Appendix 13

BOE Agenda Item Executive Summary
Date: January 22, 2024

Topic: Water Damage - Truesdell Middle School

Background Information: Our hired appraiser recommends we have a mechanical engineer inspect the Oasis P8AMSL-D301 Drinking System as the water damage seems to be due to product failure. The same system is believed to have had the same issue at Seltzer Elementary on October 30, 2023. We plan to investigate and place a subrogation demand on Oasis if proven to be a product failure. In addition, we plan to get a count of how many models of this type were installed around the district.
