Updates to Support NYS Dual Credit Reporting

Summary

When configuring a course as dual credit in the Course Catalog, districts can now select an institution that the dual credit is associated with. Additionally, updates have been made to the Student Lite, Student Class Grade Detail, and Student Credit GPA data warehouse extracts to include the data needed for accurate NYS dual credit reporting.

Details

In **Scheduling > Course Catalog**, select the Dual Credit course attribute for any dual credit courses. In addition to the Dual Credit Settings drop-down, the Institution Name drop-down is available. This drop-down shows the Institution Name followed by the Institution ID in parentheses. The selection made here will be used in data warehouse extracts.

Note: The Institution Name field is not required and a course can be saved even if no selection has been made.

Data Warehouse Updates

Student Lite

Field 57 will report a value if the student has taken a course with dual credit. If the student has dropped or withdrawn from the dual credit course, they will not be included.

Note: The Education Level of the Parent is configured in the student record on the Census > Demographics tab.

Student Class Grade Detail

Field 41 will report the Institution ID associated with the institution selected when configuring a dual credit course. This value comes from the new Institution Name field referenced above.

Student Credit GPA

The Student Credit GPA extract will include any students that have a dual credit course reported in the Student Class Grade Detail extract. If the student has dropped or withdrawn from the dual credit course, they will not be included.
