Title: Advanced Agriculture Construction

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: AG Mechanics (Recommended)

Co-requisites: None

Integrated (Academics / CTE)? Yes: Agricultural Mechanics

Grade levels: 11th, 12th

ourse Description

urse overview:

This competency-based course is the third in a sequence of three designed for construction and architectural/computerized design work as it relates to agricultural. It provides students with technical instruction and practical experience in basic residential and commercial construction using sustainable and green technology.

Instruction includes an introduction, workplace safety, and reviews of resource management, trade mathematics, employability skills, and apprenticeship preparation. Emphasis is placed on the techniques, tools, and materials required for rough and finish carpentry, estimating, advanced plumbing and electrical work, renewable energy, roofing, and painting.

The competencies in this course are aligned with **h the California High School Academic Content Standards and the California Career Technical Education Model Curriculum Standards.**

The process of planning and designing a structure is introduced first. Students will experience each step of the development process and outline appropriate sequencing of events as it applies to project scheduling. The process of creating a floor plan will allow the students to investigate math modeling through construction in practical applications. In addition, students will be justifying their decisions by explaining their design choices in writing.

The physical transformation of the site begins in preparation for building. During site work, the building process moves from two and three-dimensional plans to three-dimensional structures. Students will have prepared the site through surveying, leveling, and grading for the building foundation and other necessary site improvements. This process will allow students to begin investigating .The work done on the plot of land and using the software program to create the 3-D plan. An essential part of this unit requires students to apply measurements from scale drawings to blueprint specifications.

Every structure needs to have a solid foundation. In this phase, students first survey the site, excavate soil for the foundation, build wall forms, pour footings and stem walls, and install rebar for structural strength. Students prepare a plan with estimates for the foundation work. Students continue to work with the site and floor plans.

Working with framing, students transform conceptual ideas and construction drawings into a real structure for the first time. The structure itself comes together during the framing process, starting with material selection, flooring, walls and roofing construction, tasks necessitating a review of trigonometric concepts. By the end of this unit, students will have constructed the entire framing for their structure. Students solve rational equations in their work using the scale model. The physical structure takes on aesthetic qualities. The exterior enclosure unit encompasses finishing the roof, building wrap, exterior wall finish material, and installing windows and doors on the structure. The components in this unit include precise measurements and working with scale from floor plans. As students calculate R-values for insulation. Mechanical systems are added to make the building fully functional. Plumbing, electrical, and HVAC are installed in the structure prior to completing exterior weatherproofing of the walls. The next step in this process is insulation, which encompasses thermal, moisture, and sound control. A s students calculate the R-value for the insulation to ensure compliance with Title 24, they gain experience calculating with inverse variation as well as an appreciation of the many mathematical concepts that must come together in the building of a structure.

Advanced AG Construction is an overview of the construction trades, with integrated Geometry content. Students master measurement systems, safe use of hand and power tools, calculation and characteristics of materials, carpentry, framing, basic electrical wiring, plumbing, and site preparation. Students learn about Construction and construction careers. Coursework is project-based, developing teamwork and project management skills. The culminating project is a house that will include: concrete/masonry, framing, electrical, plumbing, and finish work. Students demonstrate responsibility for personal, occupational safety on the job site and have the opportunity to obtain OSHA cards certifying their competence.

This course allows for hands-on mastery of rigorous geometrical and mathematical concepts within a context of Construction career preparation. In AG Construction 2, students will apply major concepts of Geometry, including measurement of angles and segments, polygon properties, area and surface area, congruence, proportion and similarity. Applying these skills, students use safe and appropriate practices following construction processes and systems vital to the industry. In addition, students maintain and troubleshoot equipment used in the construction industry. This year-long, multiple-project integration course will also provide a sequential series of industry experiences with the ultimate goal of providing a clear pathway for students interested in professions in Building Trades.

The value of the integration lies in the project-based process, which will include critical thinking, problem-solving, and analysis of mathematical problems following the progression of core geometrical concepts from inception to contextual (hands-on) completion. Students understand the attributes of good design and how it applies to the design, construction and servicing of structures. In small heterogeneous work groups, students mirror construction sites by demonstrating effective leadership styles, key concepts of group dynamics and individual decision making that will result in a tangible physical product.

A variety of formative and summative assessment methods are used throughout this course in order to assess student learning. The assessments are aligned with the course purpose and the instructional strategies used, and with the Common Core Standards for the development of mathematically proficient students. In all course assignments and assessments, students experience hands-on geometry as they problem-solve and reason, use appropriate tools, attend to precision, and construct a series of projects in the CTE classroom.

Additionally, a performance assessment and a written test for each student is conducted after each unit for the NCCER certification that the student can apply for at the end of the year. As well as an assessment with NOCTI.

ɹurse content:

Unit 1: Blueprints and Construction

Students demonstrate their knowledge of the foundations of geometry by using geometric vocabulary and tools to modify a blueprint for construction. Using scale drawings and blueprints, students demonstrate understanding of the rules of similarity and proportions. Students calculate area, and calculate volume of excavation, form materials, and concrete. Students calculate framing materials needed from plans, and prepare budgets.

⊒ Unit Assignment(s):

Signature Assignments:

Students modify a blueprint using the following mathematical concepts: vocabulary concerning the building blocks of Geometry-congruent, collinear, coplanar, and bisect; using an architectural ruler to measure segments to determine length and verify congruence; naming angles in multiple ways and identifying the vertex and sides of the angle; applying geometric concepts such as congruence and bisecting to angles; verifying congruence and bisection by measuring angles with protractors; constructing congruent angles, angle bisectors, and perpendicular bisectors. Students calculate framing materials needed from plans, and prepare budgets. Students calculate area, and calculate volume of excavation, form materials, and concrete.

Unit 2: Electrical Skills

This module introduces the students to the safety rules and regulations for electricians, including the necessary precautions for avoiding various job site hazards. Students also learn the various types of devices and installation procedures used in residential wiring. It also covers service-entrance and branch circuit calculations and National Electrical Code® requirements.

⮒ Unit Assignment(s):

Signature Assignment:

Teams of students compete to see who most efficiently and effectively complete three wiring tasks: wiring a receptacle, switch, and lamp. While doing this assignment students must explain electrical safety issues concerning lockout/tagout procedures, confined space entry, respiratory protection, and fall protection systems.

Unit 3: Green Construction

Green Construction is an exciting exploration into the process of environmentally responsible and sustainable construction techniques that will attract a lot of student interest. Activities include: installation and testing of a solar panel array, installation of energy-saving plumbing components, and analysis of lighting for electrical efficiency. Students also conduct a LEED audit.

⮒ Unit Assignment(s):

Signature Assignment:

Installation of solar panels

Unit 4: Weatherization

Students research weatherization strategies to make projects more environmentally friendly, and understand the environmental regulations that influence residential design. Students explain the impact of insulation, sealing, heating,

ventilation, and HVAC on building performance. Students explain the impact of water conservation and solar thermal on a project.

Unit Assignment(s):

Signature Assignments:

Students will work on a small scale weatherization home that includes the purpose and benefits of the program. Students will learn how homes gain and lose heat energy and how those losses can be reduced by sealing the building shell and by adding insulation. Students will also calculate low flow shower heads and regular flow shower heads to determine the amount of water being used. Students will use Ohm's law to see what light bulb would be more beneficial for the home user to save money.

Unit 5: Wall & Roof Framing

Students demonstrate their knowledge of the Pythagorean Theorem, Distance Formula, and trigonometric functions when analyzing blueprints, calculating angles, and constructing wall frames. Students identify the relationship between the angles formed when a transversal intersects parallel lines, then use these relationships to find the measures of angles. Students begin demonstration framing in classroom, from simple walls to complex structural systems. This work continues throughout the year.

Unit Assignment(s):

Signature Assignments:

Teams of students frame walls and a pitched roof, using the Pythagorean Theorem to determine distance and find missing lengths of sides of right triangles, and also using trigonometric functions to solve for an unknown length of a side right triangle, given an angle and a length.

Unit 6: Cabinetmaking

In this unit student will identify basic tools and equipment used in the cabinet making trade, understand basic techniques, and design and build a sample cabinet using 32mm technology.

Unit Assignment(s):

Signature Assignment:

The student will learn about making and assembling a kitchen-type cabinet. The cabinet is a frameless, European-style cabinet. Student will use typical cabinet materials and hardware.

Unit 7: Tile Setting

In this unit student will learn how to measure, cut, set and finish both vertical and floor tile. Students will cute and fit tile using several types of cutting tools, and apply mortar and grout.

Unit Assignment(s):

Signature Assignment:

Students will complete a tile counter and back-splash of their own design. The back-splash will include accent or mosaic highlights to the design.

Unit 8: Heating, Ventilation, Air-Conditioning, and Refrigeration

In this unit student will explore the relationship between electricity consumption and heating and cooling output using meters and testing devices.

Unit Assignment(s):

Signature Assignment:

This unit prepares students to enter the residential and light commercial HVAC industry. Students learn to test and service residential & light commercial Heating and Air Conditioning systems, including Heat Pumps. They also learn, safety and work practices, protective equipment, handling pressurized fluids and hazardous substances, and how to use hand and power tools to test and service heating and refrigeration equipment, including those used to measure air flow.

Unit 9: Concrete and Masonry

In this unit, students will identify and describe basic tools, equipment, and materials used in the concrete and masonry trade. They will gain an understanding of basic concrete and masonry trade and reinforcing applications.

⮒ Unit Assignment(s):

Signature Assignments:

Students will prepare, form, reinforce and pour a concrete slab and curb, while exploring applied science and mathematics in the trade. In Masonry skills students learn about the chemistry of mortar and how to mix it properly. Students learn how to cut and lay brick, then build a 3-course concrete block wall.

Unit 10: Finish Carpentry

In this unit students use a full size window and door trainer to install a pre-hung door and window. They learn to use techniques for applying flashing and using shims, levels and squares to correctly set the door and window.

⮒ Unit Assignment(s):

Signature Assignment:

Students will install a door using the compound mitre saw to cut and fit the door casing. They also learn how to use a "coping" saw for crown moulding and trim work.

Unit 11: Small House Construction

Students coordinate the phases of walls that each group built and then construct into a small house. Students estimate the cost of the small house project, calculating material requirements from a plan, generating a budget, and preparing a project bid. Teams of students construct a small house demonstrating mastery of concepts taught previously in the course.

⮒ Unit Assignment(s):

Signature Assignment:

Teams of students construct a small house demonstrating mastery of concepts taught previously in the course, having previously estimated materials, prepared a bid, and writing a short essay coordinating the phases of construction.

Title: Advanced Agricultural Mechanics

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation?	No
Prerequisites:	Agriculture Mechanics A and B or teachers approval (Required)
Co-requisites:	None
Integrated (Academics / CTE)?	Yes
Grade levels:	10th, 11th, 12th

ourse Description

urse overview:

Advanced Agriculture Mechanics is the second class offered in the Mechanized Agriculture Pathway. In this course, students will continue to build on the knowledge and skills gained in the Agricultural Mechanics 1 course relating to the transfer of matter and energy through electrical, fluid, thermal and mechanical systems. They will also study more advanced fundamentals of mechanical and structural systems and facilities. Students will explore professional opportunities in the field of agricultural engineering. Integral to this will also be the opportunity to participate in activities developed through a student leadership organization. By participating in this program, students will be better prepared to matriculate into post-secondary Agriculture Engineering programs such as those offered at the University of California, Davis and Cal Poly, San Luis Obispo. Additionally, this course may be a gateway program for those students interested in pursuing a post-secondary study in mechanical or structural engineering.

urse content:

Exploring Careers in Agricultural Engineering/Mechanics/Welding

Objective:

Students will continue to explore various career opportunities available in the Agricultural Engineering/Mechanics field. Within each career we will explore and discuss parts of the job, such as working conditions, job requirements, educational requirements, and job outlook.

Unit Assignment(s):

Key Assignment(s):

Students will be introduced to industry professionals who will inform the students about available careers in the agricultural engineering industry. These presenters will also be able to inform students about post high school educational opportunities for students wishing to pursue agricultural engineering.

Students will complete a 3-5-page paper on a career interest within the Agricultural Engineering/Mechanics Industry. The papers are meant to be a way of further developing the student's knowledge of Ag engineering career opportunities.

Fabrication techniques Using Oxygen/Acetylene Torch

Objective:

Upon completion of the unit students will understand the theory of the oxygen/acetylene torch, as well as be able to properly demonstrate common cuts made with the torch.

⮒ Unit Assignment(s):

Key Assignment(s):

Students will be asked to demonstrate the proper procedure for setting up and shutting down the torch.

Using the torch, the students will be asked to cut a straight line, a 45 degree beveled cut, and pierce and a circular hole.

Irrigation and Plant Nutrient Distribution Systems

Objective:

Students will continue to build on the irrigation skills learned in Agricultural Mechanics 1. They will be design a mock irrigation system for a green house as well as help to maintain the current irrigation system in the school green house. Furthermore they will assemble a small personal irrigation system using materials typical to those used in agriculture.

⮒ Unit Assignment(s):

Key Assignment:

After studying the essentials of delivering water and nutrients to various plants and crops, students will use steel pipe and their welding skills to assemble a small irrigation sprinkler. Engineering principles pertaining to fluid flow and the reactions to chemicals on commonly used materials will be explored and considered.

Understanding Design and Fabrication Processes Using Gas Metal Arc Welding

Objective:

Students will understand the basic theory of GMAW welding, understand and identify five basic welding joints, and identify and correct basic weld defects.

⮒ Unit Assignment(s):

Key Assignment(s):

Following an instructor lead demonstration the students will use the GMAW machines to assemble a butt joint, corner joint, tee joint, lap joint, and an edge joint. They will be asked to focus on safety and proper technique.

Following the creation of these joints, the students will be asked to use their analytical skills to grade and judge the welds that they created. Students will be asked to focus on weld defects discussed in class. Furthermore they will be asked to explain how to prevent these defects from occurring in their future welds.

Understanding Design and Fabrication Processes Using Shielded Metal Arc Welding

Objective:

Students will understand the basic theory of SMAW welding, understand and identify five basic welding joints, and identify and correct basic weld defects.

⮒ Unit Assignment(s):

Key Assignment(s):

Following an instructor lead demonstration the students will use the SMAW machines to assemble a butt joint, corner joint, tee joint, lap joint, and an edge joint. They will be asked to focus on safety and proper technique.

Following the creation of these joints, the students will be asked to use their analytical skills to grade and judge the welds that they created. Students will be asked to focus on weld defects discussed in class. Furthermore they will be asked to explain how to prevent these defects from occurring in their future welds.

Small Engines

Objective:

Students will understand the principles of engine operation and will be able to identify engine systems and their components. Furthermore, students will be able to identify the need and use of small engines in agriculture.

⮒ Unit Assignment(s):

Key Assignment:

Students will study a number of engine operating systems such as the fuel systems, ignition, engine lubrication, and engine cooling. Further more students will be study engine performance and methods of measuring and calculating it. Students will have a small engine in class they will tear down and rebuild throughout the unit.

Project Planning and Design

Objective:

Upon completion of this unit students will understand the basics of how to measure and lay out a project that they have designed. Students will become proficient with a tape measure, square, compass, ruler, and other tools involved in the design/layout process.

⮒ Unit Assignment(s):

Key Assignment(s):

Students will be walked through the layout of a small wood project (boot puller) in order to gain an understanding of layout terms as well as how to properly use the tools.

Students will be given a metal dustpan that was built in the shop, and asked to reverse engineer it, and develop a set of plans to build one. This will require the student to use analytical skills to think through the steps that were required to create this project. Furthermore students will also have to draw out and label measurements for cuts and bends that need to be made.

Students will be charged with the task of designing and creating a small project of their own choosing. Before beginning construction on the project, the students must submit a complete set of plans detailing the dimensions of the project, as well as any cuts or bends that need to be made.

Safety in Agricultural Engineering

Objective:

Students will be introduced to the shop and the safety procedures that must be followed to ensure the safety of everyone working in it.

⊒ Unit Assignment(s):

Key Assignment:

Students will prepare a 5 min presentation on one particular power tool, its purpose, and safety precautions associated with it. Also the students will be required to pass a safety exam.

Advanced Agriculture Mechanics
Two Terms
2010-2011

Course Description

This course will review Gas Metal Arc Welding (GMAW) and Shielded Metal Arc Welding (SMAW) in a variety of positions. Students will also learn advanced welding techniques and fabrication. Student will use skills learned in Agriculture Mechanics I course to build a large project. Projects are available through the Agriculture Department and can also be done individually. Trailer projects are the most common with students also competing at the Allan Hancock College's Welding Technology Program. During the first term, students will begin to cover the content and skill standards included in the following AHC Welding 106 class.

Students, who demonstrate proficiency of the identified AHC course competencies (skill standards) with a 'B' or better grade, may earn college credit. To gain college credit, students must complete all of the competencies listed for each course (B grade level). It will take most students two terms in high school to demonstrate competency. During the term most of the competencies will be covered in class…some may require additional independent work by the student.

Course Outline

ALL STUDENTS WILL DEMONSTATE THE FOLLOWING:

I. Safety Tests and Review
Students will demonstrate the safe and proper use of the following items
a. Introduction of rules and safety pledge
b. Cutoff saw
c. Grinder
d. Drill Press
e. Plasma Cutter
f. Oxyacetylene welding & cutting

II. Review of GMAW/SMAW – This is continuation of competencies not yet attained in Agriculture Mechanics
- Demonstrate safe and effective welding and shop working practices
- Demonstrate use of proper welding-related terminology
- Demonstrate proper equipment set-up and trouble-shooting techniques
- Proper polarity selected
- Proper work clamp placement used
- Demonstrate safe handling of compressed shielding gas bottles
- Compressed gas bottle is properly secure
- Regulator is correctly installed and set at proper flow rate
- Correct shielding gas is being used
- Gas is turned "on" for welding

- Demonstrate that proper welding wire is being used for welding material selected
- Demonstrate proper roller size used in wire feeder
- Demonstrate ability to change wire, rollers, tips, diffusers, nozzles, and set proper tension on rollers for welding
- Demonstrate ability to set proper parameters (voltage and wire feed speed)
- Demonstrate understanding of simple layout and fit-up practices on ¼" mild steel plate
- Demonstrate competency GMAW techniques with solid wire on mild steel in all positions:
    - Weld deposited with complete fusion
    - Bead shape is slightly convex and uniform in appearance
    - Weld is free from slag, undercut, cracking & porosity
    - Proper overlapping with a uniform appearance

III **Project Completion**

Each student will complete at least one project where they will prepare a drawing, bill of materials, steps and complete the project. Trailer plans will be used for a Responsible and capable group of 3 students. This may be sold about 15-25% above cost to be paid to the school district for consumables. These projects may be used to exhibit for silent auction at the Santa Barbara County Fair.

Course Topics:

Safety and Review
Project Planning
Project Completion (trailer, equipment, or art)
Skill Completion

Grading and Evaluation:

Students will be graded on the completion of their objectives and at the level at which they complete them, such as excellent, good, fair, poor, unacceptable. This translates to a 90, 80, 70, and 60 percent grading scale. Grades will be based on quality of finished project, attendance, and workmanship throughout the project.
60% on projects and completion (to be graded at the end by the instructor)
25% on participation (attendance, tardies, work ethic, etc.)
15% on SAE project and record book Participation Points
5 points each day are possible. Each week students must complete a yellow journal sheet that will be graded. 0 points for each absence (excused or unexcused)
-2 points for tardy, safety infraction, not wearing safety glasses, coveralls
-1 to -4 points for not cleaning area assigned or workstation and not working on assigned project.
SAE Project and Record Book
Students are also required to complete a SAE Record Books for in and out of class projects. Failure to do so will result in an incomplete grade. This will include a career

research paper done outside of class and will include interviews. Hours spent and the report is all that is required. This can include on of the following:

1. Exploratory – career research paper, apply small gas engine sills at home, report on a welding process
2. Placement – paid or unpaid work experience in an agriculturally related field. Natural resources, mechanics, yard maintenance, lawn mowing, volunteer community service, building projects outside normal class time.
3. Entrepreneurship – raising an animal, owning our own lawn mowing business etc.
4. Job application, resume, and interviewing techniques

Portfolio Items:

Title: Advanced Communications and Leadership in Agriculture

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: None

Co-requisites: None

Integrated (Academics / CTE)? Yes: Agricultural Business

Grade levels: 10th, 11th, 12th

ourse Description

urse overview:

This course is designed to promote and develop leadership in the Agriculture Industry. Ag Communications and Leadership is a concentrator course for our CTE Pathway and is project-based course aimed at increasing students' leadership capabilities. Through the planning and execution of numerous events for the school's FFA chapter, students will discover how to best effect change in their communities. Students will read extensively about the nature of leadership and its different styles. Additionally, students write frequently write – critically, reflectively, persuasively – and speak about the real world issues in Agriculture. Topics will include current issues in Ag legislation, development of personal leadership skills, FFA operations, FFA Judging Teams and exploration of past and present needs in the Ag Industry and its leaders. A supervised Agricultural Experience project is required and will be developed with the aid of the instructor. Students will help plan, organize and put on events in FFA. Students are required to complete 20 hours per semester. FFA participation and SAE, Supervised Agricultural Experience Project will be part of the grade for this course.

Communications and Leadership has two goals. One, increase the positive school's FFA chapter's culture through academic and social events. Two, help students enrolled in the class become more effective leaders. This includes mastery of the following core leadership skills:

· Communication

· Planning/Organization/Forward Thinking

· Problem Solving

· Constructive Feedback/Evaluation

· Writing: critically, reflectively, persuasively

· Creativity

· Professionalism

· Confidence/Public Speaking

· Persistence

· Empathy

urse content:

Personality and Leadership

Description: Students will define leadership and create goals for themselves for the year. Students will examine different leadership styles and case studies. Students will research different real world leaders. Students will evaluate the strengths and weaknesses of different leadership styles and real world leaders.

This unit is an introduction to the topic of leadership. To achieve this goal, students will look a numerous real world leadership case studies and they will evaluate the issues within the situation, as well as evaluate how the person handled the situation. They will take personality assessments, evaluate 4 sets of preferences and how to work well with different group personalities. Students will have group and class discussions about these case studies and will write frequently about how they would handle the situation. Additionally, students will research a real world leader and present on the strengths and weaknesses of their leadership style.

⮒ Unit Assignment(s):

Students will write an essay explaining their personal leadership style and creating goals for the year. This assessment relates to the goals of the class because students will begin to think about themselves as leaders and how they would handle different situations as a leader. Additionally, the assessment connects to the writing goal of the class since students will need to clearly explain how they plan on being a leader.

In addition, students will plan FFA leadership meetings on the Pioneer Valley High School campus. They will invite all the agriculture students within the Agriculture department and present reports about building leadership skills to these students. The students in this class are responsible for planning, organizing and developing these leadership sessions for these monthly events.

Emotional Intelligence

Description: In this unit, students will evaluate their emotional intelligence (EQ). Emotional Intelligence is the capacity to be aware of, control, and express one's emotions, and to handle interpersonal relationships judiciously and empathetically. The purpose of this unit is to have students to effectively analyze their own personal emotional intelligence. They will evaluate various situations in an agricultural work environment and how people utilized emotional intelligence in these situations.

Conflict Resolution/ Problem Solving
Description: In this unit, students are introduced to basic techniques to handle conflict resolution. In any leadership situation, students will be presented with some type of conflict and need to be able to resolve this conflict in a positive way. This unit will also be focused on learning how to be assertive but an effective leader while making decisions and solving problems as a leader. Students will learn how to handle emotions effectively in a group situation. They will work to identify the core issues of any situation and look at problems from other perspectives. Students will learn how to build off of other's ideas in order to find a more creative and effective solution to the problem. This will be done through real work and hypothetical situational analysis of issues. Students will work in groups to develop and implement proposed solutions and will meet with appropriate personnel to present their solutions and persuade others of the viability of their ideas. Students will analyze examples of novel approaches to issues and will learn about effective brainstorming.

⮒ Unit Assignment(s):

Students will evaluate their own emotional intelligence through EQ quizzes. They will then be grouped with other students with similar emotional intelligence. The group will have to create a visual presentation that

describes their EQ and how they tend to work with people of other emotional intelligence styles.

Students will be presented with mock conflicts in Agricultural work environments. They will have to present possible methods to reduce the conflict within the work environment. The students will work in groups to clearly determine the core issues within the situation and provide a clear plan on how to handle emotions effectively and create a resolution for the conflict.

In addition, students will practice their ability to solve problems in a group environment. Students will engage in a community-based project related to Agriculture or the FFA chapter where they identify a problem they want to fix, organize a way to fix it, and then go about executing that solution. This assessment relates to the goals of the class because it connects the learning in class to the real world. Students will need to think creatively to find solutions to real problems and then plan their solution.

Leading a team

Description: In this unit, students will be investigating the proper way to leading a team. Firebaugh FFA chapter is officially led by seven officers who are always in this course. However, our goal is to have a whole class of leaders who are within this course. Hence, this unit is essential because it helps provide more guidance on how to properly lead a team or in this case, an FFA chapter. The students will investigate their interpersonal skills to evaluate themselves to see if they are a trusting individual to others.

⮒ Unit Assignment(s):

Leading a team is something often done by a coach. Hence, for an assignment, the students will be introduced to 10 key coaching skills. The students will have to take these ten key coaching skills and write about how they will apply them to being a leader in the FFA chapter. They will have to come up with a plan on how to better be leaders in their FFA chapter using these 10 key coaching skills.

Career Readiness

Description: In this unit, students will begin preparing themselves for a career. The purpose of this course is to prepare students for the future as a leader in a career in Agriculture. Through this unit, students will learn the basic skills of creating a cover letter, resume, job application and preparing for an interview. They will focus on building their individual interview skills by practicing their basic interview questions with their peers. In addition, they will practice giving positive feedback to their fellow students as they peer review cover letters and resumes.

⮒ Unit Assignment(s):

Students will participate in a local FFA Job Interview contest. They will each complete all the steps to participating in this contest which includes creating their resume, cover letter and completing a job interview. California FFA provides four mock job positions each year that the students will be applying to for the contest. The most difficult part of the contest is that the students will have to meet with an interview panel and interview for this mock position. Those students who score the highest in the local contest will continue on to the Sectional FFA Public Speaking competition for the Job Interview contest.

Communication

Description: Students will learn the skills necessary to being a good public speaker. These will include: projection, articulation, eye contact, body language, and confidence. Students will practice each of the public speaking skills necessary in increasingly difficult situations beginning with peer-to-peer and culminating in a large group speech. Students will investigate various communication styles including non verbal communications and verbal communications. In addition, the students will become familiar with the ten tools for effective listening.

⮒ Unit Assignment(s):

Students will have to practice their public speaking skills through the participation in a local chapter competition of the FFA Opening and Closing Ceremonies contest. These students will need to memorize specific parts of the ceremonies and have to present the entire ceremony's speech in a group contest. They will be graded based upon their presentation of the ceremony and their projection, articulation, eye contact, body language and confidence. The group that does the best in the local competition will move on to the Sectional FFA Opening and Closing Ceremonies contest.

Parliamentary Procedure

Description: Parliamentary procedure is the body of rules, ethics, and customs governing meetings and other operations of clubs, organizations, legislative bodies, and other deliberative assemblies. In Agriculture and the FFA, parliamentary procedure is the basic rules to make decisions and votes in a professional manner. As students are preparing for further involvement in the FFA and careers, parliamentary procedures are important to know. Almost anyone with a career in Agriculture will have to be aware of legislation in the state and by being familiar of parliamentary procedure will give anyone a head start in their career. In this unit, students will be familiar with the main motions and procedures for a vote to be passed and decisions to be made properly.

⮒ Unit Assignment(s):

The students will be grouped in a group of approximately 6 students and they will demonstrate their knowledge of main motions using parliamentary procedure. They will have to participate in a local Parliamentary Procedure contest that is similar to the FFA Parliamentary Procedure contest.

Team Building

Description: In this unit, students will learn about the skills needed to work as a team. They will investigate the characteristics of an effective team. This will allow them to evaluate how they are working as a leadership team within the Patterson FFA chapter. They will complete a team dynamics or group self assessment to see if they believe they have the proper dynamics as a team.

⮒ Unit Assignment(s):

The students will be presented with mock issues within a team environment. The students must evaluate these mock issues and develop plans on how to create or change the current team to build the proper team dyanmics or develop an effective team.

Event Planning

Description: Students will look at different ways to plan various types of school and community projects. They will learn and implement a project planning process to ensure that they are thinking about all the different aspects of organizing an event. Students will work to delegate tasks appropriately, as well as anticipate potential problems and plan solutions to those potential setbacks before they occur. Students will learn how to plan for the myriad aspects of an event, to communicate with necessary individuals and how to organize all the details of an event in a timely fashion. Students will learn to evaluate an event and identify improvements for future planning.

⮒ Unit Assignment(s):

In group committees, students will plan and implement various FFA events on campus using a project-planning format. They will be responsible for every aspect of the event including budgeting, personnel, marketing, communication and implementation. After their event, they will also evaluate the planning process and identify changes that they think are necessary to improve both the process and the results for future events.

Agricultural Issues

Description: In this unit, students will research various agricultural issues in the industry such as water rights, land uses and any other issue relating to agriculture. They will choose an agricultural issue that interests them and complete digital research on this issue. They will be introduced to the proper procedures to making a convincing presentation and the basic presentation skills. In this unit, they are learning more about common issues within the industry as well further developing their public speaking skills.

⮒ Unit Assignment(s):

Students will take their chosen agricultural issue and create a digital presentation to present to local agriculturalists. This assignment allows students to demonstrate their writing skills to write their presentation as well as demonstrate their use of technology to make a persuasive presentation. The panel of agricultural industry professionals will listen to these presentations and ask the student presenters questions at the end of each presentation.

Agriculture Literacy

Description: In this unit, students will research various agricultural topics in the industry such as California commodities, ag careers, livestock practices and any other topics relating to agriculture. They will choose an agricultural topic that interests them, complete digital research, and develop a lesson plan for a targeted elementary school age group. They will be introduced to the proper procedures to making a lesson plan and basic teaching skills. In this unit, they are learning more about common practices and the importance of the industry as well further developing their public speaking and communication skills.

⮒ Unit Assignment(s):

Students will take their chosen agricultural topic and create a persuasive speech to present to local parent club and school staff members. This assignment allows students to demonstrate their public speaking and communication skills to a targeted audience. Students will need to include a manuscript with references as part of the lesson plan which will demonstrate their ability to research, identify sources, and type up a prepare manuscript and meet the the objective of the lesson.

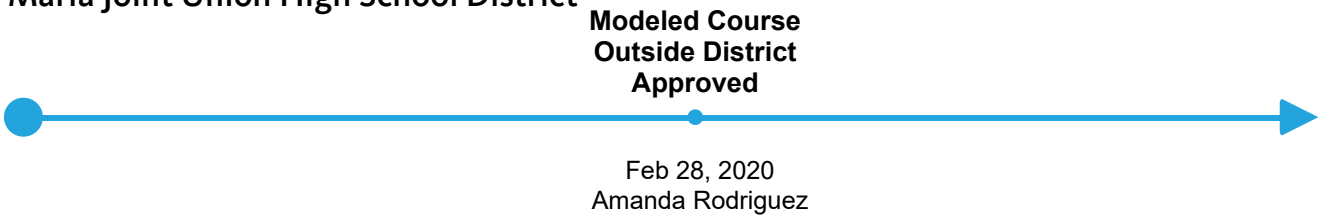
Advanced Floral Design

Santa Maria Joint Union High School District



asic Course Information

hool(s) Offering This Course:

School Name	Course Learning Environment	Transcript Code(s)
rnest Righetti High School (053303)	Classroom Based	Abbreviation: Adv Floral DesA, Course Code: AG6104 Abbreviation: Adv Floral DesB, Course Code: AG6105
anta Maria High School (053305)	Classroom Based	Abbreviation: Adv Floral DesA, Course Code: AG6104 Abbreviation: Adv Floral DesB, Course Code: AG6105

Title: Advanced Floral Design

Length of course: Full Year

Subject area: Visual & Performing Arts (F) / Visual Arts

UC honors designation? No

Prerequisites: The Art & History of Floral Design (Required)

Co-requisites: None

Integrated (Academics / CTE)? Yes

Grade levels:

10th, 11th, 12th

ourse Description

urse overview:

Advanced Floral Design is designed to build off students' knowledge gained in beginning Floral Design with theories and principles of artistic design. Students will engage and apply practical skills and knowledge in elements and principles of design (line, shape/form, color, balance, and emphasis), history of floral art, arrangement styles and techniques, as well as seasonal, holiday and special event designs. Students will achieve this through creating, designing, identifying explaining and evaluating all topics of study. Students will research and study floral trends to understand and develop an appreciation for floral design with historical, cultural, formal and casual, ceremonial and traditional, including an understanding that floral designs are affected by society, culture, history, politics and economic influence. Advanced floral will reinforce use of taxonomy in identifying potted plants and cut flowers. Emphasis will be placed on judging/critiquing potted plants and cut flowers as in the State CDE contest requirements. Students will use extensive vocabulary to explore reasons and explanations of placing of classes based on elements and principles of design. Students will master the art of corsage and cut flower arranging in both 2 dimensional and 3 dimensional forms and will learn and detain the requirements of owning and operating a floral business. Classes will arrange and sell creations in a Santa Maria Agriculture Department floral Shop to fully submerge themselves in business situations and work environment. Marketing and pricing strategies will be covered in order to enhance the floral business experience. Workplace skills and ethics will be covered in detail and work safety habits certificated.

Students will also have the opportunity to seek Student Certifications within the Floral Industry including the California Certified Florist Exam. This exam consists of both a Tier 1 - Student California Certified Florist Written Exam and Tier 2 - Student California Certified Florist Hands-On Exam.

urse content:

Taxonomy

Students are expected to use taxonomy to identify over 50 potted plants and 50 cut flowers. Students will be able to use industry tools and identify by sight using the correct common names. Students will explore the use of taxonomy/nomenclature across curriculum and understand the universal Latin naming system.

⊒ Unit Assignment(s):

Students will use Western Garden books to research common and botanical names of flowers and identify a minimum of 3 varieties of each species explored. Students will create an identification book and have the ability to identify 10 species at a time with on-going power point quizzes. They will learn visually identification and proper name identification.

Ex. students will create an interactive notebook that will contain: class notes from lectures, drawings and class exercises. Photos/drawings of potted plants and cut flowers including genus and species as well as growing requirements and common form of sales. Students will build upon this notebook throughout each unit of instruction and build vocabulary and identification skills. Students will complete worksheets on taxonomy and assigned plants and complete intermittent quizzes on identification. Students will learn to build on knowledge and vocabulary.

Pricing Strategies

Students will be able to utilize basic math skills, including percentages, to calculate the cost of retail goods and price arrangements accordingly. As well as utilize proper ordering strategies to create product with minimal amount of waste. Economics, including supply and demand will be incorporated as well as studies of the current economic status of the United States and its' affect on the floral industry. On going throughout the year.

⮒ Unit Assignment(s):

For each design the students create, they will be given a pricing sheet to calculate the exact amount of an arrangements wholesale cost and then using the standard ratio markup strategy to calculate the retail value of the arrangement. Students will learn real world value of live goods as well as the difference between wholesale and retail value.

Art Appreciation

Students will use the principles and elements of design to critique and judge a class of 4 potted plants, 4 vases of cut flowers and 4 arrangements. They will learn how to identify a structurally correct arrangement, appreciate the principles that are in place and find uniformity or lack there of in the class of 4 products. Students will then use correct and relevant plant terminology to describe and argue their class placings while pairing the class in 3 pairings (top pair, middle pair, bottom pair). This unit will be ongoing throughout the year to build and utilize a data bank of terminology.

Throughout the year students will judge classes of plants/flowers and write their placings on cards as well as write, memorize and verbally give oral reasons to the stated judge.

⮒ Unit Assignment(s):

VPA 2.3, 2.6, 4.2 and 4.3

Students will complete a worksheet for elements and principles of design

Students will design a project utilizing the elements and principles of design

Evaluation of emotions and color influence project, creation of a color wheel

Additions to student portfolio projects: applications using triangular, circular, vertical, and horizontal floral art designs and applying hue, primary, secondary, tertiary, warm, cool, value, tint, tone and shades of floral artworks.

Group Project: the class will be divided into groups and assigned an element or principle. The group will research their topic and teach it to the rest of the class. Each group is responsible for developing a visual aide, a worksheet, an outline and a presentation to teach their concept. Students will learn and reinforce the principles and elements of design. They will learn how to work together in a group environment.

Workplace Readiness

Students will demonstrate the ability to conduct a proper job interview. They will create resumes and cover letters geared towards their ability in the floral industry. Students will learn proper work ethic through classroom assignments judging promptness, preparedness and participating in class. The unit will include a Career Research paper including a resume, business letter and portfolio.

⮒ Unit Assignment(s):

Students will be periodically taken to the school computer lab to research their career paper and to create a resume using Microsoft Office templates. A professional portfolio will be turned in at the end of each semester. The students will learn how to keep records on inventory and create a professional portfolio to help finding work outside of the school setting.

Technology Application

Students will effectively use work processing skills including Excel spreadsheets to create management systems for proper pricing, waste, storage of overages and unsold/unused materials. Students will be required to create and maintain an FFA AET record book on-line.

⮒ Unit Assignment(s):

Students will design their own spreadsheets and use provided spreadsheets to record and track the progress of virtual business and the Santa Maria Agriculture Floral shop business. Spreadsheets will be reviewed and evaluation of the business will be made. I-record books will be graded on-line per semester. Students will learn how to keep records and timecards of work and hours completed. They will learn the value of record keeping and evaluating costs to determine value of a project.

History of Floral Art

Students will explore the role of visual arts using flowers in culture and history. They will describe and distinguish characteristics and identify elements and styles of a particular historical time period.

VPA 1.3, 1.5, 1.6, 2.4-2.6, 3.1-3.4, 4.1-4.3, 4.5 and 5.2

⮒ Unit Assignment(s):

Students will explore the artistic side of floral design through the elements and principles of design. Students will display proper use color, line, form, textures and expression of balance, harmony, unity, emphasis, proportion and scale. Students will create works exploring other cultures and designs including modern, historical and Ikebana.

Principles of Design

Students will explore the artistic side of floral design through the elements and principles of design. Students will display proper use color, line, form, textures and expression of balance, harmony, unity, emphasis, proportion and scale. Students will create works exploring other cultures and designs including modern, historical and Ikebana.

VPA 1.1-1.4, 2.3, 2.6, 3.1, 3.3, 3.4, 4.2, 4.3

⮒ Unit Assignment(s):

Students will complete worksheets for elements and principles and design as well as create and design projects utilizing all of the elements and principles of design. Students will create a classroom color display board and create presentation display boards for use of color, harmony, value and color schemes. Each students will write a critique of others boards explaining the correct or incorrect use of the elements and principles. Students will learn how to properly implement all principles of design and elements of design.

ourse Description

urse overview:

This integrated class combines an interdisciplinary approach to laboratory science and research with agricultural management principles. Using skills and principles learned in the course, including the chemical and biological principles that govern plant science and crop production, students design systems and experiments to solve agricultural management issues currently facing the industry. Throughout the course, students will be graded on participation in intracurricular FFA activities as well as the development and maintenance of an ongoing Supervised Agricultural Experience (SAE) program.

urse content:

Unit 1: Plant Anatomy and Functions

In this unit, students will gain a deeper understanding of the general anatomy and function of the leaf, stem, root and flower of a plant. There will be an introduction to the general parts of a leaf: tip, margin, veins, midrib, spine, base and petiole. Students will learn to notice the following parts of a stem: terminal bud, auxiliary bud, leaf scar, bud scale scar, lenticel and pith. In addition, the root parts such as phloem and xylem will be introduced along with the maturation region, elongation region, embryonic region and root cap. And lastly, the flower parts of pistil (stigma, style, ovary, and ovule), stamen (anther and filament), petal, ovary, receptacle and sepal will be detailed for the students.

Unit Assignment(s):

Students will be required to name and identify all of the different parts of the plants as they will make an educational poster outlining all of the parts of the plant. They will include all stem, root, leaf and flowers as well as drawing all of the parts of a flower. Students will also draw and label the inner xylem and phloem and describe how water and nutrients are transported through the plant.

Unit 2: Propagation

In this unit, students will explore a more in depth aspect of sexual and asexual reproduction in plants. In sexual reproduction, students will learn about meiosis and the process of creating a zygote. In asexual reproduction, students will review the processes of mitosis and cytokinesis. In addition to reproduction, the concept of propagation will be introduced to the students. They will compare the sexual versus asexual propagation processes such as seed germination through scarification and stratification, runners, stolons, sucker shoots, bulbs, layering, cuttings, grafting, budding and division.

⮒ Unit Assignment(s):

Students will start many different plants from seed and grow them to a saleable size. They will be responsible for watering and fertilizing their plants. Students will also propagate plants asexually for stem cuttings, division, leaf cuttings and any other method that is valid for the plants on hand.

Unit 3: Plant Nutrition

In this unit, students will review the primary and secondary nutrients for a plant such as Nitrogen, phosphorous, Potassium, Calcium and Magnesium. They will research the nutrient testing procedures in soil as a process that is necessary for plant growth. In addition, they will be introduced to the various types of fertilizers used in horticulture. Students will learn about organic fertilizers.

⮒ Unit Assignment(s):

Students will use their knowledge of fertilizers and nutrients to keep their plants healthy. Emphasis will be placed on organic fertilizers and using the correct formulation during vegetative growth versus flowering.

Unit 4: Pest Management

A more in depth study of the common pests and diseases in horticulture. Pests that students are asked to research include assassin bugs, damsel bugs, ground beetles, hunting wasps, lacewing, lady beetles, matis, pyrate bugs, parasitic nematodes, parasitic wasps, predatory stink bugs, soldier beetles, spiders, syrphid flies and tachinid flies. Diseases that students are asked to research include fungi, powdery mildew, leaf scorch and root rot. Students will view images of these pests and diseases and investigate for any signs of them in the Fallbrook High School greenhouses. In addition, there will be a large portion of the unit on preventing these pests and diseases on plants through cultural practices, physical controls, biological controls and chemical controls. Students will be able to read the labels of common pesticides and be familiar with the regulations relating to the use of pesticides. The students will focus on local pests and participate in hands on experience with the prevention of pests and diseases within the greenhouse on campus.

⮒ Unit Assignment(s):

Local Pest PowerPoint Project: Students will be able to create a PowerPoint presentation about a local pest that affects the San Diego County or California. Within the PowerPoint, the students must include a description of the pest, which crops the pest affects, characteristics of the damage on the crops, prevention and treatment methods including the use of Integrated Pest Management techniques. This PowerPoint is then presented to their classmates as a verbal presentation.

2) Students will be responsible for identifying pests on their plants in the greenhouse and offering solutions to eradicate the pests.

Course Description

Course overview:

This Course Overview is not available on the A-G Course Management Portal. For more information about this course, you need to contact the institution that authored this course.

In this course, students will pursue a deeper understanding of the institutions of American Government in addition to the underlying economic principles that shape policies throughout the agriculture industry. They will complete an in-depth study of the system of government in the world today and analyze the life and changing interpretations of the Constitution, the Bill of Rights, and the current state of the legislative, executive and judiciary branches of government. An emphasis is placed

on analyzing the relationship among federal, state, and local governments, the economic impacts of the aforementioned, and their relationship to agriculture and agribusiness. Students will also master fundamental economic concepts, applying the tools (graphs, statistics, equations) from other subject areas to the understanding of operations and institutions of economic systems. Studied in a historic context are the basic economic principles of micro and macroeconomics, international economics, comparative economic systems, measurement, and methods. This course is designed for advanced study of agriculture business opportunities and economics for college bound students with interest in agriculture. This course will create civic and financial literacy as students prepare to vote, participate in community activities and assume the responsibilities of citizenship as consumers in the American democracy.

Course content:

This Course Content is not available on the A-G Course Management Portal. For more information about this course, users should directly contact the institution that authored this course.

Unit 6: State and Local Government

In this unit, students will: Explain how conflicts between levels of government and branches of government are resolved. Identify the four major responsibilities and sources of revenue for state and local governments. Discuss reserved powers and concurrent powers of state government. Discuss the ninth amendment and the tenth amendment and interpretations of the extent of the federal government's powers. Explain how public policy is formed, including the setting of the public agenda and implementation of it through regulations and executive orders. Compare the processes of lawmaking at each of the three levels of government.

💻 **Unit Assignment(s):**

1. Major Assignment: Attend City Council Meeting

Students will be given a list of Santa Maria City Counsel meeting dates and will need to attend one before the end of the semester. They will write a one page summary of what happened at the meeting and its impact, if any. On the city.

1. Major Assignment: Federal vs. State Laws

Students will create a short documentary on a state law that contradicts a federal law. They will be able to research any law from any state to use in the documentary. Things they will need to include: What is the law? Why was it passed at the state level? Why is it not a law at the Federal level? What are the two opposing views on the law? Who is impacted by the law? What are the positives and negatives to the law?

1. Major Assignment: Public Policy

Students will create a comic book following the creation and implantation of a new public policy. They will chose a policy of their own and show all the steps it takes to being used. These must include: national agenda, formation, adoption, implementation and evaluation.

Unit 5: Judicial Branch, Civil Rights, and Civil Liberties

In this unit, students will: Explain the process of selection, nomination, and confirmation of Supreme Court judges. List the length of term and jurisdiction of lower court and Supreme Court. Identify and give examples of judicial review. Explain the Court's decisions and its effects in each of the following U.S. Supreme Court cases: Marbury v. Madison, McCulloch v. Maryland, Plessy v. Ferguson, Brown v. Board of Education, Miranda v. Arizona. Identify the guarantees included in the First Amendment and the limitations on those guarantees. Describe the rights of the accused in a criminal trial. Describe the right of due process under the Fifth Amendment and fourteenth amendment.

💻 **Unit Assignment(s):**

1. Major Assignment: Supreme Court Justice Collector Cards

Students will be crating collector cards on the current Supreme Court Justices. Things that will be on card: Name, why chosen, years of service, education, qualifications, and land mark cases they've voted on, who appointed them and pictures.

1. Major Assignment: Supreme Court Case

Students will work in groups of two to three people. They will research and review a nominated court case and prepare an interactive presentation that will effectively persuade other members of the Landmark Supreme Court Case Commission to select their case as the most significant Supreme Court decision in recent times. Voting will take place in closed ballot.

Project Components will include:

- Research Paper - Constitutional issue, key players, opposing viewpoints (both sides of the argument), outcome, and relevance to today's society

- Visual to guide your presentation and highlight the court case

Unit 4: The Legislative Branch

In this unit, students will describe the structure of Congress; list qualifications for membership. Contrast the Senate's leadership and the role in the lawmaking process with that of the House of Representatives. Identify kinds of committees and why members serve on them. Explain the organization, leadership, and leadership responsibilities of the House and Senate. Define and provide examples of expressed, implied and inherent powers of Congress. Explain the purpose of Congress' oversight function and the process of impeachment. Explain how federal legislation is proposed, reviewed, and enacted.

💻 Unit Assignment(s):

1. Major Assignment: Get to know your representatives

Students will research their Senators, representative and districts. Students will research the demographics of the district they live in and how the people in the district tend to vote. This information will be used in a later project as well.

1. Major Assignment: Senate Simulation

Students will be assigned a state to represent, a political party and they will choose an issue to write a bill about, that will benefit their state. Once a bill is chosen, students will present their bill to other "senators" and convince them to vote for their bill to pass. Each political party's senators will then get together and discuss which bills to support and which to drop. Bills that are chosen to move on will be presented to the entire class and discussed by the entire class. The bills will then be voted on to pass or not.

Unit 3: Executive Branch

In this unit, students will: Identify qualifications for office and length of terms for the office the president. Explain how the president and vice president are elected through the Electoral College process. Identify the pros and cons of electing the president and vice president through the Electoral College. Explain and summarize the constitutional roles of the president – chief of state, executive, legislative, diplomatic, judicial, and military.

💻 Unit Assignment(s):

1. Major Assignment: Electoral College

Students will be writing a persuasive essay in which they will argue whether the Electoral College is the best method of electing a President. The essay must include a historical perspective of the Electoral College, pros and cons of the system. And your argument for against the Electoral College. If they support it they must explain why. If they oppose it they must propose an alternative.

1. Major Assignment: Article Review and Reflection

Students will read the article "One Chief Executive, No Experience Required" while taking notes and answering questions. They will then chose a President prior to 1950 and one after 1980, comparing and contrasting their Presidential duties during their tenure.

1. Major Assignment: Mock Electoral College

Using the political parties and candidates from the previous unit students will be holding a mock electoral college for the election. The popular voting numbers will be the outcome form the election in unit 2. Students will be assigned a state to serve as a representative of for the Electoral College. Ratios and states will be determined beforehand so there is as close of an accurate representation possible, i.e. California has 55 votes in the real college, they will have 4 in the class simulation. They will be given time to look up their states issues and needs and compare them to the candidates. Students will then vote as the Electoral College and will look at the differences in the popular versus the electoral votes and who would be elected.

Unit 2: Political Parties, Elections, and Voting

In this unit, students will: Trace the origins and development of the two major political parties in the United States and summarize the role of the political parties in American politics, explain the function and role of political parties and identify the importance of third parties in the political process. Demonstrate specific examples (including political cartoons) on how the media shapes our political beliefs. Include the evaluation of the role of polls, campaign advertising, and the controversies over campaign funding. Identify the qualifications and responsibilities of being a voter and analyze trends and influences in voter turnout. Identify and describe how the following Amendments expanded suffrage in the United States: fifteenth amendment, nineteenth amendment, twenty-fourth amendment, and the twenty- sixth amendment

💻 **Unit Assignment(s):**

1. Major Assignment: Political Cartoons

Students will be given 5 political cartoons and asked to describe the cartoons in detail. Focusing on the issue and the individuals being portrayed in the cartoon, they will have to explain how the cartoon does or could sway public opinion. Students will then choose from a list of current political issues and develop their own political cartoon on the issue they chose.

1. Major Assignment: Agricultural Lobbyists

Students will research an agricultural lobbyist group and what their focus is. Students will give a presentation to the class showcasing the lobbyist group they chose, its history in government, the major states they come from, campaign tactics and its current focus. Can be done on any group that is involved in the agriculture industry.

1. Major Assignment: Voting Rights History

Students will choose one of the four amendments that changed the history of Americas voting (15th, 19th, 24th and 26th) and create a journal from the view point of someone who lived through the passing of the amendment. The journal will require:

-At least15 passages from a year before the amendment was passed

-Point of view must be from someone being affected positively by the passing of the amendment

-At least one entry on the major players in the suffrage movement they chose

-What experiences someone fighting for the right to vote would go through

-What tactics were being used to lobby for the right to vote

-Creativity: “newspaper article”, pictures, media from the time

1. Major Assignment: Presidential Mock Election

This assignment will take place throughout the unit.

Students will go the electron process, starting at the primary season and ending with an election. The class will be divided into two groups, with each group creating their own party and party values. They will be provided with 3 school rules (to represent policies) and the parties will develop their stance on each policy. Once their party has developed values they will nominate people to run for president. Each candidate will prepare a speech and the party will vote for their parties’ final presidential candidate. The two parties will then turn to the campaign of the candidate, creating “swag” and recording commercials that would be shown to another undisclosed class to sway voters. The two candidates will participate in a debate that will be shown to voters and spend time on the campaign trail on the school campus. On the final day of the project, the selected voters will cast ballots- declaring a winner of the campaign.

Unit 1: Foundations of American Government

In this unit, students will: Discuss and define the history and purpose of government, analyze ideas and historical documents and events that shaped the US Constitution, and describe structural features of the Constitution. Explain how the US system of government is a federal one, identify the four main purposes of government, explain how various theories explain the origins of government and discuss the similarities and differences between a unitary government and a federal government system. Identify and describe why free enterprise is conducive to the growth and preservation of a democracy, name the ways the US has modified its Free Enterprise system, and contrast free enterprise to other systems. Explain and cite reasons as to why colonists expected representative government, identify the ways in which the American colonies operated in a democratic system and which ways they did not.

💻 **Unit Assignment(s):**

1. Major Assignment: Creating a Sovereign State

After learning the four major foundations of a sovereign state, students will pair up and create a sovereign state of their own. Working in pairs they will design a country focusing on developing the four foundations: Information they will include:

-A map of their country- highlighting natural resources

-Population Features- level of wealth, languages, education levels and traditions

-Government- choosing attributes of their government

-Military presence

-Developing 3 well known laws and dealing with criminals

-Handling citizen's needs- education, food, communication, health and transportation.

1. Major Assignment: Global Governments

Students will identify the 6 major government types in the world and create a list of countries that fall into each of the 6 types. Students will then choose two countries from one of the government types comparing and contrast the two countries and their governments, showing that even though they fall into the same categories each country governs differently.

1. Major Assignment: How has Federalism grown?

Students will participate in a class discussion on Federalism in today's society. Students will give their opinions on how Federalism shows itself in today's America. Students will state their opinions while using researched examples as evidence to back up their position.

19. Brief Course Description

1. Use and safety of hand and power construction tools.
2. Basic surveying
3. Plans, specification, codes, building materials.
4. Concrete work, footing and foundation.
5. Construction framing, floor, wall, and roof.
6. Windows and Doors.
7. Post and beam construction.
8. Basic electricity and wiring
9. Basic pluming.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

To provide an opportunity for students to learn and apply practical skills required by the building trade.

21. Course Objectives

1. Pass safety test with a 100%
2. Demonstrate basic surveying skill in layout of foundation and measuring grade.
3. Students will demonstrate hot to read basic construction plans, review codes relate to building site constructed that year; students will be tested on materials used in basic construction projects.
4. Students will be tested on concrete volumes and demonstrate methods used in building forms for footings and foundations. Students will demonstrate procedures for finishing concrete.
5. Students will demonstrate basic construction framing of floor, wall, and roof related to yearly construction project.
6. Students will frame door ways and window.
7. Students will be introduced to bean and post construction.
8. Students will be required to wire lights, duplexes, and switches and demonstrate safety

procedure for each

9. Student will work with all three types of plumbing galvanized pipe, plastic and copper. Students will be required to make basic plumbing units with each type.

22. Course Outline

CLF2100 TOOL USE AND MAINTENANCE AND SHOP SAFETY UNIT DIRECTORY

(CLF2101) Shop Cleaning and Tool Storage

(CLF2102) Shop Safety Practices

(CLF2103) Tool Identification, Safety, and Use

(CLF2104) Tool Selection for the Ag Mechanics Shop

(CLF2105) Sharpening Hand Tools and Grinder Safety

(CLF2106) Grinder and Wheel Selection

(CLF2107) Tool Sharpening Procedures

(CLF2108) Tool Handle Fitting

(CLF2109) cutting Tool Construction and Repair

(CLF2149) Unit Exam

CLF2150 MEASUREMENTS

(CLF2151) Measurement Systems

(CLF2152) Reading Measuring Tools

(CLF2153) Calipers and Micrometers

(CLF2154) Linear Measurements

(CLF2155) Square Measurements

(CLF2156) Cubic Measurements

(CLF2157) Weights and Measures

(CLF2199) Unit Exam

CLF2200 FASTENERS

(CLF2201) Types and Uses of Fasteners

(CLF2202) Selecting Fasteners

CLF2400 WOODWORKING

(CLF2401) Selecting Wood & Lumber

(CLF2402) Measuring & Marking Wood

(CLF2403) Woodworking Hand Tools

(CLF2404) Woodworking Power Tools

(CLF2405) Fastening Wood Joints

(CLF2449) Unit Exam

(CLF2451) Measurement Systems

(CLF2452) Reading Measuring Tools

CLF2500 CONCRETE/MASONRY

(CLF2502) Concrete Proportions

(CLF 2503) Estimating Concrete Material

(CLF2504) Form Preparation and Reinforcement

(CLF2505) Placing, finishing, and curing Concrete

(CLF2506) Laying Masonry Units

(CLF2549) Unit Exam

CLF2550 PLUMING

(CLF2551) Plumbing Materials

(CLF2552) Pluming Fittings

(CLF2553) Plumbing Tools

(CLF2554) Installation of a Plumbing Project

(CLF2599) Unit Exam

CLF2650 ELECTRICITY

(CLF2651) Principles of Electricity

(CLF2652) Electrical Safety

(CLF 2653) Conductors & Overcurrent Protection

(CLF 2654) Wire Splices

(CLF 2655) Electrical Cord Repair

(CLF 2656) Simple Circuit Installation

(CLF 2657) Testing Electric Circuits

(CLF2699) Unit Exam

CLF2700 SURVEYING

(CLF2701) Surveying in Agriculture

(CLF2702) Surveying Equipment

(CLF 2703) Land Area Measurements

(CLF 2704) Differential Leveling

23. Texts & Supplemental Instructional Materials

1. *Modern Carpentry, Willis H. Wagner*
2. *Local Building*

24. Key Assignments

- See course outline for key assignments

25. Instructional Methods and/or Strategies

- Direct instruction
- Demonstrations
- Project-based learning
- Lecture
- Cooperative learning
- Reading assignments
- Video and CD-ROM Lessons
- Exhibitions of student art work

- Peer and teacher evaluation
- Interactive Notebook
- Work Portfolio
- Class discussions
- Guest Speakers
- Field Trips
- Supervised Agricultural Experience Projects (SAEP's)
- California Vocational Agriculture Recordbook

26. Assessment Methods and/or Tools

- Teacher observation
- Homework assignments
- Quizzes and tests
- Projects
- Interactive notebook
- Essay and reports
- Student demonstrations
- Work portfolio
- Rubrics
- Participation

Title: Agriculture Business Communications

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: Teachers approval (Recommended)

Co-requisites: None

Integrated (Academics / CTE)? Yes: Agricultural Business

Grade levels: 10th, 11th, 12th

ourse Description

urse overview:

This course is designed to promote and develop communication skills for use in the Agriculture Industry. Agriculture Business Communications is a concentrator course for our CTE Ag Business Pathway and is project-based course aimed at increasing students' intercommunication capabilities. Through the planning and participation in events for the school's FFA chapter, students will discover how to best effect change in their communities. Students will read about the nature of business leadership and its different styles. Additionally, students write frequently – critically, reflectively, persuasively – and speak about the real world issues and real-world business applications and operations in Agriculture. Topics will include current issues in Ag legislation, development of personal business leadership skills, FFA operations, FFA Judging Teams and exploration of past and present needs in the Ag Industry and its leaders. A supervised Agricultural Experience project is required and will be developed with the aid of the instructor. Students will help plan, organize and participate in FFA activities. Students are required to complete 20 hours per semester. FFA participation and SAE, Supervised Agricultural Experience, Project will be part of the grade for this course.

urse content:

Unit 1 – Communication through the Written Word

In this unit, students will learn how to how to create, edit and proofread standard business communications, such as e-mails, business letters, memoranda. They will be introduced to the four stages in the writing process (prewriting, writing, post writing, and publishing). Throughout the writing process, students will learn about effective message development and use technology to aid in completion of the tasks. Students will also develop their editing skills, to include identifying and revising such mistakes as run-on sentences, inappropriate language level, use of active and passive voice, as well as unburying verbs.

⊒ Unit Assignment(s):

Major Assignments:

Students will write a complaint letter to a company based on a given scenario. They will be expected to complete all four steps in the writing process, as well as having a peer review the letter.

Students will complete a review of an ag event or exhibit. Students will their news media writing skills to create a review to be published in a newspaper, so students must consider their audience as they write the review.

Students will research Internet safety and how to use Social Media wisely. Given a specific set of requirements, students will create a newsletter that contains short articles based on research. The audience for the newsletter will be middle-school students, so topic and tone will have to be considered in the writing process

Unit 2 – Communication through Presentations

In this unit, students will learn to effectively use presentation software and practice oral presentations. Throughout this unit, students will consider such elements as identifying the purpose of the presentation, analyzing the audience, gathering information, and finally determining how to present using presentation software as an aid. Students will learn about public speaking and those things they need to consider as they present (volume and rate, pronunciation and enunciation, eye contact, and movement).

⮒ Unit Assignment(s):

Major Assignments:

Students will use a software package such as Google Slides, Prezi, or PowerPoint for presentations. Using the information they glean from their research, they will create a presentation and share their findings with the class.

Students will research agriculture commodities or equipment. The goal of the presentation is to inform the class about product distribution and manufacturing process including raw materials, production, pricing, and marketing. Student must be able to utilize effective public speaking skills.

Unit 3 – Communication through Data Presentation

In this unit, students will apply a variety of problem-solving techniques as they create solutions to data problems. They will apply known algorithms where appropriate and create new ones as needed. Students will be introduced to Boolean logic and functions. Students will learn how to present data in the form of charts and graphs to communicate the data in a way that can be more quickly analyzed and interpreted.

⮒ Unit Assignment(s):

Major Assignments:

Using the Internet, research the price of a variety of agriculture production equipment/livestock. Using the information, students will create a “What if” scenario, that includes different financing options and terms. Use of payment and sum functions will be required.

Students will create a budget for purchasing and acquiring their production items. They will research prices for any supplies needed, as well as equipment. A spreadsheet will be used to track total cost (Subtotal, Taxes, and Total). Each student will create a visual presentation that will outline the project and include a chart for a visual representation of the numeric data.

Unit 4 – Digital Communication

In this unit, students will explore current trends in digital communication, including email, blogging, podcasts and social media. Students will be introduced to these forms of communication, will understand how they are used appropriately and which type of communication is likely to be effective. Students will examine multiple social media examples where businesses have successfully grown their customer base.

❑ Unit Assignment(s):

Assignment:

Working in teams of two, students will create a plan for social media services for a campus organization or an upcoming campus event. Students must set up an appropriately named account for the club, must link to the club's Web site and provide a clear and concise description of the purpose of the club. Students must set a specific goal for their service such as increased attendance at club meetings, or increased awareness on campus of the club. At the end of the time period, students will create a presentation and give before class that informs the audience about the club and how the targeted social media campaign benefited the club.

Unit 5 – Communication for Employment

This unit prepares students for successful job search and acquisition. Students will understand the key components of successful resumes and will analyze and understand the different formats of a resume. Students will examine how social media has changed hiring and gain an understanding of the importance of a presenting a professional digital profile. Students will understand digital techniques that will increase their chances of getting an interview, and will practice interviewing skills through multiple mock interviews. Students will develop and conduct a peer review of each other's job acquisition skills by sharing and providing constructive feedback to each other.

❑ Unit Assignment(s):

Major Assignments:

Students will demonstrate career skills that will enable them to be successful in the workplace and in post-high school educational settings.

Students will research and create a digital career journal for 3 careers in the agriculture industry. Students will include the education requirements, earnings, and future outlook for their chosen careers.

Students will create a sample resume for one of their chosen careers. Their resume will be printed & utilized for their mock interview.

Students will participate in a mock interview with professionals from the community.

Unit 6 - Leading a Team

In this unit, students will be investigating the proper way to lead a team. This unit is essential because it helps provide more guidance on how to properly lead, motivate, and communicate with groups and teams. Students will learn about leading in an agribusiness setting as well as within their own FFA chapter. The students will also investigate their interpersonal skills to evaluate their personality and emotional intelligence to consider their leadership style.

⮒ Unit Assignment(s):

Students will practice their ability to lead and solve problems in group environment.

Major Assignments:

Students will take an online personality assessment to evaluate 4 sets of preferences and how to work well with different group personalities. Students will also take emotional intelligent quizzes to consider how to work with a diverse group of people.

Students will be presented with mock conflicts in Agricultural work environments. They will have to present possible methods to reduce their conflict within the work environment. The students will work in groups to clearly determine the core issues within the situation and provide a clear plan on how to handle emotions effectively and create a resolution for the conflict.

Leading a team is something often done by a coach. Hence, for an assignment, the students will be introduced to 10 key coaching skills. The students will have to take these ten key coaching skills and write about how they will apply them to being a leader in the FFA chapter. They will have to come up with a plan on how to better be leaders in their FFA chapter using these 10 key coaching skills.

Unit 7 - Agribusiness Management

In this unit students will learn about agribusiness organization, global influence, and ethical and social responsibility in business. Students will review business planning and the decision making process in agriculture business. They will go over proper planning tools and techniques for running a successful business.

⮒ Unit Assignment(s):

Major Assignments:

Students will review proper ethical behaviors within a business organization through book questions and chapter review. Students will be given a variety of ethical case studies, and asked to discuss and determine their ethical and social plan of action as a business professional.

Students will use online resources in order to research the top agriculture exports and imports for both the state and country. In partners they will pick a country to review and present a small poster demonstrating international agriculture production and trade regarding their chosen country.

Students will individually be asked to pick a agribusiness topic & create a printed marketing plan report about their business. Students will list their products, pricing, location and product distribution, and how they plan to effectively promote their product. The report must include a creative cover page with company logo and printed advertisement.

Unit 8 - Agricultural Issues

In this unit, students will research various agricultural issues in the industry such as water rights, land uses, and any other issue relating to agriculture. They will choose an agricultural issue that interests them and complete digital research on this issue and prepare a report including solutions and recommendations. They will be introduced to the proper procedures for making a convincing presentation and basic presentation skills. In this unit, they are learning more about common issues within the industry as well as further developing their public speaking skills.

Unit Assignment(s):

Major Assignments:

Students will take their chosen agricultural issue and create a digital presentation to present to local agriculturalists. This assignment allows students to demonstrate their writing skills as they write their presentation as well as demonstrate their use of technology to make a persuasive presentation. The panel of agricultural industry professionals will listen to these presentations and ask the student presenter questions at the end of each presentation.

E-mail: *mdebernardi@smjuhsd.org*

- **Previously Approved Courses**

NOTE: Complete outlines are not needed for courses previously approved by UC. Courses that are defined as "previously approved" are courses from programs (Advanced Placement, International Baccalaureate, ROP courses, etc.) and courses from UC-approved online providers. Courses modeled after courses from outside the school district are also defined as "previously approved" but a complete course description will be required for submission. Each section below represents an individual page on the electronic submission site.

Was this course "Previously Approved" by UC? *X* Yes _____ No

If "No", proceed to the **Course Description** section.

If "Yes," please indicate which category applies:

Is this course modeled after a UC-approved course from another school outside your district?

X Yes _____ No

NOTE: If "Yes," you will be required to submit a complete course description. UC will review the previous submission, if available, to assist in our review process.

If "Yes," which school and ATP code? *Liberty Ranch High School*

Exact Course Title: *Ag Chemistry*

Has this course been provided program status, is not an online course, and is it listed below?

_____ Yes __X__ No

If "Yes," select an option from the Program Status list:

_____ AVID Program

_____ Advanced Placement (AP)

_____ CDE Agricultural Education

_____ CSU Early Assessment Program (EAP)

_____ Center for Advanced Research and Technology (CART)

_____ International Baccalaureate (IB) Program

_____ Project Lead the Way

_____ ROP/C Organization Name of ROP/C: _____

If "Advanced Placement", has it been authorized by the College Board through the AP Audit Process?

_____ Yes _____ In Progress

NOTE: UC will only allow Advanced Placement courses that have passed or are in the AP Audit process. UC requires all AP courses on your list, including those approved in prior years, to be verified via the College Board AP Audit process. UC will run quarterly reports based in AP Audit data; AP courses not listed on the AP Audit list will be removed.

If "In Progress," date submitted to AP: _____ (MM/DD/YY)

Exact Program Course Title: _____

Is this course provided by a UC-approved online curriculum provider listed below?

_____ Yes __X__ No

Have you signed the appropriate partnership agreement with the provider regarding methods of delivery and instruction?

_____ Yes __X__ No

NOTE: You must have signed an agreement with the appropriate provider and filed with UC in order to use their courses.

If "Yes" to both questions, select an option from the Online Provider list:

_____ Apex Learning Virtual School

_____ Brigham Young University Independent Study

_____ Connections Academy

_____ Education Program for Gifted Youth Online High School at Stanford University (EGPY)

_____ K12, Inc.

_____ Laurel Springs School (LSO)

_____ National University Virtual High School

_____ PASS Program / Cyber High

_____ UC College Prep Online (UCCP)

Exact Course Title: *Agriculture Chemistry*

- **Course Description**

Course Title: *Ag Chemistry*

NOTE: Courses that are "previously approved" must use the same exact course title as the previously approved course.

Selected Schools: *Santa Maria High School, Pioneer Valley High School, Ernest Righetti High School*

Transcript Title(s)/Abbreviation(s): _____

Course Code(s): _____

Seeking "Honors" Distinction

NOTE: To receive "honors" distinction, the course submission must satisfy certain requirements. For information about these requirements, please visit the a-g Guide: http://www.ucop.edu/a-gGuide/ag/a-g/honors.html. For "previously approved" courses (including AP and IB), the honors information will be pre-populated as applicable.

__X__ No

_____ Yes, AP

_____ Yes, IB (Higher Level)

_____ Yes, IB (Standard Level)

_____ Yes, Other Honors

NOTE: Defined as a course specifically designed by the school with distinctive features which sets it apart from regular high school courses in the same discipline areas. Course should be seen as comparable in terms of workload and emphasis to AP, IB, or introductory college courses in the subject. Honors courses must be designed for the 11th and 12th grade level and require a comprehensive, year-long, written final exam. In addition to AP and IB higher level courses, high schools may certify as honors level courses *not more than one unit in each of the following subject areas only*: history, English, advanced mathematics, each laboratory science, each language other than English, and each of the four VPA disciplines. If there are no AP or IB higher level courses in a given subject area, the high school may certify up to, but not more than, two units at the honors level in that area.

Subject Area and Category

_____ "a" – History / Social Science

_____ U.S. History

_____ American Government / Civics

_____ World History / Geography / Cultures

_____ "b" – English

_____ English

_____ English-ESL/ELD

_____ "c" – Mathematics

_____ Algebra 1; Yr 1 of 2

_____ Algebra 1; Yr 2 of 2

_____ Algebra 1

_____ Integrated Math 1

_____ Geometry; Yr 1 of 2

_____ Geometry; Yr 2 of 2

_____ Geometry

_____ Integrated Math 2

_____ Algebra 2; Yr 1 of 2

_____ Algebra 2; Yr 2 of 2

_____ Algebra 2

_____ Integrated Math 3

_____ Algebra 2/Trigonometry

_____ Advanced Mathematics

_____ Statistics

__X__ "d" – Laboratory Science

_____ Biological Science

__X__ Chemistry

_____ Physics

_____ Integrated Science

NOTE: Students electing to enroll in an integrated-science program (ISP) are strongly advised to complete the entire three-year sequence. In most cases, the first year of an integrated-science sequence fulfills only the "g" elective requirement; the second and third years of the sequence then fulfill the two-year "d" laboratory science requirement. Accordingly, if only ISP I is successfully completed, then two courses from the categories of Biology, Chemistry, or Physics in the "d" subject area must be completed. If ISP I and only one of ISP II or ISP III are completed, then one additional course from the categories of Biology, Chemistry, or Physics from the "d" subject area must be taken to fulfill the "d" requirement.

_____ Interdisciplinary Science

NOTE: This category demonstrates that the course is cross-disciplinary and is often used for advanced science courses such as AP Environmental Science or Biochemistry.

_____ "e" – Language Other than English

_____ LOTE Year 1

_____ LOTE Year 2

_____ LOTE Year 3

_____ LOTE Year 4+

- **Catalog Description**

Brief Course Description

NOTE: Briefly (in a short paragraph) describe the course, focusing on content, rather than instructional strategies, assessments, or rationale. If school has a catalog, enter the description that is in the catalog.

This is a college preparatory course for students interested in pursuing agricultural science programs in college, with emphasis on chemistry's applications to the environment and agricultural practices. Students will spend approximately 30% of this course engaged in laboratory exercises. Since this is an agricultural education course, students will also participate in leadership development and create a supervised agricultural experience program. Due to the co-curricular nature of FFA and SAE (Supervised Agricultural Experience) students will be required to participate in both FFA activities and SAE involvement, both of which are graded components of the course. As a culminating component to the class, students will also develop and present a content-relevant research project for the state Agriscience Fair. Students must have received satisfactory grades in Algebra as well as Agriculture Biology.

Pre-Requisites: *Ag Biology, Algebra* Required *X* Recommended _____

NOTE: Laboratory science and Advanced VPA courses require a pre-requisite. Submissions will not be allowed if this is not included. Some courses, particularly in the mathematics subject areas, require appropriate pre-requisites. For further explanation, refer either to the "Guide to a-g Requirements" document or the a-g Interactive Guide web site at www.ucop.edu/a-gGuide.

Co-Requisites: _____ Required _____ Recommended _____

- **Background Information**

NOTE: Do not include information that could identify your school or district.

Context for Course (optional) **REQUIRED FOR CTE COURSES**

NOTE: In order to understand the context for a new course, sometimes it is helpful for UC to understand the broader educational program and/or reform efforts of the school. How does this course fit into broader departmental and/or pathway structure? How does it fit into the overall school restructuring plans? Is the course intended to be a core course or supplemental? What are the student/school/community needs met by this course?

The Agricultural Chemistry is the third course in our core agricultural science pathway. Our campus has striven to incorporate academic rigor in our courses and pathways, and this course helps our department to align with this vision. This course helps build upon the biological principles taught in the Agricultural Biology course by providing students with an understanding of the physical nature of agricultural science.

History of Course Development (optional) **REQUIRED FOR CTE COURSES**

NOTE: Likewise, it is sometimes helpful for UC to know the origins of a course and who was involved in its development. Did you consult with UC Admissions personnel or UC professors? If so, what was the nature of such consultation and what was the result? Was this course modeled after another course at another school? If so, is that course UC approved? How does the course being submitted differ from the course after which it was modeled? Has this course received any special recognitions, designations or awards? Has it been articulated to local community colleges or universities?

The idea of the course is derived from the continued scientific research and advancements made in the Agriscience field. With these advancements come new career fields, which will need competent and prepared individuals to occupy. In many cases, multiple chemistry courses are required as a part of most post-secondary agricultural science educational programs, and so it is important to prepare students for such courses. A few high schools in California have paved the way and we have used their curriculum and resources to craft ours. The courses have been approved by UC. The help and expertise of many individuals were used to create and shape this course, including Agriscience teachers in our department, individuals from our campus science department, Agriscience professors from the CSU system, and a member of the UC Davis doctorate program in plant and soil science.

- **Textbooks**

NOTE: Include list of Primary and Secondary Texts. Make sure to note the books that will be read entirely and those that will be as excerpts. Textbook information is not necessary if your course is a Visual and Performing Arts, Advanced Placement or an International Baccalaureate course. Online texts or non-standard text materials should include a link to the online text.

Course Outline

The course begins with the study of matter and change, in which students will be introduced to the subject of chemistry, and review the scientific method and how scientists actually work. In a fairly brief manner, students will also examine the properties of matter, mixtures, elements, compounds, and chemical reactions. Students will use the required to text to study the history of chemistry and build a foundation for the coming concepts. Students will then focus on scientific method and the structure of matter, which will challenge them to review the origins and purpose of the System of International Units. Students will then study volume, mass, and density; and start building students understanding of dimensional analysis and conversion problems which will culminate in the use of stoichiometry. A historical perspective is studied of the atomic model and the discovery of the parts of the atom. Concepts such as atomic number, atomic mass number are reviewed. Students will use the text to help visualize some very spatial concepts introduced as a part of this unit. Next students will examine electrons in atoms, which will require them to understand the development of atomic models that led to the quantum theory of the atom. Key to this portion of the course is students ability to write electron configurations for atoms and be able to relate that to the atom's structure, position on the periodic table and their spectra. Once students are equipped with this knowledge, the next part of the course will focus on the Periodic Table. Students will be asked to discuss the development of the modern periodic table and understand trends in the periodic table and how elements are classified. The text will serve as a vital resource for this unit, as it will be critical for every student to have access to the periodic table. Once students have mastered the Periodic Table, the focus will shift to bonding, which will challenge students to understand and be able to distinguish the different types of chemical bonds and how they work on the atomic level. Students will be asked to identify the type of bonding exhibited by compounds by their characteristic properties. The text provides specific procedure for making such calculations and will again be a vital resource for this unit. Next in the outline of this course will be the study of chemical Names and Formulas, so that students understand and are able to use the rules for naming ionic and molecular compounds as well as acids and bases. The next unit heavily focuses on the mathematical component of chemistry through the study of chemical quantities. Students will be presented with the concepts of the mole as the chemical measurement of matter, and understand how it relates to mass on the periodic table. Students will be challenged to demonstrate the ability to calculate percent composition of elements in a compound and how empirical and molecular formulas relate. Once students have mastered these skills, the next topic will be chemical reactions. The objective is that students understand how to write and balance chemical equations and be able to characterize chemical reactions as single replacement, double replacement, combination, decomposition, or combustion. The next area of focus is stoichiometry, which will allow students to discuss and practice the arithmetic of equations and integrate all the concepts of mole ratios, dimensional analysis and algebra to solve chemical problems. Next is the study of the states of matter and behavior of gases, which will challenge students to compare the natures of gases and liquids. Students will also practice solving gas law problems, and discuss kinetic molecular theory as it relates to real and ideal gases. Next students will examine aqueous systems and solutions, which focus on the characteristics of aqueous solutions and the calculation of solution concentration, will be discussed. Once students have mastered these concepts, the focus will shift to thermochemistry, reaction rates, and equilibrium. In this unit, students will explore the flow of energy (heat) and rates of reactions, and the concept of chemical equilibrium. Next, students will take a close look at acids, bases and salts. As a part of this unit, students will focus on the three main theories of acids and bases, and the real-life characteristics of acids, bases and salts. Next students will examine hydrocarbon compounds, which will challenge them to relate the bonding and structure of simple carbon compounds to their characteristics. Simple organic nomenclature will be practiced. From there, Nuclear Chemistry will be the focus allowing students to explore nuclear radiation, as well as the fission and fusion processes. Lastly, ideal gases and mixture of gases will be examined. which entails studying the Ideal Gas Law and Dalton's Law of partial pressures.

Laboratory Activities

UNIT 1: Introduction/Matter and Change

Separating Mixtures by Filtration
In this experiment, the components of a mixture will be separated using a combination of chemical and physical changes. The mixture to be separated consists of iron oxide, more commonly known as rust, and salicylic acid, an organic compound used in drug manufacture. The purpose of this experiment is to separate a mixture of iron oxide and salicylic acid and to determine the percent composition of each component in the mixture. The students will carefully follow the procedure which involves filtering two substances, recording initial and final weights of the substances, and calculating the percent composition and percent error.

UNIT 2: Scientific Method/Atomic Structure

Measurement Challenge
Students will practice how to measure length, width, and height using a metric ruler on plastic blocks provided by the teacher. They will then calculate density of the objects. Once this is accomplished, the students will measure length, width, height, and calculate density of various agriculture objects such as a stick of butter, a bag of livestock feed, a bale of hay, and a bucket of soil. On all measurements and calculation, students will practice using significant figures. The purpose of this lab is to get students acquainted with scientific measurement and learn how to properly record accurate information.

Scientific Method
When given a roll of bubble tape bubble gum, students must develop a hypothesis, run an experiment, record data, and analyze results. After students are taught the scientific method, they must create their own testable experiment that includes a hypothesis, purpose, and independent/dependent variables. This lab allows students to apply the scientific method in a real and understandable way. Once the hypothesis has been tested, the students must graph the data, analyze the results, and make recommendations for future experiment replications.

Agriculture Science Fair Project
Students will create a hypothesis, design and run a well-balanced experiment, record data, and analyze results of an agriculture related experiment. The students will have four months to run an experiment, record results, write a paper, create a display board, and compete in a school wide science fair competition. The purpose of this project is to give students a chance to use the scientific method in an agriculturally related manner while giving them hands on experience.

UNIT 3: Electrons in Atoms

Atomic Emissions Spectra and Flame Test
Students will see the atomic emissions spectra of various elements using a spectroscope. Each element will emit a different spectrum of colors. Students will record the spectra by coloring them on a piece of paper. The purpose of this activity is to review how electrons behave within an atom and how photons play a role in the emissions of light. The purpose of the flame test is to determine the identity of the cation in an unknown substance based on its characteristic color in a flame. Sodium Chloride, Calcium Chloride, Lithium Chloride, Copper Chloride, and Potassium Chloride will be tested. Each substance will be tested and students must speculate on how the modern view of the atom supports the different colors each cation produces.

UNIT 5: Bonding

Chemical Pollution in Water: A Qualitative Ion Test Kit
The presence of eight different types of polluting ions in water will be tested. To test for typical pollution ions in water, students will mix the pollution ion with its indicating liquid, which yields vibrant chemical reactions. Students will mix the appropriate chemicals, record their observations, and discuss ways in which society can prevent water pollution. The phosphate ion will be discussed more in depth due to its relation to the agriculture industry. The purpose of this activity is to review the nature of ionic compounds, practice using indicating fluids, and discuss a real and prevalent environmental issue.

Paper Chromatography of Food Dyes

Students will use paper chromatography to separate and identify food dyes in various samples. This will display the separation of polar covalent compounds on the basis of their relative polarities. After allowing chromatography paper to reach the top of the paper when immersed in a sodium chloride solution, students will discuss which samples of food color are pure compounds and which are not. Students will identify which food dyes are most polar and least polar.

UNIT 6: Chemical Names and Formulas

Names and Formulas for Ionic Compounds
The purpose of this lab is to observe the formation of compounds and to write their names and formulas. Using a reaction surface, students will mix various chemicals including silver nitrate with sodium carbonate, lead nitrate with sodium phosphate, and calcium chloride with sodium hydroxide. The students will describe each precipitate that forms and write the formulas and names of the chemical compounds produced in the mixture.

Making Ionic Compounds
Students will mix solutions containing cations and anions to make ionic compounds. Students will create compounds such as iron carbonate, silver phosphate and lead hydroxide. Students will write the formula for each compound formed and discuss which compounds will be soluble in water.

UNIT 7: Chemical Quantities

Micro Mole Rockets: Hydrogen and Oxygen Mole Ratio
Microscale quantities of hydrogen and oxygen will be obtained to test their explosive nature, first separately, then in mixtures of various proportions. The goal is to find the most powerful gas mixture and use it to launch a rocket across the room. The purpose of this activity is to generate hydrogen and oxygen to determine the optimum ratio for their combustion reaction to give water. The optimum ratio will be used to calculate the mole ration for the reaction of hydrogen and oxygen in a balanced chemical equation. The concept of limiting reactants will be used to explain the results obtained with various hydrogen/oxygen gas mixtures. In this lab, students will practice stoichiometry, limiting reactants, mole ratios, and the act of combustion.

Boning Up on Calcium: Microanalysis of Calcium in Milk
Students will explore the chemistry behind nutrition with this experiment that measures the amount of calcium in milk. In a microscale titration analysis of calcium in milk, the number of drops of EDTA (of known molarity) needed for complete reaction with a measured volume of milk are counted. Sodium hydroxide is then added to milk to keep the solution basic, and a metal-ion indicator is added to show when all of the calcium in the milk sample has reacted with the EDTA. Parallel titrations are carried out using both control solutions and a reference solution. Students will practice using titration and calculating molarity while discussing the importance of calcium in the diet.

UNIT 8: Chemical Reactions

Chemical Reactions
Students will perform five chemical reactions: synthesis, decomposition, single replacement, double replacement, and combustion. After performing each chemical reaction, students will record their observations, write the evidence that a chemical reaction occurred, write the balanced chemical equation, and identify the type of reaction.

Soil Chemistry Lab
Students will test the acidity of soil relative to practices common in annual crop production, including soil liming. Students will examine the reactions present in soil when limed and write the balanced chemical equation for the reaction. Students will also obtain an alfalfa plant with intact roots and nodules. The class will discuss the chemical reaction that takes place in the root nodules to produce Nitrogen. Students will write the balanced chemical equation and identify the type of chemical reaction taking place in root nodules of legumes.

Chemistry of Food Additives: Fruit Facts
Students will test methods of preventing browning in various perishable foods such as apples and potatoes. Students will test the effectiveness of ascorbic acid on slices apples submerged in water versus sliced apples submerged in water with no acid. The purpose of this activity is to visualize and discuss the oxidation of phenolic compounds due to the action of polyphenol oxidase enzyme. Ascorbic acid is often used to prevent the discoloration of several foods. When added to distilled water, it lowers the pH of the solution, therefore inhibiting phenol oxidase activity. In the lab, student will discuss the ways in which produces package various agriculture

commodities such as sliced apples, and how chemistry can help producers preserve food.

UNIT 9: Stoichiometry

Leftover Aluminum Wire: A Stoichiometry Lab
The redox experiment between copper(II) chloride and aluminum metal gives an impressive visual reaction. In this lab, students will use a balanced chemical equation and stoichiometry calculations to predict the amount of aluminum that should react with copper(II) chloride and compare this to the actual amount of leftover aluminum wire. This lab will cover oxidation-reduction reactions, limiting reactants, stoichiometry, and yield calculations.

UNIT 10: States of Matter and Behavior of Gases

Boyle's law in a bottle
The purpose of this experiment is to perform a modern version of Boyle???s classic experiment without the hazards associated with the use of mercury. The experiment will be carried out using air trapped inside a sealed syringe within a pressure bottle. The bottle will be pressurized by pumping in air to obtain a pressure several times greater than the surrounding air. As some of the excess pressure within the bottle is released, the volume of the trapped air inside the syringe will change. Volume measurements will be made at several different pressures and the results will be analyzed by graphing to derive the mathematical relationship between pressure and volume.

UNIT 11: Aqueous Systems and Solutions

Making a Solution
Student will make a solution and use carefully measured date to calculate the solution???s concentration by filling a flask with sodium chloride, then dissolving it in water. After taking initial and final weights, the percent mass, mole fraction, molarity, and density of the solution will be calculated.
Observing Agriculture Solutions
Students will examine and discuss various solutions used in agriculture including liquid fertilizers such as anhydrous ammonia, pesticide applications, livestock feed additives, and different milk products. Students will then calculate the fertilizer to water ratio needed to spray a 100 acre field of pre-emergent corn seed.

UNIT 12: Thermochemistry, Reaction Rates, and Equilibrium

Hot and Cold Equilibrium
Students will visualize the effect of change in temperature on a system at equilibrium, reinforcing LeChateliers Principle. In this experiment, cobalt(II) chloride is dissolved in water to form a pink cobalt(II) chloride water complex ion. When alcohol is added to the aqueous cobalt chloride, three of the water molecules are removed, forming a blue species. This process is an endothermic reaction and heat is considered a reactant. Students will discuss how an increase of decrease in temperature affects a system at equilibrium.

Instant Hot/Cold Pack
Students investigate the concepts of thermochemistry by creating their own instant hot and cold packs. By using a heavy duty zip lock bag and various chemicals, each activity will demonstrate a different type of thermodynamic process or reaction. The cool reaction is an example of an endothermic reaction, the instant cold pack is an example of an endothermic process and the hot bag is an exothermic reaction. Students will create the hot and cold packs, record their observations, discuss the flow of heat in each reaction, and determine if they are an endothermic or exothermic reaction.

Phase Change of Water
Students will change the phase of water from solid, to liquid, to vapor by melting ice on a hot plate. Students will record the temperature in degrees Celcius every minute and plot time versus temperature on a graph. The purpose of this lab is to understand the flow of energy and change of temperature when a substance changes state.

Preparation and Properties of Biodiesel
Biodiesel is an alternative, processed fuel for cars and trucks that is obtained from biological sources. The purpose of this activity is to prepare biodiesel fuel and to investigate the amount of energy it releases when burned. Students will calculate the change in temperature, amount of energy absorbed, and the heat of combustion of the fuel from the change in energy of the water and the mass of fuel consumed. Students will then discuss the potential for using biodiesel in agriculture settings and how it can benefit the environment.

UNIT 13: Acids, Bases and Salts

Titration Lab
Students will determine if fresh or frozen orange juice contains more vitamin C. This will be determined by using a known amount of vitamin C as a standard solution then titrating the vitamin C sources into a dichloroindophenol solution. Students will then calculate the amount of vitamin C in milligrams when comparing it to the known amount.

Disappearing Ink: Thymolphthalein, an Acid-Base Indicator lab
In this activity, students will explore the properties of a characteristic acid-base indicator, thymolphthalein, and to extend their understanding of pH and acid-base concepts. Students will write a message using the thymolphthalein solution on a large piece of chromatography paper. After the message has disappeared, students will mist the paper of sodium hydroxide solution, allowing the message to reappear. Students will then experiment with other substances to determine the conditions which make the ink color disappear. Students will then estimate the pH range at which the indicator transition takes place. Students will describe what happened in this lab, and explain what cause the ink to disappear and reappear. This lab is intended to overview concepts of pH, acids and bases, and indicators.

Soil pH
Students will bring in soil samples from various locations around the county. Students will record the place in which each sample was taken and note any agriculture or industrial activity that has taken place in the soil's surroundings. They will then dilute them in water and test the pH of each soil using pH test strips. After recording their observations, students will make inferences about how the use of each soil impacts its pH and the effect agriculture has on soil pH.

Cheese-Making
The purpose of this activity is to examine the effects of enzyme activity and the different densities of milk components. Students will create cheese from powdered milk, age it for 48 hours and record observations of the final product. Students will discuss how pH, temperature, and bacteria type affect the cheese-making process.

UNIT 14: Organic Chemistry

Organic Models Lab
Students will build models of organic molecules and name the nine structural isomers of heptane. Using a ball and stick kit, students will use colors to represent certain elements. They will build a model for a straight chain isomer of heptanes followed by the eight other structural isomers. Students will determine which is the shortest possible straight carbon chain in the isomer and why each one has its own unique name.

Milk is a Natural
The purpose of this lab is to separate the protein and carbohydrate components of skim milk and verify their identity. This lab activity involves the separation, identification, and quantitative analysis of the protein and carbohydrate fractions of skim milk. The experimental results will be compared against the information provided on the nutritional label for the amount of protein and carbohydrate in milk.

Key Assignments

UNIT 1: Introduction/Matter and Change

Chemistry, 2007. Section 1.3 of chapter 1; all of chapter 2.
Students answer questions from the assigned reading.

UNIT 2: Scientific Method/Atomic Structure

Chemistry, 2007. All of chapters 3 and 4
Students will read text sections as noted in Resources section.

Safety Equipment Demo
Students take notes from teacher demonstration on lab safety.

AIM Chemistry Activity
Students will review the parts of the atom.

UNIT 3: Electrons in Atoms

Chemistry, 2007. Chapter 5
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.

The Atom Revealed, Quantum Universe, Uncertainty Videos
Students watch and take notes on videos to reinforce difficult to visualize concepts.

Element Advertisement
Students will create a billboard that advertises an element and its electron configuration and uses.

Ag Chemistry Advancement Assignment
Students will be assigned a topic to research related to historical advances in agricultural chemistry about which they will write a two page paper and present it to the class.

UNIT 4: The Periodic Table

Chemistry, 2007. Chapter 6, and wall periodic table
Students will read text sections as noted in Resources section. Students take notes from teacher generated PowerPoint and lecture.

Group Element Project
Students will research, create and present a poster highlighting the role of one element in modern or historical agricultural practice.

UNIT 5: Bonding

Chemistry, 2007.Sections 7.1 and 7.2 of chapter 7. Sections 8.1; 8.2; and 8.3 of chapter 8.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint. Students answer questions from the assigned reading.

UNIT 6: Chemical Names and Formulas

Chemistry, 2007. Chapter 9
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint. Students answer questions from the assigned reading.

Sell that Compound Assignment
Students will draw a poster to sell the uses and characteristics of an assigned compound to an agricultural producer.

UNIT 7: Chemical Quantities

Chemistry, 2007. Chapter 10
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint. Students answer questions from the assigned reading.

UNIT 8: Chemical Reactions

Chemistry, 2007. Sections 11.1 and 11.2 of chapter 11.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint. Students answer questions from the assigned reading.

Reaction Demonstrations
Students watch teacher reactions demonstrations, characterize each reaction and balance the resulting equation.

KaBoom! Video
Students will watch and take notes on a video describing the chemical reactions involved in explosives.

UNIT 9: Stoichiometry

Chemistry, 2007.Sections 12.1 and 12.2 of chapter 12.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.
Students answer questions from the assigned reading.

UNIT 10: States of Matter and Behavior of Gases

Chemistry, 2007. Sections 13.1 and 13.2 of chapter 13 and 14.1 and 14.2 of chapter 14.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.
Students answer questions from the assigned reading.

Gas Law Project
Students make a Power Point and do a presentation to explain a gas law.

UNIT 11: Aqueous Systems and Solutions

Chemistry, 2007. Sections 15.2 and 15.3 of chapter 15 and sections 16.1 and 16.2 of chapter 16.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.
Students answer questions from the assigned reading.

UNIT 12: Thermochemistry, Reaction Rates, and Equilibrium

Chemistry, 2007. Section 17.1 of chapter 17 and 18.1 of chapter 18.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.
Students will answer questions from the assigned reading.

Dynamic Equilibrium Video
Students will watch and take notes on a video describing the dynamic nature of equilibrium.

Thermochemistry Project
Student will write a two page essay, produce a visual aide, and present to the class on a real-life application of Thermochemistry as it relates to food processing.

UNIT 13: Acids, Bases and Salts

Chemistry, 2007. Section 19.1 of chapter 19.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.
Students will answer questions from the assigned reading

Acids and Bases Essay
Students will write two page essay on uses, characteristics and sources of acids and bases in soil science and their effects on agricultural productivity.

UNIT 14: Hydrocarbon Compounds

Chemistry, 2007. Sections 22.1 and 22.2 or chapter 22
Students will read text sections as noted in Resources section, and take notes from teacher generated notes on Powerpoint.
Students will answer questions from the assigned reading.

Draw That Hydrocarbon Game
Students will compete as teams to correctly draw the structural formulas of hydrocarbons and substituted hydrocarbons.

UNIT 15: Nuclear Chemistry

Chemistry, 2008. Sections 25.1 and 25.3 in chapter 25
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.
Students answer questions from the assigned reading.

Albert Einstein Video
Students will watch and take notes on video to add a historical insight to their understanding of fission.

UNIT 16: Ideal Gases and Mixtures of Gases

Chemistry, 2007. Sections 14.3 and 14.4 of chapter 14.
Students will read text sections as noted in Resources section, take notes from teacher generated PowerPoint.
Students answer questions for the assigned reading.

Liquid Nitrogen/Vacuum Demonstration
Students watch teacher perform demonstrations and answer questions verbally posed by teacher.

The Precious Envelope video
Students will watch and take notes on a video regarding the atmospheric gases.

Atmospheric Gases Essay
Students will investigate the effects of atmospheric gases on weather and weather's effect on agricultural production. They will write a 3-page essay on the subject.

UNIT 17: Agriscience Fair

Chemistry, 2007. Section 1.1 of chapter 1.
Art supplies.
Students will prepare a poster detailing the importance of research in the development of agriculture.
Students will develop an agriculturally related science fair experiment and construct a research paper utilizing course knowledge as well as larger scientific principles.

Instructional Methods and/or Strategies

Being that chemistry is a laboratory science area, the primary instructional strategy used to deliver curriculum are hands-on labs or Experiential Learning. This method of instruction allows to students to practice the concepts and see them in action, which research suggests leads to improved retention and ability for application. Also, included in this area of Experiential Learning and used as a part of this course are research projects and assigned questions. Every unit within the content outline is supported by one or more experiential learning strategies.

Another key instructional strategy used is Interactive Learning, which allows students to manipulate content in various ways and form cognitive anchors. For example, there are opportunities for students to engage in role-playing, debates, discussion, and group projects. The following concepts within the content outline are supported by Interactive Learning; elements, compounds, ionic nomenclature, and the structure of gases.

Direct instruction is a foundational instructional strategy used as a par to this curriculum. Every unit provides students with direct instruction through teacher-lead discussion and lecture. Students are able to build a foundation of knowledge which will then be built upon through labs and other interactive methods.

The last strategy used is Indirect Instruction through activities such as essays, homework, and reading methods.

Assessment Methods and/or Tools

UNIT 1: Introduction/Matter and Change

To assess students understanding of the properties of matter, mixtures, elements and compounds, and chemical reactions, students will demonstrate their knowledge through a constructed response summative assessment.

UNIT 2: Scientific Method/Atomic Structure

To assess students understanding of volume, mass, density; dimensional analysis and conversion problems which will culminates in the use of stoichiometry, students will demonstrate their knowledge through a selected response assessment. To assess student understanding of atomic model and the discovery of the parts of the atom, students will demonstrate their knowledge through a lab report.

UNIT 3: Electrons in Atoms

To assess student understanding of atomic models and how they led to the quantum theory of the atom, students will demonstrate their knowledge through selected response formative assessment. To assess student ability to write electron configurations for atoms and be able to relate that to the atom's structure, position on the periodic table and their spectra, students will demonstrate their knowledge through a lab report.

UNIT 4: The Periodic Table

To assess student understanding of the development of the modern periodic table and trends in the periodic table and how elements are classified, students will demonstrate their knowledge through a selected response summative assessment.

UNIT 5: Bonding

To assess student ability to distinguish the different types of chemical bonds and how they work on the atomic level, students will demonstrate their knowledge through a lab report. To assess student ability to identify the type of bonding exhibited by compounds by their characteristic properties, students will demonstrate their knowledge through a constructed response summative assessment.

UNIT 6: Chemical Names and Formulas

To assess student ability to use the rules for naming ionic and molecular compounds as well as acids and bases, students will demonstrate their knowledge through several means of assessment, including a performance, lab reports, and constructed response assessments.

UNIT 7: Chemical Quantities

To assess student understanding of the concept of the mole as the chemical measurement of matter, and understand how it relates to mass on the periodic table, students will demonstrate their knowledge through several lab reports and a selected response summative assessment.

UNIT 9: Stoichiometry

To assess student understanding of arithmetic of equations and the concepts of mole ratios, dimensional analysis and algebra to solve chemical problems, students will demonstrate their knowledge through a lab report and selected response summative assessment.

UNIT 10: States of Matter and Behavior of Gases

To assess student ability to compare the natures of gases and liquids, then examine the properties of gases in more detail, students will demonstrate their knowledge through a series of lab reports and performance assessments. To assess student ability to solve gas law problems, and discuss kinetic molecular theory as it relates to real and ideal gases, students will demonstrate their knowledge through constructed response summative assessment.

UNIT 11: Aqueous Systems and Solutions

To assess student understanding of mixtures with an emphasis on solutions and the characteristics of aqueous solutions and the calculation of solution concentration, students will demonstrate their knowledge through a lab report and selected response summative assessment.

UNIT 12: Thermochemistry, Reaction Rates, and Equilibrium

To assess student understanding of the flow of energy (heat) and rates of reactions, and the concept of chemical equilibrium, students will demonstrate their knowledge through a performance assessment project, a series of lab reports, and a constructed response summative assessment.

UNIT 13: Acids, Bases and Salts

To assess student understanding of the three main theories of acids and bases, and the real-life characteristics of acids, bases and salts, students will demonstrate their knowledge through a lap report and selected response summative assessment.

UNIT 14: Hydrocarbon Compounds

To assess student understanding of the bonding and structure of simple carbon compounds, students will demonstrate their knowledge through a series of lab reports and a constructed response summative assessment.

UNIT 15: Nuclear Chemistry

To assess student understanding of nuclear radiation, as well as the fission and fusion processes, students will demonstrate their knowledge through a selected response summative assessment.

UNIT 16: Ideal Gases and Mixtures of Gases

To assess student understanding of the applications of the Ideal Gas Law and Dalton's Law of partial pressures, students will demonstrate their knowledge through a constructed response summative assessment, as well as a series of lab reports.

Course Title

Agricultural Electricity

Description of Target Group

This course is designed for any student. However, it is recommended for 10th, 11th, and 12th grade students. It is also suggested that the students have a firm understanding of math.

Purpose

The purpose of this one-semester class is to develop an awareness in the student of basic electricity as it applies to self, farm, and related industries. It will develop an understanding of simple electrical problems; how to work safely with them; develop techniques to be used by the student in working with electrical devices and simple construction wiring; develop a positive attitude so that the student will work SAFELY with electricity and know the limits. Students will study an overflow of career opportunities and planning with emphasis being placed on future educational plans if an interest is established in the electrical trades.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete District safety test with a passing score.
2. Safely handle electrical wiring and work safely with it.
3. Design and lay out simple AC circuits.
4. Understand electrical color codes and where to use them.
5. Check for ground.
6. Understand and use common terms used in electrical work.
7. Understand service entrance wiring and how to trace branch circuits.
8. Determine proper wire sizes and corresponding protective devices.
9. Strip wire and make normal switch and outlet installations.
10. Clean and service electrical motor.
11. Figure electrical cost after reading a kilowatt hour meter.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The student will use the information given them to study and complete their class manual. Groups of two or three students will work together on electrical circuits and electric motors. Individual reports will be given each student on areas selected by the instructor and student. The students will be exposed to films, filmstrips, and resource people.

Course Title

Horticulture Mechanics 1A

Description of the Target Group

This course is designed for all high school students who have completed Horticulture 1A and 1B.

Purpose

This course is designed to include: Landscaping construction care and maintenance of tools, wood structures and concrete work, and basic landscape design. This course is designed to be taken as part of the horticulture program.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. Learn about the FFA.
2. Be encouraged to have a supervised occupational experience program.
3. Realize the broad scope of career opportunities in landscape maintenance.
4. Identify the major horticulture related businesses in their country and state.
5. An understanding of tool care maintenance.
6. The safe and proper use of horticulture equipment.
7. Small gas engine trouble shooting.
8. The value of landscape structures.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria School District

Activities

Field trips, lectures, discussions, demonstrations, student reports, guest speakers, movies, and filmstrips.

Course Title

Horticulture Mechanics 1B

Description of the Target Group

This course is designed for all high school students who have completed Horticulture Mechanics 1A.

Purpose

This course is designed to include: Landscape construction, care and maintenance of tools, wood structures and concrete work, and basic landscape design. This course is designed to be taken as part of the horticulture program.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. Identify common garden tools and landscaping materials.
2. Basic concrete work.
3. Basic wood construction.
4. Basic landscape design symbols.
5. How to construct landscape structures.
6. Recognize a good landscape.
7. Work in the FFA.
8. Work on their Supervised Occupational Experience programs.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Field trips, lectures, discussions, demonstrations, student reports, guest speakers, movies, and filmstrips.

Course Title

Independent Study in Agriculture

Description of Target Group

Students enrolled in this course must be of 11th – 12th grade standing and have shown a desire to do independent, advanced work. Each student desiring to enroll will make application to the Department of Agriculture, stating their desired undertaking. Open to all 11th– 12th grade students.

Purpose

This course is designed to allow students to do individual advanced work in one or more industrial and vocational areas.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete a safety test with a passing score.
2. Provide and use protective clothing and eye protection when and where required.
3. Demonstrate the ability to set up and work under sage working conditions.
4. Operate safely and demonstrate ability in the proper use of hand and power equipment available to them.
5. Complete the work that was agreed upon by the student and department advisors.
6. Demonstrate ability to work independent of constant supervision.
7. Present a typed summary of the results of their understanding to their advisors.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Student, with help of the advisors, will provide materials and activities necessary for student to complete his undertaking.

Title: Agriculture Leadership and Communications

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites:	Teachers approval (Required)
Co-requisites:	None
Integrated (Academics / CTE)?	Yes: Agricultural Business
Grade levels:	9th, 10th, 11th, 12th

ourse Description

urse overview:

This yearlong course is designed to engage students in experiential activities which further their personal development and premier leadership skills. The curriculum consists of integrated performance activities that will assist in the development of critical thinking, extemporaneous speaking, conflict resolution, consensus-building and group communication abilities. Written and oral skill development will be emphasized through individual and collaborative projects as well as character development through service-learning exercises.

urse content:

Personality and Leadership

Description: Students will define leadership and create goals for themselves for the year. Students will examine different leadership styles and case studies. Students will research different real world leaders. Students will evaluate the strengths and weaknesses of different leadership styles and real world leaders. This unit is an introduction to the topic of leadership. To achieve this goal, students will look a numerous real world leadership case studies and they will evaluate the issues within the situation, as well as evaluate how the person handled the situation. They will take personality assessments, evaluate 4 sets of preferences and how to work well with different group personalities. Students will have group and class discussions about these case studies and will write frequently about how they would handle the situation. Additionally, students will research a real world leader and present on the strengths and weaknesses of their leadership style.

Unit Assignment(s):

Assignment: Students will write an essay explaining their personal leadership style and creating goals for the year. This assessment relates to the goals of the class because students will begin to think about themselves as leaders and how they would handle different situations as a leader. Additionally, the assessment connects to the writing goal of the class since students will need to clearly explain how they plan on being a leader.

In addition, students will plan an FFA leadership conference on the Patterson High School campus known as the local Greenhand Conference. They will invite all the freshmen within the Agriculture department and present 5-6 different sessions about building leadership skills to these freshmen. The students in this class are responsible for planning, organizing and developing these leadership sessions for this leadership conference.

Emotional Intelligence

Description: In this unit, students will evaluate their emotional intelligence (EQ). Emotional Intelligence is the capacity to be aware of, control, and express one's emotions, and to handle interpersonal relationships judiciously and empathetically. The purpose of this unit is to have students to effectively analyze their own personal emotional intelligence. They will evaluate various situations in an agricultural work environment and how people utilized emotional intelligence in these situations.

⮒ Unit Assignment(s):

Assignment: Students will evaluate their own emotional intelligence through EQ quizzes. They will then be grouped with other students with similar emotional intelligence. The group will have to create a visual presentation that describes their EQ and how they tend to work with people of other emotional intelligence styles.

Conflict Resolution/ Problem Solving

Description: In this unit, students are introduced to basic techniques to handle conflict resolution. In any leadership situation, students will be presented with some type of conflict and need to be able to resolve this conflict in a positive way. This unit will also be focused on learning how to be assertive but an effective leader while making decisions and solving problems as a leader. Students will learn how to handle emotions effectively in a group situation. They will work to identify the core issues of any situation and look at problems from other perspectives. Students will learn how to build off of other's ideas in order to find a more creative and effective solution to the problem. This will be done through real work and hypothetical situational analysis of issues. Students will work in groups to develop and implement proposed solutions and will meet with appropriate personnel to present their solutions and persuade others of the viability of their ideas. Students will analyze examples of novel approaches to issues and will learn about effective brainstorming.

⮒ Unit Assignment(s):

Assignment: Students will be presented with mock conflicts in Agricultural work environments. They will have to present possible methods to reduce the conflict within the work environment. The students will work in groups to clearly determine the core issues within the situation and provide a clear plan on how to handle emotions effectively and create a resolution for the conflict.

In addition, students will practice their ability to solve problems in a group environment. Students will engage in a community-based project related to Agriculture or the FFA chapter where they identify a problem they want to fix, organize a way to fix it, and then go about executing that solution. This assessment relates to the goals of the class because it connects the learning in class to the real world. Students will need to think creatively to find solutions to real problems and then plan their solution.

Leading a Team

Description: In this unit, students will be investigating the proper way to leading a team. Patterson FFA chapter is officially led by seven officers who are always in this course. However, our goal is to have a whole class of leaders who are within this course. Hence, this unit is essential because it helps provide more guidance on how to properly lead a team or in this case, an FFA chapter. The students will investigate their interpersonal skills to evaluate themselves to see if they are a trusting individual to others.

⮒ Unit Assignment(s):

Assignment: Leading a team is something often done by a coach. Hence, for an assignment, the students will be introduced to 10 key coaching skills. The students will have to take these ten key coaching skills and write about how they will apply them to being a leader in the FFA chapter. They will have to come up with a plan on how to better be leaders in their FFA chapter using these 10 key coaching skills.

Career Readiness

Description: In this unit, students will begin preparing themselves for a career. The purpose of this course is to prepare students for the future as a leader in a career in Agriculture. Through this unit, students will learn the basic skills of creating a cover letter, resume, job application and preparing for an interview. They will focus on building their individual interview skills by practicing their basic interview questions with their peers. In addition, they will practice giving positive feedback to their fellow students as they peer review cover letters and resumes.

⮒ Unit Assignment(s):

Assignment: Students will participate in a local FFA Job Interview contest. They will each complete all the steps to participating in this contest which includes creating their resume, cover letter and completing a job interview. California FFA provides four mock job positions each year that the students will be applying to for the contest. The most difficult part of the contest is that the students will have to meet with an interview panel and interview for this mock position. Those students who score the highest in the local contest will continue on to the Sectional FFA Public Speaking competition for the Job Interview contest.

Communication

Description: Students will learn the skills necessary to being a good public speaker. These will include: projection, articulation, eye contact, body language, and confidence. Students will practice each of the public speaking skills necessary in increasingly difficult situations beginning with peer-to-peer and culminating in a large group speech. Students will investigate various communication styles including non verbal communications and verbal communications. In addition, the students will become familiar with the ten tools for effective listening.

⮒ Unit Assignment(s):

Assignment: Students will have to practice their public speaking skills through the participation in a local chapter competition of the FFA Opening and Closing Ceremonies contest. These students will need to memorize specific parts of the ceremonies and have to present the entire ceremony's speech in a group contest. They will be graded based upon their presentation of the ceremony and their projection, articulation, eye contact, body language and confidence. The group that does the best in the local competition will move on to the Sectional FFA Opening and Closing Ceremonies contest.

Parliamentary Procedure

Description: Parliamentary procedure is the body of rules, ethics, and customs governing meetings and other operations of clubs, organizations, legislative bodies, and other deliberative assemblies. In Agriculture and the FFA, parliamentary procedure is the basic rules to make decisions and votes in a professional manner. As students are preparing for further involvement in the FFA and careers, parliamentary procedures are important to know. Almost anyone with a career in Agriculture will have to be aware of legislation in the state and by being familiar of parliamentary procedure will give anyone a head start in their career. In this unit, students will be familiar with the main motions and procedures for a vote to be passed and decisions to be made properly.

⮒ Unit Assignment(s):

Assignment: The students will be grouped in a group of approximately 6 students and they will demonstrate their knowledge of main motions using parliamentary procedure. They will have to participate in a local Parliamentary Procedure contest that is similar to the FFA Parliamentary Procedure contest.

Team Development

Description: In this unit, students will learn about the skills needed to work as a team. They will investigate the characteristics of an effective team. This will allow them to evaluate how they are working as a leadership team within the Patterson FFA chapter. They will complete a team dynamics or group self assessment to see if they believe they have the proper dynamics as a team.

⮒ Unit Assignment(s):

Assignment: The students will be presented with mock issues within a team environment. The students must evaluate these mock issues and develop plans on how to create or change the current team to build the proper team dyanmics or develop an effective team.

Event Planning

Description: Students will look at different ways to plan various types of school and community projects. They will learn and implement a project planning process to ensure that they are thinking about all the different aspects of organizing an event. Students will work to delegate tasks appropriately, as well as anticipate potential problems and plan solutions to those potential setbacks before they occur. Students will learn how to plan for the myriad aspects of an event, to communicate with necessary individuals and how to organize all the details of an event in a timely fashion. Students will learn to evaluate an event and identify improvements for future planning.

⮒ Unit Assignment(s):

Assignments: In group committees, students will plan and implement various FFA events on campus using a project-planning format. They will be responsible for every aspect of the event including budgeting, personnel, marketing, communication and implementation. After their event, they will also evaluate the planning process and identify changes that they think are necessary to improve both the process and the results for future events.

Agricultural Issues

Description: In this unit, students will research various agricultural issues in the industry such as water rights, land uses and any other issue relating to agriculture. They will choose an agricultural issue that interests them and complete digital research on this issue. They will be introduced to the proper procedures to making a convincing presentation and the basic presentation skills. In this unit, they are learning more about common issues within the industry as well further developing their public speaking skills.

Unit Assignment(s):

Assignments: Students will take their chosen agricultural issue and create a digital presentation to present to local agriculturalists. This assignment allows students to demonstrate their writing skills to write their presentation as well as demonstrate their use of technology to make a persuasive presentation. The panel of agricultural industry professionals will listen to these presentations and ask the student presenters questions at the end of each presentation.

none

17. Co-Requisites

18. Brief Course Description

Leadership, communication skills, and work ethics are major contributing factors in today's successful work force. This course is designed to instruct and train students to meet the necessary leadership and communication skills needed for a career in the Agriculture industry. This course will provide instruction and meaningful experiences in personal development, career awareness and planning, management, and presentation of FFA leadership activities and Community Service Projects. Students will also be required to compile an individual career plan and portfolio.

B. COURSE CONTENT

Please refer to instructions

19. Course Goals and/or Major Student Outcomes

Upon completion of this course students will be able to:

1. Be a fair and effective leader.
2. Make logical decisions.
3. Work effectively with groups and committees.
4. Be able to speak effectively and communicate with others.
5. Manage, prioritize, and plan time efficiently.
6. Identify conflict and use conflict management.
7. Be able to conduct a meeting using parliamentary procedure.
8. Prepare a personal career portfolio.
9. Select and plan for a career.
10. Apply for a job and go through an interview process.
11. Perform 20 hours of community or school service.

20. Course Objectives

1.) To develop personal leadership qualities.

- a. Leadership: Who and what is a Leader?
- b. Developing Personal Responsibility
- c. Ethics
- d. Social Behavior
- e. Developing standards of personal dress
- f. Developing a sense of vision
- g. Developing self-discipline and goals
- h. Taking risks

2.) Growing interpersonal relationships

- a. Effective one-on-one communication
- b. Non-verbal communication
- c. Developing people skills
- d. Keeping commitments
- e. Loyalty and openness
- f. Encouraging others
- g. Conflict resolution
- h. Service to others

3.) Nurturing group leadership

- a. Leading in constantly changing times
- b. Systems thinking
- c. Encouraging personal mastery
- d. Understanding mental models
- e. Building shared vision

f. Shared decision making

g. Presiding over meetings

h. Speaking in public

4.) To create an awareness of the importance of agricultural leadership.

5.) To prepare students for college level entry in the various disciplines of agriculture science.

21. Course Outline

Unit 1 personal Leadership Development

Lesson	Student Outcomes
Interpersonal Development	1. Demonstrate good manners and positive behaviors 2. Identify elements of positive self-concept 3. Demonstrate positive professional image and behaviors
Leadership Development	1. Knowledge of the history, aims, purposes, constitution, Organization of the Future Farmers of America. 2. Working knowledge of Parliamentary Procedure. 3. Demonstrate communication skills.

Unit 2 Effective Leadership Types and Traits of Good Leadership

1. Define and identify leadership styles.
2. Define technical, conceptual and human. relations skills.
3. Identify leadership potential
4. Understand Maslow's Hierarchy of needs.
5. Demonstrate methods of motivation and influence.

Unit 3 Career Planning / Career options

1. Explain the importance of work to the individual and society
2. Identify potential and local agriculture careers.
3. Describe economic and technological trends of the work environment.

Career Planning

1. Identify, research, and describe and a agriculture career.
2. Identify and list skills abilities, and education required for career choice.
3. Develop a career plan.

Individual Personal Portfolio

1. Develop personal; resume and letter introduction.
2. Complete a basic job application.
3. Acquire two letters of reference.
4. Demonstrate job interview skills.
5. Complete five agriculture work samples.
6. Understand employee/employer responsibilities.

Unit 4 Communication Processes / Importance of Speaking and Listening

1. List and describe the importance of public speaking skills.

2. Demonstrate the ability to leas a group discussion.
3. Demonstrate the ability of being a good listener.

Communication Technology

1. Identify and demonstrate ability to communicate effectively using telephone written memo and letters, verbally, and e-mail.

Public Speaking Skills

1. Select, research, develop, and deliver an 8-10 minute presentation to a local agriculture service group or education group.

Unit 5 Time Management / Importance of Time Management

1. Explain the process of time management
2. Develop a system for grouping and planning activities.
3. Develop and utilize a personal daily activity list.

Prioritizing

1. Understand and prioritize activities according to urgent, short term, immediate, or long term.
2. Develop and unitize a personal daily activity list.

Unit 6 Team Building/Group Dynamics

Lesson **Student Outcomes**

Group Definition and Functions

1. Identify and define group norms

Group Cohesiveness and Teamwork

1. Identify and demonstrate group norms Teamwork and team work skills.
2. Identify roles within groups (dynamics)
3. Identify and understand role conflicts.
4. Identify and demonstrate group communication skills.

Group Pressure

1. Identify and explain group pressure.

Role Playing in Small Groups

1. Identify and demonstrate different roles within a group.

Unit 7 Understanding Power in Organization

Unit 8 Goal Setting

Unit 9 Critical Thinking and Problem Solving

Unit 10 Conflict Management

Unit 11 Public Speaking

Unit 12 Parliamentary Procedure

Unit 13 Current Issues

22. Texts & Supplemental Instructional Materials

Developing Leadership and Personal Skills. Sharon Hunter, Marshal Stewart, Brenda Scheil, Robert Terry, Jr. Steven D. Fraze. Interstate Publishers Inc. Danville, Illinois
Roberts rules of order 3rd edition, FFA Manual, FFA Constitution and bylaws, Supplemental materials, FFA New Horizon Magazine, Western Region Ag. Alert periodical

23. Key Assignments

Individual and Group presentations in:
1.) Interpersonal Development
2.) Leadership Development
3.) Types and Traits of Good Leadership
4.) Career Options
5.) Career Planning
6.) Individual Personal Portfolio
7.) Importance of Speaking and Listening
8.) Communication Technology
9.) Public Speaking Skills
10.) Importance of Time Management
11.) Prioritizing
12.) Group Cohesiveness and Teamwork
13.) Group Pressure
14.) Role Play in Small Groups
15.) Understanding Power in Organization
16.) Goal Setting
17.) Critical Thinking and Problem Solving
18.) Conflict Management
19.) Public Speaking
20.) Parliamentary Procedure
21.) Current Issues

24. Instructional Methods and/or Strategies

Ag leadership will be structured around student inquiry based activities.

1.) Cooperative learning activities
2.), Speech Preparation
3.) Computer simulations
4.) Model constructions
5.) Critical thinking essays
6.) Exams, Quizzes
7.) Lectures
8.) Multimedia presentations
9.) CD-ROMs
10.) Videotapes
11.) Laser discs
12.) Field experiences
13.) Guest speakers
14.) Class discussions

25. Assessment Methods and/or Tools

The following is a list of techniques that may be used in assessing student progress of pre/post diagnostic assessment:
1.) Tests and Quizzes
2.) Laboratory Journal / Class Participation
3.) Projects / Essays
4.) California Student Record Book
5.) Development and maintenance of Supervised Agricultural experience Program (varies per type of project)
6.) Daily Attendance
7.) Final Exam

C. HONORS COURSES ONLY

Please refer to instructions

26. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

27. Context for Course (optional)

This course contributes to the district framework plan through School to Career Plan, and the Righetti High School ESLR's (Expected Schoolwide Learning Results)

28. History of Course Development (optional)

Course Title

Natural Resources Management 1 A/B

Description of Target Group

This course is for 10th, 11th, and 12th grade students.

Prerequisites: Must have completed Life Science, Biology, Agricultural Science 2 or Ag. Biology

Purpose

The purpose of NATURAL RESOURCES MANAGEMENT is to present a study of scientific principles, interrelationships, and problems regarding natural resources conservation. Emphasizes interdisciplinary aspects of environmental decisions and motivates those interested in conservation and management oriented occupations. To include environmental problems and their causes, and observe cultural changes, world views, and ethics. Students will study ecosystems, how they work and what are the major types, and what can happen to them. Other issues will include: environmental economics and politics, Risk, toxicology, and human health along with climate, global warming, and ozone loss. We will explore many aspects of natural resources and bio-diversity.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Reinforced Arithmetic skills
2. Ability to evaluate current events
    a. In relationship to Natural Resources and Ecology
    b. Leading and participating in class discussions of events, issues, and real policy
    c. Summarize weather and climate problems as they relate to global warming and ozone loss
3. Relate life situations to current events
    a. Working with others
    b. Critical thinking in response to reaction paragraph or short essays
    c. Understand world cultural changes and view points that lead to an ethical sustain ability
    d. Understand environmental economics and politics
4. Conservation Projects (to include, but is not limited to:)
    a. Figuring correct amounts and costs of materials
    b. Figuring volume of water projects and dams
    c. Drawing and drafting plans
    d. Summarize the major environmental problems and their causes
    e. Discuss the types and concepts of matter and energy resources
    f. Waste reduction and prevention
    g. Identify food resources and problems that relate to sustainable Earth Ag. systems

5. Discuss and Debate Issues
   a. Discuss ways that safely protect food resources.
   b. Earth's geological processes and the proper use and management of mineral and soil resources
   c. Describe the basic component of ecosystems and how they work
   d. Summarize human population growth, urbanization, and regulation problems and solutions
   e. Discuss chemical, physical, and biological risks and hazards as to various human health problems
   f. Discuss water's importance and the application of efficient water resource use
6. Conducting Lab Activities
   a. Scientific Experiments
   b. Measurements and Evaluations of Projects
   c. Misc. lab activities
7. Assessment of Student Learning
   a. Stunts will present evidence of learning by cooperating with groups or by individual assignments and presentations based on the above subjects.
   b. Students will demonstrate evidence of learning by presenting ideas, solutions, and conclusions to the areas stated above.
   c. Teacher observation and evaluation

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and approved supplementary books used in the Santa Maria Joint Union High School District

Current Topics in Magazines & Newspapers; such as: *Popular Science, California Farmer, Hoard's Dairyman, New Horizons, Wall Street Journal, Santa Maria Times, Feedstuffs, Farm Journal, and other supplementary materials.*

Activities

Individual work, lectures, class participation, demonstration, audio visual materials, guest speakers, small group activities, and field trips.

Course Title

Ornamental Horticulture 1A

Description of Target Group

All 11th and 12th grade students with an interest in art, horticulture and agriculture fields to include business management, leadership and career awareness. Also, group/ team efforts will be stressed throughout the course.

Purpose

To expose students in all areas of Ornamental Horticulture to insure an appreciation of the complex nature of all facets of the industry including botanical classification, physiology, pests/disease, history, artistic designs, selection, color, proportionality of different types of arrangements. Career presentations and individual/group projects will be emphasized. Written and oral evaluations will be required of all units. Student will receive 5 units per semester from this course.

Prerequisites: none (preferably Ag. biology, biology, intro. to art, and 2 years of English)

Standards of Expected Student Achievement

Science Content Standards for California Public Schools,
Biology / Life Science,
#1 Cell Biology
#2 Genetics
#6 Ecology

Chemistry,
#1 Atomic and Molecular Structure
#2 Chemical Bonds
#5 Acids and Bases
#6 Solutions

Earth Science,
#6 Energy in the Earth System
#8 Structure and Composition of the Atmosphere

Ornamental Horticulture 1A (continued)

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Become familiar with Ornamental Horticulture terminology
2. Be able to identify the basic plant anatomy and physiology (leaves, stem, and roots) and have a working knowledge of their importance in the growing process.
3. Identify plant groups: trees, shrubs, ground covers, houseplants, vines, annuals, and perennials.
4. Be able to identify, by common name, the plants listed in the course curriculum sheet that are common to the local area.
5. Be able to recognize the qualifications and requirements for the various ornamental occupations.
6. Use, care for, and identify common ornamental horticulture tools and their safety.
7. Know the different types of propagation: seed, cuttings, grafting, budding, and division.
8. Identify soil amendments and how to prepare soil mixes.
9. Be able to name and have a working knowledge of different methods of watering plants.
10. Identify and explain the uses of horticultural structures: greenhouse, lath house, cold frame, and hot bed.
11. Know and understand the safety and sanitation rules in the nursery unit before working in the nursery area.

Methods of Assessment of Student Learning

1. Objective tests
2. Laboratory Reports
3. Written assignments
4. Class participation
5. Notebook
6. Research reports and oral presentations
7. Poster board display and presentation
8. Written self critiques of all presentations
9. Flyer and brochure development
10. Agricultural experience program
1. Individual and group projects (3 per semester)
12. Supervised agricultural experience project
13. California Agricultural Recordbook and FFA application
14. Attendance, positive attitude and work ethic

Ornamental Horticulture 1A (continued)

Instructional Materials

Floriculture Designing and Merchandising by Charles Griner
Introductory Horticulture by H. Edward Reiley and Carroll L. Shry, Jr.
Western Garden Book by Sunset
Western Fertilizer Handbook by Ca. Fertilizer Association
California Agricultural Education Record Book by Calif. State Dept. of Education

Activities

Laboratory and Field Activity titles
·Poster board display on a research project
· Floral arrangement construction (5+ types)
· Corsage construction
· Banquet/mock wedding planning
· Dish garden
· Plant breeding (genetics)
· Problem Solving
· Ornamental Iron work and design
· Woodwork and design
· Record book/ record keeping
· Lecture/group discussion
· Window display design and critique
· Fertilizer experiment with graph and research report
· Plant growth experiment
· Plant needs experiment
· Create own floral design/landscape with how to instructions
· Water analysis / testing report

Bold activities introduced in Intro. to Art class

Course Outline

Ornamental Horticulture, 1B

To be submitted for A-G: Yes, F requirement

Description of Target Group

All 11th and 12th grade students with an interest in art, horticulture and agriculture fields to include business management, leadership and career awareness. Also, group/ team efforts will be stressed throughout the course.

Purpose

To expose students in all areas of Ornamental Horticulture to insure an appreciation of the complex nature of all facets of the industry including botanical classification, physiology, pests/disease, history, artistic designs, selection, color, proportionality of different types of arrangements. Career presentations and individual/group projects will be emphasized. Written and oral evaluations will be required of all units. Student will receive 5 units per semester from this course.

Prerequisites: None (preferably Ag. biology, biology, intro. to art, and 2 years of English)

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully:
1. Demonstrate knowledge of the elements of visual art and the principals of landscape/floral design.
2. Integrate the use of floral equipment, materials and methods with the elements of art and principles of floral design to create a portfolio of original works of art.
3. Illustrate the interrelationship between the visual arts and the historical and cultural trends and developments.
4. Appreciate, analyze, and critique masterworks of photography as well as individual student works.
5. Relate the broader lessons of the floral and landscape arts to other subjects and fields of endeavor.

Units/Topic (standards/objectives)
Working with Natural Light
- Outdoor Light Conditions (2.1– 2.3)
- Qualities of Light and Shadow (2.1 – 2.3)

- Intensity
- Direction
- Specular vs. Diffused Light
- Color
- Spotlighting

Composition

- Perception (1.1 – 1.3, 2.1 – 2.3, 2.5, 2.6)
- Composition
- Snapshot vs. Vertical Framing
- Horizontal and Vertical Framing (1.1 – 1.3, 2.1 – 2.3, 2.5, 2.6)
- Dominant and subordinate elements
- Shape and form – 2 & 3 – dimensional objects
- Line
- Simplicity (1.1 – 1.3, 2.1 – 2.3, 2.5, 2.6)
- Space/"negative space"
- Dominant and subordinate elements
- Visual weight
- Contrast
- Unity
- The Rule of Thirds (1.1 – 1.3, 2.1 – 2.3, 2.5, 2.6)
- Balance
- symmetry
- asymmetry
- movement
- Lines and Designs (1.1 – 1.3, 2.1 – 2.3, 2.5, 2.6)
- Abstraction
- Line and implied line
- Repetition
- Pattern
- Theme and variation
- Rhythm
- Regular
- Irregular
- Texture
- Unusual Viewpoint
- Point of view
- Emphasis

Analysis and Critique

- 1A self-evaluation assignment sheet (1.1, 1.3, 4.5)
- Group/class critiques
- Classroom Display of Student work (1.1,1.3,4.1 – 4.5)
- Landscape and arrangement shows of student work (1.1, 1.3, 4.1 – 4.5)

Ornamental Horticulture 1B (continued)

Instructional Strategies

The following instructional methods and strategies are used:

- Lecture with student note-taking
- Computer presentation software, such as Microsoft PowerPoint
- Teacher demonstration
- Student-led demonstration or presentation
- Lab work
- Class exercises / guided practice
- Class discussion
- Critiques
- Question and answer
- Reading textbook passages or chapters, articles from periodicals
- Class begins with a written Daily warm-up activity, which can be used for review or to activate prior knowledge or to respond to arrangements or landscape design or ideas.
- Expository writing
- Research in classroom resources, library, internet
- Individual work
- Pair or small group work
- Test and quizzes

Natural Forms

- Landscape (1.1-1.3,2.1-2.3, 2.5, 2.6)
- Still life (1.1-1.3, 2.1-2.3, 2.5, 2.6)

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Become familiar with Ornamental Horticulture terminology
2. Be able to identify the basic plant anatomy and physiology (leaves, stem, and roots) and have a working knowledge of their importance in the growing process.
3. Identify plant groups: trees, shrubs, ground covers, houseplants, vines, annuals, and perennials.
4. Be able to identify, by common name, the plants listed in the course curriculum sheet that are common to the local area.
5. Be able to recognize the qualifications and requirements for the various ornamental occupations.
6. Use, care for, and identify common ornamental horticulture tools and their safety.
7. Know the different types of propagation: seed, cuttings, grafting, budding, and division.
8. Identify soil amendments and how to prepare soil mixes.
9. Be able to name and have a working knowledge of different methods of watering plants.
10. Identify and explain the uses of horticultural structures: greenhouse, lath house, cold frame, and hot bed.
11. Know and understand the safety and sanitation rules in the nursery unit before working in the nursery area.

Ornamental Horticulture 1B (continued)

Methods of Assessment of Student Learning

1. Objective tests
2. Laboratory Reports
3. Written assignments
4. Class participation
5. Notebook
6. Research reports and oral presentations
7. Poster board display and presentation
8. Written self critiques of all presentations
9. Flyer and brochure development
10. Agricultural experience program
11. Individual and group projects (3 per semester)
12. Supervised agricultural experience project
13. California Agricultural Recordbook and FFA application
14. Attendance, positive attitude and work ethic

Instructional Materials

Floriculture Designing and Merchandising by Charles Griner
Introductory Horticulture by H. Edward Reiley and Carroll L. Shry, Jr.
Western Garden Book by Sunset
Western Fertilizer Handbook by Ca. Fertilizer Association
California Agricultural Education Record Book by Calif. State Dept. of Education

Activities

Laboratory and Field Activity titles

- Poster board display on a research project
- Floral arrangement construction (5+ types)
- Corsage construction
- Banquet/mock wedding planning
- Dish garden
- Plant breeding (genetics)
- Landscape design (CAD)
- Ornamental Iron work and design
- Woodwork and design
- Record book/ record keeping
- Problem Solving
- Lecture/group discussion
- FFA proficiency app. In area of choice
- Window display design and critique
- Fertilizer experiment with graph and research report
- Plant growth experiment
- Plant needs experiment
- Create own floral design/landscape with how to instructions
- Water analysis / testing report
- Soil testing report

Course Title

Ornamental Horticulture 2A

Description of Target Group

This course is for 10th, 11th, and 12th grade students who have completed Ornamental Horticulture 1 A/B.

Purpose

The purpose of ORNAMENTAL HORTICULTURE 2A is to study the areas of: plant identification, advanced landscaping, turf management, advanced floral design, commercial flower production, sales, marketing, and job opportunities. This is the first semester of a one year course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Be able to identify by botanical name the plants listed in the course curriculum sheet common to the local area.
2. Use, care for, and identify common floral and landscaping tools and materials.
3. Name and construct the different types of flower arrangements and corsages.
4. Identify common lawn grasses.
5. Know and use safety rules in the operation of horticultural power equipment.
6. Identify common cut flowers.
7. Be able to recognize the qualifications and requirements for jobs in the nursery practices and floriculture industries.
8. Be able to draw a landscaping plot plan.
9. Identify floral containers and mechanics.
10. Know the process of flower marketing from grower to consumer.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

Course Title

Ornamental Horticulture 2B

Description of Target Group

This course is for 10th, 11th, and 12th grade students who have completed ORNAMENTAL HORTICULTURE 2A.

Purpose

The purpose of ORNAMENTAL HORTICULTURE 2B is to continue and further develop an understanding and knowledge of: plant identification, landscaping, commercial flower production, flower arrangement and corsage making, operation and maintenance of ornamental horticulture equipment, disease and pest identification, turf management, and arboriculture. This is the second semester of a one year course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Be able to identify by botanical name the house plants and cut flowers listed in the course curriculum sheet.
2. Identify, use and care for common types of turf equipment.
3. Be able to recognize the qualifications and requirements for occupations in turf management and arboriculture.
4. Be able to maintain a lawn.
5. Be able to maintain permanent plantings.
6. Be able to identify common insect pests of ornamentals.
7. Be able to identify common weeds of ornamentals.
8. Correctly prune a landscape tree and shrub.
9. Be able to repair PVC pipe sprinkler system.
10. Apply common pesticides to ornamentals for the control of common insect pests.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

Name: Jim Armstrong

Title/Position: Asst. Supt. Curric/Instruction

Phone: 922-4573 **Ext.:** 4211

E-mail: jarmstrong@smjuhsd.org

9. Subject Area

- ☐ History/Social Science
- ☐ English
- ☐ Mathematics
- ☐ Laboratory Science
- ☐ Visual & Performing Arts
  - ☐ Intro ☐ Advanced
- [X] **College Prep Elective**

10. Grade Level(s) for which this course is designed

[X] **9** ☐ **10** ☐ **11** ☐ **12**

11. Seeking "Honors" Distinction?

☐ **Yes** [X] **No**

12. Unit Value

- ☐ 0.5 (half year or semester equivalent)
- [X] 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Is this an Internet-based course? ☐ Yes ☐ No

If "yes", who is the provider? ☐ UCCP ☐ PASS/Cyber High ☐ Other_____

14. Complete outlines are not needed for courses that were previously approved by UC. If course was previously approved, indicate in which category it falls.

- ☐ A course reinstated after removal within 3 years. Year removed from list?_____
  - Same course title? ☐ Yes [X] No
  - If no, previous course title?_____
- ☐ An identical course approved at another school in same district. Which school? _____
  - Same course title? ☐ Yes ☐ No
  - If no, course title at other school?_____
- ☐ Year-long VPA course replacing two approved successive semester courses in the same discipline
- ☐ Approved Advanced Placement (AP) OR International Baccalaureate (IB) course
- ☐ Approved UC College Prep (UCCP) Online course
- [X] Approved CDE Agricultural Education course
- ☐ Approved P.A.S.S./Cyber High course

☐ Approved ROP/C Course. Name of ROP/C?_____

☐ Approved A.V.I.D. course

☐ Approved C.A.R.T. course

☐ Approved Project Lead the Way Course

☐ Other. Explain:_____

15. Is this course modeled after an UC-approved course from another school <u>outside</u> your district? ☐ Yes ☐ No

If so, which school(s)? _____

Course title at other school_____

16. Pre-Requisites

Algebra 1 or concurrent enrollment

17. Co-Requisites

Agriculture Biology (year 2)

18. Is this course a resubmission? ☐ Yes ☒ No

If yes, date(s) of previous submission?_____

Title of previous submissions?_____

19. Brief Course Description

The Agriculture Science 1 course is designed to include units in: California Agriculture, Principles of Soil Science, the Environment and Earth's Resources, Applied Agri-science and Technology and Agriculture Research. This course provides students with critical thinking and leadership development skills via the FFA student agricultural experience project is required for all students.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

21. Course Objectives

22. Course Outline

23. Texts & Supplemental Instructional Materials

24. Key Assignments

25. Instructional Methods and/or Strategies

26. Assessment Methods and/or Tools

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKBROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

Agriculture Science 1
Meets the UC "g" Admission Requirement

I. COURSE INFORMATION:

A. Course Title: Agriculture Science I

B. Grade Level: 9-12 Grades

C. Length of Course 1 year

D. Prerequisites: Algebra 1 or Concurrent Enrollment

E. Credit: 10 Units

II. MAJOR GOAL AND STUDENT OUTCOMES:

A. The Agriculture Science I course is offered to first year agriculture students who are planning to major in agriculture in college or university. The course is designed in conjunction with Agriculture Biology our meet UC requirements and California State Standards for Biological Sciences. It has been designed to provide students with a unique perspective of agriculture and its impact on America Society. It also provides students with critical thinking and leadership development skills via the Future Farmers of America (FFA), as well as foundation skills and knowledge in the seven program areas of agriculture.

B. The Agriculture Science I course is designed to be both academically challenging and demanding. Students will be expected to not only acquire knowledge, but also to organize, analyze, evaluate, predict, problem solve and apply this knowledge. The student must be able to read and comprehend a variety of materials; demonstrate writing skills that convey ideas in written and visual form; speak with clarity, meaning, and confidence, exhibit creativity; use technology in research and accessing information; appreciate and respect individual and cultural differences; and demonstrate the ability to work collaboratively.

III. MAJOR OBJECTIVES:

A. The course objectives are as follows:

1. Define agriculture and the agricultural industry.
2. Describe important needs and sources of food and fibers.
3. Explain ecosystems and their impact on agriculture.
4. Explain the importance of standard measurements in agriculture.
5. Understand how new energy sources are developed from agricultural products.

B. Using the Science of Computation

1. Define the important terms and concepts in Agriscience measurements and computations.
2. Explain the use and importance of standard measurement.
3. Make measurements of length, temperature, and weights.
4. Calculate area and volume of objects of various shapes.
5. Explain important characteristics of biological organisms.
6. Explain life span and its stages.
7. Explain heredity and genetics in agriculture.
8. Define plant and distinguish plants from animals.

9. Explain asexual and asexual propagation in plants.
10. Explain and understand the major organ systems of animals.
11. Name and describe the major animal groups.
12. Explain the food nutrients needed by animals and plants.
13. List examples of plant and animal classifications.
14. Understand health concerns and diseases of animals.
15. Learn leadership skills associated with the FFA.
16. Develop a Supervised Agricultural Experience Project.
17. Develop an understanding of data entry in record books.

IV. Course Outline

A. Meeting Human Needs in Changing World

1. Define agriculture and agribusiness
2. Describe how the agriculture industry meets human needs for food, fiber, and shelter.
3. Identify the origin of food and fiber items.
4. Describe the areas of the agriculture industry that affects our quality of life.
5. Contrast the interrelations of agriculture and society at the local, state, national, and international levels.
6. Economic impact for leading agricultural commodities.

B. Using Applied Sciences and Technology

1. Explain how the areas of Science relate to Agriscience.
2. Apply the scientific method.
3. Explain the laws and regulations concerning biotechnology.
4. Describe the role and uses of Technology.
5. Understand public concern for technological advancements in agriculture, such as Genetically Modified Organisms (GMO's).

C. Agriculture, the Environment and Earth's Resources

1. Describe Key agricultural environmental impacts on earth resources: soft, water, and air.
2. Explain ecosystems and how they work.
3. Understand current agricultural environmental challenges.
4. Compare and contrast practices for conserving renewable/non-renewable resources.
5. Explain pollution and identify sources of pollution.
6. Understand how new energy sources are developed from agricultural products.

D. Using the Science of Computation

1. Define the important terms and concepts in Agriscience measurements and computations.
2. Explain the use and importance of standard measurement.
3. Make measurements of length, temperature, and weights.
4. Calculate area and volume of objects of various shapes.

E. Determining the Bases of Life

1. Understand the purpose and anatomy of cells
2. Describe how cell parts function.
3. Explain and describe various cell functions.

4. Describe the differences between plant and animal cells
5. Describe the life processes in organisms

F. Classifying and Naming Living Things

1. Describe the classification systems for living things.
2. Explain taxonomy.
3. Use a classification key to identify leaves.
4. Describe how classification systems are useful in agriscience and technology

G. Applying Plant Science Principles

1. Define plant science and how plants differ from animals.
2. Label the parts of a plant and describe their functions.
3. Explain the life cycle of a plant
4. Observe the effects of light on plant growth.
5. Observe the effect of gravity on plant growth.

H. Plant Propagation and Reproduction

1. Explain the processes for the propagation of plants.
2. Label the parts of a plant and explain their functions.
3. Determine viability of seeds by using germination and vigor tests.
4. Explain the importance of imported seeds.
5. Analyze suitable common feed ingredients for ruminant, monogastric, equine, and avian digestive systems, including roughages, concentrates, and supplements.

I. Plant Growth and Nutrients

1. Explain factors and processes in plant growth/
2. Understand the photosynthesis process and the roles of the sun, chlorophyll, sugar, carbon dioxide, and water in the process.
3. Understand the anatomy and functions of plant systems and structures.
4. Explain the respiration process in food and organic matter breakdown.
5. Describe annual, biennial, and perennial life cycles.
6. Explain plant sexual and asexual reproduction.

J. Plant and Insects and Pests

1. Understand the major classifications of pests.
2. Explain three conditions for pest problems.
3. Describe how pests affect plants and cause losses.
4. Explain the chemical, mechanical, cultural, and biological methods for plant pest control.
5. Explain the advantages and disadvantages of Integrated Pest Management (IPM).
6. List safety practices to follow in pest control.

K. Applying Animal Science Principles

1. Name and describe the major animal groups.
2. Describe the anatomy and physiology of animals.
3. Identify and explain the major organ systems of animals which include skeletal, nervous, circulatory, respiratory, excretory, digestive, reproductive and mammary.
4. Understand the evolution and roles of domesticated animals.
5. Explain the differences between domestication and natural selection.

L. Animal Feeds and Nutrition

1. Explain the feed needs of animals.
2. Describe the feedstuffs that provide nutrients.
3. Explain the characteristics of good feed.
4. Understand animal feeding guidelines and evaluate sample feeding programs for various species.
5. Describe the types of nutrients required by farm animals.
6. Analyze suitable common feed ingredients for ruminant, monogastric, equine, and avian digestive systems, including roughages, concentrates, and supplements.

M. Animal Genetics and Reproduction

1. Differentiate between genotype and phenotype, and describe how dominant and recessive genes function.
2. Compare and contrast genetic characteristics among different breeds of farm animals.
3. Demonstrate how to display phenotype and genotype ratios by utilizing a Punnett Square.
4. Explain the fertilization process and the methods of insemination.
5. Understand the purpose and processes of mitosis and meiosis.

N. Animal Health and Diseases

1. Explain common animal health practices.
2. Understand the causes and control of common diseases.
3. Describe environmental influences of animal health.
4. List and examine the different types of animal diseases.
5. Describe the different types of injections.

O. Using Biotechnology to Improve Life

1. Describe biotechnology and how it is being used.
2. Identify issues associated with Biotechnology.
3. Distinguish between two major areas of biotechnology
4. List and explain examples of orgasmic biotechnology.
5. Describe the role of genetics, cells, and genomes in molecular biotechnology
6. Describe the process of genetic engineering and the use of recombinant DNA.
7. Identify the areas of Agriscience being developed through genetic engineering.

P. Applying Principals of Soil Science

1. Describe the major soil components and types.
2. Explain the different ways that soil can be formed.
3. Understand how soil texture, structure, pH, and salinity affect plant growth.
4. Explain the different kinds of soil.
5. Explain the types, uses, and applications of soil amendments and fertilizers.
6. Explain the relation between soil and land.

Q. Marketing Technology in Agriscience

1. Describe the importance of agricultural marketing.
2. Explain the ways agricultural products are marketed.
3. List and explain the major functions in agricultural marketing.
4. Describe the role of marketing infrastructure.
5. Explain the role of communication in agricultural marketing.

R. Computer Technology and Agriculture

1. Name five uses in agribusiness
2. Name and explain the functions of the major external parts of the computer.
3. Demonstrate the use of a word processor.
4. Gain access to information highway through the internet.

S. Interpersonal Skills & Leadership Development (FFA)

1. Explain leadership traits in a leader.
2. Chart a short history and purposes of the FFA
3. List and describe the FFA degree requirements.
4. Explain and recite the FFA Creed.
5. List components of teamwork and cooperation.
6. Goal setting and creating the positive attitude.
7. Completion of a Supervised Agricultural Experience Project.

T. Parliamentary Procedure & Law

1. Define Parliamentary Procedure.
2. Understand the basic concepts of Parliamentary Law.
3. Apply Parliamentary Law in a meeting setting.
4. Use effectively Parliamentary law within a meeting.

U. Communication and Speaking Skills

1. List and describe the importance of public speaking skills.
2. Demonstrate the ability to lead a group discussion.
3. Describe the importance of being a good listener.
4. Demonstrate public speaking skills in selecting, researching and orally delivering a 5-10 minute presentation.

V. Agriculture Science Research Project

1. Development of an agriculture science project.
2. Statistical management of project via Record Book.
3. Instructional coordination and supervision.
4. Analysis of project results.

W. Professional Opportunities in Agriculture

1. Biotechnology & research fields
2. Other related agriculture science fields.

V. TEXTS & SUPPLEMENTAL INSTRUCTIONAL RESOURCES:

Modern Biology 2 Edition (Holt, Rinehart & Winston, 2004)
Laboratory Investigations in Biology (Holt, Rinehart & Winston, 2004)
Agriculture Biology Lab Manual Revised (Fullerton, 1999)
Biological Science Applications in Agriculture (Osborne, 1999)
National FFA Organization (2004). Official Manual. Indianapolis, IN.
California FFA Association (2004). California Agriculture Record Book, Sacramento, CA.
University of California, Daivs & California Department of Education (2002).

Agriculture Model Curriculum Lesson Plans for Core I. CDE Press. Sacramento, CA.
California Core Agriscience CD Lesson Plan Library (2004)

VI. KEY ASSIGNMENTS:

A. Research Paper on Agriculture Science
B. Seminar Presentation on Agriculture Science Practices
C. Development of Science Fair Project relating to Agriculture Science
D. Laboratory activities
E. Supervised Agricultural Experience Project & Record Book
F. FFA Leadership Participation

VII. INSTRUCTIONAL METHODS:

A. Lecture
B. Audio Visual Materials
C. Research Readings and Written Presentation
D. Homework Assignments
E. Group & Individual Activities
F. Laboratory Investigation – 1 per week (20% of grade)
G. Discussion & Group Dynamics
H. Quizzes, Tests & Final Exam
I. Guest Speakers
J. Field Trips
K. Internet Exploration
L. Seminar Presentation

VIII. ASSESSMENT METHODS

A. Quizzes, Tests & Final Exam	40%
B. Laboratory Investigation & Write-ups	20%
C. Writing Assignments	10%
D. Leadership & Critical Thinking Activities	10%
E. Research Report and Seminar Presentation	10%
F. Supervised Agricultural Experience Project & Record Book	10%

IX. LABORATORY ACTIVITIES:

A. The following laboratory activities will be incorporated:

1. The scientific method
2. Using the microscope
3. Using the dissecting microscope
4. Introduction to lab exercises
5. The effects of population shifts
6. The effects of air pollution
7. Water testing
8. Root & stem anatomy
9. Leaf anatomy
10. Flower anatomy
11. Pollution and fertilization
12. Sexual & asexual reproduction
13. Plant reactions to the environment

14. Soil testing
15. Soil erosion
16. Osmoses & diffusion investigation
17. Weed identification
18. Insect identification
19. Examination and diagram cells microscopically
20. Natural selection
21. Examine stained blood slides for form, function, parasites etc.
22. Simple digestion
23. Bacteria in Digestion
24. Parasites
25. Urinalysis – chemistry and morphology
26. Dilution and toxicity
27. Chemical mechanism of digestion
28. Chemistry analysis that identifies blood glucose levels
29. Chick embryo development
30. Normal system response
31. Fetal pig dissection
32. Effects of steroids on growth
33. Gene regulation
34. Manipulation of DNA
35. Genetic traits

Course Title

Agricultural Surveying

Description of Target Group

This class is designed for 11th or 12th grade students who show an interest in agriculture mechanics and surveying. It is recommended that the student have satisfactorily completed Basic Agricultural Mechanics. A good basic understanding of math is necessary.

Purpose

The purpose of this one-semester course in Agricultural Surveying is to provide a combination of subject matter and activities designed to develop an awareness of skills necessary to perform the basic techniques of surveying. It will develop an insight to the actual problems of surveying. Operation of equipment and safe practices are included. Career opportunities and planning will be provided and the student will have the opportunity to decide if abilities, attitude and general interest is great enough to seek out further education in the area of engineering.

Standards of Expected Students Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete a District safety test with a passing score.
2. Determine their pace and how to use it in rough distance measurement.
3. Use the engineers tape correctly.
4. Use various formulas in determining calculations.
5. Use terms common to surveying.
6. Keep accurate field notes.
7. Safely handle surveying equipment.
8. Read the rod for studio distance.
9. Set up surveying equipment.
10. Make simple infiltration rate tests.
11. Lay out a contour line and a ditch line.
12. Determine slope of land and grade and stake out.
13. Make topography map.
14. Draw profiles.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will use the material presented and their manual to learn the basic principals of surveying. The students will work in groups while doing the field work much the same as is done by a surveying party. The students will be exposed to such media as films, filmstrips, and resource people.

Title: Agricultural Mechanics

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: none (Recommended)

Co-requisites:	None
Integrated (Academics / CTE)?	Yes: Agricultural Mechanics
Grade levels:	9th, 10th, 11th, 12th

ourse Description

urse overview:

Agricultural Mechanics is the first in a series of courses offered in the Mechanized Agriculture Pathway. In this course, students will study theories relating to the transfer of matter and energy through electrical, fluid, thermal and mechanical systems. They will also study the fundamentals of mechanical and structural systems and facilities. Students will explore professional opportunities in the field of agricultural engineering. Integral to this will also be the opportunity to participate in activities developed through a student leadership organization. By participating in this program, students will prepare to matriculate into post-secondary Agriculture Engineering programs such as those offered at the University of California, Davis and Cal Poly, San Luis Obispo. Additionally, this course may be a gateway program for those students interested in pursuing a post-secondary study in mechanical or structural engineering.

urse content:

Electrical Theories and Electrical Wiring

1. Electrical Theories and Electrical Wiring

Objective: Students will understand how the theories of electricity apply to circuits and devices common to simple lighting and power distribution systems.

Procedure: Following a reading assignment and instructor lead demonstration, students will analyze diagrams and instructions to assemble a functional electrical distribution circuit. This lab apparatus will consists of switches, outlets, plugs, connectors, and lighting devices. After proper operating status is achieved, students will measure all operating parameters using instrumentation and processes presented in the demonstration and instructions. Data will be recorded and a narrative report written to verify that correct readings of voltage, current and resistance were made.

Unit Assignment(s):

Students will understand proper basic electrical circuit and wiring techniques with nonmetallic cable and conduit as defined by the National Electric Code.

Students will be able to produce and demonstrate the proper electrical test equipment for AC and direct current (DC).

Students will be learn and be able to use word meanings within the appropriate context and show ability to verify those meanings by definition, restatement, example, comparison, or contrast.

Electronics

---

2. Electronics

Objective: Students will be able to identify specific electronic components, breadboard a simple circuit and determine if the device is operating correctly.

Procedure: Students will study a number of discrete electronic components and be able to connect them in a functional circuit using a laboratory breadboard. A simple timing device will be used to demonstrate how electronic devices can be used as components of automated devices in agriculture. As part of the project, students will observe circuit operation and record data as listed in the lab description.

⮒ Unit Assignment(s):

Students will name and how to use the proper electrical testing equipment.

Students will name and how to use common electrical wiring tools.

Students will continue to demonstrate how various tools are used to prepare electrical circuits.

Students will be able to identify the electrical tools that are used in the industry.

Understanding Design and Fabrication Processes using Wood

---

3. Understanding Design and Fabrication Processes using Wood

Objective: Upon completion of the lab students will understand three basic wood working joints and how to properly assemble those joints.

Procedure 1: Using hand tools in the lab area students will be responsible for cutting a rabbit joint, dado joint, and miter joint.

Procedure 2: Using hand and power tools in the lab facility, students will construct two bookends and a planter box using #2 pine that will allow them to put to practical use the theories learned in the classroom. They will be asked to focus on the areas of safety, types of wood fasteners, measurement, proper finishing of wood, and applying paint or finish.

⮒ Unit Assignment(s):

Students will accurately measure lumber length, width, and thickness. Students will successfully calculate the volume of each board sample. Students will be able to determine the board feet calculation for four samples of lumber. Students will be able to relate changes in measurement with change of scale to the units used and to conversions between units. They will learn how to extend ideas presented in primary or secondary sources through original analysis, evaluation, and elaboration. Students will be able to produce and construct models and projects based off of drawings and plans. Students will continue to demonstrate the use of sophisticated learning tools by following technical directions. Students will produce a wood project with the skills learned that may or may not include a wood saw horse.

Irrigation and Plant Nutrient Distribution Systems

---

4. Irrigation and Plant Nutrient Distribution Systems

Objective: Students will be able to design and assemble a scaled irrigation system using materials typical to those used in agriculture.

Procedure: After studying the essentials of delivering water and nutrients to various plants and crops, students will use steel, plastic, aluminum and copper tubing or pipe to assemble a small scale irrigation system. Assigned research will aid students in making choices in design and materials selection. Engineering principles pertaining to fluid flow and the reactions to chemicals on commonly used materials will be explored and considered. Students will make observations and collect data to support design and materials choices or to make necessary changes.

⮒ Unit Assignment(s):

Students will understand the use of technological resources to access, manipulate, and produce information, products, and services. Students will be able to apply appropriate problem solving strategies and critical thinking skills to work-related issues and tasks. Students will be able to learn and produce a complete plumbing project, including interpreting a plan, developing a bill of materials and cutting list, selecting materials, joining, and testing. Students will continue to learn basic plumbing and irrigation fitting skills with a variety of materials, such as copper, pvc, steel, polyethylene, and ABS.

Engineering Principles of Hydraulic Systems in Agriculture

---

5. Engineering Principles of Hydraulic Systems in Agriculture

Objective: Through the application of the principles of physics, students will gain an understanding of pressurized fluid work and tool systems. They will learn how to determine flow rates, pressures, thermal conditions and types of pump systems required to meet engineered specifications.

Procedure: Students will use Pascal's Law to determine pressure, force and mechanical advantage of hydraulic systems. In addition students will disassemble analyze and re-assemble a gear pump, vane pump, piston pump and cylinders in order to understand the operation and principles of physics that enable these devices to be effective instruments. Systems will be

operated as a part of this laboratory experience, observations will be made, data will be collected, efficiencies computed and conclusions drawn to facilitate student understanding.

Unit Assignment(s):

Students will be able to identify everyday items that use hydraulics. Students will be able to learn the varieties of equipment and how hydraulics work. Students will be able to closely read informational text and identify central idea and key details. Students will be able to explain how energy is transferred. Students will be able to evaluate how energy is transferred and predict the effects of resistance in mechanics, electrical, fluid, and thermal systems. Students will learn how to assemble a variety of hydraulic systems to ensure they learn the parts and contribution of each piece. Students will learn the practices and methods of irrigation as it relates to pressure and irrigation systems.

Concrete as an Engineered Structural Material

---

6. Concrete as an Engineered Structural Material

Objective: Students will study variables and follow process needed to formulate, mix, form and cure concrete as a material used in constructing engineered structures.

Procedure: Each student will design and manufacture a stepping stone. Following a laboratory instruction sheet, materials will be gathered, measured and mixed in a quantity needed to complete the designed stone. Then, the mixture will be poured into a form fabricated by the student, set, removed and cured. The finish project will be evaluated as to appearance then tested for strength to see that in meets the minimum requirements set in the design.

Unit Assignment(s):

Students will extend ideas presented in primary or secondary sources through original analysis, evaluation, and elaboration. Students will be able to demonstrate the use of sophisticated learning tools by following technical directions. They will be able to produce and generate relevant questions about readings on issues that can be researched. Students will be able to produce and complete a concrete or masonry project, including developing a bill of materials, assembling, mixing, placing, and finishing. Students will learn the vast array of tools through tool identification along with the techniques of pre-pouring, tamping, screeding, floating, jointing, edging, finishing and curing.

Course Title

Agricultural Mechanics

Description of Target Group

This class is designed for beginning agricultural students. It is primarily recommended for 9th and 10th grade level students with an interest to make a career in agriculture.

Purpose

Basic Agricultural Mechanics is a one-semester class designed to give the beginning student a feeling of worth and a positive attitude toward accomplishing basic tasks. It makes the student aware of the great need for an advanced educational background necessary to pursue a career in agriculture repair or general farming. The class is designed to teach basic shop skills. Taking class enables the student to participate in FFA activities.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete the District safety test with a passing score.
2. Be aware of the hazards of working in a farm shop.
3. Wear the necessary safety clothing and eye protection for the appropriate areas of the shop.
4. Understand how a simple working drawing or sketch can help a student or farmer build a more successful projects.
5. Become familiar with the types of lumber used in the construction of most home farm projects.
6. Be familiar with the types of tools used in the shop.
7. Understand the uses and hazards of the oxyacetylene welding equipment in the shop.
8. Be aware of the uses and hazards of the electric arc welding equipment in the shop.
9. Be familiar with the types of rope commonly used on the home farm.
10. Be familiar with the types of metals used in the construction of projects on a home farm.
11. Work on pipe, including threading and sealing joints.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Students will actively initiate the knowledge gained from demonstration lectures. Each student will work with hands and mind, developing those skills which are basic to a good foundation in agricultural mechanics. The overall activity will be on an individual basis except where a group effort is needed, such as the building of concrete forms, mixing, pouring, and finishing. The student will be exposed to films, charts, and filmstrips to build their background and thinking about skills presented.

COURSE TITLE

Agriculture Science 2 (CP)

Description of Target Group

Agriculture Science 2 is a one-year, laboratory science course designed as the second phase of the agriculture sequence. It is for the college-bound student with career interest in agriculture and will meet the University of California "a-f" requirements of Science as well as for the student who will enter the agriculture workplace following high school or further training at the community college level. Using agriculture as the learning vehicle, the course emphasizes the principles, central concepts, and inner-relationships among the following topics: the molecular and cellular aspects of life, the chemical and structural basis of life, energetic of life, growth and reproduction in plants and animals, evolution of modern plants and domestic livestock species, plant and animals genetics, taxonomy of modern agricultural plants and animals, animal behavior, ecological relationships among plants, animals, humans and environment, nutrition in animals, health and diseases in animals and the similarities between animals and humans. The course is centered around an extensive laboratory component in order to connect the big ideas of life science with agricultural applications, earth and physical science principals, and other curricular areas, including written and oral reporting skills.

Length of Course:	One Year
Units of Credit:	10
Prerequisites:	Ag Science 1 (CP) or Instructor's Approval
Grade Level:	10-12
Special Course Designation:	College Pre "f" requirement
Course Code:	*
Homework:	3 hrs+/wk

Standards of Expected Student Achievement

Upon completion of this course, the student will be able to:

1. **Unit A. Introduction to Agricultural Biology**

    1.1 Explain the importance of Agricultural Biology in our society. Provide evidence for and defend your explanation.
    1.2 Compare various careers in the area of Agricultural Biology. Report on careers that are held by persons in underrepresented populations.

2. Unit B. Agricultural Research

2.1 Explain the importance of research in agriculture.
2.2 Describe the process of scientific research methods in agriculture.
2.3 Develop a Supervised Agricultural Experience Project which involves the scientific method.
2.4 Formulate a term project focusing on one topic in Agricultural Biology and relate it to other scientific disciplines.
2.5 Develop a research project that can be entered in the FFA Agriscience competition.

3. Unit C. Agriculture and the Environment

3.1. Identify the roles of plants and animals and their interactions in the web of life.
3.2. Describe the flow of energy through the biosphere.
3.3. Compare and contrast the oxygen and nitrogen cycles. Report on their importance in agriculture.
3.4. Define the term “ecosystem”.
3.5. Appraise at least three current issues in agriculture which biology affects the environment.
3.6. Explain the impact of population on the environment and the effect of the environment on populations.
3.7. Report on both the good and bad effects of the agricultural revolution on the environment.
3.8. Evaluate the economic effects of pollution and erosion on production agriculture.
3.9. Develop and defend a plan to preserve limited resources related to agriculture.
3.10. Compare and contrast five forms of energy used in agriculture.
3.11. Design and conduct an experiment which shows the relationship between soil characteristics and plant growth.
3.12. Describe how agriculture practices can modify soil to improve soil moisture relationships.
3.13. Conduct an experiment, which involves water movement through soil.
3.14. Compare the internal systems of a single celled organism to those of multicellular organisms.
3.15. Describe the difference between plant cells and animal cells.
3.16. Identify blood, bone, fat, nerve, and muscle cells.
3.17. Identify and diagram male and female gametes in both plants and animals.
3.18. Compare and Contrast the process of Mitosis and Meiosis.
3.19. Describe how cells respond to certain stimuli.
3.20. Explain the concept of cellular adaptation.
3.21. Discuss the development of the biological concept of “Kingdom”.
3.22. Discuss three reasons for the current use of the modern system of plant classification.
3.23. Apply taxonomy in three ways to the field of agriculture.

3.24. Prepare a phytogenic tree for at least one domestic animal species.
3.25. Explain how the process of natural selection affects plants and animals. Include the impact of external conditions in the explanation.
3.26. Analyze the impact of increasing populations on the environment and its resources.

4. Unit D. Plant physiology, reproduction, photosynthesis, and growth.

4.1 Compare and Contrast the structures and functions of plants from different families.
4.2 Design and conduct an experiment which covers the entire life cycle of a plant.
4.3 Defend the role of green plants in the maintenance of life.
4.4 Compare and Contrast monocotyledons and dicotyledons with respect to leaf, stem, flower, structure, and agricultural significance.
4.5 Analyze the interrelationships among the different systems within the plant.
4.6 Discuss abiotic environmental factors that affect plant growth (wind, temperature, polar radiation, soil conditions, humidity, pollution, etc.).
4.7 Explain the difference between sexual and vegetative reproduction.
4.8 Demonstrate an application of both sexual and vegetative reproduction.
4.9 Discuss how sexual and a sexual reproduction are used in agriculture.
4.10 Research and report on the significant uses of plants in nutrition and medicine.
4.11 Compare the life cycle of simple plants, such as algae of mass to a complex plant.
4.12 Grow at least one indoor and one outdoor landscaping plant or vegetable. Chart to growth pattern and report the results of observations.

5. Unit E. ANIMAL PHYSIOLOGY AND BEHAVIOR

5.1 Demonstrate an understanding of the structure and function of the digestive system by tracing the pathways of food through the various types of livestock digestive systems with emphasis on the function of organs in the digestive process.
5.2 Analyze the function of each mammalian body.
5.3 Compare the interrelationships of each system within the mammalian body.
5.4 Compare and contrast the estrus cycles of cattle, sheep, and swine and the menstrual cycle in humans. Chart the process of fertilization in each species.
5.5 Explain the importance of cellular respiration to living organisms. Develop a flow chart outlining the process of cellular respiration.
5.6 Develop a flow chart outlining the development of an embryo from conception through parturition.

5.7 Describe how animal behavioral patterns affect management and handling practices of domestic animals.
5.8 Dissect various organisms and identify the organs and systems of each.
5.9 Compare and contrast the organ systems of different livestock species.
5.10 Analyze the nutrient requirements of various domestic species.
5.11 Analyze the nutrient content of several feeds.
5.12 Develop a low-cost feed ration for one species of livestock form maintenance, growth, and lactation, using concentrates and roughage available locally.
5.13 Describe the symptoms of five common nutritional disorders caused by vitamin or mineral deficiencies or laxicity and explain the treatment and prevention of these diseases.
5.14 Feed an animal through an entire production cycle, recording the types of feed used, rate of gain, and the lean-to-fat ration. Report on observation and conclusions.
5.15 Develop a flow chart outlining the life cycle of one internal and one external parasite.
5.16 Describe the impact of parasites on livestock and on the agricultural industry.
5.17 Design a disease prevention and health care plan for a project animal.
5.18 Appraise the results of human medicine in relation to livestock medicine.

6. UNIT F. PLANT AND ANIMAL GENETICS

6.1 Compare and contrast the phenotypic traits of related breeds and varieties of animals and plants.
6.2 Explain the function of each of the following: gene, allele, DNA and RNA.
6.3 Explain the role of enzymes in chromosome replication, and the implications of biotechnology involving these enzymes.
6.4 Discuss the contributions of Gregor Mendel to the field of genetics.
6.5 Conduct a simple experiment, which exhibits dominant and recessive properties.
6.6 Evaluate the effectiveness of selection and heritability in production of agriculture by comparing modern day crops and animals to their ancestors.
6.7 Develop an experiment, which develops a trait through selection and heritability.
6.8 Analyze the effects of biotechnology on modern agriculture.
6.9 Report on the importance of natural selection on the driving force of evolution and its importance in production agriculture.

7. SAMPLES OF LABORATORY EXAMPLES

7.1 The scientific method
7.2 Analyzing ecosystems
7.3 Checking water for Coliform Bacteria

7.4 Genotypic and phenotypic rations
7.5 Flower dissections and pollen growth germination
7.6 N-P-K tissue test on greenhouse/potted plants
7.7 Warm germination test
7.8 TS test
7.9 Cold germination test
7.10 Salinity and seed germination
7.11 Determining salt tolerance of plants
7.12 Factors affecting photosynthesis
7.13 Effects of leaf surface area, air movement and light on transportation rate
7.14 Effects of light quality on plant growth
7.15 Geotropism
7.16 Phototropism
7.17 The hydrologic cycle
7.18 Comparison of soil vs soilless plant culture
7.19 Effects of nutrient concentrations of hydroponic plant growth
7.20 Effects of herbicides on crop and plants
7.21 Herbicide bioassay
7.22 Effects of rooting hormones on root development
7.23 Effects of gibbarallic acid on seed germination
7.24 Embryo culture of apples
7.25 Another culture
7.26 DNA extraction
7.27 Probability of trait inheritance
7.28 Classifying animals
7.29 Examining animal cells
7.30 Effects of feed ration on growth
7.31 Analyzing feed for nutrient content
7.32 Starch digestion by enzyme action
7.33 Effects of physical and chemical treatment of forage samples on digestibility
7.34 Effects of feed additives on animal growth
7.35 Livestock basic physical exam
7.36 Parasites of agriculture animals
7.37 Comparison of female reproductive organs
7.38 Culturing bacteria
7.39 Evaluating semen
7.40 Safety

8. CLASSIFYING AND NAMING LIVING THINGS

8.1 Describe and classification system for living things
8.2 Explain taxonomy
8.3 Use a classification key to identify leaves
8.4 Describe how classification systems are useful in Agriscience and technology

9. APPLYING PRINCIPLES OF PLANT SCIENCE

9.1 Define plant science and how plants differ from animals
9.2 Label the parts of a plant and explain their functions
9.3 Explain the life cycle of a plant
9.4 Observe the effect of light on plant growth
9.5 Observe the effect of gravity on plant growth

10. REPRODUCING PLANTS

Explain the processes for the propagation of plants

10.1 Label the parts of a plant and explain their role
10.2 Determine viability of seeds by using germination and vigor tests
10.3 Explain the importance of imported seed

11. PRODUCING PLANTS

11.1 Explain factors and processes in plant growth
11.2 Determine the rate of photosynthesis
11.3 Test for sugar production during photosynthesis
11.4 Define transpiration and its importance
11.5 Observe water loss by transpiration
11.6 Name the nutrients plants need and describe how plants get them
11.7 Explain the use of fertilizers

12. KEEPING PLANTS HEALTHY

12.1 Explain five major kinds of pests
12.2 Explain three conditions for pests problems
12.3 Describe how pests are prevented
12.4 Describe how pests affect plants and cause losses
12.5 Explain integrated pest management
12.6 List safety practices to follow in pest control

13. APPLYING PRINCIPLES OF ANIMAL SCIENCE

13.1 Name and describe the major animal groups
13.2 Describe the anatomy and physiology of animals
13.3 Describe the role of genetics, cells and genomes in molecular biotechnology
13.4 Describe the process of genetic engineering and the use of recombinant DNA
13.5 Identify areas of Agriscience being developed through genetic engineering

14. APPLYING EARTH SCIENCE IN AGRICULTURE

14.1 Describe major features and resources of the earth
14.2 Explain changes that occur in the earth
14.3 Describe atmosphere and its importance in Agriscience
14.4 Explain the importance of climate in Agriscience
14.5 Identify and describe major factors in weather
14.6 Explain succession and its relationships to the Earth

15. APPLYING PRINCIPLES OF SOIL SCIENCE

15.1 Describe the materials that make soil
15.2 Explain the different ways that soil can be described
15.3 Explain how soil is formed
15.4 Describe soil profile
15.5 Explain the kinds of soil water
15.6 Describe soil pH and its relation to plant growth
15.7 Explain the relation between soil and land
15.8 Describe important soil management practices

16. APPLYING PRINCIPLES OF CHEMISTRY

16.2 Describe the major kinds of matter
16.3 Distinguish between elements, atoms and molecules
16.4 Describe how new compounds are formed
16.5 Explain the importance of carbon
16.6 Distinguish between solutions and suspensions
16.7 Explain acids, bases, and salts
16.8 Describe common chemical processes in Agriscience
16.9 Describe the importance of measurements in chemistry

17. APPLYING PRINCIPLES OF PHYSICS

17.1 Define physics and explain important areas of physics
17.2 Explain work and power
17.3 Describe mechanical advantage
17.4 Explain the use of thermal energy in Agriscience
17.5 Explain the use of electrical energy in Agriscience
17.6 Describe the use of compression in Agriscience

18. COMMUNICATIONS

18.1 List and describe the importance of public speaking skills
18.2 Demonstrate the ability to lead a discussion group
18.3 Describe the importance of being a good listener

18.4 Demonstrate public speaking skills by selecting, researching and orally delivering a five to ten minute presentation
18.5 Identify and demonstrate skills using telephones, letters, memos, and verbal conversation
18.6 Identify skills necessary to work on committees effectively and efficiently

19. RECORD KEEPING

19.1 List reasons for record keeping
19.2 Explain functions of, maintain, and complete a calendar, business agreement, budget, and journal in a record book
19.3 Explain how business uses records

20. COMPUTERS

20.1 Name five uses in agribusiness
20.2 Name and explain the functions of the major external parts of the computer
20.3 Demonstrate the use of a word processor
20.4 Gain access to information highway through computer network

IV. Student Assessment - Pre/Post Test

1.1 To evaluate objective materials, pretests will be administered at the beginning of the course, and a post-test will be given at the end of the school year
1.2 To test application domain skills, an evaluation instrument will be maintained by the student
1.3 To evaluate specific performance indicators in the analysis, synthesis, and evaluation domains, essay questions will be administered and scored with a rubric.
1.4 Students will participate in FFA activities, such as the state Agriscience Fair and Agriscience Student of the Year program.

Instructional Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Course Title

Agricultural Electricity

Description of Target Group

This course is designed for any student. However, it is recommended for 10th, 11th, and 12th grade students. It is also suggested that the students have a firm understanding of math.

Purpose

The purpose of this one-semester class is to develop an awareness in the student of basic electricity as it applies to self, farm, and related industries. It will develop an understanding of simple electrical problems; how to work safely with them; develop techniques to be used by the student in working with electrical devices and simple construction wiring; develop a positive attitude so that the student will work SAFELY with electricity and know the limits. Students will study an overflow of career opportunities and planning with emphasis being placed on future educational plans if an interest is established in the electrical trades.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete District safety test with a passing score.
2. Safely handle electrical wiring and work safely with it.
3. Design and lay out simple AC circuits.
4. Understand electrical color codes and where to use them.
5. Check for ground.
6. Understand and use common terms used in electrical work.
7. Understand service entrance wiring and how to trace branch circuits.
8. Determine proper wire sizes and corresponding protective devices.
9. Strip wire and make normal switch and outlet installations.
10. Clean and service electrical motor.
11. Figure electrical cost after reading a kilowatt hour meter.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The student will use the information given them to study and complete their class manual. Groups of two or three students will work together on electrical circuits and electric motors. Individual reports will be given each student on areas selected by the instructor and student. The students will be exposed to films, filmstrips, and resource people.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will use the material presented and their manual to learn the basic principals of surveying. The students will work in groups while doing the field work much the same as is done by a surveying party. The students will be exposed to such media as films, filmstrips, and resource people.

Course Title

Agriculture Business & Management A

Description of Target Group

This one-semester course is designed for 11th and 12th grade students who have completed Basic Agricultural Science A and B. The course is applicable to any student interested in agriculture. It is recommended that the student complete at least two other agriculture courses prior to enrollment in this class.

Purpose

This course is designed to include: discussion of the world food situation, California agriculture situations, cooperative marketing, agricultural prices, study of major local agriculture industries and job and career orientation.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Become familiar with FFA program.
2. Learn the types of farming operations.
3. Know the basic steps in starting a farm business corporation.
4. Complete a simple livestock or crop budget.
5. Learn what local agricultural businesses do.
6. Complete a unit on farmer cooperatives.
7. Learn how to fill out a college application form.
8. Learn what Junior and State colleges have to offer in the way of agricultural courses.
9. Complete a resume and job application.
10. Learn how to fill out a bank load application.
11. Learn how to read a farm real estate ad.
12. Learn skill in labor management.
13. Learn how to sell a product in class (salesmanship).
14. Become acquainted with career opportunities in agriculture.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Field Trips, lectures, discussions, demonstrations, laboratory exercises and experiments, student reports, guest speakers, films, filmstrips, and slides.

Course Title

Agriculture Business & Management B

Description of Target Group

This one-semester course is designed for 11th and 12th grade students who have completed Basic Agricultural Science A and B. The course is applicable to any student interested in agriculture. It is recommended that the student complete at least two other agriculture courses prior to enrollment in this class.

Purpose

This course is designed to include: discussion of the world food situation, California agriculture situations, cooperative marketing, agricultural prices, study of major local agriculture industries and job and career orientation.

Standards of Expected Student Achievement

Upon completion to this course, students will be able to successfully demonstrate the following skills:

1. Become familiar with FFA program.
2. Learn the types of farming operations.
3. Know the basic steps in starting a farm business corporation.
4. Complete a simple livestock or crop budget.
5. Learn what local agricultural businesses do.
6. Complete a unit on farmer cooperatives.
7. Learn how to fill out a college application form.
8. Learn what Junior and State colleges have to offer in the way of agricultural courses.
9. Complete a resume and job application.
10. Learn how to fill out a bank load application.
11. Learn how to read a farm real estate ad.
12. Learn skill in labor management.
13. Learn how to sell a product in class (salesmanship).
14. Become acquainted with career opportunities in agriculture.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Field trips, lectures, discussions, demonstrations, laboratory exercises and experiments, student reports, guest speakers, films, filmstrips and slides.

Course Title **ERHS**

Agricultural Science 1 (P)

Description of Target Group

This course is the first phase for students interested in agriscience. The purpose of this course is to introduce students interested in the agricultural/agriscience side of science. It will give students the opportunity to learn the fundamentals of human needs, behavior, biology animal science, plant science, biotechnology, food science, processing, computers, marketing and will meet the University of California "a-f" requirements ("College prep elective"). In addition, students will participate in leadership training activities, public speaking, and have the opportunity to be part of the F.F.A.

Length of Course:	One Year
Units of Credit:	Ten
Prerequisites:	None
Grade Level:	9th
Special Course Designation:	Science "f" requirement

Course Content Defined in Goals, Objectives, and Performance Indicators

Standards of Expected Student Achievement

Students shall learn the importance of Agriculture in our society. Students understand the basic structures and functions of cells. This would include the similarities and differences between plant and animal cells. In addition, students shall understand the concepts of the Scientific Method of Investigation and the Metric system of measurement.

1.1 The students will identify the importance of Agriculture.
- 1.1.1 The students will explain the importance of Agriculture in our society.
- 1.1.2 The students will explain the importance of agriculture.

1.2 The student will apply scientific concepts in agriculture.
- 1.2.1 The student will explain the importance of research in agriculture.
- 1.2.2 The student will describe the process of scientific research in agriculture.
- 1.2.3 The student will develop a Supervised Agricultural Experience project, which involved the scientific method.
- 1.2.4 The student will formulate a term project focusing on one topic in agricultural.
- 1.2.5 The student will develop a research project that can be entered in a science fair or competition.

Agricultural Science 1 (CP) (continued)

1.2.6 The student will calculate relationships in research projects utilizing statistics.

2. Meeting human needs in a changing world
   - 2.1 Define agriculture, agribusiness.
   - 2.2 Describe how the agriculture industry meets human needs for food, fiber and shelter.
   - 2.3 Identify the origin of food and fiber items
   - 2.4 Describe areas of the agriculture industry that affects us everyday.
   - 2.5 Contrast of world agriculture.
3. Using applied science and technology
   - 3.1 Explain how the areas of science relate to agriculture.
   - 3.2 Apply the scientific methods.
   - 3.4 Organize data and prepare graphs.
   - 3.5 Describe the role and uses of technology.
   - 3.6 Define agriscience and technology.
4. Using the earth's resources
   - 4.1 Define environment and natural resources.
   - 4.2 Explain ecosystems and how it works.
   - 4.3 Describe the relationship between habitat and population fluctuations.
   - 4.4 Test water purity.
   - 4.5 Explain pollution and identify sources of pollution.
5. Using the science of computation
   - 5.1 Define important terms and concepts in agriscience measurements and computations.
   - 5.2 Explain the use and importance of standard measurements.
   - 5.3 Make measurements of length, temperatures, and weights.
   - 5.4 Calculate area and volume of objects of various shapes.
6. Determining the bases of life
   - 6.1 Name cell parts and their functions.
   - 6.2 Explain the concepts of genetics and heredity in agriscience.
   - 6.3 Identify the parts of the microscope and their uses.
   - 6.4 Make wet mount slides.
   - 6.5 Identify major cell structures using the microscopes.
   - 6.6 Describe growth and cell division.
   - 6.7 Describe the life process in organisms.
   - 6.8 Identify and explain the major organ systems of animals, which include, skeletal, muscular, nervous, circulatory, respiratory, excretory, digestive, reproductive, and mammary.

7. Feeding animals
   - 7.1 Describe the feed and needs of animals.
   - 7.2 Explain the major nutrients needed by animals.
   - 7.3 Describe the feed stuff that provides nutrients.
   - 7.4 Explain the characteristics of good feed.
   - 7.5 Describe how animals are fed.
   - 7.6 Compare feeds using nutrients and cost.
   - 7.7 Identify carbohydrate, fats, proteins, vitamin c, and water by chemical tests.

1. Breeding animals
   - 8.1 Explain breed and bloodlines.
   - 8.2 List examples of breeds.
   - 8.3 Distinguish between methods of insemination.
   - 8.4 Describe different breeding systems.
   - 8.5 Describe management practices in breeding animals.
   - 8.6 Identification of meat cuts.
   - 8.7 Identification of external parts.

9. Keeping animals healthy
   - 9.1 Explain health and the signs of good and ill health.
   - 9.2 Describe environmental influences on animal health.
   - 9.3 List and explain the losses caused by poor animal health.
   - 9.4 Explain how good health if maintained.
   - 9.5 Describe the kinds of diseases and give examples of each.
   - 9.6 Explain general methods of disease control.
   - 9.7 Describe the different types of injections.
   - 9.8 Explain how animals defend themselves against
   - 9.9 diseases.

10. Using biotechnology to improve life
    - 10.1 Define biotechnology and describe how it is being used.
    - 10.2 Identify issues associated with biotechnology.
    - 10.3 Distinguish between two major areas of biotechnology.
    - 10.4 List and explain examples of organismic biotechnology.

11. Marketing technology in agriscience
    1. Describe the importance of agricultural marketing technology.
    2. Explain ways that agricultural produce is marketed.
    3. List and explain the major functions in agricultural marketing.
    4. Describe the role of marketing infrastructure.
    5. Explain the role of communication in Agricultural marketing.

12. Processing technology in agriscience
    - 12.1 Explain the meaning and importance of processing.
    - 12.2 List and describe methods of food preservation.
    - 12.3 Explain spoilage in food.
    - 12.4 Describe methods used in processing fiber products.
    - 12.5 Describe methods used in processing wood products.
    - 12.6 Describe methods used in processing dairy products.
    - 12.7 Describe methods used in processing meat products.
    - 12.8 Describe safety and regulations that apply to processing.

1 3. Leadership
    - 13.1 Explain leadership.
    - 13.2 Define a leader.
    - 13.3 Chart a short history and purpose of the agriculture youth leadership program.
    - 13.4 Name F.F.A. awards and contests.
    - 13.5 List requirements for F.F.A. membership and participation.
    - 13.6 Explain and recite the agriculture/F.F.A. creed.
    - 13.7 List components of teamwork and cooperation.
    - 13.8 Goal setting and creating the positive attitude.

14. Parliamentary procedure
    - 14.1 Define parliamentary procedure.
    - 14.2 Ascertain the basic concepts of parliamentary law.
    - 14.3 Apply parliamentary law in a meeting setting.
    - 14.4 Explain how and where parliamentary procedure is used in our society.
    - 14.5 Use effective parliamentary law within a contest structured debated.

IV. Student Assessment - Pre/Post Tests

1. The student's knowledge and skills of the performance objective will be assessed using the formats listed below.
    - 1.1 To evaluate objective materials, presets will be administered at the beginning of the course, and a post-test will be given at the end of the school year.
    - 1.2 To test application domain skills, an evaluation instrument will be maintained by the student.
    - 1.3 To evaluate specific performance indicators in the analysis, synthesis, and evaluation domains, essay questions will be administered and scored with a rubric.
    - 1.4 Students will participate in FFA activities, such as the state Agriscience Fair and Agriscience Student of the Year awards program.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

16. Pre-Requisites

Algebra 1 or concurrent enrollment

17. Co-Requisites

Agriculture Biology (year 2)

18. Is this course a resubmission? ☐ Yes ☒ No

If yes, date(s) of previous submission?_____

Title of previous submissions?_____

19. Brief Course Description

The Agriculture Science 1 course is designed to include units in: California Agriculture, Principles of Soil Science, the Environment and Earth's Resources, Applied Agri-science and Technology and Agriculture Research. This course provides students with critical thinking and leadership development skills via the FFA student agricultural experience project is required for all students.

B. COURSE CONTENT

20. Course Goals and/or Major Student Outcomes

21. Course Objectives

22. Course Outline

23. Texts & Supplemental Instructional Materials

24. Key Assignments

25. Instructional Methods and/or Strategies

26. Assessment Methods and/or Tools

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKBROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

Agriculture Science 1
Meets the UC "g" Admission Requirement

I. COURSE INFORMATION:

A. Course Title: Agriculture Science I

B. Grade Level: 9

C. Length of Course 1 year

D. Prerequisites: Algebra 1 or Concurrent Enrollment

E. Credit: 10 Units

II. MAJOR GOAL AND STUDENT OUTCOMES:

A. The Agriculture Science I course is offered to first year agriculture students who are planning to major in agriculture in college or university. The course is designed in conjunction with Agriculture Biology our meet UC requirements and California State Standards for Biological Sciences. It has been designed to provide students with a unique perspective of agriculture and its impact on America Society. It also provides students with critical thinking and leadership development skills via the Future Farmers of America (FFA), as well as foundation skills and knowledge in the seven program areas of agriculture.

B. The Agriculture Science I course is designed to be both academically challenging and demanding. Students will be expected to not only acquire knowledge, but also to organize, analyze, evaluate, predict, problem solve and apply this knowledge. The student must be able to read and comprehend a variety of materials; demonstrate writing skills that convey ideas in written and visual form; speak with clarity, meaning, and confidence, exhibit creativity; use technology in research and accessing information; appreciate and respect individual and cultural differences; and demonstrate the ability to work collaboratively.

III. MAJOR OBJECTIVES:

A. The course objectives are as follows:

1. Define agriculture and the agricultural industry.
2. Describe important needs and sources of food and fibers.
3. Explain ecosystems and their impact on agriculture.
4. Explain the importance of standard measurements in agriculture.
5. Understand how new energy sources are developed from agricultural products.

B. Using the Science of Computation

1. Define the important terms and concepts in Agriscience measurements and computations.
2. Explain the use and importance of standard measurement.
3. Make measurements of length, temperature, and weights.
4. Calculate area and volume of objects of various shapes.
5. Explain important characteristics of biological organisms.
6. Explain life span and its stages.
7. Explain heredity and genetics in agriculture.
8. Define plant and distinguish plants from animals.

9. Explain asexual and asexual propagation in plants.
10. Explain and understand the major organ systems of animals.
11. Name and describe the major animal groups.
12. Explain the food nutrients needed by animals and plants.
13. List examples of plant and animal classifications.
14. Understand health concerns and diseases of animals.
15. Learn leadership skills associated with the FFA.
16. Develop a Supervised Agricultural Experience Project.
17. Develop an understanding of data entry in record books.

IV. COURSE OUTLINE

A. Meeting Human Needs in Changing World

1. Define agriculture and agribusiness
2. Describe how the agriculture industry meets human needs for food, fiber, and shelter.
3. Identify the origin of food and fiber items.
4. Describe the areas of the agriculture industry that affects our quality of life.
5. Contrast the interrelations of agriculture and society at the local, state, national, and international levels.
6. Economic impact for leading agricultural commodities.

B. Using Applied Sciences and Technology

1. Explain how the areas of Science relate to Agriscience.
2. Apply the scientific method.
3. Explain the laws and regulations concerning biotechnology.
4. Describe the role and uses of Technology.
5. Understand public concern for technological advancements in agriculture, such as Genetically Modified Organisms (GMO's).

C. Agriculture, the Environment and Earth's Resources

1. Describe Key agricultural environmental impacts on earth resources: soft, water, and air.
2. Explain ecosystems and how they work.
3. Understand current agricultural environmental challenges.
4. Compare and contrast practices for conserving renewable/non-renewable resources.
5. Explain pollution and identify sources of pollution.
6. Understand how new energy sources are developed from agricultural products.

D. Using the Science of Computation

1. Define the important terms and concepts in Agriscience measurements and computations.
2. Explain the use and importance of standard measurement.
3. Make measurements of length, temperature, and weights.
4. Calculate area and volume of objects of various shapes.

E. Determining the Bases of Life

1. Understand the purpose and anatomy of cells
2. Describe how cell parts function.
3. Explain and describe various cell functions.

4. Describe the differences between plant and animal cells
5. Describe the life processes in organisms

F. Classifying and Naming Living Things

1. Describe the classification systems for living things.
2. Explain taxonomy.
3. Use a classification key to identify leaves.
4. Describe how classification systems are useful in agriscience and technology

G. Applying Plant Science Principles

1. Define plant science and how plants differ from animals.
2. Label the parts of a plant and describe their functions.
3. Explain the life cycle of a plant
4. Observe the effects of light on plant growth.
5. Observe the effect of gravity on plant growth.

H. Plant Propagation and Reproduction

1. Explain the processes for the propagation of plants.
2. Label the parts of a plant and explain their functions.
3. Determine viability of seeds by using germination and vigor tests.
4. Explain the importance of imported seeds.
5. Analyze suitable common feed ingredients for ruminant, monogastric, equine, and avian digestive systems, including roughages, concentrates, and supplements.

I. Plant Growth and Nutrients

1. Explain factors and processes in plant growth/
2. Understand the photosynthesis process and the roles of the sun, chlorophyll, sugar, carbon dioxide, and water in the process.
3. Understand the anatomy and functions of plant systems and structures.
4. Explain the respiration process in food and organic matter breakdown.
5. Describe annual, biennial, and perennial life cycles.
6. Explain plant sexual and asexual reproduction.

J. Plant and Insects and Pests

1. Understand the major classifications of pests.
2. Explain three conditions for pest problems.
3. Describe how pests affect plants and cause losses.
4. Explain the chemical, mechanical, cultural, and biological methods for plant pest control.
5. Explain the advantages and disadvantages of Integrated Pest Management (IPM).
6. List safety practices to follow in pest control.

K. Applying Animal Science Principles

1. Name and describe the major animal groups.
2. Describe the anatomy and physiology of animals.
3. Identify and explain the major organ systems of animals which include skeletal, nervous, circulatory, respiratory, excretory, digestive, reproductive and mammary.
4. Understand the evolution and roles of domesticated animals.
5. Explain the differences between domestication and natural selection.

L. Animal Feeds and Nutrition

1. Explain the feed needs of animals.
2. Describe the feedstuffs that provide nutrients.
3. Explain the characteristics of good feed.
4. Understand animal feeding guidelines and evaluate sample feeding programs for various species.
5. Describe the types of nutrients required by farm animals.
6. Analyze suitable common feed ingredients for ruminant, monogastric, equine, and avian digestive systems, including roughages, concentrates, and supplements.

M. Animal Genetics and Reproduction

1. Differentiate between genotype and phenotype, and describe how dominant and recessive genes function.
2. Compare and contrast genetic characteristics among different breeds of farm animals.
3. Demonstrate how to display phenotype and genotype ratios by utilizing a Punnett Square.
4. Explain the fertilization process and the methods of insemination.
5. Understand the purpose and processes of mitosis and meiosis.

N. Animal Health and Diseases

1. Explain common animal health practices.
2. Understand the causes and control of common diseases.
3. Describe environmental influences of animal health.
4. List and examine the different types of animal diseases.
5. Describe the different types of injections.

O. Using Biotechnology to Improve Life

1. Describe biotechnology and how it is being used.
2. Identify issues associated with Biotechnology.
3. Distinguish between two major areas of biotechnology
4. List and explain examples of orgasmic biotechnology.
5. Describe the role of genetics, cells, and genomes in molecular biotechnology
6. Describe the process of genetic engineering and the use of recombinant DNA.
7. Identify the areas of Agriscience being developed through genetic engineering.

P. Applying Principals of Soil Science

1. Describe the major soil components and types.
2. Explain the different ways that soil can be formed.
3. Understand how soil texture, structure, pH, and salinity affect plant growth.
4. Explain the different kinds of soil.
5. Explain the types, uses, and applications of soil amendments and fertilizers.
6. Explain the relation between soil and land.

Q. Marketing Technology in Agriscience

1. Describe the importance of agricultural marketing.
2. Explain the ways agricultural products are marketed.
3. List and explain the major functions in agricultural marketing.
4. Describe the role of marketing infrastructure.
5. Explain the role of communication in agricultural marketing.

R. Computer Technology and Agriculture

1. Name five uses in agribusiness
2. Name and explain the functions of the major external parts of the computer.
3. Demonstrate the use of a word processor.
4. Gain access to information highway through the internet.

S. Interpersonal Skills & Leadership Development (FFA)

1. Explain leadership traits in a leader.
2. Chart a short history and purposes of the FFA
3. List and describe the FFA degree requirements.
4. Explain and recite the FFA Creed.
5. List components of teamwork and cooperation.
6. Goal setting and creating the positive attitude.
7. Completion of a Supervised Agricultural Experience Project.

T. Parliamentary Procedure & Law

1. Define Parliamentary Procedure.
2. Understand the basic concepts of Parliamentary Law.
3. Apply Parliamentary Law in a meeting setting.
4. Use effectively Parliamentary law within a meeting.

U. Communication and Speaking Skills

1. List and describe the importance of public speaking skills.
2. Demonstrate the ability to lead a group discussion.
3. Describe the importance of being a good listener.
4. Demonstrate public speaking skills in selecting, researching and orally delivering a 5-10 minute presentation.

V. Agriculture Science Research Project

1. Development of an agriculture science project.
2. Statistical management of project via Record Book.
3. Instructional coordination and supervision.
4. Analysis of project results.

W. Professional Opportunities in Agriculture

1. Biotechnology & research fields
2. Other related agriculture science fields.

V. TEXTS & SUPPLEMENTAL INSTRUCTIONAL RESOURCES:

Modern Biology 2 Edition (Holt, Rinehart & Winston, 2004)
Laboratory Investigations in Biology (Holt, Rinehart & Winston, 2004)
Agriculture Biology Lab Manual Revised (Fullerton, 1999)
Biological Science Applications in Agriculture (Osborne, 1999)
National FFA Organization (2004). Official Manual. Indianapolis, IN.
California FFA Association (2004). California Agriculture Record Book, Sacramento, CA.
University of California, Daivs & California Department of Education (2002).

Agriculture Model Curriculum Lesson Plans for Core I. CDE Press. Sacramento, CA.
California Core Agriscience CD Lesson Plan Library (2004)

VI. KEY ASSIGNMENTS:

A. Research Paper on Agriculture Science
B. Seminar Presentation on Agriculture Science Practices
C. Development of Science Fair Project relating to Agriculture Science
D. Laboratory activities
E. Supervised Agricultural Experience Project & Record Book
F. FFA Leadership Participation

VII. INSTRUCTIONAL METHODS:

A. Lecture
B. Audio Visual Materials
C. Research Readings and Written Presentation
D. Homework Assignments
E. Group & Individual Activities
F. Laboratory Investigation – 1 per week (20% of grade)
G. Discussion & Group Dynamics
H. Quizzes, Tests & Final Exam
I. Guest Speakers
J. Field Trips
K. Internet Exploration
L. Seminar Presentation

VIII. ASSESSMENT METHODS

A. Quizzes, Tests & Final Exam	40%
B. Laboratory Investigation & Write-ups	20%
C. Writing Assignments	10%
D. Leadership & Critical Thinking Activities	10%
E. Research Report and Seminar Presentation	10%
F. Supervised Agricultural Experience Project & Record Book	10%

IX. LABORATORY ACTIVITIES:

A. The following laboratory activities will be incorporated:

1. The scientific method
2. Using the microscope
3. Using the dissecting microscope
4. Introduction to lab exercises
5. The effects of population shifts
6. The effects of air pollution
7. Water testing
8. Root & stem anatomy
9. Leaf anatomy
10. Flower anatomy
11. Pollution and fertilization
12. Sexual & asexual reproduction
13. Plant reactions to the environment

14. Soil testing
15. Soil erosion
16. Osmoses & diffusion investigation
17. Weed identification
18. Insect identification
19. Examination and diagram cells microscopically
20. Natural selection
21. Examine stained blood slides for form, function, parasites etc.
22. Simple digestion
23. Bacteria in Digestion
24. Parasites
25. Urinalysis – chemistry and morphology
26. Dilution and toxicity
27. Chemical mechanism of digestion
28. Chemistry analysis that identifies blood glucose levels
29. Chick embryo development
30. Normal system response
31. Fetal pig dissection
32. Effects of steroids on growth
33. Gene regulation
34. Manipulation of DNA
35. Genetic traits

Course Title

Agriculture Science 1A

Description of Target Group

This course is designed for students in the 9th and/or 10th grade.

Purpose

This is the first semester of a one-year course. The course is designed to follow the model agricultural education core curriculum established by the State of California. This portion of the course will include California Agriculture, Animal Science, Agriculture Business Management and Leadership.

Standards of expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Students shall understand the economic importance of the agriculture sector in California, including leading production areas and commodities.
2. Students shall understand the interrelationship of agriculture and society in California, including factors which influence agricultural activities.
3. Students shall understand the impact of agricultural production on the environment and natural resources of California.
4. Students will develop an appreciation of energy, its effects on modern agriculture and current and potential applications of alternate sources of energy available to the field today.
5. The students will understand the importance of domestic animals and their role in modern society.
6. Students will develop a basic understanding of the behavior, morphology, taxonomy, general reproductive traits and natural selection.
7. Students will develop a basic understanding of the structure, function and maintenance of the major body systems (e.g., digestive organ systems, etc.) and their components.
8. Students will develop a basic understanding of the inheritance and genetic basis for animal selection.
9. Students will develop an understanding of the factors involved in animal nutrition, animal feeding, and the basic feed stuffs available for that purpose.
10. Students shall understand the concept of animal health. They shall become familiar with methods of identification of unhealthy animals, preventative measures, treatment, and the casual agent of common health problems in animals of economic importance.
11. Students will develop an appreciation for the factors involved in and the ability to evaluate and select livestock for specific uses.
12. Students will understand the basis for meat grading and develop an appreciation of the variety of products available from meat animals.

13. Students shall appreciate the importance of keeping accurate records of business transaction in agriculture.
14. Students shall understand the basic role of financial credit in agriculture, including sources and costs of farm credit.
15. Students shall understand the basic functions of the marketing process in agriculture.
16. Students will understand the basic concepts of computer literacy and appreciate the role of computer applications in agriculture.
17. Students shall understand the four types of business structures in agriculture.
18. Students will appreciate the wide variety of leadership training activities available through the Future Farmers of America organization.
19. Students shall appreciate the important role that communication skills play in developing leadership abilities.
20. Students will understand the principles of Parliamentary Procedure.
21. Students shall understand the basic concept of scientific inquiry and critical thinking.

Instructional Materials

Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities

Field trips, lectures, discussions, demonstrations, films, filmstrips, slides, speakers, student presentations and involvement in Future Farmers of America.

Course Title

Agriculture Science 1B

Description of Target Group

This course is designed for students in the 9th and/or 10th grade.

Purpose

This is the second semester of a one-year course. The course is designed to follow the model agricultural education core curriculum established by the State of California. This portion of the course will include Plant Science, Supervised Occupational Experience, Employability and Careers.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Students will understand the growth and development of plants, including the functions of plant parts, reproductive systems, and auxins.
2. Students will understand the role of soil in the plant production, including factors, which affect soil productivity.
3. Students shall understand the role of fertilizers in agricultural production.
4. Students will understand the role of irrigation in plant production.
5. Students shall understand the importance of pest control in agricultural production and appreciate the need for safe pesticide application procedures.
6. Students will develop an appreciation for safety in the work place and proper use of tools.
7. Students shall understand the basic applications of measurement in calculating volume and distance and develop an appreciation for the differences between the American and Metric System.
8. Upon completion of this course all students will have a basic understanding of agriculture and its ramifications in California.

Instructional Materials

Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities

Field trips, lectures, discussions, demonstrations, films, filmstrips, slides, speakers, student presentations and involvement in Future Farmers of America.

Course Title **ERHS**

Agriculture Science 2 (CP)

Description of Target Group

Agriculture Science 2 is a one-year, laboratory science course designed as the second phase of the agriculture sequence. It is for the college-bound student with career interest in agriculture and will meet the University of California "a-f" requirements of Science as well as for the student who will enter the agriculture workplace following high school or further training at the community college level. Using agriculture as the learning vehicle, the course emphasizes the principles, central concepts, and inner-relationships among the following topics: the molecular and cellular aspects of life, the chemical and structural basis of life, energetic of life, growth and reproduction in plants and animals, evolution of modern plants and domestic livestock species, plant and animals genetics, taxonomy of modern agricultural plants and animals, animal behavior, ecological relationships among plants, animals, humans and environment, nutrition in animals, health and diseases in animals and the similarities between animals and humans. The course is centered around an extensive laboratory component in order to connect the big ideas of life science with agricultural applications, earth and physical science principals, and other curricular areas, including written and oral reporting skills.

Length of Course:	One Year
Units of Credit:	Ten
Prerequisites:	Ag Sci 1 (CP) or Instructor's Approval
Grade Level	10-12
Special Course Designation:	College Pre "f" requirement
Course Code *	
Homework	3 hrs+/wk

Standards of Expected Student Achievement

Upon completion of this course, the student will be able to:

1. Unit A. Introduction to Agricultural Biology
   - 1.1 Explain the importance of Agricultural Biology in our society. Provide evidence for and defend your explanation.
   - 1.2 Compare various careers in the area of Agricultural Biology. Report on careers that are held by persons in under represented populations.

2. Unit B. Agricultural Research
   - 2.1 Explain the importance of research in agriculture.
   - 2.2 Describe the process of scientific research methods in agriculture.
   - 2.3 Develop a Supervised Agricultural Experience Project which involves the scientific method.
   - 2.4 Formulate a term project focusing on one topic in Agricultural Biology and relate it to other scientific disciplines.
   - 2.5 Develop a research project that can be entered in the FFA Agriscience competition.
3. Unit C. Agriculture and the Environment
   - 3.1 Identify the roles of plants and animals and their interactions in the web of life.
   - 3.2 Describe the flow of energy through the biosphere.
   - 3.3 Compare and contrast the oxygen and nitrogen cycles. Report on their importance in agriculture.
   - 3.4 Define the term “ecosystem”.
   - 3.5 Appraise at least three current issues in agriculture which biology affects the environment.
   - 3.6 Explain the impact of population on the environment and the effect of the environment on populations.
   - 3.7 Report on both the good and bad effects of the agricultural revolution on the environment.
   - 3.8 Evaluate the economic effects of pollution and erosion on production agriculture.
   - 3.9 Develop and defend a plan to preserve limited resources related to agriculture.
   - 3.10 Compare and contrast five forms of energy used in agriculture.
   - 3.11 Design and conduct an experiment which shows the relationship between soil characteristics and plant growth.
   - 3.12 Describe how agriculture practices can modify soil to improve soil moisture relationships.
   - 3.13 Conduct an experiment, which involves water movement through soil.
   - 3.14 Compare the internal systems of a single celled organism to those of multicellular organisms.
   - 3.15 Describe the difference between plant cells and animal cells.
   - 3.16 Identify blood, bone, fat, nerve, and muscle cells.
   - 3.17 Identify and diagram male and female gametes in both plants and animals
   - 3.18 Compare and Contrast the process of Mitosis and Meiosis.
   - 3.19 Describe how cells respond to certain stimuli.
   - 3.20 Explain the concept of cellular adaptation.

3.21 Discuss the development of the biological concept of “Kingdom”.
3.22 Discuss three reasons for the current use of the modern system of plant classification.
3.23 Apply taxonomy in three ways to the field of agriculture.
3.24 Prepare a phytogenic tree for at least one domestic animal species.
3.25 Explain how the process of natural selection affects plants and animals. Include the impact of external conditions in the explanation.
3.26 Analyze the impact of increasing populations on the environment and its resources.

4. Unit D. Plant physiology, reproduction, photosynthesis, and growth.
   4.1 Compare and Contrast the structures and functions of plants from different families.
   4.2 Design and conduct an experiment which covers the entire life cycle of a plant.
   4.3 Defend the role of green plants in the maintenance of life.
   4.4 Compare and Contrast monocotyledons and dicotyledons with respect to leaf, stem, flower, structure, and agricultural significance.
   4.5 Analyze the interrelationships among the different systems within the plant.
   4.6 Discuss abiotic environmental factors that affect plant growth (wind, temperature, polar radiation, soil conditions, humidity, pollution, etc.).
   4.7 Explain the difference between sexual and vegetative reproduction.
   4.8 Demonstrate an application of both sexual and vegetative reproduction.
   4.9 Discuss how sexual and a sexual reproduction are used in agriculture.
   4.10 Research and report on the significant uses of plants in nutrition and medicine.
   4.11 Compare the life cycle of simple plants, such as algae of mass to a complex plant.
   4.12 Grow at least one indoor and one outdoor landscaping plant or vegetable. Chart to growth pattern and report the results of observations.

5. Unit E. ANIMAL PHYSIOLOGY AND BEHAVIOR
   5.1 Demonstrate an understanding of the structure and function of the digestive system by tracing the pathways of food through the various types of livestock digestive systems with emphasis on the function of organs in the digestive process.
   5.2 Analyze the function of each mammalian body.
   5.3 Compare the interrelationships of each system within the mammalian body.
   5.4 Compare and contrast the estrus cycles of cattle, sheep, and swine and the menstrual cycle in humans. Chart the process of fertilization in each species.
   5.5 Explain the importance of cellular respiration to living organisms. Develop a flow chart outlining the process of cellular respiration.
   5.6 Develop a flow chart outlining the development of an embryo from conception through parturition.
   5.7 Describe how animal behavioral patterns affect management and handling practices of domestic animals.
   5.8 Dissect various organisms and identify the organs and systems of each.

5.9 Compare and contrast the organ systems of different livestock species.
5.10 Analyze the nutrient requirements of various domestic species.
5.11 Analyze the nutrient content of several feeds.
5.12 Develop a low-cost feed ration for one species of livestock for maintenance, growth, and lactation, using concentrates and roughage available locally.
5.13 Describe the symptoms of five common nutritional disorders caused by vitamin or mineral deficiencies or laxicity and explain the treatment and prevention of these diseases.
5.14 Feed an animal through an entire production cycle, recording the types of feed used, rate of gain, and the lean-to-fat ration. Report on observation and conclusions.
5.15 Develop a flow chart outlining the life cycle of one internal and one external parasite.
5.16 Describe the impact of parasites on livestock and on the agricultural industry.
5.17 Design a disease prevention and health care plan for a project animal.
5.18 Appraise the results of human medicine in relation to livestock medicine.

6. UNIT F. PLANT AND ANIMAL GENETICS
6.1 Compare and contrast the phenotypic traits of related breeds and varieties of animals and plants.
6.2 Explain the function of each of the following: gene, allele, DNA and RNA.
6.3 Explain the role of enzymes in chromosome replication, and the implications of biotechnology involving these enzymes.
6.4 Discuss the contributions of Gregor Mendel to the field of genetics.
6.5 Conduct a simple experiment, which exhibits dominant and recessive properties.
6.6 Evaluate the effectiveness of selection and heritability in production of agriculture by comparing modern day crops and animals to their ancestors.
6.7 Develop an experiment, which develops a trait through selection and heritability.
6.8 Analyze the effects of biotechnology on modern agriculture.
6.9 Report on the importance of natural selection on the driving force of evolution and its importance in production agriculture.

7. SAMPLES OF LABORATORY EXAMPLES
7.1 The scientific method
7.2 Analyzing ecosystems
7.3 Checking water for Coliform Bacteria
7.4 Genotypic and phenotypic rations
7.5 Flower dissections and pollen growth germination
7.6 N-P-K tissue test on greenhouse/potted plants
7.7 Warm germination test
7.8 TS test
7.9 Cold germination test
7.10 Salinity and seed germination
7.11 Determining salt tolerance of plants
7.12 Factors affecting photosynthesis
7.13 Effects of leaf surface area, air movement and light on transportation rate
7.14 Effects of light quality on plant growth

7.15 Geotropism
7.16 Phototropism
7.17 The hydrologic cycle
7.18 Comparison of soil vs soilless plant culture
7.19 Effects of nutrient concentrations of hydroponic plant growth
7.20 Effects of herbicides on crop and plants
7.21 Herbicide bioassay
7.22 Effects of rooting hormones on root development
7.23 Effects of gibbarallic acid on seed germination
7.24 Embryo culture of apples
7.25 Anther culture
7.26 DNA extraction
7.27 Probability of trait inheritance
7.28 Classifying animals
7.29 Examining animal cells
7.30 Effects of feed ration on growth
7.31 Analyzing feed for nutrient content
7.32 Starch digestion by enzyme action
7.33 Effects of physical and chemical treatment of forage samples on digestibility
7.34 Effects of feed additives on animal growth
7.35 Livestock basic physical exam
7.36 Parasites of agriculture animals
7.37 Comparison of female reproductive organs
7.38 Culturing bacteria
7.39 Evaluating semen
7.40 Safety

8. CLASSIFYING AND NAMING LIVING THINGS
8.1 Describe and classification system for living things
8.2 Explain taxonomy
8.3 Use a classification key to identify leaves
8.4 Describe how classification systems are useful in Agriscience and technology

9. APPLYING PRINCIPLES OF PLANT SCIENCE
9.1 Define plant science and how plants differ from animals
9.2 Label the parts of a plant and explain their functions
9.3 Explain the life cycle of a plant
9.4 Observe the effect of light on plant growth
9.5 Observe the effect of gravity on plant growth

10. REPRODUCING PLANTS
Explain the processes for the propagation of plants
10.1 Label the parts of a plant and explain their role
10.2 Determine viability of seeds by using germination and vigor tests
10.3 Explain the importance of imported seed

11. PRODUCING PLANTS
    - 11.1 Explain factors and processes in plant growth
    - 11.2 Determine the rate of photosynthesis
    - 11.3 Test for sugar production during photosynthesis
    - 11.4 Define transpiration and its importance
    - 11.5 Observe water loss by transpiration
    - 11.6 Name the nutrients plants need and describe how plants get them
    - 11.7 Explain the use of fertilizers
12. KEEPING PLANTS HEALTHY
    - 12.1 Explain five major kinds of pests
    - 12.2 Explain three conditions for pests problems
    - 12.3 Describe how pests are prevented
    - 12.4 Describe how pests affect plants and cause losses
    - 12.5 Explain integrated pest management
    - 12.6 List safety practices to follow in pest control
13. APPLYING PRINCIPLES OF ANIMAL SCIENCE
    - 13.1 Name and describe the major animal groups
    - 13.2 Describe the anatomy and physiology of animals
    - 13.3 Describe the role of genetics, cells and genomes in molecular biotechnology
    - 13.4 Describe the process of genetic engineering and the use of recombinant DNA
    - 13.5 Identify areas of Agriscience being developed through genetic engineering
14. APPLYING EARTH SCIENCE IN AGRICULTURE
    - 14.1 Describe major features and resources of the earth
    - 14.2 Explain changes that occur in the earth
    - 14.3 Describe atmosphere and its importance in Agriscience
    - 14.4 Explain the importance of climate in Agriscience
    - 14.5 Identify and describe major factors in weather
    - 14.6 Explain succession and its relationships to the Earth
15. APPLYING PRINCIPLES OF SOIL SCIENCE
    - 15.1 Describe the materials that make soil
    - 15.2 Explain the different ways that soil can be described
    - 15.3 Explain how soil is formed
    - 15.4 Describe soil profile
    - 15.5 Explain the kinds of soil water
    - 15.6 Describe soil pH and its relation to plant growth
    - 15.7 Explain the relation between soil and land
    - 15.8 Describe important soil management practices
16. APPLYING PRINCIPLES OF CHEMISTRY
    - 16.2 Describe the major kinds of matter
    - 16.3 Distinguish between elements, atoms and molecules
    - 16.4 Describe how new compounds are formed
    - 16.5 Explain the importance of carbon
    - 16.6 Distinguish between solutions and suspensions

16.7 Explain acids, bases, and salts
16.8 Describe common chemical processes in Agriscience
16.9 Describe the importance of measurements in chemistry

17. APPLYING PRINCIPLES OF PHYSICS
    17.1 Define physics and explain important areas of physics
    17.2 Explain work and power
    17.3 Describe mechanical advantage
    17.4 Explain the use of thermal energy in Agriscience
    17.5 Explain the use of electrical energy in Agriscience
    17.6 Describe the use of compression in Agriscience
18. COMMUNICATIONS
    18.1 List and describe the importance of public speaking skills
    18.2 Demonstrate the ability to lead a discussion group
    18.3 Describe the importance of being a good listener
    18.4 Demonstrate public speaking skills by selecting, researching and orally delivering a five to ten minute presentation
    18.5 Identify and demonstrate skills using telephones, letters, memos, and verbal conversation
    18.6 Identify skills necessary to work on committees effectively and efficiently
19. RECORD KEEPING
    19.1 List reasons for record keeping
    19.2 Explain functions of, maintain, and complete a calendar, business agreement, budget, and journal in a record book
    19.3 Explain how business uses records
20. COMPUTERS
    20.1 Name five uses in agribusiness
    20.2 Name and explain the functions of the major external parts of the computer
    20.3 Demonstrate the use of a word processor
    20.4 Gain access to information highway through computer network

I V Student Assessment - Pre/Post Test

1. The student's knowledge and skills of the performance objectives will be assessed using the formats listed below
    1.1 To evaluate objective materials, pretests will be administered at the beginning of the course, and a post-test will be given at the end of the school year
    1.2 To test application domain skills, an evaluation instrument will be maintained by the student
    1.3 To evaluate specific performance indicators in the analysis, synthesis, and evaluation domains, essay questions will be administered and scored with a rubric.
    1.4 Students will participate in FFA activities, such as the state Agriscience Fair and Agriscience Student of the Year program.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Course Title

Agriculture Science 2 A

Description of Target Group

This course is designed for students who have completed Agriculture Science 1.

Purpose

This is the first semester of a one-year course. The course is designed to follow the model agricultural education core curriculum established by the State of California. This portion of the course will include California Agriculture, Animal Science, Agriculture Business Management and Leadership.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Students shall expand their understanding of the economic importance of the agriculture sector in California, including the local production areas and commodities.
2. Students shall further understand the interrelationship of agriculture and society in California, including factors which influence agricultural activities.
3. Students shall further understand the impact of agricultural production on the environment and natural resources of California.
4. Students will increase their appreciation of energy, its effects on modern agriculture and current and potential applications of alternate sources of energy available to the field today.
5. The students will further understand the importance of domestic animals and their role in modern society.
6. Students will increase their understanding of animal behavior, morphology, taxonomy, general reproductive traits and natural selection.
7. Students will advance their understanding of the structure, function and maintenance of the major body systems (e.g., digestive organ systems etc.) and their components.
8. Students will increase their understanding of the theory of inheritance and genetic basis for animal selection.
9. Students will increase their understanding of the factors involved in animal nutrition, animal feeding, and the basic feed stuffs available for that purpose.
10. Students shall further understand the concept of animal health. They shall become familiar with methods of identification of unhealthy animals, preventative measures, treatment, and the casual agents of common health problems in animals of economic importance.
11. Students will expand their appreciation for the factors involved in and the ability to evaluate and select livestock for specific uses.

12. Students will further understand the basis for meat grading and develop an appreciation of the variety of products available from meat animals.
13. Students shall increase their appreciation of the importance of keeping accurate records of business transactions in agriculture.
14. Students shall further understand the basic role of financial credit in agriculture, including sources and costs of farm credit.
15. Students shall further understand the basic functions of the marketing process in agriculture.
16. Students will further understand the basic concepts of computer literacy and appreciate the role of computer applications in agriculture.
17. Students shall increase their understanding of the four types of business structures in agriculture.
18. Students will further appreciate the wide variety of leadership training activities available through the Future Farmers of America organization.
19. Students shall further appreciate the importance role that communication skills play in developing leadership abilities.
20. Students will expand their understanding of the principles of Parliamentary Procedure.
21. Students shall advance their understanding of the basic concepts of scientific inquiry and critical thinking.

Instructional Materials

Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities

Field trips, lectures, discussions, demonstrations, films, filmstrips, slides, speakers, student presentations and involvement in Future Farmers of America.

Course Title

Agriculture Science 2B

Description of Target Group

This course is designed for students who have completed Agriculture Science 2A.

Purpose

This is the second semester of a one-year course. The course is designed to follow the model agricultural education core curriculum established be the State of California. This portion of the course will include Plant Science, Supervised Occupational Experience, Employability and Careers.

Standards of Expected Students Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Students will expand their understanding of the growth and development of plants, including the functions of plant parts, reproductive systems, and auxins.
2. Students will further understand the role of soil in plant production, including factors which affect soil productivity.
3. Students shall increase their understanding of the role of fertilizers in agricultural production.
4. Students will reinforce their understanding of the role of irrigation in plant production.
5. Students shall increase their understanding of the importance of pest control in agricultural production and appreciate the need for safe pesticide application procedures.
6. Students will increase their appreciation for safety in the work place and the proper use of tools.
7. Students shall further understand the basic applications of measurement in calculating volume and distance and develop an appreciation for the differences between the American and Metric Systems.
8. Upon completion of this course all students will have a comprehensive understanding of agriculture and its ramifications in California.

Instructional Materials

Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities

Field trips, lectures, discussions, demonstrations, films, filmstrips, slides, speakers, student presentations and involvement in Future Farmers of America.

19. Brief Course Description

Agricultural Skills is a one term class with an emphasis on the agricultural career pathways. Units of instruction to be covered in the class include: Ornamental Horticulture, Agricultural Science, Animal Science, Articultural Mechanics, FFA/Leadership and Careers in Agriculture.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Agriculture Skills provides an introduction to career pathways in agriculture. At the conclusion of the class students will be able to perform the following agriculture skills.

- Basic floral design
- Principles of plant and crop science
- Lab techniques, procedures and experiments
- Introductory welding skills
- Basic electrical knowledge and standard rope use
- Animal husbandry
- Public speaking
- Recordkeeping of student Supervised Agriculture Experience Project (SAEP)
- Agriculture career exploration

21. Course Objectives

- Students will have a basic understanding the color wheel and the relation to floral design
- Students will learn to plant, care for the harvest a variety of plants and crops.
- Students will learn proper technique for using a variety of laboratory equipment.
- Students will learn how to safely use an oxyacetylene cutting torch and become familiar with other welding practices such as SMAW, Arc, Plasma.
- Demonstration of proper driving skills – forklift and tractor
- Students will complete a single circuit electrical board and safety practices related to electrical currents.
- Students will demonstrate knowledge of a variety of knots that are involved in many agricultural tasks.
- Students will learn how to care for various types of livestock.
- Students will recite FFA Creed Motto and the FFA Statue.
- California Voc Ag Record book – student projects and leadership activities.
- Research on agriculture careers using career center, internet, and agriculture periodicals

22. Course Outline

Unit 1 – Agriculture Science
Unit 2 – Ornamental Horticulture
Unit 3 – FFA/Leadership/Record Keeping
Unit 4 - Agriculture Mechanics
Unit 5 – Animal Science

23. Texts & Supplemental Instructional Materials

- **FFA Handbook/Manual**
- **Voc Ag Record Book**
- **Class handouts and guides**
- **Computer and Internet technologies**
- **Ag related periodicals and news sources**
- **Ag core CD**

24. Key Assignments

- Voc Ag Record Book
- Floral Arrangement
- Circuit Board
- Lab Drawings
- Metal Project
- Rope Halter
- Livestock Projects
- Plant Projects
- Career Search
- History of FFA

25. Instructional Methods and/or Strategies

- Direct instruction
- Demonstrations
- Project-based learning
- Lecture
- Cooperative learning
- Reading assignments
- Video and CD-ROM lessons
- Exhibitions of student work
- Peer and teacher evaluation
- Class discussions
- Guest Speakers
- Field Trips
- Supervised Agricultural Experience Projects (SAEP's)

26. Assessment Methods and/or Tools

- Teacher observation
- Homework assignments
- Quizzes and tests
- Projects
- Student demonstrations
- Classroom and lab Participation
- Notebook
- SAEP's
- FFA Activities
- California Vocational Agriculture Recordbook

C. HONORS COURSES ONLY

Course Title

Welding 1A
Agriculture Welding 1A

Description of Target Group

This course is designed for all students interested in learning welding skills for a possible future vocation.

Purpose

Survey of welding is a one-semester course. It will provide a combination of subject matter and activities designed to develop skills necessary to perform practices for self and others. They will learn an appreciation for welding, fundamentals of gas and electrical welding, and study the economic role welding plays in today's agriculture and related industries. The course provides students with the opportunity to decide whether welding as a career fits their personal aptitudes, abilities, and interest. It is recommended that agricultural students complete basic agricultural mechanics prior to enrollment.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete district safety test with a passing score
2. Work safely with oxyacetylene equipment and understand how it works
3. Set up the oxyacetylene unit.
4. Adjust the oxyacetylene flame.
5. Use and understand welding joints.
6. Puddle and run a bead with rod.
7. Fuse bead metal together.
8. Make lap, butt and fillet welds.
9. Operate a cutting torch.
10. Work safely with electric arc welders.
11. Understand how the electric arc works.
12. Run arc beads.
13. Use the weave pattern to weld.
14. Make single and multiple pass welds.
15. Weld a beveled butt and fillet weld.
16. Weld outside corner welds.
17. Be able to identify rods and select the right rod for welding joint.
18. Run the 30-ton shear.
19. Pay all fees pending.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The student will be exposed to media such as films, filmstrips, and charts to help them conceive the ideas presented. This will reinforce the concepts and techniques presented. Considerable time is spent on building skills for job entry level. The students do many fabrication jobs; these are similar to ones they would do in industry. A variety of other welding processes are covered as indicated in the course outline.

Course Title

Welding 1B
Agriculture Welding 1B

Description of Target Group

This course is designed for any student who has completed Welding 1A.

Purpose

Welding 1B is a one-semester course. It will provide a combination of subject matter and activities designed to develop skills necessary to perform basic welding techniques. It will also develop in the student a positive attitude toward safe shop practices, appreciation for welding, fundamentals of gas and electric welding and an insight into the important economic role welding plays in today's agriculture and related industries. The areas of T.I.B. and M.I.G. are explored and the students become aware of their important role in welding. Other areas stressed help the student develop insight into specialty areas in welding. The student will become involved in the educational value of welding and become aware of career preparation in welding.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete the district safety test with a passing score.
2. Braze weld pipe.
3. Braze weld in the overlap and fillet positions on pipe.
4. Understand where and how to purchase welding supplies.
5. Weld horizontal beads.
6. Weld vertical beads.
7. Weld overhead.
8. Electric weld pipe.
9. Understand about heat distortion.
10. Work safely in the construction of larger farm welding projects.
11. Understand the importance that must be given to details and assembly of welding projects.
12. Pay all shop fees pending.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Lectures, demonstrations, filmstrips, movies, quizzes and tests, reading assignments and study sheets.

Course Title

Welding 2A
Agricultural Welding 2A

Description of Target Group

This course is designed for any student interested in developing saleable skills in the welding industry. It is recommended for students who have completed Welding 1A and 1B and those who obtain instructor's approval.

Purpose

The overall purpose Welding 2A is to provide a combination of subject matter and activities designed to develop skills necessary to perform advanced welding techniques used in today's welding industries. It will also develop in the student an awareness of safe shop practices, appreciation for welding, and advance use of gas and electric welding. The areas of tungsten inert gas and metallic inert gas are expanded upon and the students become aware of their important role in welding. Other areas are covered as listed in the course outline to help the student develop insight into career opportunities, exploration and educational planning in welding.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete district safety test with a passing score.
2. Work safely with oxyacetylene and arc welding equipment and understand how it works when given an oral test.
3. Weld vertical, horizontal, and overhead.
4. Identify the problems of heat distortion.
5. Place welds properly where necessary to complete the project.
6. Identify safety working procedures for welding on larger farm and other related equipment.
7. An understanding of the importance that must be given to details and assembly of welding projects.
8. Identify the correct welding process to use in order to complete the job satisfactorily.
9. Select the proper welding machine, polarity and electrode to complete the job satisfactorily.
10. Set-up and properly weld with the tungsten inert gas welding machine.
11. Set-up for the welding operation correctly.
12. Awareness of the importance of welding to our farming and industrial
13. Familiarity with opportunities in the welding industry.
14. Pay all shop fees pending.

Welding 2A and Agricultural Welding 2A (continued)

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The student will be exposed to media such as films, filmstrips, and charts to help them conceive the ideas presented. This will reinforce the concepts and techniques presented. Considerable time is spent on building skills for job entry level. Many fabrication jobs are done by the students; these are similar to ones they would do in industry. A variety of other welding processes are covered as indicated in the course outline.

Course Title

Welding 2B
Agricultural Welding 2B

Description of Target Group

This course is designed for students interested in increasing practices and skills learned in Vocational Welding 2A.

Purpose

Activities and subject matter in Welding 2B are designed to develop advanced welding skills and techniques. Awareness of shop practices and the advance use of gas, electric welding, tungsten inert gas and metallic inert gas, as well as career opportunities are expanded.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete district safety test with a passing score.
2. Identify and use safe working procedures for welding on large equipment and related equipment.
3. Understand welding assembly techniques.
4. Set up large welding operations correctly.
5. Familiarity with opportunities in the welding industry.
6. Pay all shop fees pending.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Large job fabrication is done by the students; media exposure includes film, filmstrips and charts.

Course Title

Welding 3A

Description of Target Group

This course is designed for any student interested in developing saleable skills in the welding industry. It is recommended for students who have completed Vocational Welding 2B.

Purpose

The overall purpose of Welding 3 is to provide a combination of subject matter and activities designed to develop skills necessary to perform basic welding techniques used in today's welding industries. It will also develop in the student an awareness of safe shop practices, appreciation for welding, fundamentals of gas and electric welding and an insight into the important economic role welding plays in today's agriculture and related industries. The areas of tungsten inert gas and metallic inert gas rare explored and the students become aware of their important role in welding. Other areas are covered as listed in the course outline to help the student develop insight into career opportunities, exploration and educational planning in welding. Other areas are covered as listed in the course outline to help the student develop insight into career opportunities, exploration and educational planning in welding.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete District safety test with a passing score.
2. Works safely with oxyacetylene and arc welding equipment and understand how it works when given an oral test.
3. Braze weld pipe together.
4. Braze weld in the overlap and fillet positions on pipe.
5. A vertical and horizontal weld.
6. Identify the problems of heat distortion.
7. Place welds properly where necessary to complete the projects.

Welding 3A (continued)

8. Identify safety working procedures for welding on larger farm equipment.

9. And understanding of the importance that must be given to details and assembly of welding projects.

10. Identify the correct welding process to use to complete the job satisfactorily.

11. Select the proper welding machine, polarity and electrode to complete a job satisfactorily.

12. Set-up and properly weld with the tungsten inert gas welding machine.

13. Set up for the welding operation correctly.

14. Awareness of the importance of welding to our farming and industrial economics.

15. Familiarity with opportunities in the welding industry.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The student will be exposed to media such as films, filmstrips, and charts to help them conceive the ideas presented. This will reinforce the concepts and techniques presented. Considerable time is spent on building skills for job entry level. Many fabrication jobs are done by the students; these are similar to ones they would do in industry. A variety of other welding processes are covered as indicated in the course outline.

Course Title

Agriculture Science IA

Description of Target Group

This course is designed for students in the 9th and/or 10th grade.

Purpose

This is the first semester of a one-year course. The course is designed to follow the model agricultural education core curriculum established by the State of California. This portion of the course will include California Agriculture, Animal Science, Agriculture Business Management and Leadership.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Students shall understand the economic importance of the agriculture sector in California, including leading production areas and commodities.

2. Students shall understand the interrelationship of agriculture and society in California, including factors which influence agricultural activities.

3. Students shall understand the impact of agricultural production on the environment and natural resources of California.

4. Students will develop an appreciation of energy, its effects on modern agriculture and current and potential applications of alternate sources of energy available to the field today.

5. The students will understand the importance of domestic animals and their role in modern society.

6. Students will develop a basic understanding of animal behavior, morphology, taxonomy, general reproductive traits and natural selection.

7. Students will develop a basic understanding of the structure, function and maintenance of the major body systems (e.g., digestive organ systems, etc.) and their components.

8. Students will develop a basic understanding of the theory of inheritance and genetic basis for animal selection.

9. Students will develop an understanding of the factors involved in animal nutrition, animal feeding, and the basic feedstuffs available for that purpose.

10. Students shall understand the concept of animal health. They shall become familiar with methods of identification of unhealthy animals, preventative measures, treatment, and the casual agents of common health problems in animals of economic importance.

11. Students will develop an appreciation for the factors involved in and the ability to evaluate and select livestock for specific uses.

12. Students will understand the basis for meat grading and develop an appreciation of the variety of products available from meat animals.

13. Students shall appreciate the importance of keeping accurate records of business transactions in agriculture.

14. Students shall understand the basic role of financial credit in agriculture, including sources and costs of farm credit.

15. Students shall understand the basic functions of the marketing process in agriculture.

16. Students will understand the basic concepts of computer literacy and appreciate the role of computer applications in agriculture.

17. Students shall understand the four types of business structures in agriculture. ~

18. Students will appreciate the wide variety of leadership training activities available through the Future Farmers of America organization.

19. Students shall appreciate the important role that communication skills play in developing leadership abilities.

20. Students will understand the principles of Parliamentary Procedure.

21. Students shall understand the basic concept of scientific inquiry and critical thinking.

Instructional Materials
Supplementary Materials
Activities

Field trips, lectures, discussions, demonstrations, films, filmstrips, slides, speakers, student presentations and involvement in Future Farmers of America.

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

.

Course Title
Agriculture Science IB

Description of Target Group

This course is designed for students in the 9th and/or 10th grade.

Purpose

This is the second semester of a one-year course. The course is designed to follow the model agricultural education core curriculum established by the State of California. This portion of the course will include Plant Science, Supervised Occupational Experience, Employability and Careers.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Students understand the growth and development of plants, including the functions of plant parts, reproductive systems, and auxins.

2. Students will understand the role of soil in plant production, including factors which affect soil productivity.

3. Students shall understand the role of fertilizers in agricultural production.

4. Students will understand the role of irrigation in plant production.

5. Students shall understand the importance of pest control in agricultural production and appreciate the need for safe pesticide application procedures.

6. Students will develop an appreciation for safety in the work place and the proper use of tools.

7. Students shall understand the basic applications of measurement in calculating volume and distance and develop an appreciation for the differences between the American and Metric Systems.

8. Upon completion of this course all students will have a basic understanding of agriculture and its ramifications in California.

Instructional Materials
Supplementary Materials
Activities

Field trips, lectures, discussions, demonstrations, films, filmstrips, slides, speakers, student presentations and involvement in Future Farmers of America.

Spring 1988

Course Title **ERHS**

Agriculture Science 2 (CP)

Description of Target Group

Agriculture Science 2 is a one-year, laboratory science course designed as the second phase of the agriculture sequence. It is for the college-bound student with career interest in agriculture and will meet the University of California "a-f" requirements of Science as well as for the student who will enter the agriculture workplace following high school or further training at the community college level. Using agriculture as the learning vehicle, the course emphasizes the principles, central concepts, and inner-relationships among the following topics: the molecular and cellular aspects of life, the chemical and structural basis of life, energetic of life, growth and reproduction in plants and animals, evolution of modern plants and domestic livestock species, plant and animals genetics, taxonomy of modern agricultural plants and animals, animal behavior, ecological relationships among plants, animals, humans and environment, nutrition in animals, health and diseases in animals and the similarities between animals and humans. The course is centered around an extensive laboratory component in order to connect the big ideas of life science with agricultural applications, earth and physical science principals, and other curricular areas, including written and oral reporting skills.

Length of Course:	One Year
Units of Credit:	Ten
Prerequisites:	Ag Sci 1 (CP) or Instructor's Approval
Grade Level	10-12
Special Course Designation:	College Pre "f" requirement
Course Code *	
Homework	3 hrs+/wk

Standards of Expected Student Achievement

Upon completion of this course, the student will be able to:

1. Unit A. Introduction to Agricultural Biology
   - 1.1 Explain the importance of Agricultural Biology in our society. Provide evidence for and defend your explanation.
   - 1.2 Compare various careers in the area of Agricultural Biology. Report on careers that are held by persons in under represented populations.

2. Unit B. Agricultural Research
   - 2.1 Explain the importance of research in agriculture.
   - 2.2 Describe the process of scientific research methods in agriculture.
   - 2.3 Develop a Supervised Agricultural Experience Project which involves the scientific method.
   - 2.4 Formulate a term project focusing on one topic in Agricultural Biology and relate it to other scientific disciplines.
   - 2.5 Develop a research project that can be entered in the FFA Agriscience competition.
3. Unit C. Agriculture and the Environment
   - 3.1 Identify the roles of plants and animals and their interactions in the web of life.
   - 3.2 Describe the flow of energy through the biosphere.
   - 3.3 Compare and contrast the oxygen and nitrogen cycles. Report on their importance in agriculture.
   - 3.4 Define the term “ecosystem”.
   - 3.5 Appraise at least three current issues in agriculture which biology affects the environment.
   - 3.6 Explain the impact of population on the environment and the effect of the environment on populations.
   - 3.7 Report on both the good and bad effects of the agricultural revolution on the environment.
   - 3.8 Evaluate the economic effects of pollution and erosion on production agriculture.
   - 3.9 Develop and defend a plan to preserve limited resources related to agriculture.
   - 3.10 Compare and contrast five forms of energy used in agriculture.
   - 3.11 Design and conduct an experiment which shows the relationship between soil characteristics and plant growth.
   - 3.12 Describe how agriculture practices can modify soil to improve soil moisture relationships.
   - 3.13 Conduct an experiment, which involves water movement through soil.
   - 3.14 Compare the internal systems of a single celled organism to those of multicellular organisms.
   - 3.15 Describe the difference between plant cells and animal cells.
   - 3.16 Identify blood, bone, fat, nerve, and muscle cells.
   - 3.17 Identify and diagram male and female gametes in both plants and animals
   - 3.18 Compare and Contrast the process of Mitosis and Meiosis.
   - 3.19 Describe how cells respond to certain stimuli.
   - 3.20 Explain the concept of cellular adaptation.

3.21 Discuss the development of the biological concept of “Kingdom”.
3.22 Discuss three reasons for the current use of the modern system of plant classification.
3.23 Apply taxonomy in three ways to the field of agriculture.
3.24 Prepare a phytogenic tree for at least one domestic animal species.
3.25 Explain how the process of natural selection affects plants and animals. Include the impact of external conditions in the explanation.
3.26 Analyze the impact of increasing populations on the environment and its resources.

4. Unit D. Plant physiology, reproduction, photosynthesis, and growth.
   4.1 Compare and Contrast the structures and functions of plants from different families.
   4.2 Design and conduct an experiment which covers the entire life cycle of a plant.
   4.3 Defend the role of green plants in the maintenance of life.
   4.4 Compare and Contrast monocotyledons and dicotyledons with respect to leaf, stem, flower, structure, and agricultural significance.
   4.5 Analyze the interrelationships among the different systems within the plant.
   4.6 Discuss abiotic environmental factors that affect plant growth (wind, temperature, polar radiation, soil conditions, humidity, pollution, etc.).
   4.7 Explain the difference between sexual and vegetative reproduction.
   4.8 Demonstrate an application of both sexual and vegetative reproduction.
   4.9 Discuss how sexual and a sexual reproduction are used in agriculture.
   4.10 Research and report on the significant uses of plants in nutrition and medicine.
   4.11 Compare the life cycle of simple plants, such as algae of mass to a complex plant.
   4.12 Grow at least one indoor and one outdoor landscaping plant or vegetable. Chart to growth pattern and report the results of observations.

5. Unit E. ANIMAL PHYSIOLOGY AND BEHAVIOR
   5.1 Demonstrate an understanding of the structure and function of the digestive system by tracing the pathways of food through the various types of livestock digestive systems with emphasis on the function of organs in the digestive process.
   5.2 Analyze the function of each mammalian body.
   5.3 Compare the interrelationships of each system within the mammalian body.
   5.4 Compare and contrast the estrus cycles of cattle, sheep, and swine and the menstrual cycle in humans. Chart the process of fertilization in each species.
   5.5 Explain the importance of cellular respiration to living organisms. Develop a flow chart outlining the process of cellular respiration.
   5.6 Develop a flow chart outlining the development of an embryo from conception through parturition.
   5.7 Describe how animal behavioral patterns affect management and handling practices of domestic animals.
   5.8 Dissect various organisms and identify the organs and systems of each.

5.9 Compare and contrast the organ systems of different livestock species.
5.10 Analyze the nutrient requirements of various domestic species.
5.11 Analyze the nutrient content of several feeds.
5.12 Develop a low-cost feed ration for one species of livestock for maintenance, growth, and lactation, using concentrates and roughage available locally.
5.13 Describe the symptoms of five common nutritional disorders caused by vitamin or mineral deficiencies or laxicity and explain the treatment and prevention of these diseases.
5.14 Feed an animal through an entire production cycle, recording the types of feed used, rate of gain, and the lean-to-fat ration. Report on observation and conclusions.
5.15 Develop a flow chart outlining the life cycle of one internal and one external parasite.
5.16 Describe the impact of parasites on livestock and on the agricultural industry.
5.17 Design a disease prevention and health care plan for a project animal.
5.18 Appraise the results of human medicine in relation to livestock medicine.

6. UNIT F. PLANT AND ANIMAL GENETICS
6.1 Compare and contrast the phenotypic traits of related breeds and varieties of animals and plants.
6.2 Explain the function of each of the following: gene, allele, DNA and RNA.
6.3 Explain the role of enzymes in chromosome replication, and the implications of biotechnology involving these enzymes.
6.4 Discuss the contributions of Gregor Mendel to the field of genetics.
6.5 Conduct a simple experiment, which exhibits dominant and recessive properties.
6.6 Evaluate the effectiveness of selection and heritability in production of agriculture by comparing modern day crops and animals to their ancestors.
6.7 Develop an experiment, which develops a trait through selection and heritability.
6.8 Analyze the effects of biotechnology on modern agriculture.
6.9 Report on the importance of natural selection on the driving force of evolution and its importance in production agriculture.

7. SAMPLES OF LABORATORY EXAMPLES
7.1 The scientific method
7.2 Analyzing ecosystems
7.3 Checking water for Coliform Bacteria
7.4 Genotypic and phenotypic rations
7.5 Flower dissections and pollen growth germination
7.6 N-P-K tissue test on greenhouse/potted plants
7.7 Warm germination test
7.8 TS test
7.9 Cold germination test
7.10 Salinity and seed germination
7.11 Determining salt tolerance of plants
7.12 Factors affecting photosynthesis
7.13 Effects of leaf surface area, air movement and light on transportation rate
7.14 Effects of light quality on plant growth

7.15 Geotropism
7.16 Phototropism
7.17 The hydrologic cycle
7.18 Comparison of soil vs soilless plant culture
7.19 Effects of nutrient concentrations of hydroponic plant growth
7.20 Effects of herbicides on crop and plants
7.21 Herbicide bioassay
7.22 Effects of rooting hormones on root development
7.23 Effects of gibbarallic acid on seed germination
7.24 Embryo culture of apples
7.25 Anther culture
7.26 DNA extraction
7.27 Probability of trait inheritance
7.28 Classifying animals
7.29 Examining animal cells
7.30 Effects of feed ration on growth
7.31 Analyzing feed for nutrient content
7.32 Starch digestion by enzyme action
7.33 Effects of physical and chemical treatment of forage samples on digestibility
7.34 Effects of feed additives on animal growth
7.35 Livestock basic physical exam
7.36 Parasites of agriculture animals
7.37 Comparison of female reproductive organs
7.38 Culturing bacteria
7.39 Evaluating semen
7.40 Safety

8. CLASSIFYING AND NAMING LIVING THINGS
8.1 Describe and classification system for living things
8.2 Explain taxonomy
8.3 Use a classification key to identify leaves
8.4 Describe how classification systems are useful in Agriscience and technology

9. APPLYING PRINCIPLES OF PLANT SCIENCE
9.1 Define plant science and how plants differ from animals
9.2 Label the parts of a plant and explain their functions
9.3 Explain the life cycle of a plant
9.4 Observe the effect of light on plant growth
9.5 Observe the effect of gravity on plant growth

10. REPRODUCING PLANTS
Explain the processes for the propagation of plants
10.1 Label the parts of a plant and explain their role
10.2 Determine viability of seeds by using germination and vigor tests
10.3 Explain the importance of imported seed

11. PRODUCING PLANTS
    - 11.1 Explain factors and processes in plant growth
    - 11.2 Determine the rate of photosynthesis
    - 11.3 Test for sugar production during photosynthesis
    - 11.4 Define transpiration and its importance
    - 11.5 Observe water loss by transpiration
    - 11.6 Name the nutrients plants need and describe how plants get them
    - 11.7 Explain the use of fertilizers
12. KEEPING PLANTS HEALTHY
    - 12.1 Explain five major kinds of pests
    - 12.2 Explain three conditions for pests problems
    - 12.3 Describe how pests are prevented
    - 12.4 Describe how pests affect plants and cause losses
    - 12.5 Explain integrated pest management
    - 12.6 List safety practices to follow in pest control
13. APPLYING PRINCIPLES OF ANIMAL SCIENCE
    - 13.1 Name and describe the major animal groups
    - 13.2 Describe the anatomy and physiology of animals
    - 13.3 Describe the role of genetics, cells and genomes in molecular biotechnology
    - 13.4 Describe the process of genetic engineering and the use of recombinant DNA
    - 13.5 Identify areas of Agriscience being developed through genetic engineering
14. APPLYING EARTH SCIENCE IN AGRICULTURE
    - 14.1 Describe major features and resources of the earth
    - 14.2 Explain changes that occur in the earth
    - 14.3 Describe atmosphere and its importance in Agriscience
    - 14.4 Explain the importance of climate in Agriscience
    - 14.5 Identify and describe major factors in weather
    - 14.6 Explain succession and its relationships to the Earth
15. APPLYING PRINCIPLES OF SOIL SCIENCE
    - 15.1 Describe the materials that make soil
    - 15.2 Explain the different ways that soil can be described
    - 15.3 Explain how soil is formed
    - 15.4 Describe soil profile
    - 15.5 Explain the kinds of soil water
    - 15.6 Describe soil pH and its relation to plant growth
    - 15.7 Explain the relation between soil and land
    - 15.8 Describe important soil management practices
16. APPLYING PRINCIPLES OF CHEMISTRY
    - 16.2 Describe the major kinds of matter
    - 16.3 Distinguish between elements, atoms and molecules
    - 16.4 Describe how new compounds are formed
    - 16.5 Explain the importance of carbon
    - 16.6 Distinguish between solutions and suspensions

16.7 Explain acids, bases, and salts
16.8 Describe common chemical processes in Agriscience
16.9 Describe the importance of measurements in chemistry

17. APPLYING PRINCIPLES OF PHYSICS
    17.1 Define physics and explain important areas of physics
    17.2 Explain work and power
    17.3 Describe mechanical advantage
    17.4 Explain the use of thermal energy in Agriscience
    17.5 Explain the use of electrical energy in Agriscience
    17.6 Describe the use of compression in Agriscience
18. COMMUNICATIONS
    18.1 List and describe the importance of public speaking skills
    18.2 Demonstrate the ability to lead a discussion group
    18.3 Describe the importance of being a good listener
    18.4 Demonstrate public speaking skills by selecting, researching and orally delivering a five to ten minute presentation
    18.5 Identify and demonstrate skills using telephones, letters, memos, and verbal conversation
    18.6 Identify skills necessary to work on committees effectively and efficiently
19. RECORD KEEPING
    19.1 List reasons for record keeping
    19.2 Explain functions of, maintain, and complete a calendar, business agreement, budget, and journal in a record book
    19.3 Explain how business uses records
20. COMPUTERS
    20.1 Name five uses in agribusiness
    20.2 Name and explain the functions of the major external parts of the computer
    20.3 Demonstrate the use of a word processor
    20.4 Gain access to information highway through computer network

I V Student Assessment - Pre/Post Test

1. The student's knowledge and skills of the performance objectives will be assessed using the formats listed below
    1.1 To evaluate objective materials, pretests will be administered at the beginning of the course, and a post-test will be given at the end of the school year
    1.2 To test application domain skills, an evaluation instrument will be maintained by the student
    1.3 To evaluate specific performance indicators in the analysis, synthesis, and evaluation domains, essay questions will be administered and scored with a rubric.
    1.4 Students will participate in FFA activities, such as the state Agriscience Fair and Agriscience Student of the Year program.

Title: Agriscience & Physics

Length of course: Full Year

Subject area: Science (D) / Physics/Earth & Space Sciences

UC honors designation? No

Prerequisites: None

Co-requisites: None

Integrated (Academics / CTE)? Yes

Grade levels: 9th, 10th, 11th, 12th

ourse Description

urse overview:

Agriscience & Physics is a collaborative standards-based laboratory science that fulfills the physical science requirement focusing on college and career readiness. This course gives students a foundation in physics with related earth science and agriculture phenomena in addition to the Science and Engineering Practices. The following units will be covered in this course; Motion, Force, Gravity, Waves, Light Waves, Electricity & Magnetism, Energy & Renewable Energy, and Nuclear Physics & the Earth. This course also provides an opportunity and expectation for students' participation in the National FFA organization including FFA participation and a Supervised Agriculture Experience Project.

Agriscience & Physics fulfills the physical science high school graduation requirement and the UC/CSU "d" laboratory science requirement, in addition to being aligned to the California Next Generation Science Standards (CA NGSS). Students in this course will learn content based on the three dimensions of CA NGSS science: Science and Engineering practices (SEPs), Disciplinary Core Ideas (DCIs), and Crosscutting Concepts (CCCs).

urse content:

Unit 1 –Motion

Students will explain and predict the motion of objects, the process in which the surface of the earth was formed. Students will explain how engineers create stable structures for various conditions found around the planet.

NGSS Performance Expectations

- HS-PS2-1: Analyze data to support the claim that Newton's second law of motion describes the mathematical relationship among the net forces on a macroscopic effect, its mass, and its acceleration.

- HS-PS2-2: Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system
- HS-PS2-3: Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision

- HS-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.

- HS-ETS1-3: Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs that account for a range of constraints, including cost, safety, reliability, and aesthetics, as well as possible social, cultural, and environmental impacts.

NGSS Science & Engineering Practices

- Analyzing and Interpreting Data
- Developing and Using Models
- Constructing Explanations and Designing Solutions

NGSS Cross-Cutting Concepts

- Stability and Change
- Cause and Effect
- Structure and Function

💻 Unit Assignment(s):

The motion detector lab gives students a kinesthetic experience in the relationships between verbal, graphic, and diagrammatic representations of motion. Students will instantaneously collect data with motion detectors to produce motion vs time graphs. Students will also use Gizmos simulations and academic science readings (CK12 AND NEWSELA) to reinforce the academic skills learned in this unit.

🧪 Unit Lab Activities:

Motion Detector Lab: Explain how the motion detector can be used to determine a target object's position. Students will try to create the position vs. time graphs provided to them by moving with the same motion to recreate the graph on the motion detector. Students will determine from a class discussion that the slope of a position-time graph is the velocity and can then be translated onto a velocity-time graph. Students are producing several different representations of motion: real-life movement, position vs. time graphs, velocity vs. time graphs, written descriptions, and motion maps.

Water Balloon Lab – With the use of a water balloon sling to illustrate how forces and masses affect acceleration, students will analyze data (either student-generated or provided) showing mass, force, and acceleration for an object (accelerations for different masses, accelerations for different forces).

Unit 2 – Force

In this unit, students are introduced to the first half of Newton's Modeling Cycle Students are moving from the realm of descriptive models (kinematical laws of motion) to that of causal models: dynamics. Students will explore the concept that changes in velocity require interaction between an agent and an object. In addition this unit explores Newton's second and third laws of motion. Students collect descriptive and mathematical data to understand the relationship between acceleration, net force, mass, and action-reaction force pairs.

Performance Expectations:

- HS-PS2-2: Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system
- HS-PS2-3: Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision
- HS-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.
- HSETS1-3: Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs that account for a range of constraints, including cost, safety, reliability, and aesthetics as well as possible social, cultural, and environmental impacts.

Science & Engineering Practices:

- Using Mathematics and Computational Thinking
- Constructing Explanations and Designing Solutions

Cross-Cutting Concepts:

- Systems and System Models
- Cause and Effect

💻 Unit Assignment(s):

Students explore forces and changes in motion by moving a bowling ball through an obstacle course with a hand broom. Students produce observational descriptions of forces and motion.

Students collect distance measurements of a free-falling ball using the burst setting on a camera. Students then derive the equation for free fall. Students produce a final data table with position, time, velocity, and acceleration. Students will also use Gizmos simulations and academic science readings (CK12 AND NEWSELA) to reinforce the academic skills learned in this unit.

🧪 Unit Lab Activities:

Free Fall Ball Lab: The purpose of this lab is to determine the relationship between position and time for a freely falling object. The teacher shows the class a ball and asks them what would happen if the ball were to drop? The teacher drops the ball and asks the students, “Does the motion of the ball verify their hypothesis?” Do they have evidence? If not, what do they need to do to verify their hypothesis? The teacher asks the students what they can measure. The students now have experience with measuring position and time for uniformly accelerated motion, so these quantities will occur to them readily. They are also familiar with video labs and have recently completed the Frictionless Incline Lab so the motion analysis should be fresh in their minds.

Agricultural/Natural Resources Application: Students will study the physics behind logging. Students will learn and create force diagrams to justify how the equipment can work on steep slopes and cut down tall trees. Students will create posters to demonstrate that they know how the equipment stays upright.

Students will also learn about how water moves through forests before and after logging. Students will answer the questions: Why do roads/mountain sides collapse during heavy rainstorms. Students will perform a lab to compare the water/soil movements from a planted demonstration table and one that has been “logged.” Students will be able to explain the mechanism and forces behind these movements. Students will be able to explain the impact that plants and soil structure have on an ecosystem.

Unit 3 - Gravity

Students will explore what factors affect Universal Gravitation. Students will explore what the relationship is between orbital period, orbital radius and velocity in an elliptical orbit. Students will explore how satellites are kept in orbit.

NGSS Performance Expectations

- HS-PS2-4: Use mathematical representations of Newton’s Law of Gravitation and Coulomb’s Law to describe and predict the gravitational and electrostatic forces between objects
- HS-ESS1-4: Use mathematical or computational representations to predict the motion of orbiting objects in the solar system
- HS-ETS1-4: Use a computer simulation to model the impact of proposed solutions to complex real-world problem with numerous criteria and constraints on interactions within and between systems relevant to the problem.

NGSS Science & Engineering Practices

- Using Mathematics
- Computational Thinking

NGSS Cross-Cutting Concepts

- Patterns
- Scale Proportion and Quantity

📃 Unit Assignment(s):

Students will analyze tangential velocities and periods for different orbit radii. Given data about planet orbits (period and radius), students will graph and find a relationship between the two. Students will also use Gizmos simulations and academic science readings (CK12 AND NEWSELA) to reinforce the academic skills learned in this unit.

🧪 Unit Lab Activities:

Circular Motion Lab - Students will measure velocity and compare velocity to the centripetal force for a constant radius.

Agriculture & Natural Resource Application Students will explore the relationship between orbital period, orbital radius and velocity in an elliptical orbit. Students will explore how to keep a satellite in orbit. Students will relate to this agriculture and discuss the mechanism behind how information transfers from Auto Farm tractors to a satellite and back to the phone.

Unit 4- Waves

Students will determine the relationship between frequency, wave speed, and wavelength of a wave in a medium. Students will explore how the medium affects the wave properties. Students will explore the advantages and disadvantages of using digital storage and transmission of information. Students will explore how wave behavior is and wave interaction involved in the capture and transmission of information and energy.

NGSS Performance Expectations

- HS-PS4-1: Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media
- HS-PS4-2: Evaluate questions about the advantage of using a digital transmission and storage of information
- HS-PS4-5: Communicate technical information about how some technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy
- HS-ESS2-3: Develop a model based on evidence of Earth's interior to describe the cycling of matter by thermal convection

NGSS Science & Engineering Practices

- Using Mathematics and Computational Thinking
- Developing and Using Models
- Asking Questions and Defining Problems
- Obtaining, Evaluating, and Communicating Information

NGSS Cross-Cutting Concepts

- Cause and Effect

Stability and Change

Unit Assignment(s):

Students will gather data about damage from an earthquake or seismograph analysis and plot on a map to find the epicenter. Students will also use Gizmos simulations and academic science readings (CK12 AND NEWSELA) to reinforce the concepts of earthquakes.

Class Project - Wave technology timeline, develop a method to transmit a message using light (LEDs, breadboards, buttons, potentiometers, wires, and batteries)

Unit Lab Activities:

Slinky Lab - Students will make waves on a slinky and measure wavelength, speed, and frequency (slow-motion video).

Agricultural/Natural Resources Application: Students will study earthquakes and the impact it has on communities. California is greatly concerned about earthquake damage and has many laws and regulations to prevent damage. Students will study the mechanical waves created during an earthquake and explain how it affects buildings. Students will collect and analyze data from the seismogram website to see how our community is affected.

Unit 5 - Light

Students will explore the nature of light. Students run experiments to learn about the basic concept of what light is, they will study light, the absence of light, speed, intensity, reflection, and refraction. They will be able to use descriptive and mathematical explanations to predict light behavior. Students will explore how stars are made of and how they are moving.

NGSS Performance Expectations

- HS-PS4-3: Evaluate the claims, evidence, and reasoning behind the idea that electromagnetic radiation can be described either by a wave model or a particle model, and that for some situations one model is more useful than the other

- HS-PS4-4: Evaluate the validity and reliability of claims in published materials of the effects that different frequencies of electromagnetic radiation have when absorbed by matter

- HS-ESS1-2: Construct an explanation of the Big Bang Theory based on astronomical evidence of light spectra, motion of distant galaxies, and composition of matter in the universe

NGSS Science & Engineering Practices

- Engaging in Argument from Evidence
- Obtaining, Evaluating
- Communicating Information
- Constructing Explanations and Designing Solutions

NGSS Cross-Cutting Concepts

- Systems and System Models
- Cause and Effect
- Energy and Matter
- Stability and Change

💻 Unit Assignment(s):

Students will determine the law of reflection by measuring the angles produced from a laser reflecting on several mirrors. Students will produce data tables with initial and final angles and form a common determination of the law of reflection.

Students will perform a diffraction experiment to separate light into waves of interference. They will first mimic the idea in a wave tank to see how waves cause these changes. They will produce sketches and written descriptions of the wave behavior.

🧪 Unit Lab Activities:

Students will make a telescope or microscope using lenses and mirrors; observe and compare emission spectra from different gases, glow sticks, etc.

Agricultural/Natural Resources Application: Students will study and see how agricultural equipment uses lasers to identify high and low-quality fruit. Students will see how optical sorters in the tomato and vineyard industries can sort fruit based on a computer visualizing each piece of fruit. Students will be able to explain how optical sorters work and how it helped

the industry increase the quality of the commodity.

Agricultural/Natural Resources Application: Students will study how light wavelengths are important for plants to absorb energy during photosynthesis. Students will set up a comparison lab at the farm. Students will grow plants under two different wavelengths of light (a blue vs green light). Students will collect growth rate data on the plants under different conditions. Students will graph the data in excel.

Unit 6 - Electricity and Magnetism

Students will explore what factors affect the force between charges. Students will explore which force rules - electric or gravitational. Students will explore how to generate electricity. Students will explore how to can create magnets. Students will explore what factors affect the force between magnets.

NGSS Performance Expectations

- HS-PS2-4: Use mathematical representations of Newton's Law of Gravitation and Coulomb's Law to describe and predict the gravitational and electrostatic forces between objects.
- HS-PS2-5: Plan and conduct an investigation to provide evidence that an electric current can produce a magnetic field and that a changing magnetic field can produce an electric current.
- HS-PS3-5: Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction

NGSS Science & Engineering Practices

- Engaging in Argument from Evidence
- Obtaining, Evaluating, and Communicating Information
- Constructing Explanations
- Designing Solutions

NGSS Cross-Cutting Concepts

- Systems and System Models
- Cause and Effect
- Energy and Matter
- Stability and Change

Unit Assignment(s):

PhET Simulation - Electrostatics lab (plastic rod, glass rod, fur, silk, pith ball electroscope) - generate charges on the rods and compare their effects on the pith ball,

Students will build a simple compass to determine the direction in addition to the use Gizmos simulations and academic science readings (CK-12) to reinforce the concepts of electricity and magmatism.

Unit Lab Activities:

Agriculture & Natural Resource Application: Students will properly install and wire using common industrial devices on an electrical board using common electronic parts including (wires, LEDs, buttons, batteries, buzzers, motors). Students will practice using common electrical testers.

Unit 7 – Energy & Renewable Energy

Students will be able to explore different types of power plants are there, and how they work including solar and wind energy. Students will be able to describe the journey of energy through a power plant (transfers and transformations). Students will be able to design, build, analyze and refine a device that converts energy from one form to another.

NGSS Performance Expectations

- HS-PS3-1: Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.
- HS-PS3-2: Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motions of particles (objects) and energy associated with the relative positions of particles (objects).
- HS-PS3-3: Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.
- HS-PS3-5: Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction.
- HS-ESS3-2: Evaluate competing design solutions for developing, managing, and utilizing energy and mineral resources based on cost-benefit ratios.

- HS-ETS1-1: Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.

- HS-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.

- HS-ETS1-3: Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs that account for a range of constraints, including cost, safety, reliability, and aesthetics as well as possible social, cultural, and environmental impacts

NGSS Science & Engineering Practices

- Developing and Using Models
- Using Mathematics and Computational Thinking
- Constructing Explanations and Designing Solutions
- Analyzing Interpreting Data

NGSS Cross-Cutting Concepts

- Systems and Systems Models
- Energy and Matter

Unit Assignment(s):

Flexible Track and Cars - put a track in a U shape and compare starting and ending heights and energies (and speed at the bottom), then put track in a loop and predict how high the car needs to start

Balloon Launcher -Measure the elastic force of the balloon launcher at different compression distances, graph and determine, the work the launcher will do and its spring constant, and use that to predict the launch velocity of the projectile and then test their prediction, measure the motion of a block down an inclined plane and determine the energy transferred to heat due to friction

Unit Lab Activities:

Generator Lab - Students will use hand-crank generators with different types of light bulbs to compare power transfer, use power meters to measure energy use of different electric devices,

Agricultural/Natural Resources Application: Students will install a small solar panel system in various locations. These will be so students can learn how solar panels collect and transform energy into electricity. Examples include but are not limited to: a solar chicken coop, solar electric fencing, etc. Students will also maintain and study solar energy.

Unit 8 – Nuclear Physics & The Earth

Students will explore what happens during fission, fusion, and radioactive decay. Students will explore why nuclear bombs do or power plants, release so much energy. Students will explore what's the oldest rock on earth, and how is it determined. In addition, students will be able to explore where the sun gets its energy and where the elements came from.

NGSS Performance Expectations

- HS-PS1-8: Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.
- HS-ESS1-1: Develop a model based on evidence to illustrate the life span of the sun and the role of nuclear fusion in the sun's core to release energy in the form of radiation.
- HS-ESS1-3: Communicate scientific ideas about the way stars, over their life cycle, produce elements.
- HS-ESS1-5: Evaluate evidence of the past and current movements of continental and oceanic crust and the theory of plate tectonics to explain the ages of crustal rocks.
- HS-ESS1-6: Apply scientific reasoning and evidence from ancient Earth materials, meteorites, and other planetary surfaces to construct an account of Earth's formation and early history.

NGSS Science & Engineering Practices

- Developing and Using Models
- Constructing Explanations and Designing Solutions
- Engaging in Argument From Evidence
- Obtaining, Evaluating, and Communicating Information

NGSS Cross-Cutting Concepts

- Energy and Matter
- Stability and Change
- Patterns
- Scale Proportion, and Quantity

🖳 Unit Assignment(s):

Students will visualize and model what happens when a nucleus decays. Radioactive decay is accompanied by the emission of radiation (alpha, beta, or gamma). Students will also use Gizmos simulations and academic science readings (CK-12) to reinforce the concepts of half-life.

Students will write equations for nuclear reactions (decay sequence of uranium, fission, fusion, etc.) using nuclear symbols and calculate the mass defect and energy released for each reaction.

Unit Lab Activities:

Star & Element Lab: Students will model several stellar nucleosynthesis reactions with pennies, given the reactants and one product, determine the other product.

Agriculture & Natural Resource Application - Students use a rock collection to observe and compare the three types of rocks (igneous, metamorphic, and sedimentary). Students can decipher between the three types of rocks and understand the methods that each of these rocks form under. Students understand the steps of the rock cycle and that it takes a long time to happen and that all rocks can move through the cycle differently than other rocks.

Grade levels:
12th

Course Description

Course overview:
American Economics Agriculture is a course that focuses on the economics of the agriculture industry. It is an introduction to the economic aspects of agriculture and their implications to the agricultural producer, consumer, and the food system. The management principles encountered in the day to day operation of an agricultural enterprise are stressed as they relate to the decision making process. In this class, you will learn the concepts and organization of the economic system we live in. The class is designed to teach students the role they play in our economic system. Students will also gain a valuable understanding of how to manage their own finances. In addition, students will develop life-long learning skills**.** Curriculum is based on the Standards developed by the California Department of Education.

THIS COURSE MEETS THE ECONOMICS GRADUATION REQUIREMENT.

Course content:
Unit 1: Fundamentals of Economics and Microeconomics
Students will describe the basic economic functions as well as the effects of those functions on agriculture.

Major objectives include: Describe economics as well as agricultural economics. Define microeconomics. Analyze the opportunity costs present in policy decisions. Analyze the relationships between inputs, outputs, price and agricultural production.

Determine an economic course of action based on the behavior of markets. Describe consumer equilibrium and market demand. Calculate Elasticity of consumer goods. Advise action to a producer based on knowledge of elasticity. Describe the relationship between production and resource use. Describe the relationship between production and resource use.

Unit Assignment(s):

Students will calculate elasticity of the top 20 crops in California. Students will undergo a problem-based simulation that requires them to make economic decisions based on market functions. Students will write an advice letter to an agricultural producer advising which crops to produce based on estimated own-price and income elasticity.

Unit 2: Macroeconomics

Students will examine the aggregate economics systems in place both domestically and across the globe.

Major objectives include: Describe product markets and their relationship to national output. Present information about one major topic in macroeconomics. Decide the best course of action based on aggregate economic information and data. Describe the relationship between policy and macroeconomics. Assess fundamental knowledge of macroeconomics and policy-making. Create and present a federal budget that synthesizes information gathered regarding citizen needs and revenue sources. Make policy decisions that affect economic activities across the nation.

Unit Assignment(s):

Students will learn how stock markets affect macroeconomics, choose a stock and follow it through the quarter. Students will research and write an essay about production and price levels for one of the top 50 agricultural commodities in California. Fluctuations and changes will be analyzed for causation and potential effects. Students will work in groups to develop an infomercial, including student handouts, about one of the following topics: Determinants of Planned Consumption, Determinants of Planned Saving, Determinants of Planned Investment, Aggregate Expenditures, The Keynesian Cross, Aggregate Supply and Full Employment, Recessionary Gaps. Presentations include a handout.

Unit 3: Global Economics

Students will examine the relationships between countries across the globe, trade agreements and how they affect agricultural production and consumption as well as human development.

Major objectives include: Describe the reasons for trade between nations as well as the policies governing trade. Assess knowledge of existing trade policies and reasons for their existence. Describe comparative advantage. Make decisions regarding trade policies after evaluating data and information. Assess the benefits of a trade agreement and present to the class. Evaluate the effectiveness of trade agreements in the development of global economies.

Unit Assignment(s):

Students will undergo a problem-based simulation that requires them to make decisions based on data regarding the benefits and tradeoffs of international trade.
Students will work in groups to develop a promotional poster for one major existing trade agreement and then present their poster to the class. Students will study sales strategies and develop a sales scheme for a product determined in groups. Students will then develop a sales strategy for their product and present to a panel of external judges from local agricultural businesses.

Unit 4: Agricultural Sales

Students will explore methods used in business to sell goods and services, thereby increasing profit margins.

Major objectives include: Demonstrate sales strategies used in agriculture business. Evaluate the effectiveness of sales strategies.

Unit Assignment(s):

Students will analyze the marketing messages and strategies used by agricultural and food companies in the United States. Students will work in groups to develop a value-added product for a local agricultural business and develop an industry-approved marketing plan to promote and market the product. The plan will include market research, economics,

potential for global marketing and advertising and sales strategies. Additionally, students will develop a 15-minute presentation to be delivered to a set of industry professionals.

Unit 5: Agricultural Marketing
Students will create a comprehensive marketing plan using all course knowledge and following a method used in agricultural businesses.

Major objectives include: Students will analyze strategies used by American and foreign food marketers and agricultural businesses. Students will develop and present a marketing plan for a value-added agricultural commodity. Students will assess the effectiveness of marketing plans.

The text will be used to introduce the topic of marketing and to give examples of the economic benefits of marketing.

Unit Assignment(s):
Students will write a six to eight page marketing plan for a value-added agricultural commodity. The marketing plan must include at least three different advertisement sources, a plan to roll out the marketing and to whom the audience will be. Students will produce and present one of the marketing pieces to the class.

Unit 6: FFA Leadership
As a part of a CTE pathway all students will learn and develop leadership skills through the National FFA Orginization. The history of the orginization will be taught and students will be take the FFA Marketing test as a part of this course.

Unit Assignment(s):
Students will participate in a number of experiential activities in teambuilding, consensus development, conflict resolution and public speaking that detail the methods and benefits of involvement in assorted FFA activities. Students will participate in a minimum of three approved leadership development activities within the FFA organization.

Integrated (Academics / CTE)? No

Grade levels: 12th

ourse Description

urse overview:

In this course, students will pursue a deeper understanding of the institutions of American Government in addition to the underlying economic principles that shape policies throughout the agriculture industry. They will complete an in-depth study of the system of government in the world today and analyze the life and changing interpretations of the Constitution, the Bill of Rights, and the current state of the legislative, executive and judiciary branches of government. An emphasis is placed on analyzing the relationship among federal, state, and local governments, the economic impacts of the aforementioned, and their relationship to agriculture and agribusiness. Students will also master fundamental economic concepts, applying the tools (graphs, statistics, equations) from other subject areas to the understanding of operations and institutions of economic systems. Studied in a historic context are the basic economic principles of micro and macroeconomics, international economics, comparative economic systems, measurement, and methods. This course is designed for advanced study of agriculture business opportunities and economics for college bound students with interest in agriculture. This course will create civic and financial literacy as students prepare to vote, participate in community activities and assume the responsibilities of citizenship as consumers in the American democracy.

urse content:

Unit 6: State and Local Government

In this unit, students will: Explain how conflicts between levels of government and branches of government are resolved. Identify the four major responsibilities and sources of revenue for state and local governments. Discuss reserved powers and concurrent powers of state government. Discuss the ninth amendment and the tenth amendment and interpretations of the extent of the federal government's powers. Explain how public policy is formed, including the setting of the public agenda and implementation of it through regulations and executive orders. Compare the processes of lawmaking at each of the three levels of government.

⊒ Unit Assignment(s):

1. Major Assignment: Attend City Council Meeting

Students will be given a list of Santa Maria City Counsel meeting dates and will need to attend one before the end of the semester. They will write a one page summary of what happened at the meeting and its impact, if any. On the city.

1. Major Assignment: Federal vs. State Laws

Students will create a short documentary on a state law that contradicts a federal law. They will be able to research any law from any state to use in the documentary. Things they will need to include: What is the law? Why was it passed at the state level? Why is it not a law at the Federal level? What are the two opposing views on the law? Who is impacted by the law? What are the positives and negatives to the law?

1. Major Assignment: Public Policy

Students will create a comic book following the creation and implantation of a new public policy. They will chose a policy of their own and show all the steps it takes to being used. These must include: national agenda, formation, adoption, implementation and evaluation.

Unit 5: Judicial Branch, Civil Rights, and Civil Liberties

In this unit, students will: Explain the process of selection, nomination, and confirmation of Supreme Court judges. List the length of term and jurisdiction of lower court and Supreme Court. Identify and give examples of judicial review. Explain the Court's decisions and its effects in each of the following U.S. Supreme Court cases: Marbury v. Madison, McCulloch v. Maryland, Plessy v. Ferguson, Brown v. Board of Education, Miranda v. Arizona. Identify the guarantees included in the First Amendment and the limitations on those guarantees. Describe the rights of the accused in a criminal trial. Describe the right of due process under the Fifth Amendment and fourteenth amendment.

🖳 Unit Assignment(s):

1. Major Assignment: Supreme Court Justice Collector Cards

Students will be crating collector cards on the current Supreme Court Justices. Things that will be on card: Name, why chosen, years of service, education, qualifications, and land mark cases they've voted on, who appointed them and pictures.

1. Major Assignment: Supreme Court Case

Students will work in groups of two to three people. They will research and review a nominated court case and prepare an interactive presentation that will effectively persuade other members of the Landmark Supreme Court Case Commission to select their case as the most significant Supreme Court decision in recent times. Voting will take place in closed ballot.

Project Components will include:

- Research Paper - Constitutional issue, key players, opposing viewpoints (both sides of the argument), outcome, and relevance to today's society

- Visual to guide your presentation and highlight the court case

---

Unit 4: The Legislative Branch

In this unit, students will describe the structure of Congress; list qualifications for membership. Contrast the Senate's leadership and the role in the lawmaking process with that of the House of Representatives. Identify kinds of committees and why members serve on them. Explain the organization, leadership, and leadership responsibilities of the House and

Senate. Define and provide examples of expressed, implied and inherent powers of Congress. Explain the purpose of Congress' oversight function and the process of impeachment. Explain how federal legislation is proposed, reviewed, and enacted.

⮒ Unit Assignment(s):

1. Major Assignment: Get to know your representatives

Students will research their Senators, representative and districts. Students will research the demographics of the district they live in and how the people in the district tend to vote. This information will be used in a later project as well.

1. Major Assignment: Senate Simulation

Students will be assigned a state to represent, a political party and they will choose an issue to write a bill about, that will benefit their state. Once a bill is chosen, students will present their bill to other "senators" and convince them to vote for their bill to pass. Each political party's senators will then get together and discuss which bills to support and which to drop. Bills that are chosen to move on will be presented to the entire class and discussed by the entire class. The bills will then be voted on to pass or not.

Unit 3: Executive Branch

In this unit, students will: Identify qualifications for office and length of terms for the office the president. Explain how the president and vice president are elected through the Electoral College process. Identify the pros and cons of electing the president and vice president through the Electoral College. Explain and summarize the constitutional roles of the president – chief of state, executive, legislative, diplomatic, judicial, and military.

⮒ Unit Assignment(s):

1. Major Assignment: Electoral College

Students will be writing a persuasive essay in which they will argue whether the Electoral College is the best method of electing a President. The essay must include a historical perspective of the Electoral College, pros and cons of the system. And your argument for against the Electoral College. If they support it they must explain why. If they oppose it they must propose an alternative.

1. Major Assignment: Article Review and Reflection

Students will read the article "One Chief Executive, No Experience Required" while taking notes and answering questions. They will then chose a President prior to 1950 and one after 1980, comparing and contrasting their Presidential duties during their tenure.

1. Major Assignment: Mock Electoral College

Using the political parties and candidates from the previous unit students will be holding a mock electoral college for the election. The popular voting numbers will be the outcome form the election in unit 2. Students will be assigned a state to serve as a representative of for the Electoral College. Ratios and states will be determined beforehand so there is as close of an accurate representation possible, i.e. California has 55 votes in the real college, they will have 4 in the class simulation. They will be given time to look up their states issues and needs and compare them to the candidates. Students will then vote as the Electoral College and will look at the differences in the popular versus the electoral votes and who would be elected.

Unit 2: Political Parties, Elections, and Voting

In this unit, students will: Trace the origins and development of the two major political parties in the United States and summarize the role of the political parties in American politics, explain the function and role of political parties and identify the importance of third parties in the political process. Demonstrate specific examples (including political cartoons) on how the media shapes our political beliefs. Include the evaluation of the role of polls, campaign advertising, and the controversies over campaign funding. Identify the qualifications and responsibilities of being a voter and analyze trends and influences in voter turnout. Identify and describe how the following Amendments expanded suffrage in the United States: fifteenth amendment, nineteenth amendment, twenty-fourth amendment, and the twenty- sixth amendment

⮒ Unit Assignment(s):

1. Major Assignment: Political Cartoons

Students will be given 5 political cartoons and asked to describe the cartoons in detail. Focusing on the issue and the individuals being portrayed in the cartoon, they will have to explain how the cartoon does or could sway public opinion. Students will then choose from a list of current political issues and develop their own political cartoon on the issue they chose.

1. Major Assignment: Agricultural Lobbyists

Students will research an agricultural lobbyist group and what their focus is. Students will give a presentation to the class showcasing the lobbyist group they chose, its history in government, the major states they come from, campaign tactics and its current focus. Can be done on any group that is involved in the agriculture industry.

1. Major Assignment: Voting Rights History

Students will choose one of the four amendments that changed the history of Americas voting (15th, 19th, 24th and 26th) and create a journal from the view point of someone who lived through the passing of the amendment. The journal will require:

-At least15 passages from a year before the amendment was passed

-Point of view must be from someone being affected positively by the passing of the amendment

-At least one entry on the major players in the suffrage movement they chose

-What experiences someone fighting for the right to vote would go through

-What tactics were being used to lobby for the right to vote

-Creativity: “newspaper article”, pictures, media from the time

1. Major Assignment: Presidential Mock Election

This assignment will take place throughout the unit.

Students will go the electron process, starting at the primary season and ending with an election. The class will be divided into two groups, with each group creating their own party and party values. They will be provided with 3 school rules (to represent policies) and the parties will develop their stance on each policy. Once their party has developed values they will nominate people to run for president. Each candidate will prepare a speech and the party will vote for their parties’ final presidential candidate. The two parties will then turn to the campaign of the candidate, creating “swag” and recording commercials that would be shown to another undisclosed class to sway voters. The two candidates will participate in a debate that will be shown to voters and spend time on the campaign trail on the school campus. On the final day of the project, the selected voters will cast ballots- declaring a winner of the campaign.

Unit 1: Foundations of American Government

In this unit, students will: Discuss and define the history and purpose of government, analyze ideas and historical documents and events that shaped the US Constitution, and describe structural features of the Constitution. Explain how the US system of government is a federal one, identify the four main purposes of government, explain how various theories explain the origins of government and discuss the similarities and differences between a unitary government and a federal government system. Identify and describe why free enterprise is conducive to the growth and preservation of a democracy, name the ways the US has modified its Free Enterprise system, and contrast free enterprise to other systems. Explain and cite reasons as to why colonists expected representative government, identify the ways in which the American colonies operated in a democratic system and which ways they did not.

⮒ Unit Assignment(s):

1. Major Assignment: Creating a Sovereign State

After learning the four major foundations of a sovereign state, students will pair up and create a sovereign state of their own. Working in pairs they will design a country focusing on developing the four foundations: Information they will include:

-A map of their country- highlighting natural resources

-Population Features- level of wealth, languages, education levels and traditions

-Government- choosing attributes of their government

-Military presence

-Developing 3 well known laws and dealing with criminals

-Handling citizen’s needs- education, food, communication, health and transportation.

1. Major Assignment: Global Governments

Students will identify the 6 major government types in the world and create a list of countries that fall into each of the 6 types. Students will then choose two countries from one of the government types comparing and contrast the two countries and their governments, showing that even though they fall into the same categories each country governs differently.

1. Major Assignment: How has Federalism grown?

Students will participate in a class discussion on Federalism in today's society. Students will give their opinions on how Federalism shows itself in today's America. Students will state their opinions while using researched examples as evidence to back up their position.

Course Title

American Economics - Agriculture

Description of Target Group

This course is for 12th grade students.

Purpose

The purpose of American Economics - Agriculture is to enable students to understand the principles of economics and of our economic system. Students will compare our system to those of other countries and make reasoned judgements about economic questions. This is a one semester course. It is required to meet the district's graduation requirement. It will meet the state mandated requirement that high school graduates successfully complete a course in economics. Credit will constitute the A-F college entrance requirements.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Fundamental economic concepts and terms.
2. The tools of analysis such as charts and graphs.
3. Economic indicators such as gross national products, inflation, and measures of unemployment.
4. Understanding basic economic problems facing society such as scarcity of resources.
5. All societies have economic systems determining choice of production.
6. U. S. economy characterized by competition and market structure.
7. Individual should use economic concepts in making consumer decisions.
8. Role that labor, agriculture, and business organizations have played in the U.S. economy.
9. Role of government in market economy and establishing monetary policy.
10. Role of financial institutions.
11. Understanding business cycles with periods of inflation, deflation, and unemployment.
12. U.S. economic history.
13. Importance of international trade and migration across international borders.
14. How values influence monetary spending and opportunities for students to develop creative thinking skills.

9. Subject Area

- [ ] History/Social Science
- [ ] English
- [ ] Mathematics
- [x] Laboratory Science
- [ ] Language other than English
- [ ] Visual & Performing Arts (for 2003)
- [x] College Prep Elective

10. Grade Level(s)
9th-12th

11. Seeking "Honors" Distinction?

- [ ] Yes
- [x] No

12. Unit Value

- [ ] 0.5 (half year or semester equivalent)
- [x] 1.0 (one year equivalent)
- [ ] 2.0 (two year equivalent)
- [ ] Other: _____

13. Date of School Board Approval

14. Was this course previously approved by UC? [ ] Yes [x] No If so, year removed from list? _____

Under what course title? _____

15. Is this course modeled after an UC-approved course from another school? [x] Yes [ ] No

If so, which school(s)? Camarillo High School and Exeter High School

16. Pre-Requisites
Agricultural Science 1 A,B college prep or General Science

17. Co-Requisites

18. Brief Course Description

This course is designed to provide a foundation in Biology and addresses Chemistry and Physics through real world experiences through agriculture for students in grades 9 - 12. Career awareness, career exploration, and skill preparation are integral parts of the curriculum. As students progress through the core curriculum and move into specific agricultural career clusters, there is a transition of emphasis from career awareness and general exploration to career and occupationally relevant experience of greater scope and depth. Applications of physical science to the agriculture industry will be the emphasis of this coarse.

B. COURSE CONTENT

Please refer to instructions

19. Course Goals and/or Major Student Outcomes

1.) Students will determine effective communication skills
2.) Students will demonstrate essential mathematical skills
3.) Students will demonstrate critical thinking skills
4.) Students will demonstrate goal setting skills
5.) Students will demonstrate the ability to work cooperatively with culturally diverse groups
6.) Students will demonstrate the ability to solve problems and think critically by effectively completing challenging group and individual projects and assignments.

20. Course Objectives

1.) To develop an appreciation of agricultural sciences.

2.) To incorporate scientific methods and biological principles with modern agricultural practices.

3.) To create an awareness of the importance of agricultural sciences.

4.) To prepare students for college level entry in the various disciplines of agriculture science.

21. Course Outline

A. Brief outline of Course Content

1. Meeting Human Needs in a Changing World
    a. Food sources
    b. Human needs
    c. Agricultural industry
    d. Quality of life
    e. Renewable natural resources
2. Using Science and Technology
    a. The meaning of agri-science and technology
    b. Relation of agriculture to science
        1. Physical Sciences
        2. Biological Sciences
        3. Social Science
    c. Methods of agri-scientist thinking
        1. Scientific method
        2. Practical use
    d. New areas of agri-science
        1. Biotechnology
        2. Genetic engineering
        3. Remote sensing
        4. Laser technology
        5. Computer applications
    e. Issues associated with agri-science and technology

3. Using the Earth's Resources
    a. Environmental and natural resources
    b. Renewable resources
        1. Water cycle
        2. Forests
        3. Air
    c. Non-renewable Resources
    d. Environmental Pollution
    e. Agricultural pollution prevention

4. Using the Science of Computation
    a. Measurement systems
    b. Agri-science measurements
    c. Problem solving in measurements

5. Determining the bases of life
    a. Life processes
    b. Structural basis

        1. Cell structure
        2. Heredity and genetics

    c. Mitosis and Meiosis

6. Classifying and Naming Living Things
    a. A Scientific classification system
    b. Classification kingdoms

22. Texts & Supplemental Instructional Materials

Items listed below are commonly used as supplementary materials and are coordinated with the adopted course objectives:

Cooper, Elmer L. Agriscience: Fundamentals and Applications Third Edition (2002). Albany, New York: Delmar Publishers.

Cooper, Elmer L. Agriscience: Fundamentals and Applications Laboratory Manual (1990). Albany, New York: Delmar Publishers.

Physical Science Applications in Agriculture. By Buriak, Phillip and Osborne, Edward W., The Interstate Publishers, Inc. 1996. ISBN 8134-3013-5.

Biological Science Applications in Agriculture. By Buriak, Phillip and Osborne, Edward W., The Interstate Publishers, Inc. 1994. ISBN 8134-2759-9.

California Supervised Agricultural Experience Record Book

FFA Student Handbook

Model Agriculture Core Curriculum

Handouts

Videos

DVD's

Internet

23. Key Assignments

Labs, Homework, and Group Presentation in each of the following areas

1. Meeting Human Needs in a changing world
2. Using science and technology
3. Using the earth's resources
4. Using the science computation
5. Determining the bases of life
6. Classifying and Naming living things
7. Applying principles of plant science
8. Reproducing plants
9. Understanding plant processes
10. Keeping plants healthy
11. Applying principles of animal science – Anatomy and Physiology
12. Feeding animals
13. Breeding animals
14. Keeping animals healthy
15. Using biotechnology for improving life
16. Applying principles of earth science in agriculture
17. Applying principles of soil science
18. Applying principles of chemistry
19. Applying principles of physics
20. Marketing technology in agri-science
21. Processing technology in agri-science
22. Introduction to FFA and Leadership Activities
23. Agriculture careers
24. Computer applications

24. Instructional Methods and/or Strategies

Animal and Plant Physiology will be structured around student inquiry based activities.

1.) Dissections
2.) Laboratory experiments
3.) Computer simulations
4.) Model constructions
5.) Critical thinking essays
6.) Exams, Quizzes
7.) Lectures
8.) Multimedia presentations
9.) CDROMs
10.) Videotapes
11.) Laser discs
12.) Field experiences
13.) Guest speakers
14.) Class discussions
15.) Cooperative learning activities

25. Assessment Methods and/or Tools

The following is a list of techniques that may be used in assessing student progress of pre/post diagnostic assessment:

1.) Tests and Quizzes
2.) Laboratory Journal / Class Participation
3.) Projects / Essays
4.) California Student Record Book
5.) Development and maintenance of Supervised Agricultural experience Program (varies per type of project)
6.) Daily Attendance
7.) Final Exam

C. HONORS COURSES ONLY

Please refer to instructions

26. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

27. Context for Course (optional)

Animal and Plant Physiology is necessary to prepare students for university or advanced training in a science related career. The students will develop skills necessary for medically oriented professions and workplace relationships. In addition, students will learn safe and correct laboratory procedures. This course contributes to the district framework plan through the School to Career Plan, and the Righetti High School ESLR's (Expected Schoolwide Learning Results).

28. History of Course Development (optional)

Course Title

Animal Science A/B (P)

Description of Target Group

This course is for 10th, 11th, and 12+ grade students.
Prerequisites: None

Purpose

This course is sequenced in such a way to expand the knowledge of advanced topics in animal science. Animal nutrition, physiology, and reproduction will be studied with attention to proper care of animals. Animal health practices and management techniques will be included. This class is designed for science elective (F) credit and to include requirements of the state community college 2+2 program. This is a year long, ten unit course.

Standards of Expected Student Achievement

Animal Facilities, Equipment, and Handling
Students will understand the correct and safe uses of animal facilities and housing, restraint equipment, and tools. They will demonstrate safe and appropriate handling and restraint procedures for various species.
Animal Nutrition
Students will understand principles of animal nutrition and feeding. Students will trace and explain the pathway of food through the four different types of digestive systems and the interrelationships between the body systems and organs related to nutrition.
Animal Physiology
Students will understand the structure, function, and maintenance of the major organ systems of animals. Students will explain the interrelationships between the circulatory, respiratory, excretory, endocrine, digestive, reproductive, skeletal, and muscle systems.
Reproduction Animal
Students will understand the structure and function of the endocrine and reproductive systems and how they relate to reproductive management practices and fetal development. Students will describe breeding systems commonly used in animal production and explain the significance of artificial insemination and embryo transfer.
Animal Genetics
Students will understand the basic theory of inheritance, the genetic basis for animal selection, the process of fertilization, the role(s) of DNA and RNA, and the process of meiotic division to form sperm and ova. Students will use probability to predict the phenotypic and genotypic results of a dominant/recessive gene pair to the F2 generation.
Animal Health
Students will understand the nature of disease as it applies to animal health problems, including the causes of nutritional diseases. Students will demonstrate preventative techniques and treatments based on disease symptoms and diagnosis of disease based on symptoms.

Animal Science A/B (P) (continued)

Animal Parasites and Pests
Students will understand the life cycle and production problems associated with internal and external pests and parasites. Students will explain control measures for these pests and parasites and develop their own parasite control program.
Large and Small Animal Production
Students will understand the principles of animal production, marketing, management, and record keeping. Students will describe different production and marketing strategies, the characteristics of each, and their economic importance.
Range Management
Students will understand range management practices, including calculation of the carrying capacity of rangeland. Students will identify common rangeland, forage, legumes, poisonous plants, weeds, and shrubs. Students will explain how range management practices affect animal health, erosion control, pasture production, and the overall balance of the ecosystem.
Waste Management
Students will understand the problems associated with animal waste management and will identify types of agricultural wastes. They will analyze different methods for the disposal and cost-effective recycling of waste including consideration of environmental impacts.
Record Keeping
Students will understand the principles of record keeping. They wil1 demonstrate record keeping utilizing a variety of methods and systems. They will explain the differences between production and financial records.
Interpersonal Leadership Development
Students will recognize the traits of effective leaders. They will participate in leadership training activities associated with the FFA including public speaking, leading group discussions, working within a committee, conducting business meetings, and problem solving.
Supervised Practical Experience Project
Students will understand the relationship between a supervised practical experience project (SPE) and their preparation for a career in agriculture. They will engage in a supervised practical experience employing skills and knowledge learned in the classroom. Students will maintain an on-going record book.

Methods of Assessment of Student Learning: written scenario, authentic assessment, work samples, portfolios, and agriculture record book.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, demonstration, audio visual materials, small group activities, field trips, outside resource people, guest speakers, and job shadowing.

Co-requisites: None

Integrated (Academics / CTE)? Yes

Grade levels: 9th, 10th, 11th, 12th

ourse Description

urse overview:

Elements and Principles of Floral Design have been implemented to aquaint students with theories and principles of artistic design and their influence on the floral industry. The course emphasizes the necessary knowledge and skills to provide the student with a perceptual and tactile base leading to understanding artistic perception, creative expression, historical and cultural contexts: aesthetic valuing and connections, relations and applications of the visual arts. Students will derive meaning from art works through analysis, interpretation, and judgements applying what is learned in floral art to other forms, subjects, and post educational experiences. Through practical skill development the student will become familiar with material selection, design mechanics, maintenance and design evaluation. Students will achieve this through creating, designing, identifying, explaining, and evaluating all topics of study. Balance, color, and symmetry using floral and synthetic medium will be emphasized to allow students to apply an artistic approach to floral art. Various assignments based on abstract, two and three dimensional designs, historical culture, theory, color theory, and analytical critiques of various floral art works using design vocabulary in conjunction with development of technical skills in floral art will serve as a foundation for more complex works such as multi-part floral designs and creative expression. Students will also have the opportunity to develop their skills further through competitive competition and analytical events offered through the program.

The Elements and Principles of Floral Design provides an introduction to artistic and creative perception including aesthetic valuing through a series of projects in various media including: plant, pencil, flowers, glass and a variety of papers. Students are also introduced to the elements and principles of visual art design such as line, shape/form, color, balance, and emphasis using a series of floral based projects to explore the connections, relations and application to visual arts design. Students will research and study floral trends to understand and develop an appreciation for floral design within historical and cultural boundaries, formal and casual, ceremonial and traditional, including and understanding that floral designs are affected by society, culture, history politics, and economic influence. Various assignments based on abstract, two and three dimensional designs, historical culture, theory, color theory, and analytical critiques of various floral art works using design vocabulary in conjunction with development of technical skills in floral art will serve as a foundation for more complex works such as multi-part floral designs and creative instruction through wedding consultations. Upon completion of this course, students will be able to complete a wide array of artistic floral designs while considering historical to modern culture and theory, the elements and principles of design, personal and creative expression, and connections, relationships and applications to visual art.

urse content:

This course satisfies the Creative Expression requirement through students creating works of floral art that demonstrate knowledge of the power of the principles and elements of design. Students will create unique arrangements utilizing a variety of media while applying arrangement techniques to communicate effectiveness. Students will evaluate, synthesize and analyze visual and floral art problems in two and three dimensional media by applying their knowledge of the technical skills of the principles and elements of design and blend them in new and original ways to create a personal statement. Students will express their ideas and thoughts through a wide variety of floral media, techniques and processes. Students

will select specific media and develop a personal study of images that contain and express different meanings. Students will identify different approaches to making critical judgments and use them when reflecting on their own work and that of others. Students will analyze and discuss their own work and others work and use of media to translate ideas, feelings into visual statements of aesthetic merit.

This course satisfies the Artistic Perception requirement through students perceiving their surroundings and demonstrating relationships between visual, tactile and aromatic senses to arrange original floral art. Students will create arrangements that illustrate their knowledge of the principles and elements of design as well as their observation and perceptions of visual art characteristics. Students will develop, comprehend and apply an extensive terminology base to the visual and floral arts. Students will discern amongst various floral designs, materials and purposes to identify commonalities and differences. Students will create and analyze aesthetic qualities of their own/peers' arrangements in order to refine their own works.

I. Unit 1: Introduction to Art

Students will be introduced to the variety of art through artistic perception. Students will be able to assess what makes art by analyses of the philosophy of arts, aesthetic value of objects, artistic inspirations, art appreciation, and arts role in the world. Students will identify the symbolism of flowers and foliage, in historical and modern works of art, cultural art, and Ikebana designs.

a. The variety of art

i. Artistic perception

b. When is it art?

i. Philosophy of arts
ii. Aesthetic value of objects
iii. Artistic inspirations
iv. Art appreciation
v. The art world

c. Floral Symbolism

i. Identify flowers and foliage and their symbolism in art

1. Historical and modern works of art

2. Cultural

3. Design

II. Unit 2: Historical Contributions and Cultural Dimensions

Students will interpret the meaning of art and explore the elements of art history. Students will research current floral visual art styles and the origination. Students will research the influences of floral artists of the 20th and 21st Century including styles and techniques, artistic inspirations, visual themes used in various cultures, artistic components of various time periods and cultures, time periods in floral art history, and design alternatives.

a. Interpretation

i. The meaning of art

ii. Elements of art history

b. History of floral art

i. The floral designs of ancient civilizations
ii. The floral art design styles and their originations

c. Research the influences of the floral artists of the 20th and 21st century

i. Styles and techniques

ii. Artistic interpretations

iii. Visual themes used in various cultures
iv. Artistic components of various time periods and cultures
v. Time periods in floral art history
vi. Historical styles and periods
vii. Floral art design: culture, ethnicity, time periods, and media
viii. Cultural themes: religious, holiday, funeral, and weddings
ix. Cultural design

x. Design alternatives

III. Unit 3: Aesthetic Valuing and Making Judgments on Individual Works of Art

Students will analyze and critique works of art and aesthetic value in terms of art elements and design principles using appropriate visual art terms. Students will apply sensory qualities to works of floral art and explore various styles and periods of viewed art. Finally, students will evaluate and critique art elements and art principles used in others and their own works of art.

a. Works of art and esthetic value

i. Critique works of art using appropriate visual terms

ii. Analyze art works in terms of art elements and design principles

iii. Apply sensory qualities to works of floral art

iv. Explore various styles and periods of viewed art

v. Evaluate and critique art elements and part principles used in others and own works of art

IV. Unit 4: Art elements of Design

Students will discover the art elements of design including lines, shapes/forms, colors, textures, values, space, and depth. Line topics include uses of line in visual art works such as implied, expressive, vertical, horizontal, and diagonal. Shape topics will be covered in length as students arrange designs of each of the following forms: round, oval, vertical, horizontal,

diagonal, inverted-t, fan, Hogarth-curve, crescent, right triangle, equilateral triangle, isosceles triangle, scalene triangle. Students will research the origin of color through visual art, analyze color harmony in various art works, and discover monochromatic, analogous, complementary, and triadic color schemes and apply this knowledge to student and other color visual art works. Students will create designs and art projects using visual and tactile components in floral art using fine medium and coarse textured media. Students will select containers, materials, flowers, and foliage based on texture components to complete and artistic floral design. Students will compare light and dark color values of various works of art and light and dark change in floral art. Students will analyze depth and space in two and three dimensional art designs, interpret space in our environment, and recognize the use of space in visual designs by applying angling and overlapping media in floral art designs. Additionally, students will distinguish the significance of size and color of media in floral art.

a. Lines

i. Implied and expressive use of line in the floral art works

ii. Vertical, horizontal, and diagonal use of lie in the floral art works

b. Shapes/Forms

i. Shape and form in visual art works

ii. Visual art elements fo shape and form in design through floral art works

c. Colors

i. The origin of the color through visual art

ii. Color harmony in various art works

iii. Use of monochromatic, analogous, complimentary, and triadic schemes in student and other visual art works.

d. Textures

i. Visual and tectile components n floral art using fine, medium, and coarse textured medium

ii. Container and material components of floral art

iii. Flowers and foliage use through arrangements

e. Value

i. Light and dark in visual arts design

ii. Light and dark change in floral art

f. Space and depth

i. The use of space in two and three dimensional visual art

ii. Interpret space in our environment

iii. The use of space in visual designs by applying and angling and overlapping media in floral art designs

iv. Significance of size and color of media in floral art

V. <u>Unit 5: Principles of Design</u>

Students will discover the art principles of design including balance, proportion/scale, emphasis, rhythm, harmony, unity, placement, transition, proximity, and contrast. Students will compare symmetrical, asymmetrical, radial, and open balance in floral art and create floral art works with each. Students will examine proportion and scale through application of floral art designs using the following techniques: flower to container, flower to flower, flower to foliage, and arrangement to environment. Geometrical techniques in floral art and visual art designs will also be explored. Students will create emphasis and a focal point in visual floral art works. Students will convey understanding of location, size, pattern, framing,

and isolation in floral art designs by using line direction and directional facing. Students will create rhythm in floral art using repetition, eye movement, transition, and radiating line in floral art works. Students will create harmony and unity through applying color combinations, placement, transition, and proximity to visual designs. Students will critique harmony and unity in their own and other student works. Students will review contrast and examine contrasting color schemes in floral art design using various media.

a. Balance

i. symmetrical and asymmetrical balance in floral art

ii. Asymmetrical or symmetrical balance through developing floral art works

iii. Radial and open balance in visual art designs

b. Proportion/Scale

i. Proportion and scale through application of floral art designs using the following techniques: flower to container, flower to flower, flower to foliage, and arrangement to environment

ii. Geometrical techniques in floral art and visual art designs

c. Emphasis

i. Visual art floral works

ii. Other visual art works: convey understanding of location, size, pattern, framing, and isolation in floral art designs

iii. Emphasis in floral designs by using line direction and directional facing

d. Rhythm

i. Floral art repetition and eye movement

ii. Transitiona nd radiation line in floral art works.

e. Harmony and Unity

i. Harmony and unity through applying color combinations to visual designs

ii. Placement, transition, and proximity in visual art works and critique student works in floral design

f. Contrast

i. Color schemes in floral art design using various media

VI. Unit 6: Creative Expression Through Applying Artistic Processes and Skills to Original Works of Art

Students will design two-dimensional media using a basic drawing a layout including a sample perspective drawing, original art work sketches, and a project layout. Students will practice and apply painting techniques for floral art through development of a color wheel and still life floral art work. Students will utilize mosaic art designs for floral art using paper and tile, pressed flowers, photograph and graphic design through computer art. Students will design three-dimensional sculptures to display flower and foliage media techniques for specific floral art such as mass flower and foliage, filler flower and foliage, line flower and foliage, form flower and foliage, fresh flower and foliage, dry flower and foliage, and artificial flower and foliage. Students will discover the proper use of floral mechanics, materials, and media through an introduction to proper care and proper usage of floral equipment and media. Students will research and identify specific artists styles and techniques such as Oriental, European, and Exhibition styles including Chinese, Japanese, Vertical, Circular, Triangular, and Wear and Carry designs. Students will demonstrate the process of evaluation and refining floral art projects.

a. Two-Dimensional Media

i. Basic drawing and layout: simple perspective drawing, sketching original art works, and project layout

ii. Painting techniques for floral art though developing a color wheel and still life floral art work

iii. Mosaic art design for floral arts using paper and tile

iv. Paintmaking to floral art using presed flowers

v. Photographic and graphic design through computer art

b. Three-Dementional Sculptures

i. Display flower and foliage media techniques for specific floral art: mass flower and foliage, filler flower and foliage, line flower and foliage, form flower and foliage, fresh flower nd foliage, dry flower and foliage, and artificial flower and foliage

ii. Mechanics, materials, and media through and introduction to proper care and usage of floral equipment and media

iii. specific artists styples and technique using Oriental, European and exhibition styles: Chinese, Japanese, Vertical, Cirular, Triangular, and wear and carry designs

VII. Unit 7: Connections, Relationships and Applications used in Visual Art

Students will connect art relationships to other disciplines as they compare and contrast works of art to these areas. Students will equate principles in floral art design in relationship to other visual art forms through comparing and contrasting of a wide spectrum of art expression. Students will identify and explain careers and subjects related to the floral and visual art industries.

a. Relationships to other Disciplines

i. Compare and contrast works of art to other discipline areas; science, literature, and history

---

This course satisfies the Historical and Cultural Context requirement through students identifying and discussing variations in stylistic periods and artistic expressions from different historical eras. Students will describe distinguishable characteristics, identifying elements and styles of the visual and floral arts. Students will compare and contrast differences in the expression of common themes and in the use of visual elements, technical processes and stylistic elements in the floral arts of various cultures. Students will demonstrate knowledge and uses of floral arts from a variety of diverse cultures by describing roles and arranging specific floral designs. Students will interpret specific themes and ideas through analyzing a variety of cultural and contemporary arrangements. Students will analyze floral works understanding the artist's reflection of the ideas and values of their own cultures.

Key Assignments

UNIT 1: Introduction to Art

- *During the course of this unit Introduction to Art, all or parts if the following chapter(s) will be read and questions answered from chapter 1 and chapter 18.*
    - *Students will develop and interactive notebook that contains: class notes, drawings, exercises, and activities. The notebook will be expanded with each instructional unit while students use both sides of the brain as students write and draw informative notes on the Introduction to Art.*
    - *In partners, students will gain an introductory scope of art as they research and evaluate and artist or design style of significance including: Ikebana, Van Goh, Picasso, Monet, Wagner, Lersch, Els and Hazenberg, O'Keeffe, Renoir, Cassatt, Hassam, Cezanne, Griffel, Gaugin, Westcott, Manet, Bremer, Martin, Le Sidaner, Pissarro, Caillebotte. From their in depth investigation, students will write a two page typed, double spaced, 12 point font, research paper in MLA format. The research paper will include history of the artist's life, type of art created by the artist, and other important contributions made by the artist.*
    - *Students will research and become familiar with the language of flowers and the symbolism of specific flowers and foliage with the results being presented in a 1 page typed, double spaced, 12 point font, research paper in MLA format and presentation.*
    - *By choosing a palate of flowers and foliage, students will create a symbolically significant design demonstrating learned knowledge of floral symbolism by material selection and placement.*
    - *Individual student portfolios will be developed to document student learning and showcase each students' work including sketches, photos and critiques of student work that will portray the floral art they can create, and their ability to analyze, evaluate, and reflect on their pieces.*
    - *Art Introduction Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer on Art Designers, and the Language of Flowers and their representation in design.*
    - *Students will design a personality project using wire and ribbon to reflect a beginning point for design*

<u>UNIT 2: Historical Contributions and Cultural Dimensions</u>

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 1, 13, 18, and chapter 19.*
- *Students will continue to develop an interactive notebook that contains: class notes, drawing, exercises, and activities. This notebook will be expanded with each instruction unit while student use both sides of the brain as students write and draw informative notes on Historical Contributions and Cultural Dimensions.*
- *Students will evaluate art examples from various time periods noting the similarities and differences of art expression. Students will complete a Venn diagram comparing similarities and differences of art work of four different time periods to demonstrate their understanding of different art periods.*
- *Students will create a visual PowerPoint presentation on floral art history and specific art periods including: Egyptian, Greek, Roman, Byzantine, Middle Ages, Baroque, Dutch Flemish, French, English Georgian, Victorian, Chinese, Japanese, Early American, Colonial, Neoclassicism-Federal and Greek Revival, American Victorian, European Period, Impressionistic Era, Oriental Influence, and American Styles. Students will include a picture, description, and lists of containers, plant material, and design styles for each period.*
- *Students will develop a scaled timeline of floral design historical periods from the Egyptian period to current floral art. Using a 2 inch by 36 inch strip of paper, students will divide their timeline into 13 labeled segments denoting era, time elapsed, and a sketch representing notable contributions of that historical period.*
- *Students will create a two and three dimensional visual display of floral art from one of the following periods: Freeform Expression, Geometric Mass, Art Deco, Art Nouveau, and Modern Contemporary through the use of various media. Utilizing acrylic as an art medium and a period art work as model, students will sketch and paint a representation of their selected time period. They will then follow-up with a completed floral design arrangement using media and mechanics authentic to that period.*
- *Students will complete a practicum using a given historical theme: two dimensional layouts, three dimensional arrangements, while selecting the appropriate fresh and dry cut flowers and containers. When engaging in this supervised practical application of their learning, students will sketch a draft of their design, apply appliqués focusing around their historical theme, and will subsequently select and utilize floral media to produce a three dimensional rendition of their design.*

- *Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer on the history of floral design including time periods, floral styles of each time period, and how historical events affected floral design.*

UNIT 3: Aesthetic Valuing and Making Judgments on Individual Works of Art

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 1 and chapter 13.*
- *Students will analyze various works including digital, electronic, media, and floral pieces. Students will write a reflective paragraph in their Interactive Notebook making judgments on the quality and creativity of the design.*
- *Students will complete a floral art three dimensional critique sheet for historical periods.*
- *Students will create a floral design arrangement with emphasis on elements and principles of design, including: balance, proportion, scale, focal point, rhythm, harmony and unity.*
- *Students will create verbal and written reflections for floral design projects while utilizing their Interactive Notebooks.*
- *Students will develop a portfolio including two dimensional drawings, sculptures, and artworks' critiques.*
- *Students will demonstrate knowledge of influential are periods through a cultural and historical research paper, with the results being presented in a 3-5 page types, double spaced, 12 point font, research paper in MLA format and presentation.*
- *Students will analyze and interpret student and others' work through critiques and rubrics in both verbal and written forms.*
- *Students will develop and convey floral art knowledge using visual art terminology in an oral presentation for floral art.*
- *In partners, students will conduct wedding and funeral consultations and create a complete event flower order and design plan, with the results being presented in a 1-03 page typed, double spaced, 12 point font, paper, a completed order form using the appropriate wedding or funeral form, and a detailed poster board or PowerPoint presentation to display pictured detailing their "planned" event for use as a visual aid for the presentation.*
- *Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer.*

UNIT 4: Art Elements of Design

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 3, 6, and chapter 7.*
- *Students will complete an element and principles of design worksheet, which will include fill in and short answer, this will be possible after receiving the notes from the unit PowerPoint presentation.*
- *Students will complete a Shape Scavenger Hunt by locating examples of floral shapes in the floriculture industry and retail magazines and assembling a reference guide to be displayed in the class during the remainder of the year as a visual aid and resource guide.*
- *Students will create a design of choice with own selection of materials and colors, they will be graded on their completed arrangement including proportion, balance, color combination, use of space and texture, design to scale ratio, and overall shape of design.*
- *Students will create a reference guide that compares color and its influence on emotion, this will be done using a types, double spaced, 20 point font PowerPoint with each color having its own slide and a list of emotion responses on that slide. The PowerPoint will be presented in the following color order: red, orange, yellow, green, blue, purple, pink, brown, black, and white.*
- *Students will create a color wheel and color scheme templates to be displayed on a poster board and hung on the wall to be used as a reference tool.*
- *Students will make additions to student art and floral Portfolio Projects: application using triangular, circular, vertical and horizontal floral art designs and applying hue, primary, secondary tertiary, warm, cool, value, tint, tone, and shades to floral art works.*
- *Students will create a design with pulp paper and pressed flowers using different textures within the design.*
- *Students will create a design for the Texture Challenge as they try to incorporate as many textures as possible into their design.*

- *Students will create and abstract design using the tint, tone, and shades of a color.*
- *Students will create a depth focus arrangement using foam and wire.*
- *Students will create a design project utilizing elements of design.*
- *Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer.*

UNIT 5: Principles of Design

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 2, 4, and chapter 5.*
- *Students will complete the elements and principles of design worksheet and will demonstrate their understanding by employing the use of a relief sculpture. Students will design symmetrical and asymmetrical layouts illustrating balance, scale, and proportion.*
- *Students will add balance, proportion, and scale notes in their Interactive Notebook. They will engage in discerning between visual weight between mediums. They will create sketches that accompany their notes to illustrate adhering to balance, proportion, and scale within their design work.*
- *Students will create a balance project with shapes of paper representing different types of flowers, fillers, and foliages. Shapes are assembles to represent the four types of balance.*
- *Students will add Focal Point/Emphasis Notes in their Interactive Notebook. Utilizing their individual student computer server space, students will access a PowerPoint and with their note guide will record complete with sketches of the importance of dominance/focal points/emphases in arrangements. Given line sketches of floral works, a student will circle the focal point in each arrangement.*
- *Students will sketch still life designs of floral and fruit media and circle focal points. Given a set of 1 and 2 dimensional images and 3 dimensional art pieces, students will sketch and provide special emphasis of the focal points in each design by circling them.*
- *Through tactile activities, students will create rhythm movement with objects and their body. An assemblage representing the student's design interests will be created using found objects, cutouts, photos, and natural media. A wide variety of textures should be encompassed within the project to ensure the greatest tactile exposure.*
- *Students will create a classroom color display board in groups. Students will build color displays and represent these colors through moving from hue tints to shades. Given analogues, monochromatic, complementary and split complementary color schemes, students will incorporate a color wheel diagramming all primary, secondary, and tertiary colors.*
- *Students will make additions to student art and floral Portfolio Projects: applying focal points to student work. Students will be able to designate focal points as well as imply focal points by use of paving, terracing and other grouping mechanisms. Students will begin to select and label their portfolio collections to be representative of their work and design growth.*
- *Students will water color visual patterns of the visual arts on a patterned worksheet. By creating a free form stencil, students will implement repetition in their design as they build utility both moving forward and reverse pattern. As they choose 3 shapes from existing design and create their stencils and subsequent design they will be communicating a story.*
- *Students will create a design project utilizing all principles of design. Through the use of a student constructed diorama used to illustrate a theme or scene, students will demonstrate to scale the principles of design.*
- *Unit Exam - 30 Multiple Choice, Fill-in, Short Answer and sketch completion questions on the powerful concepts of elements and principles of design particularly balance, proportion, rhythm, and scale.*

UNIT 6: Creative Expression Through Applying Artistic Processes and Skills to Original Works of Art

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 12, 14, and chapter 17.*
- *Students will create a thematic multi art display with cultural, holiday and event themes. Given a list of holidays, cultural celebrations or special events, students will work in teams to develop a thematic approach to express the event's meaning. Steps to include planning, construction, implementation and review.*

- *Students will create a presentation board displaying basic drawing and layout skills. Working in groups of four, students will select specific drawing and layout skills and develop a presentation complete with accompanying board that will demonstrate the terms and techniques involved in developing the prerequisite skill sets.*
- *Students will create mosaic art designs for floral art using paper, tile, and acrylics. Individuals will first sketch their mosaic design based on geometric art principles. They will then select their paper or tile pieces and using acrylic with the tiles they will attach them in place and cover their completed design with acrylic coating.*
- *Students will create and display flower and foliage media techniques for specific floral art: Mass, filler, line, form, fresh, dry and silk flower and foliage. Given the floral materials, students will construct the following designs to a high degree as per the design rubric: Horizontal, Vertical, Hogarth Curve, Inverted T, Symmetrical, Right Angle, Asymmetrical and Oval. Upon completion of four arrangements-Line, Mass, Form, and Filler- students will engage in group critiques of their finished products.*
- *Students will create a floral project applying mechanics, materials and media through an introduction to proper care, proper usage, equipment and media. Following, one hundred pieces of floral equipment, one hundred flowers and one hundred tropical plants will be set out for a matching identification test.*
- *Students will create a floral project displaying specific artists' styles and techniques using Oriental, European, and Exhibition Styles. As an example within the Oriental style, students will review contemporary floral artists Keith Kawaski's work and will become inspired to create a design of their own utilizing the Ikebana School of design style. A student will be given a low container, 3 foliage flowers, flowers and foliage and will be asked to design a Shin-Soe-Tai Ikebana Design.*
- *Students will evaluate his/her floral art project and support a position regarding the aesthetic value of the project and either change or defend position after considering views of others. Utilizing a designer's critique sheets, students will sketch and review their work utilizing ten guide questions. Students will then display their work, their critique of that work and receive peer feedback into which they will subsequently engage in a round robin review discussion group.*
- *Students will design a two to three dimensional floral room drawing. Using one point perspective, students will found a floral based interior design on a specific artist and represent that artist in their floral room drawing.*
- *Students will draw floral and fruit media still life sketches. Using sketching techniques such as tone, shading, shadows, color, and building up processes such as hatching, students will create depth and dimension in their design and represent floral media and still life fruit.*
- *Students will create a Glitter Painting of a flower. The students must use glitter in various colors and shades to create a flower painting in photo quality. The students will also write a short paper on the history and culture of the flower selected.*
- *Unit Exam - 30 Multiple Choice, Fill-in, Short Answer and practical application / description questions that pertain to the concepts of artistic processes and skills and their relationship to floral artistry.*

<u>UNIT 7: Connections, Relationships, and Applications Learned in Visual Art</u>

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 20, 21, and chapter 22.*
- *Students will create a mosaic art design utilizing geometric shapes. With the assistance of a compass and protractor, students will create an 8 section, 4inch diameter pie that they will use as their shaped base for their mosaic on which glass tile bits and grout will be interwoven. Negative space and the Greek / Roman origins of mosaics will be emphasized.*
- *Students will write an emotional poetic piece and design color influenced project designed visually for floral art. These pieces will be contained with a student's naturally designed twig journal in which they will keep poetry, prose, nature sketches, and observations and dried / pressed flower and foliage collection.*
- *Students will write a historical time period and artistic works and report. Research should include media and mechanics as well as associated accessories that were appropriate for the time period including examples of the artists' work. The report should be 3 pages typed, double spaced, 12 point font, done in MLA format and include a presentation.*

- *Students will design a floral advertisement using art elements, principles and techniques to display student's work at an art exhibition. With an impending Floral Design Symposia, each student will develop a 4 inch by 8 inch advertisement that can also be published in the newspaper that will promote their work and demonstrate a strong grasp of the elements and principles of design.*
- *Students will design a floral design shop, including letterhead, advertisements, and overall concept of shop and message to the public on the types of designs that are created within the shop. An overview is presented and graded by peers.*
- *Students will create a two dimensional or three dimensional design incorporating elements and principles as applied to a specific theme and culture. A one dimensional layout pencil sketch shall be turned into a two dimensional pressed flower design which shall be translated into three dimensional floral designs which shall be translated into a three dimensional floral design representative of a specific theme and culture.*
- *Students will develop an awareness of careers in American life and industry by researching those occupations in the floral industry that make use of arts. As a part of their heightened awareness, students will complete a resume, letter of application and obtain letters of recommendation to pursue further education or a career in the floral arts field.*
- *Students will take notes in their Interactive Notebook from various Guest Speakers from the Floral Design Industry. They will also provide lists of contemporary / historic artists and the questions that they will pose, if they had an opportunity to speak with these individuals.*
- *Unit Exam - 50 Multiple Choice, Fill-in, and Short Answer questions revolving around connections to the world and other art disciplines. This will be paired together with a 100 matching floral media, tool and tropical plant identification component.*

This course satisfies the Connections, Relationships, and Applications requirement through students comparing principles of floral art design between other visual art forms through the comparing and contrasting of a spectrum of art forms. Students will identify and explain careers and subjects related to the floral and visual arts industries. Students will complete a survey of a community building, a mall or another public site observing and recording the use of visual arts including flowers and ornamental plants in their design scheme and will be able to recognize the function of visual floral arts in a community. Students will recognize the floral designer's role. The Elements and Principles of Floral Design is centered around an extensive visual arts component as well as incorporating agriculture and other curricular areas including reading, writing and oral reporting as well as technological applications

---

Instructional Methods and/or Strategies

The following instructional methods will be used to enhance student learning in this course:

- *Direct Instruction Units: Units 1-7, teacher and mentor led instruction*
- *Checking for understanding through formative and summative assessments: Units 1-7, pre-questioning, thought provoking discussion, and written and verbal assessments*

- *Floral Art Portfolio Development: Units 1-7, students developed portfolio to display knowledge and art concepts as they apply to floral art*
- *Art Critique Component: Units 1-6, using terminology written and verbal skills to apply critiquing skills to student and other art work and projects including individual and group evaluation*
- *Creative Expression with flowers: Units 3-6, applying art concepts and individual perspective and guided training students will develop floral art projects*
- *Drawing and Sketching of Floral Arrangements: Units 1 & 4-6, using basics of art principles students will develop projects reflecting their knowledge of art*
- *Literacy Assignments Including Technical Reading and Writing: Units 1-7, students will complete reading and writing assignments to measure their understanding of art concepts. Advanced students will work in pairs with slower students to enhance their abilities and help slower learners to achieve success*
- *Guest Speakers: Units 1-3 & 5-7, using local artists, visits to floral shops, and businesses involved in the floral industry, students will garner a greater understanding of equipment and art skills used in floral art*
- *Field Experiences: Units 5-7, working in school floral shop, local floral shops and students projects, stents will develop their skills and abilities*
- *Cooperative Group Work: Units 1-7, in pairs, small groups, and working on floral opportunities with the public, students will display their knowledge and skill in applying their art background to floral art works*
- *DVD/Video and Multimedia Representations: Units 1-7, viewing, listening and creating video projects, students will demonstrate their skills and knowledge of art concepts*
- *Peer and Teacher Evaluation: Units 1-7, using rubric for evaluating floral projects, students will have the opportunity to evaluate theirs and other students art works using both verbal and written commentary*
- *Exhibitions of Student Work: Units 4-6, students will develop floral art projects using flowers and other media used in floral art projects. Students will also enter projects in local fair competitions in order to enhance the public's awareness of floral art*
- *Lecture with Accompanying Class Discussion and Notes: Units 1-7, students will learn how to take concise notes and develop listening skills to help them be more successful learners through teacher and group activities*
- *Guided Practice of Principles and Elements of Design in a Variety of Mediums: Units 3-6, teacher and guest lectures to introduce students to various art media and equipment*
- *Peer Assisted Learning at Design Stations: Units 1 & 3-6, working in groups or as individuals, advanced students with teacher guidance will help other students succeed in their project work*
- *Design Practicum with Self, Peer and Student Critique Feedback: Units 1 & 4-6, students will complete floral art projects and evaluate them*
- *Field Studies Occurring On and Off Campus with a Journal Completion Component: Units 5-7, working on writing skill student will keep a journal of their work and complete worksheets for any and all field trips*
- *Research Conducted Via Texts, Periodicals, Online and Interviewing: Units 1-7, students will learn to research using computer skills in the school library and interviews of local guest lecturers*
- *Project Based Instruction with Integrated Authentic Assessment Mediums: Units 1 & 4-6, using rubrics students will learn to evaluate floral art projects for art concepts learned through the class*
- *Interdisciplinary Lessons with Team Teaching Activities: Units 1-7, using guest lecturers and ties to other instruction areas on campus, students will learn that art is something that can touch their lives in many ways*
- *Technology Equipment Usage and Familiarization with Technology Based Assignments: Units 1-7, students will learn to use equipment such as cameras, computers, and other equipment used in the floral art industry and society*
- *Vocabulary Teaching Techniques and Graphic Organizers: Units 1-7, students will learn the flowers, vocabulary, and how to organize and present their thoughts on topics related to the floral industry and their lives*

Assessment Methods and/or Tools

- *Worksheets and text questions, vocabulary quizzes: to measure student progress in covering material related to art concepts and floral art while developing critical thinking skills*
- *Interactive Notebook: check daily, weekly and monthly goals and structures while aiding students in measuring their progress towards course goals*
- *Floral Art Practicum Presentation: unit and section projects to demonstrate student understanding of art concepts and floral art practices*
- *Student presentations and papers graded by rubric: oral and visual floral presentations accompanied by a written example using correct vocabulary and sentence structure to present floral art and other concepts, physical and higher thinking*
- *Lab Write-ups with reflection paragraphs: processing information gained from the lab experiences and expanding on their importance*
- *Designs graded by rubric: rubric presentation to aid understanding of how a floral project will be graded for design qualities enabling students to improve their performance*
- *Floral Design Portfolio: a collection of students floral and other art projects and media to display their abilities and knowledge of art concepts and abilities*
- *Art Portfolio: a collection of the various projects reflecting media, culture, history, and styles of art to reflect the students development in art theory and practice*
- *Reflective writing in Interactive Notebook: collection of student writings showing their development of ideas and thoughts on what is covered in the course*
- *History of Floral Presentation Rubrics: rubric development to help students understand how their art history presentation will be viewed and graded*
- *Timeline Rubric: rubric covering he development of art and art concepts through the ages and how they relate to floral art*
- *Individual Rubrics: help students understand how rubrics are designed and used to evaluate their work and others work during peer evaluations*
- *Analysis Paper: written and verbal presentation on an art concept or project presented to the class*
- *Grade Drawing Portfolio Rubric: understanding what is required to complete the drawing and sketching component of art appreciation and floral art*
- *Cultural and Historical Research Paper Rubric: developing a research paper on the history of art from the past, present, and how it developed down through the ages and civilizations*
- *Reflective Paragraph Rubric: students using their knowledge, correct art vocabulary, and thoughts to express how art is involved in their lives*
- *Floral Art Presentation: a presentation where students use note cards to present a verbal and physical presentation of their floral art project. This instrument can have an alternative of a written assignment for students who fear public speaking*
- *Consultation Rubric: teacher presentation on rubric design and how to use it to evaluate student floral projects to enable students to understand their grading, learn to evaluate the work of others in peer grading, and develop self-evaluation skills of their own floral art projects*
- *Color Wheel Rubric: students will develop a color wheel using colors and tints to create a color wheel. May also be done using play-dough to involve a tactile component*
- *Texture Pulp Paper and Pressed Flower Rubric: a floral art project and its grading requirements using texture media, flowers and other materials*
- *Texture Design Rubric: rubric helping students understand texture in their designs can help their grade*
- *Depth Arrangement: a floral arrangement project to demonstrate the students understanding of depth in art and floral art projects*
- *Balance Project Rubric*

- *Teacher Observation: teacher interaction with students through class and class activities, projects, presentations, interviews, media projects, equipment used in floral art production, and consultation of skill and career development*
- *Short Answer Quiz: verbal and written examples of student knowledge about floral art*
- *Visual Patterns Graded by Rubric: student understanding and interaction*
- *Presentation Board or PowerPoint graded according to Rubric: student's project used to educate others about an art concept or art related theory, or example down through history. Can be done on a standard display board or through using technology*
- *Matching and Short Answer Quiz on Types of Flowers: students will take a quiz on flower and plant identification, and materials used in floral art*
- *Flower and Foliage displays Graded with Rubric: rubric used in grading floral arrangements for their art value using flowers and foliage to meet art qualities like: depth, design, color, focal point, etc.*
- *Glitter Painting Design Graded According to Rubric: using glitter and its effective use in art designs*
- *Time Period Poster Presentations Graded with Rubric: students select a specific time period and discuss the art forms of that period, how they came to be, and why they changed floral art*

This course satisfies the Aesthetic Valuing requirement through students conducting research and being engaged in direct instruction, discussion and application whereby they will derive the meaning of specific works in the way in which these works are related to historical, cultural and contemporary context. Students will respond to floral artworks by evaluating and discussing their own interpretations, ideas, attitudes, views and interactions with the visual arts. Students will become more sensitized to art resulting in a greater appreciation of floral art works. Students will use analysis, interpretation and judgment about visual relationships based on learned aesthetic values to improve floral art production. Students will analyze aesthetic similarities and differences. Students will heighten their aesthetic awareness of visual and tactile qualities of art, nature, events and objects within the total environment.

- **Previously Approved Courses**

NOTE: Complete outlines are not needed for courses previously approved by UC. Courses that are defined as "previously approved" are courses from programs (Advanced Placement, International Baccalaureate, ROP courses, etc.) and courses from UC-approved online providers. Courses modeled after courses from outside the school district are also defined as "previously approved" but a complete course description will be required for submission. Each section below represents an individual page on the electronic submission site.

Was this course "Previously Approved" by UC? *X* Yes _____ No

If "No", proceed to the **Course Description** section.

If "Yes," please indicate which category applies:

Is this course modeled after a UC-approved course from another school outside your district?

X Yes _____ No

NOTE: If "Yes," you will be required to submit a complete course description. UC will review the previous submission, if available, to assist in our review process.

If "Yes," which school and ATP code? *Indio High School*

Exact Course Title: *The Art and History of Floral Design*

Has this course been provided program status, is not an online course, and is it listed below?

_____ Yes __X__ No

If "Yes," select an option from the Program Status list:

_____ AVID Program

_____ Advanced Placement (AP)

_____ CDE Agricultural Education

_____ CSU Early Assessment Program (EAP)

_____ Center for Advanced Research and Technology (CART)

_____ International Baccalaureate (IB) Program

_____ Project Lead the Way

_____ ROP/C Organization Name of ROP/C: _____

If "Advanced Placement", has it been authorized by the College Board through the AP Audit Process?

_____ Yes _____ In Progress

NOTE: UC will only allow Advanced Placement courses that have passed or are in the AP Audit process. UC requires all AP courses on your list, including those approved in prior years, to be verified via the College Board AP Audit process. UC will run quarterly reports based in AP Audit data; AP courses not listed on the AP Audit list will be removed.

If "In Progress," date submitted to AP: _____ (MM/DD/YY)

Exact Program Course Title: _____

Is this course provided by a UC-approved online curriculum provider listed below?

_____ Yes __X__ No

Have you signed the appropriate partnership agreement with the provider regarding methods of delivery and instruction?

_____ Yes __X__ No

NOTE: You must have signed an agreement with the appropriate provider and filed with UC in order to use their courses.

If "Yes" to both questions, select an option from the Online Provider list:

_____ Apex Learning Virtual School

_____ Brigham Young University Independent Study

_____ Connections Academy

_____ Education Program for Gifted Youth Online High School at Stanford University (EGPY)

_____ K12, Inc.

_____ Laurel Springs School (LSO)

_____ National University Virtual High School

_____ PASS Program / Cyber High

_____ UC College Prep Online (UCCP)

Exact Course Title: *The Art and History for Floral Design*

Seeking "Honors" Distinction

NOTE: To receive "honors" distinction, the course submission must satisfy certain requirements. For information about these requirements, please visit the a-g Guide: http://www.ucop.edu/a-gGuide/ag/a-g/honors.html. For "previously approved" courses (including AP and IB), the honors information will be pre-populated as applicable.

__*X*__ No

_____ Yes, AP

_____ Yes, IB (Higher Level)

_____ Yes, IB (Standard Level)

_____ Yes, Other Honors

NOTE: Defined as a course specifically designed by the school with distinctive features which sets it apart from regular high school courses in the same discipline areas. Course should be seen as comparable in terms of workload and emphasis to AP, IB, or introductory college courses in the subject. Honors courses must be designed for the 11th and 12th grade level and require a comprehensive, year-long, written final exam. In addition to AP and IB higher level courses, high schools may certify as honors level courses *not more than one unit in each of the following subject areas only*: history, English, advanced mathematics, each laboratory science, each language other than English, and each of the four VPA disciplines. If there are no AP or IB higher level courses in a given subject area, the high school may certify up to, but not more than, two units at the honors level in that area.

Subject Area and Category

_____ "a" – History / Social Science

_____ U.S. History

_____ American Government / Civics

_____ World History / Geography / Cultures

_____ "b" – English

_____ English

_____ English-ESL/ELD

_____ "c" – Mathematics

_____ Algebra 1; Yr 1 of 2

_____ Algebra 1; Yr 2 of 2

_____ Algebra 1

_____ Integrated Math 1

_____ Geometry; Yr 1 of 2

_____ Geometry; Yr 2 of 2

_____ Geometry

_____ Integrated Math 2

_____ Algebra 2; Yr 1 of 2

_____ Algebra 2; Yr 2 of 2

_____ Algebra 2

_____ Integrated Math 3

_____ Algebra 2/Trigonometry

_____ Advanced Mathematics

_____ Statistics

_____"d" – Laboratory Science

_____ Biological Science

_____ Chemistry

_____ Physics

_____ Integrated Science

NOTE: Students electing to enroll in an integrated-science program (ISP) are strongly advised to complete the entire three-year sequence. In most cases, the first year of an integrated-science sequence fulfills only the "g" elective requirement; the second and third years of the sequence then fulfill the two-year "d" laboratory science requirement. Accordingly, if only ISP I is successfully completed, then two courses from the categories of Biology, Chemistry, or Physics in the "d" subject area must be completed. If ISP I and only one of ISP II or ISP III are completed, then one additional course from the categories of Biology, Chemistry, or Physics from the "d" subject area must be taken to fulfill the "d" requirement.

_____ Interdisciplinary Science

NOTE: This category demonstrates that the course is cross-disciplinary and is often used for advanced science courses such as AP Environmental Science or Biochemistry.

_____ "e" – Language Other than English

_____ LOTE Year 1

_____ LOTE Year 2

_____ LOTE Year 3

_____ LOTE Year 4+

- _____ Legal and Government Services
- _____ Protective Services

_____ Transportation

- _____ Aviation and Aerospace Transportation Services
- _____ Collision Repair and Refinishing
- _____ Vehicle Maintenance, Service, and Repair

- **Catalog Description**

Brief Course Description

NOTE: Briefly (in a short paragraph) describe the course, focusing on content, rather than instructional strategies, assessments, or rationale. If school has a catalog, enter the description that is in the catalog.

Elements and Principles of Floral Design have been implemented to acquaint students with theories and principles of artistic design and their influence on the floral industry. The course emphasizes the necessary knowledge and skills to provide the student with a perceptual and tactile base leading to understanding artistic perception, creative expression, historical and cultural contexts: aesthetic valuing and connections, relations and applications of the visual arts. Students will derive meaning from art works through analysis, interpretation, and judgments applying what is learned in floral art to other forms, subjects, and post educational experiences. Through practical skill development the student will become familiar with material selection, design mechanics, maintenance and design evaluation. Students will achieve this through creating, designing, identifying, explaining, and evaluating all topics of study. Balance, color, and symmetry using floral and synthetic medium will be emphasized to allow students to apply and artistic approach to floral art. Various assignments based on abstract, two and three dimensional designs, historical culture, theory, color theory, and analytical critiques of various floral art works using design vocabulary in conjunction with development of technical skills in floral art will serve as a foundation for more complex works such as multi-part floral designs and creative expression. Students will also have the opportunity to develop their skills further through competitive competition and analytical events offered through the program.

Pre-Requisites: *Ag Biology, Algebra* Required *X* Recommended _____

NOTE: Laboratory science and Advanced VPA courses require a pre-requisite. Submissions will not be allowed if this is not included. Some courses, particularly in the mathematics subject areas, require appropriate pre-requisites. For further explanation, refer either to the "Guide to a-g Requirements" document or the a-g Interactive Guide web site at www.ucop.edu/a-gGuide.

Co-Requisites: _____ Required _____ Recommended _____

- **Background Information**

NOTE: Do not include information that could identify your school or district.

Context for Course (optional) **REQUIRED FOR CTE COURSES**

NOTE: In order to understand the context for a new course, sometimes it is helpful for UC to understand the broader educational program and/or reform efforts of the school. How does this course fit into broader departmental and/or pathway structure? How does it fit into the overall school restructuring plans? Is the course intended to be a core course or supplemental? What are the student/school/community needs met by this course?

The floral design course is a part of the Ornamental Horticulture pathway at the high school. It is our hope that be getting UC credit for the floral design course we will be able to attract more college bound students into the Ornamental Horticulture pathway. As our school moves towards the College and Career Readiness the restructuring of our Agricultural Industry Sectors Pathways will allow students more options for post-secondary education and build a stronger school community.

History of Course Development (optional) **REQUIRED FOR CTE COURSES**

NOTE: Likewise, it is sometimes helpful for UC to know the origins of a course and who was involved in its development. Did you consult with UC Admissions personnel or UC professors? If so, what was the nature of such consultation and what was the result? Was this course modeled after another course at another school? If so, is that course UC approved? How does the course being submitted differ from the course after which it was modeled? Has this course received any special recognitions, designations or awards? Has it been articulated to local community colleges or universities?

The floral design course has been developed over the course of many years working with industry and educational volunteers. With a committee reviewing the UC system requirements needed to meet the applied for art credit. We reviewed several approved models from Merced County ROP classes, two classes from the central valley, and finally from our neighboring San Luis Obispo County, we looked at Arroyo Grande and San Luis Obispo's UC approved floral classes to develop our structure to meet all standards. Having a large art community in various parts of Santa Barbara County, we involved local artists in striving to get their input as to how we could help students achieve their goals.

- **Textbooks**

NOTE: Include list of Primary and Secondary Texts. Make sure to note the books that will be read entirely and those that will be as excerpts. Textbook information is not necessary if your course is a Visual and Performing Arts, Advanced Placement or an International Baccalaureate course. Online texts or non-standard text materials should include a link to the online text.

Course Purpose

The Elements and Principles of Floral Design provides and introduction to artistic and creative perception including aesthetic valuing through a series of projects in various media including: plant, pencil, flowers, glass and a variety of papers. Students are also introduced to the elements and principles of visual art design such as line, shape/form, color, balance, and emphasis using a series of floral based projects to explore the connections, relations and application to visual arts design. Students will research and study floral trends to understand and develop an appreciation for floral design within historical and cultural boundaries, formal and casual, ceremonial and traditional, including and understanding that floral designs are affected by society, culture, history, politics, and economic influence. Various assignments based on abstract, two and three dimensional designs, historical culture, theory, color theory, and analytical critiques of various floral art works using design vocabulary in conjunction with development of technical skills in floral art will serve as a foundation for more complex works such as multi-part floral designs and creative instruction through wedding consultations. Upon completion of this course, students will be able to complete a wide array of artistic floral designs while considering historical to modern culture and theory, the elements and principles of design, personal and creative expression, and connections, relationships and applications to visual art.

Course Outline

I. *Unit 1: Introduction to Art*

Students will be introduced to the variety of art through artistic perception. Students will be able to assess what makes art by analyses of the philosophy of arts, aesthetic value of objects, artistic inspirations, art appreciation, and arts role in the world. Students will identify the symbolism of flowers and foliage, in historical and modern works of art, cultural art, and Ikebana designs.

- a. *The variety of art*
  - i. *Artistic perception*
- b. *When is it art?*
  - i. *Philosophy of arts*
  - ii. *Aesthetic value of objects*
  - iii. *Artistic inspirations*
  - iv. *Art appreciation*
  - v. *The art world*
- c. *Floral Symbolism*
  - i. *Identify flowers and foliage and their symbolism in art*
    1. *Historical and modern works of art*
    2. *Cultural*
    3. *Design*

II. *Unit 2: Historical Contributions and Cultural Dimensions*

Students will interpret the meaning of art and explore the elements of art history. Students will research current floral visual art styles and the origination. Students will research the influences of floral artists of the 20th and 21st Century including styles and techniques, artistic inspirations, visual themes used in various cultures, artistic components of various time periods and cultures, time periods in floral art history, and design alternatives.

- a. *Interpretation*
  - i. *The meaning of art*
  - ii. *Elements of art history*
- b. *History of floral art*
  - i. *The floral designs of ancient civilizations*
  - ii. *The floral art design styles and their originations*
- c. *Research the influences of the floral artists of the 20th and 21st century*
  - i. *Styles and techniques*
  - ii. *Artistic interpretations*
  - iii. *Visual themes used in various cultures*
  - iv. *Artistic components of various time periods and cultures*
  - v. *Time periods in floral art history*
  - vi. *Historical styles and periods*
  - vii. *Floral art design: culture, ethnicity, time periods, and media*
  - viii. *Cultural themes: religious, holiday, funeral, and weddings*
  - ix. *Cultural design*
  - x. *Design alternatives*

III. *Unit 3: Aesthetic Valuing and Making Judgments on Individual Works of Art*

Students will analyze and critique works of art and aesthetic value in terms of art elements and design principles using appropriate visual art terms. Students will apply sensory qualities to works of floral art and explore various styles and periods of viewed art. Finally, students will evaluate and critique art elements and art principles used in others and their own works of art.

- a. *Works of art and esthetic value*
  - i. *Critique works of art using appropriate visual terms*
  - ii. *Analyze art works in terms of art elements and design principles*
  - iii. *Apply sensory qualities to works of floral art*
  - iv. *Explore various styles and periods of viewed art*
  - v. *Evaluate and critique art elements and art principles used in others and own works of art*

IV. *Unit 4: Art Elements of Design*

Students will discover the art elements of design including lines, shapes/forms, colors, textures, values, space, and depth. Line topics include uses of line in visual art works such as implied, expressive, vertical, horizontal, and diagonal. Shape topics will be covered in length as students arrange designs of each of the following forms: round, oval, vertical, horizontal, diagonal, inverted-t, fan, Hogarth-curve, crescent, right triangle, equilateral triangle, isosceles triangle, scalene triangle. Students will research the origin of color through visual art, analyze color harmony in various art works, and discover monochromatic, analogous, complementary, and triadic color schemes and apply this knowledge to student and other color visual art works. Students will create designs and art projects using visual and tactile components in floral art using fine medium and coarse textured media. Students will select containers, materials, flowers, and foliage based on texture components to complete and artistic floral design. Students will compare light and dark color values of various works of art and light and dark change in floral art. Students will analyze depth and space in two and three dimensional art designs, interpret space in our environment, and recognize the use of space in visual designs by applying angling and overlapping media in floral art designs. Additionally, students will distinguish the significance of size and color of media in floral art.

- *a. Lines*
  - *i. Implied and expressive use of line in the floral art works*
  - *ii. Vertical, horizontal, and diagonal use of line in the floral art works*
- *b. Shapes/Forms*
  - *i. Shape and form in visual art works*
  - *ii. Visual art elements of shape and form in design through floral art works*
- *c. Colors*
  - *i. The origin of the color through visual art*
  - *ii. Color harmony in various art works*
  - *iii. Use of monochromatic, analogous, complimentary, and triadic schemes in student and other visual art works*
- *d. Textures*
  - *i. Visual and tactile components in floral art using fine, medium, and coarse textured medium*
  - *ii. Container and material components of floral art*
  - *iii. Flowers and foliage use through arrangements*
- *e. Value*
  - *i. Light and dark in visual arts design*
  - *ii. Light and dark change in floral art*
- *f. Space and depth*
  - *i. The use of space in two and three dimensional visual art*
  - *ii. Interpret space in our environment*
  - *iii. The use of space in visual designs by applying and angling and overlapping media in floral art designs*
  - *iv. Significance of size and color of media in floral art*

V. *Unit 5: Principles of Design*

Students will discover the art principles of design including balance, proportion/scale, emphasis, rhythm, harmony, unity, placement, transition, proximity, and contrast. Students will compare symmetrical, asymmetrical, radial, and open balance in floral art and create floral art works with each. Students will examine proportion and scale through application of floral art designs using the following techniques: flower to container, flower to flower, flower to foliage, and arrangement to environment. Geometrical techniques in floral art and visual art designs will also be explored. Students will create emphasis and a focal point in visual floral art works. Students will convey understanding of location, size, pattern, framing, and isolation in floral art designs by using line direction and directional facing. Students will create rhythm in floral art using repetition, eye movement, transition, and radiating line in floral art works. Students will create harmony and unity through applying color combinations, placement, transition, and proximity to visual designs. Students will critique harmony and unity in their own and other student works. Students will review contrast and examine contrasting color schemes in floral art design using various media.

- *a. Balance*
  - *i. Symmetrical and asymmetrical balance in floral art*
  - *ii. Asymmetrical or symmetrical balance through developing floral art works*
  - *iii. Radial and open balance in visual art designs*
- *b. Proportion/Scale*

i. *Proportion and scale through application of floral art designs using the following techniques: flower to container, flower to flower, flower to foliage, and arrangement to environment*
ii. *Geometrical techniques in floral art and visual art designs*

c. *Emphasis*
i. *Visual art floral works*
ii. *Other visual art works: convey understanding of location, size, pattern, framing, and isolation in floral art designs*
iii. *Emphasis in floral designs by using line direction and directional facing*

d. *Rhythm*
i. *Floral art repetition and eye movement*
ii. *Transition and radiation line in floral art works*

e. *Harmony and Unity*
i. *Harmony and unity through applying color combinations to visual designs*
ii. *Placement, transition, and proximity in visual art works and critique student works in floral design*

f. *Contrast*
i. *Color schemes in floral art design using various media*

VI. *<u>Unit 6: Creative Expression Through Applying Artistic Processes and Skills to Original Works of Art</u>*
Students will design two-dimensional media using a basic drawing a layout including a sample perspective drawing, original art work sketches, and a project layout. Students will practice and apply painting techniques for floral art through development of a color wheel and still life floral art work. Students will utilize mosaic art designs for floral art using paper and tile, pressed flowers, photograph and graphic design through computer art. Students will design three-dimensional sculptures to display flower and foliage media techniques for specific floral art such as mass flower and foliage, filler flower and foliage, line flower and foliage, form flower and foliage, fresh flower and foliage, dry flower and foliage, and artificial flower and foliage. Students will discover the proper use of floral mechanics, materials, and media through an introduction to proper care and proper usage of floral equipment and media. Students will research and identify specific artists styles and techniques such as Oriental, European, and Exhibition styles including Chinese, Japanese, Vertical, Circular, Triangular, and Wear and Carry designs. Students will demonstrate the process of evaluation and refining floral art projects.

a. *Two-Dimensional Media*
i. *Basic drawing and layout: simple perspective drawing, sketching original art works, and project layout*
ii. *Painting techniques for floral art through developing a color wheel and still life floral art work*
iii. *Mosaic art design for floral arts using paper and tile*
iv. *Printmaking to floral art using pressed flowers*
v. *Photographic and graphic design through computer art*

b. *Three-Dimensional Sculptures*
i. *Display flower and foliage media techniques for specific floral art: mass flower and foliage, filler flower and foliage, line flower and foliage, form flower and foliage, fresh flower and foliage, dry flower and foliage, and artificial flower and foliage*
ii. *Mechanics, materials, and media through and introduction to proper care and usage of floral equipment and media*
iii. *Specific artists styles and techniques using Oriental, European and exhibition styles: Chinese, Japanese, Vertical, Circular, Triangular, and wear and carry designs*
iv. *Demonstrate the process of evaluation and refining floral art projects*

VII. *<u>Unit 7: Connections, Relationships and Applications used in Visual Art</u>*
Students will connect art relationships to other disciplines as they compare and contrast works of art to these areas. Students will equate principles in floral art design in relationship to other visual art forms through comparing and contrasting of a wide spectrum of art expression. Students will identify and explain careers and subjects related to the floral and visual art industries.

a. *Relationships to other Disciplines*
i. *Compare and contrast works of art to other discipline areas; science, literature, and history*

Key Assignments

UNIT 1: Introduction to Art

- *During the course of this unit Introduction to Art, all or parts if the following chapter(s) will be read and questions answered from chapter 1 and chapter 18.*
- *Students will develop and interactive notebook that contains: class notes, drawings, exercises, and activities. The notebook will be expanded with each instructional unit while students use both sides of the brain as students write and draw informative notes on the Introduction to Art.*
- *In partners, students will gain an introductory scope of art as they research and evaluate and artist or design style of significance including: Ikebana, Van Goh, Picasso, Monet, Wagner, Lersch, Els and Hazenberg, O'Keeffe, Renoir, Cassatt, Hassam, Cezanne, Griffel, Gaugin, Westcott, Manet, Bremer, Martin, Le Sidaner, Pissarro, Caillebotte. From their in depth investigation, students will write a two page typed, double spaced, 12 point font, research paper in MLA format. The research paper will include history of the artist's life, type of art created by the artist, and other important contributions made by the artist.*
- *Students will research and become familiar with the language of flowers and the symbolism of specific flowers and foliage with the results being presented in a 1 page typed, double spaced, 12 point font, research paper in MLA format and presentation.*
- *By choosing a palate of flowers and foliage, students will create a symbolically significant design demonstrating learned knowledge of floral symbolism by material selection and placement.*
- *Individual student portfolios will be developed to document student learning and showcase each students' work including sketches, photos and critiques of student work that will portray the floral art they can create, and their ability to analyze, evaluate, and reflect on their pieces.*
- *Art Introduction Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer on Art Designers, and the Language of Flowers and their representation in design.*

    - *Students will design a personality project using wire and ribbon to reflect a beginning point for design*

UNIT 2: Historical Contributions and Cultural Dimensions

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 1, 13, 18, and chapter 19.*
- *Students will continue to develop an interactive notebook that contains: class notes, drawing, exercises, and activities. This notebook will be expanded with each instruction unit while student use both sides of the brain as students write and draw informative notes on Historical Contributions and Cultural Dimensions.*
- *Students will evaluate art examples from various time periods noting the similarities and differences of art expression. Students will complete a Venn diagram comparing similarities and differences of art work of four different time periods to demonstrate their understanding of different art periods.*
- *Students will create a visual PowerPoint presentation on floral art history and specific art periods including: Egyptian, Greek, Roman, Byzantine, Middle Ages, Baroque, Dutch Flemish, French, English Georgian, Victorian, Chinese, Japanese, Early American, Colonial, Neoclassicism-Federal and Greek Revival, American Victorian, European Period, Impressionistic Era, Oriental Influence, and American Styles. Students will include a picture, description, and lists of containers, plant material, and design styles for each period.*
- *Students will develop a scaled timeline of floral design historical periods from the Egyptian period to current floral art. Using a 2 inch by 36 inch strip of paper, students will divide their timeline into 13 labeled segments denoting era, time elapsed, and a sketch representing notable contributions of that historical period.*
- *Students will create a two and three dimensional visual display of floral art from one of the following periods: Freeform Expression, Geometric Mass, Art Deco, Art Nouveau, and Modern Contemporary through the use of various media. Utilizing acrylic as an art medium and a period art work as model, students will sketch and paint a representation of their selected time period. They will then follow-up with a completed floral design arrangement using media and mechanics authentic to that period.*
- *Students will complete a practicum using a given historical theme: two dimensional layouts, three dimensional arrangements, while selecting the appropriate fresh and dry cut flowers and containers. When engaging in this supervised practical application of their learning, students will sketch a draft of their design, apply appliqués focusing around their historical theme, and will subsequently select and utilize floral media to produce a three dimensional rendition of their design.*
- *Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer on the history of floral design including time periods, floral styles of each time period, and how historical events affected floral design.*

UNIT 3: Aesthetic Valuing and Making Judgments on Individual Works of Art

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 1 and chapter 13.*
- *Students will analyze various works including digital, electronic, media, and floral pieces. Students will write a reflective paragraph in their Interactive Notebook making judgments on the quality and creativity of the design.*
- *Students will complete a floral art three dimensional critique sheet for historical periods.*
- *Students will create a floral design arrangement with emphasis on elements and principles of design, including: balance, proportion, scale, focal point, rhythm, harmony and unity.*
- *Students will create verbal and written reflections for floral design projects while utilizing their Interactive Notebooks.*
- *Students will develop a portfolio including two dimensional drawings, sculptures, and artworks' critiques.*
- *Students will demonstrate knowledge of influential are periods through a cultural and historical research paper, with the results being presented in a 3-5 page types, double spaced, 12 point font, research paper in MLA format and presentation.*
- *Students will analyze and interpret student and others' work through critiques and rubrics in both verbal and written forms.*
- *Students will develop and convey floral art knowledge using visual art terminology in an oral presentation for floral art.*
- *In partners, students will conduct wedding and funeral consultations and create a complete event flower order and design plan, with the results being presented in a 1-03 page typed, double spaced, 12 point font, paper, a completed order form using the appropriate wedding or funeral form, and a detailed poster board or PowerPoint presentation to display pictured detailing their "planned" event for use as a visual aid for the presentation.*
- *Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer.*

UNIT 4: Art Elements of Design

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 3, 6, and chapter 7.*
- *Students will complete an element and principles of design worksheet, which will include fill in and short answer, this will be possible after receiving the notes from the unit PowerPoint presentation.*
- *Students will complete a Shape Scavenger Hunt by locating examples of floral shapes in the floriculture industry and retail magazines and assembling a reference guide to be displayed in the class during the remainder of the year as a visual aid and resource guide.*
- *Students will create a design of choice with own selection of materials and colors, they will be graded on their completed arrangement including proportion, balance, color combination, use of space and texture, design to scale ratio, and overall shape of design.*
- *Students will create a reference guide that compares color and its influence on emotion, this will be done using a types, double spaced, 20 point font PowerPoint with each color having its own slide and a list of emotion responses on that slide. The PowerPoint will be presented in the following color order: red, orange, yellow, green, blue, purple, pink, brown, black, and white.*
- *Students will create a color wheel and color scheme templates to be displayed on a poster board and hung on the wall to be used as a reference tool.*
- *Students will make additions to student art and floral Portfolio Projects: application using triangular, circular, vertical and horizontal floral art designs and applying hue, primary, secondary tertiary, warm, cool, value, tint, tone, and shades to floral art works.*
- *Students will create a design with pulp paper and pressed flowers using different textures within the design.*
- *Students will create a design for the Texture Challenge as they try to incorporate as many textures as possible into their design.*
- *Students will create and abstract design using the tint, tone, and shades of a color.*
- *Students will create a depth focus arrangement using foam and wire.*
- *Students will create a design project utilizing elements of design.*
- *Unit Exam – 30 questions including Multiple Choice, Fill-in, and Short Answer.*

UNIT 5: Principles of Design

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 2, 4, and chapter 5.*
- *Students will complete the elements and principles of design worksheet and will demonstrate their understanding by employing the use of a relief sculpture. Students will design symmetrical and asymmetrical layouts illustrating balance, scale, and proportion.*

- *Students will add balance, proportion, and scale notes in their Interactive Notebook. They will engage in discerning between visual weight between mediums. They will create sketches that accompany their notes to illustrate adhering to balance, proportion, and scale within their design work.*
- *Students will create a balance project with shapes of paper representing different types of flowers, fillers, and foliages. Shapes are assembles to represent the four types of balance.*
- *Students will add Focal Point/Emphasis Notes in their Interactive Notebook. Utilizing their individual student computer server space, students will access a PowerPoint and with their note guide will record complete with sketches of the importance of dominance/focal points/emphases in arrangements. Given line sketches of floral works, a student will circle the focal point in each arrangement.*
- *Students will sketch still life designs of floral and fruit media and circle focal points. Given a set of 1 and 2 dimensional images and 3 dimensional art pieces, students will sketch and provide special emphasis of the focal points in each design by circling them.*
- *Through tactile activities, students will create rhythm movement with objects and their body. An assemblage representing the student's design interests will be created using found objects, cutouts, photos, and natural media. A wide variety of textures should be encompassed within the project to ensure the greatest tactile exposure.*
- *Students will create a classroom color display board in groups. Students will build color displays and represent these colors through moving from hue tints to shades. Given analogues, monochromatic, complementary and split complementary color schemes, students will incorporate a color wheel diagramming all primary, secondary, and tertiary colors.*
- *Students will make additions to student art and floral Portfolio Projects: applying focal points to student work. Students will be able to designate focal points as well as imply focal points by use of paving, terracing and other grouping mechanisms. Students will begin to select and label their portfolio collections to be representative of their work and design growth.*
- *Students will water color visual patterns of the visual arts on a patterned worksheet. By creating a free form stencil, students will implement repetition in their design as they build utility both moving forward and reverse pattern. As they choose 3 shapes from existing design and create their stencils and subsequent design they will be communicating a story.*
- *Students will create a design project utilizing all principles of design. Through the use of a student constructed diorama used to illustrate a theme or scene, students will demonstrate to scale the principles of design.*
- *Unit Exam - 30 Multiple Choice, Fill-in, Short Answer and sketch completion questions on the powerful concepts of elements and principles of design particularly balance, proportion, rhythm, and scale.*

<u>UNIT 6: Creative Expression Through Applying Artistic Processes and Skills to Original Works of Art</u>

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 12, 14, and chapter 17.*
- *Students will create a thematic multi art display with cultural, holiday and event themes. Given a list of holidays, cultural celebrations or special events, students will work in teams to develop a thematic approach to express the event's meaning. Steps to include planning, construction, implementation and review.*
- *Students will create a presentation board displaying basic drawing and layout skills. Working in groups of four, students will select specific drawing and layout skills and develop a presentation complete with accompanying board that will demonstrate the terms and techniques involved in developing the prerequisite skill sets.*
- *Students will create mosaic art designs for floral art using paper, tile, and acrylics. Individuals will first sketch their mosaic design based on geometric art principles. They will then select their paper or tile pieces and using acrylic with the tiles they will attach them in place and cover their completed design with acrylic coating.*
- *Students will create and display flower and foliage media techniques for specific floral art: Mass, filler, line, form, fresh, dry and silk flower and foliage. Given the floral materials, students will construct the following designs to a high degree as per the design rubric: Horizontal, Vertical, Hogarth Curve, Inverted T, Symmetrical, Right Angle, Asymmetrical and Oval. Upon completion of four arrangements-Line, Mass, Form, and Filler- students will engage in group critiques of their finished products.*
- *Students will create a floral project applying mechanics, materials and media through an introduction to proper care, proper usage, equipment and media. Following, one hundred pieces of floral equipment, one hundred flowers and one hundred tropical plants will be set out for a matching identification test.*
- *Students will create a floral project displaying specific artists' styles and techniques using Oriental, European, and Exhibition Styles. As an example within the Oriental style, students will review contemporary floral artists Keith Kawaski's work and will become inspired to create a design of their own utilizing the Ikebana School of design style. A student will be given a low container, 3 foliage flowers, flowers and foliage and will be asked to design a Shin-Soe-Tai Ikebana Design.*
- *Students will evaluate his/her floral art project and support a position regarding the aesthetic value of the*

project and either change or defend position after considering views of others. Utilizing a designer's critique sheets, students will sketch and review their work utilizing ten guide questions. Students will then display their work, their critique of that work and receive peer feedback into which they will subsequently engage in a round robin review discussion group.

- *Students will design a two to three dimensional floral room drawing. Using one point perspective, students will found a floral based interior design on a specific artist and represent that artist in their floral room drawing.*
- *Students will draw floral and fruit media still life sketches. Using sketching techniques such as tone, shading, shadows, color, and building up processes such as hatching, students will create depth and dimension in their design and represent floral media and still life fruit.*
- *Students will create a Glitter Painting of a flower. The students must use glitter in various colors and shades to create a flower painting in photo quality. The students will also write a short paper on the history and culture of the flower selected.*
- *Unit Exam - 30 Multiple Choice, Fill-in, Short Answer and practical application / description questions that pertain to the concepts of artistic processes and skills and their relationship to floral artistry.*

<u>UNIT 7: Connections, Relationships, and Applications Learned in Visual Art</u>

- *During the course of this unit, all or parts of the following chapter(s) will be read and questions answered from chapter 20, 21, and chapter 22.*
- *Students will create a mosaic art design utilizing geometric shapes. With the assistance of a compass and protractor, students will create an 8 section, 4inch diameter pie that they will use as their shaped base for their mosaic on which glass tile bits and grout will be interwoven. Negative space and the Greek / Roman origins of mosaics will be emphasized.*
- *Students will write an emotional poetic piece and design color influenced project designed visually for floral art. These pieces will be contained with a student's naturally designed twig journal in which they will keep poetry, prose, nature sketches, and observations and dried / pressed flower and foliage collection.*
- *Students will write a historical time period and artistic works and report. Research should include media and mechanics as well as associated accessories that were appropriate for the time period including examples of the artists' work. The report should be 3 pages typed, double spaced, 12 point font, done in MLA format and include a presentation.*
- *Students will design a floral advertisement using art elements, principles and techniques to display student's work at an art exhibition. With an impending Floral Design Symposia, each student will develop a 4 inch by 8 inch advertisement that can also be published in the newspaper that will promote their work and demonstrate a strong grasp of the elements and principles of design.*
- *Students will design a floral design shop, including letterhead, advertisements, and overall concept of shop and message to the public on the types of designs that are created within the shop. An overview is presented and graded by peers.*
- *Students will create a two dimensional or three dimensional design incorporating elements and principles as applied to a specific theme and culture. A one dimensional layout pencil sketch shall be turned into a two dimensional pressed flower design which shall be translated into three dimensional floral designs which shall be translated into a three dimensional floral design representative of a specific theme and culture.*
- *Students will develop an awareness of careers in American life and industry by researching those occupations in the floral industry that make use of arts. As a part of their heightened awareness, students will complete a resume, letter of application and obtain letters of recommendation to pursue further education or a career in the floral arts field.*
- *Students will take notes in their Interactive Notebook from various Guest Speakers from the Floral Design Industry. They will also provide lists of contemporary / historic artists and the questions that they will pose, if they had an opportunity to speak with these individuals.*
- *Unit Exam - 50 Multiple Choice, Fill-in, and Short Answer questions revolving around connections to the world and other art disciplines. This will be paired together with a 100 matching floral media, tool and tropical plant identification component.*

Instructional Methods and/or Strategies

The following instructional methods will be used to enhance student learning in this course:

- *Direct Instruction Units: Units 1-7, teacher and mentor led instruction*
- *Checking for understanding through formative and summative assessments: Units 1-7, pre-questioning, thought provoking discussion, and written and verbal assessments*
- *Floral Art Portfolio Development: Units 1-7, students developed portfolio to display knowledge and art concepts as they apply to floral art*
- *Art Critique Component: Units 1-6, using terminology written and verbal skills to apply critiquing skills to student and other art work and projects including individual and group evaluation*
- *Creative Expression with flowers: Units 3-6, applying art concepts and individual perspective and guided training students will develop floral art projects*
- *Drawing and Sketching of Floral Arrangements: Units 1 & 4-6, using basics of art principles students will develop projects reflecting their knowledge of art*
- *Literacy Assignments Including Technical Reading and Writing: Units 1-7, students will complete reading and writing assignments to measure their understanding of art concepts. Advanced students will work in pairs with slower students to enhance their abilities and help slower learners to achieve success*
- *Guest Speakers: Units 1-3 & 5-7, using local artists, visits to floral shops, and businesses involved in the floral industry, students will garner a greater understanding of equipment and art skills used in floral art*
- *Field Experiences: Units 5-7, working in school floral shop, local floral shops and students projects, stents will develop their skills and abilities*
- *Cooperative Group Work: Units 1-7, in pairs, small groups, and working on floral opportunities with the public, students will display their knowledge and skill in applying their art background to floral art works*
- *DVD/Video and Multimedia Representations: Units 1-7, viewing, listening and creating video projects, students will demonstrate their skills and knowledge of art concepts*
- *Peer and Teacher Evaluation: Units 1-7, using rubric for evaluating floral projects, students will have the opportunity to evaluate theirs and other students art works using both verbal and written commentary*
- *Exhibitions of Student Work: Units 4-6, students will develop floral art projects using flowers and other media used in floral art projects. Students will also enter projects in local fair competitions in order to enhance the public's awareness of floral art*
- *Lecture with Accompanying Class Discussion and Notes: Units 1-7, students will learn how to take concise notes and develop listening skills to help them be more successful learners through teacher and group activities*
- *Guided Practice of Principles and Elements of Design in a Variety of Mediums: Units 3-6, teacher and guest lectures to introduce students to various art media and equipment*
- *Peer Assisted Learning at Design Stations: Units 1 & 3-6, working in groups or as individuals, advanced students with teacher guidance will help other students succeed in their project work*
- *Design Practicum with Self, Peer and Student Critique Feedback: Units 1 & 4-6, students will complete floral art projects and evaluate them*
- *Field Studies Occurring On and Off Campus with a Journal Completion Component: Units 5-7, working on writing skill student will keep a journal of their work and complete worksheets for any and all field trips*
- *Research Conducted Via Texts, Periodicals, Online and Interviewing: Units 1-7, students will learn to research using computer skills in the school library and interviews of local guest lecturers*
- *Project Based Instruction with Integrated Authentic Assessment Mediums: Units 1 & 4-6, using rubrics students will learn to evaluate floral art projects for art concepts learned through the class*
- *Interdisciplinary Lessons with Team Teaching Activities: Units 1-7, using guest lecturers and ties to other instruction areas on campus, students will learn that art is something that can touch their lives in many ways*
- *Technology Equipment Usage and Familiarization with Technology Based Assignments: Units 1-7, students will learn to use equipment such as cameras, computers, and other equipment used in the floral art industry and society*
- *Vocabulary Teaching Techniques and Graphic Organizers: Units 1-7, students will learn the flowers, vocabulary, and how to organize and present their thoughts on topics related to the floral industry and their lives*

Assessment Methods and/or Tools

- *Worksheets and text questions, vocabulary quizzes: to measure student progress in covering material related to art concepts and floral art while developing critical thinking skills*
- *Interactive Notebook: check daily, weekly and monthly goals and structures while aiding students in measuring their progress towards course goals*
- *Floral Art Practicum Presentation: unit and section projects to demonstrate student understanding of art concepts and floral art practices*
- *Student presentations and papers graded by rubric: oral and visual floral presentations accompanied by a written example using correct vocabulary and sentence structure to present floral art and other concepts, physical and higher thinking*
- *Lab Write-ups with reflection paragraphs: processing information gained from the lab experiences and expanding on their importance*
- *Designs graded by rubric: rubric presentation to aid understanding of how a floral project will be graded for design qualities enabling students to improve their performance*
- *Floral Design Portfolio: a collection of students floral and other art projects and media to display their abilities and knowledge of art concepts and abilities*
- *Art Portfolio: a collection of the various projects reflecting media, culture, history, and styles of art to reflect the students development in art theory and practice*
- *Reflective writing in Interactive Notebook: collection of student writings showing their development of ideas and thoughts on what is covered in the course*
- *History of Floral Presentation Rubrics: rubric development to help students understand how their art history presentation will be viewed and graded*
- *Timeline Rubric: rubric covering he development of art and art concepts through the ages and how they relate to floral art*
- *Individual Rubrics: help students understand how rubrics are designed and used to evaluate their work and others work during peer evaluations*
- *Analysis Paper: written and verbal presentation on an art concept or project presented to the class*
- *Grade Drawing Portfolio Rubric: understanding what is required to complete the drawing and sketching component of art appreciation and floral art*
- *Cultural and Historical Research Paper Rubric: developing a research paper on the history of art from the past, present, and how it developed down through the ages and civilizations*
- *Reflective Paragraph Rubric: students using their knowledge, correct art vocabulary, and thoughts to express how art is involved in their lives*
- *Floral Art Presentation: a presentation where students use note cards to present a verbal and physical presentation of their floral art project. This instrument can have an alternative of a written assignment for students who fear public speaking*
- *Consultation Rubric: teacher presentation on rubric design and how to use it to evaluate student floral projects to enable students to understand their grading, learn to evaluate the work of others in peer grading, and develop self-evaluation skills of their own floral art projects*
- *Color Wheel Rubric: students will develop a color wheel using colors and tints to create a color wheel. May also be done using play-dough to involve a tactile component*
- *Texture Pulp Paper and Pressed Flower Rubric: a floral art project and its grading requirements using texture media, flowers and other materials*
- *Texture Design Rubric: rubric helping students understand texture in their designs can help their grade*
- *Depth Arrangement: a floral arrangement project to demonstrate the students understanding of depth in art and floral art projects*
- *Balance Project Rubric*
- *Teacher Observation: teacher interaction with students through class and class activities, projects, presentations, interviews, media projects, equipment used in floral art production, and consultation of skill and career development*
- *Short Answer Quiz: verbal and written examples of student knowledge about floral art*
- *Visual Patterns Graded by Rubric: student understanding and interaction*
- *Presentation Board or PowerPoint graded according to Rubric: student's project used to educate others about an art concept or art related theory, or example down through history. Can be done on a standard display board or through using technology*
- *Matching and Short Answer Quiz on Types of Flowers: students will take a quiz on flower and plant identification, and materials used in floral art*
- *Flower and Foliage displays Graded with Rubric: rubric used in grading floral arrangements for their art value*

using flowers and foliage to meet art qualities like: depth, design, color, focal point, etc.

- *Glitter Painting Design Graded According to Rubric: using glitter and its effective use in art designs*
- *Time Period Poster Presentations Graded with Rubric: students select a specific time period and discuss the art forms of that period, how they came to be, and why they changed floral art*

Artistic Perception

This course satisfies the Artistic Perception requirement through students perceiving their surroundings and demonstrating relationships between visual, tactile and aromatic senses to arrange original floral art. Students will create arrangements that illustrate their knowledge of the principles and elements of design as well as their observation and perceptions of visual art characteristics. Students will develop, comprehend, and apply and extensive terminology base to the visual floral arts. Students will discern amongst various floral designs, materials and purposes to indentify commonalities and difference. Students will create and analyze aesthetic qualities of their own/peers' arrangements in order to refine their own works.

Creative Expression

This curse satisfies the Creative Expression requirement through students creating works of floral art that demonstrate knowledge of the power of the principles and elements of design. Students will create unique arrangements using a variety of media while applying arrangement techniques to communicate effectiveness. Students will evaluate, synthesize and analyze visual and floral art problems in two and three dimensional media by applying their knowledge of the technical skills of the principles and elements of design and blend them in new and original ways to create a personal statement. Students will express their ideas and thoughts through a wide variety of floral media, techniques and processes. Students will select specific media and develop a personal study of images that contain and express different meanings. Students will identify different approaches to making critical judgments and use them when reflecting on their own work and that of others. Students will analyze and discuss their own work and others work and use of media to translate ideas and feelings into visual statements of aesthetic merit.

Historical and Cultural Context

This course satisfies the Historical and Cultural Context requirement through students identifying and discussing variations in stylistic periods and artistic expression from different historical areas. Students will describe distinguishable characteristics, identifying elements and styles of the visual and floral arts. Students will compare and contrast differences in the expression of common themes and in the use of visual elements, technical processes and stylistic elements in the floral arts of various cultures. Students will demonstrate knowledge and uses of floral arts from a variety of diverse cultures by describing roles and arranging specific floral designs. Students will interpret specific themes and ideas through analyzing a variety of cultural and contemporary arrangements. Students will analyze floral works understanding the artist's reflection of the ideas and values of their own cultures.

Aesthetic Valuing

This course satisfies the Aesthetic Valuing requirement through students conducting research and being engaged in direct instruction, discussion and application whereby they will derive the meaning of specific works in the way in which these works are related to historical, cultural and contemporary context. Students will respond to floral art works by evaluating and discussing their own interpretations, ideas, attitudes, views and interactions with the visual arts. Students will become more sensitized to art resulting in a greater appreciation of floral art works. Students will use analysis, interpretation and judgments about visual relationships based on learned aesthetic values to improve floral art production. Students will analyze aesthetic similarities and differences. Students will heighten their aesthetic awareness of visual and tactile qualities of art, nature, events and objects within the total environment.

Connections, Relationships, and Applications

This course satisfies the Connections, Relationships, and Applications requirement through students comparing principles of floral art design between other visual art forms through comparing and contrasting a spectrum of art forms. Students will identify and explain careers and subjects related to the floral and visual art industries. Students will complete a survey of a community building, a mall or other public site observing and recording the

use of visual arts including flowers and ornamental plants in their design scheme and will be able to recognize the function of visual floral arts in a community. Students will recognize the floral designer's role. The Elements and Principles of Floral Design is centered around an extensive visual arts component as well as incorporating agriculture and other curricular areas including reading, writing and oral reporting as well as technological applications.

Comments:

Course Purpose: *What is the purpose of this course?*

Sustainable Agriculture is a one year course designed to integrate biological science practices and knowledge into the practice of sustainable agriculture. The course is organized into four major sections, or units, each with a guiding question. Unit one addresses the question, What is sustainable agriculture? Unit two, How does sustainable agriculture fit into our environment? Unit three, What molecular biology principles guide sustainable agriculture? Unit four, How do we make decisions to maximize sustainable agricultural practices within a functioning ecosystem? Within each unit specific life science principles will be identified with agricultural principles and practices guiding the acquisition of this knowledge, culminating in the development of a sustainable farm model and portfolio of supporting student research

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

UC CURRICULUM INTEGRATION

Title: Biology and Sustainable Agriculture

Length of Course: Full Year (2 semesters; 3 trimesters; 4 quarters)

Subject Area – Discipline: Laboratory Sciences ("d") – Biology

UC Honors designation: No

CTE Sector: Agriculture and Natural Resources

CTE Pathway: Agriscience

Grade Level(s): 9-12

Prerequisite(s): Algebra 1 or IM 1

Overview:

Sustainability is based on a simple principle: Everything that we need for our survival and well-being depends, either directly or indirectly, on our environment. Sustainability creates and maintains the conditions under which humans and the biotic world can exist in productive harmony, that permit fulfilling the social, economic and other requirements of present and future generations. Sustainability is important to making sure that we have and will continue to have, the water, materials, and resources to protect human health and our environment. (adapted from http://www.epa.gov/sustainability/basicinfo.htm)

Sustainable Agriculture is a one year course designed to integrate biological science practices and knowledge into the practice of sustainable agriculture. The course is organized into four major sections, or units, each with a guiding question. Unit one addresses the question, What is sustainable agriculture? Unit two, How does sustainable agriculture fit into our environment? Unit three, What molecular biology principles guide sustainable agriculture? Unit four, How do we make decisions to maximize sustainable agricultural practices within a functioning ecosystem? Within each unit specific life science principles will be identified with agricultural principles and practices guiding the acquisition of this knowledge, culminating in the development of a sustainable farm model and portfolio of supporting student research.

Course Content:

Unit 1: Driving Question: What is sustainable agriculture?

This introductory unit will focus on the biological classifications of agriculture and their associated industry sectors, what sustainability is, and how the scientific method is the driving force behind advancements and developments in sustainable biological practices within agriculture. Students develop an overview of agricultural industries and biologic

practices through research projects on facets of California agriculture, and identify what sustainability and sustainable practices are through individualized lab experiments relating to current practices. Ultimately, students will be able to use the scientific method to complete an extensive laboratory experiment that is designed to evaluate potential feed source varieties for sustainable success within their local community.

Unit 1: Key Assignments

1. "What is sustainable agriculture?"
Students groups will research the various biological divisions of what constitutes agriculture (plant science, animal science, forestry, horticulture, etc.). Within their research they will identify the sub categories of industry that fall within their topic, what career paths are available within each, what are currently identified as "best practices" (such as the three E's of sustainability -- economics, ecology and equity) and what are some of the sustainability issues and biologic concerns within each of these divisions. Students will then develop a multimedia presentation to introduce their particular area of agriculture to the class and identify the most prevalent issues facing their particular field of interest.

2."That's Ag - The Science Behind Agriculture" – Categorical Based Mini-Labs:
Student groups will design and complete an inquiry based mini-lab experiment to expand on their knowledge of the particular industry sector they researched from the previous activity. Choosing a focus from one of the areas of concern or issues within their sector, students will then design and implement an experiment that tests factors contributing to the issue and potential impacts they have on the population using scientific method learned in class. Examples might include a lab on animal production and energy flow, a lab on soil degradation and plant germination, a lab on food processing practices, a lab on post-harvest preservation, etc. The labs will introduce the application of inquiry within the agriculture sectors and the importance of the implementation of research in the industry. Design protocols, data, and analysis will be submitted in lab report format. As part of their analysis, students must use their data to make suggestions on how to improve efficiency or yield, or lessen the impact of processing, relevant to their finding of their particular experiment.

3. Scientific Method and Sustainability Lab – "Work Like a Scientist"
In this lab students are introduced to the scientific method, the basis for all scientific decision making. The native grasses research will provide students with the foundation of scientific investigation application as well providing key research that will be used in the final unit project as well as the end of course project. Students will research the difference between native grasses versus invasive grasses including specific species. Using this knowledge they will hypothesize germination rates between these two variable groups. Students will then design and implement an experiment incorporating quantitative data collection, analysis, and draw conclusions reflective to their hypothesis, and evaluate the grasses for potential sustainability within their communities.

As a continuation of the germination experiment, given that the two variables have differing germination rates, students can identify other measures of "success" of a potential feed crop. They will then sample the community environment for the potential

factors affecting the continued growth and development of grasses. Samples would include soil testing, (pH, nutrient composition, structure and texture, and water capacity), water availability, and ambient temperatures. Combining this information with the initial background research regarding natives versus invasive, students will hypothesize on the continued success of their germinating grasses, then transplant their seeds into test plots or fodder trays, and allow for continued growth. After a predetermined amount of time, sample plots will be analyzed for percent coverage and measurements of species biomass will be completed. Using this information students will determine the most biologically suitable grass species to plant that would be the most sustainable within the local community through a written lab completed in their lab notebook and a powerpoint presentation of their hypothesis, design, data and conclusion.

Unit 2: Driving Question: How does sustainable agriculture fit into our environment?
While unit one examined whole systems, unit two takes a closer look at components within that system. Students will use evidence gathered from a series of laboratory exercises to be able to describe the transfer of energy from one trophic level to another as well as the cycling of nutrients and energy through ecosystems. Students will be able to draw conclusions about these biogeochemical cycles and how they apply to sustainability of production agriculture. Specifically, students will conduct primary research in the areas of photosynthesis and chemical energy creation, nutrient cycling, transpiration and water use, ecological relationships and global farming practices in order to draw biologically-sound conclusions regarding the effects of agriculture on the natural environment. The students learning will culminate in a synthesis of concepts applied to the development of a three year sustainable crop rotation plan.

Unit 2: Key Assignments

1. "Bacteria at Work" - Nitrogen Fixation
Students will analyze the effects of nitrogen fixation on plants initially by examining prior studies as well as industry publications regarding the role of nitrogen in plant growth and the methods by which farmers enhance nitrogen levels in soil. This should include a thorough look at the microbiology of nitrogen-fixing bacteria, plant and root physiology, nutrient cycling and uptake in plants, chemical processes and cellular respiration in plants and fertilization methods. After garnering that background information, students will conduct an experiment that compares the effects of added nitrogen fertilizer versus nitrogen fixing bacteria on the growth of clover. Students will grow clover plants in soil with no nitrogen added, in soil with nitrogen fertilizer added, and in soil containing nitrogen-fixing bacteria (in this case, a species of rhizobia called Rhizobium legominosarium, or R. legominosarium). Students will monitor the nitrogen levels in each type of soil using a nitrogen testing kit. The students will observe the effects of nitrogen on the health of the clover plants by measuring the increase in biomass of each plant during the experiment. Plants should be harvested, soil washed away, and weights taken on plant material produced. Students will use the data collected to create a graph showing the relationship between nitrogen availability in the soil and crop sustainability. This allows students to not only experience agriculture's role in the nitrogen cycle, but also provides necessary supporting data for decision making in the final end of course project.

2. "Morning Jolt!"- Photosynthesis Lab

Photosynthesis is the basis for the creation of chemical energy in the natural world. Plants require light in order to transform one type of energy into another, and the quantity and type of light determine the optimal photosynthesis rates. Students will conduct a laboratory exercise that examines the effects of shade on the growth of plants and the rates of photosynthesis and will develop a written memorandum to the International Coffee Growers Association regarding optimal shade levels for the growth of coffee trees, including information regarding ecological sustainability involved in the practice. The process will begin by using industry journals to examine coffee production methods; primarily comparing and contrasting industrial coffee production with shade-grown, sustainable coffee production. Students should come up with the following information: arabica coffee has the highest yields under 35 to 65% shade. In addition, growing coffee under shade also discourages weed growth, may reduce pathogen infection, protect the crop from frost, and helps to increase numbers of pollinators which results in better fruit set. However, in order to produce faster, higher yields and prevent the spread of coffee leaf rust (Hemileia vastatrix), many coffee plantations began to grow coffee under sunnier conditions. The fewer shade trees that are in coffee plantations, the less biodiversity there is in those plantations.

The laboratory exercise will use several small coffee plant starts (available for purchase online as seeds or a houseplant) and will grow them for a series of days under varying shade levels. Students will conduct visual assessments of plant health and growth, then conduct a traditional floating leaf disc assay protocol to assess photosynthesis levels under varying light conditions. Students will use both the previously gathered background information regarding industry practices, sustainability and plant growth as well results of the primary research to develop the memorandum regarding optimal shade levels for sustainable coffee growth.

3. "Move on Through" - Transpiration Lab

Students will initially conduct background research into water use in agriculture and the demands placed on farmers to be efficient and careful with this scarce natural resource. Students will then investigate transpiration as part of the hydrologic system, based on different genetic variations of plant structure (leaf type and shape, for example). Students will conduct a research exercise by examining transpiration in plants with various leaf structures. This can occur using locally-grown crops or by using exotic crops and adding a component regarding appropriate plant selection. In this lab, students will use the plant weight protocol to measure the transpiration rates of individual plants. Students give plants a predetermined amount of water, reweigh the plants, and continue weighing the plants over time to contrast weight differentials and determine water loss through transpiration. Students will monitor observable physical changes in the different plants' condition as water is depleted, collecting qualitative data and measuring the diurnal transpiration rates. Students will apply the individual plant water usage data to larger scale acreage to analyze water usage. Students will create a written case study to justify plant selection within the context of the sustainability of the hydrologic system.

Optional extension: include in the case study how trends in daily transpiration rates change if water losses were replenished through different irrigation management techniques (drip, flood, etc.).

4. "From Trash to Gas" - Sustainable Waste Management

Students will use both primary and secondary research to discover that food scraps, dead plants, manure, and other decaying organic matter, called *biomass* are a rich source of energy. Energy can be procured from biomass by turning it into a gas called *biogas*. The process will begin by students examining agricultural examples of biogas production (small scale composting, dairy lagoon gas extraction, codigestion, etc.) as well as the microbiological basis for biogas production, including aerobic and anaerobic fermentation, cellular respiration, lignocellulosic breakdown, etc. As part of this analysis, students will compare the amounts of biogas produced by different types of biomass. In order to quantify their findings, students will conduct an experiment with three soda bottles filled to the same volume with various types of biomass commonly used in biogas production. Bottle one will contain cow manure, bottle two will contain cow manure and household kitchen scraps, and bottle three will contain cow manure and a biological waste product of the students choosing (teacher approved). Bottles will be topped with a small balloon. Students will record the circumference of each of the balloons at the same time of day over a period of 10 days as well as record observations of the biomass inside of the bottles. Students will create a graph representing the circumference of balloons and the number of days. Students will compare graphs to determine which biomass type produced the fastest inflation of the balloon. Upon completion of the experiment, the students will then need to develop a written plan for how this naturally occurring byproduct can be harnessed to benefit a farming situation. In addition to incorporating their data, this plan should include: research on how the gas is used, the scientific processes behind biogas creation (fermentation, anaerobic digestion, etc.), biomass feedstocks that can be used to create efficient quantities of biogas, potential uses of biogas, and potential economic and sustainable benefits of instituting a biomass digester.

5. "Composting, Do the Rot Thing"

Students will examine the principle of composting organic material, and the process of converting complex organic matter into the basic nutrients needed by living organisms. Prior to conducting the experiment, students will use industry and extension publications to learn the processes of composting, as well as the benefits and challenges of compost production (available nutrient levels, community perceptions, hazardous materials, smell, storage, etc.). Following the background research, students will conduct a laboratory exercise that will examine the utilization of organic wastes (household) as nutrients for plants. It will allow students to investigate which waste products can be composted and best utilized by plants. Based off of prior knowledge of an ecosystem and how ecosystems regenerate as well as the interaction of food and fiber systems with natural cycles, students will justify specific nutrient requirements, as well as renewable and nonrenewable natural resources. Students will prepare three test plots, one plot with just soil, one with soil and household waste products collected by students, and one plot with animal waste products. Students will then monitor plant growth and development to graph their results. Students will create an informational, six paneled brochure that explains a waste management plan using compost. Included in the brochure should be information regarding the microbiology of compost production in addition to the practical household application of the research. Additionally, the brochure should outline the removal of organic matter to increase ecological sustainability while having the least

environmental impact on the farm and community.

Unit 2. Assessment

Plant, Grow, Rotate, Repeat Sustainable Crop Management Plan

Students will apply concepts of the biogeochemical cycles as well as waste management to create a 3 year sustainable crop rotation plan that produces the highest crop yields for any given location with the least environmental impact. Students must analyze current soil conditions as well as community needs when considering their crops for production. Student focus should be on nitrogen fixation of specified crops. Students will use previous knowledge of ecosystems, invasive species, and producer and consumer relationships as well as research current market prices and local demands, to assess the environmental contribution and the economical impact from each crop. When creating the 3 year crop rotations students will defend their selections and the ecological impacts of their decisions. The synthesis of the students' research will culminate in written proposal to a local producer.

Unit 3: Driving Question - What molecular biology principles guide sustainable agriculture?

In this unit, students will examine the science of agriculture and evaluate the efficiency and sustainability of current methods. Students will explore the concepts of taxonomy of plants and nomenclature of animals, cell structure, cellular division, DNA, and chromosomes. Students will apply this knowledge to evaluate desirable inheritable traits in each species to artificially select characteristics to breed more efficient and productive offspring as a part of their created breeding plan. Students will be introduced to genetic markers, genetically modified organisms, and biotechnology. With this knowledge students will examine and evaluate biotechnology, the ethics of genetic manipulation, and its implication on the sustainability of agriculture and our ability to feed a growing population. As a culminating project for the first two units students will design, conduct, and interpret their own agricultural research project on a biological issue facing agriculture and present their findings with a visual, written, and oral report.

Unit 3: Key Assignments

1. "Breed For The Need"- Sustainable Breeding Evaluation

Animal genetics play a role in sustainability. An animal that is genetically predicted to become heavier muscled in a shorter period of time will utilize less pasture and nutritive resources than one that takes longer to reach the same weight. A female who produces more milk to feed her offspring will utilize less resources for both her and her progeny. Therefore, summative phenotypic traits are important to evaluate in a sustainable ecosystem in order to efficiently utilize natural resources. By analyzing these traits students can determine the probability of the trait expression in an animal's offspring. After instruction on chromosomal physiology, multicellular organization, animal anatomy, basic heredity, and genetic expression, students will identify desirable characteristics from a group of four animals of the same species to create a sustainable breeding plan that will include: hybrid vigor, genetic efficiency and other genetic traits. Students will use three components to evaluate the group of four animals that include the farmer's

sustainability scenario, expected progeny difference data and phenotypic evaluation of the animals. First students will read an agricultural producer's written scenario that describes the targeted phenotypic traits a farmer desires based on the environment that must sustain the health and nutrition of the specific animals while not depleting the natural resources within that biological system. The parameters of the traits the students will evaluate include milk production (the weight of the weaned offspring that was contributed to the amount of milk the mother produced), weaning weight (the weight of the offspring when removed from the mother), yearling weight (the weight of the offspring at eighteen months of age and birth weight (the weight of the offspring at birth). Next, the students will read and analyze Expected Progeny Difference (Summative phenotype expression) data. Finally, students will perform visual observations of the phenotypic traits in those four animals. Students will assess and prioritize the three analyzed components based on importance and collectively use them to place the four animals in phenotypic order from the most desirable for the environment to the least desirable according to the farmer's sustainability scenario. Students will give an oral defense with evidence to support reasoning.

2. "Where Should I Make My Home ?"- Sustainable Production Plan

The students will be put into groups and collectively evaluate the same animals from the previous activity with summative phenotypic traits for each of the bio-geological growing zones in California which are desert and high desert, coastal, valley, foothills and mountains. Instruction should occur on plant taxonomy and livestock anatomical suitability (large animals in areas with poor biomass production, genetic hardiness factors, etc.) prior to the secondary research being done. Research done on each zone will provide information on the possible sustainability plans in which the four animals could be raised. Students will research the ecosystem of each area, analyzing what crops, pasture and range can be grown and the effects of climate and rainfall on the availability of nutrients for the animals' sustainability. Based on the data accumulated from the research they will reevaluate the four animals from the previous lab including EPD data. For each zone they will place the animals in order from the one most suited and efficient to the least. Students construct a written defense for their decision in the placing of those animals in each zone based on their data and research. They will argue the merits of their placing based on the data from their zone research: native and nonnative grass and crop survivability in each zone that provides nutrition to the animals, biological merits and disadvantages of each zone on the animals. They will then use the zone information to reevaluate the EPD data and how it can be best utilized to meet the animal's biological needs. Using the research and accumulated data students can determine a class placing for each region of California.

3. "Battle of the Seeds" - Biotechnology Use in Agriculture

Crop decisions made by agricultural producers are often predicated on understanding the climate, rainfall and topography needs of their growing area. These decisions often prioritize crop yield, but also must take into account the biological health of each system. The previous lab focused on evaluating the efficiency of specific animals introduced into an ecosystem where the biological components were predetermined and consistent. In this activity, students explore the introduction of new plants into predetermined, consistent ecosystems by investigating how germination, growth and efficiency of plants (crops) can be affected by genetic and environmental changes. Prior to the experiment,

students should be instructed in cell division and structure as functions of organism growth, genotypic traits and variable expression, traditional hybridization methods and modern genetic manipulation.

For the primary research exercise, students will set up three demonstration plots to compare growth and yield rates of plants. Half of the class will grow unweeded plots of plants, manually weed-controlled beds, and chemically controlled beds with plants that have been genetically modified to withstand the effects of a widely-used herbicide. The other half of the class will grow hybrid seed, non-hybrid seed, and genetically enhanced seed of the same plant. Upon analyzing data of plant growth and yield rates students will calculate the cost in time and money for the methods demonstrated. Students will formulate a written opinion/thesis and defend from evidence the most sustainable method of growing food based on their experiment. Students determine the statistical, economical and biological differences of genetically modified organisms as compared to natural organisms. Students will then research public concern of genetically modified organisms to prepare for a class debate. Utilizing their experimental results and research students debate the use of biotechnology and genetically modified organisms playing one of four following roles; a leader of a developing nation where hunger is a problem among their citizens, a biotechnology company specializing in producing genetically modified plants, a farmer, or a parent who primarily purchases organic produce. Students will reflect on their original opinion and write what they learned as a result of this experience.

Unit 3. Assessment:

"Hypothesize, Analyze, Repeat" - Formal Research Project

Labs and activities have been done in this unit that represent the common applications of biological factors such as genetic potential and variability of plants and animals, the symbiosis of animals and plants within an ecosystem and the impact of new species introduced into an established environment. Students will utilize the science of nature they learned in unit three, how that science fits into the biological systems from unit two and how those systems contribute to sustainability in unit one to develop a comprehensive agriscience experimental research project. Students will identify a problem related to agriculture that is the result of completing the first three units of the course (plant science, animal science, natural resources). Students will utilize the empirical method to design an experiment that will test their own authentic hypothesis using the skills and processes learned throughout the course that include dissecting published research and studies, testing the hypothesis, collecting, synthesizing, analyzing and interpreting data, accepting or rejecting the hypothesis based upon the data, technical reading and writing, and scientific collaboration. Specific expectations for the written research project are outlined below:

1. Forming a Hypothesis

Students will use credible sources to conduct background research on the agricultural issue they are investigating, and they will use this research to generate a testable hypothesis related to the scientific problem they have identified. The hypothesis developed by the student will be constructed with the independent and dependent variables in mind.

2. Experimental design and conducting experimentation
Students will construct an experimental design to test their hypothesis. A written experimental design should be constructed consistent with scientific protocol using a systematic approach outlined in the previous units. Students will have their experimental designs reviewed by industry experts, agricultural instructors, local growers/producers, researchers or university representatives. After validating the design using the peer review process, students will move to the experimentation phase of their research. Experimental designs should include replicates, control groups, and determine the variables to be controlled and how. Additionally, a determination should be made as to the type of data that will be collected and in what ways, with the emphasis placed on quantitative data or quantifying data that is qualitative in nature. Students will use their experimental design to test their hypothesis. For example, in a study of primed versus non-treated seeds, seeds would be planted in identical environments, multiple test groups would be established and compared to a control group, and the number of germinated seeds would be counted and recorded to quantify the outcome. Raw data should be recorded using a field book or electronic device.

3. Analyzing data, interpreting data and forming conclusions.
Students will determine the best methods for organizing their data using tables. Students will use mathematical principles to synthesize their data, calculating a mean, for example. Furthermore, a statistical analysis of the data will help the student determine if the results are due to chance or the independent variable that was tested. Students will choose the best way to present their data using graphs they believe will most effectively demonstrate their findings, and will further summarize what each graph shows. Finally, students will interpret the data and formulate conclusions based on the results. In the written conclusion, students will use their data to either accept or reject the original hypothesis. Conclusions should be directly supported by the data and supported by previous research. Students will also identify the limitations of their research, improvements that could be made to the experimental design, as well as future studies that may be conducted that relate the study at hand.

4. Evidence of Performing the AgriScience Research Project
Students will submit their research in a written paper, and it will include the following components: problem/purpose, background research, hypotheses, methodology, results/data, and discussion/ conclusion. The paper will be written using skills associated with technical and scientific writing, for example, refraining from the use of personal pronouns or keeping discussion limited to what the research and data suggest rather than personal opinion and bias. APA format will be utilized to reference and cite sources. Students will create a visual display board, using a digital format that mirrors the use of research posters in higher education, which will also include all of the components of the paper, but in a condensed form. The peer group that reviewed the original experimental design will review the final research paper. The project and its findings will be shared with the class in an oral presentation, with the research board on display to aid in communicating the results of the research.

Unit 4: Driving Question:How do we make decisions to maximize sustainable agricultural practices within a functioning ecosystem?

Students will understand common practices in the agriculture industry that promote sustainability. They will evaluate and/or refine technological solutions that reduce impacts of human activities on natural systems by using practices that utilize cellular biology, genetics, energy cycles, biological systems, plant and animal nomenclature and how these units collectively create ecosystems that were covered in the previous units. Students will conduct production practices in the areas of animal science, horticulture, and natural resources. Students will experience how the biological systems can be changed at the cellular level, promoting the emergence of new energy cycles that produce useful, recyclable products that have a positive impact on the environment, thus decreasing the impact of agriculture on the environment and promoting sustainability. Students will investigate positive sustainable approaches to changing negative impacts agriculture has on the land by testing methods of efficiency in laboratory work. This experience will give students perspective on production costs and resource needs in relation to animal welfare, mechanization versus labor, and use of chemicals to non-use of chemicals. Students will utilize this hands-on production experience to develop their own sustainable farm as a culminating final project to illustrate the management of agricultural systems, management of natural resources , the sustainability of an ecosystem for the future while preserving biodiversity.

Unit 4: Key Assignments

1. "Show Me You Care" - Practice in Animal Health Management

Common animal production practices are done to ensure multi-system homeostasis and to foster productive animal growth and general welfare. Prior to conducting a laboratory exercise, students will engage in secondary research that seeks to correlate common livestock production practices to maintaining system health in animals. For example, castration, tail banding, hoof trimming and vaccinations prevent pathogen (viral, bacterial, fungal and parasitic) infections and thereby ensuring the health of the immune system, lymphatic system and respiratory system, among others. Shearing, clipping and dehorning are noninvasive procedures that provide recycling opportunities of animal byproducts but are also designed to maintain homeostasis and to protect vital organs throughout multiple systems (shearing reduces overall stress on the circulatory system, for example). Animal identification requires animals to have a traceable number like the scrapie tag that traces the animal to the breeder in case an animal tests positive for the genetic disease and ensure herd health (preventing disease outbreaks that can stress multiple systems).

After the conclusion of the background research, students will engage in a laboratory experience where they will conduct common livestock production procedures practiced in the United States through the application of: castration methods, dehorning practices, vaccination protocols, identification systems and shearing techniques. Students will divide into groups to demonstrate one or more of the common livestock production practices within several species of livestock and small animals. After the conclusion of each of these demonstrations, students will choose one method they demonstrated and write an explanatory position paper that correlates the production practice to physiological health in the animal, highlighting homeostatic mechanisms and system nomenclature.

2. "If You Root It, They Will Grow" - Sustainable Practices in Horticulture
The ability to graft, increase growth rates and clone species of plant, trees and crops is an option that can increase the number of organisms that can be planted in a shorter amount of time. Using one plant to create many or the ability to grow different varieties of fruit on one tree maximizes the efficiency of each organism within an ecosystem. The ability to utilize this technology increases species diversity while positively affecting land biomass. Students will experience a laboratory activity, conducting propagation techniques that make plants more efficient and in return contribute to the energy cycles within the ecosystem potentially maximizing sustainability of the plant and its production.This laboratory lets students use asexual propagation through the application of auxins directly onto plants used as a common practice in the horticultural industry. Students will also research the role of auxins and make predictions on its effectiveness on their assigned mother stock plant. Through teacher demonstration, students will learn the proper steps of asexual propagation and make cuttings of their plant. Each student will test the effectiveness of auxins (rooting growth hormone) with one row in a flat being a different concentration of hormone and one control. After two weeks students will collect data every three days and record the rate at which their plant cutting roots. Students will calculate the cost of hormone treatment versus the time for cuttings to root to recommend the use or non-use of auxins on their assigned plant in their lab report.

In the next step of the laboratory students will practice the proper steps of transplanting and fertilizer use as regular practice in the horticultural industry. Students will take their rooted cuttings and transplant them to a larger container. After direct instruction on types of fertilizers, students will make predictions on the most effective type of fertilizer for their rooted cuttings; liquid, slow release, and organic. Students will be assigned a growing area (landscape plot, or one gallon-containers) to conduct their experiment. Students will test each type of fertilizer with four rows of plants. One row will be the control, without fertilizer application and the other three rows will have liquid, slow release, and organic fertilizer applications. Students will take daily measurements and make final conclusions of fertilizer effectiveness for their plant. Students also compare cost of fertilizer to effectiveness to determine final recommendations in their lab report.

3. "It's Easy Being Green - Growing Green Communities" - Landscaping
Students will utilize the Horticulture report and experience to create a landscape plan in groups. Students will utilize the original cuttings from the previous activity which are now grown plants. Each group will use those plants in designing a landscape for a specific area designated by the teacher that could include areas around the school and/or community. Students must consider plant growth requirements, resources such as water, soil quality, and fertilization needs. Students must address the long term needs of their landscape and write a reflection on the positive and negative aspects with recommendations for more sustainable qualities. The students will submit their designs in a written proposal to the school and or community organizations for approval. Those approved will be planted and maintained by the group for the rest of the year.

4. "Use Me Responsibly or Lose Me Forever" - Using Nature's Natural Resources
Students will delve deeper into natural resources conducting research on bioprospecting. They will use the knowledge gained within this unit regarding the potential to change the

future through bioprospecting and the need to prevent the exploitation of those resources to preserve the biospheres for future generations. Students will read articles about the use of plants and animals in nature like coral producing a natural sunscreen named, "Sunscreen 855". To prevent the harvest of coral in order to save the barrier reef they isolated the compound and produced it in a lab that will be the most naturally occurring sunscreen developed. Students will discuss the importance of bioprospecting, as well as how the prospect of products from plants and animals argues for the continued maintenance of biodiversity and sustainability as long as the resources are not exploited.(Biology,Prentice Hall) After the discussion students will research other types of bioprospecting happening in agriculture. They will choose one material (natural resource) being prospected and find the following information from their research: what research is being done on the material, how are they utilizing the material and how does the research and use of the material play a role in sustainability. The information accumulated on the material bioprospecting will be utilized in a flyer created by each student. The flyers will be set-up in a walking gallery where the students will use a bioprospecting rubric to score the importance of each natural resource presented as a valuable material for continued research. The students will have a class discussion about which three natural resources are the most valuable source of bioprospecting to contribute to sustainability of the human population.

5. Bioprospecting - "Motoring with Microbes" – Discovering Cellulose Microbes for Biofuel Efficiency

The students will then conduct a research lab on Bioprospecting for Cellulose-Degrading Microbes: Filter Paper Assay Method where Students collect samples that they predict will contain communities of cellulose-degrading microbes and test for the ability of microorganisms in their samples to break down pure cellulose (filter paper). In the process, groups collect evidence to test predictions about which environmental microbial samples will be the most effective for degrading cellulose. By comparing results across groups, students can begin to uncover patterns and develop explanations about the types of environments that support cellulose-degrading microbes. This lab method is nearly identical to that used by researchers and student results could help scientists discover new enzymes for efficient biofuel production that is key in agriculture's ability to remain sustainable in the next century. Students will turn in a completed lab using scientific method and write an abstract of their research to send to the Great Lakes Bioenergy Research Center as part of their on going research on biofuel.
https://www.glbrc.org/education/classroom-materials

Unit 4. Assessment and End of Course Project

"I Believe in the Future of Agriculture" - Sustainable Farming Project

Students will design a solution for developing, managing, and utilizing energy and resources through the development of a completely sustainable farm on 400 acres that must include a minimum of three crops and two species of animals. A comprehensive farming portfolio will be created. The portfolio will include data and research done from each unit within the course to be used to create their farm as well as provide evidence to defend the sustainability of that farm and thus, the best representative of sustainability. The students must research genetic varieties of crops and species of animals based on genetic efficiency and commensalism. Attention to how soil nutrients and deficiencies

affect vegetative reproduction, germination, plant growth and crop adaptation within an environment must be utilized in the research. Based on the data the students will determine the crops to be produced. They will research and evaluate the species of animals that will have a symbiotic relationship with the crops they have chosen above. Phenotypic and genotypic traits, hybrid vigor, commensalism, and other variables should be used to determine the two species of animals that will be best suited for the designed environment while providing for the welfare of the animals' health and nutrition. Animal welfare must be addressed in the decisions made to create a farm that is positive and biodiverse in nature. Environmental impacts based on the crops and animals raised on the farm need to be identified dealing with biological magnification, depletion of soil /plant nutrients , use of natural resources , pollution issues dealing with waste and desertification. The students will use this information as well as the data and labs from the previous units to determine the carrying capacity of livestock and acres of crops to be grown on the farm . Biological methods of reducing the identified environmental impacts will then be designed by the student, which could include methane digesters, aquaculture, CO2 collectors and irrigation water recycling. Finally, students will address the management decisions made to reduce the farm's carbon footprint over a decade of production. The portfolio and presentations will be presented to the local farm bureau as well as other agriculture associations and businesses.

29. History of Course Development (optional)

Course Title

Horticulture Mechanics 1A

Description of the Target Group

This course is designed for all high school students who have completed Horticulture 1A and 1B.

Purpose

This course is designed to include: Landscaping construction care and maintenance of tools, wood structures and concrete work, and basic landscape design. This course is designed to be taken as part of the horticulture program.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. Learn about the FFA.
2. Be encouraged to have a supervised occupational experience program.
3. Realize the broad scope of career opportunities in landscape maintenance.
4. Identify the major horticulture related businesses in their country and state.
5. An understanding of tool care maintenance.
6. The safe and proper use of horticulture equipment.
7. Small gas engine trouble shooting.
8. The value of landscape structures.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria School District

Activities

Field trips, lectures, discussions, demonstrations, student reports, guest speakers, movies, and filmstrips.

Course Title

Horticulture Mechanics 1B

Description of the Target Group

This course is designed for all high school students who have completed Horticulture Mechanics 1A.

Purpose

This course is designed to include: Landscape construction, care and maintenance of tools, wood structures and concrete work, and basic landscape design. This course is designed to be taken as part of the horticulture program.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. Identify common garden tools and landscaping materials.
2. Basic concrete work.
3. Basic wood construction.
4. Basic landscape design symbols.
5. How to construct landscape structures.
6. Recognize a good landscape.
7. Work in the FFA.
8. Work on their Supervised Occupational Experience programs.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Field trips, lectures, discussions, demonstrations, student reports, guest speakers, movies, and filmstrips.

Course Title

Independent Study in Agriculture

Description of Target Group

Students enrolled in this course must be of 11th – 12th grade standing and have shown a desire to do independent, advanced work. Each student desiring to enroll will make application to the Department of Agriculture, stating their desired undertaking. Open to all 11th– 12th grade students.

Purpose

This course is designed to allow students to do individual advanced work in one or more industrial and vocational areas.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete a safety test with a passing score.
2. Provide and use protective clothing and eye protection when and where required.
3. Demonstrate the ability to set up and work under sage working conditions.
4. Operate safely and demonstrate ability in the proper use of hand and power equipment available to them.
5. Complete the work that was agreed upon by the student and department advisors.
6. Demonstrate ability to work independent of constant supervision.
7. Present a typed summary of the results of their understanding to their advisors.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Student, with help of the advisors, will provide materials and activities necessary for student to complete his undertaking.

COURSE TITLE:

INTERGRATED AGRICULTURAL BIOLOGY
COURSE SYLLABUS

COURSE DESCRIPTION

Agricultural Biology is a one year, laboratory science course designed for the college-bound student with career interests in agriculture. Using agriculture as the learning vehicle, the course emphasizes the principles, central concepts and inter-relationships among the following topics: the molecular and cellular aspects of life, the chemical structural basis of life, energetics of life, growth and reproduction in plans and animals, evolution of modern plants and domestic livestock species, plant and animal genetics, taxonomy of modern agricultural plants and animals, animal behavior, ecological relationships among plans, animals, humans and the environment, nutrition in animals, health and diseases in animals, and the similarities between animals and humans. The curse is centered around an extensive laboratory component in order to connect the central idea of biological science with agricultural applications, earth and physical science principals, and other curricular areas, including extensive written and oral reporting skills.

COURSE GOALS

1. Utilize agricultural applications as a relevant vehicle to teach biological science principles and improve the scientific literacy of students.
2. Strengthen instruction in science for students pursuing professional level careers in agriculture.
3. Integrate mathematics standards, language arts standards, and career employability standards including creative thinking and problem solving skills, and technological literacy related to the agricultural industry.
4. Meet a portion of the laboratory science requirement for admission to the University of California and California State University systems.
5. Develop a sense of the interrelationships between life, earth, and physical science and agriculture.

PREREQUISITE

This course is recommended for students in grades 10 through 12. Students must have completed at least one year of introductory agricultural science, and an agriculture instructor's recommendation.

COURSE FORMAT

Classroom instruction, including:

- Discussion
- Demonstration
- Lecture
- Examinations
- Extensive reading assignments
- Guest speakers

Laboratory and field instruction, including:

- Science laboratory experience
- Field research projects

FFA leadership experience, including:

- Verbal and written communication exercises
- Leadership development activities.

Ten percent supervised workplace learning, including:

- Individually developed supervised occupational experience projects

RECOMMENDED TEXTS

Burton, L. DeVere – Agriscience and Technology (199), Albany, New York: Delmar Publishers

Cooper, Elmer L. – Agriscience: Fundamentals and Applications (1990), Albany, New York; Delmar Publishers

Oram and Raymond – Biology Living Systems (1989), Merrill Publishing Company

Daniel – Life Science (1994), Glencoe Publishing Company

II. COURSE OUTLINE:

A. Introduction to Agricultural Biology

1. What is agricultural biology and why is it important?
2. How does biology in agriculture impact the student?
3. What are the career opportunities for the student in agricultural biology?

B. Agricultural Research

1. Why is research important?
2. What does an agricultural researcher do?
3. How do researchers go about conducting research?
4. What are the principles of research
    a. Project formulation and development
    b. Project management
    c. Analysis of project results

C. Agriculture and the Environment

1. What are the characteristics of living things?
    a. Cells – The Building Blocks of All Life Forms

        1. Plant and animal cell identification and function
        2. Cell structure
        3. Cellular respiration
        4. Cellular transport
        5. Cell differentiation

2. What are the inorganic characteristics that support life?
    a. Soil and Water: The Chemical Foundation

        1. Atom and Molecular structure and chemical bonding
        2. What are the components of soil
        3. Why are different soil types found where they are?
            a. Basic soil components
            b. Soil formation factors and horizons
            c. Soil texture, and structure
            d. Soil organisms and organic matter
            e. Interrelationships of plans and soil
        4. Water
            a. Water movement properties
        5. Soil and water management

3. How do living organisms interact with the environment? Why do the weather and other abiotic factors affect living organisms?
    a. Structure and function of ecosystems
    b. The Food Web
    c. The "agricultural revolution" and the environment
    d. Demographics and the environment
    e. Modern agricultural pictures and the environment
4. How are plants and animals classified?
    a. Taxonomy of living organisms
    b. Evolutionary relationships with other major groups
    c. Comparison of modern agricultural crops and livestock to ancestors

D. Plant Physiology, Reproduction, Photosynthesis and Growth

1. What are the structures and functions of plants?
2. How do plants grow?
    a. Seed germination
    b. Photosynthesis and respiration
3. How do plans reproduce
    a. Sexual reproduction
    b. Asexual reproduction
4. How have modern agricultural practices and biotechnology changed plants?
    a. What is the role of plants in nutrition and medicine?

E. Animal Physiology, Reproduction, Nutrition, Health and Behavior

1. What are the internal systems of animals? How do these systems differ among species? How are they similar?
2. How do these systems interact to sustain life and promote growth?
    a. The digestive process
    b. The respiratory systems
    c. The reproductive system
    d. The circulatory system
    e. The endocrine system
    f. The nervous system
3. Why do animals interact with each other? How does behavior affect management and feeding strategies?
4. What do we feed domestic animals? How is food processed within the body? What are the important characteristics of feeds? What are the animal's nutrient requirements?

    a. Feed identification and nutrient evaluation
    b. Livestock nutrient requirements
    c. Ration formulation

5. What are the major diseases that affect animals? How do these diseases spread? How does the body prevent and fight diseases and infections? What management practices can reduce the incidence of health problems?

F. Plant and Animals Genetics
   1. How are traits passed on?
   2. How do cells reproduce?
      a. Mitosis
      b. Meiosis
   3. What are the physical and chemical structures involved in genetics?
   4. Who were some famous geneticists? What where their contributions?
   5. Why are genetics important in production agriculture?
   6. What are some future careers in genetics and biotechnology?

III. INTEGRATED LOBORATORY ACTIVITIES

The laboratory activities are examples of general types of laboratory and field experiments which integrate many areas of life, physical, and earth science and agriculture. The purpose of general, rather than specific, experiments is to give students an understanding of the interrelationships among specific disciplines.

Pollution and ecology activity #1:

Have the students set up a fishtank in the classroom and introduce small amounts of common pollutant chemicals, in order to increase the nutrient content of water over a period of time. Have the students regularly take and record measurements, including, water temperature, pH, water clarity, and visual observations of changes. Apply a heat source to the water to increase the algae growth. Visit a water treatment plant or irrigation district site. Have a water quality specialist speak to the class about his/her job and current problems and challenges facing California related to water quality. Have the students write a report on California water quality which includes experimental results as well as information from the guest speaker and field trip.

Cell identification and function activity #2

Prior to lecture and textbook reading regarding plant and animal cell similarities and differences have the students take cheek cell samples and plant cell samples from any common houseplant or vegetable. Place both samples on a single slide and observe under a microscope. Have the students diagram both the plant and animal cell, label each component of the cells and describe the differences between the two. Based on observations have the students speculate why the cells differ in structure and function. Have slide samples of single cell organisms (at least one plant and one animal organism) and have students compare and contrast the single cell organism to the other plant and animal cells. Take another cheek cell sample and place it in a petri dish. Incubate for one week and place the resulting viable, live organism egg (i.e. sea urchins) and observe both the egg and the sperm under the microscope. Combine the two and allow each

student to observe the fertilization through the first splitting of the egg. Have the students outline the process of meiosis.
Apply a small amount of antibiotic to the sample in order to observe the cell response to stimuli.

Cellular environment and transport activity #3:

Have the students draw a natural food web, including plants, insects, larger abnormal species, and humans. Compare the nature food chain to an artificial chain developed in production agriculture. The students will diagram the interrelationships of different systems in the food web. Use a trash can to make either compost or silage in order to demonstrate how the breakdown of organic materials leads to the production of beneficial elements.

Taxonomy of living organisms activity #5:

Have the students collect ten different plans and develop a key to determine the species of each. Given two similar plants of different species, have the students list the differences between the two, using a key. Perform the same activity using insect species. Have the students choose an animal species. Diagram the phytogenic tree of the animal and list the differences that have occurred over time due to evolution. Compare modern agricultural plants, such as oats, to their relatives which grow in the wild in order to show the differences due to selection, heredity and biotechnology.

Plant physiology, reproduction and growth activity #6:

Start a mall garden which includes plants from seed as well as transplants. Provide plant samples with different root, tem, flower, and fruit types, have students develop models and diagrams of the different plants to demonstrate comparisons and contrasts and have them report on their findings. Using containers, grow similar plants in different soil came from and why it is located where it is, and explain how it is beneficial or detrimental to the plant. Germinate sees in an aquatic environment to demonstrate hydroponics. Have students practice grafting and budding techniques to demonstrate an understanding of asexual reproduction.

Animal physiology, nutrition and behavior activity #7:

Have the students draw and identify the organs involved in the digestive, reparatory, reproductive, circulatory, endocrine, and nervous systems of different animals. Where possible, bring organs to class. Visit a packing plant to observe the entire digestive tract of a livestock species. Identify live animals with various nutritional diseases. Have the students develop a balanced ration for their SOEP, taking into consideration the animals nutrient requirements, availability of feeds in the area, cost, and the animals behavioral patterns which would affect consumption of the ration. Have the students keep accurate records regarding the feeding program and write a report which includes the development

of the project, day to day management, and results on the animal's growth or reproductive performance as it relates to the diet.

Plant and animal genetics and reproduction activity #8:

Use microscopes or slides to show the structure of chromosomes. Have the students diagram the processes of mitosis and meiosis. Start a small garden with different varieties of peas of different colors. Cross pollinate the plants students draw a flow chart showing the development of an animal from the single egg stage, through fertilization, growth, and parturition. Use slides or clotting techniques. Have students write, or give an oral report describing the future possibilities of bioengineering including the ethical and moral concerns that may arise as a result. Show the videotape, "Garden of inheritance: a Documentary on Gregor Mendell" to show societal and political pressures associated with genetic research.

Term Research Project:

Each student will design and carry out a year long research project. During the first quarter of the year, each student will select a topic, perform library research and form a hypothesis, or research questions. The second quarter will include the development of the methodology, and conducting of an experiment to test the hypothesis. Students can design a new project, or replicate one from past research, making appropriate changes to improve the summarization of results. During the fourth quarter, the students will complete the research paper, prepare an exhibit and present an oral presentation of their research.

IV. LEARNING OUTCOMES

Upon completion of this course, the student will be able to:

Unit A. Introduction to Agricultural Biology

1. Explain the importance of Agricultural Biology in our society. Provide evidence for and defend your explanation.

2. Compare various careers in the area of agricultural biology. Report on careers are held by persons in underrepresented populations/

Unit B. Agricultural research

1. Explain the importance of research in agriculture.

2. Describe the process of scientific research methods in agriculture.

3. Develop an Supervised Agricultural Experience Project which involves the scientific method.

4. Formulate a term project focusing on one topic in agricultural biology. Relate it to other scientific disciplines.

5. Develop a research project that can be entered in the FFA Agriscience competition.

Unit C. Agriculture and the Environment

1. Identify the roles of plants and animals and their interactions in the web of life.

2. Describe the flow of energy through the biosphere.

3. compare and contrast the oxygen and nitrogen cycles. Report on their importance in agriculture.

4. Define the term “ecosystem.”

5. Appraise at least three current issues in agriculture which biologically affect the environment.

6. Explain the impact of populations on the environment and the effect of the environment on populations.

7. Report on both the good and bad effects of the agricultural revolution on the environment.

8. Evaluate the economic effects of pollution and erosion on production agriculture.

9. Develop and defend a plan to preserve limited resources related to agriculture.

10. Compare and contrast five forms of energy used in agriculture.

11. design and conduct an experiment which shows the relationship between soil characteristics and plant growth.

12. Describe how agriculture practices can modify soil to improve soil moisture relationships.

13. Conduct an experiment which involves water movement through soil.

14. Compare the internal systems of a single celled organism to tose of mulitcellular organisms.

15. Describe the difference between plant cells and animal cells/

16. Indentify blood, bone, fat, nerve, and muscle cells.

17. Indentify and diagram male and female gametes in both plants and animals.

18. Compare and contrast the processes of mitosis and meiosis.

19. Describe how cells respond to certain stimuli.

20. Explain the concept of cellular adaption.

21. Discuss the development of the biological concept of “Kingdom.”

22. Discuss three reasons for the current use of the modern system of plant classification.

23. Apply taxonomy in three ways to the field of agriculture.

24. Prepare a phytogenic tree for at least one domestic animal species.

25. Explain how the process of natural selection affects plants and animals. Include the impact of external conditions in the explanation.

26. Analyze the impact of increasing populations in the environment and its resources.

Unit D. Plant Physiology, Reproduction, Photosynthesis, and Growth

1. Compare and contrast the structures and functions of plants from different families.

2. Design and conduct an experiment which covers the entire lifecycle of a plant.

3. Defend the role of green plants in the maintenance of life…

4. Compare and contrast monocotyledons and dicotyledons with respect to leaf, stem, flower structure, and agricultural significance.

5. Analyze the interrelationships among the different systems within the plant.

6. Discuss abiotic environmental factors that affect plant growth (wind, temperature, solar radiation, soil conditions, humidity, pollution etc….)

7. Explain the difference between sexual and vegetative reproduction.

8. Demonstrate an application of both sexual and vegetative reproduction.

9. Discuss how sexual and asexual reproductions are used in agriculture.

10. Research and report on the significant uses of plants in nutrition and medicine.

11. Compare the lifecycle of simple plants, such as algae or moss to a complex plant.

12. Grow at least one indoor and one outdoor landscaping plant or vegetable. Chart the growth pattern and report the results of observation.

Unit E. Animal Physiology and Behavior

1. Demonstrate an understanding of the structure and function of the digestive system by tracing the pathways of food through the various types of livestock digestive systems, with emphasis on the function of organs in the digestive process.

2. Analyze the function of each mammalian body system.

3. Compare the interrelationships of each system within the mammalian body.

4. Compare and contrast the estrus cycles of cattle, sheep, and swine and the menstrual cycle in humans. Chart the process of fertilization in each species.]

5. Explain the importance of cellular respiration to living organisms. Develop a flow chart outlining the process of cellular respiration.

6. Develop a flow chart outlining the development of an embryo from conception through parturition.

7. Describe how animal behavioral patterns affect management and handling practices of domestic animals.

8. Dissect various organisms and identify the organs and systems of each.

9. Compare and contrast the organ systems of different livestock species.

10. Analyze the nutrient requirements of various domestic species.

11. Analyze the nutrient content of several fees.

12. Develop a low cost feed ration for one species of livestock for maintenance, growth and lactation, using concentrates and roughages available locally.

13. Describe the symptoms of five common nutritional disorders caused by vitamin or mineral deficiencies or toxicity and explain the treatment and prevention of these diseases.

14. Feed an animal through an entire production cycle, recording the types of fed used, rate of gain, and the lean to fat ratio. Report on observations and conclusions.

15. Develop a flow chart outlining the lifecycle of one internal and one external parasite. Describe the impact of parasites on livestock and on the agricultural industry.

16. Design a disease prevention and health care plan for a project animal.

17. Appraise the results of human medicine in relation to livestock medicine.

Unif F. Plant and Animal Genetics

1. Compare and contrast the phenotypic traits of related breeds and varieties of animals and plants.

2. Explain the function of each of the following: gene, allele, DNA, and RNA.

3. Explain the role of enzymes in chromosome replication, and the implications of biotechnology involving these enzymes.

4. Discuss the contributions of Gregor Mendel to the field of genetics.

5. Conduct a simple experiment which exhibits dominant and recessive properties.

6. Evaluate the effectiveness of selection and heritability in production agriculture by comparing modern day crops and animals to their ancestors.

7. Develop an experiment which develops a trait through selection and heritability.

8. Analyze the effects of biotechnology on modern agriculture.

9. Report on the importance of natural selection as the driving force of evolution and its importance in production agriculture.

Course Title

Integrated Agricultural Biology A/B
A section course # AG6260
B section course # AG6261

Course Description

Agricultural Biology is a one year, laboratory science course designed for the college-bound student with career interests in agriculture. Using agriculture as the learning vehicle, the course emphasizes the principles, central concepts, and inter-relationships among the following topics:

- the molecular and cellular aspects of life
- the chemical structural basis of life
- energetics of life
- growth and reproduction in plants and animals
- evolution of modern plants and domestic livestock species
- plant and animal genetics
- taxonomy of modern agricultural plants and animals
- animal behavior
- ecological relationships among plants, animals, humans, and the environment
- nutrition in animals
- health and diseases in animals
- the similarities between animals and humans

The course is centered around an extensive laboratory component in order to connect the central idea of biological science with agricultural applications, earth and physical science principals, and other curricular areas, including extensive written and oral reporting skills.

COURSE GOALS

1. Utilize agricultural applications as a relevant vehicle to teach biological science principles and improve the scientific literacy of students.
2. Strengthen instruction in science for students pursuing professional level careers in agriculture.
3. Integrate mathematics standards, language arts standards, and career employability standards including creative thinking and problem solving skills, and technological literacy related to the agricultural industry.
4. Meet a portion of the laboratory science requirement for admission to the University of California and California State University systems.
5. Develop a sense of the interrelationships between life, earth, and physical science and their relationship to agricultural applications.
6. To motivate under represented populations to study and pursue careers in science and agriculture.

PREREQUISITE: This course is recommended for students in grades 10 through 12. Students must have completed at least one year of introductory agricultural science, and an agriculture instructor's recommendation.

Integrated Ag Biology (continued)

COURSE FORMAT
Classroom instruction, including:
-discussion
-demonstration
-lecture
-examinations
-extensive reading assignments
-guest speakers
Laboratory and field instruction, including:
-science laboratory experience
-field research projects
FFA leadership experience, including:
-verbal and written communication exercises
-leadership development activities
Ten percent supervised workplace learning, including:
-individually developed supervised occupational experience projects

Title: Intermediate Guitar A/B

Length of course: Full Year

Subject area: Visual & Performing Arts (F) / Music

UC honors designation? No

Prerequisites: Beginning Guitar or Audition (Required)

Co-requisites: Beginning Guitar (Recommended)

Integrated (Academics / CTE)? No

Grade levels: 10th, 11th, 12th

ourse Description

urse overview:

Course Overview
This one-year Intermediate Guitar course is designed for students who have successfully completed the skills outlined in the Beginning Guitar A-G course syllabus. This course includes further development of the skill necessary to become independent as a guitarist. It is for students who wish to advance their knowledge of the guitar through gaining a deeper understanding of music theory and more advanced techniques. This course emphasizes the development of style, articulation, dynamics, rhythmic ability and skills inherent to performance. Areas of concentration include correct posture, note reading, aural skills, flat picking, singing melodic lines, rhythmic, patterns, chord study, finger picking styles, musical forms, improvisation and solo and orchestrated performing experiences. A progression on technical proficiency is expected. At the completion of this course students will be able to:

1. Play competently in several positions in the keys of Am, C, Em, G, Bm, D, E and A Major
2. Play dotted Whole 1/2, 1/4, 1/8th, and 1/16th notes rhythms and triplets
3. Play melodic lines in the keys of Am, C, Em, G, Bm, D, E and A Major
4. Play major/minor scales in the keys Am, C, Em, G, Bm, D, F, A & E
5. Play and read a chromatic scale in first position to twelve position
6. Play movable bar chords using the “E” and “A” shapes
7. Play I IV, V7, I progressions in the above keys using movable forms

- **Course Overview**
  - By end of the course students will acquire an extensive Level II ability and use written, verbal, or nonverbal communication skills in a variety of forms and contexts in order to convey meaning through the production, performance, presentation, and/or exhibition of works of art through active practice, rehearsal, and/or creation
  - Students will further their study of the many styles and techniques associated with playing the instrument using proper posture and technique
  - Students will further their study on reading music in standard notation, tablature, chord charts, accompanying other musicians, including guitar orchestration
  - Students will have many opportunities to perform at colleges, music festival competitions, and local school and community events
  - The course will also present to the students the history of the guitar, its significance in the world, and how it relates to the many different cultures in the world it is played in
  - Detailed Units of Instruction:
    - **READING COMPONENT:**
      - Students will be assigned reading from an array of sources including method books, magazines, publications, and internet sites and articles.
      - Students will be required to follow written instructions on assignments and projects

- **WRITING COMPONENT:**
  - Students will describe, analyze, critique, and write about music selections that will be heard during class through "active listening assignments
  - Students will compare and contrast the different style found in many of the significant guitar players in the music world
  - Students will write an essay/research paper on a musician that is significant to making a contribution to the guitar

Assessments:

- All Unit Assignments will consist of weekly Formal and Informal Assessments. Grades will be given on student progress for in class rehearsal skills and commitment to, as well as progress toward end result to learning the materials. A formal assessment of written and oral performances will be done and given a final grade for each student end result

SUBJECT AREA CONTENT STANDARDS TO BE ADDRESSED:

Artistic Perception

- To further introduce students to music notation, guitar tablature, and chords
- To compare, analyze, and discuss the different styles of guitar playing found in our music world

Creative Expression

- To apply instrumental music skills in performing a varied repertoire of music on the guitar.
- To compose and arrange music and improvise melodies, variations, and accompaniments on the guitar
- To perform individually and in small ensembles
- To utilize modern technology, such as Pro-Tools recording software, and other guitar/music related software, to aid in creative expression, reflection, and assessment.
- To learn more music theory that will aid in creative guitar playing: the composing of melodies, solos, improvisations, and songwriting

Historical and Cultural Context

- To analyze the role of the guitar in past and present cultures throughout the world, noting cultural diversity as it relates to music, musicians, and composers
- To identify the significance of the guitar in the musical genres found in the United States, trace the evolution of those genres, and cite well-known musicians associated with them. (Country, Blues, Jazz, Rock, Pop, etc.)
- To perform music from various cultures and time periods on the guitar

Aesthetic Valuing

- To respond, analyze, and make judgments about works of music associated with the guitar when listening/viewing music examples
- To evaluate a performance, composition, arrangement, or improvisation/solo by comparing each with an exemplary guitar model

- To describe the means used to create images or evoke feelings and emotions in musical works from various guitarists

Connections, Relationships, and Applications

- To develop competencies and creative skills in problem solving, communication, and time-management that can be used to contribute to lifelong learning and career skills.
- To explore various careers in the areas pertaining to the guitar and music through research projects, technology, and in class exercises, assignments, and performances

ɹurse content:

Unit 1--Scale Study and Applications

Unit I—Scale and fretboard Study

- Detailed Units of Instruction:
  - **READING COMPONENT--**Reading notes for each scale and memorizing intervallic relationships, as well as relation of Major and Minor scales to each other
- **MINOR SCALE**—Intervallic structure: W H W W H W W
- **MAJOR SCALE**—Intervallic structure: W W H W W H
  - Students will practice building the intervals in all keys by applying the intervallic structure to the guitar fretboard, working individually and in teams
  - Class will practice playing together daily as directed, through performing together as a class
  - Daily in-class observations and written performance test as final assessment for a grade on the Major and Minor scales
- **E Minor/E Major Scale**—Students will learn the E Minor and E Major scale in 3 octaves from the 6th string open to the first string 12th fret.
  - Assigned reading components given for the E Minor Scale for individual and group practice as a class. This will include handouts and whiteboard lessons for them to write out the details in order to learn the notes on the fretboard and for proper playing techniques
  - Students will play in varied rhythms of whole, half, quarter, eighth and sixteenth note variations. This will include handouts and a whiteboard lesson for them to write out the details for success to correctly play in good rhythm on the fretboard
  - A metronome will be used for solo practice and for group performance via teacher directed instruction and to help with daily assessments of their ability to play together in steady time and good rhythm
  - Scale instructions will be shown for proper posture, detailing correct fingerings, rhythm, and proper techniques
    - Focus will be on connections of notes, and formative assessments will be made as needed per student need on a daily basis

- An assumptive assessment will be given in weekly and as a final performance and written assessment

In this unit, students will begin with the E Minor / E Major scale. Students will progress to ascending and descending patterns as they move on through the circle of fifths for all Major/Minor Scales. Emphasis on the circle of fifths and how scales are closely related to each other as they progress through the circle
By the end of the unit, students will be able to play major and minor scales in all twelve keys. After the major and minor scales have been mastered through the process of modeling, practice, critique, and group exercises, students will learn how to apply the scales to songs and for performance. Pentatonic and blues scales will also be practiced through the use of ascending and descending pattern exercises

Following the emphasis of the basic scale types, students will learn, practice, and apply the scales in short improvisation exercises and song. This will help students develop a sense of the usefulness of these scales while building confidence. Students will do this exercise for all of the church modes. By the end of this unit, students will be able to play the above-mentioned scales by memory and be able to name the notes in each scale

Unit Assignment(s):

Unit Assignment(s):
Unit 1 Assignment:

- Through lecture, students will learn to read, write, and play the major and minor scales by memory
- Focus is on writing the scale, reading the scale through MSN, TAB, and charts. At end of the assignment students will be able to decipher the emotional qualities of the two scales
- A lecture will be given on the emotional qualities between the scales and how they differ
  - Song examples to show how the minor creates a sad or mysterious nature in songs
  - Song examples to show how the major scale creates a happy or feeling of hope in songs
- Two main assessments will be given. One will be written and graded on their knowledge of the scales and their operations. The other will be a performance grade. Students will be graded on their ability to play with correct posture, rhythm, technique, and note accuracy. They will be graded equally based on their ability to correctly apply what they've learned. Students will write a one paragraph summary of the varied emotional qualities that are evoked between the major and minor scale. Also, students will write an additional paragraph identifying the use of particular scales in listening example
- **Assessment-**Two assessments will be given for the scales, one written, the other on performing that students will be required to perform for a grade. A final graded performance assessment will be given at the end of the unit

---

Unit 2--Applications of Scale use through Orchestration

Υνιτ ΙΙ Ασσιγνμεντ: Αππλψινγ τηε Ε Μινορ/Ε Μαφορ Σχαλεσ ιν Ορχηεστρατιον

Νοτε: *Τηισ ισ αν εξτενσιον οφ Υνιτ Ι ωιτη α σονγ/πιεχε ωριττεν ιν ορχηεστρατιον χαλλεδ Δρεαμ Ετυδε. Τηισ πιεχε ισ ωριττεν ιν 4–παρτ γυιταρ ορχηεστρατιον, πλυσ αν αδδεδ βασσ λινε, ανδ ιτ ισ δεσιγνεδ το ηελπ στυδεντ λεαρνινγ το πλαψ σχαλε πασσαγεσ αλονγ ωιτη ηαρμονιχ, μελοδιχ, ρηψτημιχ, ανδ σολο νοτατιον*

τογετηερ ατ α ωερψ ηιγη−περφορμανχε λεωελ

***Dream Etude*—**

- **STUDENT ORAL COMPONENT:**
  - Lecture on how the song/piece is related to the previous Unit I assignment in that it is in the key of E Minor and transposes to E Major halfway through the piece. The piece will give students a practical approach to applying the scales they've learned to a song using various rhythms, tonal techniques, harmony, melodic content and solo ideas
  - Students will learn and perform sections of Dream Etude together in class and at rehearsals

Unit 2 summary:

- By the end of Unit 2, students will have learned to read, write, and play an orchestrated piece utilizing the major and minor scales and how they function with the elements of melodic, harmonic, and rhythmic notation
- Focus is on applying their knowledge of the E Minor and E Major scale and how it applies to a piece of music
- At end of the assignment students will be able to decipher the emotional quality between the two scales in a song
- Two main assessments will be given. One will be written and graded on their knowledge of the song and the music theory concepts they learned. The other will be a performance grade. Students will show their ability to play with correct posture, rhythm, technique, and note accuracy

Assessment: Students will be graded equally based on their ability to correctly apply what they've learned. Students will write a one paragraph summery of the varied emotional qualities that were evoked between the major and minor scale in this song

Unit Assignment(s):

Unit Assignment(s):

Unit 2 Assignment:

- Lecture on proper playing techniques needed for the piece, how to read and clap rhythms, reading and understanding new musical theory concepts introduced
- During unit 2, students will learn how to apply the major and minor scales to music through the study of an orchestrated piece
- Focus will be on applying technical proficiency, posture, note accuracy, expression, rhythmic, and melodic concepts through learning to perform in orchestration
- Formal Assessments: Students will be assessed daily on their practice indivually, in groups, and as a whole class based on their efforts in working and performing together
- At end of the assignment students will be able to decipher the emotional quality between the two scales
- **Main Assessment**: One main assessment will be given at the end of the unit. Students will be graded on their knowledge of the piece and their ability to be able to demonstrate proficiency on performing the piece on the guitar. Students will be graded on their ability to play with correct posture, rhythm, technique,

expression, and note accuracy. They will be graded equally based on their ability to correctly apply what they've learned. Students will write a one paragraph summary of the varied emotional qualities that are evoked between the song/piece

Unit 3--Chord and Scale Theory

Unit 3--Chord and Scale Theory

Unit 3--Chord and Scale Theory

- Using Noad's book *Solo Guitar Playing*, students will learn how to play arpeggios as well as strummed chords, and be able to apply them in songs
- Through lecture, various progressions will be analyzed by breaking the chords down to their basic harmonic structure, and then by emphasizing which tones lead and resolve to form functional cadences
- Students will learn to play standard progressions such as ii-V-I, I-IV-V, and iii-vi, ii-V, I etc. After playing the progressions, students will do written comparison of how they affect the sound and mood to a song
- Teacher led student instruction through developing their own unique and creative sound using chord progressions
- Students learn how to write their own chord progressions
- In these progressions, students will be applying major, minor, barre chords and power chords from the Hal Leonard book 2
- By the end of this unit, students will be able to move smoothly through the hand positions that enable them to execute the most standard chord changes played on the guitar

Unit Assignment(s):

Unit Assignment(s):

Unit III---Chord and Scale Theory

- Tertian Harmony Taught—Lecture on note relations as they work in chord structures within the Major and Minor scales
- Lecture to students on how Intervals work for chords in Tertian Harmony
    - Lecture using whiteboard lesson and handouts given on I, IV, VI, and ii, V, I intervals
    - Lecture on how Major and Minor 3rds function to create Major or Minor Chords
    - Student writing practice with handouts on building chords using Major and Minor 3rds built upon the intervals of the major and minor scales
    - Students will apply building chords writing them on staff paper
    - Notate and analyze how chords work within the Major and Minor Scale
    - Students use handouts and staff paper to practice analysis of chord structure, writing, and notating chords

Unit 3 Assignment: At the completion of unit 3, students will compose and perform a piece that involves the chords they have learned in class. They will be able to play specific chord structures and be able to a chord analysis by applying Tertian Harmony

Unit 4--Special Guitar Techniques

Unit 4--Special Guitar Techniques

Note--Units 4, 5, and 6 are extensions of each other and all related

Using the Leonard Guitar Method Book 3, students will learn and apply special guitar techniques that are frequently heard in classical to modern era guitar repertoire. These techniques will include the tremolo, slurs (hammer-on, pull-offs), harmonics, artificial harmonics and bass runs that support chord changes

Unit Assignment(s):

Unit Assignment(s):

Unit 4--Special Guitar Techniques

- Teacher led instruction on guitar techniques used on the guitar
- Reading in Noad's Solo Guitar Playing on Slurs, Slides, bass lines, and Harmonics
- Individual practice, small groups and as a class applying the techniques in songs from the Jerry Snyder and Noad Books
- Assessments daily on progress, as well as a final written and performance assessment at the end of the unit

Unit 5--Sight Reading

Unit 5--Sight Reading

Unit 5 Summary

- Using the Noad Solo Guitar Playing and the Hal Leonard texts, as well as supplemental materials from sheetmusicplus.com, students will learn how to play sections from exercises and pieces they have not seen or played before
- In this unit, excerpts from selected pieces and exercises will be put in front of each student to learn to play by sight reading it within a reasonable time frame
- students will be able to familiarize themselves with the key signature, tap out the rhythms, review dynamics, and determine the appropriate hand positions for effective technical execution.

- Students will be able to apply the techniques seen in the excerpt and be able to play and apply the techniques they learn by playing it as musically proficient as possible
- Following this exercise, the teacher will model the sight-reading excerpt as feedback for the student to assess and improve upon their own sight-reading progress.
- The main goal in this unit is for students to gain confidence in their ability to quickly navigate their way through new material. By the end of this unit, the students will have the ability to pick up a piece of intermediate guitar music and play it with musical artistry and expressiveness.

Final Assessment: Students will be given a 4-measure excerpt that they have not seen before. Students will be expected to play this excerpt using the sight-reading skills that they have learned in class for a final unit grade

Unit Assignment(s):

Unit 5--Assignment

- Lecture on reading notes in 1st, 2nd, and 5th position
  - Explain note relationship by positional playing
  - Students assigned to practice reading through sections of the Noad book in 1st. 2nd and 5th position playing
- At the end of unit 5 students will be given a 4-measure excerpt that they have not seen before. Students will be expected to play this excerpt using the sight-reading skills that they have learned from class for a final unit grade

---

Unit 6--Improvisation

Unit 6--Improvisation

Unit 6--Improvisation

Unit 6--Improvisation

Unit 6 Course Overview--Improvisation

- During this unit, students will learn how to improvise harmonic, melodic, and solo concepts over a musical idea of their own
- Students will complete written exercises which allow them to practice identifying the type and function of each chord
- After this preparation, students will be able to create their own ideas to write to popular styles of music
- After this preparation and practice, students will be able to determine the appropriate scale choices for various chords in the context of the music as well as popular pieces that are often played in working situations for professional guitarists
  - Emphasis will be placed on using the most useful scales and modes that students learned in Beginning Guitar and in previous units in Intermediate Guitar
  - They will be able to create their own style based on their emotions
  - They will be able to notate their musical ideas to staff paper in MSN, TAB, and Chord Charts
  - Students will be able to improvise over their own ideas and write their own parts and sections to the song

Unit Assignment(s):

Unit 6--Improvisation

- Lecture with whiteboard for using various scale choices for the purpose of extended improvised solos over 8, 12, and 16 bar structures
- Handouts given to students for 8, 12, and 16 bar exercises to practice improvising to
- Students directed to create their own rhythms, melodic ideas, and to improvise solo ideas using known scales in relation to the exercises
- Teacher guided practice to help students create and make their own choices on improvised solos
- Once students have established the basic concept of improvisation, they will work in small groups to create their own musical concepts
- At this time students will take turns improvising solos over the given chord changes they chose
- Final Assessment: At the completion of unit 6, students will perform a solo over a given set of their own musical ideas and changes in front of the class for a grade

---

Unit 7--Scale Study and Applications in the vein of the "Blues"

Unit 7--Scale Study and Applications in the vein of the "Blues"

Unit 7--Scale Study and Applications

- ***Music Theory Study and practice techniques: E Minor Pentatonic Blues Scale--Full Fretboard (3 Octaves)***
    - Students will gain in depth knowledge of the cultural form of music in the musical genre of the Blues
    - They will learn about the history of the blues
    - Student will gain knowledge of how the blues developed through slavery
    - Usage of the technique called "Call and Response"
    - Students will learn the main harmonic and melodic music theory concepts used to create the Blues
    - They will be able to ascertain the style by listening to it in other song style formats like Rock, Pop, and even Mexican music
    - They will be able to play the scale intervals and fretboard fingerings associated with the Blues
    - They will be able to play with Whole, Half, Quarter, Eighth and Sixteenth notes and to:
        - Add Triplets to Scale practice
        - Add Shuffle Rhythm, long/short
        - Work on playing in patterns of two to three notes in sequence

- Work on varied rhythms with long note values mixed with short ones
- For solos students will learn to mix a variety of rhythms with beginnings and endings like sentences
- Apply solo concepts to a song: Sweet Home Chicago
- Practice with small groups in the Blues format, switching off between rhythm and lead
- Hone their listening skills
- Encourage creativity – Students will learn to hear what they want to play before they play it

· ***Informal/Formal Assessments***

- Students will be evaluated throughout lesson term for the period of approximately two to three weeks
- Focus will be on the diverse student ability and how to advance each individuals knowledge in the style of the Blues
- Informal--Individual and group analysis throughout process
- Formal—Test at end of unit term
- Students will receive group assessments for a grade

Unit Assignment(s):

Unit Assignment(s):

Unit 7

- ***Music Theory Study and practice techniques: E Minor Pentatonic Blues Scale--Full Fretboard***
  - Video--Students will watch a video on the history of the Blues
    - Lecture on how slavery influenced the musical genre
    - Students will write a paragraph about specific forms/techniques used to create the Blues
    - Students will be required to respond to questions given to them before watching the video relating to information, they learned
    - Lecture on how the Blues has influenced music today
    - Watch Video of TEX/MEX Blues Guitar Lesson
  - Lecture on the relationship with the E Minor Blues Pentatonic Scale to the song in the guitar lesson
  - Demonstrate some of the harmonic and melodic ideas used
  - Watch video recording of Stevie Ray Vaughn's "Pride and Joy"
    - Lecture on how the E Minor Blues Scale is used in the song
    - Lecture on how embellishments he used in the song using I, IV, V format helped to create his own style
  - Learn the scale intervals and fretboard fingerings
    - Lecture on 1, m3, 4, blue note, 5, 7
    - How the blue note is used in many styles like rock, jazz and blues
    - Using the blue note is for expressive purposes

- Students will read, write and practice the scale in 3 octave patterns individually, in small groups, and as a class under teacher direction
  - Play with Whole, Half, Quarter, Eighth and Sixteenth notes
  - Add Triplets to Scale practice
  - Add Shuffle Rhythm, long/short
  - Students will together playing in patterns of two to three notes in sequence
  - Work on varied rhythms with long note values mixed with short ones.
  - This will help in learning to define solo technique
- Generally, for Solos, students will learn to mix a variety of rhythms with beginnings and endings like sentence sentences
- Lecture on applying solo concepts to a song: Sweet Home Chicago
  - Teacher led demonstration and instruction on playing the Melodic Guitar I part over the Rhythm Guitar II part
  - Student will apply concepts learned and practice in small groups switching off between rhythm and lead
  - Lecture on applying solo ideas to the song
  - Teacher led demonstration on applying solos to ideas to sweet home Chicago
  - Encourage creativity – Students will learn to hear what they want to play before they play it

- ***Informal/Formal Assessments***
  - Students will be evaluated throughout lesson term for the period of approximately two weeks
    - Focus will be on the diverse student ability and how to advance each individuals knowledge of what they are learning
    - Informal--Individual and group analysis throughout process
    - Formal—Test at end of two-week term
    - Students will receive group assessments for a grade

Unit 8--Exploring Career Opportunities Related to Guitar

Unit 8--Exploring Career Opportunities Related to Guitar

Unit 8--Exploring Career Opportunities Related to Guitar

- In this unit, students will research the various career opportunities available for the student that has a guitar background and interest. This research will involve a class trip to the media center where students will be guided by the teacher to find appropriate resources online for information about careers related to the guitar. Aside from playing opportunities such as studio and live, students will explore the possibilities for guitar technicians at the retail level, teaching, recording and engineering support for professional performances

Unit Assignment(s):

Unit 8--Career Options for Guitarists

- Lecture on career opportunities
  - Student online research on career opportunities for guitarists/musicians
    - Retail sales
    - Musician
    - Engineer
    - Recording
    - Teaching & Education
    - School Teacher, Elementary & Post-Secondary
    - Music Director/Composer
    - Church Accompanist/Performer
    - Music Therapist
  - Students will write a two-page essay on career paths for the guitar
  - Individuals who are talented guitarists may want to turn their passion for the guitar into a career. While the most obvious option is to pursue a path of becoming a professional musician or recording artist, there are a few other job possibilities for guitarists in the education world. Below, we will discuss a few of these guitar careers in greater detail.
- Final Assessment: Students will write a graded two-page research paper that explores the possible careers for a student interested in any aspect of the guitar or guitar playing

---

Unit 9 Relating to Aural Examples

Unit 9 Relating to Aural Examples

Unit 9--Relating to Aural Examples

- By the end of this unit students will be able to compare and contrast guitar literature from different eras in a written essay assignment
- They will be able to express what they've learned and do their own thesis about the emotions that are evoked from the guitar music of a given era as opposed to a contrasting era
- Following the essay assignment, students will have an understanding of music from different genres and eras relating from the classical guitar period to modern day music
- By the end of this unit, students will have demonstrated a clear understanding of what eras represent in terms of emotional expressiveness and stylistic differences

Unit Assignment(s):

Unit Assignment(s):

Unit 9 Assignment: During unit 4, students will perform a writing assignment that involves a comparison of guitar pieces from the impressionistic and baroque era. Also, during this unit, students will do an intra class piano/guitar assignment that involves 2 selections from the baroque and impressionistic period

Unit 10 Playing Duets & Trios to Develop Reading & Ensemble Playing

Unit 10 Playing Duets & Trios to Develop Reading & Ensemble Playing

Unit 10 Playing Duets & Trios & Orchestration

- By the end of this unit students will have the ability to play in multiple groups for performance
- Fredrick M Noad's book *Solo Guitar Playing*, students will practice and perform duets specifically designed for two guitars (selections from exercises 5 – 50). In this unit a guest performer will come to inspire students by playing samples of their most accomplished work. They will also motivate students to practice by demonstrating the "pay off", which is realized through the hours of extensive musical commitment. This will also encourage students to envision their own success by playing along with students on pieces that the students have mastered. Finally, this expert will also educate students on what it takes to excel on the instrument by revealing their own personal stories of struggles and success as they have progressed to the level that have attained to on the guitar

Assessment;

A final assessment be a performance of a piece/song studied in the Noad book

Unit Assignment(s):

Unit Assignment(s):

Unit 10 Assignment: At the completion of unit 2, students will perform a classical duet in front of the class. Students will write observational reviews on at least two of the songs performed

- Lecture on playing together in orchestration]
- Study of duets, trios and orchestra music in the Noad book
- Student group practice together on pieces from the Noad Book
- Orchestrate pieces—Libertango and Tico Tico for four guitars
    - Large group orchestration rehearsals with from six to 8 guitars per section
    - Teacher led rehearsals during and afterschool
    - Prepare pieces for community, school concerts, and festival performances

Assessment:

Informal Assessments made throughout the course of the unit

A Formal Assessment will be given at the end of the unit for a grade

Unit 11 & 12--Study in the style of Jazz Study and Applications

Unit 11 & 12--Study in the style of Jazz Study and Applications

Unit 11 & 12—Jazz Section

- In these units' students will learn about the history of jazz and the variety of sub genres in this style
- Students will learn and be able to play chord progressions commonly used in the style of Jazz
- They will learn how to apply harmonic and melodic concepts used in Jazz to their own music through study and improvisation
- They will research modal concepts in Jazz
    - Advanced Chords--7th, 9th, 11th, and 13th chords
    - 7th, 9th, 11th, and 13th intervals used in Jazz
    - The Art of Improvisation
    - ii, V, I progressions used for movement and key changes

Unit Assignment(s):

Unit Assignment(s):

Unit VII—Jazz Section—Learning Chord structures used in Jazz

- Lecture on the history of Jazz
    - What is Jazz? Introduction and study of types of Jazz, Bebop, Big Band, Swing, Gypsy, Modal, Cool, and Latin Jazz
    - Watch video on the History of Jazz
    - Students will write an essay on the styles they learned about. They will research a Jazz Guitarist within the style of Jazz and write an essay explaining what they learned about them, what they liked about the style of the guitarist, how it affects their desire to add the style of Jazz in their own playing, and how can that artist enhance their own style and playing
- Lecture on playing Jazz using the most common ii-V-I chord progressions in sequence
- Students will document a whiteboard analysis of how ii-V-I jazz chord progressions function in many jazz styles of music. They will analyze the ii-V-I Jazz Chord progressions and discuss amongst each other it's operation in music. This includes extending the ii-V progression over and over upon itself
- Student's will analyze the chord extensions of how adding the Major and Minor 7, 9th, 11th, and 13th degree of the scale changes the feel of the chords how it relates to the tonal quality for playing Jazz
    - Improvisation—Students will get in small groups of 3-4 and write ii-V progression together
    - Students will then create a name for their group
    - They will then take turns applying their knowledge of scale theory by writing solo ideas using their scale knowledge to improvise solos over the ii-V chord progression they created

- Lecture on Wes Montgomery Chords—Student's will use the PDF handout for Jazz Legend Wes Montgomery
- Online source: https://www.mwgcourses.com/courses/1204705/lectures/26981115 (https://www.mwgcourses.com/courses/1204705/lectures/26981115)
- Video Review—15 Minute video workout lesson on how to play Jazz
- Video Review—Wes Montgomery 15-minute song workout with band backing tracks for students to practice too
- In this workout students learn a Wes Montgomery style ii-V progression. Start by memorizing these shapes and getting them over the backing track. Then, start to personalize these shapes by altering the rhythms, picking patterns, adding chords, leaving chords out, etc. From there, they will advance this technique to take these shapes into their own playing over other standards and jazz chord progressions to solidify their knowledge of the through performing them on the instrument
- This will continue to advance student knowledge of the fretboard further extending their abilities on the instrument
- Final Assessment: A final written test and performance presentation will be given by each student for a grade

If yes, date(s) of previous submission? _____

Title of previous submission? _____

19. Brief Course Description

.An introduction to basic computer concepts and skills, programming techniques and web page design using HTML and JavaScript and advanced Internet technologies. A general education course dealing with how computers work, how they are used and their effects on society. Students will work in a classroom/computer lab setting.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

1) Understand basic user/software/hardware interfaces
2) Become aware of the history of computers and the WWW
3) Understand HTML and JavaScript coding
4) Demonstrate ability to problem solve in HTML and JavaScript
5) Develop basic understanding of design principles
6) Build a web site
7) Publish a web site using FTP protocol

21. Course Objectives

1) Become aware of the uses and importance of the computer on society
2) Understand and appreciate the user/software/hardware interface
3) Understand logical processes of computer problem solving
4) Understand HTML organizational techniques
5) Develop web pages that include hyperlinks and JavaScript
6) Incorporate programming control structures into their web page design

22. Course Outline

a. Computing Fundamentals – book exercises, quizzes and tests
b. Online Connections – book exercises, quizzes, and tests
c. HTML book exercises
d. Projects –
    i. Create a calendar in HTML using a table
    ii. Create a survey on campus cleanliness using a form with radio buttons, check boxes, text boxes, and a drop down list
    iii. Research good resource sites for HTML or JavaScript help
    iv. FTP protocol and publishing a site.
        1. Research web publishing and costs.
        2. Use FTP protocol to publish your site.
    v. Storyboarding – make storyboard cards on 5x8 cards with a card for each page showing the design layout, font to be used, colors, etc.
    vi. Design and build a web site that outlines the most important points learned about HTML in a frameset. Include a welcome page, basic tags page, and resources page. Publish site.
e. JavaScript book exercises
f. Culminating project
    i. Design a site using the approved subject of your choosing. Include storyboard cards, a frames based site with a nested frameset, a rollover image, compressed images, a frame based slide show, a random image array, a form with radio buttons, check boxes, text boxes, a drop down list and with an alert message and a conditional statement
    ii. Graded final project parts
        1. Storyboards
        2. Color scheme, font choices, background color, etc.
        3. Index page
        4. Image gallery – image composite sheet
        5. Array page with code
        6. Form w/ alert and conditional alert
        7. Published site
        8. Completed final project

23. Texts & Supplemental Instructional Materials

HTML and JavaScript and Advanced Internet Technologies – Turner & Barksdale, South-Western
Practical Computer Literacy – Parsons and Oja, Course Technology, Thomson Learning

24. Key Assignments

a. Create a calendar in HTML using a table
b. Create a survey on campus cleanliness using a form with radio buttons, check boxes, text boxes, and a drop down list
c. Research good resource sites for HTML or JavaScript help
d. Use FTP protocol to publish your site.
e. Published web site that outlines the most important points learned about HTML in a frameset.
f. Culminating project
    i. Design, code and publish site including all criteria given
    ii. Graded final project parts
        1. Storyboards
        2. Color scheme, font choices, background color, etc.
        3. Index page
        4. Image gallery – image composite sheet
        5. Array page with code
        6. Form w/ alert and conditional alert
        7. Published site
        8. Completed final project

25. Instructional Methods and/or Strategies

Written assignments
Computer based instructor demonstrations
Visual presentation formats for web design
Visual presentation of samples of a basic web site
Internet research as required for projects
Oral presentations
Peer evaluation and revision of layouts

26. Assessment Methods and/or Tools

Written assignments demonstrating ability to effectively communicate knowledge of computer software and hardware interfaces
Activities and projects demonstrating knowledge of HTML and JavaScript programming language
Written critiques of various web sites using basic design principles
Vocabulary homework
Ability to read and follow instructions
Quality of completed assignments
Self-evaluations and peer critiques
Portfolio
Final Project
Assessment criteria
Assessment rubric
Efforts on projects

Course Title

Introduction to Meat Processing

Description of Target Group

This course is designed as a one semester elective course for ninth and tenth grade students. Eleventh and twelfth grade students may take the course with instructor approval.

Purpose

This is a one period - semester course for students who wish to become acquainted with and understand the basics n meat processing. There is not a lab period designated as part of this course. Job opportunities and employability will also be covered. Introduction to the FFA program and California Record Book will also be included.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify the primals and subprimals of beef, pork and lamb.
2. Identify typical retail cuts of beef, pork and lamb using the National Meats Contest Sheet #44.
3. Describe the purpose of meat inspection.
4. List the marbling scores for beef carcasses and convert these scores to a quality grade.
5. Determine physiological age of carcass meat and its effect on quality grades.
6. Calculate dressing percentage for beef, swine, and lamb carcasses.
7. Calculate retail cut-out values for beef, pork and lamb.
8. List the methods of cooking meat.
9. List the methods of meat packaging and its effect on shelf and storage life.
10. List the lengths for which meat can be frozen.
11. How to properly sharpen a knife.
12. Students will learn about the FFA.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Demonstrations, lectures, handouts, graphs, worksheets, photos, video library and field trips to local markets.

Course Title

Meat Processing A

Description of Target Group

This course is designed for students in the 10th, 11th, and 12th grades. Agriculture Science is recommended.

Purpose

This is a semester course for two periods for all students who wish to understand and develop skill of meat cutting, employment opportunities in meats, slaughtering of beef, sheep, hogs, byproducts of packing houses cold storage and refrigeration of meat, curing and smoking processes, the care and handling of meat and equipment and shop safety and sanitation.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. How to properly sharpen a knife
2. Identify wholesale cuts of beef, pork, and lamb.
3. Describe the purpose of U.S. meat grading and meat inspection.
4. Be able to calculate dressing percentage for beef, swine, and sheep.
5. Understand and use shop safety habits and sanitation.
6. Acquire basic skills in breaking down beef, sheep, and hog carcasses.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Field trip to a local slaughter plan, local butcher shop; slaughter an animal as a class project; make sausage with the class.

Course Title

Meat Processing B

Description of Target Group

This course is designed for students in the 10th, 11th, and 12th grades. Agriculture Science and Meat Processing A are recommended.

Purpose

This is a semester course for two periods for all students who wish to understand and develop the skill of meat cutting, employment opportunities in meats, slaughtering of beef, sheep, hogs, byproducts of packing houses, cold storage and refrigeration of meat, curing and smoking processes, the care and handling of meat and it's equipment and shop safety, along with sanitation.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Acquaint students with the many job opportunities which exist in the meat process field and encourage further education in this area.
2. Identify typical retail cuts of beef, pork, and lamb.
3. Explain the process and reason for curing and smoking.
4. List the methods of cooking meat.
5. List the lengths for which meat can be frozen.
6. Understand the true value of trends and their real value in making management decisions.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Field trip to a local slaughter plant, local butcher shop; slaughter an animal as a class project; make sausage with the class.

Course Title

Natural Resources Management 1 A/B

Description of Target Group

This course is for 10th, 11th, and 12th grade students.

Prerequisites: Must have completed Life Science, Biology, Agricultural Science 2 or Ag. Biology

Purpose

The purpose of NATURAL RESOURCES MANAGEMENT is to present a study of scientific principles, interrelationships, and problems regarding natural resources conservation. Emphasizes interdisciplinary aspects of environmental decisions and motivates those interested in conservation and management oriented occupations. To include environmental problems and their causes, and observe cultural changes, world views, and ethics. Students will study ecosystems, how they work and what are the major types, and what can happen to them. Other issues will include: environmental economics and politics, Risk, toxicology, and human health along with climate, global warming, and ozone loss. We will explore many aspects of natural resources and bio-diversity.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Reinforced Arithmetic skills
2. Ability to evaluate current events
    a. In relationship to Natural Resources and Ecology
    b. Leading and participating in class discussions of events, issues, and real policy
    c. Summarize weather and climate problems as they relate to global warming and ozone loss
3. Relate life situations to current events
    a. Working with others
    b. Critical thinking in response to reaction paragraph or short essays
    c. Understand world cultural changes and view points that lead to an ethical sustain ability
    d. Understand environmental economics and politics
4. Conservation Projects (to include, but is not limited to:)
    a. Figuring correct amounts and costs of materials
    b. Figuring volume of water projects and dams
    c. Drawing and drafting plans
    d. Summarize the major environmental problems and their causes
    e. Discuss the types and concepts of matter and energy resources
    f. Waste reduction and prevention
    g. Identify food resources and problems that relate to sustainable Earth Ag. systems

5. Discuss and Debate Issues
   a. Discuss ways that safely protect food resources.
   b. Earth's geological processes and the proper use and management of mineral and soil resources
   c. Describe the basic component of ecosystems and how they work
   d. Summarize human population growth, urbanization, and regulation problems and solutions
   e. Discuss chemical, physical, and biological risks and hazards as to various human health problems
   f. Discuss water's importance and the application of efficient water resource use
6. Conducting Lab Activities
   a. Scientific Experiments
   b. Measurements and Evaluations of Projects
   c. Misc. lab activities
7. Assessment of Student Learning
   a. Stunts will present evidence of learning by cooperating with groups or by individual assignments and presentations based on the above subjects.
   b. Students will demonstrate evidence of learning by presenting ideas, solutions, and conclusions to the areas stated above.
   c. Teacher observation and evaluation

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and approved supplementary books used in the Santa Maria Joint Union High School District

Current Topics in Magazines & Newspapers; such as: *Popular Science, California Farmer, Hoard's Dairyman, New Horizons, Wall Street Journal, Santa Maria Times, Feedstuffs, Farm Journal, and other supplementary materials.*

Activities

Individual work, lectures, class participation, demonstration, audio visual materials, guest speakers, small group activities, and field trips.

Course Title

Ornamental Horticulture 2A

Description of Target Group

This course is for 10th, 11th, and 12th grade students who have completed Ornamental Horticulture 1 A/B.

Purpose

The purpose of ORNAMENTAL HORTICULTURE 2A is to study the areas of: plant identification, advanced landscaping, turf management, advanced floral design, commercial flower production, sales, marketing, and job opportunities. This is the first semester of a one year course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Be able to identify by botanical name the plants listed in the course curriculum sheet common to the local area.
2. Use, care for, and identify common floral and landscaping tools and materials.
3. Name and construct the different types of flower arrangements and corsages.
4. Identify common lawn grasses.
5. Know and use safety rules in the operation of horticultural power equipment.
6. Identify common cut flowers.
7. Be able to recognize the qualifications and requirements for jobs in the nursery practices and floriculture industries.
8. Be able to draw a landscaping plot plan.
9. Identify floral containers and mechanics.
10. Know the process of flower marketing from grower to consumer.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

Course Title

Ornamental Horticulture 2B

Description of Target Group

This course is for 10th, 11th, and 12th grade students who have completed ORNAMENTAL HORTICULTURE 2A.

Purpose

The purpose of ORNAMENTAL HORTICULTURE 2B is to continue and further develop an understanding and knowledge of: plant identification, landscaping, commercial flower production, flower arrangement and corsage making, operation and maintenance of ornamental horticulture equipment, disease and pest identification, turf management, and arboriculture. This is the second semester of a one year course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Be able to identify by botanical name the house plants and cut flowers listed in the course curriculum sheet.
2. Identify, use and care for common types of turf equipment.
3. Be able to recognize the qualifications and requirements for occupations in turf management and arboriculture.
4. Be able to maintain a lawn.
5. Be able to maintain permanent plantings.
6. Be able to identify common insect pests of ornamentals.
7. Be able to identify common weeds of ornamentals.
8. Correctly prune a landscape tree and shrub.
9. Be able to repair PVC pipe sprinkler system.
10. Apply common pesticides to ornamentals for the control of common insect pests.

Instructional Materials

Text and Supplementary Materials

9. Subject Area

- ☐ History/Social Science
- ☐ English
- ☐ Mathematics
- ☐ Laboratory Science
- ☐ Language other than English
- ☐ Visual & Performing Arts (for 2003)
- ☒ College Prep Elective

10. Grade Level(s)
11-12

11. Seeking "Honors" Distinction?

☐ Yes ☒ No

12. Unit Value

- ☐ 0.5 (half year or semester equivalent)
- ☒ 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Date of School Board Approval

14. Was this course previously approved by UC? ☐ Yes ☐ No If so, year removed from list? _____
Under what course title? _____

15. Is this course modeled after an UC-approved course from another school? ☒ Yes ☐ No
If so, which school(s)? North Santa Barbara County ROP

16. Pre-Requisites
General Science and Biology or AG Science I and Ag Science II.

17. Co-Requisites

18. Brief Course Description
This course is designed to instruct students in the growth, production, and care of plants for ornamental purposes. Topics include plant growth needs, botanical classification, plant physiology, plant reproduction, plant diseases and pests, planting medias, management practices, selection and care of plants, and careers in Ornamental Horticulture.

B. COURSE CONTENT

Course Plan

COURSE TITLE: Ornamental Horticulture

LENGTH OF COURSE: 1 Year

CREDITS: 10 Units

PREREQUISITES: Completion of Algebra 1 or enrolled in Algebra 1. Completion of Agriculture Biology or Biology.

COURSE DESCRIPTION:

This course is designed to instruct students in the growth, production, and care of plants for ornamental purposes. Topics include plant growth needs, botanical classification, plant physiology, plant reproduction, plant diseases and pests, planting medias, management practices, selection and care of plants, and careers in Ornamental Horticulture.

TEXT BOOKS:

Introductory Horticulture, Reiley & Shry, (Delmar, 1995)
The Science of Agriculture, A Biological Approach, Ray V. HeITen (Delmar, 2001) The Science of Agriculture, A Biological Approach Laboratory Manual, Ray V. Hen-en, Catherine A. Teare Ketter, (Delmar, 2001)
Agriscience Fundamentals and Applications, Elmer Cooper (Delmar, 1990) Agriscience Fundamentals and Applications Laboratory Manual, Walter York (Delmar, 1991)
Agricultural Science Laboratory Manual, Fullerton High School Agriculture Department, 1990

MEANS OF ASSESSING STUDENT LEARNING:

1. Tests & Quizzes - 20%
2. Laboratory Investigation -20%
3. Writing Assignments -20%
4. Discussion & Critical Thinking Activities - 20%
5. Research report and oral presentation - 10%
6. Group & Individual Activities - 10%

EXIT LEARNING OBJECTIVES:

1. To develop an appreciation of horticulture.
2. To incorporate scientific methods and biological principles with modem agricultural practices.
3. To create an awareness of the importance of horticulture.
4. To prepare students for college level entry in the various disciplines of horticulture.
5. To understand the importance of plants, their uses, and incorporation of plants in our society.
6. To be familiar with cell theory and its application to the organization of all organisms. 7. To recognize plant physiology, growth requirements, and nutrients needed for optimum plant growth.
8. To recognize the diversity oflife and the interrelationships among all organisms
9. To understand the role of plants in our landscape, the process of design, installation, and maintenance of those plant materials.
10. To be aware of the historical and descriptive nature of horticulture as a science.
11. To acquire agricultural and biological vocabulary, and the reading, writing, and critical thinking skills pertaining to the science.

OUTLINE OF COURSE:

1. Horticulture: An Introduction
   a. Exploring the Horticulture Field
   b. Plant Taxonomy: How Plants are Named c. Plant Identification

2. Organisms and Their Environment
   a. Conserving Natural Resources
   b. Agricultural Practices Beneficial/Harmful to the Environment c. The Nitrogen Cycle
   d. The Oxygen Cycle
   e. The Water Cycle
   f. The Food Web

3. Plant Cells
   a. Function of Plant Cells b. Process of Photosynthesis c. Process of Respiration d. Process of Transpiration e. Process of Translocation

4. Plant Physiology, Reproduction and Growth
   a. Root, Stem and Leaf Structures

b. Flower Structures and Functions
c. Plant Growth Requirements
d. Plant Nutritional Needs
e. Monocotyledons & Dicotyledons
f. Environmental Factors Affecting Plant Growth g.
Nutritional Needs of Plants

5. Plant Pathology & Entomology a. Plant
   Pathology
   b. Orders of Insects
   c. Insect Biology

6. Soils
   a. Introduction to Soils
   b. Soil Forming Factors c. Soil
   Horizons Structures
   d. Basic Soil Components e.
   Organic Matter in Soils f. Soil
   Moisture Behavior
   g. Soil Classification Experiment

7. Plant Propagation: Sexual & Asexual
   a. Seeds
   b. Softwood and Semi-hardwood Cuttings c.
   Hardwood Cuttings
   d. Separation and Division
   e. Grafting, Budding, and Layering

8. Plant Selection, Installation, and Care
   a. Seed Germination Trials
      i. Cool Weather vs. Warm Weather crops
      ii. Soil Sample Comparisons
      iii. Temperature Requirements for Germination
      iv. Light Needs for Optimum Growth Laboratory
   b. Outdoor Plant Growth Experiments
   c. Indoor Plant Growth Experiments
   d. Care of Seedlings
   e. Care of Mature Plant Materials

9. Plant Research Project
   a. Development of Agriculture Science Projects b.
   Statistical Management of Project
   c. Instructional Coordination
   d. Analysis of Project Results

METHODS OF INSTRUCTION:

1. Lecture
2. Tests & Quizzes
3. Laboratory Investigations
4. Essays & Writing Assignments
5. Discussion & Critical Thinking Activities 6.
Reading Assignments
7. Group/Individua1 Activities
8. Audio Visual Materials
9. Guest Speakers
10. Field Trips

Course Title

Plant and Soil Science 1 A/B (P)

Description of Target Group

This course is for 11th, and 12th grade students.

Purpose

The PLANT AND SOIL SCIENCE class sequenced in such a way that allows the student to expand the knowledge of advanced topics in plants and soil science. The course will have an emphasis on the viticulture industry, including a variety of skills necessary for successful entry level employment, such as lab technician, pest control, and plant tester. Other key concepts to be discussed are; plant physiology and growth, plant pathology and pests, soil and water management as well as detail discussion of other county crops and resource management techniques. This is a year long, ten unit course.

Prerequisites: Completion of two of three classes; Ag. Science 1, Ag. Science 2, OR, Ag Biology (or currently enrolled).

Standards of Expected Student Achievement

1.Plant Classification:
Students will understand the principles of plant classification and identify plants using a simple botanical key.

2. Plant Cell Components
Students will understand cell functions and will identify and describe cell components. They will understand the principles of plant inheritance, which will include the structure and roll of nuclear cytoplasmic DNA.

3. Plant Physiology and Growth
Students will understand the principles of plant physiology and growth. They will describe the factors, which influence plant growth including water, nutrients, and air.

4. Plant Reproduction
Students will understand the difference between sexual and asexual reproduction in plants. They will demonstrate techniques for successful plant propagation. They will understand the concepts of ploidy, diploid-somatic cell, haploid- reproductive and multiploid cells.

Plant and Soil Science 1A/B (continued)

5. Plant Pathology and Pests
Students will understand basic plant pathology and pest problems and their respective economic impacts. They will identify the types of pathogens and pests that affect plants. They will describe the symptoms of disease and insect damage and methods of management including genetic resistance.

6. Soil and water Management
Students will understand the effective management practices used in irrigation, drainage, tillage, soil and water conservation. They will describe the practices necessary to effectively manage, and conserve soil and water.

7. Cultural and Harvest Practices
Students will understand crop management and production practices. Students will demonstrate local cultural techniques including pruning, fertilization, planting, irrigation, harvesting safety, and marketing practices.

8. Biotechnology
Students will understand the principles of tissue culture and gene transfer in plant breeding as compared to conventional plant improvement and resistance procedures.
They will understand the concepts of haploid plants obtained via anther/ microscopic culture, protoplast fusion and gene transfer. They will understand the concept of ploidy, diploid-somatic cell, haploid reproductive and multiploid cells.

9.Equipment Management
Students will know how to maintain and repair tools and equipment used in plant production operations. They will demonstrate the skills necessary to service and repair equipment and maintain tools.

10.Crops of California
Students will recognize crops of California. Special emphasis will be made as to developing crops such as grapes, mini-vegetable crops, specialty varieties, and direct or farmers market type sales.

11. Record Keeping
Students will demonstrate an understanding of the principles of record keeping utilizing a variety of methods and systems. They will explain the differences between production and financial records.

12. Interpersonal Leadership Development
Students will recognize the traits of effective leaders and participate in leadership training activities associated with the FFA, including public speaking, leading group discussions, working within a committee, conducting business meetings, and problem solving.

Plant and Soil Science 1A/B (continued)

13. Supervised Practical Experience Project
Students will understand the relationship between a supervised practical experience project (SPE) and their preparation for a career in agriculture. They will engage in a supervised practical experience employing skills and knowledge learned in the classroom. Students will maintain an on-going recordbook.

Methods of Assessment of Student Learning
- Written Scenario
- Authentic Assessment
- Work Samples
- Portfolios
- Agriculture Record Book

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, demonstrations, audio visual materials, field trips, small group activities, outside resource people, guest speakers, and job shadowing.

Laboratory Science Subject Template

(Required Information needed to prepare for course submission)

- **Course Guidance**

GENERAL LABORATORY SCIENCE GUIDANCE

The intent of the laboratory science requirement is to ensure that entering freshmen have a minimum of one year of preparation in each of at least two of the areas of Physics, Chemistry, and Biology/Life Science. This requirement can be satisfied by taking two courses from among these specific subject areas, but courses from across the broad spectrum of scientific subjects are potentially acceptable, provided they conform to the Course Requirements specified below.

Goals of the Laboratory Science Requirement

The overarching goal of the subject requirement in laboratory science is to ensure that freshmen are adequately prepared to undertake university-level study in any scientific or science-related discipline. The term "laboratory" is intended to signify an empirical basis of the subject matter, as well as inclusion of a substantial experimental and/or observational activity in the course design. The requirement emphasizes biology/life sciences, chemistry and physics because these subjects are preparatory to university-level study in all scientific and science-related disciplines. However, coverage of these foundational subjects in suitable breadth and depth can potentially be found in a wide range of science courses provided the courses conform to the criteria described under the Course Requirements below.

All courses certified in the laboratory science subject area should be designed with the explicit intention of developing and encouraging these scientific habits of mind:

1. Students should develop a perception of science as a way of understanding the world around them, not as a collection of theories and definitions to be memorized.

2. Students should emerge from high school embracing an ease in using their scientific knowledge to perceive patterns and regularity, make predictions, and test those predictions against evidence and reason.

3. Students should recognize that abstraction and generalization are important sources of the power of science.

4. Students should understand that scientific models are useful to represent phenomena in the physical world. They should appreciate that models and theories are valuable only when vigorously tested against observation.

5. Students should understand that assertions require justification based on evidence and logic, and should develop an ability to supply appropriate justifications for their assertions. They should habitually ask "Why?" and "How do I know?"

6. Students should develop and maintain openness to using technological tools appropriately, including graphing calculators and computers, in gathering and analyzing data. They should be aware of the limitations of these tools, and should be capable of effectively using them while making sound judgments about when such tools are and are not useful.

7. Students should recognize that measurements and observations are subject to variability and error, and that these must be accounted for in a quantitative way when assessing the relationship between observation and theory.

Course Requirements

Regardless of the scientific subject, all approved courses are expected to satisfy these criteria:

1. Courses should be consistent with and illustrate the goals described above.

2. Courses must explain the relevant phenomena on the basis of the underlying biological, chemical and/or physical principles, as appropriate. They should provide rigorous, in-depth treatments of the conceptual foundations of the scientific subject studied.

3. Courses should afford students opportunities to participate in all phases of the scientific process, including formulation of well-posed scientific questions and hypotheses, design of experiments and/or data collection strategies, analysis of data and drawing of conclusions. They should also require students to discuss scientific ideas with other students and to write clearly and coherently on scientific topics.

4. Courses must specify, at a minimum, elementary algebra as a prerequisite or co-requisite, and should employ quantitative reasoning and methods wherever appropriate.

5. Courses must take an overall approach that is consistent with the scientific method in relation to observing, forming hypotheses, testing hypotheses through experimentation and/or further observation, and forming objective conclusions.

6. Courses must include hands-on laboratory activities that are directly related to and support the other class work, and that involve inquiry, observation, analysis and write-up. These hands-on activities should account for at least 20 percent of class time, and should be itemized and described in the course description.

7. The content for physics, chemistry and biology/life sciences courses in grades 9 through 12 will usually be drawn from the Science Content Standards for California Public Schools [PDF], and may, in some cases, also be drawn from the California Career Technical Education Model Curriculum Standards [PDF]. While these standards can be a useful guide, coverage of all items in the standards is not necessary for the specific purpose of meeting the subject requirements for university admission. Likewise, simple coverage of all standards is not enough to assure course approval. For success in college, secondary science teachers should help students learn to assimilate the major ideas and principles that encompass the standards rather than explore the breadth of all the standards. More important than the topics covered, or even than the skills directly used in class, are the more general abilities and attitudes gained through the effort of mastering the course content. These general abilities and attitudes are described in the goals section above.

HONORS LABORATORY SCIENCE GUIDANCE

- Laboratory Science Honors courses are expected to provide both breadth and depth of exploration in the subject area, developing writing, research, and analytical skills. Specific detailed evidence must be included in the course outline.
- The courses must offer content and/or experience that are demonstrably more challenging than what is offered through the regular college preparatory courses in the same field.
- Factors considered for UC approved honors courses that satisfy the "d" requirement include but are not limited to the assignment and evaluation of one long or numerous short, challenging, and properly-annotated research papers and a comprehensive final examination. Specific details of each of these assignments are required.
- The use of college-level textbooks is encouraged.
- Regular college preparatory courses in the subject areas should be offered. If regular non-honors courses are offered, a strong justification for the lack of a regular course is required.
- In addition to AP and IB higher level courses, high schools may certify as honors level courses **not more than one unit** for each Laboratory Science Discipline.
- A single, written, comprehensive, full year final exam must be administered that encompasses all the material that has been covered for the entire year.

- **Course Content**

NOTE: The following questions are subject specific and ask for detailed information regarding the course curriculum. Since UC has developed their own criteria for the review of curricula, it is not necessary (and preferred) that the State Standards are not listed when submitting course descriptions to the University. When preparing the course submission, keep in mind that your audience is the UC High School Articulation unit and UC faculty. Include relevant information that would assist those reviewing the course and provide UC a better understanding and clarity about the intent of the curriculum. UC expects to see information that would show specific, detailed evidence of the course rigor and development of essential skills and habits of mind. Course template components need to be more expository and illustrative of the integration of each course component and how the overarching goals are being accomplished. The text boxes below will expand to accommodate additional text.

Course Purpose: *What is the purpose of this course? Please provide a brief description of the goals and expected outcomes. (How these will be accomplished should be reserved for the Course Outline, Key and Written assignments, Assessments, and/or Instructional Methods.)*

NOTE: More specificity than a simple recitation of the State Standards is needed.

- Upon completion of this course students will be academically and technologically proficient, having a basic understanding of veterinary science methods
- Students will be able to apply critical thinking and decision-making skills, analyze, synthesize and evaluate veterinary science information.
- As responsible citizens students will be life-long learners able to make informed decisions regarding veterinary scientific matters.
- To encourage scientific investigation and with it the attitudes of accuracy in thought and work ethics.
- Utilize real world applications as a relevant vehicle to teach veterinary principles and improve the veterinary scientific literacy of students.

- Develop students' knowledge of Veterinary science to a competent standard as determined by the

California Career Technical educational Model curriculum standards and the Texas Agri-life extension program Test.

- Strengthen instruction in veterinary science for students pursuing professional level careers in agriculture.
- Integrate mathematics standards, language arts standards and career employability standards including creative thinking, problem solving skills and technological literacy related to the agriculture industry.
- Meet a portion of the laboratory science requirement for admissions to the University of California and California State University systems.
- Develop a sense of interrelationships between veterinary science and its relationship to agricultural applications.

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. Show examples of how the text is incorporated into the topics covered. A mere listing of topics in outline form is not sufficient (i.e. textbook table of contents or California State Standards).*

Unit 1: Introduction to Animal Anatomy, Physiology, and Veterinary Medicine.

1. In this first unit, students will learn the overall course objectives, grading procedures, and classroom procedures for safely working with animals. They will also discuss and compare the use of animals in society as pets, service animals and companion animals versus animals used for food production.
2. Students will learn proper safety and regulations to include handling of animals, routine clinical procedures, surgical practices, and emergency situations.
3. They will also review the use of the microscope for routine testing as well as develop an understanding of prescription placement and the use of the autoclave machine.
4. An overview of research and data collection procedures will be discussed as it pertains to veterinary medical cases.
5. Students will begin to develop their foundation of medical terminology to include common abbreviations, suffixes, root words and measurements.

Unit 2: Cells

1. Students will be able to review and explain the molecular makeup of cells
2. Identify the basic structures of the cell and their corresponding functions. RNA and DNA Bases. Basic structure and function such as metabolism, anabolism, and catabolism.
3. Discuss mitosis and its clinical significance in diseases such as cancer. Review Interphase, Prophase, Metaphase, Anaphase, Telophase. Students will comprehend benign vs. malignant cells.
4. Detailed meiosis in mammalian reproduction

Unit 3: Tissue Types and Functions

Students will be able to describe the properties, locations, functions, and varieties of:

1. Epithelial: properties, locations, functions, and varieties.
2. Connective: tendons, fat, blood, cartilage, and bone make up the extracellular matrix.
3. Muscle: smooth, skeletal, and cardiac.
4. Nerve: central nervous system and peripheral nervous system.

Unit 4: Muscle and Skeletal System

1. Students will be able to describe the functions of musculoskeletal system
2. Detail the structure of the bone; name the joint types and their accompanying role in movement
3. List the two major sections of the skeleton, name the corresponding bones, and compare species

differentiation

4. Explain how bone grows and remodels; relate bone and muscle groups to movement

Unit 5: Circulatory System

1. Students will be able to list blood components and explain the functions of blood
2. Identify the basic structures of the mammalian heart; trace the flow of blood through the heart and body while detailing the parts of the blood vessels and their structural significance
3. Use knowledge of heart function and control to explain the clinical significance of the electrocardiogram; heart sounds, including heart murmurs; and blood pressure

Unit 6: Respiratory System

1. Identify the basic components of the respiratory tract
2. List and discuss the function and control of breathing

Unit 7: Renal System

1. Identify and name the basic structures in the renal system
2. Name and explain the functions of the renal system
3. Students will comprehend the kidney structure and urine formation and regulation.
4. Students will learn how to do urine and blood evaluations.

Unit 8: Digestive System

1. Identify the basic structures of the digestive system
2. Explain digestion in mono-gastric and ruminant animals, including digestive tract function, absorption and the role of the liver in digestion and metabolism

Unit 9: Reproductive System

1. Discuss female anatomy and the estrous cycle
2. List the steps in establishing pregnancy and identify the stages of parturition
3. Male and female anatomy hormonal function.

Unit 10: Central Nervous System

1. Describe the neuron, the nerve impulse, and the synapse and explain the components of a reflex arc
2. Identify the major structures of the brain
3. Discuss the anatomy and function of the spinal cord
4. Compare and contrast the function of the sensory somatic system to the autonomic nervous system and differentiate between the two branches of the autonomic system

Unit 11: Nutrition

1. List the six major components of animal diets, and discuss their structure and significance in nutrition
2. Explain the general principles in animal nutrition
3. Discuss the difference between dogs, cats and equine nutrition needs

Unit 12: Common Disease and Disorders

1. Describe Koch's postulates
2. List the important distinguishing features and give example of major disease agents and discuss resulting diseases
3. Name the basic components of disease prevention
4. Describe the types of vaccines available and their roles in disease prevention
5. Classify diseases, match them with the domestic species in which they occur, and discuss their clinical

significance
6. List and describe several diseases common in domestic animals that are contagious to humans
7. List the major methods used to diagnose disease and cite examples of disease diagnosis with each testing method

Unit 13: Principles of Surgery

1. Explain the clinical significance of the basic principles of successful surgery
2. Explain the healing of lacerations

Unit 14: Pharmacology

1. Define terms relating to general pharmacology
2. Explain the five schedules of controlled substances and their common use
3. Become familiar with pharmacologic agents their uses, adverse side effects and dosage form
4. Identify the parts of drug labels and inserts
5. List routes and describe route of drug administration and routes of drug excretion
6. Define biotransformation and list common chemical reactions involved in this process

Unit 15: Genetics

1. Debate the pro and con of genetic engineering animals for food, conservation and domestic pets
2. Describe the theory of classification of the animal kingdom
3. List common genetic diseases and disorders

Unit 16: Professional Career Opportunities

1. College education and career planning
2. Professional growth
3. Work ethics and employability skills
4. Resume writing
5. Interview techniques
6. Developing a professional portfolio

Laboratory Activities: *Acceptable courses include hands-on scientific activities that are directly related to and support the other classwork, and that involve inquiry, observation, analysis, and write-up. These hands-on activities should account for at least 20% of class time, and should be listed and described in detail. Please itemize and describe each laboratory activity in detail.*

Unit 1: Introduction to Animal Anatomy, Physiology, and Veterinary Medicine.

Activity: Students will be given practicum on routine restraints and be expected to demonstrate the common safety restraints specifically used for dogs and cats in a classroom setting. Students will take the role of assistant technician and veterinarian to work together for restraints such as lateral recumbency on a large dog, dorsal recumbency for a urine sample, and sternal recumbency for placement of x-rays.

Activity: Students will go on a field trip to a local veterinary clinic to take a tour and identify common safety practices in the clinic. They will get a brief lecture on the radiography equipment and learn about the regulations related to their use. Students will write a thank you card to the vet clinic and comment with major points learned on the trip.

Unit 3: Tissue Types and Functions

Activity: Students will utilize microscopes and prepared histology slides of common tissue types for and

identification lab. They will draw detailed diagrams of what they see in order to be able to properly connect certain cells and tissue types for routine laboratory practices. They will be expected to identify common tissue samples under a microscope for assessment.

Unit 4: Muscle and Skeletal System

Activity: Skeletal system painting lab. Students paint the appendicular and axial skeleton on live animals to include horse, cows, and sheep. Use washable paint and work in groups of 3-4. Must be able to name the bones as the teacher quizzes them afterward.

Activity: Students will construct a long bone out of clay and create 'flags' to identify all the major parts. They will then transfer this knowledge to a real long bone and place tags on the major components using their clay model.

Unit 5: Circulatory System

Activity: Students will perform a dissection of the heart where they must identify the four major chambers of the heart and major blood vessels circulating blood throughout it.

Activity: Students will go on a field trip to the local veterinary clinic to watch an echocardiogram or EKG demonstrated by the veterinarians. Upon return they will write a one page summary of what an EKG is and how it is performed.

Unit 6: Respiratory System

Activity: Using a stethoscope, students will listen to lung sounds of various animals (dogs, cats, horses, sheep etc...) and practice taking respiratory rates.

Activity: The class will dissect a full grown pig carcass and extract the respiratory system. Students will identify all major parts and learn how to inflate lungs. Also, they will be given a demonstration on how a tracheotomy procedure will take place.

Unit 7: Renal System

Activity: Students will dissect kidneys and identify all of the parts and functions. They must be able to label the kidneys on a diagram and discuss their functions.

Activity: Students will learn how to perform a urinalysis and how to interpret lab results. This will help them to determine if a patient is in kidney failure. Having to interpret lab work will be a common procedure in the vet clinic.

Unit 8: Digestive System

Activity: Students will go to the local university dairy unit to see a fistulated cow (has a hole in its side) to study the components of a ruminant animal. This will provide an overview of the ruminant digestive system and give students a direct view into the rumen of an animal. Students can take a sample from the rumen and look at it under the microscope to see what microbes are present in the animal's biggest digestive chamber.

Unit 9: Reproductive System

Activity: Students will learn the processes of artificial insemination by taking a field trip to a dairy facility to watch a demonstration. Students will get to see the collection of semen from a bull and then they will view the semen under a microscope to see the sperm. They will learn how to assess the viability of sperm and count the number of sperm in a specimen. They will also learn how scientists use extenders to artificially inseminate several animals with one collection.

Unit 10: Central Nervous System

Activity: Students will observe a veterinarian doing a neurological exam on an animal for nervous system issues. They will record data on what they observe and then discuss what types of treatments or therapies are possible for the diagnosis.

Activity: Students will local and properly extract the brain from their cat specimens. They will identify all the major parts and review their functions. Teacher will verbally quiz each group on their knowledge of the major lobes of the brain and their ability to discuss the functions.

Unit 13: Principles of Surgery

Activity: Students will participate in a suturing lab utilizing proper suturing materials, needle holders, and needles. The use of a banana as the "patient" will show the outcome of a simple interrupted suture technique. Students will be given guided instruction then will practice. Students will also demonstrate how to remove sutures using Lister bandage scissors. A final set of sutures will be graded.

Activity: Students will be divided into groups to perform the following demonstrations for the class: how to prepare a patient for surgery, how to properly put on a gown and gloves using an aseptic technique, how to pack a surgical pack, how to properly scrub in for surgery and how to monitor animals under anesthesia.

Unit 14: Pharmacology

Activity: Students will be given a prescription amount and have to demonstrate their knowledge of how to use a pill counter and use knowledge of medical math to physically count the proper number of pills to administer. Students will use candy (skittles or M&Ms) to pretend they are pills with set dosages.

Key Assignments: *Detailed descriptions of all Key Assignments which should incorporate activities and projects, as well as, short answers and essay questions. How do assignments incorporate topics? Include all assignments that students will be required to complete. Assignments should be linked to components mentioned in the course outline. It is not appropriate or necessary to include instructions given to students regarding the execution of assignments (formatting, timeliness, etc.). Do not include exams or assessments in this section.*

Unit 1: Introduction to Animal Anatomy, Physiology, and Veterinary Medicine.

Assignment: Drawings of laboratory tools, demonstration of use, proper identification, short 2 page essay on proper safety techniques and escape routes from classroom.

Assignment: Students will produce a computer generated presentation of importance of animals in society. PowerPoint, Prezi, or Google Slides will be the preferred template to create the presentation. They will work in pairs of two and present the information to the class.

Unit 2: Cells

Assignment: A local veterinarian and cancer expert in small animal care will come give a guest lecture on how to diagnose and treat patients with cancer. She will also discuss a variety of common unknown forms of cancer that pets develop in our everyday lives. Options for care, prognosis for the future, and specific breeds known to be prone to cancer will be discussed. An open class discussion with feedback will be the format of this activity.

Unit 3: Tissue Types and Functions

Assignment: Students will create 3-D study tool of tissues, draw and color basic tissues. They will illustrate comparative writing on tissue types. They will use this for review on their unit test and turn in for points.

Unit 4: Muscle and Skeletal System

Assignment: Begin Anatomical Overlay project: Students will draw and trace the anatomical parts of their selected specie of animal. This will include external parts, skeletal system, and eventually the organ system. Use of

cardstock and transparencies to create overlay affect.

Assignment: Students will receive review worksheets and study guides for musculoskeletal system, create study tools with diagrams, answer questions in short essay format related to material (Ex: Explain the types of joints found in mammals and their movement patterns. Use terms from connective tissue study to explain movement.)

Unit 5: Circulatory System

Assignment: Anatomical overlay project continued. They will create the circulatory System layer. Students will draw and label all of the major veins and arteries in the selected animal diagram. They will use the color blue for arteries and the color red for veins. They will create a key for labeling all of the major blood vessels in the circulatory system.

Assignment: Design a t-shirt with the heart and major components of the circulatory system. Shirt must be white to begin and students will use t-shirt paint markers to draw diagram.

Unit 7: Renal System

Assignment: Students will go on a walking tour to identify common toxic plants to animals. They common plants will cause major issues and can be toxic to the renal system and therefore students will need to know how to identify the plants and what to do in the situation if an animal has eaten them.

Unit 8: Digestive System

Assignment: Students will be put into groups to create models of either the monogastric or ruminant digestive system tracts. They will have to present their models to the class and also discuss step by step how food moves through the systems.

Assignment: Students will add either the monogastric or ruminant digestive system to their anatomical overlay project. Which one they select depends upon the animal they choose at the beginning and its corresponding system.

Unit 9: Reproductive System

Assignment: Guest speakers from an Equine Center will discuss the stages of breeding horses beginning with their cycles. This will include all of the stages to include hormone therapy such as "short cycling" a mare to come into heat for breeding purposes. Stages of delivery and foal care will also be discussed. If possible, a trip to the breeding lab and equine center can also be arranged.

Assignment: Students will create a video demonstration about the advantages and disadvantages of spaying and neutering your pets. They will demonstrate the procedure using proper terminology regarding their reproductive system. Videos will be played in class.

Unit 10: Central Nervous System

Assignment: Students will add a layer to their continued anatomical overlay project that includes the major parts of the Central Nervous System.

Unit 11: Nutrition

Assignment: Students will take a tour of the local university feed mill and interact with animal nutritionists at the college. They will learn how different feeds are made and about possible career choices in animal nutrition.

Assignment: A guest speaker will come in to discuss feed options for raising livestock as market animals. He / she will discuss the different stages of growth and the components of the feed that will help the animal produce quality market products.

Unit 12: Common Disease and Disorders

Assignment: Students will create a parasite “catalog” with color pictures, life cycle and diagnosis/treatment.

Explain the specific steps to diagnosis of diseases and disorders by creating a visual chart to present to the class. Create a scenario to share with the class of an animal brought to the vet clinic for diagnosis; have class solve scenario.

Assignment: Disease Research Report. Students will be assigned a disease that they have to research and develop a presentation with information regarding this topic. Information should include viral, bacterial, fungal category, symptoms / signs, species affected, treatment, and long term prognosis. Photos should be presented and / or videos of animals infected if possible. Possible methods of presenting include Power Point, Prezi, Google slides, or videos.

Assignment: Guest speaker RVT (Registered Vet Technician) to come in and give a demonstration on how to properly remove ticks from a dog / cat. Also, discuss common parasite control methods useful in small and large animal pets.

Unit 13: Principles of Surgery

Assignment: Students will observed a neuter and spay surgery using their cat specimens. Students will fill out guided notes with the proper steps and use of common tools. The demo will be done by a local veterinarian. They will then try to perform either a spay or neuter procedure (depending on the sex of their cat) on their animal with help from guest DVM. (Doctor of Veterinary Medicine)

Unit 14: Pharmacology

Assignment: Students will create a drug label for 5 different but common prescriptions given to animals. They will use 5 case studies with recommendations and prescriptions given from the veterinarian. They will use a prescription label sheet to write out the information needed using proper medical abbreviations.

Unit 15: Genetics

Assignment: Students will be assigned a genetic disorder common to species. They will have to research information about the disorder as it pertains to the specie that usually presents these issues and they will give a short presentation describing their disorder.

Assignment/ Activity: An AKC (American Kennel Club) dog breeder will come in as a guest speaker to discuss common genetic disorders associated with breeding the incorrect combination of dogs in relation to their color and what common outcomes (blind, deaf, all white etc..) that occur. They will also discuss what genetic tests can be done prior to getting breeding dogs "certified" by a veterinarian.

Unit 16: Professional Career Opportunities

Assignment / Activity: Several guest speakers will come in to represent DVM, RVT, and assistant technicians to discuss their school and career readiness prior to their given profession.

Assignment: Students will all participate in mock phone conversations with common veterinary clinic client interactions. Each will take a turn playing the receptionist and the client. After the situation is done, the class will discuss how each person reacted and what you as the technician or receptionists should do in the situation.

Assignment: Students will develop a professional portfolio for a designated "job opportunity" in the veterinary science field. It will include a cover letter, resume, job application, a letter of recommendation and 4 pages of demonstrated skills with photos / descriptions.

Instructional Methods and/or Strategies: *Indicate how the Instructional Methods and/or Strategies support the delivery of the curriculum. What portions of the Course Outline are supported by the methods and strategies?*

Being that Veterinary science is a laboratory science area, the primary instructional strategy used to deliver curriculum are hands-on labs or Experiential Learning. This method of instruction allows to students to practice the concepts and see them in action, which research suggests leads to improved retention and ability for application.

Also, included in this area of Experiential Learning and used as a part of this course are research projects and assigned questions. Every unit within the content outline is supported by one or more experiential learning strategies.

Another key instructional strategy used is Interactive Learning, which allows students to manipulate content in various ways and form cognitive anchors. For example, there are opportunities for students to engage in role-playing, debates, discussion, and group projects. The following concepts within the content outline are supported by Interactive Learning; Intro to vet med, cells, muscle and skeletal systems, renal systems, digestive systems, reproductive systems, nutrition, common diseases and disorders, and genetics, professional career opportunities

Direct instruction is a foundational instructional strategy used as a par to this curriculum. Every unit provides students with direct instruction through teacher-lead discussion and lecture. Students are able to build a foundation of knowledge which will then be built upon through labs and other interactive methods.

Reading research assignments will be used to solidify material taught in class and to explore other areas within the unit. The following concepts within the content outline are supported by research assignments; Intro to vet med, common disease and disorders, and genetics.

The last strategy used is Indirect Instruction through activities such as essays, homework, and reading methods.

Assessments Including Methods and/or Tools: *Indicate the intent of each assessment and a brief description of how each relates to the Course Purpose and goals related to the development of critical thinking and other habits of mind skills.*

Assessment Methods and/or Tools

UNIT 1 Introduction to Animal Anatomy, Physiology, and Veterinary Medicine.

To assess students understanding of the safety and basic procedures and practices in a veterinarian clinic situation, students will demonstrate their knowledge through a constructed and selected response summative assessment.

UNIT 2: Cells

To assess students understanding of molecular make up of cells, students will demonstrate their knowledge through a selected response assessment. To assess student understanding of meiosis, students will demonstrate their knowledge selected response summative assessment.

UNIT 3: Tissue Types and Functions

To assess student understanding of tissue types, properties, locations and functions, students will demonstrate their knowledge through selected response formative assessment and through a lab report.

UNIT 4: Muscle and Skeletal System

To assess student understanding of the function, structure and identification of musculoskeletal systems, students will demonstrate their knowledge through a selected response summative assessment.

UNIT 5: Circulatory System

To assess student ability to distinguish the different types of blood components, students will demonstrate their

knowledge through a lab report. To assess student ability to identify the basic structures and function of a mammalian heart, students will demonstrate their knowledge through a constructed response summative assessment.

UNIT 6: Respiratory System

To assess student ability to identify components of respiratory tracts and functions of breathing, students will demonstrate their knowledge through several means of assessment, including a performance task, lab report, and constructed response assessments.

UNIT 7: Renal System

To assess student understanding of the concept of the function of the renal system and identification of its structures, students will demonstrate their knowledge through several lab reports and a selected response summative assessment.

UNIT 8: Digestive System

To assess student understanding of the function, structure and identification of digestive systems, students will demonstrate their knowledge through a selected response summative assessment.

UNIT 9: Reproductive System

To assess student understanding of hormonal function, identification of reproductive anatomy and pregnancy/parturition stages, students will demonstrate their knowledge through a lab report and selected response summative assessment.

UNIT 10: Central Nervous System

To assess student ability to compare the function of the sensory somatic system to autonomic nervous system, students will demonstrate their knowledge through a series of lab reports and performance assessments. To assess student ability to identify and describe structure and function of brain and spinal cords, students will demonstrate their knowledge through constructed response summative assessment.

UNIT 11: Nutrition

To assess student understanding of animal diets and nutritional needs, students will demonstrate their knowledge through selected response summative assessment.

UNIT 12: Common Disease and Disorders

To assess student understanding of prevention, diagnosis and classification of diseases/disorders, students will demonstrate their knowledge through a performance assessment project, a series of lab reports, and a constructed response summative assessment.

UNIT 13: Principles of Surgery

To assess student understanding and ability of the principles of successful surgery, students will demonstrate their knowledge through a performance task and selected response summative assessment.

UNIT 14: Pharmacology

To assess student understanding of the pharmacologic agents and their use in a veterinary practice, students will demonstrate their knowledge through a performance task and a constructed response summative assessment.

UNIT 15: Genetics

To assess student understanding of genetics and identification of diseases and disorders, students will demonstrate their knowledge through a research project/presentation and selected response summative

assessment.

UNIT 16: Professional Career Opportunities

To assess student understanding of the work ethic required and ability to develop a professional portfolio, students will demonstrate their knowledge through a mock job interview and career outline.

Tests and Quizzes	50%
Homework Assignments/Term Paper	15%
Notebook/Portfolio	05%
Laboratory Activities	20%
SAE Project & Record Book	05%
Leadership Development Activities	05%

NOTE: If "Yes" is selected for "Seeking 'Honors' Distinction" on the "Course Description" page of the "New Course" submission process, please complete the remaining 2 text boxes below.

Corresponding Non-Honors Course: *Indicate the name of the regular non-honors course corresponding to this proposed honors course.*

Differences in Honors/Non-Honors Courses: *Describe in detail how this honors course differs from the regular course offered in the same subject area. Be specific. UC assumes Honors submissions will have increased level of reading and writing. Please be specific and descriptive regarding precisely how these increase the rigor of the course beyond merely increased amounts of work.*

Title: Veterinary Science

Length of course: Full Year

Subject area: Science (D) / Biology / Life Sciences

UC honors designation? No

Prerequisites: Biology/Ag Biology (Recommended)

Co-requisites: Algebra (Required)

Integrated (Academics / CTE)?	Yes
Grade levels:	10th, 11th, 12th

ourse Description

urse overview:

Veterinary Science is a course designed to provide students an applied scientific study in the area of animals and veterinary care. This course focuses on the application of animal anatomical and physiological knowledge to the maintenance and improvement of animal health to include; clinical diagnosis of disease and parasites, administration of medications, and common surgical procedures. Biological applications will include studies in cells, genetics, evolution, and ecology as they pertain to the animal/veterinary field. The feline dissection and various other livestock specimens will serve as a supplemental lab practicum throughout the duration of this course. Each unit includes a clinical practice component at the conclusion to put the knowledge learned into a real veterinary clinical situation. Additional emphasis will be placed on industry practices to include office procedures, public relations and communications, laboratory skills. At the conclusion of this course and completion of requirements, students will be able to take the exam to become level 1 assistant veterinary technician certified.

urse content:

Unit 1: Introduction to Animal Anatomy, Physiology, and Veterinary Medicine.

1. In this first unit, students will learn the overall course objectives, grading procedures, and classroom procedures for safely working with animals. They will also discuss and compare the use of animals in society as pets, service animals and companion animals versus animals used for food production.
2. Students will learn proper safety and regulations to include handling of animals, routine clinical procedures, surgical practices, and emergency situations.
3. They will also review the use of the microscope for routine testing as well as develop an understanding of prescription placement and the use of the autoclave machine.
4. An overview of research and data collection procedures will be discussed as it pertains to veterinary medical cases.
5. Students will begin to develop their foundation of medical terminology to include common abbreviations, suffixes, root words and measurements.

Assignment: Drawings of laboratory tools, demonstration of use, proper identification, short 2 page essay on proper safety techniques and escape routes from classroom.

Assignment: Students will be given practicum on routine restraints and be expected to demonstrate the common safety restraints specifically used for dogs and cats in a classroom setting. Students will take the role of assistant technician and veterinarian to work together for restraints such as lateral recumbency on a large dog, dorsal recumbency for a urine sample, and sternal recumbency for placement of x-rays.

Assignment: Students will produce a computer generated presentation of importance of animals in society. PowerPoint, Prezi, or Google Slides will be the preferred template to create the presentation. They will work in pairs of two and present the information to the class.

Activity: Students will go on a field trip to a local veterinary clinic to take a tour and identify common safety practices in the clinic. They will get a brief lecture on the radiography equipment and learn about the regulations related to their use. Students will write a thank you card to the vet clinic and comment with major points learned on the trip.

Unit 2: Cells

---

1. Students will be able to review and explain the molecular makeup of cells
2. Identify the basic structures of the cell and their corresponding functions. RNA and DNA Bases. Basic structure and function such as metabolism, anabolism, and catabolism.
3. Discuss mitosis and its clinical significance in diseases such as cancer. Review Interphase, Prophase, Metaphase, Anaphase, Telophase. Students will comprehend benign vs. malignant cells.
4. Detailed meiosis in mammalian reproduction

Assignment: A local veterinarian and cancer expert in small animal care will come give a guest lecture on how to diagnose and treat patients with cancer. She will also discuss a variety of common unknown forms of cancer that pets develop in our everyday lives. Options for care, prognosis for the future, and specific breeds known to be prone to cancer will be discussed. An open class discussion with feedback will be the format of this activity.

Unit 3: Tissue Types and Functions

Students will be able to describe the properties, locations, functions, and varieties of:

1. Epithelial: properties, locations, functions, and varieties.
2. Connective: tendons, fat, blood, cartilage, and bone make up the extracellular matrix.
3. Muscle: smooth, skeletal, and cardiac.
4. Nerve: central nervous system and peripheral nervous system.

Assignment: Students will utilize microscopes and prepared histology slides of common tissue types for and identification lab. They will draw detailed diagrams of what they see in order to be able to properly connect certain cells and tissue types for routine laboratory practices. They will be expected to identify common tissue samples under a microscope for assessment.

Assignment: Students will create 3-D study tool of tissues, draw and color basic tissues. They will illustrate comparative writing on tissue types. They will use this for review on their unit test and turn in for points.

Unit 4: Muscle and Skeletal System

---

1. Students will be able to describe the functions of musculoskeletal system
2. Detail the structure of the bone; name the joint types and their accompanying role in movement
3. List the two major sections of the skeleton, name the corresponding bones, and compare species differentiation
4. Explain how bone grows and remodels; relate bone and muscle groups to movement

Assignment: Begin Anatomical Overlay project: Students will draw and trace the anatomical parts of their selected specie of animal. This will include external parts, skeletal system, and eventually the organ system. Use of cardstock and transparencies to create overlay affect.

Assignment: Skeletal system painting lab. Students paint the appendicular and axial skeleton on live animals to include horse, cows, and sheep. Use washable paint and work in groups of 3-4. Must be able to name the bones as the teacher quizzes them afterward.

Assignment: Students will construct a long bone out of clay and create 'flags' to identify all the major parts. They will then transfer this knowledge to a real long bone and place tags on the major components using their clay model.

Assignment: Students will receive review worksheets and study guides for musculoskeletal system, create study tools with diagrams, answer questions in short essay format related to material (Ex: Explain the types of joints found in mammals and their movement patterns. Use terms from connective tissue study to explain movement.)

Unit 5: Circulatory System

1. Students will be able to list blood components and explain the functions of blood
2. Identify the basic structures of the mammalian heart; trace the flow of blood through the heart and body while detailing the parts of the blood vessels and their structural significance
3. Use knowledge of heart function and control to explain the clinical significance of the electrocardiogram; heart sounds, including heart murmurs; and blood pressure

Assignment: Anatomical overlay project continued. They will create the circulatory System layer. Students will draw and label all of the major veins and arteries in the selected animal diagram. They will use the color blue for arteries and the color red for veins. They will create a key for labeling all of the major blood vessels in the circulatory system.

Assignment: Students will perform a dissection of the heart where they must identify the four major chambers of the heart and major blood vessels circulating blood throughout it.

Assignment: Design a t-shirt with the heart and major components of the circulatory system. Shirt must be white to begin and students will use t-shirt paint markers to draw diagram.

Activity: Students will go on a field trip to the local veterinary clinic to watch an echocardiogram or EKG demonstrated by the veterinarians. Upon return they will write a one page summary of what an EKG is and how it is performed.

Unit 6: Respiratory System

1. Identify the basic components of the respiratory tract
2. List and discuss the function and control of breathing

Assignment: Using a stethoscope, students will listen to lung sounds of various animals (dogs, cats, horses, sheep etc...) and practice taking respiratory rates.

Assignment: The class will dissect a full grown pig carcass and extract the respiratory system. Students will identify all major parts and learn how to inflate lungs. Also, they will be given a demonstration on how a tracheotomy procedure will take place.

Unit 7: Renal System

1. Identify and name the basic structures in the renal system
2. Name and explain the functions of the renal system
3. Students will comprehend the kidney structure and urine formation and regulation.
4. Students will learn how to do urine and blood evaluations.

Assignment: Students will dissect kidneys and identify all of the parts and functions. They must be able to label the kidneys on a diagram and discuss their functions.

Assignment: Students will learn how to perform a urinalysis and how to interpret lab results. This will help them to determine if a patient is in kidney failure. Having to interpret lab work will be a common procedure in the vet clinic.

Assignment: Students will go on a walking tour to identify common toxic plants to animals. They common plants will cause major issues and can be toxic to the renal system and therefore students will need to know how to identify the plants and what to do in the situation if an animal has eaten them.

Unit 8: Digestive System

1. Identify the basic structures of the digestive system
2. Explain digestion in mono-gastric and ruminant animals, including digestive tract function, absorption and the role of the liver in digestion and metabolism

Assignment: Students will be put into groups to create models of either the monogastric or ruminant digestive system tracts. They will have to present their models to the class and also discuss step by step how food moves through the systems.

Assignment: Students will go to the local university dairy unit to see a fistulated cow (has a hole in its side) to study the components of a ruminant animal. This will provide an overview of the ruminant digestive system and give students a direct view into the rumen of an animal. Students can take a sample from the rumen and look at it under the microscope to see what microbes are present in the animal's biggest digestive chamber.

Assignment: Students will add either the monogastric or ruminant digestive system to their anatomical overlay project. Which one they select depends upon the animal they choose at the beginning and its corresponding system.

Unit 9: Reproductive System

1. Discuss female anatomy and the estrous cycle
2. List the steps in establishing pregnancy and identify the stages of parturition
3. Male and female anatomy hormonal function.

Assignment: Guest speakers from an Equine Center will discuss the stages of breeding horses beginning with their cycles. This will include all of the stages to include hormone therapy such as "short cycling" a mare to come into heat for breeding purposes. Stages of delivery and foal care will also be discussed. If possible, a trip to the breeding lab and equine center can also be arranged.

Assignment: Students will learn the processes of artificial insemination by taking a field trip to a dairy facility to watch a demonstration. Students will get to see the collection of semen from a bull and then they will view the semen under a microscope to see the sperm. They will learn how to assess the viability of sperm and count the number of sperm in a specimen. They will also learn how scientists use extenders to artificially inseminate several animals with one collection.

Assignment: Students will create a video demonstration about the advantages and disadvantages of spaying and neutering your pets. They will demonstrate the procedure using proper terminology regarding their reproductive system. Videos will be played in class.

Unit 10: Central Nervous System

1. Describe the neuron, the nerve impulse, and the synapse and explain the components of a reflex arc
2. Identify the major structures of the brain
3. Discuss the anatomy and function of the spinal cord
4. Compare and contrast the function of the sensory somatic system to the autonomic nervous system and differentiate between the two branches of the autonomic system

Assignment: Students will observe a veterinarian doing a neurological exam on an animal for nervous system issues. They will record data on what they observe and then discuss what types of treatments or therapies are possible for the diagnosis.

Assignment: Students will locate and properly extract the brain from their cat specimens. They will identify all the major parts and review their functions. Teacher will verbally quiz each group on their knowledge of the major lobes of the brain and their ability to discuss the functions.

Assignment: Students will add a layer to their continued anatomical overlay project that includes the major parts of the Central Nervous System.

Unit 11: Nutrition

1. List the six major components of animal diets, and discuss their structure and significance in nutrition
2. Explain the general principles in animal nutrition
3. Discuss the difference between dogs, cats and equine nutrition needs

Assignment: Students will take a tour of the local university feed mill and interact with animal nutritionists at the college. They will learn how different feeds are made and about possible career choices in animal nutrition.

Assignment: A guest speaker will come in to discuss feed options for raising livestock as market animals. He / she will discuss the different stages of growth and the components of the feed that will help the animal produce quality market products.

Unit 12: Common Disease and Disorders

1. Describe Koch's postulates
2. List the important distinguishing features and give example of major disease agents and discuss resulting diseases
3. Name the basic components of disease prevention
4. Describe the types of vaccines available and their roles in disease prevention
5. Classify diseases, match them with the domestic species in which they occur, and discuss their clinical significance
6. List and describe several diseases common in domestic animals that are contagious to humans
7. List the major methods used to diagnose disease and cite examples of disease diagnosis with each testing method

Assignment: Students will create a parasite "catalog" with color pictures, life cycle and diagnosis/treatment. Explain the specific steps to diagnosis of diseases and disorders by creating a visual chart to present to the class. Create a scenario to share with the class of an animal brought to the vet clinic
for diagnosis; have class solve scenario.

Assignment: Disease Research Report. Students will be assigned a disease that they have to research and develop a presentation with information regarding this topic. Information should include viral, bacterial, fungal category, symptoms / signs, species affected, treatment, and long term prognosis. Photos should be presented and / or videos of animals infected if possible. Possible methods of presenting include Power Point, Prezi, Google slides, or videos.

Assignment: Guest speaker RVT (Registered Vet Technician) to come in and give a demonstration on how to properly remove ticks from a dog / cat. Also, discuss common parasite control methods useful in small and large animal pets.

Unit 13: Principles of Surgery

1. Explain the clinical significance of the basic principles of successful surgery
2. Explain the healing of lacerations

Assignment: Students will participate in a suturing lab utilizing proper suturing materials, needle holders, and needles. The use of a banana as the "patient" will show the outcome of a simple interrupted suture technique. Students will be given guided instruction then will practice. Students will also demonstrate how to remove sutures using Lister bandage scissors. A final set of sutures will be graded.

Assignment: Students will be divided into groups to perform the the following demonstrations for the class: how to prepare a patient for surgery, how to properly put on a gown and gloves using an aseptic technique, how to pack a surgical pack, how to properly scrub in for surgery and how to monitor animals under anesthesia.

Assignment: Students will observed a neuter and spay surgery using their cat specimens. Students will fill out guided notes with the proper steps and use of common tools. The demo will be done by a local veterinarian. They will then try to perform either a spay or neuter (depending on the sex of their cat) on their animal with help from guest DVM. (Doctor of Veterinary Medicine)

Unit 14: Pharmacology

1. Define terms relating to general pharmacology
2. Explain the five schedules of controlled substances and their common use
3. Become familiar with pharmacologic agents their uses, adverse side effects and dosage form
4. Identify the parts of drug labels and inserts
5. List routes and describe route of drug administration and routes of drug excretion
6. Define biotransformation and list common chemical reactions involved in this process

Assignment: Students will create a drug label for 5 different but common prescriptions given to animals. They will use 5 case studies with recommendations and prescriptions given from the veterinarian. They will use a prescription label sheet to write out the information needed using proper medical abbreviations.

Assignment: Students will be given a prescription amount and have to demonstrate their knowledge of how to use a pill counter and use knowledge of medical math to physically count the proper number of pills to administer. Students will use candy (skittles or M&Ms) to pretend they are pills with set dosages.

Unit 15: Genetics

1. Debate the pro and con of genetic engineering animals for food, conservation and domestic pets
2. Describe the theory of classification of the animal kingdom
3. List common genetic diseases and disorders

Assignment: Students will be assigned a genetic disorder common to species. They will have to research information about the disorder as it pertains to the specie that usually presents these issues and they will give a short presentation describing their disorder.

Assignment/ Activity: An AKC (American Kennel Club) dog breeder will come in as a guest speaker to discuss common genetic disorders associated with breeding the incorrect combination of dogs in relation to their color and what common outcomes (blind, deaf, all white etc..) that occur. They will also discuss what genetic tests can be done prior to getting breeding dogs "certified" by a veterinarian.

Unit 16: Professional Career Opportunities

1. College education and career planning
2. Professional growth
3. Work ethics and employability skills
4. Resume writing
5. Interview techniques
6. Developing a professional portfolio

Assignment / Activity: Several guest speakers will come in to represent DVM, RVT, and assistant technicians to discuss their school and career readiness prior to their given profession.

Assignment: Students will all participate in mock phone conversations with common veterinary clinic client interactions. Each will take a turn playing the receptionist and the client. After the situation is done, the class will discuss how each person reacted and what you as the technician or receptionists should do in the situation.

Assignment: Students will develop a professional portfolio for a designated "job opportunity" in the veterinary science field. It will include a cover letter, resume, job application, a letter of recommendation and 4 pages of demonstrated skills with photos / descriptions.

Assignment: Each student will go through a mock job interview situation to get practice with real job opportunities. Guest interviewers will be invited to come in to the class to conduct the interviews. They will all be asked to demonstrate a basic veterinary technical skill in front of the panel. Feedback and score sheets will be filled out for each student.

VITICULTURE OCCUPATIONS I

COURSE DESCRIPTION

CBEDS CODE: 4010

CBEDS TITLE: CROP AND SOIL SCIENCE

ROC/P COURSE TITLE: VITICULTURE OCCUPATIONS I

JOB TITLES FOR WHICH STUDENTS WILL BE PREPARED

TITLE	D.O.T. CODE
Farmer, Fruit Crops, Bush and Vine (agriculture)	403.161-014
Harvest Worker, Fruit (agriculture)	403.687-018
Winery Worker (beverage)	521.685-370
Vine Pruner (agriculture)	403.687-022
Grape Crusher (beverage)	521.685-094
Grape Grower (agriculture)	403.161-014

COURSE DESCRIPTION **Total Course Hours - 180**

This class is designed to provide a foundation in viticulture and vineyard management for students in grades eleven and twelve. The course curriculum promotes extensive student interaction and hands-on training with a particular emphasis on career awareness. This course prepares students for entry-level vineyard and winery positions or for related advanced training at a college or university. Students also earn articulated credits at Allan Hancock Community College.

VITICULTURE OCCUPATIONS I

COURSE OUTLINE

	Units	**Hours**
I.	COURSE ORIENTATION	5
	a. R.O.P. regulations and recordkeeping	
	b. Course competency list	
	c. Santa Barbara County Crop Report/Grape Crush Report	
	d. Vineyards and wineries in Santa Barbara County	
	e. Equipment dealers	
	f. Occupations in the vineyard/winery industry	
	g. Post secondary viticulture education programs	
II.	BASIC USES FOR GRAPES	5
	a. Four uses of grapes	
	b. Characteristics	
	c. Varieties	
	d. Table grapes	
	e. Raisins	
III.	GRAPEVINE PHYSIOLOGY AND STRUCTURE	18
	a. Plant and animal cells	
	b. Vine physiology	
	c. Leaf, shoot and root tissue	
	d. Parts of the vine	
	e. Root system	
	f. Fruit cluster	
IV.	PROPAGATION	18
	a. Cutting from vines	
	b. Bench grafting	
	c. Whip graft	
	d. Field bud	
	e. Propagation	
	f. Root stock/scion	
	g. Cultivars	
	h. Vitis Species	
V.	ESTABLISHING THE VINEYARD	20
	a. Soil samples/soil profiles	
	b. Soil amendment	
	c. Vineyard design & development	
	d. Diagram a vineyard	
	e. Layout	
	f. Selection	
	g. Planting	
	h. Sustainable agricultural practices	

Units		Hours
VI.	FERTILIZING YOUNG AND MATURE VINES	12
	a. Essential elements	
	b. Functions	
	c. Fertilizer needs	
	d. Applying fertilizer	
	e, Vine response	
	f. Nitrogen, potassium and phosphorus deficiency determination	
VII.	IRRIGATION PRINCIPLES	10
	a. Soil moisture	
	b. Moisture absorption	
	c. Response	
	d. Water applications	
	e. Irrigation systems	
	f. Vineyard irrigation	
	g. General principles	
VIII.	GRAPE TESTING/HARVESTING	20
	a. Grape, berry sampling	
	b. Criteria for harvesting	
	c. Maturity	
	d. Harvesting care	
	e. Harvesting procedures	
	f. Vine monitoring	
	g. Harvest parameters	
IX.	SOILS	8
	a. Soil testing	
	b. Vineyard soils	
	c. Santa Barbara County soils and soil map	
	d. Erosion control	
X.	PRUNING	25
	a. Pruning and training	
	b. Judge vigor and capacity	
	c. Principles of pruning	
	d. Dormant pruning	
	e. Bud fruitfulness	
	f. Summer or herbaceous pruning	
	g. Pruning systems	
XI.	VINEYARD EQUIPMENT	12
	a. Tillage and weed control equipment	
	b. Sprayers	
	c. Mechanical hedging	
	d. Mechanical harvesters	
	e. All terrain vehicles	
	f. Vineyard tractors & equipment	
	g. Vineyard equipment safety	

Units	Hours
XII. WINERY EQUIPMENT	10
a. Grape crusher	
b. Grape press	
c. Pumps	
d. Filters	
e. Wet environment safety procedures	
f. Winery equipment safety	
g. Confined space safety requirement	
XIII. ALCOHOL REGULATIONS	5
a. Labeling requirements	
b. Operating procedures	
c. Reporting requirement	
d. Application process	
XIV. JOB SEEKING SKILLS/GENERAL WORKPLACE SKILLS	12
a. Job Search Fundamentals	
b. Résumé and Employment Applications	
c. The Employment Interview	
d. General Workplace Skills	
1. Job Attitudes/Work Ethics	
2. Personal Organization, Goal Settings and Time Management	
3. Personal Grooming	
4. Oral and Written Communication	
5. Teamwork	
6. Common Workplace Rules and Regulations	
7. Further Training and Career Ladders	
e. Leadership development/FFA	
f. Supervised Occupational Experience Program (S.O.E.P.)	
TOTAL HOURS	**180**

VITICULTURE OCCUPATIONS I

_____ has completed ___ hours of 180 hour co in

Viticulture Occupations I and has attained a competency level of: (n/a) not applicable; (0) does not meet basic standards; (1) basic; (2) good; (3) excellent as certified by instructor in the following skill areas:

COMPETENCY LEVEL	This student can:
_____	Read and record crop and grape crush report
_____	Identify characteristics and varieties of wine grapes
_____	Understand physiology and structure of grapevines and parts of the vine
_____	Demonstrate the ability to properly graft vines
_____	Demonstrate the ability to properly propagate vines
_____	Properly design vineyards
_____	Properly test soils for nutrients and desirable qualities for vines
_____	Properly identify different methods of applying fertilizers
_____	Properly read and understand fertilizer labels
_____	Understand and apply irrigation principles
_____	Properly use soil probe to detect moisture
_____	Demonstrate proper pruning and removal of vine shoots
_____	Demonstrate grape testing and harvesting criteria and post harvest care
_____	Read and understand Santa Barbara County soil reports and soil maps
_____	Understand differences of various pruning techniques
_____	Demonstrate safe tools and equipment usage in vineyards
_____	List and identify techniques of grape crushing
_____	Understand alcohol regulations and labels.
_____	Identify nutrient differences and fertilizer needs
_____	Demonstrate ability to react to vine response to fertilizer application
	EMPLOYABILITY RELATED - This student can:
_____	Exhibit safety consciousness
_____	Prepare a personal résumé and job application form/job interview
_____	Demonstrate knowledge of appropriate appearance and dress
_____	Demonstrate the ability to follow directions and ask questions
_____	Demonstrate initiative
_____	Demonstrate dependability
_____	Demonstrate punctuality and regular attendance
_____	Demonstrate ability to cooperate with others with a positive attitude

Title: Accounting and Finance

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: Computer Applications (Recommended)

Co-requisites: None

Integrated (Academics / CTE)?	Yes
Grade levels:	11th, 12th

ourse Description

urse overview:

Upon completion of Accounting and Finance students will understand the role accountants play in business and society. Students will develop and understand the working knowledge of an annual report, financial statements and be able to analyze and interpret financial statements information and make informed financial decisions. With the use of technology innovation tools students engage in a course of 21st Century study which connects students to the world of work.

urse content:

Orientation - Course objectives, expectations and procedures

Orientation	Course objectives, expectations and procedures
Topic	Example
What is accounting?	

INTRODUCTION – Review/Learn Excel program by completing a tutorial for Excel basics and how it is used for this course.

- Students will preview power point presentation to build foundation for course presentation methods. Students will practice and participate in work together activities of guided practice.
- Students will complete, compare and analyze problems using excel.
- Using a piece of paper students will create a graphic organizer to separate and analyze transactions.
- Students will compare and contrast documents. Group discussion

Processes of planning, recording, analyzing, and interpreting financial statements.	• Preview financial Statements and reports • Complete personal net worth statement

Accounting Equation	• Vocabulary • Assets Liability Owners equity – draw demonstrate and explain equation • Excel spreadsheet • Classify accounts assets, liability or owner's equity and demonstrate their relationship in the accounting equation

- Complete Work Together P. 9, 17, 22, 26 Group Instruction and PowerPoint
- Complete Application Problem P. 25 using working papers
- Complete Analyzing Nike's financial Statements P. 27
- Analyzing transactions into Debit and Credit Parts P. 44
- Illustrate/Create transactions Model P. 44
- Forensic Accounting P. 48 Students are given opportunity to play the role of accountant.
- Mastery Problem 2M P. 53 Analyzing transactions into credit and debit parts. Print and turn in.

How business activities change the accounting equation.	• Read a business plan • Vocabulary • Label and define parts of a plan
Revenue and Expense Concepts	• Compare and contrast the types of transactions that increase and decrease owner's equity. • Explain the difference between
Fitting transactions into debit and credit parts.	• Demonstrate use and explanation of T accounts • Restate and apply the 4 questions necessary to analyze transactions for starting a business into debit and credit parts.
Owners Equity Accounts	•
Journalizing Transactions	• Define a journal • Compare and contrast different kinds of source documents. • Identify 4 parts of a journal entry • Analyze and record cash transactions, owner's equity, or paying on account using source documents. • Prove and rule a journal. • Demonstrate how to prove cash • Identify and correct errors.

- Complete Work Together 2-1 P. 35, 42, 49 Group Instruction and PowerPoint
- Complete interactive spreadsheets P. 69 & P. 75
- Complete Financial Literacy P. 76 of text. Read and apply transaction theory to a scenario based problem, answer questions and participate in group discussions.
- Critical Thinking use internet to research. Students will journalize, demonstrate, explain, classify account assets, liabilities, owner equity by creating excel spreadsheet analysis. Group share out
- Students will plan and prepare a graphic organizer for journalizing.
- Completion of Mastery 3-M P. 86 print and turn in. Journalizing transactions and proving and ruling a multicolumn journal. Plan and prepare an excel spread sheet, print and turn.
- Explore Accounting P. 116 Logical, consistent account transactions
- Accounting in the Real World, Hard Rock Café critical thinking questions linked to the chapter content, P. 121 questions and answers.

Posting to a General Ledger

- Construct a chart of accounts
- Demonstrate principles of numbering accounts
- Complete steps to open general ledger accounts
- Post general debit and credit columns to a journal
- Analyze journal entries
- Demonstrate how to correct errors made in the posting process

- Complete Work Together P. 64, 69, 75, 81 Group Instruction and PowerPoint
- Complete Application Problems 4 – 1, 2, 3, 4 P.117 – Prepare a chart of accounts, posting separate amounts to a general ledger and posting column totals to a general ledger
- 21st Century Skills Plan and prepare a chart of accounts P. 119 Using a publishing software, present results.
- Financial Literacy P.119 Compare, contrast, and explain linked to chapter content, prepare chart of accounts and create a ledger.

Cash Control Systems

- Record of deposit on a check stub
- Endorse checks using blank, special, or restrictive
- Complete bank statement reconciliation
- Journalize electronic funds transfer
- Establish petty cash fund
- Prepare petty cash report

- Complete Work Together P. 97, 102, 111, 117 Group instruction and PowerPoint
- Complete ON Your Own P. 128, 134, 139, 146 Group Instruction and PowerPoint
- Application Problem P. 149, 5 – 1, 2. Reconciling a bank statement; journalizing a bank service charge, dishonored check, and petty cash transactions.
- Ch 5 Mastery P. 150 Journalize transactions using Excel spreadsheet software, print and turn in.
- Reinforcement Activity PART 1 combined learning from CH 1 – 5. P. 153 – 155; Accounting cycle for a proprietorship, journalizing and posting transactions. Students compare with group/peer editing using working papers provided and Excel.
- Accounting in the Real World P. 157 Research CPA career opportunities, critical thinking question and answer.

Worksheets and Adjusting Entries

- Prepare the heading of a worksheet
- Prepare a trial balance worksheet
- Analyze and explain entries
- Total and rule worksheet
- Journalize and post adjusting entries

Financial Statements	• Prepare and income statement • Calculate and analyze financial ratios using the income statement • Prepare a balance sheet

- Explore Accounting P. 207 Comparative and Interim Financial Statements, Question and answers related to chapter concepts that correspond to higher level thinking skills.
- Complete Work Together P. 198 -210 Group Instruction, Power point, guided practice.
- Application Problems 7 – 1, 2 P. 208
- 7-M Mastery P. 209 Preparing and income statement and a balance sheet using excel, print and turn in.
- 21st Century Skills P. 211 Comparing Financial documents plan and prepare excel spread sheet.
- Comprehensive Reinforcement Activity Part B P. 238 Using Excel students will complete a simulation/reinforcement activity covering P. 1 – 238.
- Forensic Accounting critical thinking P. 206 Excel spreadsheet reinforcement
- Prepare a graphic organization chart, trail of financial accounts

PART 2

Accounting for Purchases and Cash Payments	• Identify differences in sole proprietorship and corporations • Accounting procedures for ordering • Purpose of a special journal • Post purchases to accounts • Demonstrate use of a cash payments journal • Use of a petty cash fund • Identify differences in ledger accounts
Accounting for Sales and Cash Receipts	• Record Sales on account using a journal • Journalize, post, prepare cash receipts • Post cash receipts

- CH 9/10 Complete Work Together and On Your Own , group instruction, power point, guided and independent practice
- Interactive spreadsheet P. 310
- Ethics in Action, Sharing the News Explore Accounting P. 276, Use the Internet to research computerized accounting processes – report and recommend, suggest businesses that could benefit from the use of these systems.
- Accounting in the Real World, P. 283 Best Buy- Strategy and Brands, Critical Thinking and applications
- CH 10 Mastery problem P. 314, Use Excel Print and turn in.
- Forensic Accounting – Theft at Mini Golf P. 306 Analyze/Interpret data to answer questions.

Transactions using the General Journal	• Explain the purpose of the general journal • Understand the accounts for purchases returns and allowances • Explain retained Earnings • Explain dividends • Record connecting entries

- CH 11 P. 326 – 339 Complete Work Together and On Your Own, group instruction, power point, guided practice
- Interactive Spreadsheets P. 340
- Careers in Accounting, P. 335 Activity research on the internet and investigate 5 jobs in accounting compare and contrast data. Plan prepare and present power point descriptive activity.
- Application problem P. 339 Journalize spreadsheets

Payroll

- Analyze payroll transactions
- Calculate and record payroll taxes
- Prepare payroll tax reports
- Journalize payroll taxes

- CH 12 – 13 P. 335 - 405 Complete Work Together and On Your Own, group instruction, power point, guided practice, excel spreadsheet print and turn in.
- Accounting in the Real World P. 377 Google critical thinking off unique opportunities to employees. Class Group instruction.
- Summative 13 – 1
- Evaluation 13 – 2 Calculate, plan, post prepare tax rates, social security and medicate tax groups.
- Begin Reinforcement Act 2 Part A, P. 406 CH 9 – 17 Summative problem
    - Complete Accounting Cycle Using Excel, print and turn in

Trial Balance

- Prepare an unadjusted trial balance
- Calculate depreciation
- Post adjusting entries
- Adjust depreciation
- Prepare an adjusted trial balance

- CH 16 – 17 P. 472 – 543 Complete Work Together and On your Own, group instruction, power point and guided practice instruction
- Complete accounting in the real world P. 439 Gap Inc. Critical thinking, plan, prepare, and compare group question answer share out.
- 21st Century Skills P. 467 Creativity and Innovation critical thinking, problem solving, communication and collaboration. Group discussion
- Plan and Prepare Balance Sheet
- Plan and Prepare Income Statement – guided practice P. 473
- Guided practice P. 474 – 478
- Global Awarenes P. 500 International Accounting research project using the Internet. Create and present a power point presentation featuring other countries accounting standards and practices.
- Apply your Understanding print and turn in.

Financial Statements and Analysis

- Prepare an income statement, statement of equity, balance sheet, and closing entries
- Prepare a post-closing trial balance
- Calculate and interpret
- Analyze a balance sheet

- Complete Reinforcement Act 2 Part B, P. 406 through 545
- CH 9 – 17 Summative problem
    - Complete Accounting Cycle Using Excel, print and turn in

Course Title

Accounting 1A

Description of Target Group

This course is designed as an elective for all students. It is recommended that students be in the 10th, 11th, or 12th grade. Students should not take this course concurrently with a course in Record Keeping.

Purpose

This one-semester course provides instruction in the organization of retail and service businesses and gives training in the elements of accounting for business or personal use.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. A basic understanding of the accounting equation: assets = liabilities plus proprietorship.
2. Apply the principle of equal debits and credits in analyzing common, recurring business transactions.
3. Record common, recurring business transactions in journals.
4. Post transactions from journals to ledgers.
5. Prepare and properly complete a simple six column work sheet.
6. Prepare and properly complete simple financial statements from a six column work sheet.
7. Describe orally and/or in writing the basic differences between a service type and a merchandising business.
8. Acquire a basic accounting vocabulary and demonstrate the ability to properly spell these vocabulary terms.
9. Responsibility, initiative and a positive attitude in completing assignments.
10. Work habits and work standards that will be acceptable for the business world.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Material will be presented to the students through lectures, class discussions, demonstrations, and in some instances, individualized learning.

Course Title

Accounting 1B

Description of Target Group

This course is designed as an elective for all students who have completed Accounting 1A. It is recommended that students be in the 10th, 11th, or 12th grade. Students should not take this course concurrently with a course in Record Keeping.

Purpose

This one semester course provides instruction in the organization of retail businesses and gives training in accounting procedures used for more specialized business transactions.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Prepare and properly complete an eight column worksheet.
2. Prepare and properly complete the following financial statements from an eight column worksheet; income state, balance sheet, and capital statement.
3. Demonstrate the ability to adjust and close the books for a merchandising business by correctly journalizing these entries and ruling ledger accounts.
4. Demonstrate the ability to correctly prepare a payroll and to record payroll transactions in a journal.
5. Demonstrate the ability to set up and maintain a petty cash fund.
6. Demonstrate the ability to correctly account for sales taxes in a journal.
7. Demonstrate the ability to correctly journalize transactions involving sales returns and purchase returns.
8. Demonstrate the ability to correctly journalize transactions involving depreciation of fixed assets and their disposal.
9. Complete at least one practice set.
10. Responsibility, initiative, and a positive attitude in completing assignments.
11. Demonstrate work habits and work standards that will be acceptable for the business world.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Material will be presented to the students through lectures, class discussions, demonstrations and in some instances individualized learning.

Course Title

Accounting 2A

Description of Target Group

This course is designed as an elective for all 10th, 11th, and 12th grade students. It is recommended that students have successfully completed Accounting 1B and that they do not take this course concurrently with a course in Record Keeping.

This one-semester course provides instruction in the organization of retail and service businesses and provides training in the more technical elements of accounting.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate the ability to correctly account for departmental purchases and cash payments in a journal.
2. Demonstrate the ability to correctly account for departmental sales and cash receipts in a journal.
3. Demonstrate the ability to complete the financial statements for a departmentalized business.
4. Demonstrate the ability to correctly account for bad debts, depreciation and depletion of fixed assets, prepaid and accrued expenses, income received in advance and accrued income in a journal.
5. Describe orally and/or in writing what a partnership is and how it is formed.
6. Demonstrate the ability to correctly divide the earnings of a partnership.
7. Demonstrate the ability to correctly complete the end-of-period work for a partnership.
8. Describe orally and/or in writing the meaning of a voucher system, inventory control systems, and budgetary control systems.
9. Complete at least one practice set.
10. Demonstrate work habits and work standards that will be acceptable for the business world.
11. Responsibility, initiative and a positive attitude in completing assignments.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Books Used in the Santa Maria Joint Union High School District

Activities

Material will be presented to the students through lectures, class discussions, demonstrations, and in some instances, individualized learning.

Course Title

Accounting 2B

Description of Target Group

This course is designed as an elective for all 10th, 11th, and 12th grade students. It is recommended that students have successfully completed Accounting 2A and that they do not take the course concurrently with a course in Record Keeping.

Purpose

This one semester course provides advanced knowledge in the organization of retail and service business and provides training in the more technical elements of accounting.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate an understanding of Accounting Control Systems.
2. Demonstrate an understanding of accounting for taxes, notes and drafts.
3. Demonstrate an understanding of corporate accounting.
4. Continue to acquire an accounting vocabulary.
5. Demonstrate ability to follow verbal as well as written instructions.
6. Demonstrate a complete understanding of single proprietorship, partnership, and corporate accounting.
7. Complete an Accounting Practice Set with emphasis on corporation accounting.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Course Title

Advanced Secretarial Skills

Description of Target Group

This course is designed as an elective for business students on the 11th and 12th grade levels. Two years of typing is highly recommended. This course may be taken for two semesters.

Description of Course

This course is designed for those students who are seriously interested in pursuing a career in the secretarial field. It is highly recommended for the student who has completed one year of shorthand and for the typing. To meet the needs of each student, some of the work will be on an individualized basis.

Course Objectives

The students should:

1. Demonstrate proficiency in using the word processing equipment, such as the transcribing machines.
   Sample Performance Objectives: Type letters, forms, inter-office memorandums, and similar forms with accuracy and mailability.
2. Develop and use English language skills commonly employed in business relating to punctuation, capitalization, grammar, sentence structure and proofreading. (This will also facilitate passing the district proficiency test.)
   SPO: Demonstrate the ability to explain and define a number of business terms.
   SPO: Punctuate, capitalize, and use numbers correctly in a group of sentences lacking these essentials.
   SPO: Proofread letters and reports containing common errors in grammar and style and make necessary corrections.
3. Take dictation from instructor and from tapes at various rates, depending upon individual speeds of the students. (For shorthand students only.)
   SPO: Type transcribed material within the allotted time.
   SPO: Transcribe at 95 percent accuracy on three-minute dictation tests, and for mailability on others, using a variety of legal, medical, and technical material.
4. Demonstrate typewriting proficiency
   SPO: Demonstrate proficiency in typing business forms completely and accurately.
   SPO: Develop a 5-minute timed writing speed that is considered an employable speed by today's standards.
5. Recognize and explain in detail and importance of appropriate dress, grooming and social behavior that is necessary for success in business and office occupations.

SPO: Participate in a teacher-directed classroom discussion on those personality traits considered desirable in office workers, including good work ethics.
SPO: Complete a self-evaluation checklist of personality traits that are desirable for the successful office worker.
SPO: Develop proficiency in appropriate dress and grooming by today's standards.

6. Describe and discuss the procedures in investigating career opportunities in the business and office methods of securing employment. (Given individually to those students who have not completed this unit in other business classes.)
   SPO: List and describe three sources or agencies for job information in office occupation.
   SPO: Complete a letter of application, personal data sheet, and thank you letter.
   SPO: Participate with other members of this class in role-playing a job interview situation.
   SPO: Identify business programs at the community college level, which would provide the advanced preparation necessary for specified job.
   SPO: Participate in sample employment examinations.
7. Develop a vocabulary in data processing.
   SPO: Demonstrate proficiency in data processing and computer terminology.

Standards of Expected Student Achievement

The student should:

1. Participate in group classroom activities.
2. Complete the assigned work (depending on individual student's requirements).
3. Pass tests at the prescribed minimum level for employment today.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District. Also teacher prepared materials and machine tapes

Activities

The student will progress through this course with a combination of group and individualized activities, based upon the diagnosed needs of the students. Activities will include dictation in shorthand, machine transcription, miscellaneous typing activities, field trips and speakers.

  4. Monetary policy (Chapter27)

X. Economic Fluctuations & International Trade (Chapters 30- 31)

Xl. Economic Growth (Chapter28)

Course Title

Business Economics, United States (P)

Description of Target Group

This course is a one-semester course required to meet the district's social studies graduation requirement. Business Economics (P) is designed for 12th-grade students.

Purpose

The course is designed to enable students to understand the principles of economics and of our economic system. Students will compare our system to those of other countries and make reasoned judgments about economic questions.

This course will meet the state mandated requirement that high school graduates successfully complete a course in economics.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to demonstrate fundamental economic skills and knowledge in the following areas:

1. Fundamental economic concepts and terms.
2. The tools of analysis such as charts and graphs.
3. Economic indicators such as gross national products, inflation, and measures of unemployment.
4. Understanding basic economic problems facing society such as scarcity of resources.
5. All societies have economic systems determining choice of production.
6. U.S. economy characterized by competition and market structure.
7. Individual should use economic concepts in making consumer decisions.
8. Role that labor, agriculture, and business organizations have played in the U.S. economy.
9. Role of government in market economy and establishing monetary policy.
10. Role of financial institutions.
11. Understanding business cycles with periods of inflation, deflation, and unemployment.
12. U.S. economic history.
13. Importance of international trade and migration across international borders.
14. How values influence monetary spending and opportunities for students to develop creative thinking skills.

19. Brief Course Description

This course is for the advanced business student. Students will be involved in preparing computer lab materials in advance for the teacher, as well as assisting the teacher and student during computer lab assignements and activities. This includes but not limited to gathering materials, computer maintenance, troubleshooting, and student guidance during curriculum application.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Business Lab Technicians will:

- Be able to read and follow book and class activities and gather all the necessary Materials and equipment for the computer lab
- Be able to use proper technology procedures when they are in the computer lab.
- Assist other students during the computer and class activities.

21. Course Objectives

Business Lab Technicians will:

- Assist the instructor in setting up computer stations with the necessary equipment and materials needed to complete class activities.
- Inventory, organize, and clean equipment and supplies. (computer maintenance)
- Demonstrate knowledge of computer skills to assist instructor in preparing word documents, excel spreadsheets, power point presentations, conduct internet research, etc.
- Assist the instructor during demonstrations
- Assist the instructor during computer demonstration and in helping the other students.
- Monitor supplies, handouts, technological equipment for students.
- Troubleshoot computer problems that arise.
- Understand and enforce the district technology use guidelines.

22. Course Outline

Students will know the following computer lab techniques as a business lab technician:

- Demonstrate knowledge of computer skills to assist instructor in preparing Word documents, Excel spreadsheets, PowerPoint presentations, Internet research, etc.
- Prepare student activity keys and evaluation forms
- Be responsible for helping to maintain a clean organized computer lab.
- Assisting students researching and formatting data for reports.
- Computer skills (including troubleshooting & general maintenance of computers.)
- Know and understand how to set-up, demonstrate and use Multi-Media devices, such as digital cameras, Smart Boards, scanners, DVD players, etc.

23. **Texts & Supplemental Instructional Materials**
24. **Key Assignments**
25. **Instructional Methods and/or Strategies**
26. **Assessment Methods and/or Tools**

C. HONORS COURSES ONLY

Please refer to instructions

27. **Indicate how this honors course is different from the standard course.**

D. OPTIONAL BACKBROUND INFORMATION

Please refer to instructions

28. **Context for Course (optional)**
29. **History of Course Development (optional)**

Title: Communication Technology

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: Computer Applications 1 (Recommended)

Co-requisites: None

Integrated (Academics / CTE)? Yes

Grade levels: 11th, 12th

ourse Description

urse overview:

By the end of this course students will appreciate the importance of communication in their personal and professional lives, know what strategies to employ in different situations, and effectively use technology to communicate their messages. This course will enhance students' preparedness for college and employment with essential communication skills using technology. Upon successful completion of this course students will be able to :

1. Use a variety of communication strategies and techniques with the use of information technology.
2. Format, compose, and revise essays, memos, business letters, notes, emails, newsletters, flyers, reports, job-search documents, and multimedia presentations utilizing Microsoft Office software.
3. Understand the Elements of Communication (audience, sender, receiver, message, purpose) and utilize the Writing Process (plan, write, revise) to create effective written and oral messages.
4. Learn to improve grammar and tone in written and oral communications
5. Demonstrate the ability to apply critical thinking and decision making skills.
6. Critique and evaluate communication behaviors and processes in various settings.
7. Examine both non-literary and literary prose with the emphasis on developing their ability to extend their understanding of complex reading material.
8. Collaborate with others to analyze information and create and deliver communications.
9. Manage computer and Internet tools to make work more efficient.
10. Develop the ability to adapt what is learned in one content area to new problems and settings to deepen critical reading, writing, and thinking skills.
11. Prepare to enter the workforce by completing a job skills training workshop

urse content:

I.* Orientation

A. Course objectives, expectations, procedures	A. Review course objectives, expectations, procedures.
B. Introduction to workplace communication	B. Understands what professional communications entail.
C. ROP	C. Complete ROP paperwork
D. Safety Training	D. Understand office safety, basic first aid procedures, and online SIPE training certificate
E. Employment outlook/ opportunities	E. Reviewed employment outlook/opportunities.
F. File management	F. Set up file system for saving and retrieving work and managing directories

II. The Study of Communication

Using the textbook Communicating for Success, student s will examine the five elements of communication and the stages of the writing process to become familiar with and recognize effective writing. Students will look at and create a several types of documents that incorporate the use of formatting, editing, self-evaluation, and peer editing, and partner projects to demonstrate their ability to communicate effectively.

TOPIC	EXAMPLE
A. Elements of Communication	A. Identifies the 5 Elements: Audience, sender, receiver, purpose, content
B. Writing Process	B. Identifies the 3 stages: planning, writing, revising
C. Editing & Proofreading	C. Practice editing a document for form and accuracy
D. Typing & Ergonomics	D. Practice keyboarding for efficiency and accuracy and understand ergonomics
E. Purpose and Content	E. Analyze the purpose & content of different types of business communications
F. Persuasive writing	F. Learn how to effectively influence with writing style
G. Compare and Contrast	G. Set up data in tables to compare information
H. Analyzing data and drawing conclusions	H. Learn how to organize reports for making decisions and recommendations & proving opinions
I. Giving Instructions	I. Learn to write and give effective instructions for favorable outcomes
J. Research & Reports	J. MLA format and effectual written presentation of content

III. MS Office Word

Students will learn MS Office Word features while creating a variety of professionally styled workplace documents. They will utilize technical reading skills to follow directions and steps in the Microsoft Office textbook.

TOPIC	EXAMPLE
A. Correct formatting techniques of workplace documents	A. Memo, Fax, Email, Note, Letters, Mail merge, Press Release
B. Editing features, hyperlinks	B. Spelling/grammar, find & replace, adding and removing links
C. Format paragraphs, lists, lines, tabs, borders, shading	C. business report, construction bid, tri-fold brochure
D. Format page, sections, breaks, columns, headers & footers, tables, endnotes, footnotes, sources & bibliography	D. Business and informational brochures
E. Reports	E. MLA format of reports and bibliography
F. Brochure/Pamphlet with images	F. Travel brochure
G. Usability – Readability Statistics	G. Use Flesch-Kincaid levels to review work

IV. MS Office PowerPoint

Following steps in the Microsoft Office textbook, students will learn to use MS Office PowerPoint to create effective and interesting presentations.

TOPIC	EXAMPLE
A. Create a basic presentation	A. Create and add text to a presentation
B. Add styles, images	B. Format a presentation and add pictures
C. Use tables, graphs, shapes	C. Add and format graphic information
D. Animations and transitions	D. Add movement to a presentation
E. Color choices and readability	E. Edit a presentation for effectiveness

V. Research Paper and Presentation

Students learn about a famous entrepreneur by researching their life and how they came into success. They will write a correctly formatted report and create a presentation for the class.

TOPIC	EXAMPLE
A. Research and notes/outline	A. Online research
B. Writing & Revising	B. MLA formatted report
C. Bibliography	C. Proper Works Cited
D. PowerPoint	D. Create a presentation and show to audience

VI. Job Search and Workplace Skills

Research and learn about the types of careers that interest them. Students learn the proper way to conduct themselves in the workplace to optimize success. Students will participate in six weekly job skill and interviewing seminars put on by the North county Volunteer Corps.

TOPIC	EXAMPLE
A. Personal Inventory	A. Identify career interests

B. Resume	B. Create an effective resume
C. Job Skills Training Workshop	C. Attend six sessions
D. Employment Paperwork	D. Application, resume, cover letter
E. Workplace Attire	E. Explain why dress is or isn't appropriate
F. Communication & conflict	F. How to talk to supervisors, colleagues, customers and manage negativity
G. Interviews	G. What to expect, how to prepare, mock interview practice
H. Financial Literacy	H. Paycheck and taxes

VII. Introduction to Website Programming

Understand basic programming with HTML. Students will create and original webpage outlining the job skills learned throughout the year.

TOPIC	EXAMPLE
A. Saving web documents	A. Use Notepad to create web page
B. Text, lines, lists	B. Learn basic HTML tags
C. Color, headings, fonts	C. Add formatting with HTML and CSS
D. Links	D. Add onsite and offsite links to a page
E. Images	E. Add and format pictures

VIII. Career/Occupational Knowledge and Workplace Skills (infused throughout the course)

Students will demonstrate career skills that will enable them to be successful in the workplace and in post-high school educational settings. Teamwork and collaboration are encouraged and practiced. Critical thinking and problem solving are developed through independent project based learning.

TOPIC	EXAMPLE
A. Technology and information	A. Accessing and utilizing technology and information.
B. Safety standards	B. Practicing occupational safety standards.
C. Critical thinking and solving problems	C. Thinking critically and solving problems effectively.
D. Basic skills in reading, writing, mathematics, listening and speaking	D. Uses basic skills in reading, writing, mathematics, listening and speaking as they relate to occupation specific skills.
E. Real world problems and situations	E. Applying knowledge to real world problems and situations.

F. Independent & collaborative work	F. Works independently and collaboratively.
G. Communication	G. Communicates effectively and appropriately
H. Reliability	H. Performs reliably and responsibly.
I. Diversity	I. Working with diverse populations effectively and respectfully.
J. Punctuality and Dependability	J. Is punctual and has good attendance
K. Directions	K. Follows directions and asks questions
L. Supervision	L. Works well with minimum supervision.
M. Cooperation	M. Is cooperative and works effectively with peers
N. Initiative	N. Takes initiative by working beyond minimum requirements.
O. Grooming	O. Meets job standards of neatness and grooming.
P. Constructive Criticism	P. Responds appropriately to constructive criticism.

Course Title

Communication Technology A - ROP

Description of Target Group

This course is the first semester of a two semester elective course designed for juniors and seniors planning to enter the workforce or continue their education at the college level.

Purpose

This is the first semester of a one-year course. The skills taught in this course prepare students for employment, provide them with the necessary skills to complete their college studies and provide them with essential communication skills to effectively use technology in their daily lives. The students will read and comprehend technical writing in order to produce original documents as well as documents from the texts.

Prerequisites

Successful completion of Keyboarding A and Keyboarding B or type 35 wpm.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Reading Skills

- ✓ Demonstrate comprehension of technical writing as in word processing and desktop publishing manuals.
- ✓ Demonstrate a basic understanding of the information processing concepts and basic word processing terminology.
- ✓ Utilize reference materials to solve problems.
- ✓ Research software documentation and help screens.

Writing Skills

Produce and format documents such as letters (personal business and business), memorandums and reports.

- ✓ Key documents with speed and accuracy.
- ✓ Incorporate headers, footers and page numbers where appropriate.
- ✓ Create footnoted documents.
- ✓ Create outlines.
- ✓ Create columns of texts.
- ✓ Create tables for a variety of uses.

- ✓ Utilize software features to edit documents.
- ✓ Identify and use universal proofreader's symbols.
- ✓ Identify errors using appropriate proofreading skills.

Combine documents using software features.
- ✓ Merge variable and constant information to create new documents.
- ✓ Generate mailing labels from merged letters.
- ✓ Prepare other identification labels and business cards.
- ✓ Move or copy between documents.
- ✓

Grammar Skills:
- ✓ Compose documents using correct grammar.
- ✓ Demonstrate ability to use the spell-check feature of the software.
- ✓ Demonstrate ability to use the grammar-check feature of the software.
- ✓ Demonstrate ability to use the thesaurus to enhance their documents.

Listening Skills:
Listen to and follow oral instructions.
- ✓ Actively participate while new concepts are being demonstrated by the teacher.
- ✓ Produce a document after receiving oral instructions from the teacher.

Assessment:
Students will demonstrate competence by:
- ✓ Effectively creating assignments by following technical written instructions.
- ✓ Receiving a passing grade on written tests.
- ✓ Producing documents from oral instructions by the teacher.
- ✓ Demonstrating the ability to transfer knowledge of one area to another.

Instructional Materials

Current word processing software
Computer Workstation
Current textbooks for training in word processing

Activities

The students will apply their skills by producing documents as directed by the text and the teacher. They will further demonstrate their ability by creating their own projects.

Course Title

Communication Technology B - ROP

Description of Target Group

This course is the second semester of a two semester elective course designed for juniors and seniors planning to enter the workforce or continue their education at the college level.

Purpose

The skills taught in this course prepare students for employment, provide them with the necessary skills to complete their college studies and provide them with essential communication skills to effectively use technology in their daily lives. The students will read and comprehend technical writing in order to produce original documents as well as documents from the texts. This course will also prepare students for competing in the job market by preparing a professional résumé, an application and a letter of application. They will also participate in a mock interview.

Prerequisites: Successful completion of Communication Technology A.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Reading Skills:
- ✓ Demonstrate comprehension of technical writing as in word processing and desktop publishing manuals.
- ✓ Demonstrate a basic understanding of the information processing concepts and basic word processing terminology.
- ✓ Utilize reference materials to solve problems.
- ✓ Research various styles of résumés.
- ✓ Research a variety of employment letters.

Writing Skills:
Produce and format documents such as letters (personal business and business), memorandums, reports and tables.
- ✓ Key documents with speed and accuracy.
- ✓ Adjust spacing, tabs, centering, margins and other formatting features.
- ✓ Incorporate headers, footers and page numbers where appropriate.
- ✓ Create footnoted documents.
- ✓ Create outlines.
- ✓ Create a variety of documents utilizing the Table feature.
- ✓ Identify and use universal proofreader's symbols.
- ✓ Identify errors using appropriate proofreading skills.
- ✓ Utilize software features to edit documents.
- ✓ Create an appropriate Résumé.
- ✓ Create a letter of application for employment.
- ✓ Fill out an application for employment correctly.

Combine documents using software features:
- ✓ Merge variable and constant information to create new documents.
- ✓ Generate mailing labels from merged letters.
- ✓ Prepare other identification labels and business cards.
- ✓ Move or copy between documents.

Introduction to Desktop Publishing:
- ✓ Design brochures, flyers and newsletters.
- ✓ Utilize graphic boxes, lines, shading and borders.
- ✓ Use page composition and layout techniques.
- ✓ Use appropriate typeface.
- ✓ Edit images and manipulate graphics.

Introduction to Web Page Design:
- ✓ Demonstrate a basic understanding of HTML.
- ✓ Utilize Web compatible formats.
- ✓ Create a web page using a Wizard.
- ✓ Create text and graphics.
- ✓ Create a link.
- ✓ Link to other pages.

Teamwork Skills:
- ✓ Work cooperatively with another team member to complete specified job assignments.
- ✓ Each team member will evaluate the other's work before submitting for a grade.

Grammar Skills:
- ✓ Compose documents using correct grammar.
- ✓ Demonstrate proficiency of basic grammar skills.
  - Identify and properly use parts of speech.
  - Identify and properly use punctuation.
  - Identify spelling errors and properly use spelling rules.
  - Identify capitalization errors and properly use capitalization rules.
- ✓ Demonstrate ability to use the grammar and spell-check feature of the software.
- ✓ Demonstrate ability to use the thesaurus to enhance their documents and increase their vocabulary.

Presentation Skills:
- ✓ Create, design and prepare presentations.
- ✓ Create student projects utilizing presentations
- ✓ Participate in a mock job interview.

Listening Skills:
- ✓ Listen to and follow oral instructions.
- ✓ Participate in a mock job interview.

Assessment:
Students will demonstrate competence by:
- ✓ Producing documents by following technical written instructions.
- ✓ Producing documents from oral instructions by the teacher.
- ✓ Producing documents from written instructions by the teacher.
- ✓ Demonstrating the ability to transfer knowledge of one area to another.
- ✓ Successful completion of the employment preparation unit.
- ✓ Creating a Web site.
- ✓ Creating professional newsletters.
- ✓ Passing four areas of grammar tests.

Instructional Materials

Current word processing software
Current presentation software
Computer Workstation
Current word processing and desktop publishing texts.

Activities

The students will complete word processing projects as well as presentation projects using current word processing and presentation software.

Title:	Computer Applications
Length of course:	Full Year
Subject area:	College-Preparatory Elective ("g") / Interdisciplinary
UC honors designation?	No
Prerequisites:	None
Co-requisites:	None

Integrated (Academics / CTE)?	**Yes**
Grade levels:	**9th, 10th, 11th, 12th**

Course Description

Course overview:

This is a computer course designed to give students a comprehensive knowledge of computer use with a functional level of computer ability. The course teaches operating system and file maintenance, keyboarding, beginning through advanced operating skills plus application level knowledge of the Microsoft Office Suite. Technical reading and writing are a key component of the course. Instructional units include email & personal information management, word processing & formatting, business correspondence, spreadsheet creation and manipulation, multimedia presentations, and introduction to database use.

Course content:

Unit 1 - Computer Concepts and Use

In this unit students will analyze the importance of computers, and explain how computers process information, describe hardware and software, evaluate technology for specific needs, and navigate the desktop.

Students will demonstrate use of software menus, ribbons and toolbars to maximize, minimize, restore, and resize windows, to manipulate the document display, to print a document, to save and manage files, to close a document and exit software.

To describe uses of the Internet, explore websites with a browser, identify the features of search engines and social networks, search for information and perform transactions via the Web. In the online safety section students will identify threats to computers and networks, discuss computer crime and legal and ethical issues, copyrights and citing sources, identify and practice online netiquette standards, as well as considering ethical and legal practices while conducting business such as safeguarding confidential information.

Unit Assignment(s):

Students will conduct online research of digital hardware and will create a one page document in Microsoft Word listing nine items and the product descriptions, features, and prices. Research will be conducted on the Internet, and students will provide data from various reliable online sources using safe navigation practices. Students will save the final document to the proper folder and print a copy. Students will learn foundational skills to independently operate a computer using Internet resources and create a document.

Unit 2 – Keyboard Conditioning

Students will learn proper control of keys to improve reach-stroke control and keying speed using proper techniques. Throughout the lessons students will build speed and accuracy. Keyboard skills are practiced throughout the course to enhance efficient document preparation and use of computer technology.

Unit Assignment(s):

Students use MicroType software to master keyboarding skills. In addition, students are assigned a daily 10 minute warm-up for conditioning practice of the alphabetic and numeric keys learned and to maneuver with proper technique using the keyboard. Students will learn to properly type without looking at the keyboard to achieve 30 words per minute with 85% accuracy.

Unit 3—Word Processing

The major focus of this unit is proper document creation and preparation of letters, tables, and reports. Throughout the unit students will use and incorporate previously learned features in the crafting of the documents.

Letters:

Format business letters in block format using Word features to include font, hyphenation, tab stops, spelling/grammar check, spacing, punctuation styles, and envelopes.

Tables:

Create tables with main headings, secondary headings, column headings, and source notes using the MS Word table design and layout features including Merge and Split, Insert/Delete Rows/Columns, cell and page alignment, sort, styles, borders and shading.

Reports:

Students learn to format press releases and MLA reports with textual citations and a Works Cited/Bibliography page. Formatting skills including paragraph and page styles, page numbering, page breaks, footnotes and endnotes, headers and footers, indentation, and paragraph and line spacing.

Unit Assignment(s):

Letters Key Assignment: Using Microsoft Word, plan and prepare a properly formatted business letter to a school staff member introducing yourself and your future goals. The letter will be printed, signed, and delivered.

Tables Key Assignment: Make a month sized calendar in Microsoft Word by designing a table that is the size and shape of a calendar. Put special dates and assignments on it and use interesting (but readable) font and formatting style and include graphics.

Reports Key Assignment: Students will plan and prepare an original MLA formatted report. They will plan the report by creating a storyboard of the main sections and gathering graphics.

Students will learn to properly format a variety of school and work based documents.

Unit 4: Presentations-Slide Shows

Students will be able to navigate through an existing PowerPoint electronic presentation and to create original presentations incorporating the following skills: title slide; bulleted lists; insert and edit graphic images and photos, lines, and shapes to enhance slides; convey information in a presentation with tables, graphs, and charts; adding slide notes; transitions; animations; slide design; printing features including handouts. Students will utilize a rubric to evaluate presentation formatting and delivery.

Unit Assignment(s):

Key Assignment: To plan, design, and deliver an electronic presentation created from the report produced in the previous unit. All skills learned in this unit should be incorporated into the presentation. Students will evaluate three of the presentations using a provided rubric. Students will learn to create a professional presentation and use public speaking skills to enhance the presentation.

Unit 5: Spreadsheets

Students will use Microsoft Excel to enter data, navigate in a worksheet, print a worksheet, select a range of cells and edit, clear, copy, move information in a worksheet, format cell contents, adjust column widths, insert and delete columns and rows, perform worksheet calculations using formulas and functions, and create embedded column, bar, and pie charts using worksheet information.

Unit Assignment(s):

Key Assignment: Apply what has been learned to create a spreadsheet comparing prices of items they researched online. The collected data will be inputted in to an Excel worksheet and formatted correctly applying proper formulas. This information will be used to create charts and exported to a Microsoft Word or PowerPoint document. Students will use Microsoft Excel to apply mathematical concepts to create formulas to solve real world problems and present data in a professional format.

Unit 6: Database

Students will use Microsoft Access and learn to add records to an existing database, print a database table. Create a new database and table, add records to a new database, update an existing database, add new records to a database table, use efficient navigation techniques within tables and forms, edit records in tables and forms, and add new fields to a table. Learn to create single and multiple data sorts, to create and utilize filters, and to generate queries.

Unit Assignment(s):

Key Assignment: To assess database application skills students will be given a list of thirty customer records for a landscaping company and will create a new database with customer information. They will add, delete, and update data. They will manipulate the data by sorting, filtering, and creating queries to answer questions about the business. Students will learn how a database can be used to organize large amounts of data to manage a business.

17. Brief Course Description

This is a computer course designed to give students an over arching knowledge of computer use in society as well as a functional level of computer ability. For many, this will be the only computer course prior to four year college. The course teaches operating systems and file maintenance, beginning through advanced operating skills plus application level knowledge of the Microsoft Office Suite.

Technical reading and writing are a key component of the course. Instructional units include essay composition and formatting, business correspondence, spreadsheet creation and manipulation, multi media presentations, web page design and html programming.

This course is based on Socratic theory and critical thinking it's approach to teaching computer theory and application.

SANTA MARIA HIGH SCHOOL
COMPUTER APPLICATIONS I

COURSE: Computer Applications I

Description:

Computer Applications I is a study of technology focusing on the computer's effect on society, computer concepts, terminology, uses, and technology's affect on our changing society. Includes instruction on typical software applications such as word processing, spreadsheets, databases, presentation software, and Internet browsers and the affects these advances have made to our society.

Purpose and Goals:

Students will analyze, understand and appreciate the uses and impact of the computer in modern society. Students will understand and appreciate the user/software/hardware interface. Students will understand logical processes of computer problem solving.
Students will use a personal computer and typical software and understand and appreciate its impact on society.

Instructional Objectives:

Students will be expected to analyze and discuss the impact of current and emerging technology on society. Students will be expected to compare and evaluate the components and associated devices of computer systems. In addition, students will distinguish between the basic terms and acronyms applicable to computer systems. Students will be able to navigate and manage files and folders on a personal computer. Students will then describe the types of computer networks and perform searches via the Internet. Students will be able to recite a brief history of the development of computers and their uses. Students will develop typical application output via word processing, spreadsheet, database and presentation software.

Prerequisites:

Math, English

Course outline:

1. Computer Components and Terminology
2. I/O, Secondary Storage
3. Operating Systems
4. Data Communications/Internet
5. Computer History
6. Societal Issues
7. Word Processing/Graphics
8. Spreadsheet Applications
9. Database Applications
10. Electronic Presentations
11. Web page composition, design, construction

Assignments:

1. Using the Internet as a research tool, write a report on one of the following pioneers in computing: Charles Babbage, Conrad Zeus, Alan Turing, Steve Jobs, Bill Gates.
2. Plan and build a worksheets that illustrate the business activity of a simulated business.
3. Plan and create an outline of a PowerPoint presentation that will summarize the students simulated business from start up through transactions.
4. Process the documents needed to operate the students simulated business.
5. A final exam process that utilizes the processes taught in the course in the organization and management of a simulated business created by the students.

Evaluation:

1. Research papers on various computer concepts and issues covered throughout the course.
2. Projects
3. Written and computer-generated assignments dealing with software applications
4. Quizzes and/or midterm examination
5. Final Examination

Function:

- Research and analyze the affects of technology on our society.
- Demonstrate appropriate uses of Internet resources and moral, ethical, safety and security issues
- Understand and demonstrate productive use of internet technology
- Analyze the value and process in proper selection of Internet service providers (ISP), typical connections, and Internet browsers.
- Perform information searches using a variety of search engines and resources
- Demonstrate the ability to download and edit information.
- Analyze validity of data on Internet.

Appropriate readings: (Other than Textbook)

Journal articles on information systems, hardware and software reviews, user manuals, computer magazines, and website knowledge bases provided by computer system manufacturers and vendors.

Interpersonal Skills:

- Demonstrate teamwork skills
- Work cooperatively with classmates to complete specified class assignments

Appropriate Ethics:

- Students will be held to the standards of ethical behavior associated with modern technology.

Course Materials:

- Adopted Text: Shelly/Cashman, Microsoft Office 2000 Introductory Concepts and Techniques, Course Technology

- Computer workstation
- Thompson Learning, Digitools
- Access to Internet
- Current appropriate application of software

Submitted to UC 2/28/06
Pending Approval: G/Elective
Replacing Computer Applications: BU6005 & BU6006

Date Prepared:
Date Reviewed: Fall 2001

PCA Established: Spring 1995

ALLAN HANCOCK COLLEGE
COURSE OUTLINE

DEPARTMENT: **BUSINESS**

PREFIX & NO.: CBIS 101

CATALOG TITLE: Computer Concepts and Applications

SCHEDULE TITLE: Computer Concepts & Apps

UNITS: 3

WEEKLY LECTURE HOURS: 3

WEEKLY LAB HOURS: 1

TOTAL NUMBER OF WEEKS: (if other than 16)

GRADING OPTION: Credit/No Credit Option

PREREQUISITES: CBIS 301

ENTRANCE SKILLS Ability to:
1. Perform basic computer operations using input/output devices such as a mouse, keyboard, monitor, and printer.
2. Distinguish between various computer storage devices such as a floppy disk, CD-ROM, Zip Disk, and hard disk.
3. Perform basic and advanced file and folder management using the Windows Explorer.
4. Customize a standard computer using the Windows control panel.
5. Perform basic communication and search procedures on the Internet.

CATALOG DESCRIPTION
A general education course focusing on computer concepts, terminology, uses, and the computer's effect on society. Introduces typical software applications such as word processing, spreadsheets, databases, presentation software, and Internet browsers.

SCHEDULE DESCRIPTION
An introduction to computer concepts and a variety of common software applications.

COURSE GOALS To encourage and enable students to:
1. understand and appreciate the uses and impact of the computer in society.
2. understand and appreciate the user/software/hardware interface.
3. understand logical processes of computer problem solving.
4. use a personal computer and typical software.

INSTRUCTIONAL OBJECTIVES At the end of the course, the student will demonstrate the ability to:
1. compare and evaluate the components and associated devices of computer systems.
2. distinguish between the basic terms and acronyms applicable to computer systems.
3. navigate and manage files and folders on a personal computer.
4. describe the types of computer networks and perform searches via the Internet.
5. recite a brief history of the development of computers and their uses.

6. discuss the impact of current and emerging technology on society.
7. develop typical application output via word processing, spreadsheet, database and presentation software.

COURSE OUTLINE

		WEEKS
1.	Computer Components and Terminology	2
2.	I/O, Secondary Storage	1
3.	Operating Systems	1
4.	Data Communications/Internet	2
5.	Computer History	1
6.	Societal Issues	1
7.	Word Processing/Graphics	2
8.	Spreadsheet Applications	2
9.	Database Applications	2
10.	Electronic Presentations	2

APPROPRIATE READINGS (Other than Textbook)

Journal articles on information systems, hardware and software reviews, user manuals, computer magazines, and website knowledge bases provided by computer system manufacturers and vendors.

ASSIGNMENTS

1. Using the Internet as a research tool, write a report on one of the following pioneers in computing: Charles Babbage, Conrad Zeus, Alan Turing, Steve Jobs, Bill Gates.
2. Plan and build a worksheet that shows the profits of a car wash during the last three months. Be sure you include the number of cars washed, the cost of supplies ($0.50 per car), the cost of labor/facilities (40%), and the cost of the car wash ($7.50).
3. Plan and create an outline of a PowerPoint presentation to convey a marketing plan to the sales department.

EVALUATION

1. Research papers on various computer concepts and issues covered throughout the course
2. Written and computer-generated assignments dealing with software applications
3. Quizzes and/or midterm examination
4. Final Examination

Sample Test Questions:

a. Explain the difference between boot, load and install.
b. What is a computer virus and how is it spread?
c. What is virtual memory?
d. Given the following e-mail address: ahcstudent@anycollege.edu
which is the domain, the account name, and the server address?

TEXTS AND SUPPLIES

Adopted Text: Shelly/Cashman, Microsoft Office 2000 Introductory Concepts and Techniques, Course Technology

Other Materials: Floppy disks
Paper for printer

ACADEMIC POLICY AND PLANNNG COMMITTEE
DISTANCE LEARNING COURSE STATUS

Date Approved for Distance Learning 9/9/02 Initiator Margaret Warrick

1. Method of instruction to be used (primary modality): Internet
2. Instructor-student Contact

Per Week

	No.			No.
e-mail communication			Chatroom	
Group	¾ hour		Discussion Board	1 hr
Individual	2 hr		Telephone contacts	½ hr
Other: 5 hr – Developing Instruction sheets, creating other examples, troubleshooting problems, meeting with students in the lab.				

Per Semester

Orientation sessions	2 hr		(in person)
Group meetings			(in person)
Review sessions			(in person)
Labs			(in person)
Testing	6 hr		(in person)
Other (Identify)			

3. Adjustments to assignments:
   - Discussion Board responses or broadcast emails are posted for all students to review in regards to general questions.
   - Discussion Board responses or broadcast emails posted for all students to review that warn of possible problems/situations students may have.
4. Adjustments to evaluation: None
5. Accessible to students with disabilities: Yes
6. On-line services: Flyers, Schedules, Orientations, individual contacts, Blackboard announcements and e-mail.

Course Title

Computer Programming A (P)

Description of Target Group

Computer Programming A is a one semester course designed for all students who have demonstrated an interest in science or business and have shown proficiency in Algebra 1A or 1B.

Purpose

Computer Programming A is designed to teach concepts in computers and computer language.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to demonstrate the following skills:

1. Given a problem within the capacity of the computer being used, a student will be able to flowchart the problem, formulate the algorithm, and be able to run the program or change it until it will run.
2. An understanding of algorithms and how to formulate them using flowcharts.
3. The ability to use the keypunch machine as well as the keyboard terminal to execute the algorithms in basic.
4. An understanding of programming language.
5. An appreciation of the computer and how it is applied to any problem solving or data processing situation.
6. An appreciation of the importance of the computer in our society.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Lectures will be a necessary procedure during the initial stage of the class. Most of the instruction will take place in small groups or on an individual basis.

Course Title

Computer Programming B (P)

Description of Target Group

Computer Programming B is second semester of a two-semester sequence designed for students who plan to pursue a four-year college degree and/or are interested in a career in business or the sciences.

Purpose

In Computer Programming B additional programming commands in the BASIC language will be learned. Graphics will be expanded to include high resolution graphics and shape tables. Expanded use of the printer will enable students to use enhanced character capabilities and print hi-res graphics. Data management will be extended using sequential and random access files and multidimensional arrays. Students will continue to plan, write, debug, and apply their own programs to solve problems. All students will be encouraged to work at a level challenging to their individual abilities.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to demonstrate the following skills:

1. Career Opportunities with Computers
    - A. Careers in computer development
    - B. Career for trained computer users
2. Printer Functions
    - A. Using printing commands within a program
    - B. Analyze different types of printers
3. Files
    - A. Text Files
        1. Sequential text files
        2. Random access text files
    - B. Developing files
    - C. Updating files
4. Arrays
    - A. Using multi-dimensional arrays
    - B. Applications of arrays
5. Special Computing Techniques
    - A. Different sorting techniques
    - B. Alphabetic and numeric sorts
    - C. User defined functions
    - D. Print Using

Computer Programming B (P) (continued)

6. Generating Sound and Music
   - A. Analyze standards music subroutine
   - B. Pitch and duration
   - C. Creating sound and music

7. Creating High Resolution Graphics Program in BASIC
   - A. Screen formats for page 1 and page 2
   - B. Plotting
   - C. Use of color
   - D. Making and using shape tables

8. Use of Peeks, Pokes, and Calls in BASIC
   - A. Altering contents of memory
   - B. Reading contents of memory
   - C. Executing built in subroutines
   - D. Executing custom subroutines
   - E. Introduction to the memory map

9. Other Languages – pros and cons
   - A. Machines language
   - B. Pascal
   - C. APL
   - D. FORTRAN
   - E. COBOL
   - F. ADA

10. Hardware
    - A. Makes and models of computers
      1. Capabilities
      2. Applications
      3. Costs

11. Software
    - A. Evaluation
    - B. Copyrights

Instructional Materials

Films, videotapes, and computer hardware and software.

Spring 1983

Course Title

Computer Applications 3: Programming Problems and Solutions

Description of Target Group

This one-semester course is designed for 10th grade business students who have an interest in learning to program a personal computer. The course will be taught in the Business Department Computer Laboratory. Students should have taken and satisfactorily passes Computer Applications: Survey of Computer Applications Software or have permission from the instructor.

Purpose

The purpose is to promote computer literacy, introduce programming concepts, and prepare students for further studies in the Computer Applications and Information Systems core program of study.

Standards of Expected Student Achievement

Upon completion of the course, the student will successfully demonstrate the ability to:

1. Understand and use computer language symbols as communication tools for programming and using a computer.
2. Understand and use the available computer hardware.
3. Graph a design and write a simple graphics program.
4. Plan and write a simple program in a specific computer language.
5. Demonstrate adequate problem solving skills in debugging the programs created.
6. Demonstrate awareness of the value of the computer as a problem solving tool in the modern business world.
7. Demonstrate the ability to understand, perform, and write sequential directions.
8. Work on the individual and the group level to solve problems.
9. Demonstrate the ability to care for hardware and software.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Hands-on experience at the computer workstation with programming problems and projects. The instruction is individual and small group.

Course Title

Computer Applications 4: Graphical User Interfaces

Description of Target Group

This one-semester course is designed for 10th grade students who have an interest in learning to use graphical user interface software (such as Windows). The course will be taught in the Business Department computer laboratory. Students should have taken and passed satisfactorily Computer Applications 1: Keyboarding and Computer Applications 2: Survey of Computer Applications Software or have permission of the instructor.

Purpose

The purpose is to promote computer literacy, introduce graphical user interface concepts, and prepare students for further computer core courses of instruction.

Standards of Expected Student Achievement

Upon completion of the course, the student will successfully demonstrate the ability to:

1. Identify and use the terminology of graphical user interface operating systems.
2. Operate a mouse in conjunction with a computer keyboard.
3. Read and make selections from menus and dialog boxes by interpreting both text and icons.
4. Understand and demonstrate ability to use software that is interfaced with the graphical user interface (GUI).
5. Understand and demonstrate ability to use the utilities that are part of the graphical user interface (GUI).
6. Use and integrate at least three applications in the GUI to complete assigned projects.
7. Demonstrate an understanding of hardware and software in use in the Computer Laboratory along with an ability to maintain and care for same.
8. Demonstrate an understanding of the unique problem solving capabilities of the computer as a tool for modern businesses.
9. Demonstrate an understanding of problem solving strategies on an individual as well as a group level.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Group and individual hands-on experience at the computer work-station interacting with the selected software.

Course Title

Computer Applications A

Description

This five-unit course is designed to teach all students basic computer operations and productivity skills

Purpose

The skills taught in this course introduce students to the use of emerging technologies to enhance their success in completing courses necessary for college admission and career path specialization.

Standards of Expected Student Achievement
Upon completion of this course, students will be able to demonstrate the following abilities:

Use of Computer Workstation:
- Safe and acceptable computer operating procedures
- Ability to identify parts of the computer system and their function
- Basic trouble shooting of computer systems

Use of Operating Systems:
- Operating Systems and Program Navigation
- Formatting floppy discs
- File Management; saving, retrieval

Use of Current Software:
- Demonstrate the ability to correctly identify components of the work screen
- Demonstrate the efficient method of navigating through documents
- Demonstrate the ability to use menus and toolbars
- Demonstrate the ability to use shortcut keys as well as the mouse

Use of Proper Keyboarding Technique:
- Ability to key the alphabet by touch using current computer software
- Basic knowledge of location of numbers and symbols
- Demonstrate keyboarding skills by touch with acceptable speed and accuracy

Use of Proper Formatting Techniques:
- Format business and personal letters
- Format memorandums
- Format reports
- Format tables

Computer Applications A (continued)

Function:
- Appropriate uses of Internet resources and moral, ethical, safety and security issues
- Internet technology
- Selection of Internet service providers (ISP), typical connections, Internet browsers
- Information searches using a variety of search engines and resources
- Downloading and editing documents and their formats
- Analyze validity of data on Internet

Interpersonal Skills:
- Demonstrate teamwork skills
- Work cooperatively with classmates to complete specified class assignments

Appropriate Ethics:
- Students will be held to the standards of ethical behavior

Evaluation:
- Observation
- Produce documents by using oral and written instruction
- Portfolios and projects
- Tests
- Acceptable speed and accuracy

Instructional Materials

Computer workstation, floppy disk, access to internet

Refer to: Secondary adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District

Current appropriate application of software

Course Title

Computer Applications B

Description of Target Group

This five-unit course is designed to further enhance all students' basic computer operation and productivity.

Purpose

The skills taught in this course introduce students to the most commonly utilized software programs in both industry and education including Internet resources.

Prerequisites: Computer Applications A or teacher approval.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrated the following:

Introduction to Word Processing:
- Document editing functions
- Enhanced formatting techniques
- Demonstrate responsibility and initiative in completing assignments and accurate proofreading of assignments
- Demonstrate qualities of neatness, initiative and accuracy

Introduction to Spread Sheets:
- Spread sheet terminology
- Basic spread sheet design
- Entering and revising data
- Graphical output

Introduction to Presentation Software:
- Presentation terminology
- Basic presentation design
- Entering data and using presentation techniques

Desktop Publishing:
- Desktop publishing terminology
- Page layout and template use
- Importing graphics

Computer Applications B (continued)

Database:
- Database terminology
- Develop and manipulate a database
- Generate output of data

Multimedia Terminology:
- Exposure to web page development programs
- Exposure to web site resources

Ethics:
- Students will be held to the acceptable standards of ethical behavior

Evaluation:
- Observation
- Produce documents by oral and written instruction Portfolios and projects
- Tests
- Acceptable speed and accuracy

Instructional Materials

Computer workstation, current appropriate software, floppy disk, access to Internet, current appropriate application of software

Refer to: Secondary adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District

Course Title

Computer/Business Machines

Description of Target Group

This course is open to students in the 9th through 12th grades who have successfully completed one or more semesters of typing. Students may not receive credit for both this course and the Introduction to Computers in Business Course.

Purpose

This is a two-part course designed to give students nine weeks of work on Electronic Printing Calculators and Transcription equipment, and nine weeks of work on Micro-Computers.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills on electronic calculators and transcription equipment.

1. Demonstrate the ability to add, subtract, multiply, and divide on the electronic calculators available in the classroom.
2. Demonstrate the ability to use proper fundamentals in the operation of the equipment.
3. Demonstrate a basic understanding and use of special business computations such as cash discounts, trade discounts, chain discounts, and sales tax.
4. Demonstrate the ability to type letters in proper form utilizing the transcription equipment and typewriters available in the classroom.
5. Complete tests on each machine to the satisfaction of the instructor.

Upon completion of this course, students will demonstrate the following pertaining to Micro-Computers:

1. Demonstrate a knowledge of the history of computer technology.
2. Demonstrate a knowledge of the components of a computer system.
3. Demonstrate a knowledge of the tasks that a computer can perform.
4. Demonstrate knowledge of the role computers play in our lives.
5. Demonstrate an awareness of the potential mis-use of computer technology.
6. Demonstrate an awareness of the career opportunities available in the computer field.
7. Demonstrate an ability to communicate with computers in their language.
8. Demonstrate an awareness of the specialized language used with computers.
9. Demonstrate the very elementary skills needed to operate the computer and computer programs.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in Santa Maria Joint Union High School District.

Activities

Lectures, demonstrations and testing.

Course Title

Correspondence, Business

Description of Target Group

This course is designed as an elective for all students. It is recommended for 11th and 12th graders. Successful completion of a typing course is desirable before taking this course.

Purpose

This one-semester course is designed to help the student gain English fundamentals in order that he/she may apply these English fundamentals to business situations. The student who successfully completes the work in this course can enter his/her job with more confidence and a higher of skill.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Correlate the skills of correct grammar, punctuation, and capitalization in the composition of business letters.
2. Correctly identify the parts of a business letter.
3. Demonstrate improved speaking vocabulary.
4. Demonstrate the basic skills necessary for seeking employment.
5. Demonstrate the ability to put words, phases, and clauses together to express thoughts in an explicit manner.
6. Demonstrate the ability to identify and use correctly the eight parts of grammar.
7. Demonstrate ability in spoken business communication.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The student will study English grammar as well as written business communications. Some study will be devoted to spoken business communications.

ROP ECONOMICS AND FINANCE

Students will address the economic development and the evolution of economic institutions. Students will compare economic systems and analyze economic problems facing our society. Students will address economic concepts as they apply to the global economy in relationship to the economy of the United States. Students will learn to analyze and interpret financial statements. Students will develop a personal investment portfolio using Internet activities.

Duration: Year, single period, 5 credits per semester.

Grade: 11, 12

Prerequisites: None

19. COURSE GOALS

1. Demonstrate ability to think critically by effectively completing individual projects and assignments.
2. Communicate effectively by active listening, reading, writing, speaking and electronic note taking.
3. Establish a pathway for future growth by analyzing the elements of America's market economy in relationship to post secondary goals and personal lifestyles.
4. Analyze the economic behavior of the United States by gathering and evaluating data from financial and government Internet sites.
5. Analyze issues of the global economy and the effects on the U.S. economy by completing individual projects.

20. COURSE OBJECTIVES:

1. The students will analyze how market forces, demographics and government have shaped modern America.
2. Students will develop critical thinking and problem solving skills through direct research investigations and activities.
3. Students will integrate language arts and mathematical skills with their economic studies and projects.
4. Students will learn to use Internet technology as a means to analyze economic conditions and evaluate the impacts on investments and the stock market.
5. The students will learn to analyze and interpret financial reports.
6. Students will compare economic systems and analyze economic problems facing our society.
7. Students will address and define macroeconomic and microeconomic issues.

21. COURSE OUTLINE: ECONOMICS AND FINANCE

ECONOMICS

I. Course Introduction
   - A. Class rules and regulations
   - B. Safety
   - C. An Economic way of thinking
   - D. Scarcity and Choice

E. Opportunity Costs

II. Economic Systems
- A. Types of economics systems
- B. U.S. Economy

III. Demand and Supply
- A. The nature of demand and supply
- B. The elasticity of demand
- C. The changes in demand and supply

IV. Prices
- A. The price system
- B. Determining prices

V. Market Structures
- A. Competitive markets
- B. Market regulation

VI. Labor Unions
- A. U.S. labor force
- B. Unions and management

VII. Sources of Capital
- A. Saving and investing

VIII. Economic Performance
- A. Gross domestic product
- B. Business cycle
- C. Economic growth
- D. Unemployment
- E. Inflation
- F. Income distribution
- G. Macroeconomic and Microeconomic integration

IX. Role of Goverment
- A. Growth of government
- B. Economic goals

X. Money and the Banking System
- A. U.S. Banking
- B. The Federal Reserve System
- C. Monetary policty strategies
- D. Fiscal policy and strategies

XII. International Trade
- A. Foreign exchange and currencies
- B. Trade barriers

FINANCE

I. Proprietorship, Partnership and Corporation
- A. Definition

B. Related business activities
C. Financial reporting
D. Accounting theory and practices

II. Business transactions
A. Analyzing transactions and the effects of transactions

III. Cash Control Systems
A. Checking accounts
B. Bank reconciliation
C. Electronic banking

IV. Financial Statements
A. Proprietorship
B. Partnership
C. Corporations

V. Journals and Ledgers
A. Use and analysis

VI. Payroll
A. Wages and Labor law
B. Taxes
C. Retirement

VII. Consumer Credit
A. Reports
B. Economic impact

VIII. Investing
A. Stock Market
B. Bond Market
C. Real Estate
D. Retirement
E. Mutual Funds

IX. Careers in Economics and Finance

27. CONTEXT FOR COURSE

This year long course is a marriage of two courses: Economics and Accounting & Finance. It will cover all of the Economics theory contained in the regular semester long Economics class. In addition, students will be involved in practical accounting and finance projects that relate directly to their acquired knowledge of economic theory.

28. HISTORY OF COURSE DEVELOPMENT

This Economics and Finance course has been a ten-year dream. Our goal is to provide all our students with a better understanding of economics and finance and the relationship to their present and future needs.

Course Purpose: *What is the purpose of this course?*

This course is designed to develop and promote entrepreneurial literacy among high school students through a project based learning approach. Through collaboration, communication, creativity, and critical thinking students will acquire skills and understand the effective applications to real world business, leadership and management and how it applies to our economic structures in a primary focus through Entrepreneurship and Marketing.

Course Objectives

- Creatively analyze and design business environments, opportunity recognition, and the business idea-generation process.
- Explore and understand the role of entrepreneurship in the global economy.
- Understand the structures of ownership.
- Know how to acquire necessary resources and organizational matters for new venture creation process.
- Be able to write a business plan that creates and starts a new venture.
- Use technology to plan and prepare informative and persuasive presentations.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

Unit 1 – Entrepreneurship, 4 weeks

This unit will cover the fundamentals of entrepreneurship and explore the role it plays in business development and the economy. Students assess their personality type and link it to their personality portrait and identify parallels to entrepreneurial characteristics in writing. Students will analyze and interpret the traits needed to succeed in entrepreneurship. Students will read and research, define, identify and evaluate the specific entrepreneurial characteristics: adaptability, competitiveness, confidence, discipline, perseverance, vision and risk taking. Students will research and identify barriers, successes and failures of entrepreneurs, with the intent of hypothesizing the importance of resilience. Students research "What it takes" to be an entrepreneur to investigate the evidence that shows how the United states and California have been historical entrepreneurial leaders. Ownership structures of various businesses will be analyzed and evaluated for their pros and cons.

Key Assignments:

Students will contact an entrepreneur and conduct an interview. The interview questions will be created by the class, compiled, and used by each team. There will be flexibility for students to add additional questions into their interview. The interview will be recorded with current audio or video technology or by hand, and a summary will be completed. The summary will be presented to the class upon completion. Students will apply a key component of the interview to their future in entrepreneurship, and provide a paragraph synopsis of this application.

- Students will analyze and create a bubble map of a characteristic that they possess to be an entrepreneur, based on the two articles listed below. This assignment will help the students analyze, critique, and explore their own entrepreneurial skills and characteristics.
- Students will work in teams to create and design a poster on the advantages of different ownership structures in different sectors of business.
- Student will select an entrepreneur and complete a research project. They will write a two page paper on their entrepreneur and give a 3-5 minute multimedia presentation to the class. The paper and presentation should include name, age, upbringing, current and past residences, education/business experience, galvanizing/important events in their life, interesting facts, and current/projected influence on the economy.

Course Resources Specific to Unit 1

- Personality Test used to determine personality type of students.
- Personality Type Portraits used to decode the personality type of students.

Unit 2 – Developing a Business Plan, 4 weeks

Teams of students will demonstrate an understanding of the elements and purpose on the different components of a business plan. Teams will formulate and revise the necessary terms, components, and sections needed for creating a professional business plan. Teams will formulate and revise the necessary terms, components, and sections needed for creating a professional business plan. Teams will draft a mission statement and statement for purpose, construct core values, and create a vision statement. Teams will compare and contrast sample business plans with the goal of identifying strengths and limitations. Throughout the year students will amalgamate these components and elements of a business plan in a finished product. Teams will finalize their business idea and name, which will be the driving factor in business plan creation.

Key Assignments:

- Students will collaborate to analyze, collect, and extrapolate their understanding of market research through campus survey's to draw conclusions regarding public perception of their business idea and name. The findings will be summarized in a one page write-up which will solidify their understanding of public perception with regards to their business and idea.
- The team of students will brainstorm, analyze, and formulate their business idea. Components will involve name, initial logo, purpose, mission, and model. A basic plan will be developed, which discusses the purpose of their business and the problem it will solve. The idea will be presented to their peers through a multimedia presentation. The presentation will begin to prepare them for their final presentation, promote strong communication skills, and allow evaluation of successful presentation components. Verbal feedback will be provided to each group following a question an answers session after each presentation.

- Teams of students create a live document spreadsheet that identifies the major components and categories of a finished business plan. Students will be evaluated on their creation of a timeline of completion dates for each section, team member responsibilities, and space for notes/ideas/brainstorming. The document will be backed-up in a minimum of 2 alternate locations, to promote good technology use habits. Students will complete large amounts of work and the back-up process can help to minimize the chance of lost data.
- Teams will utilize an online website creator/host to begin the online marketing process. The business name, mission, and purpose will be updated. The website will be modified throughout the course as new information is gathered and compiled. The marketing unit will modify and adapt their business image.
- Students collaborate and analyze their business in the terms of short (1 to 2 years), medium (2-4 years), and long (5-10 years) term goals. Teams create 2-3 pages detailing their goals and how they impact business direction. This analysis will aid students in understanding timing in business goals. These goals will help in the creation of the business plan.

Course Resources Specific to Unit 2

- College Entrepreneurship business plan templates. Spreadsheet. Text Editor.
- Finished business plan examples.

Unit 3 – Creativity & Innovation, 6 weeks

Students will analyze the concepts of creative flow through teaming: communication plus collaboration creates synergy (C+C=S). The students will develop creative thinking skills applicable to entrepreneurship. Students apply the concepts of the creative process designing potential innovative products and /or services. Students synthesize various creative strategies, building confidence in their own ability to problem solve. The students will critique the nature of failure and why negative outcomes build core resiliency skills. Students analyze the concept of synergy in the 21st century workplace. Students analyze individual intrinsic motivation, thereby creating passion-based solutions. As we evolve into the 21st century, globalized, knowledge-based, high-tech world the concepts of passion-based creativity skills are necessary for students to thrive and compete in the workplace.

Key Assignments:

- "Yes and ……": Starting the creative flow
- Communications: Giving and getting the message
- Active Collaboration: Working with your strengths to build synergy
- Mini Project 1: "looking into your World—Observing People Communicating"
- Project 2: Developing a Product
- Project 3: Addressing a need–using your passion to determine and develop your idea/solution.

Summary:
Mini Project 1: "Looking Into Your World—Observing People Communicating"
Students will work in team, conducting a two-day field research observing non-verbal communication and ineffective learning strategies. The parameters of the research include observing twenty observations in public place, recording five different communication scenarios. They will then synthesize their findings with the team, creating a PowerPoint to share with the class. The research culminates in an oral presentation analyzing and critiquing their findings as they apply concepts of formal, oral communication skills.

Project 2:
Students, working in teams, design a floor plan, synthesizing their collaborative ideas using the link: http://www.floorplanner.com/ This exercise allows the students to apply the concepts of collaborative, creativity strategies as well as defining requirements for the startup costs for their financials.

Project 3:
Students will continue working in teams to apply the concepts of active collaboration and communication by assembling a prototyped model. In teams, students will critique the design ideas, and issue revision for improving the prototyped model. In addition, students will develop possible marketing scenarios for the use(s) of a finished prototype. At the end of the process students will reflect and assess their individual and team efforts.

Culminating Project:
Students will design and create their own product prototype. Students will use an iterative development process to refine their prototype for use as the lead-in to the other units that are used to develop the final business plan.

Course Materials specific to Unit 3:

- "7 Habits of highly Effective Teens". Sean Covey—The book is used t apply the concepts of this unit which enables the students to draw conclusions on the abstract concepts of creativity and innovation.

Unit 4 – Management & Leadership, 6 weeks

The goals for this unit are to challenge students to understand and incorporate effective management and leadership characteristics as they develop their business ideas. Students develop their creative problem solving skills, set long and short term goals and learn to motivate future employees to accomplish the organization's objectives and goals. In this course, students analyze the four management functions: planning, organizing, directing (staffing) and controlling. In addition, students compare and contrast the productive leadership styles and characteristics while investigating their preferred leadership style. Students identify and analyze ethical and socially responsibility opportunities available to them. Students connect SMART (Specific, Measurable, Attainable, Realistic, and Timely) goals to strategic, tactical operational and contingency goal setting. Finally students examine the effect of technology as they develop their management plan for using their business idea.

1. **Planning** – Students analyze the concepts of effective management planning. Students assess their individual business idea by planning their organization's goal and creating a realistic, detailed plan of action for meeting those goals. Students' management plan incorporates strategic, tactical, operational and contingency plans in their business ideas.

   Students read and analyze the traits of a successful entrepreneurship leadership traits. Students critique the mail leadership theories—autocratic, democratic and laissez-faire, connecting their preferred leadership style with one of these three theories. Students also investigate, compare and contrast leadership styles and characteristics using the textbook and internet sources as reference material. Students design a plan to build their high-level teams based on strengths and skills needed for each position. Students incorporate SMART goals to set strategic, tactical, operational and contingency goals for their business ideas.

2. **Coordinating and Organizing** – Students explore and design the most efficient layout for their business ideas. Students determine how many managers and employees needed to efficiently run their businesses. Students formulate hierarchical management structures best suited for their business idea. Students develop a customer service and training plan for their business idea. Included in the customer service plan are strategies for empowering managers and employees. Students construct the physical assets necessary to operate their business, including office buildings, stores, manufacturing equipment, computers and office furniture.

3. **Staffing (Leading & Directing)** – Students investigate staffing as involves fulfilling the organization's structure through proper and effective selection, appraisal and development of personnel to fill the roles assigned to the students' businesses. Students create job descriptions, compose staffing manuals for new employees, and develop orientation and training programs for their business idea. Students develop job enrichment plans which include decision making and problem solving and employee motivation to keep employees engaged. Students develop termination strategies for downsizing and for termination. Students also describe and illustrate the advantages to demonstrating high ethical and socially responsible behavior in their businesses. Students prove high ethical behavior has a positive effect on moral and their businesses bottom line.

4. **Controlling** – Students apply the concepts of setting and measuring standards to verify the organizational goals are met. Students investigate inventory control systems to determine the best system for their business ideas. Student explore the international standards available and determine if these international standards are valuable to their businesses. Students develop inventory control strategies to measure the deviation of

actual performance from the standard performance, and create a plan for identifying and correcting any deviations.

Key Assignments:

- What Makes a Great Leader: Students will identify characteristics of leadership by researching the lives of great American leaders. Students critique two web sites on the great entrepreneurs. Students formulate a hypothesis of the top ten traits that these great entrepreneurs demonstrated. In small teams, students analyze their assigned entrepreneur identifying the top ten traits of their entrepreneur. In addition students apply the entrepreneurship traits to their own lives connecting examples to the great entrepreneur. Small groups share with the class their findings. As a closing activity, students write a response to one of the following assessment questions: a) which character trait do you think was most helpful for your leader and why? b) Which of the leadership traits do you possess? c) How might you use these leadership traits in your future career?
- SMART Goals: Students start by prioritizing a list of business tasks. These tasks include the four areas of planning; strategic, operational, tactical and contingency planning. Instructor led discussion on the prioritizing and setting of SMART goals. SMART goals are Specific, Measurable, Attainable, Realistic and Timely. In small groups, students compose SMART goals for one of the four types of planning, strategic, operational, tactical or contingency planning. After sharing their SMART goals with the class, individually students create one SMART goal in each area of planning as related to their own business idea. Students discuss their SMART goals with their small group. Students critique and revise SMART goals as needed.
- MLA paper analyzing the four functions of management: Using the key terms for this unit, students will compose a two-to-three page typed paper describing the planning, organizing, directing and controlling aspects of management. In addition students will analyze and connect the four functions of management to their business idea. When completing their paper, students will cite the textbook and provide two appropriate web sites to prove their analysis.

Unit 5 – Marketing, 9 weeks

Marketing is the process in creating, distributing, promoting, and pricing goods, services, and ideas to facilitate satisfying exchange relationships with customers in a dynamic environment. Students will create a skills and personality index to determine their preferences and abilities and where they might be best applied within the marketing process. Students will be prepared with a foundational knowledge base essential to practice industry standard skills. Students will work in small groups and collaborate in the development of marketing concepts from idea to reality. They will utilize the Internet to research current competitive products and build on environmental assessment, or WOT (Strengths, Weakness, Opportunities, and Threats) analysis. By visiting consumer markets and analyzing product placement, product packaging, and in-store promotional materials, students will connect theoretical concepts to actual market practices. Marketing involves developing and managing a product that will satisfy customer needs. By utilizing primary research strategies, like focus groups, on line surveys, students can analyze consumers' want and needs to clarify their specific target market. Students will utilize database technology to collect, store, analyze and report findings for decision support. Students will apply spreadsheet skills to create financial analysis to predict appropriate pricing models to determine break-even points and return-on-investment percentages, these activities—product, distribution, promotion, and pricing—are known as the marketing mix because marketing managers decide what type of each element to use in what amounts. Students will demonstrate

media literacy by creating images, in a graphic design software application, that identify their brand. They will incorporate those images into a series of video productions that deliver their branding message. Mentors within the marketing community will visit the classroom and discuss their experiences in applying the previously discussed marketing theories.

Key Assignments:

- Marketing Your Product: Step 1, students will create a product brand recognition strategy by designing product names, logos and packaging for a brand of their choice. Step 2, students will assume the role of a marketing director. The company is going to launch your product. But before, the student must analyze and explain the 3 steps to creating brand equity and how to apply these concepts to the new design creation. The creative process will visually prove a student's understanding of the importance of ensuring quality of products and services. The creative process will analyze factors marketers' use to position products and businesses such as branding, packaging, labeling, legal considerations, product life cycle and management techniques for each level of the life cycle, and purchasing functions.
- Sales and Marketing Campaign – Students will work in small collaborative groups to design a comprehensive Sales and Marketing Campaign. First, students will read instructional materials about goal setting techniques. Students will formulate SMART (Specific, Measurable, Attainable, Realistic, Time based) objectives for at least six activities that construct their campaign. Next, they will examine and analyze existing print, TV, and web advertisements. Then they will demonstrate an understanding of product and institutional promotion by creating advertising vehicles like magazine mock-ups of e-commerce websites. Software applications like Photoshop, Dreamweaver and Windows Moviemaker will be used to create student artifacts. Additionally students will analyze whitepapers developed by Huthwaite, Inc. to gain an understanding of professional sales techniques that they will apply in a final role-play presentation. To prove their understanding of the Huthwaite process, students will develop role-play scripts that demonstrate their understanding of consultative selling techniques and the 8 step sales process. They will differentiate whether they need to develop a retail style pre-approach and closing strategy, or if they require an approach designed for a longer sales cycle in a business-to-business relationship.
- Key Assignment 3: marketing Plan – Demonstrate an understanding of marketing objectives, strategies and tactics by creating a comprehensive effective marketing plan. Students will search and read existing marketing plans written in a formal business style. Students will synthesize their knowledge of the seven functions of marketing: product, pricing, promotion, distribution, marketing information management, finance and sales which support their plan. Students will participate in Toastmasters International to develop public speaking skills. Then they will create a multimedia presentation to consolidate and deliver the information to an interested audience. The role-play audience will consist of potential investors who have the willingness and authority to offer start-up funds.
  Marketing Mix, Pricing Strategies, Personal Selling & Customer Service, Buying Decisions, and Social Media marketing. Students Design: Website, logo, slogan, advertisements for unit project, product prototype.

Unit 6 – Finances, 6 weeks

Students will analyze the financial concepts for formulating wise financial decisions when starting a business. They will research, create and analyze all the financial factors that are involved, from personal finances to operating a business. They will identify startup costs and income and expenses. As a project and part of business plan, they will design and apply concepts for developing a sound financial plan.

Topics:

- Determining personal net worth
- Estimating business start-up costs & product cost
- Understand sources of equity capital
- Understand sources of debt capital
- Be able to prepare pro-forma cash-flow, balance sheet, and profit-loss statements
- Understand the basics of Accounting
- Explain the importance of keeping accounting, payroll, bank and tax records
- Determine valuation of your company

Key Assignments:

- Construct A Financial Plan: Students will use the information they have been compiling to develop a financial plan for their business. Students will interview banking professionals to determine the elements necessary for their plans. Students will include the personal budgets and product cost analysis they have calculated, in addition, they will prepare a balance sheet and income statement to develop the financial plan. Students will create a brochure or produce a video to present their financial plan.
- Personal Budget: Students will be able to examine forms of record keeping involved with budgeting and cash management thus summarizing how a budget will change throughout their life cycle. Students will be able to summarize how a budget will change workbook to create a monthly budget of their own, having a positive saving income every month. They will present to the class illustrating through the use of charts so students can connect and draw conclusions.
- Cost Analysis for Product and Service: Students will research fixed and variable costs when developing a project or service. Students will use an excel workbook to define and calculate fixed and variable costs of the product/service, thus understanding the concept of what is the break-even point and how do they calculated the formula to establish a price for their product/service. They will either work in pairs or individually making a presentation to the class on proving their outcomes. Students will also present to EAB (Employee Advisory Board) members who have developed a business of their own and be open to product evaluation and critique.

Course Materials specific to Unit 6:

Unit 7 – Business Plan/Culminating Unit – Final Project – Weeks TBD

This unit serves as the culmination of the course as it finalizes the business plan and incorporates the marketing plan, SWOT, and financials that were previously completed and analyzed. Preparations for a "Shark Tank-like" presentation similar to the television show will begin. Students design and create a multi-media presentation.

Students will finalize their business plan, print, and prepare for presentation. Composition of an addition of the financials and marketing sections throughout the course, the business plan will be nearing completion.

Key Assignments:

- Shark Tank – This project is designed around the TV hit show Shark Tank. Students will apply the concepts they have been working on the entire year and they will compete against each other for investor startup funds. There are 4 main parts to this project. Students will vote for the business viewed as most likely for investment. The winning team will receive an A for this section.
- Shark Tank Application A realistic presentation of information they will need to be familiar with before presenting their business:
- Virtual Business Resource Co-Op Source for writing each section of the business plan.
- Weebly Free platform to create an online blog, website, or store.
- Colorado Leeds School of Business, Business Plan Templates
- Bplans – sample business plan for students to review

History of Course Development
Our school district is currently interested in broadening the "g" elective programs and this course is very similar to our current Marketing class.

From the June newsletter: This year we made a concerted effort to write new courses that Business & Marketing teachers could bring to their schools and receive a-g college credit. In march, ten educational professionals met in Sacramento and wrote a fantastic course entitled, *Empowering Entrepreneurs.* I'm happy to report that I submitted it for a-g approval and it PASSED for "g" elective credits.

- finished business plan examples.

UNIT 3 - Creativity & Innovation, 6 weeks

Students will analyze the concepts of creative flow through teaming: communication plus collaboration creates synergy (C+C=S). The students will develop creative thinking skills applicable to entrepreneurship. Students apply the concepts of the creative process designing potential innovative products and/or services. Students synthesize various creative strategies, building confidence in their own ability to problem solve. The students will critique the nature of failure and why negative outcomes build core resiliency skills. Students analyze the concept of synergy in the 21st century workplace. Students analyze individual intrinsic motivation, thereby creating passion-based solutions. As we evolve into the 21st century, globalizes, knowledge-based, high-tech world the concepts of passion-based creativity skills are necessary for students to thrive and compete in the workplace.

Key Assignments:

- "Yes and...": Starting the Creative Flow
- Communications: Giving and getting the message
- Active Collaboration: Working with your strengths to build synergy
- Mini Project 1: "Looking into your World--Observing People Communicating"
- Project 2: Developing a Product
- Project 3: Addressing a need--using your passion to determine and develop idea/solution

Summary:

Mini Project 1: "Looking Into your World--Observing People Communicating"

Students will work in teams, conducting a two-day field research observing non-verbal communication and ineffective learning strategies. the parameters of the research include observing twenty observations in a public place, recording five different communication scenarios. They will then synthesize their findings with the team, creating a PowerPoint to share with the class. This research culminates in an oral presentation analyzing and critiquing their findings as they apply concepts of formal, oral communication skills.

Project 2:

Students, working in teams, design a floor plan, synthesizing their collaborative ideas using the link: http://www.floorplanner.com/ (http://www.floorplanner.com/) This exercise allows the students to apply the concepts of collaborative creativity strategies as well as defining requirements for the startup costs for their financials.

Project 3:

Students will continue working in teams to apply the concepts of active collaboration and communication by assembling a prototyped model. In teams, students will critique the design ideas, and issue revisions for improving the prototyped model. In addition, students will develop possible marketing scenarios for the use(s) of a finished prototype. At the end of the process students will reflect and assess their individual and team efforts.

Culminating Project

Students will design and crate their won product prototype. Students will use an iterative development process to refine their prototype for use as the lead-in to the other units that are used to develop the final business plan.

Course Materials specific to Unit 3:

- "7 Habit of Highly Effective Teens"., Sean Covey--The book is used to apply the concepts of this unit which enables the students to draw conclusions on the abstract concepts of creativity and innovation.

UNIT 4 - Management & Leadership, 6 weeks

The goals of this unit are to challenge students to understand and incorporate effective management and leadership characteristics as they develop their business ideas. Students develop their creative problem solving skills, set long and short term goals and learn to motivate future employees to accomplish the organization's objectives and goals. In this course, students analyze for four management functions: planning, organizing, directing (staffing) and controlling. In addition, students compare and contrast the productive leadership styles and characteristics while investigating their preferred leadership style. Students identify and analyze ethical and socially responsible opportunities available to them. Students connect SMART (Specific, Measurable, Attainable, Realistic, and Timely) goals to strategic, tactical, operational and contingency goal setting. Finally students examine the effect of technology as they develop their management plan for using their business idea.

1. Planning - Students analyze the concepts of effective management planning. Students assess their individual business idea by planning their organization's goals an creating a realistic, detailed plan of action for meeting those goals. Students' management plan incorporates strategic, tactical, operational and contingency plans in their business ideas.

Students read and analyze the traits of a successful entrepreneurship leadership traits. Students critique the main leadership theories--autocratic, democratic and laissez-fraire, connecting their preferred leadership style with one of these three theories. Students also investigate, compare and contrast leadership styles and characteristics using the textbook and Internet sources as reference material. Students design a plan to build their high-level teams based on strengths and skills needed for each position. Students incorporate SMART goals to set strategic, tactical operational and contingency goals for their business ideas.

2. Coordinating and Organizing - Students explore and design the most efficient layout for their business ideas. Students determine how many managers and employees needed to efficiently run their businesses. Students formulate hierarchical management structures best suited for their business idea. Students develop a customer service and training plan for their business idea. Included in the customer service plan are strategies for empowering managers and employees. Students construct the physical assets necessary to operate their business, including office buildings, stores, manufacturing equipment, computers and office furniture.

3. Staffing (Leading & Directing) - Students investigate staffing as it involves fulfilling the organization's structure through proper and effective selection, appraisal and development of the personnel to fill the roles assigned tot eh students' businesses. Students create job descriptions, compose staffing manuals for new employees, and develop orientation and training programs for their business idea. Students develop job enrichment plans which include decision making and problem solving and employee motivation to keep employees engaged. Students develop termination strategies for downsizing and for termination. Students also describe and illustrate the advantages to demonstrating high ethical and socially responsible behavior in their businesses. Students prove high ethical behavior has positive effect on moral and their businesses bottom line.

4. Controlling - Students apply the concepts of setting and measuring standards to verify the organizational goals are met. Students investigate inventory control systems to determine the best system for their business ideas. Students explore the international standards available and determine if these international standards are valuable to their businesses. Students develop inventory control strategies to measure the deviation of actual performance form the standard performance, and create a plan for identifying and correcting any deviations.

Key Assignments:

- What Makes a Great Leader: Students will identify characteristics of leadership by researching the lives of great American leaders. Students critique two web sites on the great entrepreneurs. Students formulate a hypothesis of the top ten traits that these great entrepreneurs demonstrated. In small teams, students analyze their assigned entrepreneur identifying the top ten traits of their entrepreneur. In addition students apply the entrepreneurship traits to their own lives connecting examples to the great entrepreneur. Small groups share with the class their findings. As a closing activity, students write a response to one fo the following assessment questions: a) which character trait do you think was most helpful for your leader and why? b) Which of the leadership traits do you possess? c) How might you use these leadership traits in your future career?

- SMART Goals: Students start by prioritizing a list of business tasks. These tasks include the four areas of planning; strategic, operational, tactical and contingency planning. Instructor led discussion on the prioritizing and setting of SMART goals. SMART goals are Specific, Measurable, Attainable, Realistic and Timely. In small groups, students compose SMART goals for one of the four types of planning, strategic, operational, tactical or contingency planning. After sharing their SMART goals with the class, individually students create one SMART goal in each area of planning as related to their own business idea. Students discuss their SMART goals with their small group. Students critique and then revise SMART goals as needed.
- MLA paper analyzing the four functions of management: Using the key terms for this unit, students will compose a two-to-three page typed paper describing the planning, organizing, directing and controlling aspects of management. In addition students will analyze and connect the four functions fo management to your business idea. When completing their paper, students will cite the textbook and provide two appropriate web sites to prove their analysis.

UNIT 5 - Marketing, 9 weeks

Marketing is the process of creating, distributing, promoting, and pricing goods, services, and ideas to facilitate satisfying exchange relationships with customers in a dynamic environment. Students will create a skills and personality index to determine their preferences and abilities and where they might be best applied within the marketing process. Students will be prepared with a foundational knowledge base essential to practice industry standards skills. Students will work in small groups and collaborate in the development of marketing concepts from idea to reality. They will utilize the Internet to research current competitive products and build an environmental assessment, or SWOT (Strengths, Weakness, Opportunities, and Threats) analysis. By visiting consumer markets and analyzing product placement, product packaging, and in-store promotional materials, students will connect theoretical concepts to actual market practices. Marketing involves developing and managing a product that will satisfy customer needs. By utilizing primary research strategies, like focus groups, and online surveys, students can analyze consumers' wants and needs to clarify their specific target market. Students will utilize the database technology to collect, store, analyze and report findings for decision support. Students will apply spreadsheet skills to create financial analysis to predict appropriate pricing models to determine break-even points and return-on-investment percentages. These activities--product, distribution, promotion, and pricing--are known as the marketing mix because marketing managers decide what type of each element to use in what amounts. Students will demonstrate media literacy by creating images, in a graphic design software application, that identify their brand.

They will incorporate those images into a series of video production that deliver their branding message. Mentors within the marketing community will visit the classroom an discuss their experiences in applying the previously discussed marketing theories.

Key Assignments

- Marketing Your Product: Step 1, students will create a product brand recognition strategy by designing product names, logos and packaging for a brand of their choice. Step 2, students will assume the role of a marketing director. The company is going to launch your product. but before, the student must analyze the explain the 3 steps to creating brand equity and how apply these concepts to the new design creation. The creative process will visually prove a student's understanding of the importance of ensuring quality of products and services. The creative process will analyze factors marketers' use to position products and businesses such as branding, packaging, labeling, legal considerations, product life cycle and management techniques for each level of the life cycle and purchasing functions.
- Sales and Marketing Campaign - Students will work in small collaborative groups to design a comprehensive Sales and Marketing Campaign. First, students will read instructional materials abut goal setting techniques. Students will formulate SMART (Specific, Measurable, Attainable, Realistic, Time based) objectives for at least six activities that construct their campaign. Next, they will examine and analyze existing print, TV, and web advertisements. Then they will demonstrate an understanding of product and institutional promotion by creating advertising vehicles like magazine advertisements, publicity/public relations events, promotional sales materials, and mock-ups of e-commerce websites. Software applications like Photoshop, Dreamweaver and Windows Moviemaker will be used to create student artifacts. Additionally students will analyze whitepapers developed by Huthwaite, Inc. to gain an understanding of professional sales techniques that they will apply in a final role-play presentation. to prove their understanding of the Huthwaite process, students will develop role-play scripts that demonstrate their understanding of consultative selling techniques and the 8 step sales process. They will differentiate whether they need to develop a retail style pre-approach and closing strategy, or if they require an approach designed for a longer sales cycle in a business-to-business relationship.
- Key Assignment 3: Marketing Plan - Demonstrate an understanding of marketing objectives, strategies and tactics by creating a comprehensive effective marketing plan. Students will search snd read existing marketing plans written in a formal business style. Students will synthesize their knowledge of the seven functions of marketing: product, pricing, promotion, distribution, marketing information management, finance and sales management into an integrated document that contains images, charts and graphs which support their plan. Students will participate in Toastmasters International to develop public speaking skills. Then they will create a multimedia presentation to consolidate and deliver the information to an interested audience. The role-play audience will consist of potential investors who have the willingness and authority to offer start-up funds.

  Marketing Mix, Pricing Strategies, Personal Selling & Customer Service, Buying decisions, and Social Media Marketing. students Design: website, logo, slogan, advertisements for unit project, product phototype.

UNIT 6 - Financials, 6 weeks

Students will analyze the financial concepts for formulating wise financial decisions when starting a business. They will research, create and analyze all the financial factors that are involved, from personal finances to operating a business. They will identify start-up costs and research sources of capital. Students will also project and analyze annual and monthly business income and expenses. As a project and part of business plan, they will design and apply concepts for developing a sound financial plan.

Topics:

- Determining personal net worth
- Estimating business start-up cost & product cost
- Understand sources of equity capital
- Understand sources of dept capital
- Be able to prepare pro-forma cash-flow, balance sheet, and profit-loss statements
- Understand the basics of Accounting
- Explain the importance of keeping accurate accounting, payroll, bank and tax records
- Determine valuation of your company

Key Assignments:

- **Construct A Financial Plan:** Students will use the information they have been compiling to develop a financial plan for their business. Students will interview banking professionals to determine the elements necessary for their plans. Students will include the personal budgets and product cost analysis they have calculated, in addition, they will prepare a balance sheet and income statement to develop the financial plan. Students will create a brochure or produce a video to present their financial plan.
- Personal Budget: Students will be able to examine forms of record keeping involved throughout their life cycle. Students will be able to summarize how a budget will change workbook to create a monthly budget of their won, having a positive saving income every month. They will present to the class illustrating through the use of charts so students can connect and draw conclusions.
- Cost Analysis of Product and Service: Students will research fixed and variable costs when developing a project or service. Students will research fixed and variable costs when developing a project or service. Students will use an excel workbook to define and calculate fixed and variable costs of the product/service, thus understanding the concept of what is the break-even point and how do they calculated the formula to establish a price for their product/service. They will either work in pairs or individually making a presentation o the class on proving their outcomes. Students will also present to EAB (Employee Advisory Board) Members who have developed a business or their own and be open to product evaluation and critique.

UNIT 7 - Business Plan/Culminating Unit - Final Project - Weeks TBD

this unit serves as the culmination of the course as it finalizes the business plan and incorporates the marketing plan, SWOT, and financials that were previously completed and analyzed. Preparations for a "shark Tank-like" presentation similar tot he television show will begin. Students design and create a multi-media presentation.

Students will finalize their business plan, print, and prepare for presentation. Composition of an executive summary, action plan, and exit strategy will be nearing completion.

Key Assignments:

- Shark Tank - This project is designed around the TV hit show Shark Tank. Students will apply the concepts they have been working on the entire year and they will compete against each other for investor startup funds. There are 4 main parts to this project.

Students will vote for the business viewed as most likely for investment. The winning team will receive an A for this section.

- Shark Tank Application A realistic presentation of information they will need to be familiar with before presenting their business:
- Virtual Business Resource C0-Op Source for writing each section of the business plan.
- Weebly Free platform to create an online blog, website, or store.
- Colorado Leeds School of Business, Business Plan Templates
- bplans - sample business plan for students to review

17. Brief Course Description

Exploratory Business is a simulated business that is set up and run by students to prepare them for working in a real business environment. The students determine the nature of their business, its products and services, its management and structure, and learn the daily operations of a business. Emphasis will be placed in using current business software packages and the Internet for business transactions.

Students will study supply and demand, the Federal Reserve System, business organizations, the stock market, and international transactions.

1. **COURSE DESCRIPTION (Include a brief explanation of the course; mention any prerequisites, including standardized test scores; and indicate whether the course satisfies a specific graduation requirement. Approximate length: two or three sentences.)**

   Exploratory Business is a simulated business that is set up and run by students to prepare them for working in a real business environment. The students determine the nature of their business, its products and services, its management and structure, and learn the daily operations of a business. Emphasis will be placed in using current business software packages and the Internet for business transactions.

   Students will study supply and demand, the Federal Reserve System, business organizations, the stock market, and international transactions.

2. **INSTRUCTIONAL MATERIALS (List the basic text—include title, author, and copyright—and other essential supplementary materials or instructional resources/materials used in the course.)**

   BOARD-ADOPTED TEXTBOOKS:

   Ristau, Eggland, Diabay, Burrow & Daughtrey, Introduction to Business, South-Western Publishing Co., 1997

SUPPLEMENTARY INSTRUCTIONAL MATERIALS:

Software

Office 97 Professional, Microsoft Outlook, Internet Explorer, Front Page, Bank of America Home Banking, and Microsoft Publisher, QuickBooks.

Resource Materials

Church, Crackers Bakery, an Entrepreneurial Simulation, South-Western Publishing, 1994

Forde et al., Diigitools: Technology Application Tools, South-Western, 2004

Greene, Entrepreneurship, Ideas in Action, South-Western, a division of Thomson Learning, Inc., 2004

Guerrieri et al., Glencoe Accounting, Real-World Applications & Connections, Glencoe/McGraw-Hill, 2000

Meyer, Allen, Entrepreneurship and Small Business Management, Glencoe/McGraw-Hill, 2000

Rue, Byers, Business Management, Real-World Applications & Connections, Glencoe McGraw-Hill, 2001

Shelly, Cashmen, and Vermaat, Office 2000, Introductory Concepts and Techniques, Thompson Learning, 2000

3. **COURSE OUTLINE (List the major content areas of the course and divide them according to the semester in which they fall. Designate the approximate amount of time given to each of the content areas. Suggested length: One page.)**

Introduction to fundamental economic concepts- Economic choices, the nature of the subject area, the challenge of scarcity, the need for trade-off, opportunity costs, economic goals, efficiency, price stability, full employment, growth and socio-economic goals. (20 hours)

Economic systems- what constitutes an economic system, different types of economic systems (market, command, traditional)? How do economic systems resolve the basic economic questions? (20 hours)

Free Enterprise System- Basic laws of supply and demand, and forces, which interact to establish prices. (15 hours)

Organizing Business- basic forms of business organizations. Process of starting a business (risk taking, corporate organization, sources of funds for business firms, financial structure of a business) (40 hours)

-Defining Departments
-Writing Job Descriptions
-Writing a Business Plan
-Interviewing for Jobs
-Using the Internet for business activities

Income and Consumption- The role of the consumer in the economy, personal finance (maintaining a budget, bank accounts, consumer credit, stock market, and maintaining investments.) (10 hours)

Money and Financial Institutions-bank services mediums of exchange, role of the Federal Reserve System, money supply, inflation, and international exchange rates. (10

hours)
-Starting and maintaining a branch bank

Saving and investing-An overview of how saving and investing helps the individual. Various savings and investing plans, which are open to small and medium investors. (10 hours)

International trade-The benefits of foreign trade. How foreign trade works? What causes the value of the dollar to go up and down internationally? Participation effectively as a consumer and businessperson in the global economy. (10 hours)

Working with spreadsheets-creating worksheets, writing formulas, reports, learning worksheet enhancements. (10 hours)

Working with word processing and desktop publishing documents-letters, table's graphics, catalogs memorandums, business forms, and templates. (20 hours)

Working with the Internet-using search engines, e-mail, creating web pages, and business transactions. (40 hours)

Working with presentations-creating slide shows and presentations, using text, graphics, charts, animation, digital photo imaging, audio, and scanning. (20 hours)

Working with a personal information manager-calendar, e-mail, journal, contacts, notes, and tasks. (10 hours)

Business Etiquette-professional ethics, international etiquette standards, phone etiquette, teamwork, and appropriate dress in the workplace. (10 hours)

Establishing accounting department procedures-payroll, accounts receivable/payable, financial statements, operating costs, start-up costs, and budgets. (20 hours)

Establishing human resources department responsibilities-organizational chart, assessment of personnel, employee manual, and employee relations. (20 hours)

Establishing marketing department responsibilities - advertising, market research, logos, promotional designs, and preparation of a catalog. (20 hours)

Establishing administration department responsibilities-company directory, purchasing budget for departments, workflow, business plan, office layout, correspondence, and creating a web site. (20 hours)

Establishing sales/purchases department responsibilities-
International trade research, consumer needs, competition, procedure for acquiring clients, and determining prices. (20 hours)

Total hours =360 (125 hours for economics and 235 hours for business credit)

4. **<u>COURSE OBJECTIVES</u> (the objectives are to include the specific, major skills or understandings which <u>students</u> will be able to demonstrate or acquire following instruction in the course. A minimum of eight to twelve objectives should be identified for each semester of the course. Each objective is to be clearly linked to the Board adopted standards for the course or subject area; indicate the link by placing the number of the appropriate standard(s) after each objective. Minimum length: one page)**

E = Economic Standards B = Business Standards

The student will be able to:

A. Demonstrate knowledge of the basic concepts used by economics, particularly scarcity, allocation of resources, economic decisions, economic goods, trade-offs, efficiency, price stability, goals of all economic systems. (E 3.1, 3.3, 3.6)
B. Demonstrate an understanding of the basic differences between the different types of economic systems that exist in the world today. Students will demonstrate an understanding of the concept of a mixed economic system. (E 1.2, 3.4, 6.2)
C. Demonstrate an understanding of how consumers make decisions and what factors in the economic system affect the making of those decisions. (E 8.1, 10.1, 10.2, 10.3, 11.1, 11.2)
D. Demonstrate an understanding of credit and its use in the American economic system and how credit plays a role in the lives of most Americans. (E6.1, 6.3, 7.1)
F. Gain skills necessary to calculate the cost of credit on typical credit agreements. (E 10.1, 10.3, 11.1)

G. Demonstrate knowledge of the basic information for obtaining basic necessities - housing, food, transportation, clothing - and how they will be able to analyze the costs of such basic economic factors in order to make intelligent decisions for themselves. (E 3.3, 10.1, 11.1, 11.2)
H. Demonstrate an understanding of how businesses are organized and how they function in a market economy. Students will demonstrate an understanding of the role of profit incentive in business growth and its importance in preserving the benefits of competition. (E 1.4, 2.1, 2.2, 3.7, 5.2, 7.1, 8.1, 10.4)
I. Demonstrate and understanding of how the banking system works in the American economic system and the role of the Federal Reserve System in stabilizing the value of the dollar within the nation's economy. (E 3.7, 6.1, 7.1)
J. Demonstrate an understanding of how and why government regulates business. (E 1.3, 2.2, 3.3, 3.7)
L. Students will use technology to produce projects. (B 1,3,4,6,7,12)
M. Students will develop an awareness of their own career interests. (B 8, 9, 10)
N. Students will develop employability skills through interviewing, resume building, oral presentations, and teamwork. (B 1,3,5,8,10,12)
O. Students will produce a professional portfolio and/or a "Webfolio" as a useful product for obtaining employment. (B 1.3,5,8,10,12)

P. Students will demonstrate critical thinking, organizational, and decision-making skills by developing project proposals, time lines, and final products. (B 1,3,4,12)
Q. Students will demonstrate proficiency by using desktop publishing software to create a newsletter and a brochure using imported text and graphics with appropriate page layout and design. (B 1,3,44,6,12)
R. Students will demonstrate proficiency by creating a Web site using different applications and appropriate design features. (B 1,3,4,6)
T. Students will demonstrate proficiency by sending electronic Email, threading messages. (B 1,3,4,5,12)
U. Students will demonstrate proficiency by demonstrating an understanding of computer software, hardware, and terminology. (B 1,3,4,6)
V. Students will demonstrate proficiency by demonstrating an understanding of computer software, hardware, and terminology (B 1,3,4,6)
W. Students will demonstrate proficiency by exhibiting business-like attitudes in demonstrating punctuality, turning assignments in on time, using class time productively, and making up assignments when absent. (B 1,3,4,6)
X. Students will demonstrate competence in listening to and following oral and written instructions (B 5)
Y. Students will demonstrate competence in understanding the ethical nature of on-line communication. (B 1, 5)

5. <u>STUDENT EVALUATION STANDARDS</u> (List the criteria on which students will be graded in the course. Give the approximate weight for each of the grading criteria in determining the student's grade, such as tests, homework, labs, class participation. Also indicate the weight given to quarter grades and semester finals in tabulating the final grade.)

Items used for grade assessment:

Business Technology Core Implementation and Performance-Based Assessment
Student Portfolios (all projects, business plan, annual report, job descriptions) (25%)
Weekly calendar, Participation-work log sheets, Meetings, Consultant Evaluation, Self Evaluation (20%)
Personal Finance Records (5%)
Evaluation of Economic Concepts (10%)
E-mail, letter, communication (5%)
Economics Assignments and Examinations (25%)
Final Examination (10%)

Grade Scale:
100% -90% = A
89% - 80% = B
79% - 70% = C
69% - 60 = D
59% and below = F

Submitted to UC 2/28/06
Pending Approval: G/Elective
Updating Exploratory Business: BU6020 & BU 6021

Course Description

Gaming Technology is designed for 10 - 12th grade students. Students will learn a brief history of games and their development purposes in other societies around the world as well as in the United States. Students will develop and evaluate games using a variety of technologies and strategies. Students will participate in game development and experiment with coding. Students will also have the opportunity to design and evaluate mobile apps or gaming models. Students will create collaborative multimedia presentations. This course provides a pathway for students to learn relevant technical skills and prepare themselves for career opportunities/college.

Course Goals and/or Major Student Outcomes

Students will engage in the use of relevant technology applicable across the curriculum. This course provides a rigorous curriculum designed to prepare students for additional coursework or career readiness. Students will use technical knowledge to expand, synthesize, develop, and design games or computer applications.

Course Outline

Unit 1

History of Games

In this unit students research and create a time-line of historical relevance and connect game theory. Game genres and publishing is explored and students engage in a variety of activities to connect past and present. Evolution and origin of games is explored and students use information to formulate ideas about the connections presented in material from a historical perspective.

Unit 2

Designing Process

Students unfold the game design basics using the perspective of current game designers. The process involves such aspects as brainstorming and writing a story to engage players. Through a variety of activities and writing assignments students will create storyboards and be able to connect detailed developments of design as related to real world applications. Students will also analyze written and drawn storyboards

from current state of the art game designers. Students will learn game structure from designer perspectives that bridge learning to real world applications.

Unit 3

Software

Students will be introduced to Adobe CS6 a relevant software suite of graphic design and web development applications. Students will create and design projects individually as well as collaboratively with other students using Illustrator, photo shop, Fireworks and Dreamweaver. One example would be using Illustrator a professional drawing tool to construct an image. Students will also be introduced to HTML program language and use Dreamweaver to create simple webpages. Using this program suite will allow students to connect software design tools and allow a deeper connection to the overall gaming design process. Design structure, symmetry, and gameplay elements provide a technical mapping as students build foundation of knowledge.

Unit 4

Game Creation

Emphasis on structure, process, audience, and purpose also theme/genre and character development.

Using Stencil, Twine, Game Maker and/or other software technologies students will learn the process for creating an actual "live" game. Using a storyboard students will create a game using the writing the story approach. The "story" will then be used to create a game. Considerable amount of time will be spent on character and rule development. Students will be able to create and evaluate strategies and game playability both individually and in small groups. An extension lesson would be to have other students come engage in play of their games created and evaluate based on common criteria. Students will build upon design and broaden their overall understanding gaming through technology. Students will participate in online forums or blogs to interface with other student environments. Students will have the opportunity to interface and interact with other students creating a peer forum to discuss technology developments and design techniques. Additionally, students can collaborate collectively to critique and rate/rank student projects.

Game Maker	Software program
Adobe CS6	

Key Assignments:

Unit 1

- Students create a historical timeline multimedia presentation.
- Informational Essay
- Small group presentation findings

Unit 2:

- Conduct research
- Create 4 - 6 Storyboards
- Multimedia presentations
- Peer Editing /Rubric Design

Unit 3

- Students will create 3 webpages using animation, graphic artwork, images, music, and sound
- Create a flowchart of elements of game mechanics.
- Completion of tutorials in Adobe CS6 – Photoshop, Illustrator, and Dreamweaver

Unit 4

- Students create storyboard including core gameplay, controls, rules, modes of play and other features specific to their game.
- Students create a prototype of a game or simulation and playtest the functionality of the game. Students will test and compare and contrast different games and user experiences.

Instructional Methods and/or Strategies

Writing Assignments

Independent Internet Research

Troubleshooting errors and revision

Small Group Instruction

Independent practice, partner, or group work

Student Projects

SDAIE strategies when needed to supplement second language learners

Oral discussion/Evaluation

Peer Evaluation

Checks for understanding to see all students are learning

Collaborative Learning groups

Context for Course

This course is focused around information technology with an emphasis on Arts media and entertainment. The course is designed to develop and awareness of the importance of emerging technology and the role it plays through games. Applications allow students to explore and understand game development, creation, design and the increased game technology connections in society today.

History of Course Development

The original course was developed at the Spring 2014 University of California Curriculum Integration (UCCI) Institute focusing on subject area "b" English and Career Technical Education (CTE) industry sector of Information and Communication Technologies. Writing Games for Social Change coursework was approved last year by the SMJUHSD. Our department goals were to create more "g" elective courses and by using the original course material we were able to create a similar class with challenging and relevant career technical elements.

Course Title

Introduction to Computer Programming

Description of Target Group

This one semester course is designed for 9th through 11th grade students who have an interest in learning to operate a personal computer. This course will be taught on the Apple computer and is not open to any student who has received credit for Computer Programming.

Purpose

The purpose is to promote computer literacy, introduce computer concepts, and prepare students for possible further computer studies.

Standards of Expected Student Achievement

Upon completion of the course, the student will successfully demonstrate the ability to:

1. Understand computer symbols as communication tools for programming and using a computer.
2. Understand and use the available computer hardware, demonstrating the ability to care for the equipment and software.
3. Graph a design and write a simple graphics program.
4. Plan and write a simple program in the BASIC language.
5. Understand available user programs in information management.
6. Plan and write a simple program in LOGO.
7. Appreciate the importance of the computer in society and an awareness of the wide variety of computer applications.
8. Be aware of the value of the computer as a problem-solving tool.
9. Demonstrate knowledge of the legalities of software, copyrights, etc.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in Santa Maria Union High School District

Activities

Hands-on experience at the computer with exploratory worksheets and projects. The instruction is individual and small group.

Santa Maria Joint Union High School District – Career Technical Education

INTEGRATED MARKETING AND ENGLISH (UCCI)

DATE:

INDUSTRY SECTOR: Marketing, Sales and Services Sector

PATHWAY: Entrepreneurship/Self-Employment

CALPADS TITLE: Advanced Entrepreneurship/Self-Employment (Capstone)

CALPADS CODE: 8331

HOURS:

Total	Classroom	Laboratory/CC/CVE

Sales Managers	11-2022.00	Buyers and Purchasing Agents, Farm Products	13-1021.00
Customer Service Representatives	43-4051.00		

COURSE DESCRIPTION:

The aim of this course, Integrated Marketing and English, is to prepare students with foundational knowledge in marketing within the framework of year three or four high school English, so that they will be equipped for the challenges in the workplace and in their pursuit of post-secondary education. Whether a student is interested in exploring the field of Marketing as a possible career field or to become an informed consumer, this course provides an opportunity for students to fulfill their English course requirement while pursuing a career pathway and developing critical reading, writing, speaking, and thinking skills geared towards the business field.

This interdisciplinary Marketing and English course will provide opportunities for students to study the English language within the context of business. For example, by examining and analyzing print, TV, and web advertisements, students will be able to viscerally and experientially understand tone, style, and diction. Through critical literacy, they will comprehend how marketing and advertising professionals manipulate structural and rhetorical devices to influence and sway consumers perception of products and influence buying decisions through advertisements, branding, business communications, and marketing materials. To develop an understanding of how the study of practical and academic English is translated into the practice and language of business, students will read and analyze a variety of texts - essays, journal articles, advertisements, blogs, plays, business communications, and full-length literary works, including Tortilla Curtain, Ogilvy on Advertising, and Fast Food Nation. Students will refine their skills in rhetorical reading, writing, and speaking, and polish their presentation skills, so that they can successfully market not only the businesses that they may work for but also themselves. While most of the reading materials will be on marketing-related topics, instruction will be directed towards developing students reading, writing, speaking, and critical thinking skills as they relate to the business marketing model. Students will write persuasive, narrative, and expository essays, argument analysis, and complete research projects within a business framework. Further, students will have many opportunities to polish their presentation skills in order to successfully market both their businesses and themselves. This course emphasizes diversity and innovation through gathering, synthesizing, questioning, and forming articulate data-driven opinions. Students read often and with an open mind, write often and clearly with coherent thought and form, and articulate their reading and writing in presentations appropriately targeting both academic and real-world audiences.

(Vocabulary), and the factors that influence that demographic. 2. Understanding and Selecting target markets; explain the concepts of market segmentation demographically in reference to age, gender, education, income, lifestyle, geographic location, buying patterns, consumer behavior and customer needs (vocabulary). 3. Determine the difference between mass markets by producing a commercial to everyone on television through the market segmentation capturing a specific target audience			2.4, 2.5, 2.6 Career Planning and Management: 3.5 Technology: 4.1, 4.3 Problem Solving and Critical Thinking: 5.1 Ethics and Legal Responsibilities: 8.1, 8.4 Leadership and Teamwork: 9.2 Technical Knowledge and Skills: 10.8 Demonstration and Application: 11.3 **CTE Pathway:** C1.1, C1.3, C1.4, C1.6, C3.4, C3.5, C4.4, C4.5, C4.2, C4.1, C6.5, C6.4, C6.3, C9.1, C9.3, C9.4, C9.5
III.	**UNIT 3: MARKET RESEARCH**	**CR**	**Lab/ CC**	**Standards**
	A. Create clear research questions, analyze primary and secondary sources, and analyze rhetorical devices in public documents. B. Determine client needs and desires using a scientific research process. C. Conduct and present research that supports an effective marketing plan. Research must be designed and conducted utilizing industry norms for determining, gathering, and reporting data. D. Write a properly formatted 6-8 page MLA research paper that integrates graphs, charts, and images and focuses on consumers needs and desires in order to develop and improve products and services. E. Deliver a multi-media presentation that integrates graphs, charts, and images. F. Reading Assignments include: G. Prentice Hall Writing and Grammar Ch. 13 Research Paper & Ch. 32 Citing Sources H. Marketing Essentials Ch. 28 & 29 I. Public Company's Annual Reports, profiles, marketing communications, and internet	15	2	**Academic:** LS: 11-12.1, 11-12.2 RSIT: 11-12.6, 11-12.7 WS: 11-12.6, 11-12.7 HSST: 11-12.8 **CTE Anchor:** Communications: 2.4, 2.5 Technology: 4.1, 4.3 **CTE Pathway:** C1.6, C1.3, C2.3, C3.5, C3.6, C3.1, C9.5
IV.	**UNIT 4: MARKETING ENVIRONMENT**	**CR**	**Lab/ CC**	**Standards**
	A. Define "Marketing Environment" and utilize other relevant vocabulary and key terms. B. Distinguish between international, national, regional, and local marketing environments. C. Recognize the role of multinational corporations by comparing and contrasting global businesses (e.g., Starbucks, McDonald's). D. Read, analyze, and cite evidence in industrial, global business and international marketing documents to explain business ethics and social responsibility. E. Analyze the global economy and its impact on the marketing environment by focusing on 3 Key Factors affecting: Macro (PEST= Political leaders, Economic factors, Socio-cultural, Technology), Micro (consumers, suppliers, and stake	20	10	**Academic:** LS: 11-12.2, 11-12.4 RSIT: 11-12.4 WS: 11-12.5 **CTE Anchor:** Communications: 2.3, 2.4, 2.6 Responsibility and Flexibility: 7.1

	holders), F. Internal (Men, money, machines, materials, and minutes). G. Recognize market opportunities and challenges as a result of SWOT (Strengths, Weaknesses, Opportunities, Threats) Analysis. Demonstrate the impact of internet and Web 2.0 tools with the use of technology for oral presentations			Ethics and Legal Responsibilities: 8.1, 8.4, 8.5 Leadership and Teamwork: 9.6 Demonstration and Application: 11.1, 11.4 **CTE Pathway:** C1.2, C1.5, C2.4, C3.7, C4.4, C4.5, C5.1, C7.5, C7.2, C9.2
V.	**UNIT 5: MARKETING COMMUNICATION, PRODUCT OFFERING AND BRANDING**	**CR**	**Lab/ CC**	**Standards**
	A. Analyze how an audience is persuaded by organized ideas and precise and relevant examples. B. Understand a call for action and the effect of visual aids and rhetorical devices. C. Select the appropriate medium to produce a desired effect and revise presentation based on audiences' response. Enhance vocabulary and fluency through word analysis and systematic vocabulary development. D. Research, analyze, and critique marketing packaging, branding, labeling, communication strategies, messages, and material in a variety of mediums. Demonstrate understanding of how promotion concepts and strategies achieve desired outcomes. E. Demonstrate the use of form and function of brands and brand presentation and how brand loyalty increases profits over time.	30	1	**Academic:** LS: 11-12.1, 11-12.2, 11-12.4 WS: 11-12.4 HSST: 11-12.6 **CTE Anchor:** Communications: 2.3, 2.4, 2.5, 2.6 Technology: 4.1, 4.2, 4.3 Health and Safety: 6.6 Responsibility and Flexibility: 7.4, 7.7 Ethics and Legal Responsibilities: 8.1 Technical Knowledge and Skills: 10.8 Demonstration and Application: 11.4, 11.5 **CTE Pathway:** C3.6, C3.4, C3.3, C3.1, C4.1, C4.6, C4.4, C4.5, C6.1, C6.3, C6.4, C9.2, C9.4, C9.1, C9.3, C9.6, C9.5
VI.	**UNIT 6: MARKETING CHANNELS AND PROMOTIONAL PLAN**	**CR**	**Lab/ CC**	**Standards**
	A. Examine industry-specific vocabulary and use rhetorical strategies. B. Determine relationships between elements of the research topic. C. Utilize primary and secondary resources to identify discrepancies between sources. D. Critique expository documents. E. Determine target audience. F. Incorporate appropriate tone. G. Itenfify and anaylze retail, wholesaling and physical distribution marketing channels H. Analyze and differentiate the promotional mix concepts in marketing. I. Explain the nature and scope of public relations.	30	10	**Academic:** LS: 11-12.4 RSIT: 11-12.7 WS: 11-12.4, 11-12.5 **CTE Anchor:** Communications: 2.4 Career Planning and Management: 3.9

	J. Discuss trade and consumer sales promotion. K. Discuss the elements of visual advertising and the artistic aspects of a display. L. Explain the purpose and importance of advertising. M. Compare and contrast the different types of advertising media. N. Create appropriate digital and print advertising. O. Calculate media costs. P. Create an MLA formatted Works Cited.			Technology: 4.3 Technical Knowledge and Skills: 10.3, 10.8, 10.9 Demonstration and Application: 11.1, 11.2 **CTE Pathway:** C2.1, C3.6, C3.5, C3.3, C3.4, C4.1, C4.6, C4.5, C4.2, C4.4, C6.1, C6.2, C6.3, C6.4, C6.5, C8.4, C9.2, C9.4, C9.6, C10.1
VII.	**UNIT 7: SELLING**	**CR**	**Lab/ CC**	**Standards**
	A. Understand persuasive speaking strategies and the key components of notable speeches. B. Analyze persuasive speeches by identifying its focus, intended audience and purpose, organization, and development, evaluating its overall persuasive appeal. C. Compare and contrast the similarities and differences between persuasive speeches and selling/product presentations. D. Define selling, the goals of selling, and identify different types of selling situations. E. Describe the goals and techniques for creating effective product presentations. F. Understand and determination of pricing strategies G. Understand customer buying motives and the three types of decision making. H. Demonstrate the "Seven Steps of Selling." I. Formulate open-ended questions vs. close-ended questions. J. Employ research methodology utilizing primary and secondary sources. K. Apply appropriate interviewing techniques to ask questions and use language that demonstrates knowledge of the subject. L. Relate product knowledge in terms of features and benefits. M. Use rhetorical devices in public speaking. N. Develop and present informative and persuasive speeches for an intended audience utilizing narrative, persuasion, and rhetorical devices. O. Structure ideas and arguments in a coherent and logical fashion including visual aids by employing appropriate technology anticipating the potential misunderstandings, biases, and expectations	12	5	**Academic:** LS: 11-12.5, 11-12.6 RSIT: 11-12.4 WS: 11-12.6 HSST: 11-12.5 **CTE Anchor:** Communications: 2.4, 2.5, 2.6 Technology: 4.3 Responsibility and Flexibility: 7.3, 7.4, 7.6, 7.7 Ethics and Legal Responsibilities: 8.3, 8.4, 8.5, 8.6, 8.8 Leadership and Teamwork: 9.3, 9.6, 9.7 Technical Knowledge and Skills: 10.3, 10.5, 10.9, 10.13, 10.14 Demonstration and Application: 11.3, 11.4 **CTE Pathway:** C1.4, C2.2, C2.3, C3.2, C4.1, C4.5, C5.1, C5.3, C6.1, C8.6, C8.3, C8.4, C9.2, C9.3, C9.4, C9.5, C9.6, C10.1, C11.5
VIII.	**UNIT 9: COLLEGE AND CAREER PLANNING**	**CR**	**Lab/ CC**	**Standards**

	A. Conducting research on career options. B. Conducting interviews of professionals in chosen field of research. C. Include optimizing employability by completing an employment portfolio which encompasses, but is not limited to the following: 1. Demonstrating correct use of formatting for workplace documents. 2. Identifying and utilizing correct purpose and tone for a specific audience. 3. Demonstrating effective use of language and word choice. 4. Revising and editing text. 5. Participating in mock job interviews. 6. Utilize strategies for self-promotion in the hiring process, such as job application, resume writing, interviewing skills, and preparation of a portfolio.	14	3	**Academic:** LS: 11-12.1, 11-12.5 RSIT: 11-12.3 HSST: 11-12.5 **CTE Anchor:** Communications: 2.4, 2.6 Career Planning and Management: 3.2, 3.3, 3.4, 3.5, 3.7, 3.8, 3.9 Technology: 4.3 Health and Safety: 6.6 Ethics and Legal Responsibilities: 8.3 Leadership and Teamwork: 9.4 Technical Knowledge and Skills: 10.3 Demonstration and Application: 11.2, 11.3, 11.4, 11.5 **CTE Pathway:** C1.1, C2.1, C4.2, C5.4, C5.2, C5.3, C5.1, C7.3, C7.4, C7.1, C11.4, C11.5, C11.1
IX.	**RETAIL EXPERIENCE (STUDENT STORE OPERATIONS)**	**CR**	**Lab/ CC**	**Standards**
	• Job Placement in Student Store • Students Submit Resumes/Job Applications for Retail Positions offered in the school's student store. • Management/Supervisory Students Interviewed first, then all other employees; once management is determined by instructor, new management staff has contributory input for hiring staff from course employees • Students get on-the-job training in the full operations of the school;s on site student store. Structure of the store is with a class of 36: • Management consisting of One-Two Managers, Two Merchanding Supervisors, Two Advertising Supervors, One Social Media/Web Supervisor and One Operations Supervise • Staff is distributed throughout the departments • Once foundational Marketing Concepts are mastered, then the transition to learning through application will proceed with students working in the student store approximately 2-3 hours per week for a total of between 55-60 hours (which could include out-of-class) time.	5	50	**Academic:** LS: 11-12.1, 11-12.2, 11-12.6 RSIT: 11-12.7 WS: 11-12.4 **CTE Anchor:** Communications: 2.3, 2.4, 2.5, 2.6 Career Planning and Management: 3.2, 3.3, 3.9 Technology: 4.3 Problem Solving and Critical Thinking: 5.1, 5.4 Health and Safety: 6.6 Responsibility and Flexibility: 7.1, 7.2, 7.3, 7.4 Ethics and Legal Responsibilities:

Course Title

Introduction to Computers in Business

Description of Target Group

This course is open to students in the 9th through 11th grades who have successfully completed one or more semesters of typing. This one-semester course is intended for the student who has an interest in learning to operate a personal computer with hands-on experience using the Apple computer. This course is not open to any student who has received credit in Computer/Business Machines.

Purpose

The students will study a brief history of computers; learn the basic components of a computer system; operate the computer in word processing, spreadsheet, simple graphics, and special uses. Students will be introduced to career opportunities related to computers.

Standards of Expected Student Achievement

Upon completion of the course, the student will be able to:

1. Demonstrate a knowledge of the history of computer technology.
2. Demonstrate an understanding and use of computer hardware.
3. Demonstrate an understanding of the legalities of software, copyrights, etc.
4. Demonstrate the computer skills needed to operate the computer and computer programs.
5. Type simple manuscripts and/or reports and letters using a basic word processing software program.
6. Set up a file using the data base.
7. Demonstrate a knowledge of the uses of the spreadsheet.
8. Run a simple graphics program (time permitting).

Instructional Materials

Text, Supplementary Materials, and selected Software.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in Santa Maria Union High School District.

Activities

Hands-on experience at the computer, lectures, demonstrations, testing, videos, and workbook activities.

19. Brief Course Description

.An introduction to basic computer concepts and skills, programming techniques and web page design using HTML and JavaScript and advanced Internet technologies. A general education course dealing with how computers work, how they are used and their effects on society. Students will work in a classroom/computer lab setting.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

1) Understand basic user/software/hardware interfaces
2) Become aware of the history of computers and the WWW
3) Understand HTML and JavaScript coding
4) Demonstrate ability to problem solve in HTML and JavaScript
5) Develop basic understanding of design principles
6) Build a web site
7) Publish a web site using FTP protocol

21. Course Objectives

1) Become aware of the uses and importance of the computer on society
2) Understand and appreciate the user/software/hardware interface
3) Understand logical processes of computer problem solving
4) Understand HTML organizational techniques
5) Develop web pages that include hyperlinks and JavaScript
6) Incorporate programming control structures into their web page design

22. Course Outline

a. Computing Fundamentals – book exercises, quizzes and tests
b. Online Connections – book exercises, quizzes, and tests
c. HTML book exercises
d. Projects –
    i. Create a calendar in HTML using a table
    ii. Create a survey on campus cleanliness using a form with radio buttons, check boxes, text boxes, and a drop down list
    iii. Research good resource sites for HTML or JavaScript help
    iv. FTP protocol and publishing a site.
        1. Research web publishing and costs.
        2. Use FTP protocol to publish your site.
    v. Storyboarding – make storyboard cards on 5x8 cards with a card for each page showing the design layout, font to be used, colors, etc.
    vi. Design and build a web site that outlines the most important points learned about HTML in a frameset. Include a welcome page, basic tags page, and resources page. Publish site.
e. JavaScript book exercises
f. Culminating project
    i. Design a site using the approved subject of your choosing. Include storyboard cards, a frames based site with a nested frameset, a rollover image, compressed images, a frame based slide show, a random image array, a form with radio buttons, check boxes, text boxes, a drop down list and with an alert message and a conditional statement
    ii. Graded final project parts
        1. Storyboards
        2. Color scheme, font choices, background color, etc.
        3. Index page
        4. Image gallery – image composite sheet
        5. Array page with code
        6. Form w/ alert and conditional alert
        7. Published site
        8. Completed final project

23. Texts & Supplemental Instructional Materials

HTML and JavaScript and Advanced Internet Technologies – Turner & Barksdale, South-Western
Practical Computer Literacy – Parsons and Oja, Course Technology, Thomson Learning

24. Key Assignments

a. Create a calendar in HTML using a table
b. Create a survey on campus cleanliness using a form with radio buttons, check boxes, text boxes, and a drop down list
c. Research good resource sites for HTML or JavaScript help
d. Use FTP protocol to publish your site.
e. Published web site that outlines the most important points learned about HTML in a frameset.
f. Culminating project
    i. Design, code and publish site including all criteria given
    ii. Graded final project parts
        1. Storyboards
        2. Color scheme, font choices, background color, etc.
        3. Index page
        4. Image gallery – image composite sheet
        5. Array page with code
        6. Form w/ alert and conditional alert
        7. Published site
        8. Completed final project

25. Instructional Methods and/or Strategies

Written assignments
Computer based instructor demonstrations
Visual presentation formats for web design
Visual presentation of samples of a basic web site
Internet research as required for projects
Oral presentations
Peer evaluation and revision of layouts

26. Assessment Methods and/or Tools

Written assignments demonstrating ability to effectively communicate knowledge of computer software and hardware interfaces
Activities and projects demonstrating knowledge of HTML and JavaScript programming language
Written critiques of various web sites using basic design principles
Vocabulary homework
Ability to read and follow instructions
Quality of completed assignments
Self-evaluations and peer critiques
Portfolio
Final Project
Assessment criteria
Assessment rubric
Efforts on projects

Course Title

Introduction to Marketing

Description of Target Group

This one semester course is designed as a Business elective for all grade levels.

Purpose

Introduction to Marketing provides instruction to students who are seeking employment or currently working in marketing occupations, planning to major in marketing, business management, or operating their own business.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Establish career planning and employment opportunities in business and industry.
2. Develop leadership characteristics and qualities, practice problem solving, and decision making skills.
3. Apply effective communication skills orally and in writing using appropriate vocabulary and terminology for the industry.
4. Demonstrate effective human/customer relations skills by working with people and developing positive intra- and interpersonal skills.
5. Demonstrate knowledge of basic computer/terminal applications and functions in industry.
6. Demonstrate effective techniques in selling products/services explaining features and benefits based on customers needs.
7. Explain operations, policies, and procedures utilized in industry including stocking, inventory control, and security.
8. Develop effective entrepreneurial qualities and show how they relate to successful business operations and ownership.
9. Identify basic financing systems and security procedures in marketing.
10. Explain how risk factors are managed in business.
11. Demonstrate knowledge of effective advertising, written and visual merchandising, promotion, and other marketing strategies for products or services in the industry.
12. Explain basic economic concepts such as supply and demand, types of business ownership, and the free enterprise system.
13. Prepare a resume, cover and follow-up letter, complete an application, and participate in a job interview.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Demonstrations, lectures, tech prep integrated performance activities, video library, guest speakers, field trips, and cooperative learning activities.

UNITS OF INSTRUCTION:
Introduction to Marketing is divided into the following instructional units:

- Career Development
  - Career Decisions
- Leadership
  - Leadership skills
  - FBLA
- Communications
  - Written and oral communication skills
  - Critical thinking skills
- Mathematics
  - Problem solving and computational skills
- Human Relations
  - Working with people
  - Decision making
  - Problem solving
  - Self Esteem
  - Personal traits
  - Interpersonal skills
- Economic Concepts
  - Basic economic concepts
  - Marketing concepts and information
  - Entrepreneurial awareness
  - Financial systems
- Computer Applications
  - Basic computer applications
- Operations, Policies, and Procedures
  - Marketing operations
  - Security
  - Distribution
  - Product/service planning
  - Purchasing policies
- Selling Product/Service Knowledge
  - Basic selling concepts
  - Sales skills and techniques
- Promotional Strategies
  - Advertising
  - Displays
- Product promotion

19. Brief Course Description

Intervention Through Technology is a remediation course designed to: assist students to pass CAHSEE, improve reading, writing, and math ability to high school level, and to provide entry level employment skills. Instruction will include entry level computer skills, specific CAHSEE remediation, structured writing development, job acquisition skills with Career Technical focus.

B. COURSE CONTENT

Please refer to instructions

Purpose and Goals:

The purpose of this course is to prepare students to pass the CAHSEE, improve reading and writing skills; and prepare students for entry into postsecondary education and/or employment in the work force.

Instructional Objectives:

Students will be expected to develop basic computer literacy, actively prepare for the CAHSEE, and develop writing strategies. Students will improve reading comprehension and expand vocabulary knowledge. Students will reinforce basic math skills and continue to develop competency. Students will acquire employment skills which will enable them to continue Career Technical Education or enter the work force.

Pre-requisites:

No.

Course Outline:

Computer Literacy
Computer Components & Terminology
CAHSEE Language Arts Blueprint (ELA Power Standards)
PLATO
CTE Foundations Standards
Structured Writing

Editing & Proofreading
Software Application Programs
Employment Acquisition and Skills
Specific Math Skills Development
Grammar and Language Rules
Structured Essay Writing
Vocabulary
CAHSEE Math Blueprint (Math Power Standards)
Oral and Electronic Presentations

Assignments:

- Identify and define computer hardware/software.
- Utilize software to develop basic keyboard skills
- Write and edit a structured Biographical Narrative
- Respond to Literature in a Memo Format
- Utilize PLATO Tutorial to develop mastery of CAHSEE
- Math Remediation using software applications to record/compute grades
- Using PowerPoint, create and present a lesson which reinforces CAHSEE essentials (Power Standards)
- Create a business letter which demonstrates ability to influence or persuade the recipient's viewpoint or position.
- Employ math skills through use of application software to create a time analysis data spreadsheet
- Create tables using Word Bank data

Evaluation:

Projects
Quizzes and/or midterm examination
Written and computer-generated assignments dealing with software applications
Mastery of units including PLATO and other
Observation

Appropriate Reading: (other than textbook)

Technical documents, trade journals, appropriate grade level literature, reference manuals and materials and related websites.

Interpersonal Skills:

Demonstrate teamwork skills
Work cooperatively with classmates to complete specified class assignments
Appropriate listening and speaking skills

Appropriate Ethics:

Students will be held to the standards of ethical behavior associated with modern technology

Course Materials:
Computer workstation

Access to Internet
Direct Instruction utilizing technology from teacher workstation
PLATO
Various application software

Course Title

KEYBOARD1NG 1A (replacing Typing 1A)

Description of Target Group

This course is designed for all high school students.

Purpose

This is the first semester of a year-long course designed to meet the requirements of all students who want to learn the skill of keyboarding in order to meet their personal writing requirements or to advance their skills to a job performance level.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate with correct fingering the proper use of all keys on the keyboard.
2. Demonstrate a minimum speed of 15 wpm with no more than one error per minute.
3. Demonstrate the ability to identify the parts of a letter and be able to recognize proper placement.
4. Demonstrate the ability to proofread and correct errors.
5. Demonstrate the ability to center both horizontally and vertically.
6. Demonstrate the ability to type reports with endnotes.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

The first six weeks of the course is devoted to learning the proper fingering of the keyboard (alphabetic keys, numbers and symbols). The students progress to typing letters, reports and tables. Three-minute times writings will be given periodically to judge the students progress in speed.

Course Title

KEYBOARDING 1B (Replacing Typing 1B)

Description of Target Group

This is the second semester of a year-long course and is open to all students at the 9th, 10th, 11th, and 12th grade level who have completed Keyboarding A.

Purpose

The student will gain an understanding of personal and business letters, tables, reports, and manuscripts. Further competence of the keyboard with speed and accuracy is stressed.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate correct and efficient operation of the computer and printer.
2. Competence of the keyboard and the fundamentals of keyboarding.
3. Demonstrate qualities of neatness, initiative, and accuracy.
4. Demonstrate responsibility to organize supplies and work area in an efficient manner.
5. Demonstrate responsibility and initiative in completing assignments and accurate proofreading of assignments.
6. Demonstrate the ability to perform at the vocational job-entry level.
7. Demonstrate ability to accurately type letters, memorandums, manuscripts, and tables.
8. Demonstrate the ability to type at rate of speed acceptable to the department standards.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Material will be presented to the students through lectures, class discussions, demonstrations, and in some instances, individualized learning.

Course Title

Keyboarding Review (Replacing Typing Review)

Description of Target Group

This course is designed for students who learned to touch type in Jr. High but have no formal training in formatting. Students who did not pass Keyboarding A or received a D should take this course before proceeding to Keyboarding B.

Purpose

This one semester course is designed for students to reinforce their learning of touch-typing. They will become more proficient in keying numbers and symbols as well as alphabetic keys. Strong emphasis will be placed on proper formatting of documents and increasing speed.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify the hardware components of the microcomputer.
2. Demonstrate the ability to properly operate a printer as well as cease print jobs properly.
3. Demonstrate ability to produce hard copies of properly formatted documents such as letters, reports and tables.
4. Demonstrate the ability to follow verbal as well as written instructions.
5. Reach a higher degree of proficiency in spelling, grammar, punctuation, and proper word division.
6. Demonstrate ability to evaluate personal work, proofread, and make corrections.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

The teacher will utilize the demonstration method of instruction. Instruction will be verbal as well as written. Timed writings, daily production work and achievement tests will be given to evaluate the students' progress.

Course Title

Law, Business

Description of Target Group

This one-semester course is open to all students. It is recommended that the course be taken at the 11th and 12th grade level.

Purpose

To give the student an understanding of basic business law principals needed to conduct our daily activities.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Understand the five elements of a contract.
2. Identify and understand the different types of fraud apparent in our society.
3. Know consumer rights and responsibilities as implied by state legislation.
4. Understand the different types of bailments and the legality of each.
5. Experience the awareness of the tenant and landlord relationships and the rights of each.
6. Recognize the importance of a will and the legality involved.
7. Evaluate rights and responsibilities of parties to a sales contract.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lecture, discussion, filmstrips, tapes, casework, speakers, testing.

17. Brief Course Description

Marketing is a comprehensive course designed to provide the student with the knowledge and skills to enter and succeed in the world of the marketer. An in-depth study of the economy of the 21st century and the aspects of marketing are examined. Economic and marketing concepts, such as database management, advanced communications strategies, decision-making for the market place, and resource allocation and product distribution, are emphasized.

Through the study of the economy and marketing, students will develop critical reading, writing, and thinking skills.

B. COURSE CONTENT

Please refer to instructions

18. Course Goals and/or Major Student Outcomes

- Provide students with an opportunity to investigate different economic aspects of the American economy as it related to marketing and advertising
- Increase understanding of and insights into the role of America in the international market place; and
- Combine research and integrated academics that enable students to understand the crucial role that marketing and advertising play in the economy.

19. Course Objectives

In Marketing, students will do the following:

1. Demonstrate an understanding of the global environment as it related to the market place, Standard: *California Business Education Standards Draft*. Gr. 9-12, Global Marketing 5.2.2
2. Analyze the components associated with successful marketing. Standard: *California Business Education Standard Draft.* Gr. 9-12, Global Marketing 5.2.8; Marketing Strategies 5.3.3
3. Understand the concepts and processes needed to obtain, develop, maintain, and improve a product in response to market opportunities. Standard: *California Business Education Standard Draft.* Gr. 9-12, Marketing Strategies 5.3.5
4. Analyze communication strategies needed to provide information about products, services, images, and/or ideas. Standard: *California Business Education Standard Draft.* Gr. 9-12, Global Marketing 5.2.2 ; Selling Concepts 5.6.4; Merchandising 5.9.7
5. Demonstrate an understanding of the nature, importance and strategies of the marketing process. Standard: *California Business Education Standards Draft.* Gr. 9-12, Marketing Strategies 5.3.6; Product Service and Management 5.4.6; Promotion 5.5.5

6. Explain the financial services institutions in a dynamic marketplace. Standard: *California Business Education Standards Draft.* Gr. 9-12, Telecommunications 4.5.2
7. Demonstrate knowledge of a variety of functional strategies for competitive marketing. Standard: *California Business Education Standards Draft.* Gr. 9-12, Communication and Interpersonal Skills 5.1.4; Marketing Strategies 5.3.9; Product Service and Management 5.4.3; Financial Services 5.7.4
8. Implement a strategic plan for the successful marketing of a competitive business. Standard: *California Business Education Standards Draft.* Gr. 9-12, Marketing Strategies 5.3
9. Experience real world opportunities in the market place. Standard: *California Business Education Standard Draft.* Gr. 9-12, Entrepreneurship 6.0

20. Course Outline

Students will explore topics focusing on the American economy and how it related to the marketing arena; Economics of Marketing, corporate environment analysis, internal business analysis, expanding, declining and hostile markets, and real world problem solving.

1. Marco Economic Principles
    a. Fiscal Policy
    b. Monetary Policy
    c. International Economics
2. Environment Analysis
    a. Economics
    b. Government
    c. Technology
    d. Culture
    e. Demographics
3. Internal Analysis/Economic Constraints
    a. Portfolio Analysis
    b. Market Attractiveness
    c. Financial Resources
4. Organizational Characteristics
    a. Differentiation Strategies
    b. Building Product Loyalty
5. Strategic Thrusts
    a. Low costs
    b. Focus
    c. Pre-emptive move
    d. Synergy
6. Growth Strategies
    a. Cost/Benefit Analysis
    b. Expanding Markets
        i. Operating economics
        ii. Access to demand
        iii. Operating costs
        iv. Diversification
7. Declining and Hostile Markets
    a. Market analysis
    b. Solutions
8. Real World Applications

a. Professional Standards
b. Employee/Employer Rights
c. Application of skills

21. Texts & Supplemental Instructional Materials

To be determined. Much of the materials are supplemental as this is an integrated course with students focusing on project based on learning.

22. Key Assignments

23. Instructional Methods and/or Strategies

- Direct instruction (lecture, reading, labs and investigations, writing B reports, journals, analyses, essays C speaking, presentations, guest speakers);

- Laboratory investigations and projects using educational materials and computer technology;

- Team teaching including assisted instruction form university, business, and community partners as well as all management aspects of the school retail store

- Community-based research projects with professional mentors;

    - Use of a variety of instructional materials and resources including electronic media, professional journals and reference materials, textbooks, and other print information;
    - Self-directed, cooperative, and collaborative learning to increase the responsibility of students for their own learning;
    - Students presentations, exhibits, and competitions B both team and individual;
    - Embedded assessments as a learning tool;
    - SDAIE (Special Designed Academic Instruction in English);
    - Differentiated instruction for exceptional students.

24. Assessment Methods and/or Tools

Assessment opportunities, which allow for continuous evaluation of students progress, will be embedded throughout the course and should be a learning experience. All students will be expected to achieve mastery of all topics; demonstrations of mastery will sometimes occur in a public forum. Emphasis is placed on integrated curriculum projects and student exhibits. The following strategies, which include both formal and informal assessment techniques will include, but are no limited to:

1. Experiments, demonstrations, discussions, debates, simulations, and projects
2. Students presentations, exhibits, and competitions B both team and individual
3. On-going and cumulative portfolio record of projects and component investigative accomplishments
4. Written tests with a variety of objective, short answer, and extended essay questions
5. Written assignments such as justifications, investigations, and research, evaluative, or technical papers
6. Individual, group and community (e.g., world of finance and banking professionals and academia) assessments.

C. HONORS COURSES ONLY

Please refer to instructions

25. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

26. Context for Course (optional)

27. History of Course Development (optional)

Submitted to UC 2/28/06
Pending Approval: G/Elective
Replacing: Student Store A/B BU6030/BU6031

COURSE TITLE:
MULTIMEDIA OCCUPATIONS "A" (ROP)

DEPARTMENT:
Regional Occupational Program (Business)

DESCRIPTION OF TARGET GROUP:
This course is the first semester (5 units) of a two semester (10 units) elective course designed for juniors and seniors planning to enter the workforce or continue their education at the college level.

PURPOSE:
This course is designed to give a broad overview of multimedia applications in business and industry and teach students design concepts used in product design, business proposals and marketing. Students will learn to use a wide range of multimedia software and hardware. Students will begin development of a multimedia portfolio including: hard copy, digital and video samples of their work.

PREREQUISITES:
Computer literacy (usually completion of Computer Application A and B)

RECOMMENDED COURSE WORK:
While students with personal experience in a variety of computer applications will likely have many of the skills necessary to be successful in this course, It is preferred that students take **one** of the following courses prior to enrolling in Multimedia Occupations:

Exploratory Business, Intro to Marketing, Communication Technology, Mechanical Drawing, Design A, Drawing A, Photography 1A.

STANDARDS OF EXPECTED STUDENT ACHIEVEMENT:
Upon completion of this course, students will be able to successfully demonstrate the following knowledge and skills:

Knowledge of Industry, overview and outlook:
- Multimedia uses in the modern business enterprise
- Basic principles of elements of design from a product/marketing perspective
- Integrating graphic design in business correspondence and marketing

  - Orthographic, oblique, isometric, projection
  - Perspective drawing
- Computer graphic image editing
- Introduction to 3D modeling
- Basic animation principles and techniques
- Basic presentation techniques

Knowledge of Industry, overview and outlook cont.:

- Basic PowerPoint functions and formatting
- Basic HTML to supplement packaged web page design tools

SKILLS:

1. Apply the principles and elements of design to basic page layout for business presentations and marketing.
2. Create simple orthographic, oblique, isometric and perspective drawings.
3. View and edit photos and computer generated graphics using basic editing and filter tools.
4. Basic presentation skills and formatting using multimedia applications.
5. Enhance presentations and projects utilizing basic animation techniques.

ASSESSMENT:

Students will demonstrate competency by:

1. Effectively creating assignments by following technical written and oral instructions.
2. Receiving passing grade on written tests.
3. Producing completed projects using each of the software and hardware tools utilized in the course.
4. Regular and effective communication with their business/industry partner.
5. Presentation of completed project to class utilizing MS PowerPoint with a LCD projector.

INSTRUCTIONAL MATERIALS:

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

ACTIVITIES:

As outlined in the assessment section above, students will utilize a variety of software and hardware components to effectively produce present a basic multimedia project to the class.

COURSE TITLE:
MULTIMEDIA OCCUPATIONS “B” (ROP)

DEPARTMENT:
Regional Occupational Program (Business)

DESCRIPTION OF TARGET GROUP:
This course is the second semester (5 units) of a two semester (10 units) elective course designed for juniors and seniors planning to enter the workforce or continue their education at the college level.

PURPOSE:
This course is designed to increase student proficiency in the implementation of multimedia applications in business and industry utilizing design concepts for product design, business proposals and marketing. Students will use a wide range of multimedia software and experience first-hand the power and purpose of multimedia as a communication tool in business. Each student will produce a portfolio including: hard copy, digital and video samples of their work as well as a functioning Internet web site for a local business.

PREREQUISITES:
Multimedia Occupations “A”

STANDARDS OF EXPECTED STUDENT ACHIEVEMENT:
Upon completion of this course, students will be able to successfully demonstrate the following knowledge and skills:

Knowledge of Industry, overview and outlook:
- Multimedia uses in the modern business enterprise
- Advanced principles of elements of design from a product/marketing perspective
- Integrating graphic design in business correspondence and marketing
  - Orthographic, oblique, isometric, projection
  - Perspective drawing
- Advanced computer graphics image editing
- Advanced 3D modeling techniques
- Complex computer animation sequences
- Advanced presentation techniques
- Advanced PowerPoint techniques
- Basic HTML to supplement packaged web page design tools
- Basic web page design for a small business

SKILLS:

6. Apply advanced principles and elements of design to page layout for business presentations and marketing.
7. View and edit photos and computer generated graphics using a variety of advanced special effects and filter techniques.
8. Advanced presentation skills using multimedia tools.
9. Enhance presentations and projects using advanced animation techniques.
10. Convert animations and graphics into web compatible formats.
11. Incorporate all of the above in the development of a web page for a small business.

ASSESSMENT:

Students will demonstrate competency by:

6. Effectively creating assignments by following technical written and oral instructions
7. Receiving passing grade on written tests.
8. Producing completed projects using each of the software and hardware tools utilized in the course.
9. Regular and effective communication with their business/industry partner.
10. Presentation of completed web site to class and business/industry partner utilizing MS PowerPoint with an LCD projector.
11. Teaching industry partner to use and maintain the completed web site.

INSTRUCTIONAL MATERIALS:

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

ACTIVITIES:

As outlined in the assessment section above, students will utilize a variety of software and hardware components to effectively produce a working web site for local businesses. Students will present project to class and business/industry partner and teach business/industry partner to operate and maintain site.

Course Title

Office Technology A (Replacing Office Occupations A)

Description of Target Group

This course is designed as an elective for students in grades 10-12. At least one semester of keyboarding is required.

Purpose

This is the first semester of a year-long course. It stresses office-type duties and it is designed to prepare students for entry-level office jobs. Course work will consist of learning the proper use of the electronic calculator as well as performing data entry and word processing activities on the microcomputer. The student will also learn proper filing procedures.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate the ability to type a letter in proper style and in mailable form.

2. Demonstrate the ability to file alphabetically and by subject.

3. Demonstrate the ability to perform basic data entry activities on the microcomputer.

4. Demonstrate the ability to perform basic word processing activities such as typing letters, memorandums, agendas and reports.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will learn the proper use of office machines as well as acceptable office conduct. Speakers and field trips may also be used.

Course Title

Office Technology B (Replacing Office Occupations B)

Description of Target Group

This course is designed as an elective for students in grades 10-12. At least one semester of keyboarding is required.

Purpose

This is the second semester of a year-long course. It goes beyond the fundamentals taught in the first semester and the students work with office simulation packets which enables him/her to gain a better understanding of office-type employment. The students will also be trained to use a transcription machine. At the end of the course, students will research an office job, complete a letter of application, an application and a resume. Interview skills will also be taught.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Transcribe letters, memorandums and other business documents using a transcription machine.

2. Set priorities and complete job tasks in a timely manner.

3. Type letters, agendas, reports, and itineraries.

4. Properly complete an application form.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will work with office simulations to learn how to prioritize work and complete various office tasks, from simple to complex. They will transcribe letters and office style memorandums using a transcription machine. Speakers and field trips will continue to be part of the course. Interviewing skills as well as proper methods of applying for employment will be taught.

Course Title

Office Work Experience

Description of Target Group

This course is designed for 10th, 11th, and 12th grade business students who have completed the interviewing process and have been selected to work as a secretary in one of the school offices. These students' names are submitted by business teachers. This course may be for more than one semester up to a maximum of 20-units of credit.

Purpose

It provides a realistic experience for the business student by giving office work experience training. The student who successfully completes this course can enter the job market with more confidence and a higher degree of skill.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate the ability to follow directions.
2. Demonstrate typewriter proficiency.
3. Demonstrate the art of proofreading.
4. Demonstrate the application of basic grammar.
5. Demonstrate ability to meet the public, including students and staff.
6. Demonstrate the operation of the copy machine.
7. Demonstrate skills necessary for using the dictionary.
8. Demonstrate the understanding of good human relations and work ethics.
9. Develop an understanding of the relationship between classroom education and on-the job work experience.

Instructional Materials

Resource and supplementary materials as needed.

Activities

Employment is in a school office after going through the interviewing process. The activities include the following: typing on the electric typewriter, filing, answering the telephone, meeting the public, assuming certain responsibilities, application of good human relations, and dictation in shorthand or with transcribing machine (optional).

Course Title

PASCAL, Beginning

Description of Target Group

This class is designed for students in grades 10 through 12 who plan to attend a four-year university or enter a field in which computer programming is important.

Purpose

This one-semester course will provide students with basic instruction in Pascal language grammar, and practice in writing simple programs.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Produce files using the Pascal system editor as a word processor and the Pascal filer as a storage device.
2. Write simple Pascal programs and produce code files using the Pascal system compiler.
3. Successfully run student created programs.
4. Define selected terms used in Pascal.

Instructional Materials

Text and Supplementary Materials

1. Luehrmann and Peckham, Apple Pascal: A Hands-On Approach (McGraw-Hill, 1981).
2. Pattis, Karel the Robot: A Gentle Introduction to the Art of Programming With Pascal (Wiley and Sons, 1981)
2. 3.USUS, MUSUS.
3. Apple II computers with two disk drives.
4. Apple Pascal language.

Activities

Students will practice good programming techniques, diagram flow charts, create storyboards, write programs, take quizzes, and demonstrate successful programs.

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Mathematics

UC honors designation? No

Prerequisites: None

Co-requisites: None

Integrated (Academics / CTE)?	Yes
Grade levels:	11th, 12th

ourse Description

urse overview:

Personal Finance is designed to help students gain essential knowledge and skills to make informed decisions about real work financial issues. Students will learn how choices influence occupational options and future earning potential. Students will also learn to apply decision-making skills to evaluate career choices and set personal goals. The course content is designed to help the student make wise spending, saving, and credit decisions and to make effective use of income to achieve personal financial success. This course will cover the following topics: Checking, Saving, Types of Credit, Managing Credit, Paying for College, Budgeting, Investing, Financial Pitfalls, Career, Taxes, Insurance, Behavioral Finance, Mini Units and Bonus Lessons.

Students will design personal and household budgets and simulate the use of checking and savings accounts. They will be able to demonstrate a solid understanding of debt, credit management, investments, apartment rental/lease agreements, and job application and interview processes. Students will gain a solid understanding of car, home, and health insurance policies and practices while learning to be a savvy consumer and price shop. There will be a focus on learning the different types of income and payroll taxes, and students will practice how to properly complete and successfully file IRS forms like 1040EZ, I-9 forms, and State of California income taxes.

Projects will involve research, reading, writing reports and oral presentations. In addition to projects, the students will use math skills to investigate real-world problems and practice math skills that will be used in their daily lives based on Common Core standards. Assessments will be in the form of performance tasks, quizzes, portfolios, and a final exam. Students will develop a deep understanding of the expectations and situations they will face as productive young adults

Assessment opportunities that allow continuous evaluation of students' progress will be embedded throughout the course and will be a part of their learning experience. All students will be expected to achieve a deep understanding of all topics, and students will often demonstrate knowledge in a public forum. Students will complete reflections on Unit Learning; a compilation of work in a portfolio. Students will review their activities from each unit and will write a brief reflection about how any given activity may impact their future financial decisions. Rubric evaluation. This course is inter-curricular with the goals of the national Future Business Leaders of America (FBLA). FBLA is the national organization for high school students who are participating in business related instructional programs.

urse content:

Unit 1: Saving and Budgeting

This unit introduces the topic of personal finance, explores the evolution of the American credit industry, and highlights the importance of both knowledge and behavior when it comes to managing money. It emphasizes the importance of saving and explains the three reasons to save: emergencies, large purchases, and wealth building. This unit also explores the purpose and process of writing a budget and the basics of banking, including balancing and reconciling a checking account. This unit introduces the topic of personal finance, explores the evolution of the American credit industry, and highlights the importance of

both knowledge and behavior when it comes to managing money. It emphasizes the importance of saving and explains the three reasons to save: emergencies, large purchases, and wealth building. This unit also explores the purpose and process of writing a budget and the basics of banking, including balancing and reconciling a checking account.

Math skills: Students create and apply equations to solve real-world problems relevant to both the personal and business environments. Looking beyond simple arithmetic, students will provide a thorough understanding of how to interpret and use variables and functions. Neatness and attention to details and showing work will be stressed. Students will add and subtract real numbers and fractions, decimals and percents; multiply and divide real numbers and fractions, decimals and percents; convert fractions, decimals and percents; identify and define variables; evaluate expressions; use correct order of operations; recognize patterns and use them to estimate outcomes; represent functions by using graphs, tables, equations and words; and solve multi-step problems and draw conclusions about the outcomes

❑ Unit Assignment(s):

Budget Project – Students will use the online site (cacareerzone.org) to create a working budget for their future selves, based on their chosen career from the persuasive essay project. They will start with the average income for this career, minus deductions, debt costs for education or training, fixed expenses and variable expenses. Students will consider the cost of living in a state of their choice including rent, utilities, insurance and any variable expenses. Ultimately, they will balance their bottom line. Students will evaluate their own budgets using a rubric that shows realistic figures and average percentages for each budget category. After checking their budget for reasonableness against the rubric, students will write a summary of their findings and outline what they can and cannot afford with their chosen career path. Compilation of Work in a Portfolio – Students will review their activities from the unit and will write a brief reflection about how any given activity may impact their future financial decisions. Rubric evaluation.

An Alternate lesson would involve participating in the 10-week **H & R Block Budget Challenge simulation**. First steps in this simulation involve selecting vendors and creating a Cash Flow Statement for budget purposes. Students must select a suited 401k contribution, bank account, cell service, apartment choice, cable, car loan, credit card, utilities and car insurance while receiving a set salary and responsibility of a student loan payment.

Cell Phone Bill--Students will look over their cell phone bill carefully and list the charges that appear on the bill. Then research other cell phone service providers and decide which provider has the best deal, is it worth switching? Convince other classmates why your provider is the best option.

Dream Car Project – Students will choose a new car and compare the costs of a base model to the end product, "their dream car" including add-ons, destination fees and taxes. They will compare the Manufacturer Retail Price to the dealer price and understand that the difference is the profit margin. Students will calculate total loan costs, including registration through the DMV and insurance costs. They will make an informed decision about comprehensive versus liability insurance. Students will estimate monthly costs including gas and maintenance. In an essay, they will outline the choices they made in "purchasing" their car and will justify their reasoning for each of these decisions. They will also state the income necessary to purchase and maintain their chosen car. Finally, students will share this information with their peers in a short oral presentation. Rubric evaluation.

Trade-in Project – Students will imagine they are helping a family member trade in a used car and upgrade to a new car. Students will be given a specific car with specifications to find the best trade-in value on that car. They will find the difference between the trade-in and private party value of the car, and will explain the reasons for this difference. Then, students will receive general specifications for the desired new car, and will need to find the best option within 50 miles of our location. Students will write a paper in which they support their choice of car in terms of cost, safety, reliability, and desired features. This paper will include the trade-in value and the overall cost of the new car. Rubric evaluation.

Home Sweet Home Project – Students will find the average market sales price for homes in a location of their choice. They will "purchase" their first home, with a budget of 20% below that average price. They will investigate the following: what it takes to secure a mortgage, current interest rates for the specified loan duration, and closing costs, including the possibility of PMI. Students will use a spreadsheet to create an amortization schedule for their home loans and compare the bottom line cost of the home relative to interest rates and duration. They will write a paper in which they advise first-time buyers on how to navigate the home buying process. In this paper, students will also state income needed to afford their home comfortably. The project will conclude with an oral presentation in which students share their home—including photos—with their peers.

Gross Income Project – Students will investigate how their method of payment makes a difference on both their gross and net income. Students will also investigate how the total price for a large ticket item changes based on the city-specific sales tax rates. This project is a worksheet with scenarios and leading questions that have students independently investigate different types of wages and study variations in sales taxes. To conclude the project, students summarize how these factors—wage structure and sales tax rates—will influence their buying power as consumers. The rubric for this assignment emphasizes neatness, computational accuracy and attention to detail to set a standard for the rest of the course.

Renting Project - Students will investigate what makes renting desirable and will learn about the decisions they may make as renters in the next few years. Students will find all the costs associated with living on their own. They will determine how much income is needed to live alone, versus with roommates, and will consider what characters make a "good" roommate. Students will choose a local rental option. They will write a brief summary explaining their choice, including such factors as the location, size, and amenities. In this summary, students will include a breakdown of living costs and will explain whether or not they could afford to live alone and why. Rubric evaluation.

Unit 2 - Credit and Debt

Students identify the devastating costs of using debt as a financial tool, debunk credit myths, explain the elements of a credit score, identify organizations that maintain consumer credit records, and summarize major consumer credit laws. Students explore 21st Century post-secondary education and career options, highlight the importance of avoiding debt as a young adult, and explain how to cash flow a college education. Students apply systematic decision making to identify the most cost-effective option for purchasing a car. They will identify factors that influence consumer behavior and the effect of inflation on buying power.

⮒ Unit Assignment(s):

Banking Project - Students will investigate how banks and credit unions operate and the requirements to open and maintain an account. Students will do internet research to learn about savings account options at local institutions, with the goal of finding the best available interest rate. They will also consider the cost of not maintaining the required balance and the fees associated with overdrafts. Finally, students paper in which they compare and contrast a local bank and credit union, respectively. In this paper, they will state at which institution they would choose to do business and justify their choice mathematically. A rubric evaluation is used for this project.

Checking Account Project – Students will be given a beginning balance and a scenario with a list of tasks involving their checking account. They will need to pay bills online and with checks, purchase products with a debit card and checks, deposit checks and cash, receive online wages and credit for returned purchases. Students will account for financial institution fees and show all of these events on a reconciliation statement containing every transaction. Students will self-evaluate their final product with a rubric to be sure they have completed all necessary forms, checks, and transaction accurately and that they have found the correct ending balance.

Debt snowball assignment - Students receive a list of debts including the current balance, interest rate, and minimum payments. The students are divided into groups where they will create a budget based on the identified income, taxes, monthly expenses, and debt payments. They are to create a plan to pay off the debt while staying current on their monthly bills. Students are to analyze the interest rates and minimum payments to identify a plan to pay off the debt in a reasonable manner. Students must also consider ways to decrease monthly expenses or increase income in order to help pay off debt. The purpose of this activity is for students to work together in order to evaluate and design a plan to help a person get out of debt and start the debt snowball.

FICO Scores--Students will research FICO scores answer the following questions: What is the range of possible scores? How can each score be interpreted? What contributes to the FICO score? How can you improve it, what hurts it? Then they will summarize the information they find from the websites and prepare the information in an easy-to-read handout/pamphlet that will be shared with family and friends.

Identity Theft Project – The students will research different types of identity scams and will give advice to help other young adults protect their identities. Students will present their findings two ways: (1) in an oral presentation to their peers; and (2) in written form with a trifold informational pamphlet. Their research will include: data from the FTC, ways to protect oneself from fraud, and necessary steps to take and people to contact when someone is the victim of identity theft. Finally, students will advise other young adults how identity theft can impact their immediate and long-term financial futures. Rubric evaluation.

Unit 3: Financial Planning and Insurance

Students highlight the importance of bargain shopping as part of a healthy financial plan and identify important negotiation strategies. This unit establishes basic investing guidelines, describes and compares various types of investments, and identifies elements of employer benefits and retirement plans. Students demonstrate an understanding of the Rule of 72 and how taxes affect the rate of return on investments. Students calculate various investments utilizing compound interest formulas. Students also identify the purpose of financial risk management as well as the appropriate and most cost-effective risk management strategies.

⮒ Unit Assignment(s):

Basic investing assignment - Student will learn how to read a mutual fund prospectus. Students identify the fund objective, the fund managers experience, what companies the fund is invested in, the historical rate of return, the cost to invest in the fund, the turnover ratio, the risk ratio, and the minimum investment. As a class the students use a handout to identify the aforementioned components of a prospectus. The students are then required to choose a mutual fund of their own and identify the same components to the selected prospectus. The purpose of this activity is for students to be able to assess a mutual fund by reading its prospectus.

Insurance Project – Given a certain type of insurance (health, home, auto, life, pet, travel), students will work in pairs to investigate premiums, co-pays, deductions and percentages of liability and the impact of these factors on their coverage. Students will demonstrate their knowledge by creating an informational brochure and giving an oral report in which they advise peers about important considerations for their given type of insurance. Rubric evaluation.

Against All Odds Project – Students will be given $750 to "play" with for one week. They will participate in simple games of chance and may choose to risk a little or a lot. Throughout the week they will fill out a probability and statistics form about each game and learn about their chances of winning big. At the end of the week they will write a reflection paper about their tolerance for risk and will explain how this experience may or may not be similar to investing in the stock market. Rubric evaluation.

Stock Market Game – Students will work in a team and will have $100,000 virtual dollars which they must invest in stocks, bonds, mutual funds or index funds of their choice including being charged a 1% broker fee for all purchases. They will also estimate their purchases prior to trading in the virtual "real-time" simulation. They must invest after researching industry sectors and understand the idea of diversification. Throughout the 8 week period, as they learn more about investing and types of investing, they will make "sells and purchases to try and increase their portfolio. They will do more in-depth

research about their holding and learn about PE Ratios, Market Capitalization, Yields of returns and how to read a Prospectus from a stock. They will summarize their findings and their final portfolio value in a paper in which they use their personal experience to outline how to make solid investment decisions. Rubric evaluation.

Stock Market Project-Students will choose a corporation that they are interested in following, track the daily progress of the stock, create graphs and discuss trends. All research will be used about the corporation they are following (i.e. news highlights) and in the end the student will create a summary of the corporation's stock over a period of time. They will then anaylze the companies future profitability based on the research they have gathered.

Unit 4: Income, Taxes and Giving

Students identify the differences among people's value and attitudes as they relate to money and highlight communication strategies for discussing financial issues. They examine the importance of pursuing a career in line with their strengths, the elements of effective goal setting, the best practices of successful people, and types of income and taxes. Students research and learn how to properly fill out a W-4, I-9, and 1040EZ forms. This unit highlights the importance of giving of your time, talents, and money in order to serve others and leave a lasting legacy.

❑ Unit Assignment(s):

Reading a pay stub assignment - Students learn the following terms: pay period, gross pay, net pay, payroll deduction, pension, 401(k), and FICA (Federal Insurance Contributions Act). Students are provided a sample pay stub. They are to identify: gross pay, amount of local tax, amount of state tax, amount of federal tax, employee contribution to FICA, employee contribution to Medicare, amount of other deductions, purpose of other deductions, and employee's net pay. After identifying these amounts, students are directed to the Internal Revenue Service (IRS) website to answer the following questions: how must an employer report his/her employees' tips to the IRS, what is an Employer Identification Number and how should an employer go about withholding tax when he/she has no regular payroll period. Students are then divided into groups to use an online presentation tool to develop a presentation explaining the parts of a pay stub.

Income Tax Filing Project - Students act as a tax preparer and will fill out both state and federal tax forms (1040EZ, 6402EZ) given a W2 form for a fictitious client. They will then write a paper summarizing what they need to fill out their taxes, how to get forms, where to get help, and where to file forms. Additionally, they will explain why their client received a refund or owed money. The paper will include a reflection about what they learned from this project. Rubric evaluation.

Persuasive Essay – Students will complete a career interest profile (cacareerzone.org), (xello.com) and/or on (virtualjobshadow.com) online to learn how their interests relate to the work world. With the results, they will research a career of interest, find avenues to achieve that career including college, tech schools, trade schools or apprentice programs. Students will also estimate the cost of the higher education needed for their career of interest, and research possible avenues to fund this further education. Finally, students will look at the living wage statistics from the Bureau of Labor and Industry to determine how location will affect their educational and employment opportunities. This investigation will culminate in a persuasive essay, in which students' state and justify their opinion on the best higher education option for their future. This persuasive essay will include a consideration of any educational debt they will incur, based on actual figures from their research. The rubric for this assignment measures the quality of students' arguments (overall structure and supporting details), as well as the accuracy of their computations.

Course Title

Personal Money Management

Description of Target Group

This is a one-semester course that is designed as and elective for the senior student.

Purpose

The students will become familiar with all personal record keeping that is necessary for any young adult regardless of their future occupation.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Know the principles and application of check writing and banking.
2. Job-getting techniques, such as writing the letter of application, writing a resume, interview, follow up.
3. Know the mechanics of buying and selling a home.
4. Preparing Federal Income Tax Form and State Income Tax Form.
5. Knowledge of all types of insurance that may be necessary for the individual, such as the following: automotive, life, homeowner's, personal liability, fire, and medical.
6. Credit and installment buying with some emphasis being given to figuring interest.
7. Demonstrate the importance of intelligent consumer buying.
8. Prepare and set up a personal budget.
9. Demonstrate the knowledge of payroll deductions, such as state disability, workmen's compensation, in addition to retirement benefits, including Social Security.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The students will progress through the course by completing a series of related business projects. The teacher will utilize the lecture and demonstration method of instruction. The students will be evaluated through periodic testing.

Course Title

Practical Bookkeeping A

Description of Target Group

This course may be taken by students at all grade levels, but is specifically designed for 9th and 10th grade students who need an introductory course before taking Computer Accounting. Students should not take this course at the same time they are enrolled in an Accounting class or after they have successfully completed an Accounting Class.

Purpose

This course should be taken along with Practical Bookkeeping B as a one-year course. The two courses allow the student to progress from concrete, record keeping activities in the first semester to the more advanced, double-entry concepts in the second semester.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. An understanding of the duties and requirements for bookkeeping jobs.
2. An understanding of all phases of opening and maintaining a checking account.
3. An understanding of establishing and maintaining a petty cash fund.
4. An understanding of how sales orders and sales invoices are used, prepared and processed.
5. An understanding of how to use a sales journal and accounts receivable ledger to record sales invoices.
6. An understanding of how to use a cash receipts journal and accounts receivable ledger to record money received from customers on account.
7. An understanding of cask discounts and how they are calculated and recorded.
8. An understanding of sales discounts and sales returns and how they are recorded.
9. An understanding of statements of account and of how to prepare them.
10. An understanding of how purchase orders are used, prepared and processed.
11. An understanding of how to use a purchase journal and accounts payable ledger to record purchase invoices.
12. An understanding of how to use a cash payments journal and accounts payable ledger to record payments to creditors.
13. An understanding of purchase returns and allowances and of how they are processed.
14. An understanding of a general ledger and of how to keep a general ledger for a service business.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Every new type of problem is thoroughly explained in the reading material and further demonstrated by the teacher showing the actual step-by-step procedure. A related vocabulary drill, math drill, and a series of practice problems are then performed by the student. A workbook with printed forms may be provided for all students.

Practical Bookkeeping B

This course may be taken by all students at all grade levels, but is specifically designed for 9th and 10th grade students who need an introductory course before taking Computer Accounting. Students should not take this course concurrently with an Accounting class or after they have successfully completed an Accounting class.

Purpose

This course should be taken after successfully completing Bookkeeping A.. The two courses allow the student to progress from concrete, record keeping activities in the first semester to the more advanced, double-entry concepts in the second semester.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. An understanding of how to keep the journals and general ledger for a service business.
2. An understanding of how to prepare the financial statements for a service business.
3. An understanding of how to use the general ledger and the accounts receivable ledger for a merchandising business.
4. An understanding of how to use the general ledger and the accounts payable ledger for a merchandising business.
5. An understanding of sales tax and how to record sales tax for a retail business.
6. An understanding of wages and how to record the payroll and payroll taxes.
7. An understanding of how bookkeepers compute data such as depreciation, bad debts expense, supplies expense, valuing the merchandise inventory, calculating cost of merchandise sold, etc. when preparing a worksheet.
8. An understanding of how the worksheet is used to prepare the financial statements for a merchandising business.
9. An understanding of how to look and apply for a job.
10. An understanding of what factors are used to evaluate employees and of how you are evaluated on the job.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Every new type of problem is thoroughly explained in the reading material and further demonstrated by the teacher showing the actual step-by-step procedure. A related vocabulary drill, math drill, and a series of practice problems are then performed by the student. A workbook with printed forms is provided for all students.

COURSE DESCRIPTION - **DISTRICT**

(Must be accompanied by a Course Adoption Form & Textbook Adoption Form)

Full Title of Proposed Course: Professional Business Communications

Abbreviated Title for AERIES: _____
(15 characters maximum including spaces & punctuation)

Subject Area: Business **Category:** English ☐ **Intro** ☒ **Advanced**

Is this course classified as a CTE Course? If "yes" please select the following:

Department: Business Education _____ Intro X Concentrator X Completer

Industry Sector: Information Technology Career Pathway: Information Support and Services

Grade Level(s): ☐9 ☐10 ☒11 ☒12 **Unit Value:** ☐.5 (semester/term) ☒1.0 (one year equivalent)

Brief Course Description The Professional Business Communications course is designed to prepare students for essential business communication skills utilizing 21st technology platforms.

Pre-Requisites: 2 years of English/Language Arts — Required _____ Recommended X
Intro to Business (or equivalent) — Required _____ Recommended X

Co-Requisites: 3rd, 4th year of English/Language Arts — Required _____ Recommended X
1 or 2 years of MS Office Suite (or equivalent) — Required _____ Recommended X

COURSE CONTENT

Course Goals and/or Major Student Outcomes

The Professional Business Communications course is designed to prepare students for essential business communication skills utilizing 21st technology platforms. This course will develop the depth and breadth of communication abilities, critical thinking, and problem solving skills. It is specifically designed to give students a competitive edge in both postsecondary education and career pursuits.

The course integrates the foundational principles of business communication with the organizational, analytical and technical concepts required of business communications. The development of a professional portfolio is a key component in each unit. This course emphasizes diversity and innovation through gathering, synthesizing, questioning, and forming articulate data-driven opinions. Students read often and with an open mind, write often and clearly with coherent thought and form, and articulate their reading and writing in presentations using technology, appropriately targeting both academic and real-world audiences.

Course Objectives

This course is designed to provide students with an understanding of the varied and diverse use of communications utilized within the business community. The course will require students to demonstrate a clear understanding of the communication methods in business drawing evidence from literary and informational text. Using this information to produce, reflect, display in a contextual format that shows the mastery of knowledge. The students are expected to analyze and disseminate varied and diverse technologies and resources that include: Internet, technical manuals, and literary texts. Students will demonstrate their acquired knowledge throughout the various presentations of information using diverse technology resources. The purpose of the course is to emulate the academic rigor of a college class, while giving the students the foundational principles of the complex nature of the formats available in business

- Expository writing methodologies for exploration and research
- Formulate systematic strategies to organize and record information (e.g., anecdotal bibliographies.)
- Critiques the logic of functional documents by examining the sequence of information and procedures in anticipation of possible reader misunderstandings.

CTE Content

- Explain the role of business communication in the business enterprise system
- Compare and contrast the various types of business communications used in the diverse organizations
- Differentiate the types of communication systems that are used in the diverse organizations
- Examine the role and function of the professional organizations, industry associations, and organized labor in a productive society
- Compose a written and electronic survey for collection of diverse data in business communication
- Microsoft Office 2010, 2013: Microsoft Excel, Microsoft Word, Google Forms, Survey Monkey

Unit 4- business technologies

Outcomes: Unit four focuses on the utilization of information and technology tools to conduct, present, and develop effective business communications.

"a-g" Academic Topics

- Compose business documents utilizing a variety of technology resource
- Analyze and evaluate the effective structure of document for the purpose of the intended audience
- Utilize a variety of technology tools (Google Docs, Cloud, Internet) to produce, publish, and update individual and collaborative writing/projects

CTE Content

- Describe appropriate computer hardware used in business communication
- Examine technological trends and analyze the impact on business communication
- Integrate appropriate use of the internet, social media into business communications
- Past, present, and future technological advances
- Select, apply, and differentiate appropriate software used in business communications
- Identifies the influence of current and emerging technologies on the local, state, national, and global economies.

Unit 5 – Social Concepts as related to Business Communications

Outcomes: Unit five focuses investigating the various roles of society and social media in business communications. Students will explain the functions and impacts social media and demographics have on effective business communications.

"a-g" Academic Topics

- Advanced investigative research to gather and evaluate relevant information from multiple authoritative print and digital sources.
- Evaluate and integrate multiple sources of information presented in diverse media formats.
- Formulate judgments about the ideas under discussion and supports those judgment with convincing evidence
- Produce clear and coherent written documents to validate the organizational needs.
- Develop and strengthen writing as needed through planning, revision, editing peer evaluation, that focuses on the use of social concepts and media

CTE Content

- Describe the various types of social media that is used in business communications
- Integrate the varied styles of communication methods used in social media
- Examine the benefits, added value of social media to business communications
- Explore the demographic impact of social concepts as they relate to business communications
- Determines the validity of the content and evaluates the authenticity, reliability, and bias of electronic and other resources.
- Applies appropriate problem-solving strategies and critical-thinking skills to work-related issues and tasks

Semester 2

Outcomes: Semester two students will apply the knowledge gained from the first semester to construct a marketing plan, evaluate and design a business presentation. Students will formulate and present a compiled portfolio. Students

- Research career opportunities
- Identifies the important strategies for self-promotion in the hiring process, job applications, resume writing, electronic resumes, interview skills, and preparation and presentation of career portfolio.

***Key Assignments**

Daily Key assignments- students will be required, on a daily basis to check and respond to all correspondence that is sent by the instructor. Student will utilize the varied communication technologies in the business community. They will respond verbally (skype, podcasts, youtube), written (Word, google docs, blogs) with research and all data required

The Unit 1 – Foundations and Principles of Business Communication

- Students will read and analyze the foundation and principles of Business Communications as used by Administrative Professionals. Student will identify the key elements and vocabulary used keying into the structure and key ideas that are intrinsic to effective communications. Students will produce a sample of professional documents that show a range of writing skills. Samples of work will include:
    - Internal Office Memo
    - Business Letters (Persuasive)
    - Newsletters/Public Relations Announcements
    - 1000 page essay that details the use of effective writing skills in business communications
- Student will be aware of the basic functions of a Word Processing application program, assessment will be given

Unit 2 – Business Ethics and legal Responsibilities

This unit focuses on research of the ethics and legal responsibility that are used in business communications. Students will work in collaborative groups to discuss and research evidence of principles that guide the ethics and legal guidelines in effective business communications. Students will discuss the findings and produce the following:

Listening and Speaking:

See the course outline, key assignments, methods and assessments.

- Students show knowledge of listening skills by passing key assessments that test the knowledge learned in direct instruction, presentations, and guest speakers
- Students will successfully present and defend the presentation of the Marketing Plan and Career Portfolio in front of an audience of their peers
- Participate effectively in dialog, diverse conversations, collaborative ideas, and expression of independent ideas clearly and persuasively
- Formulate digital media presentations to effectively express information appropriate to audience and purpose to enhance audience experience

Context for Course

Communication skills and abilities are critical in all areas of business, in all forms, and through multiple media channels. Students learn to access research, share, and publish marketing information in a variety of formats and media. A variety of instructional methods provide students with a structured overview of business topics and vocabulary while developing critical thinking, reading comprehension and writing skills. Students will be engaged in a variety of activities that balance direct instruction with interactive instruction and experiential learning.

This is an integrated course utilizing English concepts presented in an informational technology environment and framework. The course is designed to prepare students for a natural progression to higher post-secondary studies in English and/ or business. Through integration of technological resources, students will understand the connection between the requisite skills and abilities gained in their English Language Arts classes and the requisite skills required for business career success.

History of Course Development

With the beginning implementation of Common Core standards, the emphasis on College AND Career readiness, the adoption of the newly revised California CTE Model Curriculum Standards 2.0; and finally the opportunity to work o innovative CTE coursework as a result of a UCCI Pathways grant, this year has been the "perfect storm" of opportunity to work on invigorating our Marketing and Business pathway curriculum with innovative CTE courses built on the UCCI models. Using both the ***Integrated Marketing and English*** and the ***Applied Medical English*** as models, this course was developed by a team of Information Technology, Marketing, and English, instructors to provide a rigorous and relevant course of instruction for students interested in business

Santa Maria High School has recently earned a three-year WASC and prior six year accreditations. Also, Santa Maria Joint Union High School District in conjunction with Santa Barbara County Regional Occupational Program has maintained a continued collaborative relationship with Allan Hancock Community College Business Educators for over 20 years, establishing and maintaining multiple CTE course articulation agreements. Additionally, the business advisory processes has indicated the need for a variety of reading, writing, and articulate communication skills that would be addressed along with appropriate business professionalism and ethics issues. This course is intended to address that recommendation.

PREREQUISITES:

Prerequisite
none

METHODS OF INSTRUCTION

- Direct instruction
- Group and individual applied projects
- Multimedia
- Demonstration
- Field trips
- Guest speakers

STUDENT EVALUATION:

- Student projects
- Written work
- Exams
- Observation record of student performance
- Completion of assignment

INDUSTRY CERTIFICATION:

- Entrepreneurship, Small Business Certification

RECOMMENDED TEXTS:

- Professional Communication, 1st Edition, Goodheart-Willcox Publisher
- NFTE Entrepreneurship Curriculum

PROGRAM OF STUDY

Grade	Fall	Spring	Year	Course Type	Course Name
9, 10, 11, 12				Concentrator	BUS 101 / ENT101 Concurrent AHC
10, 11, 12				Capstone	Professional Business Communication

I.	FOUNDATIONS OF BUSINESS COMMUNICATION	CR	Lab/ CC	Standards
	A. Fundamentals of business communications with emphasis on the course vocabulary, theory, technology, and principles that are used in business communications • Business trends • Describe effective communication techniques • Develop functional communication skills • Demonstrate use of technical writing and communication skills Microsoft Office Suite and Microsoft Office 365: Microsoft Word, PowerPoint, OneNote, Teams and Google Docs • Portfolio Guidelines / Objectives B. Students will read and analyze the foundation and principles of Business Communications as used by Administrative Professionals. Student will identify the key elements and vocabulary used keying into the structure and key ideas that are intrinsic to effective communications. Students will produce a sample of professional documents that show a range of writing skills. Samples of work will include: • Internal Office Memo • Business Letters (Persuasive) • Newsletters/Public Relations Announcements • 1000 word essay that details the use of effective writing skills in business communications • Student will be aware of the basic functions of a Word Processing application program, assessment will be given	8	2	**Academic:** LS: 11-12.1, 11-12.2, 11-12.3, 11-12.6 RSIT: 11-12.3, 11-12.5, 11-12.7 WS: 11-12.2, 11-12.3, 11-12.4, 11-12.5, 11-12.6, 11-12.7, 11-12.8, 11-12.9 HSST: 11-12.6, 11-12.8 **CTE Anchor:** Communications: 2.1, 2.2, 2.3, 2.4, 2.5, 2.6 Career Planning and Management: 3.5 Technology: 4.1, 4.2, 4.3 Problem Solving and Critical Thinking: 5.1, 5.2, 5.3, 5.4 Health and Safety: 6.3, 6.6 Responsibility and Flexibility: 7.2, 7.3, 7.4, 7.5 Ethics and Legal Responsibilities: 8.2, 8.3, 8.4, 8.5, 8.6, 8.7 Leadership and Teamwork: 9.2, 9.6 Technical Knowledge and Skills: 10.1, 10.3, 10.5, 10.6, 10.9, 10.12, 10.14 Demonstration and Application: 11.2, 11.5 **CTE Pathway:** C1.1, C2.1, C3.5, C5.4, C5.1, C7.1, C10.1, C10.2, C11.1, C11.2, C11.3, C11.4, C11.5, C11.6
II.	**BUSINESS ETHICS AND LEGAL RESPONSIBILITIES**	**CR**	**Lab/ CC**	**Standards**

	A. Unit two focuses on the ethical and legal responsibilities of business communications. Students will research labor laws, utilizing the laws to prepare documents for effective communication in the business setting. • Knowledge of government and labor laws in business • Apply communication principles and procedures for legal documents • Compare and contrast the various types of ethics and legal responsibilities in business communication • Describe the concept and process of risk management, include the use of communication in risk management • Identifies the importance of accountability and responsibility in fulfilling personal, community, and workplace roles B. Students will work in collaborative groups to discuss and research evidence of principles that guide the ethics and legal guidelines in effective business communications. Students will discuss the findings and produce the following: • Research document that details the findings of their research • The document will show a command of the industry language that is required in business communications. • Presentation that outlines the research document. • Presentation will show evidence that the listeners can follow and is appropriate to the audience • Present the findings in a collaborative method.	4	12	**Academic:** LS: 11-12.1, 11-12.2, 11-12.4, 11-12.6 RSIT: 11-12.4, 11-12.5, 11-12.7 WS: 11-12.2, 11-12.4, 11-12.5, 11-12.6 HSST: 11-12.6, 11-12.8 CSR: 1, 2, 3 **CTE Anchor:** Communications: 2.4, 2.5, 2.6 Career Planning and Management: 3.2 Technology: 4.2, 4.3 Problem Solving and Critical Thinking: 5.1, 5.2, 5.4 Health and Safety: 6.2, 6.6, 6.7 Responsibility and Flexibility: 7.2, 7.3, 7.4, 7.7 Ethics and Legal Responsibilities: 8.2, 8.3, 8.4, 8.5, 8.6, 8.7, 8.8 Leadership and Teamwork: 9.2, 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.2, 10.8, 10.13 **CTE Pathway:** C1.2, C1.1, C2.1, C2.3, C2.4, C5.1, C5.2, C5.3, C5.4, C6.1, C7.1, C7.2, C7.3, C8.1, C8.2, C10.2, C10.1, C11.6, C11.4, C11.5
III.	**UTILIZATION OF BUSINESS COMMUNICATION IN DIVERSE ORGANIZATIONS**	**CR**	**Lab/ CC**	**Standards**
	A. Unit three focuses on the exploration of the diverse organizations structures and audiences that are used in business communications. Students will research, and apply the information for effective business communications. • Explain the role of business communication in the business enterprise system • Compare and contrast the various types of business communications used in the diverse organizations • Differentiate the types of communication systems that are used in the diverse	3	12	**Academic:** LS: 11-12.2, 11-12.3, 11-12.4 RSIT: 11-12.7 WS: 11-12.6, 11-12.7 HSST: 11-12.6,

	organizations • Examine the role and function of the professional organizations, industry associations, and organized labor in a productive society • Compose a written and electronic survey for collection of diverse data in business communication • Microsoft Office Sutie 2016: Outlook, Word, Excel, PowerPoint, OneNote, Teams; Office 365; Google Forms, Google Drive; Virtual Job Shadow B. In this unit the students will produce the following; • Survey – in both a paper and digital format • Deploy the survey in both a paper and digital format • Collect data and produce a document or presentation that details the results			11-12.7 **CTE Anchor:** Communications: 2.4, 2.5, 2.6 Career Planning and Management: 3.5 Technology: 4.1, 4.2, 4.6 Problem Solving and Critical Thinking: 5.1, 5.4 Health and Safety: 6.6 Responsibility and Flexibility: 7.7 Ethics and Legal Responsibilities: 8.4 Leadership and Teamwork: 9.6, 9.7 Technical Knowledge and Skills: 10.13, 10.14 Demonstration and Application: 11.1 **CTE Pathway:** C2.4, C2.2, C2.3, C2.1, C3.2, C3.4, C5.4, C5.1, C7.3
IV.	**BUSINESS TECHNOLOGIES**	**CR**	**Lab/ CC**	**Standards**
	A. Unit four focuses on the utilization of information and technology tools to conduct, present, and develop effective business communications. • Describe appropriate computer hardware used in business communication • Examine technological trends and analyze the impact on business communication • Integrate appropriate use of the internet, social media into business communications • Past, present, and future technological advances • Select, apply, and differentiate appropriate software used in business communications • Identifies the influence of current and emerging technologies on the local, state, national, and global economies. B. In this unit the students will use and produce a Multi-media presentation that includes; 1. PowerPoint and/or Google Doc presentations that include, graphs forms and data 2. Video links with information and references 3. Internet and data sources. • Show example of the variety of technologies that include: • Internet Skype/Tango/Facetime/Social Media • Google Docs • Blogger • YouTube • Smart technologies (smart phones, Ipads, Android Tablets, etc.)	10	10	**Academic:** LS: 11-12.1 RSIT: 11-12.7 WS: 11-12.6 HSST: 11-12.5, 11-12.6 **CTE Anchor:** Communications: 2.4, 2.5, 2.6 Technology: 4.2, 4.3, 4.4, 4.6 Problem Solving and Critical Thinking: 5.4 Health and Safety: 6.6 Ethics and Legal Responsibilities: 8.7 Leadership and Teamwork: 9.6, 9.7 Technical Knowledge and

				Skills: 10.5, 10.8, 10.9, 10.14 Demonstration and Application: 11.4 **CTE Pathway:** C1.6, C4.1, C4.6, C4.2, C4.3, C4.4, C4.5, C7.3, C7.4, C7.5, C7.6, C7.7, C7.1, C7.2, C10.2, C10.1
V.	**SOCIAL CONCEPTS AS RELATED TO BUSINESS COMMUNICATIONS**	**CR**	**Lab/ CC**	**Standards**
	A. Unit five focuses investigating the various roles of society and social media in business communications. Students will explain the functions and impacts social media and demographics have on effective business communications. • Describe the various types of social media that is used in business communications • Integrate the varied styles of communication methods used in social media • Examine the benefits, added value of social media to business communications • Explore the demographic impact of social concepts as they relate to business communications • Determines the validity of the content and evaluates the authenticity, reliability, and bias of electronic and other resources. • Applies appropriate problem-solving strategies and critical-thinking skills to work-related issues and tasks B. Students will explain the functions and impacts social media and demographics have on effective business communications. Students will produce: • 1000 to 1500 words informative research paper that details the use of social media in business communications through research of the subject matter. • Class discussions will be an integral part of his lesson. Students will work in collaborative groups and present their finding to the class using the various types of Social media.	10	11	**Academic:** LS: 11-12.1, 11-12.2, 11-12.4 RSIT: 11-12.3, 11-12.7 WS: 11-12.5, 11-12.6, 11-12.7, 11-12.8 HSST: 11-12.6, 11-12.7 **CTE Anchor:** Communications: 2.1, 2.3, 2.4, 2.5, 2.6 Technology: 4.2, 4.3, 4.4 Problem Solving and Critical Thinking: 5.1 Health and Safety: 6.6 Responsibility and Flexibility: 7.4, 7.7 Ethics and Legal Responsibilities: 8.4, 8.6, 8.7, 8.8 Leadership and Teamwork: 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.1, 10.3, 10.8, 10.9, 10.14 Demonstration and Application: 11.1, 11.4, 11.5 **CTE Pathway:** C9.5, C9.6, C9.1, C9.2, C9.3, C9.4, C10.1, C10.2
VI.	**BUSINESS RESEARCH AND MARKETING PLAN**	**CR**	**Lab/ CC**	**Standards**

	A. Unit six focuses on systematic research and production of a Business Marketing Plan. Students will conduct market analysis and assess the business organizations need for effective communication. • Determine validity of content and evaluate for authenticity, reliability, and bias of electronic and other resources • Evaluates and revises written documentation with proper proofreading/editing skills • Constructs MLA format paper incorporating advanced level Word processing technological skills • Modify edited versions of the document via electronic track changes and protection of written document • Digitally compose and modify a table of contents; cross reference; index and bibliography B. Students will conduct market analysis and assess the business organizations need for effective communication. • Students will write a research finding report that is 2000 to 2500 words (6-8 pages) in length that reflects on the research of business communications that include: • Annual Reports • Company profiles • Marketing communications • Relevant resources on the internet • Work will meet the required MLA formatting	10	23	**Academic:** LS: 11-12.4, 11-12.6 RSIT: 11-12.3, 11-12.7 WS: 11-12.4, 11-12.5, 11-12.7, 11-12.8 **CTE Anchor:** Communications: 2.4, 2.5 Career Planning and Management: 3.6, 3.7, 3.8 Technology: 4.1, 4.2, 4.3, 4.4 Problem Solving and Critical Thinking: 5.1, 5.4 Health and Safety: 6.6 Responsibility and Flexibility: 7.2, 7.4, 7.5, 7.7 Ethics and Legal Responsibilities: 8.6, 8.7 Leadership and Teamwork: 9.6, 9.7 Technical Knowledge and Skills: 10.3, 10.5, 10.13 Demonstration and Application: 11.1, 11.2, 11.5 **CTE Pathway:** C6.1, C6.2, C6.3, C6.4, C6.5, C7.1, C7.2, C7.3, C7.6, C7.7, C7.4, C7.5, C8.1, C8.2, C8.3, C8.4, C9.3, C9.4, C9.1, C9.2, C9.5, C9.6, C10.1
VII.	**BUSINESS PRESENTATION METHODOLOGIES**	**CR**	**Lab/ CC**	**Standards**
	1. Unit seven focuses on the construction, evaluation, and design of business presentations. • Demonstrate and apply high-quality craftsmanship to a product or presentation; continually refine and perfect it • Constructs props, visual aids, graphs, data spreadsheets, and electronic media to enhance the appeal and accuracy of presentations • Selects, applies, and differentiates among appropriate tools in technology	18	30	**Academic:** LS: 11-12.1, 11-12.2, 11-12.3, 11-12.5, 11-12.6 RSIT: 11-12.7 WS: 11-12.1, 11-12.4, 11-12.5, 11-12.6 HSST: 11-12.8 **CTE Anchor:**

				Communications: 2.3, 2.4, 2.5, 2.6 Technology: 4.1, 4.2, 4.3, 4.4, 4.5, 4.6 Problem Solving and Critical Thinking: 5.1, 5.2, 5.3, 5.4 Health and Safety: 6.6 Responsibility and Flexibility: 7.4, 7.5, 7.7 Ethics and Legal Responsibilities: 8.6, 8.7 Leadership and Teamwork: 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.1, 10.2, 10.3, 10.4, 10.5, 10.8, 10.9, 10.11, 10.12, 10.13, 10.14 Demonstration and Application: 11.1, 11.2, 11.5 **CTE Pathway:** C4.5, C4.6, C4.3, C4.4, C4.2, C7.5, C7.6, C7.7, C7.2, C7.1, C7.3, C7.4, C8.4, C8.5, C8.6, C8.7, C9.1, C9.2, C9.3, C9.4, C9.5, C9.6, C10.1, C10.2
VIII.	**CAREER PLANNING AND MANAGEMENT**	**CR**	**Lab/ CC**	**Standards**
	A. Unit eight will focus on the integration of multiple sources of career information from diverse formats to make informed career decisions. Students will develop a career plan that will include student work, resume and reference materials • Identify personal qualifications, interest, aptitudes, information, and skills for making career decisions • Explore how information and communication technologies are used in career planning. • Research career opportunities • Identifies the important strategies for self-promotion in the hiring process, job applications, resume writing, electronic resumes, interview skills, and preparation and presentation of career portfolio B. Students will research and write a 1000 to 1500 word research essay on a career in the industry of their choice C. Students will complete an employment portfolio, which will include the following: • Job Application • Resume • Letters of recommendation	17	15	**Academic:** LS: 11-12.1, 11-12.2, 11-12.4, 11-12.6 RSIT: 11-12.7 WS: 11-12.3, 11-12.4, 11-12.5, 11-12.6, 11-12.7 **CTE Anchor:** Communications: 2.4, 2.5, 2.6 Career Planning and Management: 3.1, 3.2, 3.3, 3.5, 3.6, 3.7, 3.8, 3.9 Technology: 4.1, 4.2, 4.3

	• Work samples • Special certifications or awards • Sample interveiw questions with research answers • Completion of an interview critique with a business partner			Problem Solving and Critical Thinking: 5.3, 5.4 Health and Safety: 6.2 Responsibility and Flexibility: 7.3, 7.4, 7.7 Ethics and Legal Responsibilities: 8.1, 8.3, 8.4, 8.6, 8.7 Leadership and Teamwork: 9.1, 9.2, 9.3, 9.4, 9.6, 9.7 Technical Knowledge and Skills: 10.2 Demonstration and Application: 11.1, 11.2, 11.3, 11.5 **CTE Pathway:** C1.1, C1.2, C2.1, C2.2, C4.1, C7.1, C9.1, C10.1, C11.5

13. Is this an Internet-based course? ☐ Yes ☒ No

If "Yes", who is the provider? ☐ UCCP ☐ PASS/Cyber High ☐ Other _____

14. Complete outlines are not needed for courses that were previously approved by UC. If course was previously approved, indicate in which category it falls.

- ☐ A course reinstated after removal within 3 years. Year removed from list? _____
  Same course title? ☐ Yes ☐ No
  If no, previous course title? _____
- ☐ An identical course approved at another school in same district. Which school? _____
  Same course title? ☐ Yes ☐ No
  If no, course title at other school? _____
- ☐ Approved Advanced Placement (AP) or International Baccalaureate (IB) course
- ☐ Approved UC College Prep (UCCP) Online course
- ☐ Year-long VPA course replacing two approved successive semester courses in the same discipline
- ☐ Approved P.A.S.S./Cyber High course
- ☐ Approved ROP/C course. Name of ROP/C? _____
- ☐ Approved CDE Agricultural Education course
- ☐ Other. Explain: _____

15. Is this course modeled after an UC-approved course from another school outside your district? [X] Yes [ ] No

If so, which school(s)? Pleasanton, Livermore, Granada, Foothill and Dublin High Schools

Course title at other school Visual Communications, Computer Graphics I and II

16. Pre-Requisites

Computer Applications I, English I, English II, Algebra

17. Co-Requisites

N/A

18. Is this course a resubmission? [ ] Yes [X] No

If yes, date(s) of previous submission? _____

Title of previous submission? _____

19. Brief Course Description

Computer Applications III is a course that emphasizes the fundamentals of the elements of art and design. The class is structured around projects with emphasis on the art elements of line, space, shape, form, color and texture. It also introduces the principles of design including rhythm, balance, proportions and variety. It also encompasses the development of student's skills in the procedures, techniques, vocabulary and skills in drawing and design. The ability to plan and create original works of art will be developed through research, analysis, and critique. Students will articulate their creativity visually and develop and showcase their ability to communicate ideas through visual arts. A portfolio will be produced as demonstration of their abilities. This portfolio could be used for college entrance or employment in the visual arts field.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

1) Research and study various artwork to understand style and intent. (Standard 1)
2) Understand past benefits to and the artistic influence on visual infrastructure such as typography, computer graphics and present-day media,. (Standard 3)
3) Demonstrate ability to plan and create printed and electronic media for effective visual and verbal communication applying the elements of art and design. (Standard 2)
4) Analyze and make critical assessments of artwork using visual arts terminology. (Standards 1 & 4)
5) Develop a portfolio of the student's original works. (Standard 5)

21. Course Objectives

1) Student will be able to identify, record and understand design in analyzing his/her own computer generated artwork and other present-day media artwork utilizing terminology of art principles and computer graphics. (Standard 2)
2) Student will be able to analyze his/her work and that of classmates using correct art terminology. (Standard s 1, 2 &4)
3) Student will be able to exhibit increasing skill improvement in the use of present-day media to create artistic projects based on the principles and elements of design. (Standard 2)
4) Student will understand the principles of as they related to computer graphics. (Standards 1 & 4)
5) Student will gain appreciation of varied art types of the past and express this keen awareness in the construction of his/her own pieces. (Standards 2 & 3)
6) Develop method to analyze and assess artwork for its quality and content. (Standard 4)
7) The student will develop time management skills and resource useage to help him/her in any career, and gain awareness of the practical application of his/her skills. (Standard 5)
8) Student will be able to identify various career options available to him/her in the field of graphic arts/visual communications. (Standard 5)

22. Course Outline

1) Course overview and visual arts standards
   a) Questionnaire and skill measuring activities
   b) Computer knowledge, file management skills
   c) Instructor and student course expectations discussion
2) Career awareness and design ethics—S5
   a) Research the field of visual communications and make an oral report to class on three career opportunities including the skills necessary to be successful in each—S5
   b) Write a report on the legal considerations of copyright, counterfeiting, plagiarism and common trade practices and participate in a group discussion of the findings.—S5
   c) Planning the student portfolio.—S5
      i) Develop a criteria for selecting artwork for the portfolio—S4
      ii) Throughout the year select artwork to be placed in the portfolio.—S5
3) Introduction and use of design tools
   a) Classroom discussion on how advances in technology might change the definition and function of the visual arts.—S5
   b) Research and discuss the current software used in the industry and how emerging technologies effect or will effect visual artists and their fields.–S5
   c) Compare and contrast similar styles of works of art done in electronic media with those done with materials traditionally used in the visual arts.—S1
   d) Research and describe the role and influence of new technologies on contemporary works of art—S3
4) Elements of art and principles of design—S1
   a) Glossary of terms used in the Visual Arts Standards—S1
      i) Line
      ii) Sketch examples of line representing an emotion—S2
   b) Shape and form
      i) Discuss the purposes of shape and form used in artwork from a selected contemporary culture.—S3
   c) Value and texture
      i) Generate a value scale from black to white using shapes and patterns—S2
   d) Color
      i) Discussion of color origins and cultural perspectives for color usage—S3
      ii) Create a color wheel to demonstrate understanding of terminology and color development—S1
      iii) Formulate and support a position regarding the aesthetic value and color choices of a specific work of art and change or defend that position after considering the views of others. —S4
   e) Balance
      i) Select artworks, magazine ads, or photos and label examples of symmetry and asymmetry, radial balance, informal balance and visual weight using visual arts terminology—S1
   f) Rhythm and movement
      i) Find uses of pattern in printed materials.
      ii) Create a design using regular rhythm in a repeated pattern—S2
      iii) Create a design using rhythm in a repeated pattern with a variation—S2
   g) Unity, emphasis and contrast
      i) Sketch a web page putting the design elements together to create unity with emphasis and contrast—S2
      ii) Analyze and describe how the composition of this artwork is affected by the use of unity, emphasis and contrast –S1
5) Understanding working with shapes
6) Working with type
7) History of typography
   a) Black letter
   b) Old style
   c) Transitional
   d) Modern
8) Working with Graphics
   a) Development of computer graphics
   b) Various type and formats of graphics available
9) Student Portfolios
   a) Terminology index
   b) Critiques and evaluations of own work
   c) Comprehensive web sites
   d) Design layouts for sites

10) Critiques
    a) Research and discuss examples of art critiques of a well-known artist—S4
    b) Write critiques of the projects generated by at least two—S4
    c) Write critiques for your own artwork.
11) Students will work on individual and group projects throughout the year
    a) Create a flyer, or a newsletter
        i) Discuss the process and design elements applied using appropriate visual arts terminology—S(a)1.2
        ii) Print several versions of an assignment and describe the process and rationale for changing the artwork.—S4
    b) Conference program
        i) Analyze the personal direction and style used to develop the theme throughout—S1
    c) Logos—find two examples of logos from the U.S. and three examples of logos from other cultures—S3
        i) Describe the principles of design used to generate each logo—S1
        ii) Create an original personal logo—S2
    d) Generate fictitious product packaging artwork and text, company logo, letterhead and envelope for a fictitious company—S2, S5
        i) Compare and contrast product packaging identifying psychological content found in the symbols and images–S5
        ii) Identify the intentions of the artist when developing product packaging artwork—S4
12) Finalize student portfolio .—S5
    a) Describe how a selected piece demonstrates growth in ability and technique—S4
    b) Select several works from the portfolio and discuss the intent of the work and choice of media—S1

23. Texts & Supplemental Instructional Materials

Studio MX Step by Step
District adopted design texts
Print: various magazines, newspapers
The Internet as a source for art and gallery viewing and research
Software: Macromedia Studio MX (Dreamweaver, Fireworks, Flash, Freehand), Microsoft Word
Hardware: IBM PC computers, scanners, digital cameras, color and black and white printer, pc tablet and stylus

24. Key Assignments

A final project will complete the portfolio. This final project will require utilization of all skills learned during the course as well as written evaluation using terminology of the art and visual communications fields. – S1, 2, 3

25. Instructional Methods and/or Strategies

Computer based instructor demonstrations
Visual presentation formats for graphics terminology
Visual presentation of samples of printed and electronic media layouts.
Visual presentation of samples of artwork with similar themes
Internet research as required for various topics
Peer evaluation and revision of layouts.

26. Assessment Methods and/or Tools

Activities demonstrating knowledge of art design theory
Written assignments demonstrating ability to effectively communicate that knowledge
Written reflection
Vocabulary homework
Portfolio
Final project
Evaluation of artwork by instructor
Assessment rubric
Assessment criteria
Ability to follow instructions and direction
Effort on projects
Quality of the completed assignment
Self-evaluations and peer critiques

Submitted to UC 2/28/06
Pending Approval -G/Elective

Record Keeping A

Description of Target Group

This course is designed for all students at all grade levels, but especially for those in SAA.

Purpose

This course should he taken along with Record Keeping B as a one-year course. Together, the two courses provide students with the opportunity to develop an understanding of, and appreciation for, organization, operation and internal contact of business through utilizing simple recording activities.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Correctly compare and arrange names, numbers, addresses and dates according to approved business systems.
2. Filling out business papers correctly.
3. Make out receipts by hand method as well as the correct procedures and techniques for cash register operation and handling of money (making change8.
4. Record keeping for banking, such as making bank deposits, writing checks, finding the checkbook balance, endorsing checks, and reconciling bank statements.
5. Record keeping for petty cash, writing and recording petty cash vouchers and replenishing the petty cash fund.
6. Understand the principles of personal and family budgets and budgeting.
7. Record keeping for retail sales clerks, such as preparing sales slips, figuring sales taxes, keeping records for charge customers, handling sales returns an preparing statements of account.
8. Develop speed, accuracy and neatness in computation.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Every new type of problem is thoroughly explained and illustrated in the text and further demonstrated on the blackboard showing the actual step-by-step operation of how the various forms are filled out. An explanation of what is being done plus why it is done a certain way is made with a chance for questions both before, during, and after completion. A workbook with printed forms for all required problems is provided for all students. Four unit tests assist the students in evaluating their progress.

Record Keeping B

Description of Target Group

This course is designed for all students at all grade levels, but especially for those in SAA.

Purpose

This course should be taken along with Record Keeping A as a one-year course. Together, the two courses provide students with the opportunity to develop an understanding of, and appreciation for, organization, operation and internal contact of business through utilizing simple recording activities.

Standards of Expected Student Achievement

Upon completion of this course students will be able to successfully demonstrate the following skills:

1. Record keeping for a purchasing department such as keeping stock record cards, preparing purchase requisitions and orders, and using a purchase journal.
2. Record keeping for a wholesale sales department, such as preparing sales, invoices, keeping records of customers accounts, using a sales an cash receipt, an sales returns and allowances journal and preparing statements of account.
3. Handling time cards and computing wages of workers for workers for regular hours worked as well as work involving overtime.
4. Determining social security taxes, withholding taxes, as well as other payroll deductions.
5. Preparing the payroll, maintaining a record of employees earnings and preparing withholding tax forms.
6. Preparing an income statement for small retail businesses.
7. Using cash receipts journal and a general ledger for small retail businesses.
8. Using a cash payments journal and a general ledger for small retail businesses.
9. Maintaining the checkbook and reconciling the bank statement for small retail businesses.

Instructional Materials

Text and Supplementary Materials

Course Title

Shorthand 1A

Description of Target Group

This one-semester course is designed for 10th and 12th grade students. The student should also have completed or be taking typing concurrently along with this course.

Purpose

The students will gain the knowledge and acquire the skills which they need for confidence in writing, reading, and transcribing shorthand from familiar dictation.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following

1. Demonstrate the knowledge of shorthand theory, including brief forms and phrases.
2. Demonstrate reading ability of shorthand notes from the textbook with a minimum amount of difficulty.
3. Demonstrate the ability to read the shorthand plates from the book.
4. Demonstrate the ability to use the punctuation necessary for the business field.
5. Demonstrate ability to take verbatim dictation from familiar material at gradually increasing speeds.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The following kinds of learning approaches will be used in this course: blackboard demonstrations, teacher lectures, weekly tests, dictation from records, tapes, and the instructor.

Course Title

Shorthand 1B

Description of Target Group

This one-semester course is designed for 10th through 12th grade students who have successfully completed Shorthand 1A. The student should also have completed a typing course.

Purpose

The students should gain knowledge and acquire skills which they need for confidence and success in writing, reading, and transcribing shorthand from familiar material and gradually transfer those skills to new material.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Transcribe in typewritten form from shorthand notes written from dictation.
2. Take dictation from the teacher on both familiar and unfamiliar dictation.
3. Improve skills in spelling, punctuation, and paragraphing.
4. Demonstrate the ability to read from "cold" shorthand notes (homework notes should which are several days old.)
5. Correctly identify and spell shorthand brief forms.
6. Develop an understanding of the place of stenography in the business world, qualifications needed and possible channels of advancement, considering both opportunities and limitations.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The following kinds of learning approaches will be used in this course: blackboard demonstrations, teacher lectures, weekly tests, dictation from records, tapes, and the instructor.

Course Title

Shorthand 2A

Description of Target Group

This one-semester course is designed as an elective for 11th and 12th grade level students. One year of shorthand and typing is recommended prior to enrollment.

Purpose

The student will gain vocational competence as a stenographer.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Take dictation on both familiar and unfamiliar material, using phonetic symbols for shorthand alphabet.
2. Develop the ability to construct outlines under the stress of dictation.
3. Transcribe speed dictation at a 95 percent accuracy level in typewritten form.
4. Transcribe letter-style dictation on the typewriter in mailable form.
5. Develop the ability to spell, punctuate, and effectively utilize a good command of the English language.
6. Demonstrate the ability to judge letter placement with the use of the letterheads.
7. Transcribe shorthand outlines taken from dictation in various business letter styles.
8. Demonstrate shorthand knowledge of brief forms, phrases, general vocabulary, word prefixes and suffixes, and derivatives.
9. Demonstrate the necessary skills for penmanship and shorthand theory.
10. Demonstrate skill in the use of the electric typewriter.
11. Demonstrate the skills necessary for using the dictionary and other reference books.

Instructional Materials

Text and Supplementary Materials
Refer to Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Taking dictation, transcribing from dictated material, reading shorthand plates from textbook as well as own shorthand, transcribing on the electric typewriter, checking dictionary for spelling and syllabication' taking dictation from tapes and records and the instructor, typing drills, speakers.

Course Title

Shorthand 2B

Description of Target Group

This one-semester course is designed as an elective for 11th and 12th grade levels. One year of typing and one and one-half years of shorthand are recommended.

Purpose

The students will gain vocational competence as stenographers.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Take dictation on both familiar and unfamiliar material.
2. Transcribe dictation at a 95 percent accuracy level in typewritten form.
3. Transcribe letter-style dictation on the typewriter in mailable form.
4. Demonstrate skill in the use of the electric typewriter.
5. Transcribe shorthand outlines taken from dictation using the acceptable business letter styles.
6. Demonstrate shorthand knowledge of brief forms, phrases, general vocabulary, word prefixes and suffixes, and derivatives.
7. Demonstrate skill of shorthand penmanship, spelling, punctuation, and sentence structure.
8. Develop a higher speed through the use of tapes and records.
9. Demonstrate the skills necessary for using the dictionary and other reference books.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Taking dictation, transcribing from dictated material, reading shorthand plates from textbook as well as own shorthand, transcribing on the electric typewriter, checking dictionary for spelling and syllabication, taking dictation from tapes and records and the instructor, typing drills, speakers.

Course Title

Simulated Office

Description of Target Group

This one-semester course is designed as an elective for students of the 11th and 12th grate level. It is highly recommended that one semester of typing and office machines be completed prior to enrollment in this class. This is an excellent course for students to take before participating in cooperative business work education.

Purpose

The student works as a member of the office simulation by organizing his/her work, setting priorities and interacting with other students. The course is set up as a full-scale office simulation that operates with the realism of an actual business world.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop a wide range of clerical skills.
2. Perform a broad range of occupational experience by rotating through different office positions.
3. Demonstrate realistic patterns of interaction with one another.
4. Develop the personal traits and human relations skills that are necessary for success in clerical occupations.
5. Demonstrate the ability to write a letter of application and data sheet.
6. Participate in a simulated office type interview in a realistic situation.
7. Demonstrate the ability to learn from one job and be able to transfer this to another job within the simulation.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

At the start of the simulation, students apply for jobs by writing letters of application and data sheets. They are then interviewed by a professional with whom they have had little or no contact. Under the direction of the executive vice president (the teacher) they are hired for specific positions; such as department managers, order clerks, stock control clerks, accounting clerks, etc.

Simulated Office (continued)

Once the employees are hired, they establish office files and go through orientation sessions that familiarize them with their specific job duties and the duties of the entire department. Then, the actual day-to-day office work begins. As far as the classroom situation will permit, the work flow parallels that of an actual business office. The workflow begins when the office receives the first orders from customers.

During the simulation, students earn weekly salaries (reflecting an academic grade), and they are eligible for bonuses and seductions. Provision is also made for the transfer of employees from one job to another.

Course Title

Student Store

Description of Target Group

This course is designed as an elective for business students on the 10th, 11th and 12th grade levels. It is recommended that students complete a minimum of one other business course before enrolling. A student may enroll in the course for a maximum of two semesters.

Purpose

This course is designed to train students in sales, marketing, and merchandising techniques. The emphasis is placed on learning by doing. All students learn store operation by actually operating the high school student store. Training will include work in selling, cashiering, inventory control, display, advertising, buying, accounting, payroll, and employee supervision.

Standards of Expected Students Achievement *

Upon completion of this course, students will be able to:

1. Develop the necessary skills and attitudes in the positions of sales clerk, cashier, promotions, stock and inventory clerk, accounting, payroll, and supervision of employees.
2. Successfully apply for a position in the student store under actual business conditions with a rating of satisfactory as evaluated by the store manager and instructor.
3. Sell a variety of merchandise at retail in a student store setting as measured by a passing score on the evaluation form.
4. Operate a cash register for one week with cash short or overage of not more than fifteen cents.
5. Order student store merchandise during one school quarter using district purchase procedures with a rating of satisfactory as evaluated by the store manager and the instructor.
6. Maintain the store inventory for a period of one quarter with a rating of satisfactory as evaluated by the store manager and the instructor.
7. Stock and price a variety of merchandise for a period of one school quarter with a rating of satisfactory as evaluated by the store manager and the instructor.
8. Prepare displays in the store showcases with a passing score on the evaluation form.
9. Prepare advertising campaigns with a passing score on the evaluation form.
10. Supervise other employees for one school quarter maintaining the necessary records and scoring satisfactory on the evaluation form.
11. Maintain the proper payroll records of the student store for a period of one school quarter with a rating of satisfactory as evaluated by the store manager and the instructor.

Student Store (continued)

12. Maintain the proper accounting records necessary for the financial success of the student store for a period of one school quarter with a rating of satisfactory as evaluated by the store manager and instructor.
13. Maintain adequate store security at all times to safeguard against shop-lifting and employee theft for a period of one school quarter with a rating of satisfactory as evaluated by the store manager and instructor.

* The number of performance objectives obtained by each student will depend on the number of workstations the student can complete.

15. Pre-Requisites

Must be 9th grad freshman

16. Co-Requisites

May go to Health Ed. Or another 9 week class for second 9 weeks

17. Brief Course Description

The course designed to introduce students to business principles and practices. An introduction to keyboarding, word processing, spreadsheet application, presentation delivery, desktop publishing software programs and media skills. Units include personal budgeting, business document formatting, career exploration, goal setting, Internet searching, styles of learning including aptitude and interest inventories.

B. COURSE CONTENT

Please refer to instructions

18. Course Goals and/or Major Student Outcomes

Students will be able to demonstrate beginning skills in keyboarding, word processing, spreadsheet applications, presentation delivery, desktop publishing software programs and media skills.

19. Course Objectives

Students will acquire beginning skills in the application software in a business environment. Students will know how to use contemporary and emerging technological resources in diverse and changing personal, community and work place environments.

20. Course Outline

1. Goal Setting
2. Beginning Keyboarding Skills
3. Aptitude and Interest inventory
4. Format business documents
5. Budgeting concepts
6. Presentation skills
7. Research skills
8. Basic operating system fundamentals.

21. Texts & Supplemental Instructional Materials

MicroType 3.0, Digitools, Microsoft Office Suite, Freedom Writers Diary and Teacher's Guide, Internet Explorer Browser

22. Key Assignments

Introduction to Keyboarding – students use MicoType 3.0 to learn correct finger usage of the Qwerty Keyboard

Goal setting – students define goals and steps to achievement and possible blockages. Students set a personal 6 moth goal that is sealed and delivered at the end of the semester.
Interest inventory/Aptitude Test – Students do at least one assessment to help define strengths and learning styles.

Spreadsheet Applications/Personal Budgeting – students use a weekly allowance to spend in a personal budget for a moth. They then put the budget in a spreadsheet using formulas to add/subtract/divide/multiply expenditures for the month.
Internet Research – students use the Small Business Administration web site to complete a web quest assignment. Using IE students learn to do Internet searches.
Job Search – students use the Internet to do a job search for a career that they are assigned. They complete a report or brochure to include the qualifications/education needed, starting pay - hourly salary, physical and mental abilities needed, and a description of daily activities.
Family Budget – students are assigned a partner and they put both starting incomes together when planning their monthly budget to include standard percentages for housing, food, taxes, savings, transportation, medical/dental, insurance, clothing, and entertainment. Students shop for housing insurance and transportation within their budget amounts, assuming at all other categories have used the entire amount budgeted. Students make a major purchase from any money saved from housing, insurance and transportation.
Family Budget Presentation – students put together a presentation using presentation software to include each one's job information from their report/brochure, their family budget, where they found and how much they spent on housing, insurance and transportation. Also included is their major purchase with details on how they were able to budget the money for the purchase. All jobs searched will be presented so that entire class has an opportunity to learn about many different careers.

23. Instructional Methods and/or Strategies

Presentations using on overhead projector along with written requirements of each unit project are given. A software program that projects the demonstration and examples is also broadcast onto their computer screens. Rubrics are given out with the project criteria so that students have clearly defined criteria for determining the project grade.

24. Assessment Methods and/or Tools

Rubrics, observations, testing used for assessment.

19. Brief Course Description

This Advanced Business course is for junior and senior level students, and is designed to prepare students for employment, provide them with the necessary skills to complete their college studies and provide them with essential communication skills to effectively use technology in their daily lives, while improving literacy skills. This class is an alternate choice to meet the district graduation requirement for four years of English for **seniors only**. Juniors may take this class to fulfill the appropriate elective credits, but must note that as seniors, they must still take a class approved to meet the four year of English graduation requirement. This class does not meet the UC/CSU entrance requirement for a fourth year of English.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Throughout this year long course, students will read and comprehend technical reading and writing in order to produce original documents as well as documents from the texts. This will include the creation of a variety of word processing documents, including memos and letters, brochures, newsletters, flyers, charts, multimedia presentations, and research based projects.

21. Course Objectives

- Advanced Word Processing
- Reading Skills
- Writing Skills
- Grammar Skills
- Listening Skills
- Introduction to Desktop Publishing
- Introduction to Webpage Design
- Deliver Multimedia Presentations
- Combine documents using Software features
- Teamwork Skills
- Job Seeking/General Workplace Skills

22. Course Outline

This Course addresses both California State English/Language Arts Standards for grades 11/12 and the Career Technical Education Foundation Standards for Information Technology Sector. Upon completion of this course, students will be able to successfully demonstrate the following skills:

Advanced Word Processing: (CTE – Information Tech Foundation Standard 9.0 & 10.0)

Reading Skills

√ Demonstrate use of sophisticated learning tools by following technical documents. (R 2.3 ELA)
√ Demonstrate a basic understanding of the information processing concepts and basic word processing terminology. (R 1.0 ELA)
√ Verify and clarify facts presented in other types of expository texts by using a variety of consumer, workplace, and public documents. (R 2.3 ELA)
√ Research software documentation and help screens. (R 2.3 ELA)

Writing Skills

√ Produce and format documents such as letters (personal business and business), memorandums and reports. (W 1.0 ELA)
√ Write technical documents (CTE Foundation Standard) (W 1.0, 1.3, 1.9, 2.5, 2.6 ELA)
√ Demonstrate an understanding of the elements of discourse (W 1.1 ELA)
√ Utilize reference materials to solve problems. (W 1.5 ELA)
√ Create documents based on research using the appropriate form documentation. (W 1.6, 1.7 ELA)
√ Create outlines. (W 1.7 ELA)
√ Create columns of texts. (W 1.7 ELA)
√ Create tables for variety of uses. (W 1.7 ELA)
√ Utilize software features to edit documents. (WOELC 1.3 ELA)
√ Identify and use universal proofreader's symbols. (WOELC 1.2 ELA)
√ Identify errors using appropriate proofreading skills. (WOELC 1.2 ELA)

Grammar Skills:
√ Compose documents using correct grammar. (WOELC 1.1 ELA)
√ Demonstrate ability to use the spell-check feature to the software. (WOELC 1.2 ELA)
√ Demonstrate ability to use the grammar-check feature of the software. (WOELC 1.1 ELA)
√ Demonstrate ability to use the thesaurus to enhance their documents and increase their vocabulary. (WOELC 1.1 ELA)
√ Demonstrate proficiency of basic grammar skills.
- Identify and properly use parts of speech.
- Identify and properly use punctuation.
- Identify spelling error and properly use spelling rules.
- Identify capitalization errors and properly use capitalization rules.

Listening Skills: (LS 1.0 ELA)
Listen to and follow oral instructions.
√ Actively participate while new concepts are being demonstrated by the teacher.
√ Produce a document after receiving oral instructions from the teacher.

Introduction of Desktop Publishing: (CTE – Information Tech Sector)
√ Design brochures, flyers and newsletters.
√ Utilize graphic boxes, lines, shading and borders.
√ Use page composition and layout techniques
√ Use appropriate typeface.
√ Edit images and manipulate graphics.

Introduction to Web Page Design (CTE – Information Tech Sector, MSS Pathway B 5.0)
√ Demonstrate a basic understanding of HTML
√ Utilize Web compatible formats.
√ Create a web page using a Wizard.
√ Create text and graphics
√ Create a link.
√ Link to other pages.

Deliver Multimedia Presentations: (SA 2.4 ELA)
√ Create, design and prepare presentations.
√ Create student projects utilizing presentations
√ Critique fellow student presentation (LS 1.11 ELA)

Combine documents using software features.
√ Merge variable and constant information to create new documents.
√ Integrate

√ Move or copy between documents.

Teamwork Skills: (CTE – Information Tech Foundation Standard 9.0)
√ Work cooperatively with another team member to complete specified job assignments.
√ Each team member will evaluate the other's work before submitting for a grade.

Job Seeking Skills/General Workplace skills (WA 2.5 ELA)
√ Research various styles of resumes.
√ Research a variety of employment letters.
√ Create an appropriate resume
√ Create a letter of application for employment.
√ Fill out an application for employment correctly.
√ Participate in a mock job interview.

23. Texts & Supplemental Instructional Materials

Hyden, Jordan and Jone Steinaver. Communicating for Success. Thomson-South Western, 2006.
Computer Workstation
Applications software
Textbooks for software applications and workplace communications

24. Key Assignments

The students will complete project based assignments to demonstrate the use of computer skills learned, which integrates English Language Arts standards and Career Technical Educational Information Technology Industry Sector standards.

25. Instructional Methods and/or Strategies

Direct and Indirect Teacher Instruction
Independent Office Simulation Activities
Technical Reading and Writing interpretation of Textbook and Online Resources

26. Assessment Methods and/or Tools

Use scoring guides/rubrics/textbook assessments.
Students will demonstrate competence by:
√ Effectively creating assignments by following technical written instructions.
√ Receiving a passing grade on written tests.
√ Producing documents from oral instructions by the teacher.
√ Demonstrating the ability to transfer knowledge of one area to another.
√ Successful completion of the employment preparation unit.
√ Creating a web site
√ Creating professional newsletters.
√ Passing four areas of grammar tests.
√ Student Portfolio.

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

Course Title

Typing 2A

Description of Target Group

This one-semester course is open to all students. It is recommended that students complete two semesters of typing prior to enrolling in this class.

Purpose

The student will gain vocational competence as a typist.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate initiative by performing assigned and unassigned tasks in the classroom.
2. Demonstrate responsibility in organizing and maintaining an efficient.
3. Demonstrate importance of good posture and typing techniques.
4. Demonstrate ability to follow verbal as well as written instruction.
5. Develop skill in spelling, grammar and punctuation.
6. Demonstrate ability to evaluate personal work, proofread and make corrections.
7. Increase speed and develop accuracy in sustained production typing to meet department standards.
8. Demonstrate proficiency in typing speeds and accuracy, which meets minimum employment standards.
9. Demonstrate the ability to apply the fundamentals of typing to assigned work.
10. Develop a sense of pride, loyalty, honesty, and dependability.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Material will be presented to the students through lectures, class discussions, demonstrations, films, and in some instances, individualized learning.

Course Title

Typing 2B

Description of Target Group

This one -semester course is open to all students. It is recommended that students complete three semesters of typing prior to enrolling in this class.

Purpose

The student will gain vocational competence as a typist.

Standards of Expected Student Achievement

Upon completion of course, students will be able to successfully demonstrate the following skills:

1. Demonstrate initiative in completing assignments in a manner representative of a business employee.
2. Demonstrate the ability to organize material and time for maximum efficiency.
3. Demonstrate competence in accuracy through effective proofreading.
4. Demonstrate the understanding of good work ethics.
5. Demonstrate accuracy in word division, punctuation, capitalization, and spelling.
6. Increase speed and develop accuracy representative of the minimum requirements for entry level typing.
7. Demonstrate speed and accuracy representative of the minimum requirements for entry level typing.
8. Demonstrate the understanding of employment examinations.
9. Demonstrate the ability to understand verbal and written communication.
10. Develop a sense of pride, loyalty, honesty, and dependability.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Material will be presented to the students through lectures, class discussions, demonstrations, films, and in some instances, individualized learning.

College Preparatory Elective – Interdisciplinary / Other Subject Template

(Required Information needed to prepare for course submission)

- **Course Guidance**

GENERAL COLLEGE PREP ELECTIVE GUIDANCE

The intent of the college preparatory elective requirement is to encourage prospective UC students to fill out their high school programs with courses that will meet one or more of a number of objectives:

- To strengthen general study skills, particularly analytical reading, expository writing, and oral communications
- To provide an opportunity to begin work that could lead directly into a major program of study at the University, and
- To experience, in some depth, new areas of academic disciplines that might form the basis for future major or minor studies at the University

Quality. All courses selected to meet the "g" elective requirement are expected to meet standards of quality similar to those required for the "a-f" requirements. Courses acceptable for the "g" elective area should be advanced courses designed for the 11th and 12th grade level and/or have appropriate prerequisites. Elective courses should present material at a sufficient depth to allow students to achieve mastery of fundamental knowledge that prepares them for University work or a future career path.

COLLEGE PREP ELECTIVE: INTERDISCIPLINARY/OTHER GUIDANCE

- Courses must be rigorous in terms of academic content and student expectations.

- **Course Content**

NOTE: The following questions are subject specific and ask for detailed information regarding the course curriculum. Since UC has developed their own criteria for the review of curricula, it is not necessary (and preferred) that the State Standards are not listed when submitting course descriptions to the University. When preparing the course submission, keep in mind that your audience is the UC High School Articulation unit and UC faculty. Include relevant information that would assist those reviewing the course and provide UC a better understanding and clarity about the intent of the curriculum. UC expects to see information that would show specific, detailed evidence of the course rigor and development of essential skills and habits of mind. Course template components need to be more expository and illustrative of the integration of each course component and how the overarching goals are being accomplished. The text boxes below will expand to accommodate additional text.

Course Purpose: *What is the purpose of this course? Please provide a brief description of the goals and expected outcomes. (How these will be accomplished should be reserved for the Course Outline, Key and Written assignments, Assessments, and/or Instructional Methods.)*

NOTE: More specificity than a simple recitation of the State Standards is needed.

The purpose of this course is to teach web page design and beginning programming with the coding languages HTML, JavaScript, and CSS. Students will be able to design and build a website from scratch. Students will develop a basic understanding of design principles and the user/software/hardware interface as well as understanding the logical process of computer problem solving. Students will also learn skills for research, development, and the publishing processes. Understanding, critical thinking, and problem solving skills related to programming will be developed as students get an introduction to the fields of web development and computer science.

For Presentation Only

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. Show examples of how the text is incorporated into the topics covered. A mere listing of topics in outline form is not sufficient (i.e. textbook table of contents or California State Standards).*

I.* Orientation

A. Course objectives, expectations, procedures	A. Review course objectives, expectations, procedures.
B. Introduction to workplace communication	B. Understands what professional communications entail.
C. ROP	C. Complete ROP paperwork
D. Safety Training	D. Understand office safety, basic first aid procedures, and online SIPE training certificate
E. Employment outlook/ opportunities	E. Reviewed employment outlook/opportunities.
F. File management	F. Set up file system for saving and retrieving work and managing directories

II. The Study of Communication

Using the textbook Communicating for Success, student s will examine the five elements of communication and the stages of the writing process to become familiar with and recognize effective writing. Students will look at and create a several types of documents that incorporate the use of formatting, editing, self-evaluation, and peer editing, and partner projects to demonstrate their ability to communicate effectively.

TOPIC	EXAMPLE
A. Elements of Communication	A. Identifies the 5 Elements: Audience, sender, receiver, purpose, content
B. Writing Process	B. Identifies the 3 stages: planning, writing, revising
C. Editing & Proofreading	C. Practice editing a document for form and accuracy
D. Typing & Ergonomics	D. Practice keyboarding for efficiency and accuracy and understand ergonomics
E. Purpose and Content	E. Analyze the purpose & content of different types of business communications
F. Persuasive writing	F. Learn how to effectively influence with writing style
G. Compare and Contrast	G. Set up data in tables to compare information
H. Analyzing data and drawing conclusions	H. Learn how to organize reports for making decisions and recommendations & proving opinions
I. Giving Instructions	I. Learn to write and give effective instructions for favorable outcomes
J. Research & Reports	J. MLA format and effectual written presentation of content

III. MS Office Word

Students will learn MS Office Word features while creating a variety of professionally styled workplace documents. They will utilize technical reading skills to follow directions and steps in the Microsoft Office textbook.

TOPIC	EXAMPLE
A. Correct formatting techniques of workplace documents	A. Memo, Fax, Email, Note, Letters, Mail merge, Press Release
B. Editing features, hyperlinks	B. Spelling/grammar, find & replace, adding and removing links
C. Format paragraphs, lists, lines, tabs, borders, shading	C. business report, construction bid, tri-fold brochure
D. Format page, sections, breaks, columns, headers & footers, tables, endnotes, footnotes, sources & bibliography	D. Business and informational brochures
E. Reports	E. MLA format of reports and bibliography
F. Brochure/Pamphlet with images	F. Travel brochure
G. Usability – Readability Statistics	G. Use Flesch-Kincaid levels to review work

IV. MS Office PowerPoint

Following steps in the Microsoft Office textbook, students will learn to use MS Office PowerPoint to create effective and interesting presentations.

TOPIC	EXAMPLE
A. Create a basic presentation	A. Create and add text to a presentation
B. Add styles, images	B. Format a presentation and add pictures
C. Use tables, graphs, shapes	C. Add and format graphic information
D. Animations and transitions	D. Add movement to a presentation
E. Color choices and readability	E. Edit a presentation for effectiveness

V. Research Paper and Presentation

Students learn about a famous entrepreneur by researching their life and how they came into success. They will write a correctly formatted report and create a presentation for the class.

TOPIC	EXAMPLE
A. Research and notes/outline	A. Online research
B. Writing & Revising	B. MLA formatted report
C. Bibliography	C. Proper Works Cited
D. PowerPoint	D. Create a presentation and show to audience

VI. Job Search and Workplace Skills

Research and learn about the types of careers that interest them. Students learn the proper way to conduct themselves in the workplace to optimize success. Students will participate in six weekly job skill and interviewing seminars put on by the North county Volunteer Corps.

TOPIC	EXAMPLE
A. Personal Inventory	A. Identify career interests
B. Resume	B. Create an effective resume

For Preparation Only

C. Job Skills Training Workshop	C. Attend six sessions
D. Employment Paperwork	D. Application, resume, cover letter
E. Workplace Attire	E. Explain why dress is or isn't appropriate
F. Communication & conflict	F. How to talk to supervisors, colleagues, customers and manage negativity
G. Interviews	G. What to expect, how to prepare, mock interview practice
H. Financial Literacy	H. Paycheck and taxes

VII. Introduction to Website Programming

Understand basic programming with HTML. Students will create and original webpage outlining the job skills learned throughout the year.

TOPIC	EXAMPLE
A. Saving web documents	A. Use Notepad to create web page
B. Text, lines, lists	B. Learn basic HTML tags
C. Color, headings, fonts	C. Add formatting with HTML and CSS
D. Links	D. Add onsite and offsite links to a page
E. Images	E. Add and format pictures

VIII. Career/Occupational Knowledge and Workplace Skills (infused throughout the course)

Students will demonstrate career skills that will enable them to be successful in the workplace and in post-high school educational settings. Teamwork and collaboration are encouraged and practiced. Critical thinking and problem solving are developed through independent project based learning.

TOPIC	EXAMPLE
A. Technology and information	A. Accessing and utilizing technology and information.
B. Safety standards	B. Practicing occupational safety standards.
C. Critical thinking and solving problems	C. Thinking critically and solving problems effectively.
D. Basic skills in reading, writing, mathematics, listening and speaking	D. Uses basic skills in reading, writing, mathematics, listening and speaking as they relate to occupation specific skills.
E. Real world problems and situations	E. Applying knowledge to real world problems and situations.
F. Independent & collaborative work	F. Works independently and collaboratively.
G. Communication	G. Communicates effectively and appropriately
H. Reliability	H. Performs reliably and responsibly.
I. Diversity	I. Working with diverse populations effectively and respectfully.
J. Punctuality and Dependability	J. Is punctual and has good attendance
K. Directions	K. Follows directions and asks questions
L. Supervision	L. Works well with minimum supervision.
M. Cooperation	M. Is cooperative and works effectively with peers
N. Initiative	N. Takes initiative by working beyond minimum requirements.
O. Grooming	O. Meets job standards of neatness and grooming.
P. Constructive Criticism	P. Responds appropriately to constructive criticism.

Key Assignments: *Detailed descriptions of all Key Assignments which should incorporate activities and projects, as well as, short answers and essay questions. How do assignments incorporate topics? Include all assignments that students will be required to complete. Assignments should be linked to components mentioned in the course outline. It is not appropriate or necessary to include instructions given to students regarding the execution of assignments (formatting, timeliness, etc.). Do not include exams or assessments in this section.*

1ST SEMESTER

Unit 1: MS Office Word and Study of Communication

File Management: set up folders for saving work

A. CS Book Chapter 1-"Communicating at Work"

- Group Popcorn read Pgs. 1-2 & 5
- Practice 1-1: Analyzing the sender & receiver
  Small group poster analyzing a document. Present to class.
- Students read pgs. 6-11 (+ Ethics Connections pg. 5 & 8) and 15-19 and answer review Q's about the Elements of Communication and the three stages of the writing process.
- Do Real Life Independent Challenge take typing skill test and research ergonomics
- Practice editing with proofreading marks

B. Safety training

- Safety Meeting: Safety and Basic First Aid Books (have everyone sign in on sheet)
- Online SIPE training—print certificate for New Employee Safety Orientation
  http://www.getsafetytrained.com/

C. MS Office Word Unit A—Memo, fax, letter formatting

- Memo: Review Memo format; do Step-by- Steps Pgs. 5-12—Screen Check Memo and Fax
- Fax cover sheets: Word A Skills Review—Screen Check 2 fax sheets
- Review letter format and correct address format: Communication Book Practice 9-9

Not Binding Policy

- Job interview follow-up letter: do Independent Challenge 1 Pg. Word 21 - Print
- LETTER TO TEACHER – show Flesch-Kincaid Readability Statistics & Alt PrtScn to copy and paste to letter.

D. MS Office Word Unit B—Editing features
- Press Release with hyperlinks Steps and Skills Review
- Ind. Challenge 2: Job Cover Letter—partner must edit, print w/Readability Stats
- Job Interview Discussion w/overhead and Movie "Answering interview Questions"

E. CS book Chapter 9--Writing Messages and understanding Purpose and Content
- Review the 5 Elements of Communication
- Popcorn Read Pgs. 281-287 & 296, do Practice 9-1 as a class
- Analyze purpose and content of messages on poster paper in small groups (Practice 9-2) Present.
- Notes: Read Pgs. 296-7 and do Practice 9-5—design notecard front on bottom half of paper, print and fold, write note on inside to teacher or staff member. Deliver.
- Review when a memo and letter are used
- Memos: Read Pgs. 298-300, Do Practice 9-6 #1 and #4. Submit memos electronically
- Email: Pg. 301-303, Do Practice 9-7 #2—send email to teacher
- 2 Letters: Read pgs. 303-311, Review Content (pg. 296) of an effective message. With a partner, write a complaint letter to a business. Answer the complaint as the business owner (create company letterhead to write the letter on)

F. MS Office Word Unit C—Formatting text and paragraphs, lists, lines, tabs, borders, shading
- Business Flyer: Steps Pgs. Word 49-67—Screen Check
- Executive report: Skills Review Pgs. Word 69-71-- + add a 2-line drop cap to the 1st paragraph. (see pg. 51)
- Construction Bid: Independent Challenge 1—Screen Check

G. MS Office Word Unit D—formatting page, sections, breaks, columns, headers & footers, tables, endnotes & footnotes, bibliography (citing sources), citations
- Multiple page informational report: Steps Pgs. 77-95—Screen Check
- Business brochure: Skills Review Pgs. 97-99—Screen Check
- Tri-fold brochure: Independent Challenge 1 + Advanced Challenge—Screen Check

H. CS Book Chapter 10—Persuasive Writing
- Oral Popcorn read textbook pgs. 323-329, 335-338, 349-51
- PUBLICATION PROJECT: Students develop a multiple page brochure for a vacation destination using persuasive writing techniques and incorporating all of the formatting techniques they have learned. Must include a Bibliography. They will follow the 3 steps of the writing process: Plan, Write, Revise

2ND SEMESTER

Review: Handbook, attendance, Certificate/Competencies and value for employment

File Management: Check student file organization for ROP Certification

SIPE Online Safety Training (http://www.getsafetytrained.com/) .
- Ergonomics in the Workplace. Print certificate

I. CS Book Chapter 12—Comparing & Contrasting—analyze the decision making process including organizing data, drawing conclusions, and making recommendations:
- Oral Popcorn Read Pgs. 407-412, show table overhead noting 5 parts of a table
- Tables: do Practice 12-2 Pgs. 414-15—organize the data in a table. Print
- Analyzing data & drawing conclusions: students read Pgs. 415-420 and Do Practice 12-2 #1 where they analyze three tables and write two conclusions and one recommendation for each one.
- PARTNER ESSAY PROJECT: Students evaluate their community and make a table of the positive and negative aspects. One negative aspect is chosen and the arguments for changing it and the arguments against changing it are organized in a second table. The

For Presentation Only

findings are prepared in a comparison and contrast analysis and presented. Attach Flesch-Kincaid Readability Statistics. Present to class.

- LITERARY REVIEW: Mark Twain—students read silently then oral popcorn read "Two Veiws of the River". Do Start-Up/Connection activity: create a table of the two viewpoints of the narrator (must include 5 parts of a table—label, title, headings, data, and source). On same page answer this Q: Which view of the river does the narrator find more satisfying? 1 paragraph--Attach Readability Statistics showing at least 9th grade level. Print.

J. CS Book Chapter 4—Giving Effective Instructions

- Oral Popcorn read Pgs. 107-109, Do game to showcase the importance of being complete, accurate, and precise when giving instructions (Practice 4-2 #1). Answer questions about the experience and what was learned (Practice 4-2 #2 (typed))
- Read Pg. 120; do Practice 4-12: Writing numbers correctly
- Assign Reading Pgs. 112-119 & 121-131 and Review Q's.
- Review Giving Instructions tips
- DIRECTIONS PROJECT—Design a one page document giving directions on how to get somewhere. Must be clear and precise; include visuals and creative page design.

UNIT 2: MS Office PowerPoint and Research Paper

K. MLA Format: research MLA format online and answer questions. Format a report.

- MS Office book Pg. Word 103—Real Life Independent Challenge. Screen Check.

L. MS Office PowerPoint

- Unit A: Adding and modifying text and lists--Steps and Visual Workshop
- Unit B: Formatting, grouping objects, pictures, outline--Steps and Skills Review
- Unit C: Inserting and editing tables and graphs--Steps and Skills Review
- Unit D: Animation, Transition, layouts, backgrounds, reviewing-- Steps and Skills Review

M. Biography Research Paper on a famous entrepreneur

- Research notes—typed and Screen Check
- 3-page research paper in MLA format w/Works Cited and citations.
- Attach Flesch-Kincaid Readability statistics

N. PowerPoint—see handout

- Students prepare and present PowerPoint of their research subject. Extensive formatting required. Not graded if don't present.

Unit 3: Job Seeking and Workplace Skills

O. CS Book Chapter 11

- Review pages 367-368
- Read Pgs. 370-378—Fill out a Personal Inventory and create a resume

P. North County Volunteer Corps Job Skills Workshop (as scheduled during spring semester)

- Complete 6 week job skills program and mock interview

File Management: Check student file organization for ROP Certification

Unit 4: Website Programming Skills

- DigiTools Book Chapter 11—Introduction to HTML programming Lessons 1-4
- Create a website describing the communication and job skills you have learned this year.

ROP Certificates handed out to year-long students

For Preparation Only

Instructional Methods and/or Strategies: *Indicate how the Instructional Methods and/or Strategies support the delivery of the curriculum. What portions of the Course Outline are supported by the methods and strategies?*

Written Assignments: Review of key concepts and vocabulary that is learned from reading, research, and pracatice.

Writing allows the student to demonstrate their mastery and understanding of the material.
Direct Whole Group Instruction: Demonstration and visual presentation.
Independent Practice: Students practice with step-by-step instructions.
One-on-one Instruction: Teacher assists and gives feedback to students individually.
Cooperative Learning Group: collaboration and sharing of information is encouraged so students are learning from and working with each other. Group projects encourage teamwork and cooperation.
Independent Internet research: structured research skills are developed throughout the course, both individually and in small groups to provide platforms for analysis and synthesis of information.
Troubleshooting errors and revision: learning to recognize errors and know where and how to find them and how to fix them. Peer editing develops teamwork and a commitment to producing high quality work the whole group is proud of.
Projects: Students demonstrate use of all skills and concepts in original works. Students do a written self-evaluation after a project to analyze what worked, what they would change about the process, and what they learned.
Oral presentation and peer evaluation: Students share and present original works and evaluate for effectiveness.

Assessments Including Methods and/or Tools: *Indicate the intent of each assessment and a brief description of how each relates to the Course Purpose and goals related to the development of critical thinking and other habits of mind skills.*

- Written Review Questions to reinforce concepts learned are checked for accuracy.
- Ability to read technical texts and follow instructions
- Screen Checks: Students show the teacher their work at the computer to show accuracy and completeness of step-by-step modules.
- Rubrics: allows student to self-evaluate and teacher to check for inclusion of necessary elements, mastery, and level of use.
- Presentations: to share final projects for review of different design concepts, use of elements, and creative solutions to project criteria.
- Activities and Projects: demonstrates knowledge of formatting concepts and writing skill
    - Memo
    - Letters: job cover letter, complaint letter, business letter
    - Note: expressing thanks
    - Persuasive writing destination brochure
    - Comparison/Contrast Essay
    - Literary Review
    - Giving Directions project
    - Research Report
    - Job skills training: resume and mock interview

For Preparation Only

UC Doorways Online Update Template

(Required Information needed to prepare for course submission)

- **School Information**

NOTE: The School Information must be updated / verified as accurate at the start of each submission cycle. This must be completed before the system will allow any course submissions.

School Information

School Name: **Pioneer Valley High School** _____

High School District: **Santa Maria Joint Union High School District** _____

City: **Santa Maria, California**_____

School Course List Contact Information

First Name: **Elyssa** _____

Last Name: **Rodriguez-Chavarria**_____

Position/Title: **Assistant Principal of Instruction**_____

For Preparation Only

- **Previously Approved Courses**

NOTE: Complete outlines are not needed for courses previously approved by UC. Courses that are defined as "previously approved" are courses from programs (Advanced Placement, International Baccalaureate, ROP courses, etc.), courses from within the same district, courses that have been removed within a three-year window and are being reinstated, and courses from UC-approved online providers. Courses modeled after courses from outside the school district are also defined as "previously approved" but a complete course description will be required for submission. Each section below represents an individual page on the electronic submission site.

Was this course "Previously Approved" by UC? _____ Yes __**X**__ No

If "No", proceed to the **Course Description** section.

If "Yes," please indicate which category applies:

Has this course been provided program status, is not an online course, and is it listed below?

_____ Yes _____ No

If "Yes," select an option from the Program Status list:

_____ AVID Program

_____ Advanced Placement (AP)

_____ Advanced Placement (AP)

_____ California Partnership Academies (CPA)

_____ CDE Agricultural Education

_____ Center for Advanced Research and Technology (CART)

_____ CSU Early Assessment Program (EAP)

_____ International Baccalaureate (IB) Program

_____ National Academy Foundation (NAF)

_____ Project Lead the Way

_____ ROP/C Organization Name of ROP/C: _____

_____ University of California Curriculum Integration (UCCI) Institute

If "Advanced Placement", has it been authorized by the College Board through the AP Audit Process?

_____ Yes _____ In Progress

NOTE: UC will only allow Advanced Placement courses that have passed or are in the AP Audit process. UC requires all AP courses on your list, including those approved in prior years, to be verified via the College Board AP Audit process. UC will run quarterly reports based on AP Audit data. AP courses not listed on the AP Audit list will be removed.

If "In Progress," date submitted to AP: _____ (MM/DD/YY)

Exact Program Course Title: _____

Is this course provided by a UC-approved online course publisher listed below?

_____ Yes _____ No

If "Yes", select an option from the Online Provider list:

_____ Academic Advantage Online

_____ Accelerate Education/Accelerate Online Academy

_____ Advanced Academics

_____ Apex Learning/Apex Learning Virtual School

_____ Alpha Omega Academy

_____ Aventa Learning

_____ Class.com

_____ CompassLearning/Odyssey

_____ Connections Academy

_____ Edgenuity, Inc. (formerly Education2020)

_____ Edmentum, Inc. (formerly PLATO Learning

_____ FlipSwitch

_____ Florida Virtual School (FVS)

_____ Jesuit Virtual Learning Academy

_____ K12, Inc.

For Preparation Only

_____ Middlebury Interactive Languages

_____ National University System

_____ OdysseyWare, Inc.

_____ Pamoja Education Unlimited

_____ Pearson Education (GradPoint)

_____ Scout from University of California

_____ Thesys International

_____ VHS, Inc. Virtual High School Global Consortium

Exact Course Title: _____

Is this course modeled after an identical course approved for the current year at another school in the same comprehensive school district?

_____ Yes _____ No

If "Yes," which school? _____

Exact Course Title: _____

Is this course being reinstated after removal within 3 years?

_____ Yes _____ No

If "Yes," what year was the course removed from the list? _____

Exact Course Title: _____

Is this course modeled after a UC-approved course from another school outside your district?

_____ Yes _____ No

NOTE: If "Yes," you will be required to submit a complete course description. UC will review the previous submission, if available, to assist in our review process.

If "Yes," which school and ATP code? _____

Exact Course Title: _____

- **Course Description**

Course Title: **Communication Technology** _____

NOTE: Courses that are "previously approved" must use the same exact course title as the previously approved course.

Transcript Title(s)/Abbreviation(s): **Comm Tech A & Comm Tech B and Com/Tec Acadm A & Com/Tec Aca B**

Course Code(s): **BU7060 & BU7061 and BU4003 & BU4004**_____

For Preparation Only

Seeking "Honors" Distinction

NOTE: To receive "honors" distinction, the course submission must satisfy certain requirements. For information about these requirements, please visit the a-g Guide: http://www.ucop.edu/agguide/a-g-requirements/honors/index.html. For "previously approved" courses (including AP and IB), the honors information will be pre-populated as applicable.

X No

_____ Yes, AP

_____ Yes, IB (Higher Level)

_____ Yes, IB (Standard Level)

_____ Yes, Other Honors

NOTE: Defined as a course specifically designed by the school with distinctive features which sets it apart from regular high school courses in the same discipline areas. Course should be seen as comparable in terms of workload and emphasis to AP, IB, or introductory college courses in the subject. Honors courses must be designed for the 11th and 12th grade level and require a comprehensive, year-long, written final exam. In addition to AP and IB higher level courses, high schools may certify as honors level courses *not more than one unit in each of the following subject areas only*: history, English, advanced mathematics, each laboratory science, each language other than English, and each of the four VPA disciplines. If there are no AP or IB higher level courses in a given subject area, the high school may certify up to, but not more than, two units at the honors level in that area.

Subject Area and Category

_____ "a" – History / Social Science

- _____ U.S. History
- _____ American Government / Civics
- _____ World History / Geography / Cultures

_____ "b" – English

- _____ English
- _____ English-ESL/ELD

_____ "c" – Mathematics

- _____ Algebra 1; Yr 1 of 2
- _____ Algebra 1; Yr 2 of 2
- _____ Algebra 1
- _____ Integrated Math 1
- _____ Geometry; Yr 1 of 2
- _____ Geometry; Yr 2 of 2
- _____ Geometry
- _____ Integrated Math 2
- _____ Algebra 2; Yr 1 of 2
- _____ Algebra 2; Yr 2 of 2
- _____ Algebra 2
- _____ Integrated Math 3
- _____ Algebra 2/Trigonometry
- _____ Advanced Mathematics
- _____ Statistics

_____ "d" – Laboratory Science

- _____ Biological Science

For Preparation Only

_____ Chemistry

_____ Physics

_____ Integrated Science

NOTE: Students electing to enroll in an integrated-science program (ISP) are strongly advised to complete the entire three-year sequence. In most cases, the first year of an integrated-science sequence fulfills only the "g" elective requirement; the second and third years of the sequence then fulfill the two-year "d" laboratory science requirement. Accordingly, if only ISP I is successfully completed, then two courses from the categories of Biology, Chemistry, or Physics in the “d” subject area must be completed. If ISP I and only one of ISP II or ISP III are completed, then one additional course from the categories of Biology, Chemistry, or Physics from the “d” subject area must be taken to fulfill the "d" requirement.

_____ Interdisciplinary Science

NOTE: This category demonstrates that the course is cross-disciplinary and is often used for advanced science courses such as AP Environmental Science or Biochemistry.

_____ “e” – Language Other than English

_____ LOTE Year 1

_____ LOTE Year 2

_____ LOTE Year 3

_____ LOTE Year 4+

Language:

_____ ASL

_____ Chinese

_____ French

_____ German

_____ Hebrew

_____ Italian

_____ Japanese

_____ Latin

_____ Other

_____ Russian

_____ Spanish

_____ “f” – Visual & Performing Arts

_____ Dance (Intro)

_____ Dance (Advanced)

_____ Music (Intro)

_____ Music (Advanced)

_____ Theater Arts (Intro)

_____ Theater Arts (Advanced)

_____ Visual Arts (Intro)

_____ Visual Arts (Advanced)

__X__ “g” – Elective

_____ History / Social Science

_____ VPA

__X__ Interdisciplinary

_____ Other

Grade Level: _____ 9 _____ 10 __X__ 11 __X__ 12

NOTE: Grade level pertains to which grades the course has been designed. 9th grade cannot be selected for Advanced VPA. 9th and 10th grades cannot be selected for honors courses.

Unit Value: _____ 0.5 (half year or semester equiv.) __X__ 1.0 (one year, 2 semesters or 3 trimesters equiv.)

- **Course Attributes**

Is this course, or any separate section of this course, taught in an online learning environment?

_____ Yes __X__ No

If "Yes," has this course been certified by the California Learning Resource Network (CLRN)?

_____ Yes _____ No

If "No," has your institution conducted a self-assessment of the online course against the iNACOL Standards for Quality Online Courses?

_____ Yes _____ No

If "Yes," does the course fulfill all 15 UC-identified power standards from the iNACOL Standards for Quality Online Courses?

_____ Yes _____ No

If "Yes," how many of the remaining 37 standards from the iNACOL Standards for Quality Online Courses does the course satisfy? _____

If "Yes," please attach a copy of your completed Online Course Self-Assessment Form.

Is this course classified as a Career Technical Education course?

__X__ Yes _____ No

If "Yes," please select the name of the Industry Sector and Career Pathway:

_____ Agriculture and Natural Resources

_____ Agricultural Business

_____ Agricultural Mechanics

_____ Agriscience

For Preparation Only

_____ Animal Science
_____ Forestry and Natural Resources

- **Catalog Description**

Brief Course Description

NOTE: Briefly (in a short paragraph) describe the course, focusing on content, rather than instructional strategies, assessments, or rationale. If school has a catalog, enter the description that is in the catalog.

This class is a Santa Barbara County Regional Occupational Program course for students to learn how to enhance their use of essential computer and communication skills on both a personal and professional level with the use of technology tools focusing on Microsoft Office 2013 applications. This Advanced Business course is for junior and senior level students, and is designed to prepare students for employment, provide them with the necessary skills to complete their college studies, and provide them with essential communication skills to effectively use technology in their daily lives, while improving literacy skills. The course integrates the foundational principals of business communication with the Organizational, analytical, and technical concepts required of business communications. This course offers an opportunity to study the elements of effective communication and learn office technology skills with a concentration on learning the advanced features of the Microsoft Word and PowerPoint applications to produce documents and presentations with a workplace related focus. Students participate in job readiness training and practice these essential skills throughout the course. Students will be assigned a variety of independent project-based coursework to demonstrate their skills. This course is an alternate choice to meet the district graduation requirement for the fourth year of English for seniors (it is non-college prep as it has not been approved for UC/CSU entrance requirements). Students completing the year long course will receive a ROP Certificate of Competency.

Pre-Requisites: **Computer Applications 1** Required _____ Recommended __**X**__

NOTE: Laboratory science and Advanced VPA courses require a pre-requisite. Submissions will not be allowed if this is not included. Some courses, particularly in the mathematics subject areas, require appropriate pre-requisites. For further explanation, refer either to the "Guide to a-g Requirements" document or the "a-g" Guide web site at www.ucop.edu/agGuide.

Co-Requisites: _____ Required _____ Recommended _____

For Preparation Only

- **Background Information**

NOTE: Do not include information that could identify your school or district.

Context for Course (optional) **REQUIRED FOR CTE COURSES**

NOTE: In order to understand the context for a new course, sometimes it is helpful for UC to understand the broader educational program and/or reform efforts of the school. How does this course fit into broader departmental and/or pathway structure? How does it fit into the overall school restructuring plans? Is the course intended to be a core course or supplemental? What are the student/school/community needs met by this course?

Although not a new course, we are seeking "g" elective status. We have always offered rigorous classes and in order to attract college bound students we want to have UC approved offerings available. This course is an advanced course that several beginning courses lead to. Students who have a strong career interest in various business focus areas and technology will find this course beneficial in preparing them for post-secondary education and entering the workforce. Our ROP Business Advisory Committee supports and encourages our efforts while giving us feedback on essential skills young people need as they move beyond high school and enter the career marketplace. We are striving to have more students achieve college ready status, and we are moving from a block schedule to a traditional seven period day and this restructuring process will allow students to pursue and follow pathways in CTE as part of their elective classes. This will also allow students to take a class that could lead to a college major and career. It articulates with Allan Hancock College.

History of Course Development (optional) **REQUIRED FOR CTE COURSES**

NOTE: Likewise, it is sometimes helpful for UC to know the origins of a course and who was involved in its development. Did you consult with UC Admissions personnel or UC professors? If so, what was the nature of such consultation and what was the result? Was this course modeled after another course at another school? If so, is that course UC approved? How does the course being submitted differ from the course after which it was modeled? Has this course received any special recognitions, designations or awards? Has it been articulated to local community colleges or universities?

The Santa Barbara County Regional Occupation Program has offered the Communication Technology course for many years at multiple schools. This particular course in our district was developed by ROP Business teachers through collaboration with district English teachers. Based on alignment of course curriculum with CA ELA standards in addition to CTE standards, the high school district approved this course for meeting their 4th year of English graduation requirement (as a non-college prep class because it has not been approved for UC/CSU English entrance requirement).

The course is articulated with Allan Hancock College, our local community college, and regular advisory meetings with local businesses and educational institutions ensure the curriculum is keeping up with industry trends. The Advisory Committee acknowledges and supports the course in order to prepare students with necessary work readiness and communication skills. This course is one of the higher level electives offered to students and it exposes them to material that can lead to advanced study in college and become a career focus.

For Preparat

- **Textbooks**

NOTE: Include list of Primary and Secondary Texts. Make sure to note the books that will be read entirely and those that will be as excerpts. Textbook information is not necessary if your course is a Visual and Performing Arts, Advanced Placement or an International Baccalaureate course. Online texts or non-standard text materials should include a link to the online text.

Co-requisites:	None
Integrated (Academics / CTE)?	Yes
Grade levels:	11th, 12th

ourse Description

urse overview:

The purpose of this course is to teach web page design and beginning programming with the coding languages HTML, JavaScript, and CSS. Students will be able to design and build a website from scratch. Students will develop a basic understanding of design principles and the user/software/hardware interface as well as understanding the logical process of computer problem solving. Students will also learn skills for research, development, and the publishing processes. Understanding, critical thinking, and problem solving skills related to programming will be developed as students get an introduction to the fields of web development and computer science.

urse content:

I. Orientation

A. Course objectives, expectations, procedures	A. Review course objectives, expectations, procedures.
B. Introduction to website design	B. Understands introduction to website design programming language.
C. History of web design	C. Reviewed history of web design.
D. Current trends in web design	D. Identifies current trends.
E. Employment outlook/ opportunities	E. Reviewed employment outlook/opportunities.

II. HTML/JavaScript

Students will learn basic structure of HTML and Javascript programming with the use of opening and closing tags in pairs to create their web pages. They will learn the proper placement of web document sections and techniques to create functional sites with organizational techniques that make the site easier to navigate for the user. Creating interest & ease of use with the use of color, images, tables, and surveys and frames will be learned. They will

incorporate CSS formatting techniques for the appearance and behavior of the webpage. They will add JavaScript programming and functions to create user interactivity. They will learn to troubleshoot coding errors. The topics are covered in lessons 1-9 of the primary textbook.

TOPIC	EXAMPLE
A. Basic HTML formatting tags	A. Identifies basic formatting tags and structure.
B. Save and view web page	B. Identifies file naming conventions save and view web page through a browser.
C. Use lists, headings, lines	C. Uses HTML to create and format lists, lines, headings
D. Create links	D. Uses HTML to create onsite and offsite links.
E. Format web page text	E. Uses style attribute to format the appearance of body & text

F. Insert graphics	F. Demonstrates how to insert and manipulate graphics.
G. Tables	G. Use HTML to create a table with various types of data
H. Forms	H. Use HTML to create a form with various inputs
I. Frames	I. Use frames to divide the window and use links across frames
J. Apply CSS and Create an external CSS file	J. Demonstrates how to use CSS to control the formatting of the page(s).
K. Learn Javascript	K. Uses correct JS syntax: strings, objects, methods, parameters, conditional statements
L. Create an alert and a rollover	L. Demonstrates how to use JS to create an alert message and functions for a rollover link & image.
M. Create a JavaScript banner and slideshow	M. Demonstrates how to use JS functions to create banners (cycling & random) and slideshow.
N. Create a form	N. Demonstrates how to use JavaScript to create a functional, validated, clearing form with buttons.
O. Functions across frames	O. Be able to create functions that work across frames and understand the parent-child relationship

III. Web Design Fundamentals

Students will learn the design process beginning with an idea and going through the planning stages. They will clarify the audience and purpose of their site, and come up with a design concept and storyboard their idea before programming.

TOPIC	EXAMPLE
A. Design Evaluate and Review	A. Identifies design standards for review.
B. Brainstorming	B. Shares and presents ideas for design.
C. Information Design – Site message, audience, design, scope	C. Identifies site message, audience, and scope and applies to plan
D. Interaction Design – Storyboard, site map	D. Creates a storyboard, layout and site map. Wireframes site with responsive design.
E. Presentation Design – site graphics, banner, navigation	E. Designs site graphics, including banner and navigation.
F. Design elements – proportion, balance, unity, space	F. Understands the role of proportion, balance, unity and space in design.
G. Usability – Human interaction design	G. Understands usability and accessibility concepts.

IV. Introduction to Design Applications

Students will learn to use the Dreamweaver software application to create sites that have all the elements they learned to program in HTML and JavaScript. In addition, they will learn to evaluate the website structure and present and publish a website. This is covered in units A – J of the primary textbook.

TOPIC	EXAMPLE
A. Web publishing application using Dreamweaver	A. Uses web publishing application software.
B. Develop and create a functioning website	B. Uses Dreamweaver to format page, text, images, links, menus, tables, forms and uses CSS and media interactivity features.
C. Multimedia applications	C. Uses multimedia application software.
D. Updating and posting pages	D. Updates and uploads pages.
E. Cloud Computing	E. Understands cloud computing.
F. Security	F. Understands network security.

V. Computer Graphic Design Concepts (infused throughout the course)

Students learn the principles of art and design including line, space, shape, form, color, and positive/negative space and white space and how it affects the usability and appeal of the web site. Students will also understand the various types and formats of computer graphics available. They will learn about web safe fonts.

TOPIC	EXAMPLE
A. Design considerations	A. Understands design considerations.
B. Output considerations	B. Understands output considerations.
C. Color theory	C. Demonstrates use of color theory.
D. Typography	D. Understands typography and web safe fonts

VI. Project Management (infused throughout the course)

Follow through a long term project from concept to fruition. Manage project needs and deadlines.

TOPIC	EXAMPLE
A. Writing the Project Proposal	A. Writes a project proposal.

B. Writing the Design Document	B. Writes a design document and storyboard.
C. Cost analysis	C. Research project costs of developing a website
D. Creating a Project Schedule	D. Creates a project timeline with deadlines.
E. Writing a Status Report	E. Writes a status report.
F. Quality Assurance	F. Performs quality assurance testing.
G. Client Communication and Requirements	G. Communicates with the client and understands client requirements for site.

VII. Marketing your Site

Understand the principles of using the internet for sales and promotion. Analyze if goals are met with the website. Review pricing and distribution goals. Use consumer research and site review to evaluate effectiveness of site both locally and globally.

TOPIC	EXAMPLE
A. Search engine optimization	A. Optimizes a website using search engines optimization techniques.
B. Marketing	B. Creates a marketing plan.
C. eCommerce	C. Understands eCommerce.
D. Business Development	D. Understands business development.
E. Social Networking	E. Understands use of social networking to publicize site (Facebook, Twitter, blogs).
F. Marketing	F. Understands marketing with mobile apps.
G. Analytics	G. Uses analytics to analyze effectiveness
D. Equipment and tools	D. Selects equipment and tools, applies technology to specific tasks and maintains and troubleshoots equipment.
E. Safety procedures and practices.	E. Follows safety procedures and practices.
F. Ethics and confidentiality.	F. Demonstrates (shows) understanding of ethics and confidentiality.

VIII. Career/Occupational Knowledge and Workplace Skills (infused throughout the course)

Students will demonstrate career skills that will enable them to be successful in the workplace and in post-high school educational settings. Teamwork and collaboration are encouraged and practiced. Critical thinking and problem solving are developed through independent project based learning.

TOPIC	EXAMPLE
A. Technology and information	A. Accessing and utilizing technology and information.
B. Safety standards	B. Practicing occupational safety standards.
C. Critical thinking and solving problems	C. Thinking critically and solving problems effectively.
D. Basic skills in reading, writing, mathematics, listening and speaking	D. Uses basic skills in reading, writing, mathematics, listening and speaking as they relate to occupation specific skills.
E. Real world problems and situations	E. Applying knowledge to real world problems and situations.
F. Independent & collaborative work	F. Works independently and collaboratively.
G. Communication	G. Communicates effectively and appropriately.
H. Reliability	H. Performs reliably and responsibly.
I. Diversity	I. Working with diverse populations effectively and respectfully.
J. Punctuality and Dependability	J. Is punctual and has good attendance
K. Directions	K. Follows directions.
L. Supervision	L. Works well with minimum supervision.
M. Cooperation	M. Is cooperative and works with peers
N. Initiative	N. Takes initiative by working beyond minimum requirements.
O. Grooming	O. Meets job standards of neatness and grooming.
P. Constructive Criticism	P. Responds appropriately to constructive criticism.

ourse Materials

Other

Title	Authors	Date	Course material type	Websit
Written Assignments	[empty]	[empty]	Review of key concepts and vocabulary that is learned from reading and research. short answer questions allow the student to demonstrate their mastery and understanding of material	[empty]

Title	Authors	Date	Course material type	Websit
Direct Whole Group Instruction	[empty]	[empty]	Demonstration and visual presentation.	[empty]
Independent Practice	[empty]	[empty]	Students practice with step-by-step instructions.	[empty]
One-on-One Instruction	[empty]	[empty]	Teacher assists and gives feedback to students individually.	[empty]
Cooperative Learning Group	[empty]	[empty]	Collaboration and sharing of information is encouraged so students are learning from and working with each other. Group projects encourage teamwork and cooperation.	[empty]
Independent Internet Reaserch	[empty]	[empty]	Structured research skills are developed throughout the course, both individually and in small groups and provide platforms of analysis and synthesis of information.	[empty]
Double shooting Errors and Revisions	[empty]	[empty]	Learning to recognize coding errors and know where and how to find them and how to fix them	[empty]
Projects	[empty]	[empty]	Students demonstrate use of all skills and concepts in original works. Students do a written self evaluation after a project to analyze what worked, what they would change about the process, and what they learned.	[empty]
Oral Presentation and Peer evaluation	[empty]	[empty]	Students share and present original works and evaluate sites for effectiveness.	[empty]

Santa Maria Joint Union High School District – Career Technical Education

WRITING GAMES FOR SOCIAL CHANGE (UCCI)_SSD

DATE:

INDUSTRY SECTOR: Information and Communication Technologies Sector

PATHWAY: Software and Systems Development - Systems Programming

CALPADS TITLE: Intermediate Systems Programming (Concentrator)

CALPADS CODE: 8131

HOURS:

Total	Classroom	Laboratory/CC/CVE
195	90	105

JOB TITLE	O*NET CODE	JOB TITLE	O*NET CODE
Video Game Designers	15-1199.11	Computer Occupations, All Other	15-1199.00
Multimedia Artists and Animators	27-1014.00	Software Developers, Applications	15-1132.00
Software Developers, Systems Software	15-1133.00	Computer Programmers	15-1131.00

COURSE DESCRIPTION:

Writing Games for Social Change is a college preparatory grade 9 English course integrated with the Games and Simulation pathway standards of the Information and Communication Technology sector. Students engage in dose reading of complex texts and technical documents to analyze and synthesize the design and development of games and simulations. This course provides a rigorous pathway for students to learn relevant technical knowledge and skills that prepare them for further education and career opportunities in the field of Information and Communication Technologies.

This course allows students to see where the skills of English intersect with the elements of game design. Students conduct research, closely read and analyze complex texts, evaluate game designers' audience and purpose, and create a digital portfolio where they synthesize their knowledge to design a game that addresses a social issue. In doing so, Writing Games for Social Change increases student engagement with the academic rigor of English, while also allowing them to learn relevant technical knowledge and skills to prepare for further education and careers in game and simulation design giving them a more comprehensive understanding of a career field that interests them, specifically game design.

A-G APPROVAL: B

ARTICULATION: None

DUAL ENROLLMENT: None

PREREQUISITES: None

METHODS OF INSTRUCTION

- Direct instruction
- Group and individual applied projects
- Multimedia
- Demonstration
- Field trips
- Guest speakers

STUDENT EVALUATION:

- Student projects
- Written work
- Exams
- Observation record of student performance
- Completion of assignment

INDUSTRY CERTIFICATION:

- code.org
- typing.com
- MBA Research DIgital Badge in Programming

RECOMMENDED TEXTS:

- Video Game Foundation
- A Game Designers Reader: A Rules of Play Anthology
- Animal Farm

PROGRAM OF STUDY

Grade	Fall	Spring	Year	Course Type	Course Name
9				Introductory	Survey of Business
9, 10, 11, 12				Concentrator	Writing Games for Social Change (UCCI)_SSD
9, 10, 11, 12				Capstone	Wesite Design Programming

I.	WHAT IS A GAME?	CR	Lab/ CC	Standards
	A.In this unit, students define what a game is and learn about the fundamental elements and distinguishing features within various types of games. Through reflective reading and close examination of informational texts such as The Game Designers Reader, "Ten Things Every Game Needs" and "The Rhetoric of GamePlay", students develop a deeper understanding of these elements. Drawing on knowledge gained from their readings, students write a 1-2 page informational essay that includes appropriate citation formats, in which they evaluate the complex interaction between games and players (in terms of player engagement, skill development and audience) across various genres of games, such as video games, board games, puzzle games, card games and sports. Students conduct research on the history of gaming. Beginning with the ancient world and culminating to the present day, students examine the role of game play in human culture and their psychological impact on individuals and groups, and write a 3-4 page research position paper on the topic. In groups of 3-5, students synthesize their informational and research essays into a 3-5 minute multimedia presentation that illustrates the trends within a selected game genre and its garners' experience, over time. Students then create a digital portfolio (or wiki) that will serve as the location to house selected assignments created throughout the course.	10	20	**Academic:** LS: 11-12.1, 11-12.2, 11-12.3, 11-12.4, 11-12.5 RSIT: 11-12.2, 11-12.3, 11-12.5, 11-12.7 WS: 11-12.2, 11-12.4, 11-12.6, 11-12.7, 11-12.8 A-REI: 1 **CTE Anchor:** Communications: 2.1, 2.4, 2.5, 2.6, 2.7 Technology: 4.1, 4.2 Problem Solving and Critical Thinking: 5.5, 5.6, 5.8, 5.12 Health and Safety: 6.6 Responsibility and Flexibility: 7.4, 7.7 Leadership and Teamwork: 9.3, 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.1, 10.2, 10.3, 10.6, 10.9, 10.11 Demonstration and Application: 11.1, 11.2, 11.5 **CTE Pathway:** C1.3, C1.5, C3.1, C4.1, C4.3, C4.5, C6.1, C8.3, C9.3
II.	**THE GAMING EXPERIENCE**	**CR**	**Lab/ CC**	**Standards**
	A.Building upon the knowledge on the history of games acquired in unit 1, students then examine how modern information and communication technologies have redefined the culture of play. Students read the book Ender's Game as well as several industry-related selections from the Game Designers Reader, What Games Have to Teach Us About Learning and Literacy and view on-line resources such as TED Talks about the gaming experience to understand and analyze the ways in which gameplay has evolved. To recognize this influence, students write a 1-2 page explanatory essay which compares and contrasts traditional games with their digital equivalents. Students create and conduct a survey to examine how video games influence and impact the lives	5	10	**Academic:** LS: 11-12.1, 11-12.2, 11-12.4 RSIT: 11-12.2, 11-12.5, 11-12.7 WS: 11-12.6, 11-12.7 **CTE Anchor:** Communications: 2.1, 2.2, 2.3, 2.5, 2.7 Career Planning and Management: 3.1

	of their peers, and then present their findings in a 2-3 minute oral presentation. Next, during their reading of Ender's Game, students create storyboards to track theme development in the novel. After gathering textual evidence, students write a 2-3 page literary analysis essay on the purposeful design of the game and resulting psychological effects on the characters in the novel.			3.1 Technology: 4.2, 4.3 Problem Solving and Critical Thinking: 5.5, 5.6 Health and Safety: 6.6 Responsibility and Flexibility: 7.2, 7.3, 7.5 Ethics and Legal Responsibilities: 8.3, 8.4, 8.5 Leadership and Teamwork: 9.3, 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.2, 10.3, 10.6, 10.12 Demonstration and Application: 11.5 **CTE Pathway:** C1.6, C1.1, C1.4, C2.1, C3.1, C3.3, C4.2, C4.3, C4.5, C4.6, C4.1, C5.1, C5.2, C5.4, C6.4, C6.7, C7.5, C8.5, C8.2, C9.2, C9.3
III.	**GAMES AS TEXTS: DESIGNER, AUDIENCE, AND PURPOSE.**	**CR**	**Lab/ CC**	**Standards**
	A.Building upon their understanding of the intention, experience and impact of gaming, students now read about the various aspects of game design (with an emphasis on structure, process, audience, and purpose) as they develop a game, write supporting documents and build a physical prototype. Using professional models of game scripts, excerpts from the Game Design Workshop: A Playcentric Approach to Creating Innovative Games, and observations of actual gameplay, students learn to read games as texts with specific and/or multiple purposes, focusing on the design elements that help a game to achieve its purpose. To direct this focus students write three 1-page rhetorical analyses of their games' purpose and how it drives the content and style of the game. Students also learn the game design and development life cycle. Applying the general principles of storytelling in the context of games, students create a storyboard narrating the development of a central idea in a game and how the designer's choices create specific effects and determine purpose. Students also create a 2-3 page game treatment guiding the design of a prototype. Through a revision process, students use professional templates and excerpts from Character Development and Storytelling for Games as a guide to write a 4-page (or more) game design document.	25	20	**Academic:** LS: 11-12.1, 11-12.2, 11-12.3, 11-12.6 RSIT: 11-12.2, 11-12.3, 11-12.7 WS: 11-12.2, 11-12.5, 11-12.6, 11-12.7, 11-12.8 US: 11.8.7 **CTE Anchor:** Communications: 2.1, 2.4, 2.6, 2.7 Career Planning and Management: 3.8 Technology: 4.1, 4.2, 4.5 Problem Solving and Critical Thinking: 5.5, 5.7 Health and Safety: 6.6 Responsibility and Flexibility: 7.2, 7.3, 7.4, 7.7 Ethics and Legal

				Responsibilities: 8.3, 8.4, 8.6, 8.7 Leadership and Teamwork: 9.3, 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.1, 10.2, 10.6, 10.9, 10.11, 10.13 Demonstration and Application: 11.4, 11.5 **CTE Pathway:** C1.6, C1.1, C1.4, C1.3, C2.3, C2.4, C2.5, C3.1, C3.3, C4.1, C4.6, C4.8, C4.7, C4.5, C5.1, C5.4, C5.5, C6.5, C6.6, C6.4, C7.5, C9.2, C9.3, C10.1
IV.	**SOCIETY AND GAMES**	**CR**	**Lab/ CC**	**Standards**
	A.In this unit students build upon their learning about game design, broadening their focus to the impact that games and simulations have on society. Students expand their literary analysis skills by reading a novel (i.e. Animal Farm, Fahrenheit 451, or another novel that deals with a social issue) and researching a social issue in the text that a game or application could help address. Students add their research findings to their digital portfolio in the form of a 2-3 page literary analysis essay. As they analyze the social issues in their novel and imagine possible technology-based solutions, students continue to learn about the complexity of storytelling in the context of games from selections from The Game Designer's Reader. From this understanding, students reflect on their personal life story and write a 2-3 page personal narrative about a specific experience or social issue they faced or observed. Students now research that issue in a larger context and publish their findings on a discussion forum. Using this forum, students stimulate a thoughtful, well-reasoned exchange of ideas with mentors and peers. Next, students write a 2-3 page game critique in terms of its impact on society. Finally, students engage in a formal debate drawing on their individual and collaborative research throughout the unit.	20	20	**Academic:** LS: 11-12.1, 11-12.3, 11-12.4 RSIT: 11-12.2, 11-12.3, 11-12.7 WS: 11-12.3, 11-12.4, 11-12.6, 11-12.8 WH: 10.11, 10.3 **CTE Anchor:** Communications: 2.1, 2.3, 2.4, 2.5 Career Planning and Management: 3.8 Technology: 4.1, 4.2, 4.3 Problem Solving and Critical Thinking: 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7 Health and Safety: 6.6 Responsibility and Flexibility: 7.3, 7.5, 7.7 Ethics and Legal Responsibilities: 8.2, 8.4, 8.6 Leadership and Teamwork: 9.3, 9.7 Technical Knowledge and Skills: 10.1, 10.2, 10.3, 10.4, 10.9,

				10.14 Demonstration and Application: 11.1, 11.2, 11.5 **CTE Pathway:** C1.5, C1.3, C1.4, C2.1, C3.1, C3.2, C3.3, C4.5, C4.11, C4.8, C4.6, C5.1, C5.6, C5.2, C5.3, C5.4, C6.1, C6.6, C6.4, C7.5, C8.3, C9.1, C9.3
V.	**GAME TIME**	**CR**	**Lab/ CC**	**Standards**
	A.Using all their expository reading and writing skills from previous units, students use their knowledge of game design to create a game, simulation or mobile app development group that addresses a societal issue of their choosing. Students start by writing a 2-3 page research paper describing the business model used in the gaming industry. In their project teams students then develop a 2-3 minute multimedia pitch for their idea to the class. After receiving informal and formal feedback on their pitch, students create a digital storyboard for their game design. Next students synthesize their understanding of the games and simulation pathway by completing a capstone project proposal. This includes a 1-page cover letter to panel members, a formal 3-4 page written proposal, a 1-2 minute multimedia artifact (commercial, animation or video) and a 3-5 minute presentation for an audience consisting of peers and industry professionals.	30	35	**Academic:** LS: 11-12.1, 11-12.2, 11-12.4, 11-12.6 RSIT: 11-12.1, 11-12.3, 11-12.7 WS: 11-12.3, 11-12.4, 11-12.5, 11-12.6, 11-12.7 **CTE Anchor:** Communications: 2.1, 2.3, 2.4, 2.5, 2.7 Career Planning and Management: 3.2, 3.4 Technology: 4.3 Problem Solving and Critical Thinking: 5.1, 5.2, 5.4, 5.5, 5.6, 5.7 Health and Safety: 6.6, 6.11 Responsibility and Flexibility: 7.2, 7.4, 7.5, 7.7 Ethics and Legal Responsibilities: 8.4, 8.6 Leadership and Teamwork: 9.3, 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.1, 10.2, 10.4, 10.6, 10.9, 10.11 Demonstration and Application: 11.2, 11.4, 11.5 **CTE Pathway:** C1.4, C1.5, C1.1, C1.2, C2.1, C2.2, C2.3, C2.4, C3.1, C4.9, C4.11, C4.5,

(Must be accompanied by a Course Adoption Form & Textbook Adoption Form)

Full Title of Proposed Course: Writing Games for Social Change (UCCI)

Abbreviated Title for AERIES: _____

(15 characters maximum including spaces & punctuation)

Subject Area: Business English **Category:** English ☒ **Intro** ☐ **Advanced**

Is this course classified as a CTE Course? If "yes" please select the following:

Department: Business X Intro _____ Concentrator _____ Completer

Industry Sector: Information Technology Career Pathway: Programming and Systems Development

Grade Level(s): ☒9 ☐10 ☐11 ☐12 **Unit Value:** ☐.5 (semester/term) ☒1.0 (one year equivalent)

Brief Course Description

Writing Games for Social Change is a college preparatory **grade 9 English course integrated with the Games and Simulation pathway standards of the Information and Communication Technology sector**. Students engage in close reading of complex texts and technical documents to analyze and synthesize the design and development of games and simulations. This course provides a rigorous pathway for students to learn relevant technical knowledge and skills that prepare them for further education and career opportunities in the field of Information and Communication Technologies.

Pre-Requisites:_____ Required _____ Recommended X

Co-Requisites:_____ Required _____ Recommended X

COURSE CONTENT

Course Goals and/or Major Student Outcomes Course Objectives

Writing Games for Social Change is a college preparatory **grade 9 English course integrated with the Games and Simulation pathway standards of the Information and Communication Technology sector**. Students engage in close reading of complex texts and technical documents to analyze and synthesize the design and development of games and simulations. This course provides a rigorous pathway for students to learn relevant technical knowledge and skills that prepare them for further education and career opportunities in the field of Information and Communication Technologies.

Purpose

This course allows students to see where the skills of English intersect with the elements of game design. Students conduct research, closely read and analyze complex texts, evaluate game designers' audience and purpose, and create a digital portfolio where they synthesize their knowledge to design a game that addresses a social issue. In doing so, Writing Games for Social Change increases student engagement with the academic rigor of English, while also allowing them to learn relevant technical knowledge and skills to prepare for further education and careers in game and simulation design giving them a more comprehensive understanding of a career field that interests them, specifically game design.

Course Outline

Unit 1: What is a Game?

In this unit, students define what a game is and learn about the fundamental elements and distinguishing features within various types of games. Through reflective reading and close examination of informational texts such as The Game Designers Reader, "Ten Things Every Game Needs" and "The Rhetoric of GamePlay", students develop a deeper understanding of these elements. Drawing on knowledge gained from their readings, students write a 1-2 page informational essay that includes appropriate citation formats, in which they evaluate the complex interaction between games and players (in terms of player engagement, skill development and audience) across various genres of games, such as video games, board games, puzzle games, card games and sports. Students conduct research on the history of gaming. Beginning with the ancient world and culminating to the present day, students examine the role of game play in human culture and their psychological impact on individuals and groups, and write a 3-4 page research position paper on the topic. In groups of 3-5, students synthesize their informational and research essays into a 3-5 minute multimedia presentation that illustrates the trends within a selected game genre and its gamers' experience, over time. Students then create a digital portfolio (or wiki) that will serve as the location to house selected assignments created throughout the course.

Unit 2: The Gaming Experience

Building upon the knowledge on the history of games acquired in unit 1, students then examine how modern information and communication technologies have redefined the culture of play. Students read the book Ender's Game as well as several industry-related selections from the Game Designers Reader, What Games Have to Teach Us About Learning and Literacy and view on-line resources such as TED Talks about the gaming experience to understand and analyze the ways in which gameplay has evolved. To recognize this influence, students write a 1-2 page explanatory essay which compares and contrasts traditional games with their digital equivalents. Students create and conduct a survey to examine how video games influence and impact the lives of their peers, and then present their findings in a 2-3 minute oral presentation. Next, during their reading of Ender's Game, students create storyboards to track theme development in the novel. After gathering textual evidence, students write a 2-3 page literary analysis essay on the purposeful design of the game and resulting psychological effects on the characters in the novel.

Unit 3: Games as texts: designer, audience, and purpose.

Building upon their understanding of the intention, experience and impact of gaming, students now read about the various aspects of game design (with an emphasis on structure, process, audience, and purpose) as they develop a game, write supporting documents and build a physical prototype. Using professional models of game scripts, excerpts from the Game Design Workshop: A Playcentric Approach to Creating Innovative Games, and observations of actual gameplay, students learn to read games as texts with specific and/or multiple purposes, focusing on the design elements that help a game to achieve its purpose. To direct this focus students write three 1-page rhetorical analyses of their games' purpose and how it drives the content and style of the game. Students also learn the game design and development life cycle. Applying the general principles of storytelling in the context of games, students create a storyboard narrating the development of a central idea in a game and how the designer's choices create specific effects and determine purpose. Students also create a 2-3 page game treatment guiding the design of a prototype. Through a revision process, students use professional templates and excerpts from Character Development and Storytelling for Games as a guide to write a 4-page (or more) game design document.

Unit 4: Society and Games

In this unit students build upon their learning about game design, broadening their focus to the impact that games and simulations have on society. Students expand their literary analysis skills by reading a novel (i.e. Animal Farm, Fahrenheit 451, or another novel that deals with a social issue) and researching a social issue in the text that a game or application could help address. Students add their research findings to their digital portfolio in the form of a 2-3 page literary analysis essay. As they analyze the social issues in their novel and imagine possible technology-based solutions, students continue to learn about the complexity of storytelling in the context of games from selections from The Game Designer's Reader. From this understanding, students reflect on their personal life story and write a 2-3 page personal narrative about a specific experience or social issue they faced or observed. Students now research that issue in a larger context and publish their findings on a discussion forum. Using this forum, students stimulate a thoughtful, well-reasoned exchange of ideas with mentors and peers. Next, students write a 2-3 page game critique in terms of its impact on society. Finally, students engage in a formal debate drawing on their individual and collaborative research throughout the unit.

Unit 5: Game Time

Using all their expository reading and writing skills from previous units, students use their knowledge of game design to create a game, simulation or mobile app development group that addresses a societal issue of their choosing. Students start by writing a 2-3 page research paper describing the business model used in the gaming industry. In their project teams students then develop a 2-3 minute multimedia pitch for their idea to the class. After receiving informal and formal feedback on their pitch, students create a digital storyboard for their game design. Next students synthesize their understanding of the games and simulation pathway by completing a capstone project proposal. This includes a 1-page cover letter to panel members, a formal 3-4 page written proposal, a 1-2 minute multimedia artifact (commercial, animation or video) and a 3-5 minute presentation for an audience consisting of peers and industry professionals.

Instructional Methods and/or Strategies Assessment Methods and/or Tools

Key Assignments

Unit 1: What is a Game?

1. Wiki/Webpage/Digital Portfolio: To use the tools and software commonly used in game/simulation development, students create a wiki or website that serves as a digital portfolio to store key assignments that students add to and update throughout the year-long course. Suggested applications include: WordPress, wikispaces.com, edutopia.org, etc.)

2. Informational Essay: The Genres of Games: To launch the yearlong study, students respond to the question of what is a game? Students begin their study by learning about different gaming genres and systems by conducting research from The Game Designers Reader and credible on-line sources such as the Critical Gaming Project at the University of Washington, or boardgamegeek.com. Students write a 1-2 page informational essay that examines the distinguishing features of games including types of systems, engagement of players, specific skill development, or audience. This understanding of game genre and features serves as the foundation for rhetorical analysis of games as complex texts.

3. Research Essay: The Development of the Gaming Industry: To deepen their understanding of what is a game, students examine the historical development of games from simple non-eletronic forms to a technologically driven multibillion dollar industry (ex. Grand Theft Auto 5). In a 3-4 page research essay, students describe the development of gaming as an industry and its most common business models and career opportunities and stakeholders with relevant information and supporting evidence from credible sources such as "Video Game Revolution" from PBS, the Institute of Play and the Critical Gaming Project from University of Washington.

4. Multimedia Presentation: What Is A Game In small groups, students synthesize the information from their individual informational and research essays from this unit to create a 3-5 minute multimedia presentation. This presentation responds to the question, what is a game, and illustrates the evolution of the significance of gameplay, genres, and the development of the gaming industry using information

from the Topic Essays from The Game Designers Reader. This may be completed using: Keynote, PowerPoint, Google Presentation, or Prezi.

Unit 2: The Gaming Experience

1. Compare and Contrast: High Tech v. Lo Tech - Students write a 2-3 page compare/contrast essay that analyzes a game that exists in both electronic and nonelectronic form such as scrabble or monopoly. By examining these two forms closely, students analyze technology's influence on gameplay and how it affects the individuals and groups that play such games. Students focus on relevant details on the user's experience to illustrate the similarities and differences between the high tech/lo tech forms.

2. Survey: Your Gaming Experience - Students conduct research by creating a survey that elicits information from game players regarding their experiences playing electronic games. The student-generated survey asks participants about their purpose for playing, the extent to which they substitute game play for other activities, and how these games provide experiences that traditional, non-electronic games cannot provide. The results of this survey will be used as part of their supporting evidence for claims they will make in the subsequent presentation. Students craft questions that are appropriate to their purpose and audience and publish thier survey using on-line tools such as surveymonkey.com and/or Google forms.

3. Multimedia Presentation: Why Play?- In addition to the survey results, students conduct research on game theory from the Game Designers Reader and other sources that further elucidates why people play games and what we can learn about the impact of gaming on their lives. Students prepare a 2-3 minute oral presentation using evidence from their research to answer the question, "why do people play games, and what do we know about their impact?" Students present their thesis, findings, and supporting evidence clearly, concisely, and logically. This assignment provides students with a real-world context for understanding the psychological impact of games on individuals and groups which will be further addressed in the students reading of the novel Ender's Game. Students use professional-quality media, images, documents, audio, and video clips for their presentation.

4. Storyboard for a Game based on Ender's Game: From the game designer's perspective, students closely read a full length novel that lends itself to be turned into a game. Novels may be contemporary texts, such as Ender's Game, For The Win, Ready Player One, or older novels such as Clockwork Orange or The Odyssey to analyze the interaction between characters, plot, setting, and theme. Students then create a storyboard for a game that is based on the novel that includes: essential elements, plot, flow, and functions of the game/simulation within the novel. Students use on-line resources such as ComicLife, OmniGraffle, SketchUp.

5. Character Analysis: Ender's Game - To build upon the students' analysis of a novel from the perspective of a game designer, students turn their attention to an examination of the novel from a literary perspective. Students use information from the research that was conducted for the multi-media presentation to inform conclusions drawn about the the psychological impact that the game has on the characters. In this 2-4 page essay, students cite strong textual evidence from their research and

the novel to determine how the psychological impact of the game changes the character throughout the course of the story. This prepares students for Unit Three's focus on the role of games and simulations as texts with specific purposes that influence their designs.

Unit 3: Games as texts: designer, audience, and purpose.

1. Game Analysis: 3 Games & 3 Genres By regarding games as complex texts, students choose three different games (such as WOW, Farmville, Flappy Bird, Candy Crush, Words with Friends) and write three 1 page analysis of each game's rhetorical context. Using their notes about the game's essential elements, plot, flow, and functions from texts such How to Do Things With Video Games, students assess how point of view and purpose shape the content and style of the game and how the creators of the game utilize the features of the genre to impact the end user experience. At least one of the games that students choose must follow a narrative design, describe the complex interaction between games and players, and the role it plays in the game.

2. Storyboard of an Existing Game: Building on their rhetorical understanding of games, students choose one of the games from the Game Analysis assignment. Students create a storyboard or flowchart describing the elements of plot, flow, and basic game mechanics. Students demonstrate an understanding of how game narratives follow a non-linear progression, how a particular story structure impacts gameplay, how the players interact with the game world, and how the players interact with one another.

3. Game Treatment: Utilizing their understanding of game design, students begin the process of designing their own game. In a 2-3 page game treatment, students create a flowchart for their proposed game, including descriptions of core gameplay, controls, rules, modes of play and other features specific to their game. Students also summarize the character design and story background in a 2-3 paragraph sub-section of the document.

4. Prototype: Students create a working prototype of their game or simulation, and playtest the functionality of the game's mechanics using a diagram map to visualize each process or procedure of the game. As if they were pitching their game to a group of potential investors, students prepare for and deliver a 3 minute oral multi-media presentation of their game treatment and a physical presentation of their game prototype that includes sound recordings and visual texts that serve as inspiration for the game's look and feel (Keynote, PowerPoint, Prezi, Google Presentation, Prezi). During the presentation, students justify their choices based on their purpose and impact on the user experience.

5. Game Design Document: Students review professional models of game design specification documents as mentor text to write a 3-4 page game design specification document that reflects the feedback that they received on their prototype. In this culminating assignment, students clearly and succinctly explain their game's intended purpose, audience and describe the user's game experience. Students narrate the story of the game and use valid reasoning and sufficient evidence to defend their interface and delivery choices, rules of play, navigation functionality, scoring, media choices, start and end of play, and special features.

Unit 4: Society and Games

1. Literary Analysis Essay : Students write a 2-3 page response to literature essay analyzing and tracing the development of a social issue in a chosen text such as: Animal Farm, Brave New World, or Fahrenheit 451. Focus is on how the stylistic choices the author makes impacts the text's purpose. Students evaluate the general principles of storytelling in a text and understand that the modern world is an international community and requires an expanded global view. Students also use technology, including the Internet, to produce and publish writing.

2. Blog/Podcast Personal Narrative: Students write a 2-3 page personal narrative about a specific experience of an injustice or social issue they faced/observed and how this story can be translated into a game. Students should consider: What happened? How did you react? How can your story be written as a game or application that addresses this type of injustice? Students provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative. Students understand the general principles of storytelling, learn how social issues influence and shape them as individuals and how those elements can shape a game. Additionally students are challenged to view the human experience, including cultural values and beliefs, from alternative perspectives. Students post the story as a comic, blog, or podcast and comment on other narratives.

3. Online Research Site/Forum: Connecting the previous learning of social issues, technology, purpose/intent of gaming, and societal impacts from units 1-3, students use knowledge gained from activities and assignments to inform their choice of a social issue of personal significance to research that has (or could possibly be) addressed via games or applications. Students gather and analyze information about their issue responding thoughtfully to diverse perspectives, summarize points of agreement and disagreement, and, when warranted, qualify or justify their own views and understanding to make new connections in light of the evidence and reasoning. Students then publish their findings for a collective audience to stimulate a thoughtful, well-reasoned exchange of ideas and explore issues of global significance affecting the games and simulation pathway.

4. Game Critique: Using classroom generated online research site(s) students write a 2-3 page analysis critiquing the impact of an existing digital game or mobile application on society (such as: WOW, Farmville, Flappy Bird, Candy Crush, Words with Friends). Students should show understanding of both the positive and negative role of their chosen game/app in human culture including the impact on individuals and groups such as social, cultural, economic, and psychological effects. The critique should be developed with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic. Students should review and respond to each other's post.

5. Formal Debate: Finally, in a formal debate students argue the larger issues of the positive and negative effects of technology and/or games on society. They should review and analyze current research, tech publications, and/or literature texts (1984, Brave New World, Jurassic, Ender's Game, "The Lottery") to critically think about the interaction of technology and games in human culture and society. Through this students research and write about controversial topics and defend their claims interpreting information and drawing conclusions, based on the best analysis, to make informed decisions. Students must come prepared, having read and researched material under study and explicitly draw on that

preparation by referring to evidence from texts and other research to stimulate a thoughtful, well-reasoned exchange of ideas. Through this students use a logical and structured approach to isolate and identify the source of problems and to resolve problems.

Unit 5:

1. Research Paper - Students write a 2 to 3 page research paper describing the business model and the core tasks of teams in the game development industry. Students examine and categorize the significant processes in the production of interactive games (such as World of Warcraft, Grand Theft Auto). Students synthesize, summarize, compare and contrast multiple sources on the subject, demonstrating understanding of the subject under investigation.

2. Multimedia Pre-Production Presentation - In game development groups (including various business roles such as Marketing, Game Designer, Project Manager, Game/App Developer, etc) students identify a social issue and make a 2-3 minute multimedia presentation about a new game or application that could address the chosen social issue. Students demonstrate an understanding of the vocabulary for discussing games and play by describing the general procedure and requirements of game and simulation design. The multimedia presentation should engage and orient the audience by addressing a social problem establishing one or multiple point(s) of view, and introducing characters to create a smooth progression of experiences or events. This may be completed using Photoshop, Illustrator, Pixeler, Skitch, Aviary, InDesign, PowerPoint, Prezi, Google Presentation, Google Drive, Quip, etc. Students make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.

3. Design/Develop a Digital Storyboard (Storyboard should include 6-10 scenes) - Utilizing their game concept, students develop and write a digital storyboard describing the essential elements, plot, flow, and functions of the game/simulation/app. Students show they understand the general principles of storytelling in game design including determining a central social purpose/theme, and its development over the course of the game. Additionally, the storyboard may include how complex characters develop, interact with other characters, and advance the plot. Students must employ multimedia components (e.g., graphic artwork, animation, images, music, sound) and visual displays in presentations to clarify information applicable to the environmental design of the game/simulation/app. Students may use: Photoshop, Illustrator, Pixeler, Skitch, Aviary, Evernote, Prezi, StoryBoard Composer from Apple, Crank, or Storyboard.

4. Proposal Report - As a final project student groups write a 3-4 page proposal in preparation for a final presentation. Students interpret information and draw conclusions, based on the best analysis, to make logical conclusions for their proposal. Proposals might include a: business plan, (SWOT: Strengths, Weaknesses, Opportunities, Threats analysis), project timeline, game design document (GDD), bidding proposal, and/or a budget. Student produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience. Students write a proposal with arguments to support claims in an analysis of substantive topics using valid reasoning, relevant and sufficient evidence. Students may use: Google Drive, Quip, or a Wiki for their proposal report.

5. Multimedia Visual - To accompany the proposal report, student groups create a 1-2 minute visual such as a video, commercial, animation, or documentary about their game/simulation/app and social issue. Students will communicate information and ideas effectively to multiple audiences while integrating music, sound, art, and animation. The video must apply high-quality techniques and/or capture professional-quality media, images, documents, audio, and video clips. Multiple images must be produced by the students to demonstrate their artistic composition skills, but it may be used along with borrowed images. All borrowed images are properly cited using appropriate conventions. Students may use Adobe Photoshop, Illustrator, Premiere, AfterEffects, Final Cut Pro, or iMovie.

6. Cover letter - (added to digital portfolio blog post, wiki, website, or digital portfolio) - In a 1 page cover letter to the multimedia proposal presentation panel students reflect on the their group experiences in this course. They identify the characteristics of successful teams, including leadership, cooperation, collaboration, and effective decision-making skills. Students establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.

7. Multimedia Proposal Presentation - Groups present their multimedia proposal as a capstone in a 3-5 minute presentation to a group of potential investors or venture capitalist. Students present information, findings, and supporting evidence clearly, concisely, and logically (using appropriate eye contact, adequate volume, and clear pronunciation). Essential skills include the ability to work well and communicate information and ideas effectively to multiple audiences using a variety of media and formats. Students may use resources such as Photoshop, Illustrator, Keynote, Google Presentation, Prezi, or PowerPoint.

Instructional Methods and/or Strategies

- Think aloud using higher level questions to activate prior knowledge and build on new information and ideas
- Independent practice, partner work, group work to meet the needs of all learners and provide opportunities for collaboration
- Context Clues to determine vocabulary and strengthen depth of knowledge
- Student Projects to promote interdependence, collaboration and communication skills
- SDAIE strategies will be used to scaffold instruction for second language learners
- Oral reading and discussion of complex ideas and rhetoric
- Mentor Text will be used to model effective writing
- Random checks for understanding to ensure all students are learning
- Socratic Seminars and class discussions
- Active Listening helps the listener to focus on hearing the speaker's intent and on achieving mutual understanding. The listener takes the time to check in with the speaker, through paraphrasing and questioning, to verify that he or she has understood what is being said. It is a skill that is important both in an academic setting and in the workplace.
- Cooperative Learning: develops interpersonal skills, individual accountability, communication, conflict resolution, and group decision-making skills. Unlike collaborative learning, which usually refers to any form of group-based, open-ended learning, cooperative learning is usually a fairly structured, teacher-

designed activity. Students are divided into small groups, from two to six members, who complete a project as a team and peer edit their programs like a professional IT team. Group members share various roles and are interdependent in achieving the learning goal. Students learn the importance of maintaining group health and harmony and respecting individual views.

- List, Group, Label is a strategy for developing categories within a larger concept. It is effective both as a way to introduce new material and as a review before a test or an essay. The teacher will provide—or ask the class to develop—a list of key words about a topic (for example, terms introduced in a statistics unit). Students then work individually, in pairs, or in small groups to sort the terms into categories and label them.
- Think, Pair, Share is a cooperative learning strategy that uses these steps: 1.Students think silently about a question the teacher has posed. Provoke their thinking with a question or a prompt or an observation and have them write the prompt down. The students should take a few moments to think about the question. 2. Students pair up during the second step and exchange thoughts. Using designated or spontaneous partners, students pair up to talk about the answer each came up with. They compare their mental or written notes and identify the answers they think are best, most convincing, or most interesting.

Unit 1

1. Wiki/Webpage/Digital Portfolio: Students build a wiki/website or digital portfolio. The product will be graded using a rubric that focuses on organization and structure and will ultimately be graded as a summative assessment.

2. Informational Essay: The informational essay assignment assesses students' ability to integrate and evaluate multiple sources by producing an essay which they thoroughly cite strong textual evidence.

3. Research Essay: Students write a 3-4 page research essay. Beginning with the ancient world and culminating to the present day, students examine and explore the role of game play in human culture and the psychological impact on individuals and groups. Use appropriate citation method. Students submit a rough draft of their essay as a formative assessment and will submit a final draft for their summative assessment.from the reading of the novel, Ender's Game, All assessments will be graded using a rubric.

4. Multi-media presentation: Students present audio/visual interpretations of the information gathered through research. Students are assessed based on the validity and impact of the information they provide and a comprehensive list of presentation skills.

Unit 2

1. Informational Essay: This assesses students' ability to integrate and evaluate multiple sources by producing an essay that cites strong and thorough textual evidence. A rubric will be used for this formative assessment.

2. Survey -Students create a survey using an online survey generator such as surveymonkey.com or googleforms that elicits information from their peers regarding their experiences with simulated games. Surveys are assessed based on the quality of questions and appropriateness relating to purpose and audience.

3. Oral Presentation-Students prepare a 2-3 minute argumentative oral presentation based upon their research survey. Students present their thesis, findings, and supporting evidence clearly, concisely, and logically. This assignment provides the students with a real-world context for understanding Ender's Game and for completing the culminating analysis essay.

4. Storyboard: Using the novel Ender's Game, students develop a storyboard that illustrates the development of a central idea or theme over the course of the story and describes the essential elements, plot, flow, and functions of the game/simulation within the novel. The goal of the storyboard is to use a different modality to introduce theme and to introduce game design concepts. This assignment will be assessed using a rubric.

5. Literary analysis essay: In a well developed 2-3 page essay, students will write about the psychological impact simulation games have on individuals and groups. Students will use evidence from the text, personal experience and observations to support their argument, with appropriate citation. A rubric will be used to assess essay.

Unit 3

1. Game Analysis: This activity assesses student's ability to identify the purpose of a particular game, and determine key components that contribute to that purpose. A scoring rubric will be used to evaluate the assignment.

2. Storyboard: The storyboard will be assessed using a rubric to determine the level of skill development with regard to theme, plot development, flow, and functions of the game/simulation.

3. Game Treatment: Students create a 2-3 page game treatment, which includes a flowchart for their proposed game. This document will describe the core gameplay, including controls, rules, modes of play and other features specific to their game. Character design and story background will also be summarized in a 2-3 paragraph sub-section of the document. The game treatment will be assessed using a rubric.

Unit 4

1. Literary Analysis Essay: Essays are assessed on the development of ideas, the accuracy and relevancy of supporting evidence, and attribution of credible sources.

2. Blog/Podcast Personal Narrative are assessed with a narrative rubric that focuses on narrative elements of description, detail, word choice and coherence.

3. Online Research Site/Forum is graded with a teacher generated rubric for participation in a group discussion and accuracy and relevancy of ideas that are in response to the ideas of others.

4. Game Critique is graded on the relevancy and development of ideas in addition to a peer response rubric.

5. Formal Debate: is graded by a speaking and listening rubric that focuses on clarity of presentation, the ability to follow the speaker's line of reasoning, responsiveness to the counterargument and persuasiveness of the argument.

Unit 5:

1. Research Paper - The research paper assesses students' ability to gather relevant information from multiple authoritative sources and to convey complex ideas through effective selection and analysis of content.
2. Multimedia Pre-Production Presentation -Students present multimedia interpretations of the information gathered through research. Students are assessed based on the validity and impact of the information they provide and their strategic use of digital media in integrating multiple sources of information.
3. Design/Develop a Digital Storyboard The storyboard will be assessed using a rubric that measures the clarity and level of development of the game/simulation's plot, characters, theme flow, and functions.
4. Proposal Report - The final proposal report will be assessed using a rubric that measures the degree to which the clarity, coherence, development, organization, and style are appropriate to task, purpose, and audience.
5. Multimedia Visual - Students present multimedia interpretations of the information gathered through research. Students are assessed based on the validity and impact of the information they provide and their strategic use of digital media in integrating multiple sources of information.
6. Multimedia Proposal Presentation - Students present multimedia interpretations of the information gathered. Students are assessed based on the validity and impact of the information they provide and a comprehensive list of presentation skills.
7. Cover letter - (added to digital portfolio blog post, wiki, website, or digital portfolio) - The final proposal report will be assessed using a rubric that measures the degree to which the clarity, coherence, development, organization, and style are appropriate to task, purpose, and audience.

Reading

Students engage in close reading of complex texts and technical documents to analyze and synthesize the design and development of games and simulations. In addition, students read and analyze fiction and nonfiction to evaluate the argument about the psychological effect of games and simulation taking into account the author's purpose.

Writing

Students write frequently and extensively in both on-demand and in process writing situations to demonstrate their understanding of both the English and CTE concepts of this course. Students utilize technology to create an online portfolio, professional presentations, business proposals, and essays. Students also write arguments in support of substantive claims, with relevant and sufficient textual evidence. Students develop claims and counterclaims with clear, precise language and organize their essays in a cohesive and logical manner. Students use mentor texts and utilize technology to strengthen their writing skills. Additionally, students write informational papers with clarity and accuracy, including up-to-date research and correct citations. Students participate in all steps of the writing process, including brainstorming, drafting, revising, and editing to ensure well-developed writing that demonstrates understanding of writing conventions, rhetorical devices, and organization.

Listening and Speaking

Students engage in collaborative discussions about relevant and technical skills to prepare for careers in games and simulation while demonstrating their ability to be both good speakers and considerate listeners. Students come to discussions, such as Socratic Seminars and online forums, prepared with notes and ideas and follow the rules for collegial discussions. They are able to evaluate information presented from a variety of diverse media formats and present their analysis to their peers in an engaging and academic manner. Also, students can identify a speaker's argument and analyze its component parts. Students are also able to present marketing proposals to their peers demonstrating their understanding of games and simulation and the game development industry.

Context for Course

This is an integrated course integrating English Language Arts content with a focus on Information and Communication Technologies (ICT) specifically. The course is designed to help students develop a thorough understanding of English Language Arts through a course rich in connections to Games and Simulation that will generate interest in English and increase student success. The applications throughout the course allow students to see the connection of Games and Simulation skills and content as they apply to a career in ICT. This course could be part of an ICT academy in a sequence of ICT courses

History of Course Development

This course was developed at the Spring 2014 University of California Curriculum Integration (UCCI) Institute focusing on subject area "b" English and the Career Technical Education (CTE) industry sector of Information and Communication Technologies. It has been challenging for educators to find and develop linkages between some CTE sectors and certain academic disciplines, including English, history/social sciences, and mathematics. To address these challenges, the University of California created the UCCI Institute to focus on subject areas that have proven to be difficult to develop integrated curriculum. Over sixty California high school English and CTE instructors, administrators, curriculum specialists, and UC staff were assembled into teams and challenged to develop innovative model courses that infuse core foundational English concepts with relevant career technical elements.

SMJUHSD

ENGLISH

Course Title

ADVANCED CREATIVE WRITING

Description of Target Group

Advanced Creative Writing is a one-semester class designed for students in grades 10-12. Students will learn to prepare manuscripts for submission to national publications in self-selected markets and contests. Students will also be required to contribute regularly to the school literary magazine. Active participation in the writing process, including making presentations and performing two public readings, is expected. Prerequisites include teacher recommendation and a grade of B or better in English I, II, III, or IV and completion of Creative Writing.

Purpose

The purpose of this course is to provide students with additional opportunities for writing imaginatively and effectively in the public domain. Personal style and writing confidence are emphasized.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Write to entertain, to persuade, and to inform.
2. Research and assess potential markets.
3. Respond to the requisites of specific market demands in the short story, poem, vignette, play, essay, and journal formats.
4. Generate strategies which foster originality.
5. Edit copy using standard conventions when appropriate.
6. Work individually and in cooperative learning groups.
7. Perform computer functions using word processing, graphics, and layout.
8. Follow manuscript format for submission of solicited and unsolicited work.
9. Prepare and follow production schedules.
10. Write query letters.

Assessment

Student achievement will be measured using a combination of portfolios, peer-editing, and teacher-generated tests.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Guest speakers, field trips, writers' workshops, editing, reading, writing, submission of manuscripts, public readings, and literary magazine production.

Course Title **SMHS**

American Literature A/B (11) (P)

Description of Target Group

This yearlong course, required to meet the district's graduation requirement, is designed for all students who have passed Introduction to Literature (9), (H), or (L2).

Purpose

This course is designed to complement the curriculum of United States History. Through a multi-text approach, students will read and write accessing themes which include individualism, the American Dream, social issues, as well as personal and human values. Critical writing and reading, listening and speaking skills will focus on using analytical and evaluative thinking. Both group and individual projects will be assigned. In addition, students will explore career and college information and opportunities to develop life-long learning skills.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING
A variety of genre from the literature of many world cultures will be read. Students will be expected to:

- read independently
- identify literary genre
- identify elements of literature
- paraphrase
- construct meaning from a text
- make connections within a text
- extend beyond a text
- include an element of risk taking in constructing meaning
- keep journal or log

Core selections include:

novel: The Catcher in the Rye - J.D. Salinger
drama: Glass Menagerie - Tennessee Williams

American Literature (P) A/B (11) (continued)

Other possible selections include:

novel: Billy Budd - Herman Melville
East of Eden - John Steinbeck
The Grapes of Wrath - John Steinbeck
The Great Gatsby - F. Scott Fitzgerald
Huckleberry Finn - Samuel Clemens

drama: Death of a Salesman - Arthur Miller
Our Town - Thornton Wilder
Inherit the Wind -

short story, poetry, essays: selections from the basic and supplementary texts

WRITING

Students will be expected to demonstrate the following skills:

Rhetoric:

- present an idea; acknowledge an audience/reader
- use logic and relevant support/details
- state and develop an argument
- demonstrate coherence and style
- attempt an element of risk
- demonstrate improvement

Conventions:

- practice sentence variety
- use proper word choice/usage and vocabulary development
- demonstrate good mechanics
- improve spelling
- demonstrate improvement

Students will demonstrate the ability to write in the following types of discourse:

- interpretive
- evaluative
- speculation about causes and effects
- comparison and contrast

RETRIEVING INFORMATION
Students will demonstrate the ability to:

- use the library and computer catalog
- use the computer lab
- cite works using the MLA documentation
- document within a text using MLA format
- take notes

GROUP/COMMUNICATION SKILLS
Students will demonstrate the ability to:

- participate effectively in class and small group discussions
- communicate information and ideas effectively to others
- respect others
- follow directions
- compromise and reach consensus
- be responsible
- show improvement in speaking and listening skills

CAREER/JOB EDUCATION SKILLS
Students will demonstrate the ability to:

- apply the results of the UNIACT or other interest inventory by
- reviewing Career Path placement
- writing a research or "I" search paper and/or
- researching specific careers and majors
- research educational opportunities beyond high school
- vocational/technical schools
- 2-year community colleges
- 4-year colleges and/or universities
- write or revise a resume or personal data sheet
- complete the application process for a technical school or college

PORTFOLIO REQUIREMENTS
Students will be expected to complete the Portfolio Requirements as outlined on Page 4 of this course outline.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and approved Supplementary Books used in the Santa Maria Joint Union High School District.

PORTFOLIO REQUIREMENTS Student Name: _____

1.) Demonstrate reading comprehension/questioning competency in the following areas:

Any three (3):

		Date	Signature
A.)	Read independently	_____	_____
B.)	Construct meaning from a text	_____	_____
C.)	Make connections within a text	_____	_____
D.)	Extend beyond a text	_____	_____
E.)	Take a risk in making connections/meaning	_____	_____
F.)	Analyze literature symbolically & thematically	_____	_____

Any one (1)

G.)	Reading log	_____	_____
H.)	Double entry journal	_____	_____

2.) Demonstrate writing skills in the following areas:

Any three (3):

A.)	Autobiographical essay	_____	_____
B.)	Reflective essay	_____	_____
C.)	Narrative essay	_____	_____
D.)	Descriptive essay	_____	_____
E.)	Expository essay	_____	_____

3.) Demonstrate the following information retrieval skills:

A.)	Works Cited/Bibliography using MLA	_____	_____
B.)	Documentation using MLA format	_____	_____
C.)	Note taking	_____	_____

4.) Demonstrate the following oral presentation skills:

A.)	Effectively present an idea/project	_____	_____
B.)	Show improvement in speaking skills	_____	_____

5.) Demonstrate the following career skills:

A.)	Identify areas of career interests	_____	_____
B.)	Match interests to specific careers	_____	_____

Course Title **SMHS**

American Literature A/B (11) (Honors)

Description of Target Group

This year long course, required to meet the district's graduation requirements, is designed for only those junior students who have passed Introduction to Literature and World Literature and whose recommendations and portfolios have been accepted by the English Department Honors Committee.

Purpose

This course is designed to provide selected students with a qualitatively different and varied curriculum, which challenges and enriches their individual potential while maintaining the requirements of the basic course outline. Designed to complement the curriculum of Advanced Placement United States History, through a multi-text approach, students will read and write accessing themes which include individualism, the American Dream, social issues, as well as personal and human values. Critical writing and reading, listening and speaking skills will focus on using analytical and evaluative thinking. Both group and individual projects will be assigned. In addition, students will explore career and college information and opportunities to develop life-long learning skills.

Students must maintain a grade of "B" or better at the end of each semester to remain in the honors program.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING
A variety of genre from literature will be read. Students will be expected to:

- identify literary genre
- identify elements of literature, literary terms
- construct meaning from a text
- make connections within a text
- extend beyond a text
- include an element of risk taking in constructing meaning
- keep journal or log
- Analyze literature on both symbolic and thematic levels

American Literature A/B (11) (H) (continued)

Core selections include:

novel: The Catcher in the Rye - J.D. Salinger
drama: Glass Menagerie - Tennessee Williams

Other possible selections include:

novel: Billy Budd - Herman Melville
The Great Gatsby - F. Scott Fitzgerald
Huckleberry Finn - Samuel Clemens
drama: Death of a Salesman - Arthur Miller
The Crucible - Arthur Miller

short story, poetry, essays: selections from the basic and supplementary texts

WRITING

Students will be expected to demonstrate the following skills:

Rhetoric:

- present an idea; acknowledge an audience/reader
- use logic and relevant support/details
- state and develop an argument
- demonstrate coherence and style
- attempt an element of risk
- demonstrate improvement

Conventions:

- practice sentence variety
- use proper word choice/usage and vocabulary development
- demonstrate good mechanics
- improve spelling
- demonstrate improvement and growth

Students will demonstrate the ability to write in the following types of discourse:

- analytic
- evaluative
- speculation about causes and effects
- comparison and contrast

RETRIEVING INFORMATION
Students will demonstrate the ability to:

- use the library and computer catalog
- use reference volumes appropriately
- take notes on note cards
- cite works using the MLA or APA documentation
- document within a text using MLA or APA format
- take notes

GROUP/COMMUNICATION SKILLS

Students will demonstrate the ability to:

- participate effectively in class and small group discussions
- communicate information and ideas effectively to others
- respect others; set an example
- both follow directions as well as be an independent learner
- compromise and reach consensus
- be honest and responsible; demonstrate integrity
- show improvement in speaking and listening skills
- demonstrate leadership and be wiling to take a risk

COLLEGE/UNIVERSITY EDUCATION SKILLS
Students will demonstrate the ability to:

- apply the results of the UNIACT or other interest inventory by
- reviewing Career Path placement
- writing a research or "I" search paper and/or
- researching specific careers and majors
- research educational opportunities beyond high school
- vocational/technical schools
- 2-year community colleges
- 4-year colleges and/or universities
- write or revise a resume or personal data sheet
- complete the application process for a technical school or college

PORTFOLIO REQUIREMENTS
Students will be expected to complete the Portfolio Requirements as outlined on Page 4 of this course outline.

Course Title **SMHS**

ENGLISH 3 (AP) A, B

Description of Target Group

This course is a two-semester course designed to meet the district's graduation requirement. English 3 (AP) is aimed at accelerated students who have successfully completed English 1A/1B (P) and 2A/2B (H) with an "A" or a "B" or who have received a teacher recommendation.

Purpose

The purpose of English 3 (AP) is to continue to provide students with those English language experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analysis of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American, English, and World Literature as they prepare for the Advanced Placement Examination in Language and Composition.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

READING
Students will achieve knowledge of and appreciation for the American tradition through an in-depth study of literature. Students will read selected short stories, novels, drama, poetry, and non-fiction in order to identify the purpose and modes of discourse, recognize the conventions of assorted genres, achieve a working knowledge of rhetorical and structural devices, and extrapolate and evaluate themes.

WRITING
Students will write extensively using several rhetorical structures in order to employ effective transitions and subordination. They will learn to organize information selectively and to communicate successfully with a wide variety of intellectually demanding audiences.

SPEAKING
Students will participate in class discussions and small groups by communicating their ideas or opinions clearly while demonstrating respect for others' opinions.

LISTENING
Students will follow oral directions and take notes from dictation or lectures.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Course Title **SMHS**

ENGLISH 4 (AP) A, B

Description of Target Group

This year-long course, required to meet the entrance requirements for four-year colleges and universities, is designed only for those senior students whose recommendations and completed applications have been accepted by the Ernest Righetti English Department Honors/ Advanced Placement Committee.

Purpose

This course is designed to provide selected students with a qualitatively different and varied curriculum which challenges and enriches their individual potential while maintaining the requirements of the basic course outline. Students will focus upon British and American literature and the writing process through an integrated approach. Moreover, this course will prepare students for the Advanced Placement Exam as well as college level courses. As they read and write, students will access numerous themes and motifs and study the epic hero, the tragic hero, the influences of government and religion upon literature, the concept of the individual in l9th Century literature, as well as to explore personal and human values in 20th Century literature. Through individual and group projects, students will further refine their communication skills in reading, writing, listening, and speaking. Additionally, students shall participate in exploration of college majors and relevant application information.

Students must earn a "B" or better at the first semester's end to remain in Advanced Placement during the second semester.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING

A variety of genre from literature will be read. Students will be expected to:

- keep a journal or log;
- identify literary genre;
- identify elements of literature (literary terms);
- construct meaning from a text;
- make connections within a text;
- extend beyond a text;
- include an element of risk-taking in constructing meaning; and
- analyze literature on both symbolic and thematic levels.

Core selections include:

epics: Beowulf
excepts from Paradise Lost - John Milton

Medieval literature: The Canterbury Tales (selections)--Geoffrey Chaucer
Sir Gawain and the Green Knight

drama: Oedipus and/or Antigone--Socrates
Macbeth and Othello and Twelfth Night or A Midsummer Night's Dream--William Shakespeare

Everyman

novels: Animal Dreams of The Bean Trees--Barbara Kingsolver
The Joy Luck Club--Amy Tan
Gulliver's Travels (Books 1 and 11)--Jonathan Swift
Jane Eyre--Charlotte Bronte
Far From the Madding Crowd--Thomas Hardy
Lord of the Flies--William Golding
1984--George Orwell
A Separate Peace--John Knowles
Anthem--Ayn Rand
I Know Why the Caged Bird Sings--Maya Angelou
Farewell to Manzanar--Jeanne Houston

poetry: "The Seafarer" and "The Wanderer"
William Shakespeare
John Donne
Andrew Marvell
Robert Herrick
George Herbert
Robert Burns
William Blake
William Wordsworth
Samuel Taylor Coleridge
John Keats
Lord Byron
Percy B. Shelley
Alfred, Lord Tennyson
Robert Browning
Elizabeth Barrett Browning
Matthew Arnold
William Butler Yeats
T.S. Eliot
Dylan Thomas

essay: "A Modest Proposal" by Jonathan Swift
"An Essay on Man" by Alexander Pope

Other possible selections include:

drama: Hamlet or The Tempest or The Taming of the Shrew-William Shakespeare
Dr. Faustus--Christopher Marlowe
Rosencrantz and Guildenstern are Dead--Tom Stoppard

novels: Grendel--John Gardner (This short novel complements Beowulf.)
The Chocolate War--Robert Cormier (" " Macbeth.)
Wide Sargasso Sea--Jean Rhys (" " Jane Eyre.)
Brave New World--Aldous Huxley (" " 1984.)
Cry, the Beloved Country--Alex Paton
Black Boy--Richard Wright
Cold Sassy Tree--Olive Ann Burns

short stories, poems, essays: Selections from basic and supplementary texts are to be done at the teacher's discretion.

WRITING
Students will be expected to demonstrate the following skills:

Rhetoric

- present an idea: acknowledge an audience/reader;
- use logic and relevant support/details;
- state and develop an argument;
- demonstrate coherence and style;
- attempt an element of risk; and
- demonstrate improvement;

and Conventions

- practice sentence variety;
- use proper word choice/usage (vocabulary development);
- demonstrate excellent mechanics;
- improve spelling; and
- demonstrate improvement and growth.

Students will demonstrate the ability to write in the following types of discourse:

- analytical;
- evaluative;
- satirical;
- speculation about cause and effect; and
- comparison and contrast.

RETRIEVING INFORMATION

Students will demonstrate the ability to:

- use the library and computer catalog;
- use reference volumes appropriately;
- take notes on note cards;
- cite works using MLA or APA documentation; and
- document within a text using MLA or APA format

GROUP/COMMUNICATION SKILLS
Students will demonstrate the ability to:

- participate effectively in class and small group discussions;
- communicate information and ideas effectively to others;
- respect others;
- follow directions as well as be an independent learner;
- compromise and reach consensus;
- demonstrate integrity;
- show improvement in speaking and listening skills; and
- demonstrate leadership and be willing to take a risk.

COLLEGE/UNIVERSITY SKILLS
Students will demonstrate the ability to:

- apply the results of the Major/College Match or interest inventories by
- researching specific majors and colleges;
- revise student resume or personal data sheet;
- apply for appropriate college or university scholarships;
- complete the application process for a college or university; and
- request recommendations.

INSTRUCTIONAL MATERIALS

Text and Supplementary Materials: Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

AVID Senior Seminar Course Outline

Department: English & Social Science

Grades: 11 & 12

Prerequisite: Previous enrollment in AVID elective class prior to grade 11 for at least one year.

Corequisite: Enrollment in at least one Honors, Advanced Placement, or International Baccalaureate course or in a college transferable course accepted by UC/CSU in both the 11th and 12th grade years.

Context for the Course

AVID elective courses at all grade levels are designed to prepare students for entrance into four-year colleges and universities. The courses emphasize rhetorical reading, analytical writing, collaborative discussion strategies, tutorial inquiry study groups, preparation for college entrance and placement exams, college study skills and test taking strategies, note taking and research. AVID students, generally, come from groups underrepresented at our four-year colleges and universities. They are enrolled in a rigorous academic program while being given a support system in the AVID classes through tutorials, coaching in note taking, organization and study skills, analytical writing, collaborative work and college counseling. All AVID seniors are required to develop and present a portfolio representing their years of work in the AVID program as well as complete the requirements for the Seminar course.

Course Description

The AVID Senior Seminar is a two-year interdisciplinary course for AVID juniors and seniors. The course is designed for those students who elect to take a course that prepares them for the rigor required for college work. Students will engage in higher levels of WIC-R (writing, inquiry, collaboration and reading) strategies than experienced in prior years of AVID. These higher level thinking, reading, writing and oral language skills are needed to prepare students for the level of work required to produce a culminating research project at the end of the senior year.

This course is organized around the theme of "Leadership as a Catalyst for Change in Society." Students study, in depth, exceptional leaders in contemporary society, and examine the effect these individuals have had on culture, politics, education, history, science, and the arts. The course requires that students read essays, speeches, articles and letters by these leaders, as well as at least one full-length work by the leader or about the leader. In addition, each student is required to conduct a research project that is presented in the senior year. The project requires that students examine a particular leader's life and accomplishments in relation to the student's own possible career goals and aspirations. Among the leaders included in the course for in-depth study include: Leonard Bernstein, Dr. Jane Goodall, Dr. Stephen J. Gould, Dr. Martin Luther King, Jr., Pablo Neruda, Eleanor Roosevelt, Dr David Suzuki and John Wooden. Students may select other leaders of equal stature with the approval of the AVID teacher.

The focus of the junior year is the survey of 8–10 recognized leaders from a variety of fields of study. Individually and in study teams, students will explore the historical period in which the leader lived, the social issues they addressed, and their contributions to society. Students will be expected to read and write extensively throughout the process, including participation in a variety of collaborative discussion and response groups. This

preliminary research survey will culminate in an end-of-year essay in which students explain and provide evidence for choosing a particular leader to study in greater depth.

The level of reading, writing, inquiry, discussion and analysis experienced in the junior year will serve as the foundation for in depth research to be introduced and completed as a final project in the senior year.

In the senior year, students will select a leader to study in depth, read extensively about the leader, write a number of analytical essays, develop critical questions based on their reading and writings, participate in collaborative discussion groups such as Socratic Seminar, and complete a final research essay project.

In addition to the academic focus of the AVID Senior Seminar, there are college bound activities, methodologies and tasks that should be achieved during the junior and senior year. Support materials are in development and will be divided into four semesters surrounding the topics of Testing, Preparation, Exploration and Fit and Finances. For an overview and timeline related to each semester for both the junior and senior years, and for directions for reviewing and downloading pilot materials, see Appendix A.

Course Content

Goals

1. Students will learn to analyze the features and rhetorical devices used in different types of non-fiction: essays, speeches, editorials, scientific reports and historical documents.
2. Students will demonstrate a comprehensive understanding of significant ideas expressed in a variety of written works by identifying important ideas, recognizing inferences and drawing conclusions.
3. Students will develop various strategies to respond to a text including, annotating a text, writing learning logs, and developing double entry journals and summaries.
4. Students will develop their ability to relate prior knowledge to new information and make connections to related topics of information.
5. Students will demonstrate an ability to articulate a clear thesis on a topic, and identify, evaluate and use evidence to support their thesis.
6. Students will develop their ability to write well-organized essays that are consistently coherent and logically developed.
7. Students will continue to learn to effectively summarize ideas contained in a text.
8. Students will develop skill in writing short answer response essays, including, timed essays.
9. Students will participate in research projects that extend their knowledge of a particular topic and develop and support their own ideas and opinions.
10. Students will participate in discussions, presenting their ideas in a clear and articulate manner.
11. Students will listen to and respond to the ideas of others.
12. Students will develop a leadership role in Socratic Seminars.
13. Student will develop their skills in research techniques.

14. Students will productively participate in both individual and group projects and discussions.
15. Students will improve their oral communication skills through a variety of means, including presentation, debate, and Socratic Seminar.
16. Students will learn to evaluate their own and others' writing, using rubrics and scoring guides modeled on UC and CSU entrance exams.
17. Students will learn specific strategies to navigate the college admission process by engaging in a variety of activities and tasks.

Course Outline

Junior Year

I. Course Introduction

A. Introduce the theme of "Leadership as a Catalyst for Change in Society."

1. Examine students' perceptions about what constitutes a leader, including the qualities that characterize a leader. Using a variety of readings and collaborative group strategies, students analyze and discuss how "leadership" is defined and what roles leaders play in our society.
2. Discuss the role of students as leaders in their school and community

B. Following the discussion and exploration of the course theme, have students write a short essay in which each student analyzes, from his/her point of view, what is meant by "leadership as a catalyst for change in society."

1. Revisit this essay as the semester progresses so students can modify, reexamine and redefine their original definition.
2. As students study different leaders, have them develop graphic organizers, which outline the characteristics of a leader.

C. Utilizing a "philosophical chair" or other collaborative group discussion formats, ask students to analyze, discuss, and debate the following question, "Does history make a leader, or does a leader make history?"

II. Organization of Study

A. Develop a process and criteria to assign students to "study" team groups.

B. Each group will be assigned a specific leader to study in-depth.

1. Each study team will spend (4) weeks reading, analyzing, raising questions, discussing findings and exploring the life and role of the selected "leader."
2. At the end of the 4 weeks, students, as a group, will rotate to another leader to study.

C. As a group, students will discuss and examine the historical, social and cultural period in which the leader lived and worked.

1. They will create a historical timeline.

2. The will create a graphic organizer, a T Chart, in which they outline the characteristics of that period and juxtapose them to the response of their leader to those characteristics.

D. Reading—Critical analysis Assignments

1. Students will be required to read one major work about the leader in each group.
2. Students will be required to read at least two essays by the leader.
3. Students will read at least three essays written about the leader by other authors.
4. Students will read at least two sources that specifically discuss the historical, social, cultural and scientific issues of that period, there by placing the leader in historical context.
5. Throughout the time in each study team, students will engage in a variety of writing, inquiry, collaboration and reading (WIC-R) activities.

E. Writing Assignments

1. Students will be required to do the following on an ongoing basis: Take Cornell notes, write summaries, develop dialectical journals, and write at least two critical essays. In the essays students will analyze various historical, social, cultural issues.
2. Students will write an analytical essay of no less than three pages in which they examine, in detail, the major trends, conflicts and issues of the historical period in which the leader lived and worked.
3. Students will participate in individual and collaborative reader response groups to reflect and provide feedback for revisions.
4. Students will use a writing rubric designed specifically for the type of essay assigned and will be expected to score at least a 4 on a 6-point rubric.

F. Discussion and Oral Presentations

1. Students will be involved in ongoing discussions in each group based on questions the students generate from their readings.
2. Students will participate in Socratic Seminars on themes that link the various leaders they have studied. The students will use the texts they have read to support different points of view.
3. Students will prepare oral presentations for each group outlining and discussing the major issues and questions that evolved about the leader they studied.

III. Final Paper

A. At the end of the spring semester each student will select a leader he/she wants to study in depth in the senior year.

B. The student will write a paper in which he/she explains why they have chosen a particular leader based on their readings and discussion. Student will also address the questions that were developed in the groups and select particular questions for in depth exploration.

Senior Year

I. The senior year will begin with a review of what was studied in the junior year.

A. Review, examine and discuss (in historical context) the contributions made by the leaders in the course of study.

B. Discuss what has made their contributions significant on both a personal and universal level.

C. Explore and develop possible research questions, topics and themes as a result of the discussion.

D. All discussions should be continually linked back to the theme of the course "Leadership as a Catalyst for Change in Society."

II. Research Project

A. Students will review/revise the paper in which they explain and defend their choice of leader for research.

B. Students prepare a preliminary research question.

C. Students develop a plan and timeline for their project with input from their academic advisor. The plan must also include a reading schedule.

III. Reading Assignments

A. Students will read at least two long works (books) by their leader.

B. Students will read at least four essays, including speeches, by their leader.

C. Students will read at least four other sources—articles, books, essays, etc.—written about their leader.

D. Students must read four sources about the historical period in which their leader lived (lives) and worked.

IV. Writing Assignments

A. On an ongoing basis students will take Cornell notes, keep a dialectical journal, and write summaries, short essays and develop graphic organizers.

B. Every four weeks students will be required to write a well-developed critical essay in which they discuss their findings and the significance of these findings to their overall question.

C. Students will generate higher level thinking questions that evolve from their research. These questions will help to propel their research forward.

V. Outside Sources

A. Students will collect information from individual contacts who are in the same field of study as the leader being researched.

B. Students will form a mentorship with a scholar who has a special interest in the field of the leader being studied. This mentor will act as an advisor to the students' project.

VI. Research Group

A. Students will form research groups/teams based on the leader they are researching.

B. The team will be a forum in which to exchange ideas, generate questions for discussion, and develop possible themes and topics.

C. The team will also be a forum to discuss and clarify issues regarding the historical context in which the leader worked.

D. The team will also act as a peer editing group

VII. Socratic Seminars

A. The Socratic Seminar should be an ongoing activity that helps the students see their leader in a global context.

B. The Socratic seminar should explore some of the following topics:

1. How does a leader affect society and how does society affect the leader?
2. What are the pros and cons of the changes that have taken place because of a leader's work?
3. What are the individual characteristics of a leader and are their commonalities amongst leaders?
4. What makes a leader a catalyst for change? What would such leadership look like in a school, business, community, and nation?

VIII. Review Research Plan and Timeline

A. By the end of the first semester the students should submit their preliminary notes.

B. The students should finalize the thesis for their project.

C. Students should revise their timeline.

IX. Oral Presentations from Each Team

A. Each team will present a consensus about their findings.

B. Each team will discuss the research questions of their individual members.

C. Each team will present and defend the topics for each individual project.

X. Writing the Research Paper

A. Students will use MLA Style form, bibliography, etc. for their project essay.

B. Students will submit a schedule for submitting drafts of their project to their team and teacher.

C. Students will state the thesis of their project.

D. Students will present a preliminary bibliography.

E. Students will present an outline of their research paper.

F. Students will present drafts and revisions of their research paper in a timely fashion.

XI. Submission of the Final Research Project

A. Students utilize the writing-research process in submitting their final paper.

B. Students follow all established and recorded timelines.

C. Students conference with their teacher and academic mentor about the results of their research.

XII. Individual Reflections—Essay

A. Conclusions drawn from the research.

B. The relationship of the leaders studied—his/her contributions, characteristics, accomplishments, education, goals—and the goals and aspirations of the AVID student.

NOTE: Support activities for writing assignments may be referenced in the revised (2005) *AVID High School Writing Teacher Guide,* especially those sections for advanced writing—argumentation, persuasion, exposition, and critical analysis.

Reading and writing assignments are referenced to the California State Standards in English Language Arts for the 11th and 12th grade.

3.0 Literary Response and Analysis
3.2
3.5
3.8
3.9
1.0 Writing Strategies
1.1
1.2
1.3
1.4
1.5
Writing—Research
1.7
Writing—Evaluation and Revision
1.9
2.0 Writing Application
2.2 a, b, c
2.4 a, d, e

Key Assignments And Activities

- Reciprocal Teaching
- Literature Circles for Non-fiction
- Annotating the text
- Working with graphic organizers
- Quickwrites and freewrites
- Learning logs
- Double-entry journals

- Summary writing
- Analytical essays—short and long
- Timed essays—45 minute limit
- Preparing a bibliography
- Research project
- Discussion activities
- Group discussions
- Philosophical chairs
- Socratic seminars
- Oral reports

Instructional Methods And Strategies

- Lecture
- Collaborative group work
- Readings
- Library and Internet research
- Seminars
- Collaboration with Advisors

Assessment Methods And Tools

- Papers, essays, writing and oral language rubrics
- Journals
- Learning logs
- Exams, quizzes
- Participation
- Observation
- Conferencing
- Final project
- Reflection

AVID students will also be assessed on rudimentary AVID "basics" such as a well-organized notebook, participation in tutorials, notetaking and participation and leadership in Socratic seminars

Appendix A

NOTE: After June 1, 2005, you can review/download a course description and resources including a pilot Teacher Guide that includes a number of college preparation/exploration activities by going to www.avidonline.org, log into MyAVID Account, then go to File Sharing and click on Jr./Sr. Seminar Resources. Overviews of each of the units from the pilot teacher guide are described below.

Unit 1

Overview

It is during the first semester of the junior year that students learn about the two college admission tests (ACT and SAT) and the differences between them. One way for students to become familiar with these materials is to take both practice tests (the PLAN and the PSAT) and use the results to prepare for ACT and SAT testing in the spring.

Students also begin to prepare for college admission by gathering materials and organizing them into "crates" and by reviewing what they have accomplished in their first two years of high school. This will prepare them for writing a résumé, a good resource when completing college applications. This is also a time to look at college entrance requirements and to access a valuable research tool: the Internet.

AVID students may want to consider applying to both public and private schools. One way to explore the various elements of the college admission process is to visit a variety of Web sites. For example, at the California Colleges site (www.californiacolleges.edu), students can find answers to their questions about entrance requirements, financial aid, career planning, and much more. College admissions representatives who come to the school can provide additional information.

Financing their college education is a concern for many students. In this semester, some key concepts are introduced, but little can be done in this area until the senior year. Students can also begin self-exploration to help them determine which college(s) will be a good "fit" for them.

Timeline

1. **Testing**
   September: Review previous PLAN and PSAT scores.
   September–October: Prepare for PSAT test. Take PSAT test.
   December: Interpretation of score results (counselor presentation).
2. **Preparation**
   September: Prepare student "crates."
   September–October: Do preparation activities.
   October–January: Data sheets, "a–g" requirements, résumé, "Family Firsts."
3. **Exploration**
   September–November: Presentations by college representatives.
   October–December: College exploration on the Web (UC Pathway, California Colleges, CSU Mentor sites).
   January: AVID graduate panel.
4. **"Fit" and Finances**
   September–June: Explore types and varieties of financial aid.

December–June: Financial aid calendar; ongoing review.

Unit 2

Overview

During the second semester of the junior year, students are encouraged to take both college admissions tests. They can then prepare for retaking their highest scored test in the fall semester of their senior year. This is also the time to explain strategies that will help students when they take SAT Subject tests. Since many students will also be taking AP tests for the first time, these can be coordinated with the SAT Subject tests.

Students can prepare for the college application process by beginning a first draft of their college essay and also by considering whom they will ask to write letters of recommendation. The "GPA Game" demonstrates what counts most when college admissions officers decide which applications to accept. It's a valuable tool for both students and parents.

Students will also need to determine priorities for their higher education so they can focus on researching colleges that "fit" these priorities. Once a list of colleges is created, students will want to consider visiting these campuses before the first semester of their senior year. Finally, students need to plan a productive summer to ensure they are prepared for the application process in the fall.

This is also the time to research the costs involved in attending college and to determine how to pay these costs. (It's important to include parents in this discussion.) Students can begin the search for financial aid by applying for a PIN. Visiting college fairs in the spring to check for "fit" and continuing the search for scholarships are also a part of the second semester of junior year.

Timeline

1. Testing

January–June: Register for March through June admission tests, including ACT, SAT, and SAT Subject tests. (SAT Subject tests are needed for UC or highly selective schools.)

March–June: Take SAT, ACT, and SAT Subject tests.

May: Take appropriate AP tests.

2. Preparation

February: Review first-semester grades and compute "a–g" GPA.
February–June: Update data sheets and résumé.
March–June: UC essay prompts and Common Applications should be started and refined.
May–June: Letter of recommendation procedures and teacher/counselor selection.

3. Exploration

February: College selection and priorities activities.
March–June: College/major research, using a variety of resources including Web sites, printed materials, speakers, and visits.
March–June: Create potential college lists. Use comparison worksheets. Finalize summer plans.

4. "Fit" and Finances

February: Register for FAFSA PIN.

February–June: Continue searches and applications on FASTWEB.
March: Use family financial aid predictor Web sites (www.act.org or www.collegeboard.com).
March–April: Visit College fairs.

Unit 3

Overview

The first semester of the senior year is a critical time for the college- bound student for this is when all the elements of college admission come together and the application is completed and submitted. Students will have one final chance in the early fall of their senior year to retake college admission tests (ACT, SAT, and/or SAT subject tests). Test results should then be sent to all schools to which students intend to apply.

Students will need to finalize their choice(s) of colleges, and, ideally, visit college campuses. (If visiting is not possible, they should plan to meet with college representatives.) This is the time for computing the final "a–g" GPA (from grades 10–11) and requesting letters of recommendation. College admission essays will need to be finalized, résumés updated, and materials gathered for college applications.

The preferred method for completing and submitting a college application is online, although students may want to prepare for this by using a paper application as a worksheet. All required materials should be gathered together, and, if possible, taken to the school's computer lab. The application deadline for most California public colleges and universities is November 30, so AVID students should plan to submit their application prior to Thanksgiving. Private college applications are usually due in December or January. Fee waivers are available.

This is also the time for financial aid arrangements to be made, beginning with completing the Free Application for Federal Student Aid (FAFSA). This form, which is key to nearly all types of financial assistance, should be submitted as soon as possible after January 1 (the earliest date for submission). In some cases, the CSS PROFILE form will be required as well. Application materials are available, at no cost, to teachers, students, and parents to assist them in learning about this process.

Timeline

1. Testing

August–December: Register for ACT, SAT, and/or SAT Subject tests, as appropriate. Send scores to colleges of interest. File test results in the testing folder in the student's "crate."

2. Preparation

September: Update résumés and compute the final "a–g" GPA to be submitted with applications.

September–October: Complete college research; review guidelines for applying to college online; visit colleges of interest; request applications.

October: Ask selected teachers/counselors/others to write letters of recommendation and provide each with a packet of information. Revise essays and finalize for submission.

3. Exploration

October–November: Submit public college applications online (with final draft essays).

November–December: Submit private college and university applications (with final draft essays). Schedule interviews.

4. "Fit" and Finances

September–January: Continue to apply for scholarships.

October: Verify FAFSA PIN and register for PROFILE, if needed.

October–January: Attend financial aid events.

December–January: Submit Cal Grant GPA verification.

January: Complete FAFSA application worksheet.

Unit 4

Overview

If students are applying to private colleges or schools outside of California, they may still have time to take college admission tests (ACT or SAT) in January Once students have been accepted, there may be additional enrollment requirements. For example, CSUs require that students show proficiency in writing and math, and some students may have to take placement tests for these subjects. UC schools require that students meet an entry-level writing requirement. Advanced Placement students will also be taking AP subject tests in May.

As students begin receiving acceptance letters, they should prepare "College Comparison Grids." Celebrate acceptances by creating a "Hurrah Board" that honors the student and university. Sending thank-you notes to teachers and counselors who have helped with the admission process is highly recommended. It is also time to begin preparing students for the transition from high school to college.

Invite AVID graduates to visit the class and share their college experiences. Encourage students to visit the schools to which they have been accepted and to attend freshman orientation or "Accepted Students" events. Once they have decided where they will attend, students must notify the school and send in any required deposits by May 1. They should also notify other colleges that have accepted them that they will not be attending there.

Filing for FAFSA as early as possible (after January 1, but before the March 2 deadline) is the financial priority for this semester. Applying online is the preferred method. The process is complex, but there are many resources to help students and their parents. As graduation nears and students prepare for the transition to college, academic, personal, and social success in college are important topics to discuss with class.

Timeline

1. Testing

January–February: Make sure all test scores have been submitted to colleges, especially if tests were taken in January for admission to private or out-of-state colleges.

February–April: For students applying to a CSU: If not exempt, register for and take the ELM and/or EPT.

April–May: For students applying to a UC campus: If not exempt, register for and take the Entry Level Writing Requirement Exam.

May: Take Advanced Placement (AP) Tests; be sure to indicate to which college the scores should be sent.

2. Preparation

February–April: Complete comparison grids for colleges from which acceptance letters have been received. Post acceptances on the "Hurrah Board."

February–March: Submit mid-year transcripts, if requested.

April–May: Begin transition activities (from high school to college).

June: Write thank-you notes to teachers and counselors who helped during the application process.

3. Exploration

February to Mid-April: Visit/Revisit campuses (where students have been accepted), if needed. Attend "Accepted Students" events.

Mid-April: MAKE A DECISION; inform college and send deposit. Notify other colleges.

June: Request that a final transcript be sent to ONE college

4. "Fit" and Finances

January–February: Submit FAFSA and GPA verification forms (if the school does not submit electronically).

January–June: Continue to apply for scholarships.

January–June: MAKE COPIES OF EVERYTHING

January–February: Make sure financial forms for all colleges are completed.

February–April: Carefully review and file in "crate" all financial aid offers; complete financial aid comparison sheets.

March: If necessary, appeal financial aid award of first choice college. This must be done in writing with additional information.

Mid-April: MAKE A DECISION; sign all appropriate documents for the college of choice. Send in tax forms as soon as prepared.

ADVANCEMENT VIA INDIVIDUAL DETERMINATION AVID SENIOR SEMINAR (P)

Department: English

Target Group AVID Seniors

Prerequisites Previous enrollment in AVID lower-level course for a minimum of two years and enrollment in at least one honors or Advanced Placement course.

Purpose AVID Senior Seminar is for seniors in their third or fourth year of AVID and is the culmination of the students' years in the AVID Program.

a) One year college-prep course
b) 10 units
c) Meets "f" requirement

AVID elective courses at all grade levels are designed to prepare, in an academic context, students for entrance into four year colleges, with emphasis on analytical writing, preparation for college entrance and placement exams, college study skills and test taking, oral language development, note taking, and research.

As with all AVID courses, the Senior Seminar features tutors, college students, who lead discussions and analysis of the academic subjects in which the students are enrolled. Students enrolled in the Senior Seminar are required to complete weekly timed writings and analytical discourses in all subjects. In addition, students are required to make oral presentations to the class on topics related to career searches, college entrance, contemporary issues, and social concerns all the while focusing on a culminating senior paper, portfolio, and/or project. Seminar students, working with the tutors, are expected to participate in and eventually act as moderators for Socratic Seminars. These discussions move beyond didactic instruction and assist students in gaining multiple perspectives on texts, supporting arguments with clear reasoning and evidence, and developing their critical thinking skills to the extent necessary for success in college.

AVID Seminar Instructor

Up to the time that the AVID student enters the Senior Seminar, ninth through eleventh grade students have received coaching in note taking, organization, and study skills, along with instruction in writing domains such as the autobiographical incident, comparison-contrast, and cause and effect. They are also introduced to in-depth textual analysis, and writing for the various disciplines plays a unique role for all students in the AVID classroom.

The instructor for the AVID Seminar provides a segue from high school to college. Though the class maintains the same structure as in the preceding years, the students will gradually realize that they are expected to take a much more active part in their own learning. Dedication to the preparation for their rigorous classes will show dividends, giving students confidence for their transition to college.

The instructor encourages the students to experience more analytical writing, literary analysis, and college entrance preparation for the SAT I and II, the ACT, and AP examinations, in addition to college placement exams. Seminar students engage in more times essays, perfecting and analyzing their writing and that of others according to rubrics. They are required to produce an extended, reflective paper focusing on one of their areas of interest or study such as mathematics, science, history, English, or world language, which may interrelate to the study of careers emanating from individual fields of study.

AVID Senior Seminar (continued)

Throughout the senior year, the Seminar Instructor serves as a conduit to colleges and universities as well as to academic departments on campus and at colleges. The instructor assists AVID students in applying for college, researching financial aid and housing, registering for entrance and placement exams, and in preparing for external examinations in the spring. AVID college tutors also assist in these processes by providing actual information and giving feedback to the seniors regarding their applications and essays.

The AVID Senior Seminar is divided into four areas of emphasis, leading to the student's acceptance at a four-year college or university.

1. Reading, Writing and Speaking at the College Level
2. College Entrance Exams and Rigorous Academic Practices
3. College Application and Essay, Financial Aid, and Placement Exams
4. Culminating Activities for Academic Major Specialization and Career Exploration

Standards of Expected Student Achievement (Course Objectives)

1. Students will complete the four-year course requirements for entrance to the most competitive public universities in the state.
2. Students will successfully complete college applications and financial aid packages.
3. Students will demonstrate analytical writing at the college level in a variety of discourse modes.
4. Students will improve their oral communication skills through a variety of means, including presentation, debate, and Socratic Seminar.
5. Students will learn to evaluate their own and others' writing, using rubrics and scoring guides modeled on university entrance exams.
6. Students will prepare for college entrance and placement exams, using the AVID College and Careers library, and other materials.
7. Students will prepare for an external exam such as Advanced Placement.
8. Students will complete and present a senior project as a culmination of their portfolio work, and junior-senior research, and career exploration.

Methods of Assessment of Student Learning

AVID students will be evaluated using a variety of performance-based assessments. While they will be judged on rudimentary AVID "basics" such as a well-organized notebook, participation in tutorials, and note taking, they will also be assessed according to their performance on timed writings, practice placement examinations, participation in scoring of practice examinations, leadership in Socratic Seminars, and external exam preparations. In addition, AVID Seminar students will be required to complete a critical essay or research paper exploring issues emanating from Honors or AP classes. This paper will also be presented to the class as part of the Senior Presentation, which also includes additional selections from their portfolio and/or their senior project.

Portfolio Contents

Portfolio contents will include but not be limited to the following:

- College Admissions essay
- Final Extended Essay or Research Paper (which may be based on a career related to a field of study)
- Transcript

- Timed writings
- Expository essays
- Notes taken in content areas
- Dialectical journal from core literature work

RESOURCES

Course Textbooks: AVID Library Selections
Writing Curriculum
College and Careers
Subject Area Guides

Instructional Materials:
Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities/Course Outline

General Yearlong Activities
1. Ongoing tutorials with focus on support for Honors & AP classes
2. Collaborative group study with focus on Honors & AP classes
3. Peer Tutoring
4. Socratic Seminar training
5. Ongoing timed writings and analytical discourse

Terms 1 & 2 (Semester 1)
1. SAT I and II preparation, calendaring, and registration
2. Introduction and planning for Honors/AP Research Paper
3. Career and College exploration and request for fall college applications
4. A Dialectical Journal based on Honors & AP Core Literature Work
5. Consider applying to take college level classes at community colleges, four year colleges and universities, or distance learning sites in addition to AP courses
6. The College Application
7. Writing the Personal Statement

Terms 3 & 4 (Semester 2)
1. Applying for Financial Aid (FAFSA & Cal Grant & Scholarships)
2. Introduction to and practice for College Placement Exams
3. Lead Socratic Seminars for AVID Classmates
4. Extended Essay or Research Paper
5. Portfolio/Senior Project preparation and presentations
6. Follow-up on the SAR for FAFSA, grants, loans, and scholarships
7. AVID students/parents receive support in making college choices
8. Students mail Intent to Enroll cards and apply for academic orientation, summer programs, open houses, etc.

Course Title

Beginning Speech A

Department

English

Career Path

Social Services
Arts/ Media/ Entertainment
Business
Education

Description of Target Group

Beginning Speech A is the first part of a year-long college preparatory elective course designed primarily for the novice student in speech who wishes to gain self confidence while learning the fundamentals of public speaking and social skills.

Purpose

Beginning Speech A is the first part of a year-long course consisting of 10 units Its purpose is to build self confidence in young people by developing both their social and speaking skills.

Prerequisites

None

Standards of Expected Achievement

1. Learn the importance of social skills while interacting with an audience Gain self confidence through the art of self expression
2. Gain self confidence through the art of self expression
3. Acquire elements of fairness, tolerance, and open-mindedness to the perspectives of others
4. Develop the ability to work cooperatively with others
5. Learn the significance of body language and its potential influence upon others
6. Learn to organize thoughts and to present ideas clearly and effectively
7. Develop the qualities of a good listener
8. Develop the attributes of an effective audience participant

Methods of Assessment of Student Learning

1. Participating in listening exercises through video instruction and story-telling games
2. Participating in role playing involving social etiquette
3. Participating in visualization exercises to further imagination and self awareness and writing about such exercises
4. Participating in a children's storytelling unit and presenting to elementary school children
5. Memorizing various pieces of literature and delivering them to the class
6. Participating in choral readings and reader's theatre
7. Practicing voice control and articulation

Growth will be evaluated by administering a pre and post test assessment in the following manner:

1. Videotape of initial, interim, and final performance
2. Participation in community performance
3. Written and oral performance

Instructional Materials

Various scripts, books of poetry and prose, videos, reference books, internet resource material and student-generated material

Also refer to Santa Maria Joint Union High School District adopted texts

Activities

1. Field trip to local elementary schools for storytelling unit
2. Guest speakers
3. Video presentations
4. Classroom speaking and role playing
5. Individual and group exercise in composing written material for performance
6. Interviews
7. Charades and pantomimes
8. Reading various materials and practicing what it is to be a good reader

Course Title

Beginning Speech B

Department

English

Career Path

Social Services
Arts/ Media/ Entertainment
Business
Education

Description of Target Group

Beginning Speech B is the second semester of a year-long college preparatory elective course designed primarily for the novice student in speech who wishes to gain self confidence while learning the fundamentals of public speaking and social skills.

Purpose

Beginning Speech B is the second semester of a year-long course consisting of 10 units. Its purpose is to build self confidence in young people by developing both their social and speaking skills.

Prerequisites - Beginning Speech A

Standards of Expected Achievement

1. Continue social interaction through appropriate manners
2. Continue to gain awareness of self and others
3. Develop an acceptable speaking voice free of grammatical errors
4. Learn the art of memorization through various memory techniques
5. Learn responsibility and commitment to an enterprise through career speech and etiquette
6. Explore various elements of prose and poetry through research and writing
7. Research a greater understanding of life as it is revealed and reflected in literature
8. Prepare a written speech and deliver it effectively
9. Learn the basic rules of oral interpretation of literature
10. Learn the basic rules of public performance in speaking

Methods of Assessment of Student Learning

1. Presenting poetry and prose to organizations in the community such as retirement and convalescent homes

2. Presenting various speeches written by students
3. Presenting public speeches and various oral interpretations
4. Writing original material and presenting it in class
5. Memorizing various pieces from literature

Growth will be evaluated by administering a pre and post test assessment in the following manner:

1. Videotape of initial, interim, and final performance
2. Participation in community performance
3. Peer evaluations and teacher evaluations of classroom speaking per given instruction
4. Written and oral performance

Instructional Materials

District reference books on speech procedure, library books, published speeches, teacher-generated materials, internet resource material, student-generated material, and newspapers

Also refer to Santa Maria Joint Union High School District adopted textbooks

Activities

1. Field trip to local retirement/convalescent homes to read poetry and prose
2. Guest speakers
3. Role playing
4. Classroom speaking
5. Video presentations of accomplished speakers
6. Individual and group exercise in composing written material for oral performance
7. Research
8. Listening to songs and learning to interpret both meaning and mood

Course Title

Bible as Literature

Description of Target Group

Bible as Literature is designed as a one-semester course for students who have successfully completed freshman English.

Purpose

The purpose of Bible as Literature is to assist students in identifying those qualities of the Bible, which establish it as a literary work of art.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Trace the influence of the Bible in its historical and contemporary context.
2. Outline the content of the Old and New Testaments.
3. Discuss the great themes of the Bible.
4. Identify figurative language and symbolism in the Bible.
5. Compare other literary works with comparable genre in the Bible.
6. Paraphrase and summarize some of the dramatic or difficult passages in the Bible.
7. Exhibit a knowledge of syntax and style by comparing the King James translation with later translations.
8. Explain the meaning of Biblical allusions in assigned literary selections.
9. Explain the origin of given popular expressions taken from the Bible.
10. Compare literary and film versions of parts of the Bible with the Bible version.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Reading assignments from the textbooks, oral and written reports, movies, filmstrips, recordings, art work, class discussions and lecture/discussion, guest speakers.

Course Title **SMHS**

British Literature A/B (12) (Honors)

Description of Target Group

This year long course is designed to meet the entrance requirements for four year colleges and universities, is designed for only those senior students who have passed Introduction to Literature, World Literature, and American Literature and whose recommendations and portfolios have been accepted by the English Department Honors Committee.

Purpose

This course is designed to provide selected students with a qualitatively different and varied curriculum which challenges and enriches their individual potential while maintaining the requirements of the basic course outline. Students will focus upon European and British literature and the writing process through an integrated approach. This course will prepare students for college level courses and the Advanced Placement Test as they read and write accessing themes which include the epic hero, the tragic hero, the influences of government and religion upon literature, the concept of the individual in 19th Century literature, as well as the exploration of personal and human values in 20th Century literature. Students will develop communication skills in reading, writing, listening and speaking in which group and individual projects will be assigned. In addition, students may participate in exploration of college majors and relevant application information.

Students must maintain a grade of "B" or better at the end of each semester to remain in the honors program.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING
A variety of genre from literature will be read. Students will be expected to:

- identify literary genre
- identify elements of literature, literary terms
- construct meaning from a text
- make connections within a text
- extend beyond the text
- include an element of risk taking in constructing meaning
- keep a journal or log
- analyze literature on both symbolic and thematic levels

British Literature A/B (12) (Honors) (continued)

Core selections include:

novel: Far from the Maddening Crowd - Thomas Hardy

drama: Macbeth - Shakespeare
Hamlet- Shakespeare
A Man for All Seasons - Robert Bolt
Becket - Jean Anhouil

Other possible selections include:

drama: Major Barbara - G. B. Shaw
Taming of the Shrew - Shakespeare

epic poetry: Beowulf
Paradise Lost (excerpts) - John Milton

short story, poetry, essays: selections from the basic and supplementary text

WRITING

Students will be expected to demonstrate the following skills:

Rhetoric:

- present an idea; acknowledge an audience/reader
- use logic and relevant support/details
- state and develop an argument
- demonstrate coherence and style
- attempt an element of risk
- demonstrate improvement

Conventions:

- practice sentence variety
- use proper word choice/usage and vocabulary development
- demonstrate excellent mechanics
- improve spelling
- demonstrate improvement and growth

Students will demonstrate the ability to write in the following types of discourse:

- analytic
- evaluative
- speculation about causes and effects
- comparison and contrast
- other expository discourses

RETRIEWNG INFORMATION
Students will demonstrate the ability to:

- use the library and computer catalog
- use reference volumes appropriately
- take notes on note cards
- cite works using MLA or APA documentation
- document within a text using MLA or APA format

GROUP/COMMUNICATION SKILLS
Students will demonstrate the ability to:

- participate effectively in class and small group discussions
- communicate information and ideas effectively to others
- respect others; set an example
- both follow directions as well as be an independent learner
- compromise and reach consensus
- be honest and responsible; demonstrate integrity
- show improvement in speaking and listening skills
- demonstrate leadership and be willing to take a risk

COLLEGE/UNIVERSITY EDUCATION SKILLS
Students will demonstrate the ability to:

- apply the results of the Major/College Match or interest inventories by researching specific majors and colleges
- revise student resume or personal data sheet
- apply for appropriate college or university scholarships
- complete the application process for a college or university
- request recommendations

PORTFOLIO REQUIREMENTS
Students will be expected to complete the Portfolio Requirements as outlined on PAGE 4 of this course outline.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

British Literature A/B (12) (Honors) (continued)

PORTFOLIO REQUIREMENTS Student Name: _____

1.) Demonstrate reading comprehension/questioning competency in the following areas:

Any three (3):

		Date	Signature
A.)	Read independently	_____	_____
B.)	Construct meaning from a text	_____	_____
C.)	Make connections within a text	_____	_____
D.)	Extend beyond a text	_____	_____
E.)	Take a risk in making connections/meaning	_____	_____
F.)	Analyze literature symbolically & thermatically	_____	_____

Any one (1)

G.)	Reading log	_____	_____
H.)	Double entry journal	_____	_____

2.) Demonstrate writing skills in the following areas:

Any three (3):

A.)	Autobiographical essay	_____	_____
B.)	Reflective essay	_____	_____
C.)	Narrative essay	_____	_____
D.)	Descriptive essay	_____	_____
E.)	Expository essay	_____	_____

3.) Demonstrate the following information retrieval skills:

A.)	Works Cited/Bibliography using MLA	_____	_____
B.)	Documentation using MLA format	_____	_____
C.)	Note taking	_____	_____

4.) Demonstrate the following oral presentation skills:

A.)	Effectively present an idea/project	_____	_____
B.)	Show improvement in speaking skills	_____	_____

5.) Demonstrate the following career skills:

A.)	Identify areas of career interests	_____	_____
B.)	Match interests to specific careers	_____	_____

19. Brief Course Description

Classic Fiction and Film is a class focusing on an intense, critical comparison of the plots, characters, and themes of great Renaissance, Victorian, and Modern novels and plays to their 20th century film adaptations. Students will be asked to analyze through critical-thinking, discussion, and both research-based and expository writing how literature of the Western canon influences such popular films as *Ten Things I Hate About You*, *O*, and *Kiss Me, Kate* as well as adaptations of *Great Expectations*, *Sense and Sensibility*, and *Animal Farm* and how the American film industry changes and adapts classic stories to appeal to a modern audience. In addition, students will develop their understanding of both the elements of literature including theme, symbolism, foreshadowing, and archetype, as well as important film terminology such as frame, shot, narration, adaptation, live action, and zoom.

B. COURSE CONTENT

20. Course Goals and/or Major Student Outcomes

- Demonstrate the ability to communicate effectively through a variety of oral and written assignments.
- Develop the interpersonal skills needed to work with others by effectively completing various group projects.
- Acquire the technological skills necessary for participating in the workplace through use of technology and research-based assignments.
- Utilize and enhance critical-thinking skills by positively contributing to class discussions and analyzing the written and spoken word.

21. Course Objectives

- Students will learn how to closely and critically read several novels with the intention of comparing them to their film adaptations.
- Students will learn successful research methods by researching a famous author and writing a paper presenting their findings.
- Students will develop advanced writing skills through response to literature, response to film, expository, and analytical essays.

- Students will learn how to effectively use technology by preparing and giving a multimedia presentation comparing one novel to its film adaptation.
- Students will learn and use vocabulary relating to literature and the film industry.

22. Course Outline

SYLLABUS:

Classic Fiction and Film is a class in which we will read and critically discuss great novels and plays of the Renaissance, Victorian, and Modern periods with the intent of comparing them to their modern film adaptations. We will discuss how filmmakers change both major and minor elements of the literature to make the films more accessible and/or appealing to modern audiences. We will view films with the intent of analyzing the use of lighting, music, character movement, and techniques such as fade out and flashback. We will write several essays and a research paper and give a multimedia presentation. In addition, we will learn important literary terms such as plot, theme, character, symbolism, and archetype, as well as important film terms such as frame, shot, narration, and adaptation.

TOPICS COVERED:

Through the study of various Shakespearean plays, students will learn about the English Renaissance and Shakespeare's influence of the English language. Students will learn the ways in which modern film adaptations change and update Shakespeare's language, plots, characters, and themes, and how those changes influence the audience. Specific topics include Franco Zeffirelli's interpretation of Hamlet's Oedipal complex, how directors Gil Junger and Tim Blake Nelson attempt to make Shakespeare appeal to teenagers in 1*0 Things I Hate About You* and*, O,* and how *Kiss Me, Kate* turns *The Taming of the Shrew* into a Broadway showpiece.

Students will read novels by Jane Austen and Charles Dickens and gain an understanding of the way Dickens used his novels to proclaim social commentary on the politics and events of his day, while Austen wrote her novels as a commentary on the society and manners of England in her time. Students will analyze how modern adaptations of their novels attempt to make these commentaries relevant to viewers today. Students will read political novels such as *Cry, the Beloved Country* and *Animal Farm* to broaden their understanding of other cultures and to heighten their awareness of important political issues such as apartheid and Communism. Students will discuss how politics influence filmmakers and how historical events are depicted in both the written word and on screen. By reading plays of the Modern period such as *Our Town* and *A Streetcar Named Desire*, students will become familiar with dramatic elements such as text aids, asides, soliloquies, monologues, dramatic irony, acts, and scenes. They will analyze the difference between drama and the novel and discuss how film adaptations of both kinds of literature differ.

Students will learn and effectively use literary and film terminology by writing response to literature and films and by critically discussing the use of lighting, music, character movement, fade ins and outs, flashbacks, narration, and voice-overs, in film and plot, characterization, symbolism, theme, archetype, conflicts, point of

view, foreshadowing, suspense, purpose, tone, and mood in novels. Students will learn to effectively use research tools such as online journals and search engines, scholarly journals and periodicals, magazines, and books. Students will learn to analyze whether a research tool is credible, effective, and relevant. Students will learn about plagiarism and the importance of accurate citation of works used. By researching, outlining, drafting, and revising a research paper, students will develop sophisticated writing and research skills.

By preparing and giving a multimedia presentation comparing one novel or play to its film adaptation, students will learn how to use technological resources such as an overhead projector, PowerPoint software, audio recording devices, DVD/video recorders and players, and/or LCD projectors.

23. Texts & Supplemental Instructional Materials

Core Novels/Plays to be Read in their Entirety:

At least one play by William Shakespeare from the following list:

Hamlet

Macbeth

The Taming of the Shrew

Othello

Great Expectations by Charles Dickens

Pride and Prejudice by Jane Austen

A Streetcar Named Desire by Tennessee Williams

Animal Farm by George Orwell

Jane Eyre by Charlotte Bronte

Movie Versions of the Above Novels/Plays to be Watched in their Entirety:

Hamlet—Director Franco Zeffirelli

Macbeth—Director Trevor Dunn

10 Things I Hate About You—Director Gil Junger

Kiss Me, Kate—Directors Chris Hunt and Michael Blakemore

O—Director Tim Blake Nelson

Great Expectations—Director Julian Jarrold

Pride and Prejudice—Director Simon Langton

A Streetcar Named Desire—Director Elia Kazan

Animal Farm—Director John Stephenson

Jane Eyre—Director Robert Young

Novels/Plays from which Excerpts will be Read:

Emma by Jane Austen

Sense and Sensibility by Jane Austen

The Adventures of Huckleberry Finn by Mark Twain

The Grapes of Wrath by John Steinbeck

All Quiet on the Western Front by Eriq Remarque

A Raisin in the Sun by Lorraine Hansberry

The Odyssey by Homer

Movie Versions of the Above Novels/Plays from which Scenes will be Watched:

Emma—Director Douglas McGrath

Clueless—Director Amy Heckerling

Sense and Sensibility—Director Ang Lee

The Adventures of Huckleberry Finn—Director Stephen Sommers

The Grapes of Wrath—Director John Ford

All Quiet on the Western Front—Director Lewis Mileston

Oh Brother, Where Art Thou?—Director Joel Coen

24. Key Assignments

Students will complete all the following assignments as minimum requirements for the class:

- Students will outline, draft, write, and revise four response to literature/response to film essays. Minimum requirements for each include four pages each, typed, double-spaced
- Students will research and write one research paper on a famous author of the
- Renaissance, Victorian, or Modern periods. Minimum requirements are four pages, typed, double-spaced, with correct MLA citations and Works Cited page. Research Will include a minimum of six sources, with at least three sources not from the Internet.
- Students will give a multimedia presentation comparing a novel or play to its film
- adaptation using at least three different multimedia devices.
- Students will read a minimum of six novels/plays, chosen by the teacher over the
- course of the year, as well as read several excerpts, chapters, and scenes of various other novels and plays.
- Students will keep a daily journal of reflective responses to films viewed and chapters and scenes read and discussed.
- Students will keep a Word Bank of literary and film terms and definitions for use in discussions and writings.

25. Instructional Methods and/or Strategies

Classic Fiction and Film will be taught with the understanding that the students in the class are college-prep senior-level students. Class discussions will formulate a large portion of class time, with discussions lead primarily by the teacher but also on occasion by individual students and small student groups. Teacher lecture will serve as a smaller component of the class instruction, with students taking notes for the aid of class discussions and writing assignments. Small, cooperative learning groups will also be utilized for the purpose of students teaching their peers what they have learned.

26. Assessment Methods and/or Tools

Students will be assessed in various ways, including, but not limited to,

- tests and quizzes 10%
- classroom discussions/participation 15%
- daily reflective journal writings and Word Bank 5%
- all formal essays/research paper 35%
- multimedia presentation 15%
- final exam 20%

- Demonstrate the ability to communicate effectively through a variety of oral and written assignments.
- Develop the interpersonal skills needed to work with others by effectively completing various group projects.
- Acquire the technological skills necessary for participating in the workplace through use of technology and research-based assignments.
- Utilize and enhance critical-thinking skills by positively contributing to class discussions and analyzing the written and spoken word.

21. Course Objectives

- Students will learn how to closely and critically read several novels with the intention of comparing them to their film adaptations.
- Students will learn successful research methods by researching a famous author and writing a paper presenting their findings.
- Students will develop advanced writing skills through response to literature, response to film, expository, and analytical essays.

- Students will learn how to effectively use technology by preparing and giving a multimedia presentation comparing one novel to its film adaptation.
- Students will learn and use vocabulary relating to literature and the film industry.

22. Course Outline

SYLLABUS:

Classic Fiction and Film is a class in which we will read and critically discuss great novels and plays of the Renaissance, Victorian, and Modern periods with the intent of comparing them to their modern film adaptations. We will discuss how filmmakers change both major and minor elements of the literature to make the films more accessible and/or appealing to modern audiences. We will view films with the intent of analyzing the use of lighting, music, character movement, and techniques such as fade out and flashback. We will write several essays and a research paper and give a multimedia presentation. In addition, we will learn important literary terms such as plot, theme, character, symbolism, and archetype, as well as important film terms such as frame, shot, narration, and adaptation.

TOPICS COVERED:

Through the study of various Shakespearean plays, students will learn about the English Renaissance and Shakespeare's influence of the English language. Students will learn the ways in which modern film adaptations change and update Shakespeare's language, plots, characters, and themes, and how those changes influence the audience. Specific topics include Franco Zeffirelli's interpretation of Hamlet's Oedipal complex, how directors Gil Junger and Tim Blake Nelson attempt to make Shakespeare appeal to teenagers in 1*0 Things I Hate About You* and*, O,* and how *Kiss Me, Kate* turns *The Taming of the Shrew* into a Broadway showpiece.

Students will read novels by Jane Austen and Charles Dickens and gain an understanding of the way Dickens used his novels to proclaim social commentary on the politics and events of his day, while Austen wrote her novels as a commentary on the society and manners of England in her time. Students will analyze how modern adaptations of their novels attempt to make these commentaries relevant to viewers today. Students will read political novels such as *Cry, the Beloved Country* and *Animal Farm* to broaden their understanding of other cultures and to heighten their awareness of important political issues such as apartheid and Communism. Students will discuss how politics influence filmmakers and how historical events are depicted in both the written word and on screen. By reading plays of the Modern period such as *Our Town* and *A Streetcar Named Desire*, students will become familiar with dramatic elements such as text aids, asides, soliloquies, monologues, dramatic irony, acts, and scenes. They will analyze the difference between drama and the novel and discuss how film adaptations of both kinds of literature differ.

Students will learn and effectively use literary and film terminology by writing response to literature and films and by critically discussing the use of lighting, music, character movement, fade ins and outs, flashbacks, narration, and voice-overs, in film and plot, characterization, symbolism, theme, archetype, conflicts, point of

view, foreshadowing, suspense, purpose, tone, and mood in novels. Students will learn to effectively use research tools such as online journals and search engines, scholarly journals and periodicals, magazines, and books. Students will learn to analyze whether a research tool is credible, effective, and relevant. Students will learn about plagiarism and the importance of accurate citation of works used. By researching, outlining, drafting, and revising a research paper, students will develop sophisticated writing and research skills.

By preparing and giving a multimedia presentation comparing one novel or play to its film adaptation, students will learn how to use technological resources such as an overhead projector, PowerPoint software, audio recording devices, DVD/video recorders and players, and/or LCD projectors.

23. Texts & Supplemental Instructional Materials

Core Novels/Plays to be Read in their Entirety:

At least one play by William Shakespeare from the following list:

Hamlet

Macbeth

The Taming of the Shrew

Othello

Great Expectations by Charles Dickens

Pride and Prejudice by Jane Austen

A Streetcar Named Desire by Tennessee Williams

Animal Farm by George Orwell

Jane Eyre by Charlotte Bronte

Movie Versions of the Above Novels/Plays to be Watched in their Entirety:

Hamlet—Director Franco Zeffirelli

Macbeth—Director Trevor Dunn

10 Things I Hate About You—Director Gil Junger

Kiss Me, Kate—Directors Chris Hunt and Michael Blakemore

O—Director Tim Blake Nelson

Great Expectations—Director Julian Jarrold

Pride and Prejudice—Director Simon Langton

A Streetcar Named Desire—Director Elia Kazan

Animal Farm—Director John Stephenson

Jane Eyre—Director Robert Young

Novels/Plays from which Excerpts will be Read:

Emma by Jane Austen

Sense and Sensibility by Jane Austen

The Adventures of Huckleberry Finn by Mark Twain

The Grapes of Wrath by John Steinbeck

All Quiet on the Western Front by Eriq Remarque

A Raisin in the Sun by Lorraine Hansberry

The Odyssey by Homer

Movie Versions of the Above Novels/Plays from which Scenes will be Watched:

Emma—Director Douglas McGrath

Clueless—Director Amy Heckerling

Sense and Sensibility—Director Ang Lee

The Adventures of Huckleberry Finn—Director Stephen Sommers

The Grapes of Wrath—Director John Ford

All Quiet on the Western Front—Director Lewis Mileston

Oh Brother, Where Art Thou?—Director Joel Coen

24. Key Assignments

Students will complete all the following assignments as minimum requirements for the class:

- Students will outline, draft, write, and revise four response to literature/response to film essays. Minimum requirements for each include four pages each, typed, double-spaced
- Students will research and write one research paper on a famous author of the
- Renaissance, Victorian, or Modern periods. Minimum requirements are four pages, typed, double-spaced, with correct MLA citations and Works Cited page. Research Will include a minimum of six sources, with at least three sources not from the Internet.
- Students will give a multimedia presentation comparing a novel or play to its film
- adaptation using at least three different multimedia devices.
- Students will read a minimum of six novels/plays, chosen by the teacher over the
- course of the year, as well as read several excerpts, chapters, and scenes of various other novels and plays.
- Students will keep a daily journal of reflective responses to films viewed and chapters and scenes read and discussed.
- Students will keep a Word Bank of literary and film terms and definitions for use in discussions and writings.

25. Instructional Methods and/or Strategies

Classic Fiction and Film will be taught with the understanding that the students in the class are college-prep senior-level students. Class discussions will formulate a large portion of class time, with discussions lead primarily by the teacher but also on occasion by individual students and small student groups. Teacher lecture will serve as a smaller component of the class instruction, with students taking notes for the aid of class discussions and writing assignments. Small, cooperative learning groups will also be utilized for the purpose of students teaching their peers what they have learned.

26. Assessment Methods and/or Tools

Students will be assessed in various ways, including, but not limited to,

- tests and quizzes 10%
- classroom discussions/participation 15%
- daily reflective journal writings and Word Bank 5%
- all formal essays/research paper 35%
- multimedia presentation 15%
- final exam 20%

Course Title

Advanced Creative Writing

Description of Target Group

Advanced Creative Writing is a one-semester class designed for students in grades 10-12. Students will learn to prepare manuscripts for submission to national publications in self-selected markets and contests. Students will also be required to contribute regularly to the school literary magazine. Active participation in the writing process, including making presentations and performing two public readings, is expected. Prerequisites include teacher recommendation and a grade of B or better in English 1, 2, 3, or 4 and completion of Creative Writing.

Purpose

The purpose of this course is to provide students with additional opportunities for writing imaginatively and effectively in the public domain. Personal style and writing confidence are emphasized.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Write to entertain, to persuade, and to inform.
2. Research and assess potential markets.
3. Respond to the requisites of specific market demands in the short story, poem, vignette, play, essay, and journal formats.
4. Generate strategies which foster originality.
5. Edit copy using standard conventions when appropriate.
6. Work individually and in cooperative learning groups.
7. Perform computer functions using word processing, graphics, and layout.
8. Follow manuscript format for submission of solicited and unsolicited work.
9. Prepare and follow production schedules.
10. Write query letters.

Assessment

Student achievement will be measured using a combination of portfolios, peer-editing, and teacher-generated tests.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Advanced Creative Writing (continued)

Activities

Guest speakers, field trips, writers' workshops, editing, reading, writing, submission of manuscripts, public readings, and literary magazine production.

Course Title

CREATIVE WRITING

Description of Target Group

Creative Writing is a one-semester class designed for students in grades 10-12. Students will be introduced to writing situations requiring creativity and experimentation, independent practice and writers' workshop critiques. Prerequisites include teacher recommendation and a grade of B or better in English 1, 2, 3, or 4.

Purpose

The purpose of this course is to develop students who will become more confident writers able to create and publish literary art.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Write to entertain, to persuade, and to inform.
2. Assess an audience in order to determine style and point of view.
3. Respond to the requisites of the short story, poem, vignette, essay, and journal formats.
4. Generate strategies which foster originality.
5. Edit copy using standard conventions when appropriate.
6. Work individually and in cooperative learning groups.
7. Perform computer functions using word processing, graphics, and layout.

Assessment

Student achievement will be measured using a combination of portfolios, peer-editing, and teacher-generated tests.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Guest speakers, field trips, writers' workshops, group editing, reading, writing, and literary magazine production.

Course Description

Course overview: The grade 11 Expository Reading and Writing Course (ERWC) engages students in the discovery of who they are as persons, the realization of the ways in which they can participate in society, and their development as critical consumers and effective communicators within society. Teachers and schools build and personalize the yearlong course by selecting from approximately 35 modules (instructional units) to meet rigorous, college-preparatory learning goals in reading, writing, listening, and speaking for all students while promoting student interest and motivation. Employing a rhetorical, inquiry-based approach that fosters critical thinking, student agency, and metacognition, the course includes six full-length modules drawn from five categories: 1) American foundational documents; 2) American drama; 3) full-length books; 4) research; and 5) contemporary issues (two modules). In addition, the course includes five concept mini-modules that address transferable skills applicable to conceptual development and practice across all modules, e.g., genre awareness, goal setting and self-assessment, rhetorical situation, Aristotelian appeals. The core structure of all the modules—the Assignment Template—progresses along an "arc" from reading rhetorically (preparing to read, reading purposefully, and questioning the text) to preparing to respond (discovering what you think) to writing rhetorically (composing a draft, revising rhetorically, and editing). By the end of the course, students will have read a range of literary and nonfiction text genres and produced 10-12 culminating projects, including academic essays, research reports, creative writing and performances, and multimedia presentations, from initial draft to final revision and editing.

Note: The course materials listed with this submission represent the materials from a sample sequence of 11 modules for the categories as described above; they do not represent all possible course materials.

Course Content:

American Foundational Document Module (Category 1)

The four American foundational document module selections include the following: "The Big Breakup: The Declaration of Independence"; "*March* and the Civil Rights Movement, Then and Now"; "Segregation, Integration, Justice"; and "Speech in America." Students read and analyze texts such as the Declaration of Independence, the Bill of Rights, Lincoln's Second Inaugural Address, the Gettysburg Address, or *Brown v. Board of Education* in conjunction with Web sites, videos, a graphic novel (*March, Book Three),* or other contemporary articles related to the themes of the selected module. In each module, students relate historical American documents to issues of the day and synthesize their understandings to create an argument for the role the Declaration of Independence should have in our society today; what the civil rights movement should look like today; or how best to integrate people of different backgrounds or abilities, or students identify an action to solve a problem in the school, community, or world.

Unit Assignment(s): Sample Assignment from "The Big Breakup: The Declaration of Independence":

Activity 28: Considering Your Task and Your Rhetorical Situation

What is or should be the role of the Declaration of Independence in our country today? Taking into account the survey your class did in Activity 17, the two articles from the *Washington Post,* and the text of the Declaration itself, write an essay in which you define the role that the

Declaration should have, support why it should have this role, and discuss some concrete things that could be done to achieve it.

There are many different positions that could be taken. One could argue, for example, that the Declaration achieved its purpose at the time, but now that we are a separate country, its job is done. On the other end of the spectrum, one could argue that it expresses the hopes and dreams of our country and should be remembered and consulted by everyone. If the latter is the case, both Gerson and NPR have suggested ways that people might keep the ideas of the Declaration in the forefront of the conversation, though their ideas may not be the best ones. Whatever position you take, support your arguments with words from the Declaration itself, from the discussions you have had in class, and from the two articles. You may also want to consider other sources.

You may find that some of the paragraphs you wrote in doing the activities in the module can be reworked to fit into your essay. Look back through your notes to see if there is material you can use.

a. Students will synthesize their readings and collaborative discussions in order to take a position expressed through an argumentative essay.

b. Written essay

c. Students will learn to engage in collaborative discussions, synthesize multiple perspectives, analyze writing prompts and their rhetorical situation (audience, occasion, purpose), gather evidence and develop a position, and argue effectively in writing creating a product from initial drafting through final revision and editing using classroom technology, such as Google classroom, as appropriate.

American Drama Module (Category 2)

The two American drama module selections include "*The Crucible:* A Power Play" and "So What's New? *Zoot Suit* and New Dramatic Potentials." Students read and analyze one of the full-length plays and, for *The Crucible,* a supplementary article and Web sites. Students perform dramatic readings of *Zoot Suit* and view a performance online. In the culminating task for *The Crucible,* students consider the core question—How is power used and abused?—and write an essay evaluating a character from the play or write a one-act play featuring a contemporary character of their invention. For *Zoot Suit,* students write a third act for the play exploring a present-day iteration of one of the play's characters.

Unit Assignment(s): Sample assignment from "*The Crucible:* A Power Play":

Activity 23: Considering Your Task and Your Rhetorical Situation

For the culminating assignment in this module, you will write an essay addressing the core question: How is power used and abused?

Prompt 1

Background: *The Crucible* presents a series of power plays between characters and groups of different status. Throughout the play, education, title, luck, age, gender, strength, wealth, and social connectedness confer power on individuals. In this essay, you will examine power brokerage—how characters get, use, and maintain power.

Writing Task: Choose a major character from *The Crucible*, and using the French and Raven's Five Forms of Power article, evaluate how that character assumes, utilizes, and maintains (or loses) power throughout the play. What power bases do they use? How do they use them? How could they have used a different power base to act with more humanity in the story and mitigate, or lessen, the abuse of power by themselves or other characters in the play? Make sure that you refer to your character's development of power throughout the play. Cite your evidence from at least two acts of the play. Make sure that all your assertions are documented by correctly cited facts (quotes) from your sources and supported with the quote and your rationale. The rationale should backup, or defend, your assertions.

Prompt 2

Writing Task: Arthur Miller wrote *The Crucible* in response to his concerns about McCarthyism, the practice of making accusations of subversion or treason without proper regard for evidence. Choose a contemporary group that is currently at risk of suffering from similar abuses of power. Create a character that represents this potentially persecuted group. Write a one-act play featuring this character. Your dramatic arc should demonstrate how humanity could mitigate or fail to combat abusive power.

In selecting your topic, consider the timeliness of your message. What topics or issues are particularly relevant in the current social and historical context? How might your make use of this *kairotic* moment?

After writing your act, complete a one-page reflection in which you address the following: In your act, what power base(s) did your characters use? How did their actions mitigate the abuses of power? How is your act particularly relevant to our current social and historical context? How are your characters and situations inspired by those of *The Crucible*?

a. Students will engage in collaborative discussions and conduct a character analysis considering the question at issue in order to take a position expressed through an argumentative essay. *OR* Students will create a character based on a contemporary issue related to themes from *The Crucible* and write a one-act play.

b. Written essay *OR* one-act play

c. From this activity, students will learn to engage in classroom discussions collaboratively, conduct a character analysis, gather evidence from the text, analyze writing prompts and their rhetorical situation (audience, occasion, purpose), develop a position, and argue effectively in writing. *OR* Students will learn to build on the themes of the play to create a character and write a narrative piece. Students learn to create a written product from initial drafting through final revision and editing, using classroom technology, such as Google classroom, as appropriate.

Full-Length Book Module (Category 3)

The four book module selections include the following: the great American novel, *The Great Gatsby;* the memoir of a young immigrant, *The Distance Between Us;* the book of linked short stories based on the Vietnam War, *The Things They Carried*; and the story of learning, persistence, and innovation during the Malawi famine, *The Boy Who Harnessed the Wind.* Students read and analyze the selected book considering its literary and rhetorical features and questions at issue. Students typically engage in activities for of each section of the book—often with a major writing assignment at the conclusion of each. For example, *The Great Gatsby*

module requires students to complete four writing assignments: a letter to Nick Carraway about the social landscape of a student's own neighborhood, an essay about Gatsby's true identity, a definitional essay about love, and an essay about how the novel has affected each student's attitudes toward literature and life.

Unit Assignment(s): Sample assignment from "*The Things They Carried* and the Power of Story":

You have been analyzing, exploring, and experimenting with the original literary form that Tim O'Brien invented for *The Things They Carried.* Write a fictionalized version of an event similar to the one you have experienced, using two or more of O'Brien's writing moves to convey the felt truth of this event (the point you are trying to make). You may want to adopt one of your letters or stories for this purpose—or choose another memory from your backpack. If you would prefer, you can reimagine an event from the life of someone you know, such as a parent or grandparent.

Simulate O'Brien's approaches, but make this narrative your own. You might create a fictional protagonist who shares your name and write a narrative and descriptive passage about what "you" see and think and do, or you can create two or more versions of this same event that are told from multiple perspectives or with differing styles.

Be sure to at least use the following two O'Brienesque techniques in your story:

1. A central indelible (unforgettable) image or moment that conveys the strongest core of the memory or the truth of the story. This image should be revisited several times and be told with variations. See the following stories for models of a repeated central image:
    - "The Things They Carried" (death of Ted Lavender)
    - "How to Tell a True War Story" (death of Curt Lemon)
    - "The Man I Killed" / "Ambush" / "Good Form" (the killing of the "man")
    - The "field stories in readings 6 and 7 (the death of Kiowa)
2. Repetition of the exact same phrasing or words. This could be combined with the central image, as O'Brien does in describing "the man [he] killed."

a. Students will reflect on classroom discussions and the stories read in the book and create their own narrative of an event.

b. Written narrative

c. Students will learn to analyze literary text and incorporate imagery and effective diction in their own narrative writing, using classroom technology, such as Google classroom, as appropriate.

Research Module (Category 4)

The two research module selections include "Service and Sacrifice" and "Daily Challenge: Mental Illness in Our Lives." For the first, students read the full-length work, *Claudette Colvin: Twice Toward Justice,* and then conduct primary and secondary research on a community change movement of their choosing. They consider how change occurs and explore how to tell the story of a movement in their culminating task. For the second, students investigate issues surrounding Post-Traumatic Stress Disorder (PTSD) and other mental illnesses. They read and analyze a

newspaper account of a veteran with PTSD and then research a mental illness in order to write and perform a public service announcement.

Unit Assignment(s): Sample assignment from "Service and Sacrifice":

Activity 16: Considering Your Task and Your Rhetorical Situation

Project Overview: We have been reading about Claudette Colvin and the role she played in desegregating buses in Montgomery, AL, and in the nation. Our discussions of the book focused on her role in supporting this change, the risks and rewards of her actions, and the overall trajectory and *kairos* that are a part of such major social change. We also compared these events with other community change events. The point of this reading and these discussions is for us to consider what role we play in our communities in making change, and for us to consider the very important notion of the relationship between risk and reward in community action contexts.

Prompt 1: For this writing project assignment, building from Activity 14, you will analyze how change happens socially and rhetorically in communities. Drawing on the book about Colvin, as well as at least one other community change event (locally or nationally), highlight the important moments that led toward change for the residents of Montgomery as well as what moments led the people of another movement to make change and compare how moments in both situations created opportunities for change. Be sure to focus not only on events, but also the timing of those events, the genres of the events (for example, community meetings, speeches, flyers announcing events, maps of pick up and drop off locations, schedules and maps for people who needed rides, legal documents, books or articles that report on the event in the aftermath, etc.), the audience and purpose of people taking action, the opportunities that people took to take action, and the social factors that contributed to how events unfolded (for example, laws like Jim Crow that set the stage for activism). You also need to include multimedia elements as a way to enhance the meaning and analysis of your reflection. The point of this writing is to reflect with evidence, both textual and multimedia, about what it means and what it takes to make meaningful and large scale social change.

Prompt 2: For this writing project assignment, building from Activity 14, choose an action that happened in your local or national community that should be documented and told. Interview knowledgeable residents of your community. Search local newspapers for information about how that story unfolded. Visit a local historical society or museum to brainstorm ideas or to find artifacts (that you can photograph and include in your text). Drawing on your experience reading about Colvin and the Montgomery Bus Boycott, use similar writerly practices and genre elements as Hoose used in his book to tell your own community's story.

For both writing projects, you need to include at least five sources, which must include at least one primary, one secondary (the texts we read in class or that you read for homework can be counted toward these four), and one multimedia. Works cited needs to be in MLA or APA format.

a. Students will build on classroom discussions and other activities to research an issue either through secondary sources (prompt 1) or primary sources (prompt 2) in answer to the questions posed and develop a coherent written analysis.

b. Written report

c. Students will learn to research an issue either through secondary sources (prompt 1) or primary sources (prompt 2) in answer to the questions posed, synthesize and document

sources, and present a coherent written analysis, using classroom technology, such as Google classroom, as appropriate.

Issue Module (Category 5)

The 14 issue module selections include the following: "Chance Me: Redefining Merit"; "Changing Minds: Thinking About Immigration"; "Civil Disobedience From Thoreau to Present"; "The Danger (and Power) of a Single Story"; "Generation to Generation: Learning from Each Other"; "A Headache Becomes a Death Sentence: The NFL's Arguments on the Concussion Crisis"; "Human Impact on Climate"; "Nonconformity: Yay or Nay?"; "Poetry is Among Us"; "Racin' America"; "The Really Big One" (about earthquakes or other natural disasters); "Rhetoric of the Op-Ed Page"; "Teenage Sleepers"; and "What's Next? Thinking About Life After High School." Teachers and schools select at least two issue modules to teach. Based on the modules selected from the other categories, teachers and schools consider the balance of text genres, writing assignment types (argumentative, informative, narrative), opportunities for multimedia and oral presentations, assignment length, state standards addressed, and students' needs and interests in order to select the most appropriate issue modules. All modules include extensive collaboration and discussion, examination of vocabulary, text-based critical thinking questions, and analysis of rhetorical effects. Many of the issue modules engage students in using technology to identify additional sources of information and most offer choices of issues and assignments that students explore beyond the initial readings and assigned activities.

Unit Assignment(s): Sample assignment from "Changing Minds: Thinking About Immigration":

Activity 20: Considering Your Task and Your Rhetorical Situation

Read the writing assignments for this module and make notes in response to the questions below:

Academic Essay

Prompt 1: Changing Other People's Minds

What can we learn from Ropeik and Machado in order to try to change the minds of people who "hold tenaciously" to myths about immigration?

Write an essay to be posted on a Web site for people interested in issues of changing minds about immigration such as the ADL Web site. Make an argument about how to go about changing peoples' minds on controversial topics like immigration. Use evidence from Ropeik's and Machado's articles, from "Myth and Facts About Immigrants and Immigration," and your own observations and/or reading.

Make clear whose ideas or words you are using by including the author's names and titles of the articles. You do not need to include in-text citations (page numbers) or a reference list. If you wish to cite discussions in class and the role the Norms for Civil Discourse that your class created, do not use the names of your fellow students.

Prompt 2: Changing My Mind

As a high school student, you may be an immigrant, from a family that includes immigrants or be surrounded by immigrants and the children of immigrants. You are inundated with information and misinformation about immigration.

Write an essay to be published in your school newspaper about how your own views about immigration have evolved in response to new information and experiences. Use evidence from both Ropeik's and Machado's articles and from "Myth and Facts About Immigrants and Immigration" to explain the stages in the evolution of your thinking and to argue for your current view about immigration.

You must make clear whose ideas or words you are using by including the author's names and titles of the articles. You do not need to include in-text citations (page numbers) or a reference list. If you wish to cite discussions in class, do not use the names of your fellow students.

To prepare to write, take notes on your responses to the following questions.

- Now that you have read the texts for this module, what is your position about what it takes to change someone's mind on a controversial topic like immigration?
- What will your purpose be in writing this essay?
- Who will read your essay? How will you take into account your readers' knowledge, values, and assumptions? How will you engage in civil discourse and be respectful of alternative viewpoints?
- How will you develop your own credibility as someone knowledgeable on the subject of opinion formation and immigration at this time in our country's history?
- How will you balance your appeal to your readers' emotions with your need to provide sound factual information about immigration?

a. Students synthesize their readings and discussions to address the final writing prompt. Both prompts ask students to develop an argument.

b. Argumentative writing for a Web posting or school newspaper

c. Students will learn to synthesize multiple perspectives, analyze writing prompts and their rhetorical situation (audience, occasion, purpose), gather evidence and develop a position, and create a written product from initial drafting through final revision and editing, using classroom technology, such as Google classroom, as appropriate.

Sample assignment from "The Danger (and Power) of a Single Story":

Activity 22: Considering Your Task and Your Rhetorical Situation

After you listen to your teacher read the prompt, reread it and circle any unfamiliar words. Annotate the prompt with numbers indicating the steps you need to complete. Your class will work together to create a list of strategies to achieve each step.

Prompt 1: What is a dangerously narrow single story from a community you know? Perhaps it's one you believed until you learned more about the people involved, or maybe it's a single story some people believe about you or your family. Develop a narrative (fiction or nonfiction) to help complicate this simplistic belief for a specific audience. If your narrative focuses on a community different from your own, position yourself as an ally rather than co-opting the perspective you've selected. Anticipate your audience's needs by selecting a medium, genre, and style that will invite interest and empathy.

Prompt 2: In her TED Talk "The Danger of a Single Story," author Chimamanda Ngozi Adichie argues that stories have great power, both "to dispossess and to malign," and "to empower and to

humanize." Choose a story from this module and decide whether, in its craft and appeal to a specific audience, it has achieved the power Adichie describes. Has it complicated a single story for an audience that previously held a simplistic view? Does it fall short by appealing only to audiences already familiar with the complex subject? Or does it wield a darker power, reinforcing a stereotype or maligning a marginalized community? Using specific evidence from Adichie's speech, your analysis of the short story, and your investigation of the story's intended audience, create an argument to convince your classmates and teacher that the story you select should be upheld as an example of literary social justice or rejected due to its limited appeal or purpose.

a. Students synthesize their readings and discussions to address their choice of final writing prompt. One prompt asks students to create a narrative, and the other asks them to develop an argument.

b. Narrative story based on the issues addressed in the module or an argumentative essay to be presented to the class

c. Students will learn to synthesize multiple perspectives, analyze writing prompts and their rhetorical situation (audience, occasion, purpose), gather evidence and develop a position, and create a written product from initial drafting through final revision and editing, using classroom technology, such as Google classroom, as appropriate.

Concept Mini-Module (Category 6)

The nine concept mini-module selections include the following: "Introducing ERWC 11: Reflecting on Learning and Using Portfolios"; "Introducing the Rhetorical Situation"; "Three Ways to Persuade"; "Email, Text, or Call? Learning to Write through Genre Awareness"; "Becoming Assessment Savvy"; "Learning for Fun and Future"; "The Classical Pattern of Persuasion"; "The Toulmin Model of Argumentation"; and "Final Reflection on Learning: The ERWC 11 Portfolio." These mini-modules take a few days to a week or two to teach and address many key or foundational concepts to ERWC. They focus on ideas considered threshold concepts for the course that will be used in most modules as well as in other disciplines. The most critical of these are the rhetorical situation (audience, purpose, occasion); Aristotelian rhetorical appeals (*ethos, pathos,* and *logos*); metacognition; and transfer of learning. The concluding mini-module, "Final Reflection on Learning," provides opportunities for students to look back on the year's learning and review what they've discovered and aspects of their reading, writing, listening, and speaking that may call for further development as they prepare for college and careers. Both the introductory and concluding portfolio mini-modules directly address elements of Universal Design for Learning, including goal setting, formative assessment, student self-assessment, and metacognition.

Unit Assignment(s): Sample assignment from "Learning for Fun and Future":

Activity 4: Considering Your Task and Your Rhetorical Situation

The writing task for this module is to write a letter to another student in your class, using your understanding of *detect*, *elect*, and *connect* to suggest how your colleague can apply skills they are learning in their English class to one of their other classes. In this case, you will be doing the work of detecting for your colleague, and you will suggest ways that they can make connections between classes, but it will be up to them to elect to follow your advice, so make it convincing.

In order to make your advice convincing and helpful, you will need to interview your colleague to gather information and consider the connections you can help them make. They may be more inclined to use your advice if the class you suggest they apply their English skills in is one they especially enjoy or perhaps is one in which they struggle. Here are some questions you might ask to get you started. You will probably need to ask more to get all of the information you need. Make sure you take careful notes of your interview.

- What classes are you taking other than English?
- Which subject do you find the most interesting and enjoyable?
- In which class do you struggle the most?
- What kinds of reading do you do in your class?
- What kinds of writing do you do in your class?
- What other kinds of activities do you do?

Because you want to be helpful to your colleague, try to use your imagination to look for unexpected ways they might use English skills to deepen their learning in whichever class you choose to advise them about.

a. Students interview their classmates and write a persuasive letter suggesting how they can transfer what they learn in English to other settings.

b. Written letter

c. Students will learn to synthesize what they have learned about transfer and apply it to a classmate's own situation by writing a letter of advice. They will learn to analyze their rhetorical situation (audience, purpose, occasion) to write the most effective letter, using classroom technology, such as Google classroom, as appropriate.

Sample assignment from "Three Ways to Persuade":

Activity 8: Considering Your Task and Your Rhetorical Situation

Consider the following quotations from Aristotle in defense of rhetoric:

1. Rhetoric is useful because the true and the just are by nature stronger than their opposites and if judgments are not made in the right way, the true and the just will be defeated by their opposites.
2. Even if we were to have the most exact knowledge, it would not be easy for us in speaking to use it to persuade some audiences. Speech based on knowledge is teaching, but teaching is impossible with some audiences; rather it is necessary for . . . speeches as a whole to be formed on the basis of common beliefs.
3. It would be strange if an inability to defend oneself by means of the body [such as by learning boxing] is shameful, while there is no shame in an inability to use speech.
4. If it is argued that great harm can be done by unjustly using such power of words, this objection applies to all good things except virtue, and most of all useful things like strength, health, wealth, and military strategy; for by using these justly one would do the greatest good, and unjustly, the greatest harm. (Kennedy 34-35)

We have a saying, "The facts speak for themselves." In quotation number 1, Aristotle is saying that sometimes the facts need a little help from rhetoric. Taking this quote and the other three into account, does Aristotle make a good case that we should study and use rhetoric? Or is the use of rhetoric, especially ethos and pathos, deceptive and bad? Write a short essay in which you take a position on the use of rhetoric and analyze the four quotations from Aristotle.

a. Students reflect on classroom discussions and other activities to write an essay taking a position on the use of rhetoric.

b. Written essay

c. Students will learn to synthesize what they have learned about Aristotelian appeals and consider Aristotle's view in writing a short argumentative essay, using classroom technology, such as Google classroom, as appropriate.

Course Description Submitted to UC for Approval

June 2, 2019

Course Title: CSU Expository Reading and Writing 3.0 (12th)

Length of Course: Full Year

Subject Area/Discipline: English (B)

UC Honors Designation: No

Prerequisites:

Completion of 11th grade "B" English course: Required

Completion of CSU Expository Reading and Writing (11th): Recommended

Integrated Course: No

Grade Level: 12th

Course Learning Environment: Classroom Based

Course Overview

The grade 12 Expository Reading and Writing Course (ERWC) engages students in the discovery of who they are as persons, the realization of the ways in which they can participate in society, and their development as critical consumers and effective communicators within society. Teachers and schools build and personalize the yearlong course by selecting from approximately 40 modules (instructional units) to meet rigorous, college-preparatory learning goals in reading, writing, listening, and speaking for all students while promoting student interest and motivation. Employing a rhetorical, inquiry-based approach that fosters critical thinking, student agency, and metacognition, the course includes five to six full-length modules drawn from three categories: 1) Shakespeare drama; 3) full-length books; and 3) contemporary issues (three to four modules). In addition, the course includes two short portfolio modules and at least three mini-modules that address transferable skills applicable to conceptual development and practice across all modules, e.g., genre awareness, goal setting and self-assessment, rhetorical situation, Aristotelian appeals. The core structure of all the modules—the Assignment Template—progresses along an "arc" from reading rhetorically (preparing to read, reading purposefully, and questioning the text) to preparing to respond (discovering what you think) to writing rhetorically (composing a draft, revising rhetorically, and editing). By the end of the course, students will have read a range of literary and nonfiction text genres and produced 10-12 culminating projects, including academic essays, creative writing and performances, and multimedia presentations/research reports, from initial draft to final revision and editing.

Note: The course materials listed with this submission represent the materials from a sample sequence of 11 modules for the categories as described above; they do not represent all possible course materials. The modules included in this sample are "Introducing ERWC 12: Reflecting on Learning and Using Portfolios"; "Introducing Genre as Rhetoric"; "Waste More, Want More"; *The Tragedy of Hamlet, Prince of Denmark;* "Introducing Exigence"; *The Curious Incident of the Dog in the Night-Time;* "Bored and Brilliant"; "Introducing Kairos"; "On Leaving | On Staying Behind"; "Ready to Launch"; "Final Reflection: The ERWC 12 Portfolio."

Course Content

Shakespeare Drama Module (Category 1)

Unit Summary

The two Shakespeare drama modules, from which schools/teachers select one, include the following: *The Tragedy of Hamlet, Prince of Denmark* and *The Tragedy of Othello, the Moor of Venice.* Students read and interact with the dramas in dynamic and interesting ways and engage with Shakespeare's rich and complex language. The modules combine close readings, written reflections, performance activities, and in-class discussions as a means of prompting students to think deeply about the ways in which words can be used to create meaning. Students also analyze Shakespeare's use of character to develop his themes.

Sample Assignment from *The Tragedy Of Hamlet, Prince of Denmark*

Activity 79: Considering Your Task and Your Rhetorical Situation

You have now read and analyzed five of Hamlet's soliloquies:

- "O that this too sullied flesh would melt" (Act 1, scene 2, lines 133-164)
- "O what a rogue and peasant slave am I!" (Act 2, scene 2, lines 576-634)
- "To be or not to be" (Act 3, scene 1, lines 64-96)
- "Now I might do it pat" (Act 3, scene 3, lines 77-93)
- "How all occasions do inform against me" (Act 4, scene 4, lines 34-69)

Your next writing assignment will require you to compose an essay that focuses on whichever of Hamlet's soliloquies you believe is important for the audience to understand a key element of the plot; this might include Hamlet's upcoming plans and his current state of mind. What would happen to the audience's understanding of Hamlet and the play if it were removed?

Your essay will be shared with your classmates or another group familiar with the play. Provide a clear claim statement explaining the soliloquy's importance to the audience. In your analysis of its significance, include specific examples and/or quotations to support your claim(s) and indicate why those passages are particularly significant.

The activities below clarify aspects of the soliloquies to consider for the writing task.

- Choose the soliloquy you plan to analyze.
- Identify the rhetorical situation (speaker, audience, purpose, and occasion) for each soliloquy. Although Hamlet is the speaker in each, how might you characterize his state of mind? What is he worried about? What problem(s) does he need to solve? What has happened just before that has generated his need to explore his thinking in this way?
- What does this soliloquy help the audience understand about Hamlet's state of mind at the moment? Why is this important to their understanding of the play?
- Once you have decided on a soliloquy, go over it slowly, noting Shakespeare's choices of language, imagery, and form. An analysis is not a simple summary; your job is to analyze how the soliloquy works, not just what it says.

Summary: a. How will students complete the assignment? b. What will students produce? c. What will students learn?

a. Students reflect on their readings and performances of one of Hamlet's soliloquies and analyze its importance to the plot and its significance to the audience.

b. Written essay

c. Students learn to analyze the rhetorical situation of the chosen soliloquy and to analyze how the soliloquy works to help the audience understand the play and the state of Hamlet's mind. They learn to write an analytical essay that engages closely with the text and to use revision to improve the clarity, form, and style of their writing.

Full-Length Book Module (Category 2)

Unit Summary

The six book modules, from which teachers/schools select one, include the following:

- Big Brother and the Authoritarian Surveillance State: George Orwell's *1984*
- Huxley's classic dystopian novel, *Brave New World*
- Cambodia Remembers, featuring three memoirs read in literature circles: *Never Fall Down; First They Killed My Father: A Daughter of Cambodia Remembers; Stay Alive, My Son*
- The *Curious Incident of the Dog in the Night-Time,* featuring a boy with autism who sets out to solve the murder of a neighbor's dog
- *Into the Wild,* the story of Chris McCandless and his journey through the West and Southwest and eventual demise in Alaska
- Working Class Hero, based on the comic novel, *Hawkeye: My Life as a Weapon*

Students read and analyze the book for the selected module considering its literary and rhetorical features and questions at issue. Students typically engage in activities for each section of the book--often with a writing assignment or other task at the conclusion of each. The *Brave New World* module, for example, asks students to complete writing tasks addressing key issues at the end of each of four sections. Other modules present a range of culminating tasks in which students write a book review, develop a short digital documentary, write a human interest article for a magazine, conduct Internet searches to respond to core questions, prepare a poster session presentation, or choose among reading-based argument prompts to write an academic essay.

Sample Assignment from *The Curious Incident of The Dog in the Night-Time*

Activity 55: Considering Your Task and Your Rhetorical Situation

For your summative writing assignment, you have a choice of six options. Choose ONE of the prompts that follow to respond to in a 750-1,000 word essay. You will be writing for an academic audience as part of an ongoing discussion about Mark Haddon's novel *The Curious Incident of the Dog in the Night-Time*. Be sure to use MLA style.

Option #1: What message or theme does the novel present about lying? You might consider the following questions in developing your interpretive argument:

- What does the novel suggest about the causes and effects of lying?
- Does the novel distinguish among different types of lies?
- Does the novel offer a judgment about lying?
- How do Christopher's beliefs and behavior complicate the novel's message about lying?
- What does the novel help us understand about lying and human relationships, communication, motives, values, and/or capacity for self-knowledge?

Support your argument with evidence from the novel, other readings, and your personal observations and experiences as relevant. |

Option #2: What do we learn from Christopher's story and perspective? What do we learn from his mother's and father's perspective? What do we learn from synthesizing multiple perspectives? Consider the extent to which the character's various perspectives—and their collective impact—reveal truths or insights about human nature. Support your argument with evidence from the novel, other readings, and your personal observations and experiences as relevant. |

Option #3: How does Christopher define love and truth? Do these definitions change over the course of the novel? How do other characters define these concepts? To what extent do you agree or disagree with these definitions? (question of definition)

Option #4: Ursula Le Guin says that "a novelist's business is lying." What does this mean? To what extent do you agree or disagree with her characterization of novelists and novel writing? Support your position with examples from *The Curious Incident of the Dog in the Night-Time,* as well as from other sources and your own experience as relevant. (question of definition)

Option #5: To what extent is an exceptional perspective an advantage? Discuss the drawbacks and/or benefits of being able to see things differently from other people, using examples from *The Curious Incident of the Dog in the Night-Time*, as well as from other sources and your own experience as relevant. (question of quality)

Option #6: In "The Ways We Lie," Stephanie Ericsson challenges the assumption that, in some cases, the truth will cause more harm than a lie. She condemns white lies as an act of arrogance: "[...] in effect, it is the liar deciding what is best for the lied to. Ultimately, it is a vote of no confidence. It is an act of subtle arrogance for anyone to decide what is best for someone else" (181). Write an argumentative essay in which you evaluate whether or not Christopher's father was justified in lying to his son in Mark Haddon's novel *The Curious Incident of the Dog in the Night-Time*. Consider Ericsson's criticism of white lies, and establish your own ethical criteria for making this judgment. For instance, do you believe the end justifies the means? Or do you think there are absolute ethical principles we must follow regardless of the outcome? In other words, are some things always right or always wrong? Include an analysis of Christopher's father's reason for lying about Christopher's mother. Support your position with evidence from the novel, the other readings in this module, and your personal observations and experiences as relevant. (question of quality)

To choose the conversation you would like to join, you might start by looking back at your summaries of Chapter 29, Chapter 37, Chapter 83, Chapter 101, Chapter 113, Chapter 131, Chapter 139, Chapter 151, Chapter 181, and Chapter 199. Are there any observations Christopher makes about human nature or his personal experience that you'd like to respond to? You might also look for ideas in your quickwrites and notes or sketchnotes. What aspects of the novel and class discussions did you find most interesting? Base your selection of one of the six options on your interests and the materials you've gathered.

Summary: a. How will students complete the assignment? b. What will students produce? c. What will students learn?

a. Students reflect on their summaries of various chapters of the book and other assignments to identify the question that most interests them.

b. Students write an argument essay of 750-1,000 words.

c. Students learn to practice extended inquiry and develop and support a line of reasoning in response to a question at issue. They deepen their understanding of logic and perspective while strengthening their ability to negotiate different textual voices.

Issue Module (Category 3)

Unit Summary

The 19 issue modules, from which schools/teachers select three or four, include the following:

- "Bored and Brilliant"
- "Brace for Impact"
- "Community Activism"
- "The Daily Me"
- "Fake News and Bias in Reporting"
- "Fiction Is Truth Too"
- "From Hip-Hop to Mashup: Remix Culture and Copyright Law"
- "Island Civilization"
- "Juvenile Justice"
- "Language, Gender, and Culture"
- "Narrative Medicine"
- "The New Space Race"
- "On Leaving | On Staying Behind"
- "Politics of Food"
- "Ready to Launch"
- "The Value of Life"
- "Waste More, Want More"
- "What's Next? Thinking About Life After High School"
- "Who Is Diversity For?"

Teachers and schools select two to three issue modules to teach. Based on the modules selected from the other categories, teachers and schools consider the balance of text genres, writing assignment types (argumentative, informative, narrative), opportunities for multimedia and oral presentations, assignment length, state standards addressed, and students' needs and interests in order to select the most appropriate issue modules. All modules include extensive collaboration and discussion, examination of vocabulary, text-based critical thinking questions, and analysis of rhetorical effects. Many of the issue modules engage students in using technology to identify additional sources of information and most offer choices of issues and assignments that students explore beyond the initial readings and assigned activities.

Sample Assignment From "Waste More, Want More"

Activity 18: Considering Your Task and Your Rhetorical Situation – The Writing Task

Up until this point, you have been paying careful attention to a single text, working hard to understand the writer's argument, including how he develops and supports that argument. But Andrew Lam is just one voice in the conversation—and in fact, the argument he makes about consumer culture and garbage production participates in several ongoing conversations about these and related issues. Now it is your turn to respond to these issues by joining a conversation of your choice.

Writers respond to rhetorical situations by taking rhetorical action. That is, they target specific audiences and occasions and use their words to change how others think, act, or feel. For this assignment, you will have your choice of taking rhetorical action through one of two ways: research or advocacy. Students who chose the research option will interpret and synthesize multiple sources that deepen their audience's understanding of the issue. The research option will thus be a reading-based argument essay that may respond directly to Lam's article as one of the sources. Students who chose the advocacy option will develop a communication plan and artifacts (e.g., PSAs, emails, posters, digital stories, tweets, policy recommendations, infographics, etc.) directed at changing their audience's response to the issue. This option can take the form of project-based learning and may involve proposing and/or implementing a change in the students' school or community, such as adopting "The Last Straw" program (a program aimed at eliminating single-use plastics), creating a school composting program, or persuading school administrators and raising funds to install campus hydration stations that encourage the use of refillable water bottles.

BOTH options must include the following:

- Citations from multiple sources (for the advocacy option, these may appear in the artifacts as footnotes, in-text citations, links, references, expert testimony—whatever is most appropriate for the genre selected)
- A works-cited list
- Reading-based argumentation
- An answer to a question at issue
- Appropriate and effective use of genre conventions
- See below for additional directions for the individual options.

OPTION #1: Research Project

Write a 1,000 to 1,500-word research paper responding to a question at issue related to the topics of consumer culture and waste management. Begin by designing and conducting a research project investigating your question. Consider the work that others have done to address this issue. Gather, analyze, and evaluate evidence from multiple sources. Look for significant trends in your data. Present your findings through a well-organized essay crafted for an academic audience.

In addition to reading scholarly sources (i.e., sources vetted through a peer-review process and published by academic presses), you may also conduct research by doing any of the following:

- Obtain a food scale and weigh your food waste after each meal for a period of one week. Record your data in a spreadsheet. Analyze trends in your data and draw conclusions using evidence-based reasoning. Include graphs or charts of your data in your research essay.
- Conduct field research at a grocery store on any of the following: product packaging; product origin; product expiration dates; consumer use of plastic, paper, or reusable bags; waste management, etc. Include photographs in your research essay.
- Conduct field research at a waste management facility. Take a tour or attend a class if possible. Many waste management facilities offer educational programs to the public, including classes in home composting.

OPTION #2: Advocacy Project

Step One: Create a 500-word formal communication plan detailing your rationale for taking action and your strategies for reaching your target audience, including the genres and media platforms you intend to use. Audiences must be specific and focused (e.g., local business owners, school administrators, elected representatives, community groups, news organizations, mothers, millennials, etc.). The rationale for the

advocacy plan must include research on the issue(s) and evidence-based reasoning supporting your claims. Be sure to cite your sources. Write your communication plan for a professional audience.

NOTE: Communication plans are typically internal documents (i.e., documents only shared within an organization or company). They are written to guide the development of the artifacts (e.g., newsletters, social media posts, PSAs) that will be published for the target audience. You can think of the communication plan as the design specifications for the other texts that will be produced.

Step Two: Now create an artifact or set of artifacts suited to your purpose and audience. These artifacts can be in any genres most appropriate for communicating with the people you are trying to reach. For instance, if your plan is to communicate with other high school students through social media, you can prepare a series of blogs or tweets. Alternatively, if your plan is to persuade local business owners to change their practices, then you can write a formal email and/or develop a tri-fold brochure or flyer. Keep in mind your artifact(s) must total 500 to 1,000 words. Cite sources as relevant (e.g., numerical data from www.savethefood.com/ cited in a brochure).

Possible actions and artifacts could include (but are not limited to) the following:

- A proposal for removing plastic straws from the school cafeteria
- A campaign encouraging students and teachers to bring reusable cups, water bottles, and food containers to school
- An education program on how food choices impact the environment
- A Web site featuring tips for waste management
- A cookbook featuring local ingredients
- A "Weigh the Waste" program at your school
- A bilingual guide to home composting
- A proposal for school hydration stations (include cost analysis)
- A newsletter offering tips on grocery shopping and food preparation and storage
- A proposal to establish a Food Bus program at your school for lunch leftovers

Summary: a. How will students complete the assignment? b. What will students produce? c. What will students learn?

a. Based on the activities and readings in the module to this point, students choose to conduct a research project or create an advocacy project. Both projects address a question at issue raised in the module.
b. Students produce either a 1,000 to 1,500-word research paper, or they produce a 500 word communication plan with an artifact or artifacts.
c. Students learn to take rhetorical action through research or advocacy. They develop and support a response to a question at issue. Students come to understand genre as a component of rhetorical situations and develop skill in genre analysis in preparation for making effective choices about genre forms and features in their final projects.

Sample Assignment from "Bored and Brilliant"

Activity 12: Considering Your Task and Your Rhetorical Situation

Option 1: Argument

"It seems like every generation of parents has a collective freak-out when it comes to kids and new technologies; television and video games each inspired widespread hand-wringing among grown-ups. But the inescapability of today's mobile devices—coupled with the personal allure of social media—seems to

separate smartphones from older screen-based media. Parents, teens, and researchers agree smartphones are having a profound impact on the way adolescents today communicate with one another and spend their free time. And while some experts say it's too soon to ring alarm bells about smartphones, others argue we understand enough about young people's emotional and developmental vulnerabilities to recommend restricting kids' escalating phone habit."

Markham Heid, "We Need to Talk About Kids and Smartphones," *Time Magazine*

Explain Heid's argument and discuss the extent to which you agree or disagree with his analysis. Support your position, providing reasons and examples from your own experience, observations, and/or readings.

Option 2: Infographic

Using data from your survey, Bored and Brilliant Challenge, and other personal notes and experiences relating to the readings, create an infographic on the topic of Bored and Brilliant similar to the "Creativity: Essential Job Skills" infographic. Illustrate the significant statistics from your experiences, readings, surveys, and "Bored and Brilliant" challenge. Infographics make complex information and difficult concepts more appealing and digestible. They also look nice on presentations, social media, and marketing activities. They are not difficult to make and can be done for free on a variety of websites. Two popular online infographic sites are Piktocharts (piktochart.com/) and Canva (www.canva.com/create/infographics/).

Option 3: Debate

Select a partner you will debate with and prepare speeches both for and against the following statement: Smartphones are making us less creative.

Research both sides of the issue and prepare written arguments to debate both for the topic and against it. We will flip a coin to decide which side each team will debate.

The format for the debate is as follows:

Pro	**Con**
1st Speaker 2 minutes	1st Speaker 2 minutes
2nd Speaker 2 minutes	2nd Speaker 2 minutes
Cross-examination all speakers 2 minutes	
Rebuttal: 1st Speaker 1 minute	Rebuttal: 1st Speaker 1 minute

You will need to look up other credible evidence in addition to the provided readings to support your arguments. Be sure to cite your reputable sources during the debate.

Summary: a. How will students complete the assignment? b. What will students produce? c. What will students learn?

a. Based on the readings and research they have done in the module, students convey their thoughts and opinions about the topic of creativity and smartphone use in an expository essay, an infographic, and/or argumentative debate.
b. Students produce one or more of the following: argumentative essay; infographic; and speeches for a debate.
c. Students learn to identify central arguments from a variety of texts, respond to an arguable statement, illustrate data using a data organizer or infographic, and understand the importance of creativity for their future academic or professional lives.

Sample Assignment from "On Leaving | On Staying Behind"

Activity 22: Considering Your Task and Your Rhetorical Situation

Consider the topics raised by Garcia in her poems. In what ways are any of them issues in your own life or community? Which of those issues calls urgently for a response now?

Choose one of the following forms of writing to express your ideas:

- A set of paired poems that explore the topic from different perspectives
- A profile feature article
- A work of creative nonfiction (e.g., a memoir or reflective essay)

Your finished piece of writing should be between 650 and 1,000 words in length (lengths will vary according to form). Develop your ideas through focused inquiry, including background research and interviews as needed. Include a Works Cited list for any citations.

Before choosing your genre, consider the kinds of stories that can be told through poetry, feature articles, and creative nonfiction. Whose story do you want to tell? What need or problem to do you want to address? What do you want to do about that need or problem? What's the best way to do this? Select your genre based on your purpose and interests.

A successful response to the task will do all of the following:

- Demonstrate an ability to understand a perspective on its own terms
- Establish the timeliness and importance of the issue
- Engage multiple points of view
- Draw on research into relevant contexts and experiences
- Make strategic use of language choices to create particular meanings and effects
- Make strategic use of organizational choices to develop and support ideas

Rubric Scores:

- 6 - Exceptional
- 5 - Commendable
- 4 - Adequate
- 3 - Limited
- 2 - Inadequate
- 1 - Failing
- 0 - Off-topic or plagiarized

Summary: a. How will students complete the assignment? b. What will students produce? c. What will students learn?

a. Students select their final assignment based on the genre that will most effectively express the story they want to tell and craft their writing to accomplish their purposes.
b. Students produce one of the following: a set of paired poems; a profile feature article; or a work of creative nonfiction. This assignment is in addition to an assignment to write a one-page literary analysis of the issues and contexts Garcia addresses in her poems.
c. Students learn to describe how a poet's choices create meaning; analyze the effects and functions of a poet's choices; understand and respond to a critical need or issue address by a literary text; make connections across texts and conversations; and use literary strategies to produce a creative work.

Mini-Module (Category 4)

Unit Summary

The two portfolio mini-modules are "Introducing ERWC 12: Reflecting on Learning and Using Portfolios" and "Final Reflection on Learning: The ERWC 12 Portfolio." These open and close the yearlong course.

The 13 mini-modules, from which teachers/schools select at least three to teach, include the following:

- "Introducing the Rhetorical Situation"
- "Introducing Ethos, Pathos, and Logos"
- "Introducing Genre as Rhetoric"
- "Introducing Transfer of Learning"
- "Introducing Kairos"
- "Introducing Inquiry Questions"
- "Reviewing the Rhetorical Situation"
- "Introducing Stasis Theory: Finding Common Ground and Asking Questions"
- "Introducing the Toulmin Model of Argumentation"
- "Introducing Exigence"
- "Analyzing Audience: Pathos as Inquiry"
- "Becoming Assessment Savvy"
- "The Classical Pattern of Persuasion"

These mini-modules are designed for grade 11 or 12 and take a few days to a week or two to teach. The mini-modules are intended to introduce or reinforce foundational concepts and/or strategies that are further developed in full-length course modules. Key concepts addressed in the mini-modules—sometimes referred to as threshold concepts—include the rhetorical situation (audience, purpose, occasion); Aristotelian rhetorical appeals (ethos, pathos, and logos); genre; metacognition; and transfer of learning.

The concluding mini-module, "Final Reflection on Learning," provides opportunities for students to look back on the year's learning and review what they've discovered and aspects of their reading, writing, listening, and speaking that may call for further development as they prepare for college and careers. Both the introductory and concluding portfolio mini-modules directly address elements of Universal Design for Learning, including goal setting, formative assessment, student self-assessment, and metacognition.

Sample Assignment from "Introducing Genre as Rhetoric"

Activity 6: Considering Your Task and Your Rhetorical Situation

Your writing assignment is to conduct a genre analysis of three to five examples of a genre you want to write or learn more about. You can choose almost any genre, such as brochure, letter to the editor, public service announcement, commercial, personal letter, report, application, form, email, social media post, meme, and so on, but be sure to choose something you can collect samples of, so you can look at the genre across different examples. Additionally, it would be best to choose a genre that you want to eventually write, so the analysis can benefit you the next time you need to use that genre.

In this writing assignment, you will analyze the genres you collected in ways similar to how we analyzed the "Wanted" posters. The purpose is for you to analyze the genres, so you can write in those genres. You might choose something with which you have some familiarity and want to explore further in order to be more rhetorically effective in that genre. It would not be a good idea to choose a genre that you are very

familiar with and already know how to use to be rhetorically effective. Collecting several samples of your selected genre will help you understand what the genre requires and how you can make the genre your own.

Your genre analysis should be 200 to 300 words and include these four qualities:

- A summary of the genre you chose and its rhetorical situation, including a list of the texts you collected as examples of the genre
- An analysis of the common or required features across genres, with evidence
- An analysis of the differences across genres, with evidence
- A reflection on how you might use the genre in the future or what you learned about the genre from doing the analysis

This is not a formal essay; you do not need a formal introduction or conclusion, as the summary and reflection noted in the required qualities can orient your readers just as well.

Summary: a. How will students complete the assignment? b. What will students produce? c. What will students learn?

a. Students complete the assignment by identifying a genre that interests them, collecting examples of the genre, and conducting a genre analysis across multiple samples.

b. Students produce a short written analysis of their selected genre.

c. Students learn to define genre as part of the rhetorical situation, including paying attention to the constraints of a genre while seeing the rhetorical possibilities and creativity of a communication situation; cultivate genre awareness through the analysis of genres; and apply genre awareness to a new rhetorical situation.

Sample Assignment from "Introducing Kairos"

Activity 4: Reading for Understanding

Read the article "Choosing the Right Words at the Right Time" by Jennifer Fletcher. As you read, think of how the concept of kairos can help you be a more effective communicator. Annotate advice or examples that you find useful.

Activity 6: Summarizing and Responding

Based on your reading of the article, discuss the questions that follow with a partner or small group. Record your responses in your notes.

1. What's the difference between the need and the opportunity for rhetorical action?
2. Why are social expectations (or "decorum") part of kairos?
3. How can kairos be used as an inquiry strategy? What kinds of questions can speakers or writers ask to learn more about the kairos of a particular rhetorical situation?
4. How can kairos be used as a persuasive strategy?
5. How can kairos be used as a reading strategy?
6. What's one piece of advice or example from the article that you found helpful?

Activity 7: Considering Kairos and the Rhetorical Situation

Read "The Undercover Parent" by Harlan Coben. Note where and when it was published. Then respond to the following questions in a quickwrite or pairs conversation.

- What was the immediate social situation in which this article was written? What was happening in the world at that time in terms of technology use? Who was Coben's first audience?
- To what extent are the issues Coben addresses relevant today?
- To what extent has the conversation about teenagers and technology use changed since the article was first published? To what extent has the conversation about privacy rights changed?
- How far back do these issues go? How much of this history is important to know? To what extent do you see this text as participating in an ongoing conversation?
- What else has changed—culturally, socially, or politically—since the article was first published?
- What additional context does the article provide for understanding today's issues?
- What are the most timely and important parenting and/or technology issues that need to be addressed today?

Summary: a. How will students complete the assignment? b. What will students produce? c. What will students learn?

a. Students complete the assignments by reading, annotating, discussing, summarizing, recording notes, and doing a quickwrite.

b. Students produce an annotated text, a summary of a pairs or group discussion, and a quickwrite.

c. Students learn to understand and apply the rhetorical concept of kairos; develop increased situational awareness and responsiveness; and explore kairos as an inquiry strategy.

Sample Assignment from "Final Reflection on Learning: The ERWC 12 Portfolio"

Activity 1: The Portfolio Letter – A Final Reflection on Learning in ERWC

Purpose: At the end of this year, you will put together a collection of your work for your ERWC portfolio. Imagine that you are presenting and evaluating your work in order to demonstrate that you have achieved expected course learning goals. The portfolio will include a portfolio analysis of your work over two semesters with representative assignments from various times during the year.

Requirements: Document minimum: quickwrite, annotated text, summary, and three timed or process essays (one each from early, middle, and late phases of the year).

Portfolio Letter: Write a portfolio letter analyzing your reading and writing processes and the **progress** you have made during the past two semesters. Use the Student Learning Goals Self-Assessment exercise to evaluate your own progress, drawing upon your responses as you compose your letter. Your letter should make a persuasive text-based argument that you have met ERWC Portfolio Criteria. You must refer to the assignments themselves and discuss **all** parts of your portfolio. In this analysis you should address the following questions:

- Why did you choose these particular assignments (including the three essays)?
- What was the process you went through to complete the quickwrite, the annotated text, and the summary? How has the process you go through to create documents like these changed?
- How has your ability to write academic essays developed? Include specific examples from your three essays to provide evidence of your process and/or progress. For ideas, look back on

journals, memos, or "Reflections on Reading and Writing" you have done throughout the semester and/or compare earlier work with later

- What have you learned about your own strengths and needs for improvement as a reader and writer and the ways your reading and writing have changed? How have you modified your reading and writing processes? Provide examples of changes in writing processes where
- What have you learned about the expectations of academic reading and writing while completing these assignments? In what ways have you been able to transfer to your other classes what you have learned about those expectations?
- What can you do now that you could not do at the beginning of the year? Provide specific
- In what areas of your reading and writing do you still see needs for further growth and development? What specific goals could you set for yourself to improve your reading and writing?
- How well do you believe you are prepared for the academic reading and writing you are likely to encounter in college? Explain your grounds for that belief.

Place this analysis at the beginning of your portfolio in front of Parts I through IV.

Part I: Quickwrite (Place items in the following order):

- Selected quickwrite
- Prompt for quickwrite
- Rationale for choosing this particular quickwrite

Part II: Annotated Reading (Place items in the following order):

- Selected annotated reading
- Rationale for choosing this particular annotated reading
- Reflection on what you have learned about the ways in which annotating texts contributes to your reading and understanding of them

Part III: Summary (Place items in the following order):

- Selected summary
- Rationale for choosing this particular summary
- Reflection on what you have learned about how to write summaries and their value to you as a student

Part IV: Three Essays (one from early, middle, and late phases of the year)

- Three essays selected, date each was completed, and the module on which each was based
- The prompts for these three essays
- What you have learned about writing essays this year and how these three essays demonstrate your growth as a writer
- An explanation of what your next goals as a writer are and how you plan to work toward their

Format

Place the Portfolio Letter at the front of the portfolio you submit. Behind the Portfolio Letter, place Parts I through IV in the file with a paper clip holding together each of the parts. Make sure the parts of the portfolio are in the following order: I. Quickwrite; II. Annotated text; III. Summary; and IV. Three essays.

For the Teacher: **Evaluating the ERWC Portfolio**

Use the following criteria to evaluate the students' portfolios. You will be considering the degree to which the portfolio provides evidence of student ability in several areas.

Criteria

- Portfolio provides evidence of **exceptional ability** in the areas
- Portfolio provides evidence of **adequate ability** in the areas
- Portfolio **fails to provide evidence of adequate ability** in the areas

Areas to Consider

1. Understand key rhetorical concepts, such as audience, purpose, context, and genre through analysis of texts.
2. Cite textual evidence to support analysis of what a text says and implies.
3. Analyze how ideas, events, and/or narrative elements interact and develop over the course of a
4. Determine the meaning of words or phrases as they are used in a text.
5. Analyze an author's assumptions and appeals, for example, ethos, logos, and pathos.
6. Analyze the author's use of rhetorical devices and strategies.
7. Write a variety of text types for real audiences and purposes, making effective rhetorical choices in light of those audiences and purposes.
8. Contribute the writer's own ideas and opinions about a topic to an ongoing conversation in ways that are appropriate to the academic discipline or context.
9. Write reading-based arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence; make warranted and reasonable assertions about the author's arguments and themes by using elements of the text to defend and clarify interpretations.
10. Develop academic/analytical texts that are focused on a central idea and effectively organized.
11. Incorporate the texts of others effectively and use documentation styles suitable to the task, genre, and discipline.
12. Edit for clarity and for standard written English grammar, usage, and mechanics.
13. Select words and phrases that express precise meaning concisely and effectively, taking into consideration the rhetorical purpose of the text.
14. Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.
15. Demonstrate ability to observe, evaluate, and regulate one's development as a writer, including the identification of areas needing further growth.

COURSE TITLE

Debate/Forensics A (P) – ***Transcript Course Code/Number: EN6132 / EN6133***

DEPARTMENT

English

CAREER PATH

Business/ Law
Public and Human Services
Arts/Media/ Entertainment
Education

DESCRIPTION OF TARGET GROUP

Debate/Forensics A (P) is the first semester of an upper level college preparatory elective course designed primarily for students who keep up on current events and who enjoy and wish to excel in public debate and/or public speaking. This five-unit course and Debate/Forensics B (P) may be repeated for a total of 20 units. During the second year, a more rigorous schedule will be maintained and students will be strongly encouraged to enter tournament speaking.

PURPOSE

Debate/Forensics A (P) is the first semester of a one-year course that will focus on teaching students to effectively engage in competitive public speech and debate.

PREREQUISITE

Achievement of a B or better grade in preceding English class.

STANDARDS OF EXPECTED ACHIEVEMENT

1. Define the nature of leadership and demonstrate understanding of a basic leadership theory
2. Demonstrate understanding of leadership ethics and responsibility
3. Articulate knowledge of the Constitution and its Amendments
4. Understand basic parliamentary law
5. Learn the art of extemporaneous speaking and conflict resolution through debate
6. Develop research skills through exploration of various informational categories
7. Become critical thinkers by employing the methods necessary to reach critical thinking

METHODS OF ASSESSMENT OF STUDENT LEARNING

1. Delivering extemporaneous speeches

2. Delivering impromptu speeches
3. Preparing and delivering cases
4. Writing and preparing research
5. Participating in Lincoln-Douglas debate
6. Participating in team debate
7. Demonstrating a professional demeanor
8. Exhibiting knowledge of law/government/Constitution/business terminology in cases
9. Speaking in tournaments

GROWTH WILL BE EVALUATED BY ADMINISTERING A PRE AND POST TEST ASSIGNMENT GIVEN IN THE FOLLOWING MANNER:

1. Pre-test of terminology—post-test of terminology
2. Actual debates and presentations in class based on a rubric developed for each type of presentation
3. Videotape of initial performance, interim performance, and final performance for each type of presentation
4. Teacher, class, and self critique

INSTRUCTIONAL MATERIALS

Magazines such as *World News, World Reports, Time,* and *Newsweek*
Newspapers such as *The New York Times* (online), the *Los Angeles Times* . . (online), and local publications
Briefs prepared by companies specializing in debate research
Videos prepared by companies specializing in debate procedure and techniques
Internet
Additional readings include specific cases found through library and classroom research

Also refer to Santa Maria Joint Union High School Districts adopted texts

ACTIVITIES

1. Guest speakers
2. Team debate
3. Lincoln-Douglas debates
4. Extemporaneous activities
5. Outside research, recording, and videotaping
6. Lecture
7. Community speaking
8. Tournament speaking

All tournaments depend upon Debate/Forensics program funding

If tournaments are not funded, students will continue community speaking and classroom and school performance speaking

COURSE TITLE

Debate/Forensics B (P)

DEPARTMENT

English

CAREER PATH

Business/ Law
Public and Human Services
Arts/Medial Entertainment
Educational

DESCRIPTION OF TARGET GROUP

Debate/Forensics B (P) is the second semester of a one-year course. lt is an upper level college preparatory elective course designed primarily for students who have taken Debate/Forensics A (P) and who will continue tournament and community speaking. This five-unit course can be repeated for 20 units, provided that Debate/Forensics A (P) is also repeated. During the second year, a more rigorous schedule will be maintained and students will be strongly encouraged to enter tournament speaking.

PURPOSE

Debate/Forensics B (P) is the second semester of a one-year course that will focus on competitive speech and debate and community speaking.

PREREQUISITE - Debate/Forensics A (P)

STANDARDS OF EXPECTED ACHIEVEMENT

1. Continue to demonstrate leadership skills and an understanding of basic leadership theory
2. Continue to demonstrate an understanding of leadership ethics and responsibility
3. Articulate knowledge of the Constitution and its Amendments
4. Understand basic parliamentary law
5. Continue research application
6. Articulate knowledge of important precedent-setting cases
7. Develop a basic understanding of important philosophical figures and ideas
8. Discuss media-government interactions in terms of social, political, and economic impact
9. Advance the ability to think critically

METHODS OF ASSESSMENT OF STUDENT LEARNING

1. Participation in community and tournament speaking
2. Participation in class debate based on a rubric
3. Compilation of research

4. Participation in Lincoln-Douglas debate
5. Inclusion of philosophy politics, and current events in speaking
6. Inclusion of law, government, Constitutional, and business terminology in cases

GROWTH WILL BE EVALUATED BY ADMINISTERING A PRE AND POST TEST ASSIGNMENT GIVEN IN THE FOLLOWING MANNER:

1. Pre-test of facts learned in Debate/Forensics A (P) from such categories as law, the Constitution, parliamentary procedure, debate terminology and presentation
2. Actual debates and presentations in class and inclusion of learned material
3. Videotape of final performance with teacher, peer, and self evaluation

INSTRUCTIONAL MATERIALS

Magazines such as *World News, World Reports, Time,* and *Newsweek*
Newspapers such as *The New York Times* (online), the Los *Angeles Times* (Online), and local publications
Briefs prepared by companies specializing in debate research
Videos prepared by companies specializing in debate procedure and techniques
Internet
Additional readings include specific cases found through library and classroom research

Also refer to Santa Maria Joint Union High School District adopted texts

ACTIVITIES

1. Guest speakers
2. Team debate
3. Lincoln-Douglas debates
4. Extemporaneous activities
5. Outside research, recording, and videotaping
6. Lecture
7. Community speaking
8. Tournament speaking

All tournaments depend upon Debate/Forensics program funding

If tournaments are not funded, students will continue community speaking and classroorn and school performance speaking

Course Title

ELD 1 A & B - English as a Second Language
Beginning Level

Description of Target Group

This is a two-term course. It is designed to further develop the basic English language skills of listening, speaking, reading, and writing for the non-native speaker of English. Emphasis is placed on listening comprehension, oral pronunciation, vocabulary development, language structure, language functions, reading, writing, and study skills. Through intensive English language instruction, students progress from limited-English proficiency toward fluent English proficiency in preparation for entry into classes with native English speakers.

Beginning level (ELD 1) introduces initial communication strategies and develops a vocabulary of 1000-1500 words. Upon completion of two terms, students will read and understand learned material at an elementary level; recognize alphabet and understand learned written material; communicate learned material at an elementary level; copy, transcribe, and write learned material; be aware of stereotypes; be aware of and interact successfully in the cultural dimensions of everyday activities.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Follow classroom directions.
2. Point to classroom items.
3. Distinguish items according to color, shape, size, and other characteristics.
4. Recognize words for people and family relationships.
5. Distinguish people according to physical and psychological descriptions (sick, happy, sad, tall, etc.).
6. Act out common school activities.
7. Give classroom commands to peers.
8. Ask for and give directions.
9. Exchange common greetings.
10. Introduce self and others.
11. Make requests and suggestions.
12. Ask for and offer things.
13. Compliment, praise, and congratulate someone.
14. Express emotions.
15. Ask questions for clarification.
16. Ask someone to do something.
17. Make apologies.
18. Express likes and dislikes, agreement, disagreement, and indifference.
19. Make, accept, and decline invitations.
20. Role-play purchasing things in stores, markets.

21. Describe common recreational activities by identifying action pictures.
22. Memorize basic classroom sentences.
23. Memorize basic routines (How are you? Excuse me, etc.).
24. Discuss activities associated with school.
25. Name the 26 letters of the English alphabet, in alphabetical order, with approximate English speaker pronunciation and be able to spell words by using English alphabet.
26. Recognize and reproduce the written English alphabet symbols in order, in print or cursive, capital and small letters.
27. Learn the English vowels and pronounce them appropriately.
28. Recognize the difference between vowels and consonants.
29. Say and spell the cardinal and ordinal numbers 1-100.
30. Say and spell in order the days of the week seasons, and months of the year.
31. Identify orally and in writing the most common parts of the body.
32. Identify and spell United States money denominations.
33. Use time expressions correctly.
34. Use the correct form to the verbs to be, to have, to do, in the present and past tenses, and in simple sentences, questions, and negatives.
35. Use correctly in simple sentences the simple present tense of regular and irregular verbs, including some two-word verbs.
36. Spell plurals correctly using s, es, and spelling changes forms.
37. Define and demonstrate the use of the most common contractions.
38. Demonstrate the correct use of common marks of punctuation.
39. Identify by sight and spell the basic colors.
40. Identify and use correctly the common prepositions of place.
41. Use the command form correctly.
42. Use the direct and indirect object pronouns correctly.
43. Distinguish between plurals and possessives.
44. Use the future with will.
45. Combine groups of words using the conjunction and.
46. Use correctly a, an, the.
47. Read aloud and act out simple skits.
48. Read for information and pleasure.
49. Gain some insight into their own lives from the literature.
50. Recognize and interpret a short story.
51. Gain experience using descriptive and narrative writing in sentence and paragraph format.
52. Gain experience in paragraph development with topic sentence and supporting details.
53. Complete career unit (L1/L2).

Activities

Total Physical Response, Language Experience Approach, The Natural Approach, lectures, class and small group discussions, audio-visual aids, field trips, individualized learning, cooperative learning, demonstrations, guest speakers, computers, classroom videos, journal

ELD 1A/B (continued)

writing, into-through-and-beyond reading, composition and writing process activities, portfolios, role-playing, study and metacognitive skills.

Assessments

Teacher observation of student actions, speaking demonstrations, and other oral presentations.
Student depictions of concepts via drawings, markings, posters, collages, and video projects.
Students sorting and/or showing realia.
Student or teacher generated (planned or impromptu) role-play or real life situations.
Written student work including but not limited to, exercises, worksheets, compositions, portfolios, notebooks, or projects.
Summative written tests and quizzes based on teacher generated criteria.
Student work in computer files.
Student generated logs and journals.

Instructional Materials

1st TERM

ELD 1A (Beginning)
? Bridges A - Units 1-4
? Practical English 1 - Chapters 1-8 and workbook
? Variety of supplemental materials, computer, computer literature, etc.
? See Standards of Expected Student Achievement

2nd TERM

ELD 1B (Beginning)
? **Bridges A - Units 5-10**
? Practical English 1 - Chapters 9-16 and Variety of supplemental materials, literature, etc.
? See Standards of Expected Student Achievement

Course Title

ELD 2 A & B - English as a Second Language
Intermediate Level

Description of Target Group

This is a two-term course. It is designed to further develop the basic English language skills of listening, speaking, reading, and writing for the non-native speaker of English. Emphasis is placed on listening comprehension, oral pronunciation, vocabulary development, language structure, language functions, reading, writing, and study skills. Through intensive English language instruction, students progress from limited-English proficiency toward fluent English proficiency in preparation for entry into classes with native English speakers.

While continuing work from the Beginning Level, the ELD 2 Level emphasizes the structure of the language with more extensive vocabulary development (1500-3000 words) and conversational and writing experiences. Upon completion of two terms, students will understand routine speech and conversations; read and understand main ideas, facts, and narratives dealing with everyday matters; participate in basic communication tasks; combine and recombine basic speech elements; write short messages and simple letters; take notes; write simple summaries; perceive cultural differences and recognize points of misunderstanding; handle aspects of more complex situations.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1-53. (See ELD 1A-B, Beginning Level)
54. Say and spell vocabulary pertaining to relatives.
55. Demonstrate use of the telephone and directory for assistance (operator, information, emergency, government agencies).
56. Learn expressions to seek medical help and to get help in emergency situations.
57. Identify orally and in writing basic articles of clothing.
58. Learn basic opposites.
59. Learn to make comparisons using comparatives, superlatives, and common expressions of size, shape, weight.
60. Learn the names of the furniture and other common household articles in the different rooms of the house.
61. Say and spell the names of common meals, foods, and eating utensils.
62. Say and spell the names of common birds and animals.
63. Say and spell the names of common plants and flowers.
64. Identify orally and in writing the most common occupations (complete career unit L1/L2).
65. Use correctly the three forms of questions: reverse order, question words, and tag questions.
66. Use demonstrative correctly.
67. Spell and use correctly possessive adjectives and pronouns.
68. Give oral description or explanation of common daily activities.
69. Use can and would correctly.

70. Combine simple sentences using and, but, because.
71. Form the present, past, and future progressive.
72. Use used to correctly.
73. Demonstrate the ability to reproduce orally the basic sentences presented, with approximate native English speaker pronunciation (vowel and consonant sounds, rhythm patterns, intonation patterns, stress patterns.
74. Learn the pronunciation of English sounds that are not present in the student's native language.
75. Demonstrate the use of a dictionary.
76. Demonstrate recognition of oral and written instructions used in the classroom.
77. Demonstrate recognition of oral and written instructions used in taking tests.
78. Recognize and use the following parts of speech: noun, pronoun, verb; and the parts of the sentence: subject, object, predicate.
79. Use basic adjectives of quantity and description.
80. Form adverbs with -ly.
81. Read and label maps, graphs, and charts.
82. Participate in activities related to recognized holidays and events within the cultures of his/her first and second languages.
83. Demonstrate computer literacy on the Macintosh.
84. Use the Macintosh to complete exercises and assignments related to spelling, grammar, and writing skills.
85. Develop study skills and test-taking strategies.
86. Increase self-confidence and self-esteem and develop interpersonal skills through cooperative learning activities.
87. Develop cognitive and meta-cognitive strategies and learn to employ those strategies in dealing with difficult tasks.
88. Build vocabulary weekly through oral and written use and weekly quizzes.
89. Participate in sustained silent reading activities.
90. Read and interpret various types of literature from the following types: short story, poetry, drama, and novel.
91. Participate in skits and plays.
92. Develop a clear and well-organized paragraph using varied sentence patterns with supporting ideas and conclusion.
93. Demonstrate writing competency on a single topic on a variety of discourses from the following types: business letter, autobiographical, observation.
94. Participate in weekly class/small group discussions of current global events, universal human problems, or cultural values.
95. Use computer to build vocabulary and skill levels.
96. Make value judgements.
97. Use problem-solving skills.
98. Get along with others.
99. Discuss music, art, and scientific discoveries.
100. Keep open-ended or dialog journal.

ELD 2 A/B (continued)

Activities

Total Physical Response, Language Experience Approach, The Natural Approach, lectures, class and small group discussions, audio-visual aids, field trips, individualized learning, cooperative learning, demonstrations, guest speakers, computers, classroom videos, journal writing, into-through-and beyond reading, composition and writing process activities, portfolios, role-playing, study and meta cognitive skills.

Assessments

Teacher observation of student actions, speaking demonstrations, and other oral presentations.
Student depictions of concepts via drawings, markings, posters, collages, and video projects.
Students sorting and/or showing realia.
Student or teacher generated (planned or impromptu) role-play or real life situations.
Written student work including but not limited to, exercises, worksheets, compositions, portfolios, notebooks, or projects.
Summative written tests and quizzes based on teacher generated criteria.
Student work in computer files.
Student generated logs and journals.

Instructional Materials

1st TERM

ELD 2 A (Intermediate)
? Bridges B - Units 1-3
? Practical English 2- Chapters 1-6 and workbook
? Variety of supplemental materials, computer, literature, etc.
? See Standards of Expected Student Achievement
? Writing Frames (Walch, Publisher) 2, 3, 7, 8, 30, 33, 34, 38
? Surprises (Jamestown Publishers)

2nd TERM

ELD 2 B (Intermediate)
? Bridges B - Units 4-6
? Practical English 2 - Chapters 7-13 and workbook
? Variety of supplemental materials, computer, literature etc.
? See Standards of Expected Student Achievement
? Writing Frames (Walch, Publisher) 21, 22, 23, 13, 14
? Surprises (Jamestown Publishers)
? Novel: The Pearl

Course Title

ELD 3A & B- English Language Development (Replaced ELD 3A/B-Advanced Level)
Advanced Level

Description of Target Group

This is a two-semester course. It is designed to further develop the basic English language skills of listening, speaking, reading, and writing for the non-native speaker of English. Emphasis is placed on listening comprehension, oral pronunciation, vocabulary development, language structure, language functions, reading, writing, and study skills. Through intensive English language instruction, students progress from non- and limited-English proficiency toward fluent English proficiency in preparation for entry into classes with native English speakers.

Progressing from the previous levels, the Advanced Level stresses academic language development for content area, develops vocabulary (3000-4500 words), and introduces students to core literature. Upon completion of the two semesters, students will read and understand main ideas and details of many kinds of presentations; understand stories, news, letters and technical textbooks of a general nature; maintain extended conversations; satisfy work and school needs; handle unforeseen problems; write narratives, descriptions, business correspondence, resumes, summaries and a variety of discourses; demonstrate important cultural behaviors; know how misunderstandings arise; handle personal relationships and historical references.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

92. Say and spell the names of man-made and natural materials.
93. Form subordinate clauses
94. Form irregular past tense and past participle.
95. Make sentences and questions in the present perfect tense.
96. Fill out an application for employment (complete career unit L2).
97. Read a map and give directions to a specific place.
98. Read a short story and tell in his/her own words orally or in writing the major incidents and characters.
99. Read an article in a newspaper and discuss it.
100. Read and respond to a variety of poetry.
101. Use the Macintosh to create simple short stories using graphics.
102. Use the Macintosh to write pen-pal letters.
103. Read aloud in class.
104. Give prepared oral reports and speeches.
105. Give impromptu speeches.
106. Recognize and use abbreviations correctly.
107. Use adjective and adverb clauses.
108. Use noun phrases and clauses.
109. Demonstrate knowledge of idiomatic words and expressions.
110. Demonstrate knowledge of word roots, prefixes, and suffixes.
111. Use the modal auxiliaries can, could, may, might, should, and must.

112. Recognize, understand and be able to use in class discussion or writing the following literary terms: plot conflict, character, rising/falling action, point of view, setting, climax, theme, foreshadowing, fiction/nonfiction, myth, fable, hero/heroine, narrator, biography, autobiography.
113. Solve problems by noting clues and questioning conclusions in what is read.
114. Write exemplifying a social amenity (friendly letter, thank you note, and invitation).
115. Write a creative story of at least three paragraphs.
116. Demonstrate writing competency by writing a paper of at least three paragraphs from among the following types: reflective, report of information, compare and contrast, cause and effect, interpretive.
117. Use relative clauses.
118. Recognize and write compound and complex sentences.
119. Get information from reference materials.
120. Demonstrate knowledge of basic terms of literary analysis (plot, setting, theme, characterization)
121. Read core literature.
122. Participate in class and small group discussions of core literature, answer inferential questions, draw conclusions, support and debate answers.
123. Participate in a class video production, play, or long term project related to core literature.
124. Use computer for composing, editing, and revising essays and short stories.
125. Role-play job interviews.
126. Tell a joke or riddle.
127. Use an English only dictionary.
128. Speak to the teacher, aides, and other students in English in free conversation without making significant errors.
129. Identify the 8 parts of speech and use them correctly in exercises.
130. Demonstrate an interest in reading by selecting additional reading in free class time.
131. Use conditional clauses with if and unless.
132. Use direct and indirect quotations with correct punctuation.
133. Change sentences from active to passive voice and vice versa.
134. Make a telephone request and write a business letter requesting information.
135. Read a short novel and give an oral/written summary of it.
136. Develop critical thinking skills through literary analysis and evaluation.
137. Synthesize their experiences in a formal, written essay.
138. Recognize and use formal and informal speech and writing.
139. Evaluate the results of an action or event.

Activities

Total Physical Response, Language Experience Approach, The Natural Approach, lectures, class and small group discussions, audio-visual aids, field trips, individualized learning, cooperative learning, demonstrations, guest speakers, computers, classroom videos, journal writing, into-through-and beyond reading, composition and writing process activities, portfolios, role-playing, study and meta-cognitive skills.

Instructional Materials

1st SEMESTER

ELD 3 A (Advanced)

- Variety of supplemental materials, computer, selected short stories, etc.
- Student Literature Reader - Bridges to Communication, Secondary Level C
- Blanton's Composition Practice Book
  See Standards of Expected Student Achievement
- Writing Frames (Walch, Publisher) 1,4,5,6,9, 10, 11, 12, 15, 16, 17, 18, 19,20
- Shocks (Jamestown Publishers)
- Sudden Twists (Jamestown Publishers)
- Selected novel ;

2nd SEMESTER

ELD 3 B (Advanced)

- Variety of supplemental materials, computer selected short stories, etc.
- Student Literature Reader - Bridges to Communication, Secondary Level C
- Blanton's Composition Practice, Book 3
- See Standards of Expected Student Achievement
- Writing Frames (Walch, Publisher) 24, 25, 26, 27,28,29,31,32,35,36,37,39,40
- Shocks (Jamestown Publishers)
- Sudden Twists (Jamestown Publishers)
- Selected novel

English Subject Template

(Required Information needed to prepare for course submission)

- **Course Guidance**

GENERAL ENGLISH GUIDANCE

College preparatory composition and literature are required. Reading, writing, and speaking components must be included in the courses.

Goals of the English requirement

The English subject requirement seeks to ensure that freshmen are prepared to undertake university-level study; to acquire and use knowledge in critical ways; to think, read, write and speak critically; and to master literacy skills for classes in all University subjects.

More important than the specific topics covered are the more general abilities and habits of mind students should acquire through reading, writing, speaking and other course activities. As indicated in the ICAS Academic Literacy Statement of Competencies [PDF] and the Common Core State Standards for English Language Arts [PDF], these include the following:

1. **They are well-informed, thoughtful and creative readers, writers, listeners and thinkers** who incorporate the critical practices of access, selection, evaluation and information processing in their own original and creative knowledge production.
2. **They understand the ethical dimensions of academic life** as grounded in the search, respect for and understanding of other informed viewpoints and pre-existing knowledge. They have a capacity to question and evaluate their own beliefs; the curiosity and daring to participate in, and contribute to, intellectual discussions; and the ability to advocate for their own learning needs.
3. **They comprehend and evaluate complex texts across a range of types and disciplines** and can construct effective arguments and convey intricate or multifaceted information.
4. **They respond to varying demands of audience, task, purpose, genre and discipline** by listening, reading, writing and speaking with awareness of self, others and context; and adapting their communication to audience, task, purpose, genre and discipline.
5. **They value evidence.** Students can analyze a range of informational and literary texts, ask provocative questions and generate hypotheses based on form and content of factual evidence, see other points of view, and effectively cite specific evidence when offering an oral or written interpretation of a text.
6. **They use technology and digital media strategically and capably** to enhance their reading, writing, speaking, listening and language use.
7. **They demonstrate independence** by exhibiting curiosity and experimenting with new ideas.

Course requirements

Competencies for entering students cannot be reduced to a mere listing of skills. True academic competence depends on a set of interactive insights, perceptions and behaviors acquired while preparing for more advanced academic work. Good writers are most likely careful readers and critical thinkers—and most academic writing is an informed and critical response to reading. Courses should, at each level, give students full awareness and control of the means of linguistic production, orally and in writing.

Regardless of the course level, all approved courses are expected to stress the reading and writing connection and to address all of the Common Core College and Career Readiness Anchor Standards in Reading, Writing, Listening and Speaking [PDF].They must also satisfy these criteria:

- **Reading**. Acceptable courses must require extensive reading of a variety of genres, non-literary as well as literary, including informational texts, classical and/or contemporary prose and poetry, and literary fiction and non-fiction. Reading of literary texts must include full-length works; excerpts from anthologies, condensed literature, et cetera, cannot substitute for full-length literary works. Students should be expected to read for literal comprehension and retention, depth of understanding, awareness of the text's audience, purpose and argument, and to analyze and interact with the text.
- **Writing**. Courses must also require substantial, recurrent practice in writing extensive, structured papers directed at various audiences and responding to a variety of rhetorical tasks. Students must demonstrate understanding of rhetorical, grammatical and syntactical patterns, forms and structures through responding to texts of varying lengths in unassisted

For Preparation Only

writing assignments. Courses should address basic issues of standard written English, including style, cohesion and accuracy.

Writing is taught as a recursive process involving invention, drafting, revision and editing where writers return to these activities repeatedly rather than moving through them in discrete stages. Writing is also a way of learning and it should enhance the students' understanding of a subject.

- **Listening and speaking**. Courses must allow students to develop essential critical listening skills and provide them ample practice speaking in large and small groups. Students are expected to be active, discerning listeners, to make critical distinctions between key points and illustrative examples, develop their ability to convey their ideas clearly, and listen and respond to divergent views respectfully, just as they must do when they read and write.

For expected competencies in English reading, writing, listening and speaking, consult the Common Core Standards for English Language Arts [PDF]. Further information is available in the following resources:

- An Information Booklet for the Analytical Writing Placement Examination for discussion of writing standards and examples of acceptable college freshman-level scored essays.
- Academic Literacy: A Statement on Competencies Expected of Entering Students to California's Public Colleges and Universities [PDF] for a description of the language arts material that almost all regularly admitted freshmen have learned.

HONORS ENGLISH GUIDANCE

- English Honors courses are expected to provide detailed and specific illustrations both breadth and depth of exploration in the subject area, developing writing, research, and analytical skills. Specific detailed evidence must be included in the course outline.
- The courses must offer content and/or experience that are demonstrably more challenging than what is offered through the regular college preparatory courses in the same field.
- Factors considered for UC-approved honors courses that satisfy the "b" requirement include but are not limited to the assignment and evaluation of one long or numerous short, challenging, and properly-annotated research papers and a comprehensive final examination. Specific details of each of these assignments are required.
- The use of college-level textbooks is encouraged.
- Regular college preparatory courses in the subject areas should be offered. If regular non-honors courses not are offered, a strong justification for the lack of a regular course is required.
- In addition to AP and IB higher level courses, high schools may certify as honors level courses **not more than one unit** in English.
- A single, written, comprehensive, full year final exam must be administered that encompasses all the material that has been covered for the entire year.

For Preparation Only

- **Course Content**

NOTE: The following questions are subject specific and ask for detailed information regarding the course curriculum. Since UC has developed their own criteria for the review of curricula, it is not necessary (and preferred) that the State Standards are not listed when submitting course descriptions to the University. When preparing the course submission, keep in mind that your audience is the UC High School Articulation unit and UC faculty. Include relevant information that would assist those reviewing the course and provide UC a better understanding and clarity about the intent of the curriculum. UC expects to see information that would show specific, detailed evidence of the course rigor and development of essential skills and habits of mind. Course template components need to be more expository and illustrative of the integration of each course component and how the overarching goals are being accomplished. The text boxes below will expand to accommodate additional text.

Course Purpose: *What is the purpose of this course? Please provide a brief description of the goals and expected outcomes. Explain how the course aligns the seven goals of the English requirement. (How these will be accomplished should be reserved for the Course Outline, Key and Written assignments, Assessments, and/or Instructional Methods.)*

NOTE: More specificity than a simple recitation of the State Standards is needed.

English 2 Honors is an accelerated college preparatory class designed to help students prepare for the rigors of subsequent Advanced Placement and college courses. In addition to the extensive study of highly-varied literature, the class focuses on the craft of writing to help students become better communicators and information-consumers. The course emphasizes the need for on-demand writing, but also encourages the editing process through multiple revisions. Students are encouraged to cultivate curiosity and to question pre-conceptions. The curriculum teaches students to seek evidence and develop

arguments using multiple forms of textual support. Students will learn how be both articulate presenters and active listeners through a series of class presentations, discussions, and Socratic seminars. The class also helps students become comfortable with integrating relevant technology into their education. Ultimately, the goal of English 2 Honors is to give students the skills, organization, and determination necessary to be successful scholars in a challenging educational environment.

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. Show examples of how the text is incorporated into the topics covered. A mere listing of topics in outline form is not sufficient (i.e. textbook table of contents or California State Standards).*

Unit 1: Discovering Theme

The primary six weeks of the semester utilize pieces of shorter genres (poetry and short story primarily) to introduce year-long skills, such as the SoapsTONE method and thematic analysis. Students will begin year-long explicit writing instruction in this unit, focusing first on argumentative writing based on multiple non-fiction sources. Students come to the course with basic understanding of literary analysis writing, but limited argument. The first semester writing goals are to focus on argumentative writing, while more advanced literary analysis is taught in second semester. Students will also begin the year-long Voice Lessons in this unit, as adapted from Nancy Dean's *Discovering Voice*. A great deal of emphasis is placed on the need for textual evidence, quotation introduction, integration, and citation.

In-unit Reading: *Oedipus Rex* (summer assignment), Short Stories such as: "Contents of a Dead Man's Pocket," "Damon and Pythias," "The Censors," "Lamb to the Slaughter;" Poetry such as: "Hazel Tells Laverne," "Janet Waking," "You Want a Social Life;" 3-5 non-fiction articles topically based on the argumentative essay assigned.
Concurrent Reading: Students will read *Oedipus at Colonus* independently in preparation for the next unit.
Writing Instruction: Parenthetical Citation, quotation introduction, essay structure, counterclaim and refutation, and source introduction.
Skills and terms: SoapsTONE, theme, MLA terminology part 1
Writing Assessments: Practice AP Essay #1 honor code (as pre-test), *Oedipus Rex* Literary Analysis Essay, Non-fiction Argumentative Essay #1.
Voice Lessons: Introducing Voice and Diction
Common Key Assignments: Dialectical journal entries *Oedipus Rex*, dialectical journal entries *Oedipus at Colonus*, Padlet online discussions for theme, and Common Core Academic Vocabulary 1-30.

Sample Assignment:

Oedipus Rex Argumentative Essay

Background: Man's struggle against the will of the gods is a common reoccurring motif in Greek tragedy. One of the most well-known examples of this is Oedipus's dilemma in *Oedipus Rex*.

Prompt: Write an argumentative essay in which you argue that the tragic circumstances surrounding Oedipus were EITHER primarily the result of fate OR primarily the result of free will. Support your claim with clear reasons and quoted examples from the play. You must also address the counterargument that might be made against your claim.

For Preparation Only

Unit 2: Perspective & Identity

Students will begin to look at perspective, voice, and identity in writing. Students will examine the writer's craft through varied reading assignments to further develop their own voice.

In-Unit Reading: *Antigone, Joy Luck Club* (or similar), "Leopard Man" (ERWC unit), "Identity," ethos, logos, and pathos reading, and various current event non-fiction articles. Non-fiction articles from this point forward come from the *New York Times Upfront* magazine, or News ELA.com.
Writing Instruction: Quotation integration, commentary
Skills and terms: ethos, logos, pathos, Greek theater terminology
Writing Assessments: Non-fiction Argumentative Essay #2, "How Far" Performance Task, *Antigone* literary analysis essay.
Voice Lessons: Diction (continued) & detail
Common Key Assignments: Common Core Vocabulary 31-60, ethos logos and pathos in advertising, Book Club activities for Joy Luck Club (or similar), and Socratic Seminar for Performance Task.
Sample Assignment:

"How Far" Performance Task

Background: The poem "Identity" speaks of the value of finding your own path in a world of followers. This is a common theme in many literary works and in real life, including two others you have recently studied: *Antigone* and "Leopard Man." Both Antigone and the Leopard man defied society's expectations to stand up for what they believed in. Did they go too far? Or not far enough?

Prompt: In a well-developed argumentative essay, evaluate how far someone should go to stand up for his or her beliefs. Your essay must incorporate **at least three** of the sources from your studies this semester. You must also address the counter argument that might be made against your claim.

Unit 3: Argument

Students will study argument as both a reader and a writer. Students will tie the argumentative appeals of ethos, logos, and pathos to both non-fiction sources (advertisements, non-fiction articles) and fiction via *Julius Caesar* and *Farewell to Manzanar*. Students will study logic and the most common logical fallacies. The study of these appeals and logical strategies will be used to further enhance the students' understanding of their own craft as writers. Students will research a common fallacy in teams of four. These teams will present their finding to the class in the multimedia method of their choice.

In-Unit Reading: *Julius Caesar, Farewell to Manzanar* (or similar), "A Grave Wrong," and varied non-fiction articles.
Writing Instruction: Continue quotation integration and commentary, advanced counterclaim and refutation
Skills and terms: Drama terminology, common fallacies
Writing Assessments: Literary Analysis *Julius Caesar*
Voice Lessons: Detail
Common Key Assignments: Fallacy class presentation, book club activities for *Farewell to Manzanar* (or similar), Funeral Speech Analysis for Julius Caesar.
Sample Assignment:

Fallacy Presentation Assignment

In order to understand the structure of argument, as both a reader and a writer, it's important for students to understand the most common fallacies of argument. There are many important logical fallacies, but we're going to concentrate on nine right now. You will be assigned one of these nine fallacies and will work in groups of three to four to teach the class about your logical fallacy. You will

For Preparation Only

research your assignment and create a PowerPoint to help visuals learners.

Unit 4: Research & World War II Literature

Students will learn how craft a research question and create a research paper in the MLA style. Students will focus on the authenticity of sources, research organization, and integrating sources into their writing. Students will research a World War II topic in preparation for reading *Lord of the Flies* in the next unit. The class will utilize Turnitin.com to help students learn about plagiarism and prepare for this future requirement in many college classes. Students will read the World War II graphic novel *Maus I* (or similar) in literature circles to analyze the interplay between text and visual. Students will begin to analyze visual mediums, like art, using the OPTIC method as adapted from the College Board's Pre-AP handbook.

In-Unit Reading: *Maus I* or *Persepolis,* "The Bristol Evacuees," and varied non-fiction articles.
Writing Instruction: Research skills, works cited creation, source integrity, MLA paper formatting
Skills and terms: Common Core Vocab. 61-90, MLA terminology part 2
Writing Assessments: World War II research paper (or similar), "Bristol Evacuees" Argumentative Essay, Non-fiction Argumentative Essay #3, business letter.
Voice Lessons: Figurative Language
Common Key Assignments: Literature Circle for graphic novel
Sample Assignment:

Lord of the Flies – World War II Research Project

We will be reading a novel set just after World War II. The author was a veteran of the war and was greatly impacted by what he did and saw there. In order to help you understand the time period, you are going to researching an aspect of the time period and writing a research paper. The war, of course, impacted the whole world, but we'll primarily be discussing England, so stick with that front of the war. You will be choosing one of the topics listed below. If there's something you'd like to research that's not on the list, come talk to me about it and we'll discuss if it will work or not.
Choose one of the topics listed below:

1. The evacuation of children from British cities targeted by bombing
2. Life for women during the war
3. The role of aircraft/pilots in the war
4. The Invasion of Normandy
5. The biography of author William Golding

For Preparation Only

Unit 5: Literary Analysis & Theme

Students will further develops their skills analyzing the craft of writing by focusing on literary devices as they contribute to mood, tone, and theme. In this unit, students will begin to work on more advanced literary analysis strategies in preparation for AP Literature and Composition. Students will move away from the rote identification of literary devices, and move toward a broader understanding of why authors make particular choices.
In-Unit Reading: *Lord of the Flies,* "And of Clay Are We Created," "Janet Waking" and varied non-fiction articles.
Writing Instruction: Continue commentary, literary present, advanced literary analysis
Skills and terms: OPTIC method of visual analysis, Literary Terms
Writing Assessments: Two Literary Analysis essays (LOF, and "Clay"), Two Practice AP essays (question 1)
Voice Lessons: Figurative Language Part 2, Syntax
Common Key Assignments: Creative project for *Lord of the Flies*, OPTIC assignments for art and

photography, class presentations for *Lord of the Flies* activities (including a video component).
Sample Assignment:

"And of Clay We Are Created" On-Demand Essay

Choose ONE of the following prompts and write a five or more paragraph outline & essay response. Be sure to write the number of the prompt that you are responding to on the top of your essay:
1. Write a five paragraph essay that states what you believe to be the main theme of "And of Clay We Are Created." **What literary devices does the author use to convey the theme to the reader?** Defend your choice with support from text. Make sure to continually tie back to your thesis by explaining how each quotation helps to build to the theme.

OR

2. Write a five paragraph essay that states what you believe to be the **one overall** mood of "And of Clay We Are Created" **OR three separate** moods (as the mood changes throughout the course of the short story). **What literary devices does the author use to convey the mood to the reader?** Defend your choice with support from text. Make sure to continually tie back to your thesis by explaining how each quotes helps to build to the mood.

Unit 6: The Nature of Man

During this unit, students will deepen their understanding of irony and satire though both print and visual sources. Students will analyze weekly relevant political cartoons from *The New York Times Upfront* magazine to develop these skills. Students will also deepen their analysis of rhetoric in print form in preparation for AP Language and Composition. Students will continue to develop their discussion and collaboration skills as they work in groups to truly understand *Brave New World*. Students will demonstrate maturity and sophistication as they participate in online discussion groups in preparation for future college-level classes. They will both pose and answer questions, and provide relevant creative work in response to the text. Students will complete a final performance task that requires them to demonstrate all the skills they've learned in the class.

In-Unit Reading: *Brave New World* (or similar), "Girl Moved to Tears by Cliff Notes" Satire (or similar) "Hog Letter" Satire (or similar), political cartoons, and varied non-fiction articles and documentaries (for good vs. evil performance task).
Writing Instruction: Rhetorical analysis
Skills and terms: Rhetorical devices
Writing Assessments: "Nature of Man" performance task, Practice AP essays #4 & 5 (questions 2 and 3).
Voice Lessons: syntax and tone
Common Key Assignments: Optic assignment of political cartoons, Socratic seminar
Sample Assignment:

Nature of Man Performance Task

In your studies this term, you have studied a variety of viewpoints on the nature of humans, all in attempt to answer the question: Are humans inherently good, evil, or neutral (and shaped by society)? For this essay, you will need AT LEAST seven pieces of evidence to argue for a stance on this issue. Your essay must incorporate **at least three** of the sources from your studies in Term 4. You must address the counter argument that might be made against your claim. You must also provide evidence that refutes that counterclaim (why are they wrong?).

Cumulative final: Students will complete the Nature of Man performance task as their comprehensive

For Preparation Only

final. Students will analyze print and visual texts to gather evidence from both fiction and non-fiction sources (from in-class and independent reading). Students will use that evidence to participate in a Socratic seminar that will require them to be eloquent advocates for their position and thoughtful listeners to their classmates' differing perspectives. Finally, they will use the evidence they've gathered to write an argumentative essay that seamlessly integrates multiple sources, uses correct citation, acknowledges and refutes a counterclaim, and demonstrates a mature voice and style of writing. The final product will be created in a timed-writing atmosphere.

Key Assignments: *Detailed descriptions of all Key Assignments which should incorporate activities and projects, as well as, short answers and essay questions. How do assignments incorporate topics? Include all assignments that students will be required to complete. Assignments should be linked to components mentioned in the course outline and in the discussion of accomplishing the course goals. Explicitly indicate how the assignments support the Common Core College and Career Readiness Anchor Standards in Reading, Writing, Speaking and Listening, and Language. Courses must address them all in a balanced fashion. It is not appropriate or necessary to include instructions given to students regarding the execution of assignments (formatting, timeliness, etc.). Do not include exams or assessments in this section.*

Daily practice assignments will vary by teacher. These include study guide questions, vocabulary assignments, non-fiction article analysis, etc. Below is a list of the key common (non-assessment) assignments for each unit.

Unit 1: Discovering Theme
Common Key Assignments: Dialectical journal entries *Oedipus Rex*, dialectical journal entries *Oedipus at Colonus*, Padlet online discussions for theme, and Common Core Academic Vocabulary 1-30.

Unit 2: Perspective & Identity
Common Key Assignments: Common Core Vocabulary 31-60, ethos logos and pathos in advertising, Book Club activities for *Joy Luck Club* (or similar), and Socratic Seminar for Performance Task.

Unit 3: Argument
Common Key Assignments: Fallacy team presentation, book club activities for *Farewell to Manzanar* (or similar), Funeral Speech Analysis for Julius Caesar.

Unit 4: Research & World War II Literature
Common Key Assignments: Common Core Vocabulary 61-90, Literature Circle for graphic novel, Research paper preparation.

Unit 5: Literary Analysis & Theme
Common Key Assignments: Creative project for *Lord of the Flies*, OPTIC assignments for art and photography, class presentations for *Lord of the Flies* activities (including a video component).

Unit 6: The Nature of Man
Common Key Assignments: Optic assignment of political cartoons, Socratic seminar, Rhetorical Devices, Satire Analysis

Instructional Methods and/or Strategies: *Indicate how the Instructional Methods and/or Strategies support the delivery of the curriculum and the course goals. Explicitly indicate how the instructional approaches support the Common Core College and Career Readiness Anchor Standards in Reading, Writing, Speaking and Listening, and*

For Preparation Only

Language. Courses must address them all in a balanced fashion. What portions of the Course Outline are supported by the methods and strategies?

Instructional strategies will vary by unit. Lecture will be used to introduce topics and give historical context to readings. Class discussion will be used primarily during in-class readings. Students will collaborate in pairs or fours whenever possible to deepen discussions and improve students' listening and speaking abilities. Students will complete several major group projects. Technology will be utilized in a variety of ways to enhance instruction. This includes the use of Padlet, Socrative, Edmodo, Nearpod, Kahoot, and class websites.

Assessments Including Methods and/or Tools: *Indicate the intent of each assessment and a brief description of how each relates to the Course Purpose and goals related to the development of critical thinking and other habits of mind skills described in the Common Core College and Career Readiness Anchor Standards in Reading, Writing, Speaking and Listening, and Language.*

A variety of informal formative assessments will be given, and these will vary by teacher. These formative assessments will be used to guide instruction. This includes vocabulary assessments, grammar assessments, and reading quizzes (to check for understanding).

Summative assessments will be given at the end of each short story, play, and novel. These assessments will be a mixture of selected and constructed response. The constructed response items will be assessed both on the demonstrated depth of understanding and the students' ability to support their assertions with cited textual support.

Summative assessments will be given each semester for the corresponding grammar and vocabulary topics. The writing and speaking and listening assessments are detailed in their specific boxes below.

For Preparation Only

Reading: *Acceptable courses must require extensive reading of a variety of genres, non-literary as well as literary, including informational texts, classical and/or contemporary prose and poetry, and literary fiction and non-fiction. Reading of literary texts must include full-length works; excerpts from anthologies, condensed literature, et cetera, cannot substitute for full-length literary works. Students should be expected to read for literal comprehension and retention, depth of understanding, awareness of the text's audience, purpose and argument, and to analyze and interact with the text.*

Unit 1: Discovering Theme
In-unit Reading: *Oedipus Rex* (summer assignment), Short Stories such as: "Contents of a Dead Man's Pocket," "Damon and Pythias," "The Censors," "Lamb to the Slaughter;" Poetry such as: "Hazel Tells Laverne," "Janet Waking," "You Want a Social Life;" 3-5 non-fiction articles topically based on the argumentative essay assigned.
Concurrent Reading: Students will read *Oedipus at Colonus* independently in preparation for the next unit.

Unit 2: Perspective & Identity
In-Unit Reading: *Antigone*, *Joy Luck Club* (or similar), "Leopard Man" (ERWC unit), "Identity," ethos, logos, and pathos reading, and various current event non-fiction articles. Non-fiction articles from this point forward come from the *New York Times Upfront* magazine, or News ELA.com.

Unit 3: Argument
In-Unit Reading: *Julius Caesar, Farewell to Manzanar* (or similar), "A Grave Wrong," and varied non-fiction articles.

Unit 4: Research & World War II Literature
In-Unit Reading: *Maus I* or *Persepolis,* "The Bristol Evacuees," and varied non-fiction articles.

Unit 5: Literary Analysis & Theme
In-Unit Reading: *Lord of the Flies,* "And of Clay Are We Created," "Janet Waking" and varied non-fiction articles.

Unit 6: The Nature of Man
In-Unit Reading: *Brave New World* (or similar), "Girl Moved to Tears by Cliff Notes" Satire (or similar) "Hog Letter" Satire (or similar), political cartoons, and varied non-fiction articles and documentaries (for good vs. evil performance task).

Writing: *Courses must also require substantial, recurrent practice in writing extensive, structured papers directed at a various audiences and responding to a variety of rhetorical tasks. Students must demonstrate understanding of rhetorical, grammatical, and syntactical patterns, forms, and structures through responding to texts of varying lengths in unassisted writing assignments. Courses should address basic issues of standard written English, including style, cohesion, and accuracy. Writing is taught as a recursive process involving invention, drafting, revision, and editing where writers return to these activities repeatedly rather than moving through them in discrete stages. Writing is also a way of learning and it should enhance the students' understanding of a subject.*

Student will write all essays in an in-class and timed environment. They will then be allowed to re-write select essays to hone their skills and practice the revision process. The research paper will not be written under a time limit.

Unit 1: Discovering Theme
Writing Assessments: Practice AP Essay #1 honor code (as pre-test), *Oedipus Rex* Literary Analysis Essay, Non-fiction Argumentative Essay #1.

Unit 2: Perspective & Identity
Writing Assessments: Non-fiction Argumentative Essay #2, "How Far" Performance Task, *Antigone* literary analysis essay.

Unit 3: Argument
Writing Assessments: Literary Analysis *Julius Caesar*

Unit 4: Research & World War II Literature
Writing Assessments: World War II research paper (or similar), "Bristol Evacuees" Argumentative Essay, Non-fiction Argumentative Essay #3, business letter.

Unit 5: Literary Analysis & Theme
Writing Assessments: Two Literary Analysis essays (LOF, and "Clay"), Two Practice AP essays (question 1)

Unit 6: The Nature of Man

For Preparation Only

Writing Assessments: "Nature of Man" performance task, Practice AP essays #4 & 5 (questions 2 and 3).

Listening and Speaking: *Courses must allow students to develop essential critical listening skills and provide them ample practice speaking in large and small groups. Students are expected to be active, discerning listeners, to make critical distinctions between key points and illustrative examples, develop their ability to convey their ideas clearly, and listen and respond to divergent views respectfully, just as they must do when they read and write.*

Students will engage in class discussions as a whole group, in pairs, and in fours on a regular basis. They will practice their skills as both speakers and listeners. In addition to this academic discussion, students will participate in several more formal listening and speaking activities as outlined below.

Unit 2: Perspective & Identity
Socratic Seminar for Performance Task.

Unit 3: Argument
Fallacy class presentation (in teams), book club discussions for *Farewell to Manzanar* (or similar)

Unit 4: Research & World War II Literature
Literature Circle for graphic novel

Unit 5: Literary Analysis & Theme
Class presentations for *Lord of the Flies* activities (including a video component).

Unit 6: The Nature of Man
Common Key Assignments: Socratic seminar for performance task

For Preparation Only

NOTE: If "Yes" is selected for "Seeking 'Honors' Distinction" on the "Course Description" page of the "New Course" submission process, please complete the remaining 2 text boxes below.

Corresponding Non-Honors Course: *Indicate the name of the regular non-honors course corresponding to this proposed honors course.*

English 2 CP

Differences in Honors/Non-Honors Courses: *Describe in detail how this honors course differs from the regular course offered in the same subject area. Be specific. UC assumes Honors submissions will have increased level of reading and writing. Please be specific and descriptive regarding precisely how these increase the rigor of the course beyond merely increased amounts of work.*

The difference in rigor between an honor and a non-honors class lies primarily in the depth of thought that is required. Honors students will be asked to read not just more, but far more challenging texts. They will also read more out of class than a typical non-honors class would require. They will then be asked to think about answers to open-ended and abstract concepts. Using the Depth of Knowledge 1-4 scale, honors classes spend more time at levels three and four. The class will require them to write, think, and speak in a more sophisticated manner. They will also be encouraged be independent scholars and take a large

portion of ownership of their education. Honor students will be required to learn and apply more advance vocabulary, syntax, and analysis.

For Preparation Only

Course Title **ERHS**

ENGLISH 3A (P)

Description of Target Group

This course is the first semester of a two-semester course designed to meet the district's graduation requirement. English 3A (P) is designed for college preparatory students who have successfully completed English 1A/ 1B (P), or for students with a teacher's recommendation upon successful completion of English 2A/ 2B.

Purpose

The purpose of English 3A (P) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analyses of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American literature.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

READING

1. A knowledge of and an appreciation for the American tradition through the study of the following American authors, emphasizing the elements of the literary periods of Puritanism' Reason and Revolution, Romanticism, and Transcendentalist. Students will be exposed to selected American short stories, novel, drama, poetry and non fiction from as many of the following authors as possible:

   John Smith
   William Bradford
   Anne Bradstreet
   William Byrd
   Edward Taylor
   Jonathan Edwards
   Arthur Miller's *The Crucible or Three Sovereigns for Sarah,* a video presentation
   Ben Franklin
   Patrick Henry
   Thomas Payne
   Thomas Jefferson
   Michel-Guillaume Jean de Crevecoeur
   Phyllis Wheatley
   Washington Irving
   William Cullen Bryant
   Edgar Allan Poe--poems as well as short stories
   Herman Melville--*Moby Dick* or *Billy Budd* **(required)**

Nathaniel Hawthorne
Ralph Waldo Emerson
Henry David Thoreau
Mark Twain—*The Adventures of Huckleberry Finn* **(required)**
Ambrose Bierce

2. Recognition and understanding of literary terms, as well as their application in class discussions and in writing (see attachment for a list of terms)

WRITING

1. The ability to write effective sentences, meaning:

   a. write complete sentences
   b. use a variety of sentence types and structures
   c. and punctuate sentences correctly

2. The ability to write effective paragraphs, meaning:

   a. be able to identify and write a topic sentence
   b. write supporting sentences using details and examples
   c. write paragraphs of narration, description, exposition, persuasion, parallel sequence and integrated comparison
   d. and practice paragraph writing with journal entries, written quizzes, and exams

3. The ability to write the following types of essays:

   a. definition
   b. persuasion
   c. critical analysis

4. The ability to edit effectively and review language usage and mechanics

SPEAKING

1. Effective participation in class discussions and/or small discussion groups by actively listening, communicating an idea or opinion clearly, and demonstrating respect others' opinions

LISTENING

1. The ability to listen and follow oral directions
2. The ability to take notes from dictation or lectures
3. The ability to listen attentively to lectures, class discussions, and audio visual materials

Literary and Poetic Terminology

1. allegory
2. alliteration
3. allusion
4. anachronism
5. anecdote
6. antagonist
7. aphorism
8. assonance
9. autobiography
10. biography
11. blank verse
12. characterization
13. cliche
14. climax
15. colloquialism
16. conflict
17. connotation
18. couplet
19. denotation
20. denouement
21. dialogue
22. epigram
23. epitaph
24. figurative language
25. folk tale
26. foreshadow
27. free verse
28. genre
29. Gothic tale
30. hyperbole
31. iambic pentameter
32. imagery
33. irony (verbal and dramatic)
34. metaphor
35. Metaphysical
36. Modernism
37. motif
38. narrative
39. narrator
40. novelette/novella
41. omniscient point of view
42. onomatopoeia
43. oxymoron
44. paradox
45. parody
46. personification
47. plot
48. point of view
49. Postmodernism
50. prose
51. protagonist
52. pun
53. Realism
54. refrain
55. rhythm
56. Romanticism
57. satire
58. setting
59. simile
60. sonnet
61. stanza
62. symbol
63. theme
64. tone
65. tragic hero
66. Transcendentalism

Instructional Materials

1. Textbooks:

   Editorial Staff. *Adventures in American Literature, Heritage Edition Revised.* Harcourt Brace Jovanovich, Inc., 1985.

   Editorial Staff. *Grammar and Composition, Sixth Course.* Heighten Mifflin Company, 1984.

2. Test and supplementary materials.

3. Audio-visual materials: filmstrips, films, video-cassettes, records, tapes, compact discs, and laser discs.

4. Refer to “Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.”

Course Title **ERHS**

ENGLISH 3B (P)

Description of Target Group

This course is the second half of a two-semester course designed to meet the district's graduation requirement. English 3B (P) is designed for college preparatory students who have successfully completed English 1A/1B (P) and 2A/2B (P), or for students with a teacher's recommendation upon successful completion of English 3A.

Purpose

The purpose of English 3B (P) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analyses of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American literature. All students will also complete a career unit, offering them the chance to explore future occupation choices.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

READING

1. A knowledge of and an appreciation for the American tradition through they study of the following American authors, emphasizing the elements of the literary periods of Realism and the modern twentieth century. Students will be exposed to as variety of late nineteenth and early to mid-twentieth century authors, as well as more contemporary authors and their short stories, novels, dramas, poetry, and non-fiction selections, including as many of the following authors as possible:

   Walt Whitman
   Emily Dickinson
   Stephen Crane
   Willa Cather
   Edwin Arlington Robinson
   Edgar Lee Masters
   Sherwood Anderson
   Ernest Hemingway
   William Faulkner
   Katherine Anne Porter F. Scott Fitzgerald's *The Great Gatsby* **(required)**
   John Steinbeck's *Cannery Row* or *The Grapes of Wrath* **(required)**
   Flannery O'Connor
   Carl Sandburg

Amy Lowell
T.S. Eliot
William Carlos Williams
Langston Hughes
Thornton Wilder's *Our Town*
Richard Wright
James Baldwin
Ray Bradbury
Martin Luther King, Jr.
Maya Angelou
J.D. Salinger's *The Catcher in the Rye*
Kurt Vonnegut, Jr.

2. Recognition and understanding of literary terms, as well as their application in class discussions and in writing (see attachment for a list of terms)

WRITING

1. The ability to write effective sentences, meaning:

   a. write complete sentences
   b. use a variety of sentence types and structures
   c. and punctuate sentences correctly

2. The ability to write effective paragraphs, meaning:

   a. be able to identify and write a topic sentence
   b. write supporting sentences using details and examples
   c. write paragraphs of narration, description, exposition, persuasion, parallel sequence and integrated comparison
   d. and practice paragraph writing with journal entries, written quizzes, and exams

3. The ability to write the following types of essays:

   a. definition
   b. persuasion
   c. critical analysis

4. The ability to edit effectively and review language usage and mechanics

5. The ability to write business letters

6. Proper methods of notation, including:

   a. footnotes

b. bibliography

7. The ability to use the Career Center to explore career options

8. The ability to produce documents necessary for a career and/or college entrance, namely a cover letter and a resume

SPEAKING

1. Effective participation in class discussions and/or small discussion groups by actively listening, communicating an idea or opinion clearly, and demonstrating respect for others' opinions
2. Proper preparation and effective delivery of formal and informal speeches

LISTENING

1. The ability to listen to and follow oral directions
2. The ability to take notes from dictation and/or lectures
3. The ability to listen attentively to lectures, class discussions, and audio visual materials

INSTRUCTIONAL MATERIALS

Textbooks:

Editorial Staff. *Adventures in American Literature, Heritage Edition Revised.* Harcourt Brace Jovanovich, Inc., 1985.

Editorial Staff. *Grammar and Composition, Sixth Course.* Houghton Mifflin Company, 1984.

Audio-visual materials: filmstrips, films, video-cassettes, records, tapes, compact discs, and laser discs.

Refer to: Secondary Adopted Texts and Approved Supplementary Books used the Santa Maria Joint Union High School District

ENGLISH 4A (P)

Description of Target Group

This course is the first semester of a two-semester course designed for seniors who are college/university bound.

Purpose

The purpose of English 4A (P) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analysis of literary selections and will develop a knowledge of and an appreciation for the English language through their study of British literature.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to:

LISTENING
1. Listen to and follow oral directions
2. Take notes from dictation and/or lectures
3. Listen attentively to lectures, audio-visual materials, and classroom discussions
4. Identify weaknesses and strengths of oral arguments

SPEAKING
1. Participate in class discussion
2. Do an oral interpretation

READING
1. Demonstrate a knowledge of and an appreciation for the English language tradition through the study of the following authors or readings emphasizing the elements of the literary periods of Anglo-Saxon, Medieval, Renaissance, Age of Reason, and Romanticism:

Beowulf, "Seafarer" - a Ballad, Geoffrey Chaucer, Sir Thomas Malory, Edmund Spenser, Christopher Marlowe, Sir Walter Raleigh, Shakespeare, John Donne, George Herber, Andrew Marvel, Ben Johnson, Robert Herrick, Richard Lovelace, John Milton, Samuel Pepys, Jonathan Swift, Joseph Addison, Richard Steele, Alexander Pope, James Boswell, Thomas Gray, Robert Burns, William Blake, William Wordsworth, Samuel Taylor Coleridge, Lord Byron, Percy Bysshe Shelley, and John Keats.

WRITING

1. Develop writing skills which involve stages: thinking/discussing/listening/finding ideas/drafting/clarifying/developing/revising/ and finally editing
2. Write cogent prose related to literature: argue cogently, study and/or imitate models
3. Write paraphrases or summaries
4. Do "Real World" writing: non-literary tasks such as investigative reports, written interviews, magazine articles
5. Write for variety of audiences
6. Evaluate their own work as well as that of others
7. Practice the conventions of language

ACTIVITIES

Students will write every day (i.e. journal, learning log, dialogues, interior monologues, reading log). Some writing tasks will involve evaluation (i.e. character sketches, analysis of setting, study of imagery and symbols, consideration of themes. Writing will include assignments which require some length of time to develop (i.e. memoirs, exposition, and argumentation).

Teachers will role model: teachers will write at times with and for students.

INSTRUCTIONAL MATERIALS

Text and Supplementary Materials

Audio-visual materials: filmstrips, films, video-cassettes, records

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

ENGLISH 4B (P)

Description of Target Group

This course is the second semester of a two-semester course designed for seniors who are college/ university bound.

Purpose

The purpose of English 4B (P) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analyses of literary selections and will develop a knowledge of and an appreciation for the English language through their study of British literature.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

READING

1. Demonstrate a knowledge of and an appreciation for the English language and literary tradition through the study of the following authors or readings emphasizing the elements of the literary periods of Romanticism. Victorian' Early 20th Century, and 20th century:

Mary Shelley, William Wordsworth, Samuel Coleridge, Lord Byron, Percy Shelley, John Keats, Alfred Tennyson, Robert Browning, Matthew Arnold, Thomas Hardy, Gerard Manley Hopkins, A.E. Housman, Oscar Wilde' Joseph Conrad, E.M. Forster, James Joyce7 D.H Lawrence, Katherine Mansfield, Frank O'Connor, Graham Greene, William Butler Yeats, T.S. Eliot, W.H. Auden, and Dylan Thomas and others as selected instructor.

2. Examine and discuss these themes and topics:
   death and immortality
   the class system
   the role of woman
   British imperialism
   the development of industrialism
   disillusionment and despair
   British education
   the World Wars
   science and religion

3. Recognize and understand the following literary terms:

aphorism	apostrophe
caricature	carpe diem tradition
Cavalier poetry	Classicism
conceit	diary
diction	dramatic monologue
elegy	exemplum
heroic couplet	heroic epic
metaphysical conceit	mock epic
modernist movement	ode
pastoral elegy	patron
Petrarchan sonnet	psalm
Romantic	scope
Shakespearean sonnet	social comedy
soliloquy	sprung rhythm
stream of consciousness	strophe
terza rima	traffic flaw
Victorian	villanelle
volta (turn)	

WRITING

1. Develop writing skills which involve stages: thinking/discussing/listening/finding ideas, drafting/clarifying/developing/revising, and finally editing.
2. Write essays related to literature: argue cogently, study and/or imitate models.
3. Write paraphrases or summaries.
4. Do "Real World" writing non-literary tasks such as investigative reports, written interviews, magazine articles.
5. Write for a variety of audiences.
6. Evaluate their own work as well as that of others.
7. Practice the conventions of language.
8. Use vocabulary effectively.
9. Write a research paper on a literary subject.

SPEAKING

1. Participate in class discussions.
2. Participate in group a presentation.
3. Participate in a class debate.

LISTENING

1. Listen to and follow oral directions.
2. Take notes from dictation and/or lectures.
3. Listen attentively to lectures, audio-visual materials, and discussions.
4. Identify weaknesses and strengths of oral arguments.

INSTRUCTIONAL MATERIALS

Texts and Supplementary Materials
Audio-visual materials: filmstrips, films, video-cassettes, records

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

CURRENT SITUATION

The English intensive courses were setup as 2 periods worth 10 units. It was a scheduling issue.

Since schools wanted the same set of kids in both periods of English Intensive A and B we couldn't get Aeries to automatically keep the students when rolling the students into classes within the same semester and then again for the next semester.

Ernest Righetti, Pioneer Valley and Santa Maria High School:

- **FALL:** English 1 Intensive A, EN6402, UC approved to satisfy the "b" requirement
- **SPRING:** English 1 Intensive B, EN 6403, (Part B will receive elective credits)
- **FALL:** English 2 Intensive A, EN6406, UC approved to satisfy the "b" requirement.
- **SPRING:** English 2 Intensive B, EN6407, (Part B will receive elective credits)

IN THE FUTURE

How would we work English vs elective credits?

One option:

FALL:	**SPRING:**
Eng I IntenA pt1 5 elective credits	Eng IntenB pt1 5 elective credits
Eng I IntenA pt2 5 Eng Credits	Eng IntenB pt2 5 English credits

Initially the courses could be setup on the master board as a year-long class for 2 periods so we can get the students to roll into the same classes in both the fall and spring. Then after the roll, change these classes to be semester and 1 period classes.

The only caveat is that would not be able to guarantee that students in Fall part 1 would be the same students in Fall part2 class.

Students in Fall A part 1 class could still be the same students in Spring B pt 1, but within the fall semester may have different students in the part 1 and part 2 classes and may not be in both part 1 and 2 in sequential periods. Heydi did say they could stay with the same teacher, just may not be the same students in each class.

Maria's Note: This option may not be viable

Course Title

English 1A (H)

Description of Target Group

Honors English 1A is the first semester of a two-semester course designed for freshmen who scored highest on the language/reading sections of standardized tests and the District's competency tests. This course is also for those freshmen who have demonstrated unusual potential in the junior high school and those in the "Gifted and Talented Education" (GATE) program.

Purpose

Designed to provide qualitatively different and more varied material to challenge and enrich honor students' individual interests and potential.

Standards of Expected Student Achievement

Upon completion of this course, honor students will be able to successfully demonstrate the following skills:

Listening Skills

1. Listen to and follow oral directions.
2. Take notes from dictation or lectures.
3. Paraphrase, from discussion, what a speaker has said.
4. Identify weaknesses and strengths of oral arguments.
5. Listen critically to oral presentations.

Speaking Skills

1. Give directions on how to complete a task.
2. Request specific information.
3. Make appropriate and relevant contributions to class discussion.
4. Participate in oral reading exercises.
5. Give impromptu and prepared oral presentations.
6. Make appropriate use of vocabulary terms from selected portions of the S.A.T. word list.

Reading Skills

1. Understand and appreciate the techniques of the short story with an awareness of form,
2. character, theme, plot, and style through exposure to various readings.
3. Recognize and understand various sections of a newspaper.
4. Use literary terms relating to fiction.
5. Gain insights into their own lives from a work of literature.
6. Establish an individual reading program.
7. Use the dictionary effectively.

English 1A (H) (continued)

Writing Skills

1. Spell correctly words on approved 1A spelling list.
2. Make appropriate use of the vocabulary items from selected portions of the S.A.T. word list.
3. Use the library for research.
4. Understand the function of the various parts of speech.
5. Use effectively a variety of sentence forms in the construction of unified, coherent, and mechanically correct paragraphs.
6. Write a book report.
7. Write an essay.
8. Keep a personal journal, diary or learning log for discovering and exploring ideas.
9. Experiment in various forms of creative writing.
10. Write a short character analysis from selected readings.
11. Make effective use of each of the stages of the composing process; prewriting, writing, and rewriting.

Additional enrichment activities will include reading, writing, and speaking with emphasis on critical observation and analysis, problem solving, and creativity.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will practice skills in the areas outlined in the Standards of Expected Student Achievement.

Course Title

English 1B (H)

Description of Target Group

Honors English 1B is the second semester of a two-semester course designed for freshmen who scored highest on the language/reading sections of standardized tests and the District's competency tests. This course is also for those freshmen that have demonstrated unusual potential in the junior high school and those in the "Gifted and Talented Education" (GATE) program.

Purpose

Designed to provide qualitatively different and more varied material to challenge and enrich honor students' individual interests and potential.

Standards of Expected Student Achievement

Upon completion of this course, honor students will be able to successfully demonstrate the following skills:

Listening Skills

1. Listen to and follow oral directions.
2. Take notes from dictation or lectures.
3. Paraphrase, from discussion, what a speaker has said.
4. Identify weaknesses and strengths of oral arguments.
5. Listen critically to oral presentations.

Speaking Skills

1. Give directions on how to complete a task.
2. Request specific information.
3. Make appropriate and relevant contributions to class discussion.
4. Participate in oral reading exercises.
5. Give impromptu and prepared oral presentations.
6. Make appropriate use of vocabulary terms from selected portions of the S.A.T. word list.

Reading Skills

1. Understand and appreciate the techniques of the short story with an awareness of form, character, theme, plot, and style through exposure to various readings.
2. Recognize and understand various sections of a newspaper.
3. Use literary terms relating to fiction.
4. Gain insights into their own lives from a work of literature.
5. Establish an individual reading program.
6. Use dictionary effectively.

English 1B (H) (continued)

Writing Skills

1. Spell correctly words on an approved 1B spelling list.
2. Make appropriate use of at least 70 percent of vocabulary from the recommended word lists.
3. Use the library for research.
4. Understand the function of the various parts of speech.
5. Use effectively a variety of sentence forms in the construction of unified, coherent, and mechanically correct paragraphs.
6. Write a book report.
7. Write an essay.
8. Keep a personal journal, diary or learning log for discovering and exploring ideas.
9. Experiment in various forms of creative writing.
10. Write a short literary analysis from selected novels.
11. Work effectively in group and individual writing projects (e.g., play version of novel, "saturation" reports).
12. Make effective use of each of the stages of the composing process; prewriting, writing, and rewriting.

Additional enrichment activities will include reading, writing, and speaking with emphasis on critical observation and analysis, problem solving, and creativity.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will practice skills in the areas outlined in the Standards of Expected Student Achievement.

COURSE TITLE **ERHS**

English 1A/B (CP)

DESCRIPIION OF TARGET GROUP

This is a year-long course, required to meet the district's graduation requirements, and is designed for all students.

PURPOSE

English 1A and 1B are designed to develop communication skills in reading, writing, speaking, and listening. This is a literature-based course designed to prepare students for English 2A, World Literature. Emphasis will be placed on paragraph and essay development, sentence structure, library/research skills, and all stages of the writing process. Literary selections will include the short story, the novel, and a drama and poetry unit. Vocabulary development, critical thinking skills, essays, and oral presentations will develop communication skills. Individual work and group/cooperation work will be assigned. A career and goals-setting unit will provide greater awareness of the need for proficiency in language skills. Students will be required to demonstrate the ability to use computer technology in their research and for their presentations.

STANDARDS OF EXPECTED STUDENT ACHIEVEMENT

Upon completion of this course, students will be able to successfully demonstrate the following skills:

READING
The students will be expected to:

- -recognize and interpret poetry, plays, short stories, and novels
- -respond to works of literature with appropriate inferences and questions
- -identify non-fiction formats such as essay, biography, and autobiography
- -find information from reference works to use in oral/written reports
- -participate in a silent sustained reading component
- -recognize, understand, and use literary terms
- -demonstrate the ability to make meaning from text, and make connections beyond the text, such as in keeping a reading/response log.

Core selections include: Novel: To Kill a Mockingbird or Of Mice and Men
Drama: Romeo and Juliet

Other possible selections include: Novels: Lord of the Flies, Alive, Great Expectations, Animal Farm, West Side Story
Drama: Inherit the Wind, Midsummer Night's Dream
Epic Poetry: The Odyssey

English 1A/B (continued)

WRITING
The students will be expected to demonstrate the following skills:

- write effective, complete sentences which are punctuated and spelled correctly, and demonstrate use of sentence variety
- write effective paragraphs and essays in which they identify the topic sentence or thesis statement use supporting sentences/ideas/examples
- follow the writing process from pre-writing to final editing, including brainstorming techniques, peer-editing, evaluation, and presentation
- acknowledge an audience/reader in the presentation of an idea
- identify and write in the following types of discourse: narrative, description, reflective, and autobiographical
- write a comparison/contrast essay on a major literary work
- demonstrate skill in gathering information form reference sources
- and write a report on an assigned topic and demonstrate the following skills:

    1) take notes, 2) document references/apply MLA standard, 3) use the library and computer catalogue as a research tool.

GROUP/COMMUNICATION SKILLS
The students will be expected to demonstrate the following skills:

- be able to give an oral presentation
- ask for specific information
- participate in whole class or small group discussions by communicating
- their own ideas clearly, and receiving others' ideas with proper respect
- listen to and follow verbal directions
- take notes from class presentations and respond with appropriate questions and comments
- accept suggestions and critiques made by peers

CAREER/JOB EDUCATION
The students will be expected to:

- take the COPS or other interest inventory
- identify career choices which coordinate with interests
- and begin a career portfolio that will incorporate a six-year plan.

INSTRUCTIONAL MATERIALS

Textbooks: Elements of Literature by: Holt, Rinehart and Winston
Adventures in Literature and Orange Level by McDougal, Little

Also refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District and a list of audio-visual materials/technological resources.

Course Title **ERHS**

English 2A (CP)

Description of Target Group

This is the first semester of a two-semester course intended to meet the district's graduation requirement. It is designed for all students who have passed English 1A and 1B-CP with an A or B, have the freshman teacher's recommendation, and plan to continue education at a college or university.

Purpose

This course will continue to provide students with activities, which will develop effective communication through reading, writing, speaking, and listening. Students will review parts of speech, punctuation, capitalization, usage, and have extensive practice with simple, compound, complex, and compound-complex sentences. Critical reading, writing, speaking, and listening skills will focus on using analytical and evaluative thinking and reinforce the grammar and literature study. Both group and individual projects will be assigned which entail a written research report and an oral presentation. In addition, students will explore career and college information.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING

1. Read independently.
2. Comprehend the reading.
3. Identify and understand literary terms:

allusion	conflict	foil	moral	protagonist
anecdote	connotation	foreshadowing	narrator	satire
antagonist	denotation	genre	plot	setting
character	denouement	irony	point of view	symbol
climax	dialogue	mood	prose	theme
				tone

4. Construct meaning from a text.
5. Extend beyond a text.
6. Keep a journal or log.
7. The ability to find pertinent data form reference works to use in oral and written reports.

Short Stories: From the text

Novels:	*All Quiet on the Western Front*	*Ivanhoe*
	Black Like Me	*Les Miserables*
	Brave New World	*Lost Horizon*
	Bridge of San Luis Rey	*Martian Chronicles*

English 2A (CP) (continued)

Captains Courageous
Connecticut Yankee
Cry, the Beloved Country
Dandelion Wine
David Copperfield
Fahrenheit 451
Good Earth
Hunchback of Notre Dame
1984
Old Man and the Sea
One Day in the Life
Picture of Dorian Gray
Pride and Prejudice
Slaughterhouse Five
Wuthering Heights

WRITING

1. Write effective sentences.
2. Write effective paragraphs, which have relevant support.
3. Write effective essays, which demonstrate coherence and style.
4. Use a variety of sentences in written work.
5. U se vocabulary effectively.
6. Demonstrate good mechanics and spelling.
7. Use a dictionary, thesaurus, and grammar handbook in the writing process.
8. Follow an outline to write an essay.
9. Write a research report using MLA or APA documentation.
10. Write the following types of essays:

evaluative reflective
comparison/contrast interpretive

SPEAKING

1. Participate effectively in class and small group discussions.
2. Communicate information effectively as a large group member, a small group member, and as a presenter.
3. Give an oral report based on research employing appropriate props.

LISTENING

1. Listen to and follow directions.
2. Listen to an oral presentation, glean pertinent data, and take appropriate notes.
3. Not interrupt a presentation.
4. Summarize the major points of a presentation---whether or not the student agrees with the topic.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Also refer to the county schools' inventory and the English Department inventory of materials.

English 2B (CP)

Description of Target Group

This is the second semester of a two-semester course intended to meet the district's graduation requirement. It is designed for all students who have passed English 2A-CP with an A or B, have the English 2A-CP teacher's recommendation, and plan to attend a college or university after graduation.

Purpose

This course will continue to provide students with activities, which will develop effective communication through reading, writing, speaking, and listening. Students will continue practice with simple, compound, complex, and compound-complex sentences; a variety of these sentences will be expected in their essays. Critical reading, writing, speaking, and listening skills will focus on using analytical and evaluative thinking and reinforce the grammar and literature study. Both group and individual projects will be assigned which entail a written research report and an oral presentation.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING

1. Read independently
2. Comprehend the reading
3. Identify and understand literary terms:

alliteration	free verse	paradox	sonnet
anachronism	hyperbole	personification	stanza
assonance	Iambic	pentameter	poetry tragic hero
blank verse	imagery	prose	
couplet	metaphor	refrain	
figurative language	onomatopoeia	rhythm	

4. Construct meaning from a text
5. Extend beyond a text
6. Keep a journal or log
7. The ability to find pertinent data form reference works to use in oral and written reports

Poetry:	Selections from the text
Plays:	Core: Julius Caesar
	Supplementary selections are in the text
Novel:	If time allows, a novel may be covered this semester.
	See English 2A-CP course description for a list.

English 2B (CP) - (continued)

WRITING

1. Write effective sentences
2. Write effective paragraphs which have relevant support
3. Write effective essays which demonstrate coherence and style
4. Use a variety of sentences in written work
5. Use vocabulary effectively
6. Demonstrate good mechanics and spelling
7. Use a dictionary, thesaurus, and grammar handbook in the writing process
8. Follow an outline to write an essay
9. Write a research report using MLA or APA documentation
10. Write the following types of essays:

evaluative	reflective
comparison/contrast	interpretive

SPEAKING

1. Participate effectively in class and small group discussions
2. Communicate information effectively as a large group member, a small group member, and as a presenter
3. Give an oral report based on research employing appropriate props

LISTENING

1. Listen to and follow directions
2. Listen to an oral presentation, glean pertinent data, and take appropriate notes
3. Not interrupt a presentation
4. Summarize the major points of a presentation---whether or not the student agrees with the topic

INSTRUCTIONAL MATERIALS

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Also refer to the county schools' inventory and the English Department inventory of materials.

Course Title **ERHS**

English 2A (H)

Description of Target Group

This course is the first semester of a two-semester course intended to meet the district's graduation requirement. It is designed for only those sophomore students who have passed English 1A-CP and 1B-CP and whose recommendations and portfolios have been accepted by the English Department Honors Committee.

Purpose

This course is designed to provide selected students with a qualitatively different and varied curriculum which challenges and enriches their individual potential while maintaining the requirements of the basic course outline. Critical writing and reading, listening and speaking skills will focus on using analytical and evaluative thinking. Both group and individual projects will be assigned. In addition, students will explore career and college information.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING

1. Read independently
2. Comprehend the reading
3. Identify and understand literary terms:

allusion	conflict	foil	moral	protagonist
anecdote	connotation	foreshadowing	narrator	satire
antagonist	denotation	genre	plot	setting
character	denouement	irony	point of view	symbol
climax	dialogue	mood	prose	theme
				tone

4. Construct meaning from a text
5. Extend beyond a text
6. Keep a journal or log
7. The ability to find pertinent data from reference works to use in oral and written reports.

Short Stories: From the text

Novels:	*All Quiet on the Western Front*	*Ivanhoe*
	Brave New World	*Les Miserables*
	Bridge of San Luis Rey	*1984*
	Cry, the Beloved Country	*One Day in the Life*
	David Copperfield	*Pride and Prejudice*

Hunchback of Notre Dame *Slaughterhouse Five*
Withering Heights

WRITING

1. Write effective sentences
2. Write effective paragraphs which have relevant support
3. Write effective essays which demonstrate coherence and style
4. Use a variety of sentences in written work
5. Use vocabulary effectively
6. Demonstrate good mechanics and spelling
7. Use a dictionary, thesaurus, and grammar handbook in the writing process
8. Follow an outline to write an essay
9. Write a research report using MLA or APA documentation
10. Write the following types of essays:

evaluative	reflective
comparison-contrast	interpretive

SPEAKING

1. Participate effectively in class and small group discussions
2. Communicate information effectively as a large group member, a small group member, and as a presenter
3. Give and oral report based on research employing appropriate props

LISTENING

1. Listen to and follow directions
2. Listen to an oral presentation, glean pertinent data, and take appropriate notes
3. Not interrupt a presentation
4. Summarize the major points of a presentation--whether or not the student agrees on the topic

INSTRUCTIONAL MATERTALS

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Also refer to the county schools' inventory and the English Department inventory of materials.

Course Title **ERHS**

English 2A

Description of Target Group

This is the first semester of a two-semester course designed to meet the district's graduation requirements. It is for students who have passed English 1A and 1B and who are interested in entering the job market, trade/technical field or community college.

Purpose

The purpose of English 2A is to develop those skills of comprehension and communication ordinarily required for productive employment, thoughtful recreation and responsible citizenship. Emphasis will be placed on comprehension in reading and fluency in writing. A career unit will be presented to allow students to start planning for their future.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to demonstrate successfully the following tasks/skills:

READING

1. Read independently
2. Comprehend the reading
3. Identify and understand literary terms:

allusion	conflict	plot	personification
antagonist	dialogue	climax	protagonist
character	irony	symbol	point of view
simile	narrator	imagery	metaphor

4. Construct meaning from a text
5. Extend beyond a text
6. Keep a journal or log
7. The ability to find pertinent data from reference works to use in oral and written reports

Short stories: From the text

Novels: One or more of the following or any from the current department list:

Black Like Me	*One Day in the Life. . .*
Cry, The BeloYed Country	*All Quiet on the Western Front*
The Old Man and the Sea	*The Good Earth*
The Pearl	

English 2A (continued)

WRITING

1. Write effective sentences
2. Write using legible handwriting
3. Write a 6-10 sentence paragraph with a topic sentence, support sentences and a closing sentence.
4. Use vocabulary effectively
5. Demonstrate good mechanics and spelling
6. Use a dictionary, thesaurus, and grammar handbook in the writing process
7. Write a research report using MLA or APA documentation
8. Write in the following types of discourse: evaluative, comparison-contrast, reflective, and descriptive

SPEAKING

1. Participate effectively in class and small group discussions
2. Communicate information effectively as a large group member, a small group member, and as a presenter
3. Make an oral presentation to the class

LISTENING

1. Listen to and follow directions
2. Listen to an oral presentation, glean pertinent data, and take appropriate notes
3. Not interrupt a presentation
4. Summarize the major points of a presentation

CAREER/JOB EDUCATION SKILLS

1. Take the COPS or other interest inventory
2. Identify career choices which coordinate with interests

Instructional Materials

Text and Supplementary Materials: Refer to Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Also refer to the county schools' inventory and the English Department inventory of materials.

Course Title **ERHS**

English 2B

Description of Target Group

This course is designed as the second semester of a two-semester course required to meet the district's graduation requirements. It is designed primarily for all students who have passed English 2A and who are interested in entering the job market, trade/technical field or community college.

Purpose

The purpose of English 2B is to continue to develop those skills of comprehension and communication ordinarily required for productive employment, thoughtful recreation and responsible citizenship. Emphasis will be placed on reading with understanding and appreciation and on producing well-formed and correct sentences, paragraphs, and short essays through effective use of the writing process.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to demonstrate successfully the following tasks/skills:

READING

1. Read newspapers, vocational material, popular magazines and other materials for information and pleasure
2. Read poetry, plays and novels and apply some aspect of the reading to their own lives.
3. Apply critical thinking skills to literary works studied in class
4. Read and understand civic and business documents
5. Use reference material in oral and written reports
6. Do silent sustained reading for 15 minutes intervals (45-60 minutes per week)
7. Recognize and understand literary terms

Poetry: From the text

Novels (optional):	*Black Like Me*	*The Old Man and the Sea*
	Cry, The Beloved Country	*One Day in the Life*
	All Quiet on the Western Front	*The Pearl*
	The Good Earth	

Drama (one of the following): *Julius Caesar/Merchant of Venice/Taming of the Shrew/Fiddler on the Roof*

English 2B (continued)

WRITING

1. Write effective sentences and paragraphs
2. Write short narrative and comparison-contrast essays, brief reports, summaries, resumes, business and personal letters
3. Keep a reading log/journal

SPEAKING

1. Participate effectively in class and small group discussions
2. Communicate information effectively as a large group member, a small group member, and as a presenter

LISTENING

1. Listen to and follow directions
2. Listen to an oral presentation, glean pertinent data, and take appropriate notes
3. Listen without interrupting a presentation
4. Summarize the major points of a presentation

Instructional Materials

Text and Supplementary Materials: Refer to Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Also refer to the county schools' inventory and the English Department inventory of materials

Course Title **ERHS**

ENGLISH 3 (AP) A, B

Description of Target Group

This course is a two-semester course designed to meet the district's graduation requirement. English 3 (AP) is aimed at accelerated students who have successfully completed English 1A/1B (P) and 2A/2B (H) with an "A" or a "B" or who have received a teacher recommendation.

Purpose

The purpose of English 3 (AP) is to continue to provide students with those English language experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analysis of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American, English, and World Literature as they prepare for the Advanced Placement Examination in Language and Composition.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

READING
Students will achieve knowledge of and appreciation for the American tradition through an in-depth study of literature. Students will read selected short stories, novels, drama, poetry, and non-fiction in order to identify the purpose and modes of discourse, recognize the conventions of assorted genres, achieve a working knowledge of rhetorical and structural devices, and extrapolate and evaluate themes.

WRITING
Students will write extensively using several rhetorical structures in order to employ effective transitions and subordination. They will learn to organize information selectively and to communicate successfully with a wide variety of intellectually demanding audiences.

SPEAKING
Students will participate in class discussions and small groups by communicating their ideas or opinions clearly while demonstrating respect for others' opinions.

LISTENING
Students will follow oral directions and take notes from dictation or lectures.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Course Title **ERHS**

ENGLISH 3A (H)

Description of Target Group

This course is the first semester of a two-semester course designed to meet the district's graduation requirement. English 3A (H) is designed for accelerated students who have successfully completed English 1A/ 1B (P) and 2A/ 2B (H) and who have received a teacher recommendation. Students who fail to receive an "A" or a "B" in sophomore Honors English may not enroll in English 3A (H).

Purpose

The purpose of English 3A (H) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analyses of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American literature. The volume of reading materials is of a large percentage, so it is imperative that the instructor *consider* the list of authors and titles below and select only what can be realistically covered in the span of one semester.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

READING

1. A knowledge of and an appreciation for the American tradition through the study of the following American authors, emphasizing the elements of the literary periods of Puritanism, Reason and Revolution, Romanticism, and Transcendentalism. Students will be exposed the selected American short stories, novel, drama, poetry, non-fiction from:

   John Smith
   William Bradford
   Anne Bradstreet
   William Byrd
   Edward Taylor
   Jonathan Edwards
   Arthur Miller's *The Crucible (required)*
   Ben Franklin
   Patrick Henry
   Thomas Paine
   Thomas Jefferson
   Michel-Guillaume Jean de Crevecoeur
   Phyllis Wheatley
   Washington Irving--at least three short stories

William Cullen Bryant
James Fenimore Cooper--The *Last of the Mohicans*
Edgar Allan Poe--poems as well as six short stories from *Great Tales of Horror*
Herman Melville--Moby *Dick* or *Billy Budd (required)*
Ralph Waldo Emerson
Henry David Thoreau--Walden **OR** *Civil Disobedience*
Mark Twain--The *Adventures of Huckleberry Finn* **(required)**
Ambrose Bierce

2. Recognition and understanding literary terms, as well as their application in class discussions and in writing (see attachment for a list of terms)

3. Understanding of one to two novels (of each student's choosing) read outside of class; the teacher shall be responsible for devising a method to show completion

WRITING

1. The ability to write effective sentences, meaning:

   a. write complete sentences
   b. use a variety of sentence types and structures
   c. and punctuate sentences correctly

2. The ability to write effective paragraphs, meaning:

   a. be able to identify and write a topic sentence
   b. write supporting sentences using details and examples
   c. write paragraphs of narration, description, exposition, persuasion, parallel sequence and integrated comparison
   d. and practice paragraph writing with journal entries, written quizzes, and exams

3. The ability to write the following types of essays:

   a. definition
   b. persuasion
   c. critical analysis

4. The ability to edit effectively and review language usage and mechanics

5. Enrichment of vocabulary banks by:

   a. defining and studying new words from context and/or thematic units
   b. incorporating new words into vocabulary and writing
   c. defining and studying Greek and Latin roots
   d. and defining and studying allusions and idioms

6. Knowledge of the library's capacity to aid in student research through an assigned or independent project

7. Proper methods of notation, including:

   a. footnotes
   b. bibliography
   c. and Modern Language Association notation technique (consult the *MLA Handbook for Writers of Research Papers)*

SPEAKING

1. Effective participation in class discussions and/or small discussion groups by actively listening, communicating an idea or opinion clearly, and demonstrating respect for others' opinions

LISTENING

1. The ability to listen and follow oral directions

2. The ability to take notes from dictation or lectures

3. The ability to listen attentively to lectures, class discussions, and audio visual materials

Instructional Materials

1. Textbooks:

Editorial Staff. *Adventures in American Literature, Heritage Edition Revised.* Harcourt Brace Jovanovich, Inc., 1985.

Editorial Staff. *Grammar and Composition, Sixth Course.* Houghton Mifflin Company, 1984.

2. Test and supplementary materials.

3. Audio-visual materials: filmstrips, films, video-cassettes, records, tapes, compact discs, and laser discs.

4. Refer to "Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District. "

ENGLISH 3B (H)

Description of Target Group

This course is the second half of a two-semester course designed to meet the district's graduation requirement. English 3B (H) is designed for accelerated students who have **successfully completed** English 3A (H) with an "A" or a "B", or for students with a teacher's recommendation upon completion of English m A (P).

Purpose

The purpose of English 3B (H) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analyses of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American literature. Once again, since the volume of reading material is quite extensive, so it is imperative that the instructor *consider* the list of authors and titles below and select only what can be realistically covered in the span of one semester.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

READING

1. A knowledge of and an appreciation for the American tradition through the study of the following American authors, emphasizing the elements of the literary periods of Realism and the modern twentieth century. Students will be exposed to a variety of late nineteenth and early to mid-twentieth century authors, as well as more contemporary authors and their short stories, novels, dramas, poetry, and non-fiction selections, including:

   Frederick Douglass--Life *of An American Slave*
   Walt Whitman
   Emily Dickinson
   Stephen Crane--short stories **OR** *The Red Badge of Courage*
   Willa Cather--short stories **OR** *My Antonia*
   Edwin Arlington Robinson
   Edgar Lee Masters
   Ernest Hemmingway
   William Faulkner
   Katherine Anne Porter
   F. Scott Fitzgerald's *The Great Gatsby* (required) OR
   John Steinbeck's *East of Eden* or *The Grapes of* Wrath (required)

Flannery O'Connor
Carl Sandburg
Robert Frost
Amy Lowell
T.S. Eliot
William Carlos Williams
Langston Hughes
Thornton Wilder's *Our Town* OR
Arthur Miller's *Death of A Salesman* OR
Tennessee Williams' *The Glass Menagerie*
Richard *Wright--Black Boy* OR *Native Son*
James Baldwin
Ray Bradbury--*Fahrenheit 451* OR *The Martian Chronicles*
Martin Luther King, Jr.
Maya Angelou
J.D. Salinger's *The Catcher in the Rye*
Hermann *Hesse--Siddhartha*
Kurt Vonnegut, Jr.
Amy *Tan--The Joy Luck Club* OR *The Kitchen God 's Wife*
Robert Waller--The *Bridges of Madison County*

2. Recognition and understanding literary terms, as well as their application in class discussions and in writing (see attachment for a list of terms)

3. Understanding of one to two novels (of each student's choosing) read outside of class. The teacher shall be responsible for devising a method to show completion

WRITING

1. The ability to write effective sentences, meaning:

   a. write complete sentences
   b. use a variety of sentences types and structures
   c. and punctuate sentences correctly

2. The ability to write effective paragraphs, meaning:

   a. be able to identify and write a topic sentence
   b. write supporting sentences using details and examples
   c. write paragraphs of narration, description, exposition, persuasion, parallel sequence and integrated comparison
   d. and practice paragraph writing with journal entries, written quizzes, and exams

3. The ability to write the following types of essays:
   a. definition

a. persuasion
b. critical analysis

4. The ability to edit effectively and review language usage and mechanics

5. Enrichment of vocabulary banks by:

   a. defining and studying new words from context and/or thematic units
   b. incorporating new words into vocabulary and writing
   c. defining and studying Greek and Latin roots
   d. and defining and studying allusions and idoms

6. Literary ability and confidence by entering individual original work in at least one literary contest

7. Knowledge of the library's capacity to aid in student research through an assigned or independent project

8. Knowledge of proper methods of notation, including:

   a. footnotes
   b. bibliography
   c. and Modern Language Association notation technique (consult the *MLA Handbook for Writers of Research Papers)*

9. The ability to use the career center to explore career options

10. Production of documents necessary for a career and/or college entrance, namely the college essay, a cover letter, and a resume

Listening

1. The ability to listen and follow oral directions

2. The ability to take notes from dictation or lectures

3. The ability to listen attentively to lectures, class discussions, and audio visual materials

Speaking

1. Effective participation in class discussions and/or small discussion groups by actively listening, communicating an idea or opinion clearly, and demonstrating respect for other's opinions

2. Proper preparation and effective delivery of formal and informal speeches

Instructional Materials

1. Textbooks:

Editorial Staff. *Adventures in American Literature, Heritage Edition Revised.* Harcourt Brace Jovanovich, Inc., 1985.

Editorial Staff. *Grammar and Composition, Sixth Course.* Houghton Mifflin Company, 1984.

2. Test and supplementary materials.

3. Audio-visual materials: filmstrips, films, video-cassettes, records, tapes, compact discs, and laser discs.

4. Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Course Title **ERHS**

ENGLISH 3A (P)

Description of Target Group

This course is the first semester of a two-semester course designed to meet the district's graduation requirement. English 3A (P) is designed for college preparatory students who have successfully completed English 1A/ 1B (P), or for students with a teacher's recommendation upon successful completion of English 2A/ 2B.

Purpose

The purpose of English 3A (P) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analyses of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American literature.

   Arthur Miller's *The Crucible or Three Sovereigns for Sarah,* a video presentation
   Ben Franklin
   Patrick Henry
   Thomas Payne
   Thomas Jefferson
   Michel-Guillaume Jean de Crevecoeur
   Phyllis Wheatley
   Washington Irving
   William Cullen Bryant
   Edgar Allan Poe--poems as well as short stories
   Herman Melville--*Moby Dick* or *Billy Budd* **(required)**

Nathaniel Hawthorne
Ralph Waldo Emerson
Henry David Thoreau
Mark Twain—*The Adventures of Huckleberry Finn* **(required)**
Ambrose Bierce

2. Recognition and understanding of literary terms, as well as their application in class discussions and in writing (see attachment for a list of terms)

WRITING

1. The ability to write effective sentences, meaning:

   a. write complete sentences
   b. use a variety of sentence types and structures
   c. and punctuate sentences correctly

2. The ability to write effective paragraphs, meaning:

   a. be able to identify and write a topic sentence
   b. write supporting sentences using details and examples
   c. write paragraphs of narration, description, exposition, persuasion, parallel sequence and integrated comparison
   d. and practice paragraph writing with journal entries, written quizzes, and exams

3. The ability to write the following types of essays:

   a. definition
   b. persuasion
   c. critical analysis

4. The ability to edit effectively and review language usage and mechanics

SPEAKING

1. Effective participation in class discussions and/or small discussion groups by actively listening, communicating an idea or opinion clearly, and demonstrating respect others' opinions

LISTENING

1. The ability to listen and follow oral directions
2. The ability to take notes from dictation or lectures
3. The ability to listen attentively to lectures, class discussions, and audio visual materials

Literary and Poetic Terminology

1. allegory
2. alliteration
3. allusion
4. anachronism
5. anecdote
6. antagonist
7. aphorism
8. assonance
9. autobiography
10. biography
11. blank verse
12. characterization
13. cliche
14. climax
15. colloquialism
16. conflict
17. connotation
18. couplet
19. denotation
20. denouement
21. dialogue
22. epigram
23. epitaph
24. figurative language
25. folk tale
26. foreshadow
27. free verse
28. genre
29. Gothic tale

31. iambic pentameter
32. imagery
33. irony (verbal and dramatic)
34. metaphor
35. Metaphysical
36. Modernism
37. motif
38. narrative
39. narrator
40. novelette/novella
41. omniscient point of view
42. onomatopoeia
43. oxymoron
44. paradox
45. parody
46. personification
47. plot
48. point of view
49. Postmodernism
50. prose
51. protagonist
52. pun
53. Realism
54. refrain
55. rhythm
56. Romanticism
57. satire
58. setting
59. simile
60. sonnet
61. stanza
62. symbol
63. theme
64. tone
65. tragic hero
66. Transcendentalism

Instructional Materials

1. Textbooks:

   Editorial Staff. *Adventures in American Literature, Heritage Edition Revised.* Harcourt Brace Jovanovich, Inc., 1985.

   Editorial Staff. *Grammar and Composition, Sixth Course.* Heighten Mifflin Company, 1984.

2. Test and supplementary materials.

3. Audio-visual materials: filmstrips, films, video-cassettes, records, tapes, compact discs, and laser discs.

4. Refer to “Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.”

ENGLISH 3B (P)

Description of Target Group

This course is the second half of a two-semester course designed to meet the district's graduation requirement. English 3B (P) is designed for college preparatory students who have successfully completed English 1A/1B (P) and 2A/2B (P), or for students with a teacher's recommendation upon successful completion of English 3A.

Purpose

The purpose of English 3B (P) is to continue to provide students with those experiences that will enable them to develop the skills they must have to express their ideas clearly, concisely, and comprehensively in writing and in speaking. Students will write expository essays and critical analyses of literary selections and will develop a knowledge of and an appreciation for the American tradition through their study of American literature. All students will also complete a career unit, offering them the chance to explore future occupation choices.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

READING

1. A knowledge of and an appreciation for the American tradition through they study of the following American authors, emphasizing the elements of the literary periods of Realism and the modern twentieth century. Students will be exposed to as variety of late nineteenth and early to mid-twentieth century authors, as well as more contemporary authors and their short stories, novels, dramas, poetry, and non-fiction selections, including as many of the following authors as possible:

   Walt Whitman
   Emily Dickinson
   Stephen Crane
   Willa Cather
   Edwin Arlington Robinson
   Edgar Lee Masters
   Sherwood Anderson
   Ernest Hemingway
   William Faulkner
   Katherine Anne Porter F. Scott Fitzgerald's *The Great Gatsby* **(required)**
   John Steinbeck's *Cannery Row* or *The Grapes of Wrath* **(required)**
   Flannery O'Connor
   Carl Sandburg
   Robert Frost

   Amy Lowell
   T.S. Eliot

William Carlos Williams
Langston Hughes
Thornton Wilder's *Our Town*
Richard Wright
James Baldwin
Ray Bradbury
Martin Luther King, Jr.
Maya Angelou
J.D. Salinger's *The Catcher in the Rye*
Kurt Vonnegut, Jr.

2. Recognition and understanding of literary terms, as well as their application in class discussions and in writing (see attachment for a list of terms)

WRITING

1. The ability to write effective sentences, meaning:

   a. write complete sentences
   b. use a variety of sentence types and structures
   c. and punctuate sentences correctly

2. The ability to write effective paragraphs, meaning:

   a. be able to identify and write a topic sentence
   b. write supporting sentences using details and examples
   c. write paragraphs of narration, description, exposition, persuasion, parallel sequence and integrated comparison
   d. and practice paragraph writing with journal entries, written quizzes, and exams

3. The ability to write the following types of essays:

   a. definition
   b. persuasion
   c. critical analysis

4. The ability to edit effectively and review language usage and mechanics

5. The ability to write business letters

6. Proper methods of notation, including:

   a. footnotes
   b. bibliography

7. The ability to use the Career Center to explore career options

8. The ability to produce documents necessary for a career and/or college entrance, namely a cover letter and a resume

SPEAKING

1. Effective participation in class discussions and/or small discussion groups by actively listening, communicating an idea or opinion clearly, and demonstrating respect for others' opinions
2. Proper preparation and effective delivery of formal and informal speeches

LISTENING

1. The ability to listen to and follow oral directions
2. The ability to take notes from dictation and/or lectures
3. The ability to listen attentively to lectures, class discussions, and audio visual materials

Course Title **ERHS**

ENGLISH 4 (AP) A, B

Description of Target Group

This year-long course, required to meet the entrance requirements for four-year colleges and universities, is designed only for those senior students whose recommendations and completed applications have been accepted by the Ernest Righetti English Department Honors/ Advanced Placement Committee.

Purpose

This course is designed to provide selected students with a qualitatively different and varied curriculum which challenges and enriches their individual potential while maintaining the requirements of the basic course outline. Students will focus upon British and American literature and the writing process through an integrated approach. Moreover, this course will prepare students for the Advanced Placement Exam as well as college level courses. As they read and write, students will access numerous themes and motifs and study the epic hero, the tragic hero, the influences of government and religion upon literature, the concept of the individual in l9th Century literature, as well as to explore personal and human values in 20th Century literature. Through individual and group projects, students will further refine their communication skills in reading, writing, listening, and speaking. Additionally, students shall participate in exploration of college majors and relevant application information.

Students must earn a "B" or better at the first semester's end to remain in Advanced Placement during the second semester.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING

A variety of genre from literature will be read. Students will be expected to:

- keep a journal or log;
- identify literary genre;
- identify elements of literature (literary terms);
- construct meaning from a text;
- make connections within a text;
- extend beyond a text;
- include an element of risk-taking in constructing meaning; and
- analyze literature on both symbolic and thematic levels.

Core selections include:

epics: Beowulf
excepts from Paradise Lost - John Milton

Medieval literature: The Canterbury Tales (selections)--Geoffrey Chaucer
Sir Gawain and the Green Knight

drama: Oedipus and/or Antigone--Socrates
Macbeth and Othello and Twelfth Night or A Midsummer Night's Dream--William Shakespeare

Everyman

novels: Animal Dreams of The Bean Trees--Barbara Kingsolver
The Joy Luck Club--Amy Tan
Gulliver's Travels (Books 1 and 11)--Jonathan Swift
Jane Eyre--Charlotte Bronte
Far From the Madding Crowd--Thomas Hardy
Lord of the Flies--William Golding
1984--George Orwell
A Separate Peace--John Knowles
Anthem--Ayn Rand
I Know Why the Caged Bird Sings--Maya Angelou
Farewell to Manzanar--Jeanne Houston

poetry: "The Seafarer" and "The Wanderer"
William Shakespeare
John Donne
Andrew Marvell
Robert Herrick
George Herbert
Robert Burns
William Blake
William Wordsworth
Samuel Taylor Coleridge
John Keats
Lord Byron
Percy B. Shelley
Alfred, Lord Tennyson
Robert Browning
Elizabeth Barrett Browning
Matthew Arnold
William Butler Yeats
T.S. Eliot
Dylan Thomas

essay: "A Modest Proposal" by Jonathan Swift
"An Essay on Man" by Alexander Pope

Other possible selections include:

drama: Hamlet or The Tempest or The Taming of the Shrew-William Shakespeare
Dr. Faustus--Christopher Marlowe
Rosencrantz and Guildenstern are Dead--Tom Stoppard

novels: Grendel--John Gardner (This short novel complements Beowulf.)
The Chocolate War--Robert Cormier (" " Macbeth.)
Wide Sargasso Sea--Jean Rhys (" " Jane Eyre.)
Brave New World--Aldous Huxley (" " 1984.)
Cry, the Beloved Country--Alex Paton
Black Boy--Richard Wright
Cold Sassy Tree--Olive Ann Burns

short stories, poems, essays: Selections from basic and supplementary texts are to be done at the teacher's discretion.

WRITING
Students will be expected to demonstrate the following skills:

Rhetoric

- present an idea: acknowledge an audience/reader;
- use logic and relevant support/details;
- state and develop an argument;
- demonstrate coherence and style;
- attempt an element of risk; and
- demonstrate improvement;

and Conventions

- practice sentence variety;
- use proper word choice/usage (vocabulary development);
- demonstrate excellent mechanics;
- improve spelling; and
- demonstrate improvement and growth.

Students will demonstrate the ability to write in the following types of discourse:

- analytical;
- evaluative;
- satirical;
- speculation about cause and effect; and
- comparison and contrast.

RETRIEVING INFORMATION
Students will demonstrate the ability to:

- use the library and computer catalog;
- use reference volumes appropriately;
- take notes on note cards;
- cite works using MLA or APA documentation; and
- document within a text using MLA or APA format

GROUP/COMMUNICATION SKILLS
Students will demonstrate the ability to:

- participate effectively in class and small group discussions;
- communicate information and ideas effectively to others;
- respect others;
- follow directions as well as be an independent learner;
- compromise and reach consensus;
- demonstrate integrity;
- show improvement in speaking and listening skills; and
- demonstrate leadership and be willing to take a risk.

COLLEGE/UNIVERSITY SKILLS
Students will demonstrate the ability to:

- apply the results of the Major/College Match or interest inventories by
- researching specific majors and colleges;
- revise student resume or personal data sheet;
- apply for appropriate college or university scholarships;
- complete the application process for a college or university; and
- request recommendations.

INSTRUCTIONAL MATERIALS

Text and Supplementary Materials: Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Course Title **ERHS**

English 4A (H)

Description of Target Group

This course is the first semester of a two-semester accelerated course with an emphasis on British literature and Advanced Placement Exam preparation. It is designed for those college/university-bound students who have successfully completed English 3A (H) and English 3B (H), that is, earned an "A" or a “B” for both semesters, and received a teacher recommendation. Students who excelled in English 3A (P) and English 3B (P) and who have a teacher recommendation may also sign up for the course. All prospective Engl. 4 (H) students must sign a student/parent contract and submit two writing samples (one timed essay and one take-home essay). An English Honors Committee, comprised of the English 3 (H) and English 4 (H) teachers, shall compile a final class list. Students enrolled in this course are expected to take the AP English exam in May. Upon successful completion of this test, college credit may be granted.

Purpose

The purpose of English 4A (H) is to engage students in the close reading and critical analysis of classic literary works so as to deepen their understanding and enhance their knowledge of literature. Students will develop critical standards for interpreting literature by studying and analyzing individual works, their characters, action, structure, and language, both large-scale and small-scale literary elements, and any other pertinent aspects in order to derive greater meaning. Since writing is an integral part of any English course, students will continue to further develop their sense of how style, subject, and audience are related with emphasis being placed upon heightening each student's stylistic maturity. Students will practice ethical and effective use of language and the organization of ideas in a clear, coherent, and persuasive manner. Through the study of British literature, English 4 (H) will also help students use critical thinking to understand abstract concepts and develop a knowledge of and an appreciation for the English language tradition.

STANDARDS OF EXPECTED STUDENT ACHIEVEMENT

Upon completion of this course, students will be able to successfully demonstrate:

READING

1. A knowledge of and an appreciation for the English language through the study of the following British authors, emphasizing the elements of the literary periods of Anglo-Saxon, Medieval, Renaissance, Age of Reason, and Romanticism. Students will study a variety of genres from selected British authors/works:

Beowulf	Sir Walter Raleigh
“Seafarer”--a ballad	Ben Johnson
Geoffrey Chaucher	William Shakespeare
Sir Thomas Malory	John Donne

Edmund Spense
Christopher Marlowe
Robert Herrick
Richard Lovelace
King James Bible
John Milton
Samuel Pepys
Jonathan Swift
Alexander Pope
Joseph Addison
Richard Steele
Samuel Johnson
George Herbert
Andrew Marvell
James Boswell
Thomas Gray
John Bunyan
Lord Byron
Robert Burns
William Blake
William Wordsworth
Samuel Taylor Coleridge
John Keats
Percy Bysshe Shelley
Charles Lamb

2. **Recognize and understand the following literary terms**:

allegory
aphorism
apostrophe
caricature
carpe diem tradition
Cavalier poetry
Classicism
comic relief
conceit
diary
diction
dramatic monologue
elegy
epic (heroic and mock)
epiphany
exemplum
heroic couplet
in medias res
invocation
metaphysical conceit
memento mori
Modernist movement
motif
ode
pastoral elegy
patron
Petrarchan sonnet
psalm
Romantic
satire
scope
Shakespearean sonnet
social comedy
soliloquy
sprung rhythm
stream of consciousness
strophe
style (in British Literature)
terra rima
tragic flaw
Victorian
villanelle
volta (turn)

WRITING

1. Further develop writing skills which involve all stages of the writing process as well as further develop an awareness of language and individual style by writing effective, college-level essays related to college entrance requirements and literature

   a. college application essay
   b. critical analysis
   c. argumentative/persuasive
   d. satirical

2. Do "real world" writing: investigative reports, written interviews, letters to the

editor, editorial for school or local paper, magazine articles, etc.

3. Write creatively in a variety of genres
4. Write for a variety of audiences
5. Practice the conventions of the language and study elements of style
6. Use vocabulary effectively
7. Write every day (e.g. journal, reading log, internal monologues, notes from lecture, student self-evaluations, and in-class timed writes)
8. Evaluate individual work as well as that of others

SPEAKING

1. Participate in small group and class discussions
2. Give individual presentations and participate in group presentations
3. Interpret a piece of literature and do a dramatic reading, thus emphasizing intonation, facial expression, gesticulation, and body language
4. Read and publish an original piece of prose/poetry
5. Participate in a class debate

LISTENING

1. Listen to and follow oral directions
2. Take notes from dictation and/or lectures
3. Listen attentively to lectures, audio-visual materials, and discussions
4. Identify weaknesses and strengths of oral arguments

INSTRUCTIONAL MATERIALS

1. Textbooks:

   Michael Meyer, ed. *The Bedford Introduction to Literature, Third Edition.* University of Connecticut Press, 1991.

   Editorial Staff. *Harbrace Grammar and Composition, Ninth Edition.* Harcourt Brace Jovanovich, Inc., 1985.

2. Supplementary materials. Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

3. Audio-visual materials: filmstrips, films, video-cassettes, records, tapes, compact discs, and laser discs.

English 4B (H)

Description of Target Group

This course is the second semester of a two-semester accelerated course with an emphasis on British literature and Advanced Placement Exam preparation. It is designed for those college/university-bound students who have successfully completed English 4A (H) by earning an "A" or a "B" in English 4 (H). Students enrolled in this course are expected to take the AP English exam in May. Upon successful completion of this test, college credit may be granted.

Purpose

The purpose of English 4B (H) is to continue to provide students with qualitatively different material and to provide them with enriching and challenging experiences. They will further develop critical standards for interpreting literature by studying and analyzing individual works, their characters, action, structure, and language, both large-scale and small-scale literary elements' and any other pertinent aspects in order to derive greater meaning. Through the study of British literature, English 4 (H) will also help students use critical thinking to understand abstract concepts and develop a knowledge of and an appreciation for the English language tradition. In addition, students will revisit and reaffirm dominant themes in American literature and practice for the Advanced Placement Exam utilizing sample AP multiple choice and essay study and strategy guides.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

READING

1. A knowledge of and an appreciation for the English language through the study of the following British author, emphasizing the elements of the literary periods of Victorians, early 20th century, and contemporary 20th century. Students will be exposed to selected British short stories, novel, drama, poetry, and non-fiction from:

Alfred Lord Tennyson	D.H. Lawrence
Robert Browning	Margaret Atwood
Matthew Arnold	Prank O'Connor
Thomas Hardy	Graham Greene
Charlotte Bronte	William Butler Yeats
Gerard Manley Hopkins	T.S. Eliot
A.E. Houseman	W.H. Auden
Oscar Wilde	Dylan Thomas
George Bernard Shaw	Virginia Woolf
Joseph Conrad	George Orwell

Katherine Mansfield William Golding

2. Recognize and understand the following literary terms:

allegory
aphorism
apostrophe
caricature
carpe diem tradition
Cavalier poetry
Classicism
comic relief
conceit
diary
diction
dramatic monologue
elegy
epic (heroic and mock)
epiphany
exemplum
heroic couplet
in medias res
invocation
metaphysical conceit
memento mori
Modernist movement
motif
ode
pastoral elegy
patron
Petrarchan sonnet
psalm
Romantic
satire
scope
Shakespearean sonnet
social comedy
soliloquy
sprung rhythm
stream of consciousness
strophe
style (in British literature)
terza rima
tragic flaw
Victorian
villanelle
volta (turn)

WRITING

1. Further develop writing skills which involve all stages of the writing process as well as further develop an awareness of language and individual style by writing effective, college level essays related to literature

   a. critical analysis
   b. argumentative/persuasive
   c. comparison and contrast
   d. definition

2. Do "real world" writing: investigative reports, written interviews, letters to the editor, editorial for school or local paper, magazine articles etc.
3. Write creatively in a variety of genres
4. Write for a variety of audiences
5. Practice the conventions of the language
6. Use vocabulary effectively

7. Write every day (e.g. journal, reading log, internal monologues, notes from lecture, student self-evaluations, and in-class timed writes)
8. Evaluate individual work as well as that of course

SPEAKING

1. Participate in small group and class discussions
2. Give individual presentation and participate in group presentations
3. Interpret a piece of literature and do a dramatic reading, thus emphasizing intonation, facial expression, gesticulation, and body language
4. Read and publish an original piece of prose/poetry
5. Participate in a class debate

LISTENING

1. Listen to and follow oral directions
2. Take notes from dictation and for lectures
3. Listen attentively to lectures, audio-visual materials7 and discussions
4. Identify weaknesses and strengths of oral arguments

INSTRUCTIONAL MATERIALS

1. Textbooks:

   Michael Meyer, ed. *The Bedford Introduction to Literature, Third Edition.* University of Connecticut Press, 1991.

   Editorial Staff. *Harbrace Grammar and Composition Ninth Edition.* Harcourt Brace Jovanovich, Inc., 1985.

Career Path - All

Description of Target Group

The target group would be comprised of students who enter high school with deficient skills in English, which will affect their ability to be successful in a college prep English program as well as other courses on campus. This group would be selected based on their performance on a placement test.

Lab Fees - None

Purpose

1. To introduce below level students to the language arts through intensive reading, writing, and critical thinking.
2. To emphasize the process approach to writing.
3. To provide a course in sentence and paragraph construction, grammar usage, vocabulary development, and essay structure.

This course will not only give students an opportunity to develop skills in areas that they are lacking, but would also have a direct impact on these students' abilities to be more successful in all courses across the curriculum and State Mandated Assessments. A key necessity for this course is that it is taught concurrently with English 1A so that it acts as a support system for students who have low skills.

Length of Course - One Semester (open entry-open exit as scheduling parameters allow)

Units - Five (elective credit)

Prerequisites - None

Standards of Expected Student Achievement

1. demonstrate knowledge of writing as a process, including prewriting, drafting, and revising
2. demonstrate ability to narrow topic and construct effective topic sentences and theses
3. demonstrate knowledge of paragraph organization
4. demonstrate basic knowledge of essay structure
5. recognize and write clear, coherent sentences
6. demonstrate proofreading and editing techniques
7. demonstrate skills in correct grammar and punctuation, including recognizing and correcting fragments, comma splices, run-ons, comma errors, and apostrophe errors

8. demonstrate skills in subject/verb agreements, capitalization, and pronoun reference
9. recognize independent and dependent clauses
10. demonstrate ability to learn and use grade level vocabulary in speech and written exercises

Methods of Assessment of Student Learning

1. One-on-one instruction
2. Written exams
3. In-class writings
4. Timed writings
5. Essay writings (students are trained and assessed with a rubric)
6. Grammar tests
7. Vocabulary tests
8. Tests on word derivation and etymology
9. Portfolios
10. Parent participation sheet

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

1. Sentence combining
2. Writing and revising sentences and paragraphs
3. Punctuation team games (bingo, board games, etc)
3. DOL-type exercises
4. Using a style manual to revise
5. Grammar exercises
6. Revising for sentence variation (teach types of sentences with examples from literature)
7. Computer-generated grammar and punctuation exercises
8. Using a dictionary and thesaurus
9. Imitate the styles of various authors
10. Peer edit with rubric
11. Timed writing
12. Non-timed essays which use the writing process
13. Responding to a prompt

Course Outline

ENGLISH SKILLS B (Summer School Course Only)

Department - English

Career Path - All

Description of Target Group

The target group would be comprised of students who enter high school with deficient skills in English, which will affect their ability to be successful in a college prep English program as well as other courses on campus. This group would be selected based on their performance on a placement test.

Lab Fees - None

Purpose

1. To introduce below level students to the language arts through intensive reading, writing, and critical thinking.
2. To emphasize the process approach to writing.
3. To provide a course in sentence and paragraph construction, grammar usage, vocabulary development, and essay structure.

This course will not only give students an opportunity to develop skills in areas that they are lacking, but would also have a direct impact on these students' abilities to be more successful in all courses across the curriculum and State Mandated Assessments. A key necessity for this course is that it is taught concurrently with English 1A so that it acts as a support system for students who have low skills.

Units - Five (elective credit)

Prerequisites - None

Standards of Expected Student Achievement

Reading:
Upon completion of this course students should be able to:
1. recognize the organization of paragraphs, essays, and short stories
2. evaluate reading to determine the main idea
3. recognize the relationship between the ideas, sentences, and paragraphs in essays
4. analyze various forms of writing such as critical essays, editorials, and short stories

English Skills B (Summer School Course Only) - continued

Writing:
Upon completion of this course students should be able to:
1. demonstrate knowledge of and skills in writing as a process: prewriting, writing, revising
2. recognize general subjects, topic sentences, and thesis statements
3. demonstrate knowledge of paragraph structure
4. develop ideas using specific and relevant support
5. demonstrate the knowledge of essay structure
6. recognize and use sentence variety
7. write error-free sentences
8. write a timed essay on a given topic
9. recognize and use rhetorical modes such as narration and argumentation to critically analyze their own writing and that of their peers

Methods of Assessment of Student Learning:
1. One-on-one instruction
2. Written exams
3. In-class writings
4. Timed writings
5. Essay writings (students are trained and assessed with a rubric)
6. Grammar tests
7. Vocabulary tests
8. Tests on word deviation and etymology
9. Portfolios
10. Parent participation sheet

Instructional Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities
1. Sentence combining
2. Writing and revising sentences and paragraphs
3. Punctuation team games (bingo, board games, etc)
4. DOL-type exercises
5. Using a style manual to revise
6. Grammar (clause and phrase)
7. Revising for sentence variation (teach types of sentences with examples from literature)
8. Computer-generated grammar and punctuation exercises
9. Using a dictionary and thesaurus
10. Imitate the styles of various authors
11. Peer edit with rubric
12. Timed writing
13. Non-timed essays which use the writing process
14. Responding to a prompt

9. Subject Area

- ☐ History/Social Science
- ☒ English
- ☐ Mathematics
- ☐ Laboratory Science
- ☐ Language other than English
- ☐ Visual & Performing Arts
  - ☐ Intro ☐ Advanced
- ☐ College Prep Elective

10. Grade Level(s) for which this course is designed
12

11. Seeking "Honors" Distinction?
No

12. Unit Value

- ☐ 0.5 (half year or semester equivalent)
- ☒ 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Is this an Internet-based course? No

If "Yes", who is the provider? ☐ UCCP ☐ PASS/Cyber High ☐ Other _____

14. Complete outlines are not needed for courses that were previously approved by UC. If course was previously approved, indicate in which category it falls.

- ☐ A course reinstated after removal within 3 years. Year removed from list? _____
  - Same course title? ☐ Yes ☐ No
  - If no, previous course title? _____
- ☐ An identical course approved at another school in same district. Which school? _____
  - Same course title? ☐ Yes ☐ No
  - If no, course title at other school? _____
- ☐ Year-long VPA course replacing two approved successive semester courses in the same discipline
- ☐ Approved Advanced Placement (AP) or International Baccalaureate (IB) course
- ☐ Approved UC College Prep (UCCP) Online course
- ☐ Approved CDE Agricultural Education course
- ☐ Approved P.A.S.S./Cyber High course
- ☐ Approved ROP/C course. Name of ROP/C? _____
- ☐ Approved A.V.I.D. course
- ☐ Approved C.A.R.T. course
- ☐ Approved Project Lead the Way course
- ☐ Other. Explain: _____

15. Is this course modeled after an UC-approved course from another school outside your district? Yes

If so, which school(s)? Sweetwater Union High School District

Course title at other school English 12: Rhetoric and Writing

16. Pre-Requisites

English I (9th grade), English 2 (10th grade), English 3 (11th grade)

17. Co-Requisites

None

18. Is this course a resubmission? ☐ Yes ☒ No

If yes, date(s) of previous submission? _____

Title of previous submission? _____

19. Brief Course Description

The goal of the Expository Reading and Writing course is to prepare college-bound seniors for the literacy demands of higher education. Through a sequence of fourteen rigorous instructional modules, students in this yearlong, rhetoric-based course develop advanced proficiencies in expository, analytical, and argumentative reading and writing. The cornerstone of the course—the assignment template—presents a process for helping students read, comprehend, and respond to non-fiction and literacy texts. Modules also provide instruction in research methods and documentation conventions. Students will be expected to increase their awareness of the rhetorical strategies employed by authors, and to apply those strategies in their own writing. They will read closely to examine the relationship between an author's argument or theme and his or her audience and purpose, to analyze the impact of structural and rhetorical strategies and to examine the social, political, and philosophical assumptions that underlie the text. By the end of the course, students will be expected to use this process independently when reading unfamiliar texts and writing in response to them. Course texts include contemporary essays, newspaper and magazine articles, editorials, reports, biographies, memos, assorted public documents, and other non-fiction texts. The course materials also include modules on two full-length works (one novel and one work of non-fiction). Written assessments and holistic scoring guides conclude each unit

EXPOSITORY READING & WRITING

B. COURSE CONTENT

20. Course Goals and/or Major Student Outcomes

- To enable students to analyze, interpret, and apply the rhetorical strategies of a variety of expository and literary texts
- To foster students' ability to create and support written arguments based on readings, research, and personal experience
- To increase students' repertoire of cognitive and metacognitive strategies for approaching various academic reading and writing tasks

- To promote independent academic literacy practices in college-bound students, including the ability to use reading and writing processes recursively and reflectively
- To provide a conceptual and disciplinary focus for a wide variety of issues and problems that converge in written discourse
- To prepare students to meet the standards of the CSU English Placement Test and the California English-language arts content standards

21. Course Objectives

Students will:

a. Analyze the features and rhetorical devices of different types of texts and the way in which authors use those features and devices.

b. Analyze the way in which clarity of meaning is affected by patterns of organization, hierarchical structures, repetition of main ideas, syntax, and word choice in the text.

c. Analyze an author's implicit and explicit political and/or philosophical assumptions and beliefs about a subject or topic.

d. Identify and assess the impact of ambiguities and complexities within the text.

e. Demonstrate an understanding of elements of discourse (e.g., purpose, speaker, audience, form) when completing reading and writing assignments.

f. Make warranted and reasonable assertions about the author's arguments and themes by using elements of the text to defend and clarify interpretations.

g. Critique the validity of arguments in texts; their appeal to both friendly and hostile audiences; and the extent to which the arguments anticipate and address reader concerns and counterclaims (e.g., logos, pathos and ethos).

h. Develop academic/analytical essays that are focused on a central idea, developed with information learned from assigned texts, well-organized in an appropriate and effective pattern that structures ideas in sustained and persuasive way, and free from grammatical and mechanical errors.

i. Revise what they have drafted, rethinking their focus, point of view, organization, logic, and structure; improve sentence variety and style, and enhance sophistication of meaning and tone in ways that are consistent with purpose, audience, and genre.

j. Edit their work for clarity; for standard written English grammar, usage, and mechanics; for diction and for an appropriate level of formality to demonstrate control of grammar, diction, and paragraph and sentence structure and an understanding of English usage.

k. Meet all relevant California English-language arts content standards for twelfth grade.

22. Course Outline

The fourteen instructional modules are organized by semester. Most modules include multiple text pieces on a topic, often representing different genres. Course texts include contemporary essays, newspaper and magazine articles, editorials, reports, biographies, memos, assorted public documents, and other non-fiction texts.

Two modules include full-length works—a work of non-fiction in semester one and a novel in semester two. Modules include instruction in critical reading, analysis of rhetorical strategies, vocabulary, research methods, documentation conventions, and analytical writing based on information learned from and in response to the assigned texts. The cornerstone of the course—the assignment template—provides consistent structure and content for each module. The assignment template and one sample module, "The Rhetoric of the Op-Ed Page," are appended for more information. The following is a brief outline of each module by semester.

First Semester

Fast Food—Who's to Blame?
"Fast Food—Who's to Blame?" is based on four newspaper articles and a set of letters to the editor written in response to one set of the articles about the issue of fast food and its role in contributing to childhood obesity. As the first assignment in the Expository Reading and Writing course curriculum it serves as an introduction to the approach to teaching expository reading and writing utilizing accessible readings and an engaging topic. The assignment culminates with a choice among three writing assignments: a timed essay topic similar to writing prompts used in the California State University's English Placement Test (EPT), in this case a persuasive essay; an essay evaluating the arguments in the letters to the editor; or a text-based argumentative essay suitable for writing out-of-class. Students are expected to write an essay of 750-1,500 words.

Readings:
Brownlee, Shannon. "It's Portion Distortion that Makes America Fat." *Sacramento Bee* 5 Jan. 2003.

Barboza, David. "If You Pitch It, They Will Eat." *New York Times* 3 Aug. 2003.

Ching, Roberta. Letters to the editor in response to "Don't Blame the Eater."2003.

Weintraub, Daniel. "The Battle Against Fast Food Begins in the Home." *Sacramento Bee* 17 Dec. 2002.

Zinczenko, David. "Don't Blame the Eater." *New York Times* 23 Nov. 2002.

Going for the Look
"Going for the Look" is based on a single newspaper article about the lawsuit accusing Abercrombie and Fitch of hiring sales associates based on appearance. The article incorporates a variety of brief arguments on both sides of the issue, making it a good assignment for introducing students to rhetorical analysis. It concludes by offering the option of having students write an EPT-type timed essay (persuasive) or an out-of-class text-based essay (argumentative). Students are expected to write an essay of 750-1,500 words.

Reading:
Greenhouse, Steven. "Going for the Look, but Risking Discrimination." *New York Times* 13 July 2003.

The Rhetoric of the Op-Ed Page
This assignment sequence introduces the Aristotelian concepts of ethos, logos, and pathos and applies them to a rhetorical analysis of an op-ed piece by Jeremy Rifkin. The culminating writing assignment is a letter to the editor in response to the Rifkin article. Students are expected to write an essay of 500 words.

Readings:
Edlund, John. "Three Ways to Persuade."

Edlund, John. Letters to the editor in response to "A Change of Heart about Animals." 2003.

Rifkin, Jeremy. "A Change of Heart about Animals." *Los Angeles Times* 1 Sept. 2003: B15.

The Value of Life
This assignment asks students to synthesize their understanding of Hamlet's "To be or not to be" soliloquy, an excerpt from Lance Armstrong's *It's Not About the Bike*, an article by Amanda Ripley on the aftermath of 911, and a life insurance tool, "The Human Life Value Calculator." Students are asked to add their voices to the discussion by creating a well-developed response to these sources (text-based academic essay). Students are expected to write an essay of 750-1,500 words.

Readings:
Shakespeare, William. From "Hamlet" - Act III, Sc. 1, Hamlet's "To be" soliloquy.
Armstrong, Lance, with Sally Jenkins. Excerpt from Chapter One: *It's Not About the Bike:*

My Journey Back to Life. New York: Putnam, 2000.

Ripley, Amanda. "What Is a Life Worth?" *Time* 11 Feb. 2002.

The Life and Health Insurance Foundation for Education. *LIFE.* "The Human Life Value Calculator." <http://www.life-line.org/build/human_life_value_calculator/index.php?pt=lfhlvc&m=1>

Racial Profiling
This assignment teaches students how to read and respond to an argumentative essay by Bob Herbert on racial profiling. First, students practice several reading strategies as they deepen their understanding of the Herbert essay; then, students learn how to write their own argumentative essay on a similar topic. Students are expected to write an essay of 750-1,500 words.

Reading:
Herbert, Bob. "Hounding the Innocent." *New York Times* 13 July 1999.

Juvenile Justice
"Juvenile Justice" is based on four newspaper articles about whether juveniles who commit serious crimes should be tried and sentenced as adults. The articles include an opinion piece, a summary of brain research, a report of juvenile competence to stand trial, and an article about a Supreme Court case. Students must evaluate the

rhetorical stances of different authors and synthesize their arguments in a text-based academic essay (argumentative). Students are expected to write an essay of 750-1,500 words.

Liptak, Adam. “Supreme Court to Rule on Executing Young Killers.” *New York Time* 3 Jan. 2005.

Lundstrom, Marjie. “Kids are Kids–Until they Commit Crimes.” *Sacramento Bee* 1 Mar. 2001.

Krikorian, Greg. “Many Kids Called Unfit for Adult Trial.” *Sacramento Bee* 3 Mar. 2003.

Thompson, Paul. “Startling Finds on Teenage Brains.” *Sacramento Bee* 25 May 2001.

The Last Meow

“The Last Meow” is based on a long reflective essay about the implications of recent development in veterinary medicine. It is framed by the story of “Lady,” a cat in need of a kidney transplant, and her human owners. The essay requires that students infer the argument that the writer is making; they then write either a timed essay or an out-of-class essay on the topic of providing medical care for pets. A variety of writing genres is offered for the assignment: timed, persuasive essay; academic summary; letter to the editor; synthesis essay; text-based academic or argumentative essay; I-Search paper; and research essay. Students are expected to write an essay of 750-1,500 words.

Reading:

Bilger, Berkhard. “The Last Meow.” *New Yorker* 8 Sept. 2003.

Into the Wild

This non-fiction, full-length work, *Into the Wild,* by Jon Krakauer, was published in 1996. Engaging students in this biography/story, based on Krakauer’s investigation of Christopher McCandless, a young idealistic college graduate, allows them to think deeply about human motivation and perhaps begin to understand something of the complexity of maturity. Excerpted in the book, students experience a taste of the works of the American Transcendentalists and Russian novelists, which so influenced McCandless’s life philosophy. Students conclude the assignment by writing a text-based academic essay on one of a number of themes from the work. Students are expected to write an essay of 1,500-2,500 words.

Reading:

Krakauer, Jon. *Into the Wild*. New York: Doubleday, 1996.

Second Semester

Bring a Text to Class

This assignment sequence builds on texts that students bring in to share with the class and serves to introduce the second semester. Throughout this sequence students work on externalizing their existing textual skills and knowledge and discovering ways that they can bring their current reading expertise from outside of school to bear on texts in school that they have never encountered before. A sample of music lyrics by a group called Black Eyed Peas is included as an example of the kinds of texts students may bring. An article on hip-hop music as a tool of resistance in youth cultures around the world is also included as an example of the kind of follow-up text that teachers may use to complement the texts brought in by students. Writing assignments require students to summarize readings and reflect on their own reading practices in an essay of 750-1,500 words.

Readings:

Black Eyed Peas. "Where is the Love?" *Elephunk*. A & M Records, 2003.

"Hip-Hop Becoming a Worldwide Language for Youth Resistance." *USA Today* 1 Sept. 2000.

Language, Gender, and Culture

The "Language, Gender, and Culture" assignment invites students to explore how language use embodies cultural values and gender-based communication styles. This assignment draws on readings in sociolinguistics and literature. The students conclude the assignment by writing a text-based academic essay. Students are expected to write an essay of 750-1,500 words.

Readings:

Ehrlich, Gretel. "About Men." *The Solace of Open Spaces.* New York: Penguin, 1985.

Hong Kingston, Maxine. *The Woman Warrior: Memoirs of a Childhood Among Ghosts.* New York: Random House, 1976.

Tannen, Deborah. "His Politeness is Her Powerlessness." *You Just Don't Understand: Women and Men in Conversation.* New York: HarperCollins, 1990.

Left Hand of Darkness

The Left Hand of Darkness is a classic science fiction novel by Ursula K. Le Guin. Embedded in the literary narrative are field reports, folk tales, and other genre-bending texts, making it an ideal vehicle for extending the analytical and pedagogical techniques of the assignment template to a full-length literary work. At the conclusion students write an argumentative essay. Students are expected to write an essay of 1,500-2,500 words.

Reading:

Le Guin, Ursula K. *The Left Hand of Darkness.* New York: Penguin, 1969.

The Politics of Food

This assignment is based on two articles on the consumption and production of food. The articles were written over ten years apart and have similar concerns: the health and well being of humans. These two authors have different ways of pointing out the same issues, ultimately asking the students to consider the worlds of science, agriculture, and politics. Students conclude the assignment by writing a text-based academic essay on one of several possible questions. Students are expected to write an essay of 750-1,500 words.

Readings:

Berry, Wendell. "The Pleasures of Eating." *What are People For?* New York: North

Point/Farrar, Straus and Giroux, 1990.

Pollan, Michael. "When a Crop Becomes King." *New York Times* 19 July 2002.

Justice: Childhood Love Lessons

This assignment presents an argumentative essay by bell hooks about methods of childhood punishment and the relationships between discipline and expressions of love. Students are then asked to write a persuasive essay in response. Students are expected to write an essay of 750-1,500 words.

Reading:

Hooks, bell. "Justice: Childhood Love Lessons." *All About Love: New Visions.* New York: William Morrow, 2000.

Bullying at School: Research Project

"Bullying at School" is a research project for the whole class. Students read thirteen different kinds of writing on bullying (provided), including two primary research articles from refereed journals, and do additional primary and secondary research on their own. They then write a School Code of Conduct on bullying to present to a real audience, their School Board. Skills include how to do research, how to evaluate and document sources (both in-text and in a Works Cited page), and how to distinguish between primary and secondary research. Students learn how to incorporate sources into their own writing, how to tailor writing for a specific audience, and how to make an argument using several different kinds of sources to provide appropriate evidence. Students are expected to write an essay of 1,500-2,500 words.

23. Texts & Supplemental Instructional Materials

Texts were specified in #22 above in the course outline.

24. Key Assignments

Each of the fourteen instructional modules uses an assignment template to guide students through the following processes: reading rhetorically, connecting reading to writing, and writing. Please see the attached assignment template for more detail on specific assignments for each module. Examples of assignments include the following:

- Quick Writes to access prior knowledge
- Surveys of textual features
- Predictions about content and context
- Vocabulary previews and self-assessments
- Reciprocal reading and teaching activities, including summarizing, questioning, predicting, and clarifying
- Responding orally and in writing to critical thinking questions
- Annotating and re-reading texts
- Highlighting textual features
- Analyzing stylistic choices
- Mapping text structure
- Analyzing logical, emotional, and ethical appeals
- Peer response activities

25. Instructional Methods and/or Strategies

<u>Reading Rhetorically:</u>

- All texts will be introduced by a sequence of research-based pre-reading and vocabulary strategies.
- All texts will be analyzed using analytical strategies such as annotating, outlining/charting text structure, and questioning.
- All texts will be examined and discussed using relevant critical/analytical elements such as intended audience, possible author bias, and rhetorical effectiveness.
- Students will work individually, in pairs and small groups, and as a whole class on analytical tasks.
- Students will present aspects of their critical reading and thinking orally as well as in writing.

<u>Connecting Reading to Writing:</u>

- Students will write summaries, rhetorical précis, and responses to critical questions.
- Students will compare their summaries/rhetorical précis, outlines, and written responses in small groups in order to discuss the differences between (a) general and specific ideas; (b) main and subordinate points; subjective vs. objective summarizing techniques.
- Students will engage in note-taking activities, such as composing one-sentence summaries of paragraphs/passages, charting a text's main points, and developing outlines for essays in response to writing prompts.
- Students will complete compare/contrast and synthesis activities increasing their capacity to make inferences and draw warranted conclusions, such as creating comparison matrixes of readings, examining significant points within texts, and analyzing significant textual features within thematically related material.

Writing:

- Students will write 750-1500 word analytical essays based on prompts that require establishing and developing a thesis/argument in response to the prompt and providing evidence to support that thesis by synthesizing and interpreting the ideas presented in texts. Some modules will require essays of greater length.
- Students will complete timed in-class writings based on prompts related to an author's assertion(s), theme(s), purpose(s), and/or a text's rhetorical features.

26. Assessment Methods and/or Tools

Assessment activities will be based on the writing prompts and rubrics embedded in the fourteen instructional modules. Scored sample papers are included with each module, and training sessions for teachers have included specific instruction in running holistic grading sessions with other teachers. The rubrics and sample papers should mean that grading standards will be consistent throughout the state. Further training and advice will be available through the CSU Expository Reading and Writing teacher website. Examples of specific assignment types to be assessed include the following:

- Persuasive essays
- Letters to the Editor
- Argument analysis
- Descriptive outlines of assigned readings
- Reflective essays
- Text-based academic essays
- Research projects

Timed in-class essays and major writing projects will be used to assess students. The final module, "Bullying at School," uses portfolio assessment. In and out of class assignments (e.g., partner/group work, summaries, writing tasks, learning/reading journal entries, written and oral responses to critical reading questions, oral presentations, vocabulary work, homework) will be assessed also. In addition multiple-choice reading and vocabulary quizzes may be used to assess students.

C. HONORS COURSES ONLY

27. Indicate how this honors course is differen from the standard course.

Not applicable.

D. OPTIONAL BACKGROUND INFORMATION

28. Context for Course (optional)

The Expository Reading and Writing Course (ERWC) was originally developed by the California State University as a component of the Early Assessment Program (EAP). The EAP test, given at the end of the 11th grade as part of the California Standards Test, was designed to predict success on the English Placement Test (EPT) and the Entry-Level Mathematics exam, and various interventions were imagined for students whose scores indicated that they would probably not test into a college-level course. Thus the original impetus for the development of the Expository Reading and Writing Course was to provide a rigorous yearlong intervention for students who did not meet the cutoff for English.

However, a number of factors converged to move the course beyond its original goals. The CSU English Placement Test Development Committee has observed for many years that scores on the Reading Skills component of the EPT were dragging down the composite scores. Students were doing more poorly on the reading portions of the test than the writing portions. A similar concern was raised in survey of higher education faculty in California conducted by the Intersegmental Committee of the Academic Senates (ICAS), which found that 83% of faculty respondents attribute their students' lack of success in a course to a lack of analytical reading skills (18). The ICAS report warns that "[…] when students fail to learn the very different reading strategies necessary for comprehending non-fiction (essays), they may have difficulty with college reading, and, we might argue, may fail to develop life-long interests in reading" (18-19). The ICAS survey respondents generally agree that "students are best prepared to write personal essays, informal responses, short answer essay questions, and brief summaries of readings" (ICAS 23)—and are poorly prepared for the kinds of formal, expository tasks the EPT and most content area courses require. Furthermore, only 13% of faculty respondents believe that student writing of any kind has improved since they first began teaching college freshman, while 34% perceive an overall decline in the writing abilities of entering freshmen (ICAS 23).

The problems noted above do not involve a small group of remedial students. These problems involve large portions of the college-bound population, and require fundamental changes in the curriculum if they are to be addressed. Part of the problem is that high school language arts courses have traditionally been oriented toward the teaching of British and American literature, and although the California English-language arts content standards require teaching the rhetorical analysis of non-fiction expository texts, many teachers have not been trained to implement these parts of the standards. Thus, academic tasks such as understanding and evaluating arguments, analyzing rhetorical effects, and drawing conclusions pose particular problems for students taking the EPT. These findings corroborate what

many educational researchers have identified as a general weakness in secondary students: an inability to read and write about nonfiction in sustained, sophisticated, and informed ways.

Thus the task force that developed the Expository Reading and Writing Course began to see their work as performing two different but related functions: 1) Better preparing college-bound students to do the academic reading and writing tasks expected by college faculty across the disciplines, not just in English departments, and 2) Better preparing high school teachers to meet the ELA standards in teaching expository texts and rhetorical analysis. The result is a curricular package that incorporates cutting edge reading pedagogy, accessible rhetorical theory, and up-to-date composition practices. These strategies and techniques are applied to both literary and expository texts, so that the result is a balanced and comprehensive 12th grade language arts course.

29. History of Course Development (optional)

The CSU Task Force on Expository Reading and Writing, known informally as "Task Force 12," held its first meeting in August, 2003. The eleven members were selected by the Executive Committee of CSU English Council, and included reading specialists, ESL specialists, and composition specialists from CSU, as well as high school teachers and administrators. The original eleven members of Task Force 12 initially developed an assignment template and five instructional modules that could be integrated into existing senior English classes. During the program's first pilot year, two high schools, Chula Vista Senior High School and Santa Monica High School, used all five modules to create new 12th grade rhetoric-based English courses. In June of 2005, Task Force 12 launched its second pilot year by unveiling nine additional modules that, together with the original five, create a complete, yearlong course in rhetorical reading and writing. Ongoing professional development coordinated by local CSU campuses, the Center for the Advancement of Reading, and county offices of education has now provided training in the fourteen modules for nearly 1,200 teachers throughout California.

19. Brief Course Description

Designed to address any writing deficiencies that any incoming freshman may have and reinforce and review key writing concepts for all other freshman.g

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

This course will provide students with the skills to structure paragraphs, understand different types of paragraphs, and finally, to stretch tose paragraphs into different types of essays, e.g. narrative, compare and contrast, research, literary analysis, persuasive and expository.

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Apply grammar skills to essay writing

2. Properly structure a paragraph

3. Write a 750 word "I Search" research paper

4. Write the following kinds of essays from the following menu: narrative, compare and contrast, literary analysis, persuasive and expository.

5. Demonstrate the steps in the writing process:

- **a. Prewriting**
- **b. Writing**
- **c. Editing**
- **d. Rewriting**

6. Understand and demonstrate the rationale for the writing process

- **How Prewriting helps:**
  - **Examine purpose**
  - **Determine goals**
  - **Consider audience(s)**
  - **Gather data**
  - **Determine how content will be organized and provided**
- **How writing helps organize and format the draft**
- **How to go about editing**
- **How rewriting helps polish the document**

7. Demonstrate the role of single sourcing

a. Overall organization
b. Internal organization
c. Development
d. Word usage

8. Understand the grammar rules to help write effectively:

a. The basic components of a sentence
b. Agreement between pronoun and antecedent
c. Agreement between subject and verb
d. Comma splice
e. Faulty or vague pronoun reference
f. Fragment
g. Run on
h. Fused sentence
i. Modification
j. Parallelism

9. Understand the transitional word and phrases for adding, comparing and contrasting, providing examples, showing place, revealing time and summarizing.

10. Demonstrate how punctuation rules help the writer to avoid errors

a. Apostrophe
b. Colon
c. Comma
d. Dash
e. Ellipses
f. Exclamation Point
g. Hyphen
h. Parentheses
i. Period
j. Question Mark
k. Quotation Marks
l. Semicolon

21. Course Objectives

Freshman Writing 101 is designed to address any writing defieciencies that any incoming freshman may have and to reinforce and review key writing concepts for all other freshman. This course is designed to help all incoming freshman to be better writers not just in their English classess, but across the curriculum.

22. Course Outline

Week 1: Introduction to the course, PPT on plagiarism, basic sentence and paragraph writing, summarizing, introduction to editing and the editing process, Vocabulary #1 (senences, edited sentences, vocab. quiz), Daily Grammar (daily exercises with a grammar quiz)

Week 2: Focusing on narrative writing by writing a narrative essay (demonstrating the writing process from prewriting to finished product), vocabulary #2 / Vocab. Quiz, Daily Grammar / Grammar Quiz

Week 3: Focusing on compare and contrast writing by writing a compare and contrast essay (using Step Up to Writing) (using appropriate transition words, organizing information), Vocabulary #3 / Vocab. Quiz, Daily Grammar / Grammar Quiz

Weeks 4 & 5: focusing on research writing by writing a research paper (understanding and conducting the research process, establishing a goal before writing, assessing sources, iting sources, works cited, appropriate transition words, considering audience), vocabulary #'s 4 & 5 / Vocab. Quizzes, Daily Grammar / Grammar Quizzes

Weeks 6 & 7: Focusing on literary analysis writing by writing a literary response essay (using in-Short: A Collection of Brief Creative Non-Fiction) (establishing a goal, considering audience and tone, appropriately quoting text, appropriate tansition words), Vocabulary #'s 6 & 7 / Vocab. Quizzes, Daily Grammar / Grammar Quizzes

Week #8: Foccusing on persuasive writing by writing a persuasive essay (understanding concession technique, understanding purpose, considering audience, appropriate transitions), Vocabulary #8 Voca. Quiz, Daily Grammar / Grammar Quiz

Week #9: Focusing on expository writing by writing an expository essay (using In-Short: A Collection of Brief Creative Fiction) (establishing purpose, considering audience, appropriate tranistions), Vocabulary Review of Weeks 1-8 / Vocab. Final, Grammar Review of Weeks 1-8 / Grammar Final.

23. Texts & Supplemental Instructional Materials

1. In Short - A Collection of Brief Creative Nonfiction

Norton, 1996 / Paperback/ ISBN 0-393-31492-8 / 256 pages / Memoir/Anthology

2. Step Up to Writing

Activities

Reading assignments from the textbooks and writing assignments. Grammar practice and vocabulary development exercises.

24. Key Assignments

Essays, weekly vocabulary, daily grammar and daily journal writing.

25. Instructional Methods and/or Strategies

Direct instruction that includes modeling the writing process, students working independently (writing essays) as well as collaboratively (brainstorming / editing).

26. Assessment Methods and/or Tools

Essays and in-class essays graded according to the school approved writing rubric, weekly vocabulary tests focusing on academic language, weekly grammar tests, assessment of informal journals for content and ability to respond to a specific question for a sustained period of time, etc.

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKBROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

28. History of Course Development (optional)

Course Title

Grammar/Vocabulary

Description of Target Group

This course is an elective for juniors and seniors who need more work with grammar before they proceed to Composition Workshop and/or other writing courses.

Purpose

The purpose of Grammar/Vocabulary is to develop and improve grammar and vocabulary skills, especially for the student who intends to go to college.

Standards of Expected Student Achievement

Upon completion of this course, the students will be able to successfully demonstrate the following skills:

1. Identify subjects and predicates.
2. Use correct subject/verb agreement
3. Use verbs, pronouns, and modifiers correctly.
4. Recognize the different levels of usage and appropriateness of each level.
5. Identify the various kinds of sentences.
6. Identify and write correctly the various kinds of sentences.
7. Refer clearly to antecedents.
8. Capitalize and punctuate correctly.
9. Write sentences that use coordination and subordination correctly.
10. Recognize Greek and Latin roots and their English derivatives.
11. Spell and use correctly the assigned vocabulary words.
12. Explain the origin and derivation of words, as required.
13. Explain the importance of roots in word study.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Grammar exercises, daily homework, vocabulary study, frequent drills, quizzes, and tests.

19. Brief Course Description

Introduction to Education: An Interdisciplinary and Applied Discipline, is a year-long, academically focused course designed to introduce interested college prep junior and senior students to the theory behind learning and teaching. Students use several texts to provide them with the interdisciplinary background needed in a theory course. Students study the history of education in the United States, sociological factors influencing educational systems, education policy and politics, the psychology behind learning and teaching, curriculum design and educational standards, and assessment and evaluation in education. A multi-disciplinary approach requires students to produce essays, oral presentations, projects and to pass exams from a number of academic areas. Academic work is reinforced by 60 required lab hours with K-9 students in public school community classrooms. Lab work relates directly to the educational theory under study.

COURSE DESCRIPTION:

Introduction to Education: An Interdisciplinary and Applied Discipline, is a year-long, academically focused course designed to introduce interested college prep junior and senior students to the theory behind learning and teaching. Students use several texts to provide them with the interdisciplinary background needed in a theory course. Students study the history of education in the United States, sociological factors influencing educational systems, education policy and politics, the psychology behind learning and teaching, curriculum design and educational standards, and assessment and evaluation in education. A multi-disciplinary approach requires students to produce essays, oral presentations, projects and to pass exams from a number of academic areas. Academic work is reinforced by 60 required lab hours with K-9 students in public school community classrooms. Lab work relates directly to the educational theory under study.

18. Course Goals and/or Major Student Outcomes

- Demonstrates knowledge of the history of education in the U.S.
- Demonstrates knowledge of sociological factors affecting education and educational systems.
- Demonstrates knowledge of social and personality development.
- Demonstrates knowledge of cognitive development in children and young adults.
- Demonstrates ability to match instruction to how the brain learns.
- Demonstrates knowledge of a major historical event by planning in-depth lesson units on the event.
- Demonstrates ability in critical thinking skills by planning lessons and designing curriculum.
- Demonstrates knowledge of the psychology behind proper classroom management via individual projects and assignments.
- Demonstrates ability to speak in a public forum
- Demonstrates ability to read and understand college level texts
- Demonstrates ability to write fluently and coherently.
- Demonstrates ability to use technology both in conducting research and in classroom presentations.
- Demonstrates knowledge of various methodologies through simulations, written assignments, and work in community classrooms.
- Demonstrates knowledge of social diversity in the classroom through individual projects and assignments, and through work in community classrooms.
- Demonstrates knowledge of assessment tools through analysis of forms of assessment and through designing various assessments for varying subject matter.

19. Course Objectives

a. Students will show understanding of the history of education in the U.S.
b. Students will show understanding of the sociological factors influencing educational systems.
c. Students will show understanding of social and personality development.
d. Students will show understanding of structure and function of the human brain.
e. Students will show understanding of basic psychology via classroom management techniques and strategies.
f. Students will show ability to match instruction to how the brain learns through designing lessons.
g. Students will show in-depth understanding of an historical era and of their ability to write lessons through designing a fifteen lesson unit project.
h. Students will show ability to speak in a public forum.
i. Students will show ability to read and understand a college level text.
j. Students will show ability to write fluently and coherently.

k. Students will show mastery of various teaching methodologies.
l. Students will show knowledge of Bloom's Taxonomy by designing several lessons that utilize all levels of higher level thinking skills.
m. Students will show their ability to work with students one-on-one, in small groups, and in large groups through lab settings.

20. Course Outline

Unit 1: History of American Education

California Teaching Standard for Understanding and Organizing Subject Matter for Student Learning; California Standard for Developing as a Professional Educator

(footnote: all units meet specific California Teaching Standards)

I. Organization of American Schools
II. Evolution of Education from the Colonial Period through the Nineteenth Century
III. European influences of Rousseau and Pestalozzi
Industrialism's Affect on Schools
IV. John Dewey and the Reform Movement

Unit 2: Sociology of Education

California Teaching Standard for Engaging and Supporting All Students in Learning

Organization and Design of Educational Systems
Cultural Diversity in the Classroom
Economic Diversity in the Classroom
Gender Issues in the Classroom

Unit 3: Education Policy and Politics

California Teaching Standard for Creating and Maintaining Effective Environments for Student Learning

I. Governing Bodies
II. Federal Mandates (NCLB) and State Mandates
III. Public Funding
IV. Political Issues Affecting Education

Unit 4: Psychology of Teaching and Learning

California Standard for Engaging and Supporting All Students in Learning

I. Cognitive Psychology
Brain Research and Classroom Practice
II. Methodologies
A. Socratic seminars
B. large group/small group
C. learning styles (multiple intelligences)
D. cross-curricular
E. assignments (projects, tests, quizzes, debates, simulations)
F. writing and reading strategies (SCWRiP)
III. Dealing with Special Populations

Unit 5: The Core Curriculum and Education Standards

California Standard for Understanding and Organizing Subject Matter for *Student Learning*

I. Standards Based Curriculum
II. Designing Curriculum and Lesson Plans

Unit 6: Assessment and Evaluation in Education

California Standard for Assessing Student Learning

I. Assessment

A. Standards based assessment

B. S.T.A.R., G.S.E., exit exams, A.P.

21. Texts and Supplemental Materials

Textbooks for the course are as follows:

The Organization and Control of American Schools, Campbell et. al.
Schools That Learn, Senge.
Schools and Society, Ballantine.
Schools in Conflict, Wirt and Kirst.
How to be an Effective Teacher: The First Days of School, Wong.
Developmental Psychology, McIlveen & Gross.
Brain Matters: Translating Research into Classroom Practice, Wolfe.
Teaching with the Brain in Mind, Jensen.
The Structure of School Improvement, Joyce, Hersh & McKibbin.

22. Key Assignments

- Students show understanding of the history of American education through passing an exam.
- Students show understanding of sociological influences in schools through writing reports and making oral presentations on issues such as economic disparity, cultural diversity and gender differences.
- Students show understanding of the role of federal and state governments in education through passing an exam.
- Students show mastery of knowledge of brain function, cognitive development and social and personality development by passing a comprehensive exam.
- Students show understanding of how the brain learns through projects that are presented to the class.
- Students show mastery of standards based education by designing lessons and a 3 week curriculum.
- Students show understanding of the role of assessment and evaluation in education by writing reports and making oral presentations on the various range of standardized tests employed in American schools.

23. Instructional Methods and/or Strategies

- Readings
- Discussion
- Lecture
- Oral and written reports
- Small group work
- Project-based learning
- Sixty hour of supervised lab practicum

- Internet research
- Field trips (to UC and CSU Teacher Education programs, Museum of Tolerance)
- Interviewing
- Guest speakers
- Videotapes

24. Assessment Methods and/or Tools

- Exams (20%)
- Quizzes (15%)
- Projects and reports (40%)
- Journals from community classroom (20%)
- Videotaping of their teaching (5%)

The final exam for the first semester is a written essay exam and short paragraph answers on the primary texts, along with a three week unit (fifteen lesson plans) designed by the student. The final exam for the second semester includes a written essay on the primary texts, along with a half-hour lesson designed by the student and taught to the Introduction to Education class.

27. Context for Course

This course is a heavily academic course with a lab component. With three hundred thousand new teachers needed in California within the next ten years, this course is designed to give students a thorough introduction to the teaching profession and to encourage them to become educators.

28. History of Course Development

Designed in the spring and summer of 2000 and implemented in the fall of that year, this course, now in its third year of operation, was the result of consultations with a broad range of educational professionals, including Dr. Lynn Cavasos from UC Santa Barbara, Dr. Bonnie Konopak from Cal Poly San Luis Obispo, and Dr. Andrea Maxie from CSU Los Angeles. Both professors provided in-put for course materials and outlines. The course was further developed and implemented by the current instructor, a former college instructor in English and a Nationally Board Certified teacher. Due to its strong academic nature and field service component, it has been visited and acclaimed by California State Superintendent of Education, Delaine Eastin. Additionally, it has been written up for its success in The Center for the Future of Teaching and Learning Fall Newsletter (2001) and in the summer of 2001 issue of Passport, the publication put out by CalTeach.

Course Title **SMHS**

Introduction To Literature A/B (9) (Honors)

Description of Target Group

This yearlong course, required to meet the district's graduation requirement, is designed for only those freshman students whose recommendations and portfolios have been accepted by the English Department Honors Committee.

Purpose

This course is designed to provide selected students with a qualitatively different and varied curriculum, which challenges and enriches their individual potential while maintaining the requirements of the basic course outline. Students will focus upon an introduction to literature and the writing process through an integrated approach. This course will prepare students for World Literature (Honors) as they read and write accessing themes which include self-exploration, prejudice, tolerance and personal and human values. Students will develop communication skills in reading, writing, listening and speaking in which group and individual projects will be assigned. In addition, students will participate in beginning career exploration to provide a greater awareness of the need for proficiency in communication skills.

Students must maintain a grade of HB" or better at the end of each semester to remain in the honors program.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING
A variety of genres from literature will be read. Students will be expected to:

- read independently
- identify literary genre
- identify elements of literature, literary terms
- construct meaning from a text
- make connections within a text
- extend beyond the text
- include an element of risk taking in constructing meaning
- keep a journal or log
- analyze literature on both symbolic and thematic levels

Core selections include:

novel: Of Mice and Men - John Steinbeck
drama: Romeo and Juliet - Shakespeare

Other possible selections include:

novel: Captain's Courageous - Rudyard Kipling
Night - Elie Wiesel
A Tale of Two Cities - Charles Dickens
drama: The Mother - Paddy Chayefsky
Visitors from Forest Hill - Neil Simon

epic poetry: The Odyssey - Homer

short story, poetry, essays: selections from the basic and supplementary texts.

WRITING

Students will be expected to demonstrate the following skills:

Rhetoric:

- present an idea; acknowledge an audience/reader
- use logic and relevant support/details
- state and develop an argument
- demonstrate coherence and style
- attempt an element of risk
- demonstrate improvement

Conventions:

- practice sentence variety
- use proper word choice/usage and vocabulary development
- demonstrate good mechanics
- improve spelling
- demonstrate improvement and growth

Students will demonstrate the ability to write in the following types of discourse:

- autobiographical
- reflective
- descriptive
- narrative
- expository discourses

Introduction to Literature A/B (9) (Honors) (continued)

RETRIEVING INFORMATION

- use the library and computer catalog
- use reference volumes appropriately
- cite works using MLA documentation
- document within a text using MLA format
- take notes

GROUP/COMMUNICATION SKILLS

Students will demonstrate the ability to:

- participate effectively in class and small group discussions
- communicate information and ideas effectively to others
- respect others
- follow directions
- compromise and reach consensus
- be responsible
- show improvement in speaking and listening skills

CAREER/GROUP EDUCATION

Students will demonstrate the ability to:

- take the UNIACT or other interest inventory
- apply the results of the UNIACT or other interest inventory by
- preparing to choose a Career Path
- identify career choices which coordinate with interests
- research a career or write an "I" search paper
- complete the written application process

PORTFOLIO REQUIREMENTS

Students will be expected to complete the Portfolio Requirements as outlined on PAGE 4 of this course outline

INSTRUCTIONAL MATERIALS

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Introduction to Literature A/B (9) (Honors) (continued)

PORTFOLIO REQUIREMENTS Student Name: _____

1.) Demonstrate reading comprehension/questioning competency in the following areas:

Any three (3):

		Date	Signature
A.)	Read independently	_____	_____
B.)	Construct meaning from a text	_____	_____
C.)	Make connections within a text	_____	_____
D.)	Extend beyond a text	_____	_____
E.)	Take a risk in making connections/meaning	_____	_____
F.)	Analyze literature symbolically & thermatically	_____	_____

Any one (1)

G.)	Reading log	_____	_____
H.)	Double entry journal	_____	_____

2.) Demonstrate writing skills in the following areas:

Any three (3):

A.)	Autobiographical essay	_____	_____
B.)	Reflective essay	_____	_____
C.)	Narrative essay	_____	_____
D.)	Descriptive essay	_____	_____
E.)	Expository essay	_____	_____

3.) Demonstrate the following information retrieval skills:

A.)	Works Cited/Bibliography using MLA	_____	_____
B.)	Documentation using MLA format	_____	_____
C.)	Note taking	_____	_____

4.) Demonstrate the following oral presentation skills:

A.)	Effectively present an idea/project	_____	_____
B.)	Show improvement in speaking skills	_____	_____

5.) Demonstrate the following career skills:

A.)	Identify areas of career interests	_____	_____
B.)	Match interests to specific careers	_____	_____

Course Title **SMHS**

Introduction to Literature A/B (9) (L2)

Description of Target Group

This yearlong course, required to meet the district's graduation requirement, is designed for all students who have successfully completed the appropriate ESL classes and are ready for the regular English program.

Purpose

Students will also participate in beginning career exploration to provide a greater awareness of the need for proficiency in communication skills. In addition, sheltered English strategies, authentic assessment, and cooperative learning strategies will be employed to assist students to succeed.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING
A variety of genre from literature will be read. Students will be expected to:

- Read independently
- Identify literary genre
- Identify elements of literature, literary terms
- Construct meaning from a text
- Make connections within a text
- Extend beyond the text
- include an element of risk taking in constructing meaning
- keep a journal or log

Core selections include:

novel: Of Mice and Men - John Steinbeck
drama: Romeo and Juliet- Shakespeare

Other possible selections include:

novel: Bless the Beasts and Children - Glendon Swarthout

Introduction to Literature A/B (L2) (continued)

Dandelion Wine - Ray Bradbury
Night - Elie Wiesel
When Legends Die - Hal Borland
drama: The Miracle Worker - William Gibson
epic poetry: The Odyssey - Homer

short story, poetry, essays: selections from the basic and supplementary texts.

WRITING
Students will be expected to demonstrate the following skills:

Rhetoric:

- present an idea; acknowledge an audience/reader
- use logic and relevant support/details
- state and develop an argument
- demonstrate coherence and style
- attempt an element of risk
- demonstrate improvement

Conventions:

- practice sentence variety
- use proper word choice/usage
- demonstrate good mechanics
- improve spelling
- demonstrate improvement

Students will demonstrate the ability to write in the following types of discourse:

- autobiographical
- reflective
- descriptive
- narrative

RETRIEVING INFORMATION
Students will demonstrate the ability to:

- use the library and computer catalog
- use the computer lab
- take notes
- document references

Introduction to Literature A/B (L2) (continued)

GROUP/COMMUNICATION SKILLS
Students will demonstrate the ability to:

- participate effectively in class and small group discussions
- communicate information and ideas effectively to others
- respect others
- follow directions
- compromise and reach consensus
- be responsible
- show improvements in speaking and listening skills

CAREER INFORMATION

Students will demonstrate the ability to:

- take the UNIACT or other interest inventory
- apply the results of the UNIACT or other interest inventory by
- preparing to choose a Career Path
- identify career choices, which coordinate with interests
- research a career or write an "I" search paper
- complete the written application process

PORTFOLIO REQUIREMENTS
Students will be expected to complete the Portfolio Requirements as outlined on PAGE 4 of this course outline

INSTRUCTIONAL MATERIALS

Text and Supplementary Materials

Refer to Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

PORTFOLIO REQUIREMENTS Student Name: _____

1.) Demonstrate reading comprehension/questioning competency in the following areas:

Any three (3):

		Date	Signature
A.)	Read independently	_____	_____
B.)	Construct meaning from a text	_____	_____
C.)	Make connections within a text	_____	_____

Journalism 2 A/B (P)

Description of Target Group

Journalism 2 A/B is designed as a two-semester, year-long course for 11th or 12th grade students who possess basic journalism skills.

Purpose

The purpose of Journalism 2 A/B is (a) to continue to help students learn to work cooperatively, develop leadership, practice group dynamics, learn promptness, responsibility and dependently, and in doing so, publish the school newspaper; (b) to provide an opportunity for students to learn advance styles of journalistic and expository writing; (c) to provide an opportunity for students to evaluate, discuss and compare various writing styles and ideas of outstanding authors.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the ability to:

WRITING SKILLS

1. Generate ideas from classical and contemporary literature and from observing the social environment through various media of communication.
2. Understand appropriate sources and identity facts, examples and illustrations form published material, live sources, and personal experience.
3. Structure and conduct interviews to obtain information.
4. Identify the appropriate form for writing information: news, editorial or feature.
5. Formulate a single statement that clearly expresses the central idea in one's essay, story or article.
6. Construct paragraphs that develop and support the story's main ideas with facts, examples, reasons, description, incidents, quotations, definitions, and analogy.
7. Organize paragraphs into a logical sequence so that the central idea of the story is presented clearly and is developed to a logical conclusion.
8. Write varied and appropriate sentence structures and types effectively in order to indicate the meaning, relationship and importance of ideas.
9. Write sentences with precise and appropriate words, keeping the audience in mind, to distinguish between literal and figurative use of language, and to avoid inappropriate jargon and clinch.
10. Use word and sentences for different readers and purpose: features, editorials, news and sports.
11. Understand when and how to present one's own ideas as related to, but clearly distinguished from, the ideas of others, including the ability to use attribution and documentation and to avoid plagiarism.
12. Do research for support of one's opinions and conclusions, including the appropriate use of evidence and attribution.

Journalism 2 A/B (P) (continued)

13. Use dictionaries, style books, thesaurus and other reference materials for the purpose of checking words and facts used in one's writing.
14. Proofread for errors and omissions of both form and substance, to revise and restructure, to correct the draft for errors in mechanics and to produce a finished paper relatively free of errors in structure and usage.
15. Listen, take notes and transcribe information accurately.

READING SKILLS

1. Identify and comprehend the main and subordinate ideas in a written work and to summarize the ideas in one's own words.
2. Recognize different purposes and methods of writing, to identify a writer's point of view and tone, and to interpret a writer's meaning inferentially as well as literally.
3. Separate one's personal opinion and assumptions from a writer's.
4. Use features of books and other reference materials, such as table of contents, preface, introduction, titles and subtitles, index, glossary, appendix, and bibliography.
5. Define unfamiliar words by decoding, using contextual clues or by using a dictionary.

ETHICAL JUDGMENT

1. Recognize the place of the press in a modern democratic society as "watchdog," reporter and commentator on social environment.
2. Present both sides of an issue by comparison and contrast, argumentation, and analysis.
3. Develop a writing form free from libel, slander or obscenities and to respect privacy.

NEWSPAPER PUBLICATIONS FUNCTIONS

1. Explain newspaper staff procedures and responsibilities.
2. Show effective newspaper staff interaction.
3. Use proper newspaper bookkeeping.
4. Explain the function of the student newspaper on campus.
5. Identify the fundamentals of advertising.
6. Outline the sequential steps of production.
7. List career opportunities in journalism.

Course Description

Course overview:

Students in Journalism 1 will develop knowledge and skills in writing news, editorials, sports, advertising and feature writing. Students work on independent and group assignments, edit copy and use computers to prepare articles for publication. Students develop confidence, creative techniques and learn to organize time to meet monthly deadlines. Students will develop knowledge and skills in organizing a staff for the production of a monthly newspaper/magazine. Students will assign and write articles, organize layout, headline and edit work submitted for newspaper/magazine. Students will assign and write articles, organize layout, headline and edit work submitted for the school paper. Students will also make public contacts for the purpose of securing advertising and will negotiate with the local newspaper for the purpose of printing and submitting news required in all facets of publication.

Suggestion: Students are encouraged to submit articles to local competitions and to attend state journalism conferences.

Suggested: Students are encouraged to enroll in The Paw Print club, newspaper production, in order to follow articles from inception of publication.

1. Students will read and comprehend newspaper and magazine articles by analyzing author's rhetoric and style.
2. Students will begin the study of researching, writing, and editing for journalistic purposes.
3. Students will read and respond to culturally significant articles from mainstream publications and selected texts to better understand American and global events.
4. Students will write coherent and well-written articles showing an understanding of audience and purposes.
5. Students will learn to write well under time pressure.
6. Students will learn to listen critically and learn to ask pertinent questions also showing flexibility in question asking.
7. Students will learn the importance of the editing and revision process with multiple drafts required of articles.
8. Students will compose articles of at leas 500 words reflecting their understanding of the following formats: news, feature, opinion, review and sports.
9. Each of the journalistic writing styles listed in #8 encompasses coherent and focused expository, persuasive, narrative and informational writing.
10. Students will complete a full sized (tabloid or broad sheet) model page with articles they have written demonstrating their skill and understanding of desktop publishing using Adobe InDesign and Photoshop.
11. Students will learn editing marks and editing skills by exchanging articles and peer editing.

12. Students will be introduced to first amendment rights, libel laws and the responsibility of the press.
13. Students will have a brief introduction to the history of American journalism.
14. Students will be introduced to web journalism and the ue of the internet to research articles.
15. Students will keep a digital portfolio of their work.

- *Associated Press Stylebook* will be used each week of the term.
- *The Newspaper Designer's Handbook* by Tim Harrower will be used for design exercises each week of the term.
- Exercises fro the *School Newspaper Adviser's Survival Guide* by Patricia Osborn will be used each week of the term.

Course content:

INTERVIEWING

Students will learn interviewing skills and the purpose of formulating effective follow-up questions. Students will know as much background as possible for their assignments before the interview. Students will list likely questions beginning with the five W's. Students are held responsible for scheduling interviews setting aside sufficient time to answer all questions. Students are discouraged from using tape recorders or digital recorders for the interview. Rather, students are encouraged t listen intently and take careful, well-chosen notes on the interview.

NEWSWRITING

The inverted pyramid style of building a news story will be stressed. Emphasis will b e placed on writing effective leads using the five W's of reporting. Students will read various news stories from local, state and national news sources analyzing them for sentence structure, information presented, organization, number of words and sentences in the lead.

Students will have four opportunities to write news stories, each of about 500 words. The first two stories will be from facts garnered from mock news conferences in class. The second two stories will be gathered from school-related subjects. Students will be responsible for writing one of those stories abut a club or organization on campus. Objective writing will be stressed and students will have multiple lessons on the difference between fact and opinion.

FEATURE WRITING

Students will be introduced to writing a personality profile. Students will be introduced to writing a personality profile. Students will read examples of profiles in various media and, using the "Dialogue Box" worksheet from SNAG (School Newspaper's Survival Guide) will rite a personality profile about a class member.

Students are also introduced to feature lead writing and given examples of descriptive leads, narrative leads and summary leads. Students will write two stories from the following: A club feature, sport feature, event feature, human interest, historical feature, restaurant review, or consumer report.

Students will learn to focus on a special angle of their subject and to get the whole story and organize the story in a readable and informative format.

OPINION AND COLUMN WRITING

Students will read editorials from local, state and national media and compare the writing and viewpoints. They will be learning the structure for effective argumentative writing, emphasizing a strong thesis statement with clear supporting paragraphs.

They will select their won topics from school and current events and write an opinion piece of 500 words. Their piece will display and understanding of both sides and a given issue and then argue in favor of one side or the other. They will write effective opinion leads and then contrast them with the news leads they wrote earlier.

Students will also study column writing. While many columns employ the same expository format as opinion pieces, other columns can be subject-specific or humorous.

SPORTS WRITING

Students will read sports stories from local, state and national media with a particular focus on local and school reporting of individual high school sports. While they will review sports features and sports columns, this unit focuses on sports news reporting.

Students will do game reporting emphasizing the five W's and employing strong leads and including quotes from at least two sources, either players or coaches. Their stories will be fact-based and resist opinion statements about the game or players.

DESKTOP PUBLISHING AND ELEMENTS OF DESIGN

Desktop publishing is woven into the curriculum throughout the year. Students are made aware of newspaper layout and design by studying various layout examples. Examples are used from local, state and national newspaper.

Students will also study the elements of design from Harrower's book *Newspaper Designer's Handbook.* They will apply principles from Harrower's book to create one or two-page layouts showing a grasp of design fundamentals including proper format for headlines, picture placement and text and caption placement.

Students will learn to use both Adobe InDesign and Photoshop. In Photoshop students will learn how to crop and reformat photos for publications. They will learn the difference between gray scale and CMYK formats for photos and other special effects. Students will learn how to place headlines, body text, captions and photo into InDesign documents and arrange those items according to the principles of good design. Adobe Illustrtor will also be used for creting graphs and infographics

REVIEW & FINAL PROJECT

Students will review all the writing styles and work on their final project, an authentic assessment of everything they have learned during the term. They create a newspaper page or pages where they layout chosen stories that show competence in all of the writing styles, news, opinion, feature and sports. They will also show competency in the use of Photoshop and InDesign and the principles of newspaper layout.

ETHICAL JUDGMENT

1. Recognize the place of the press in a modern democratic society as "watchdog," reporter and commentator on social environment.
2. Present both sides of an issue by comparison and contrast, argumentation, and analysis.
3. Develop a writing form free from libel, slander or obscenities and to respect privacy.

NEWSPAPER PUBLICATIONS FUNCTIONS

1. Explain newspaper staff procedures and responsibilities.
2. Show effective newspaper staff interaction.
3. Use proper newspaper bookkeeping.
4. Explain the function of the student newspaper on campus.
5. Identify the fundamentals of advertising.
6. Outline the sequential steps of production.
7. List career opportunities in journalism.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Interviewing, writing, editing, publishing student newspaper, ad sales, oral and written book evaluation, participation in professional journalistic contest

Course Title

Mass Media

Description of Target

Mass media is a one-semester elective for all students who have completed freshman English.

Purpose

The purpose of Mass Media is to analyze mass media's positive and negative effects they project on the individual and society.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Write a paragraph analyzing a television show.
2. Demonstrate simple knowledge of how the electronics of TV shows.
3. Write a thirty-second persuasive TV commercial.
4. Perform a thirty-second persuasive TV commercial on videotape.
5. Write an effective paragraph nominating a television star for an Emmy.
6. List and define at least three advertising techniques used in TV commercials.
7. Plan and participate in a closed circuit TV (videotape) show or parody of a current TV show.
8. Explain the concept of "the medium is the message" and defend or reject its validity.
9. List five standards for evaluation of a TV show.
10. List three good points and three bad points about a given TV show.
11. Demonstrate an understanding of the relationship between violence and TV, politics and TV, and persuasion and TV.
12. List three critical differences between a TV show and a movie in a theater.
13. Demonstrate knowledge of the history of radio, television, and the movies for the past 100 years.
14. Write a paragraph analyzing a movie's good and bad points.
15. Write an effective paragraph nominating a movie star for an Oscar.
16. List five standards for evaluation of a movie.
17. Write an effective paragraph on the effect of radio on today's society.
18. List and define three advertising techniques used in radio commercials.
19. Write an effective paragraph on the impact of newspapers and magazines on today's society.
20. List five standards for evaluation of the news on TV, radio, and the newspaper.
21. Demonstrate an understanding of the parts of a newspaper.
22. Write a paragraph on the effect of paperback books on reading habits and society in general.
23. Write a paragraph on the impact of modern music on culture and teens.

Mass Media (continued)

24. Demonstrate knowledge of basic communication theory.
25. Recognize semantic problems in communication, such as euphemisms, connotation of words, and body language.
26. Recognize and describe the basic types of television shows.
27. Demonstrate an awareness of sensory and perception problems in communication.
28. List the possible careers in the communication industry.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Reading assignments from the textbooks, oral and written reports, movies, film strips, slides, recordings, and pictures; class discussion and literal/discussion, guest speakers, creating modern communication through the use of audio and video tape.

Mexican American and Latina/o Literature

Santa Maria Joint Union High School District

Basic Course Information

School(s) Offering This Course:

School Name	Course Learning Environment	Transcript Code(s)	
		Abbreviation	Course Code
Santa Maria High School (053305)	Classroom Based	Mex Am/Lat Lit	EN4038
		Mex Am/Lat Lit	EN4039

Title:	Mexican American and Latina/o Literature
Length of course:	Full Year
Subject area:	English ("b") / English
UC honors designation?	No
Prerequisites:	None
Co-requisites:	None
Integrated (Academics / CTE)?	No
Grade levels:	12th

Course Description

Course overview:

This course surveys the history, identity, and oral traditions of Mexican American and other Latina/o cultures through the lens of literature. It is a representative overview of Mexican American and Latina/o literature covering poetry, drama, novels, short stories, critical essays and other non-fiction texts. The course will include literary techniques, modes of expression, trends in Mexican American and Latina/o creativity, and will expose students to the richness and diversity that Mexican American and other Latina/o cultures have to offer.

The first semester of the course will focus on literature/texts authored by Mexican American, and Chicana/o writers. The second semester focuses on Latin America as a whole and how the influences of Cuba, the Dominican Republic, Puerto Rico, Central America, and South America have shaped American and Latina/o identity in the U.S. and provide a well-rounded understanding of the cultural elements that contribute to U.S. Latina/o Literature.

Students will be exposed to extensive reading of classic and modern Mexican American and Latina/o American literature and nonfiction texts that emphasize their historical and cultural roots in the United States and examine the contested meanings of identity; the relationship between social/political activism and literary expression and movements; the politics of immigration and the border; and the intersectionality of these with gender relations and sexuality within the Mexican American and Latina/o community. Students will engage in a variety of short-term and long-term writing assignments that will enhance their scholarly writing; including argumentative, informative, and narrative compositions. Students will improve their skills in close reading, academic research, and expository writing. By the end of the course, students will have developed and written approximately 10 essays in a variety of discursive modes as well as created independent projects that develop their critical speaking and listening skills.

Course content:

Unit 1: Pre-Columbian Civilization and the Conquest (The Rise of Mestizo Culture)

Unit Description: This unit will focus on the historical significance of Pre-Columbian cultures in the Americas, the conquest period and three centuries of Spanish colonial rule that saw the rise of the new “mestizo” as an identity that is in constant transformation. An emphasis will be given to Spanish hierarchies of social class as determined by ethnicity and the impact they have on Mexican American identity today. Through close

reading and discussion of Pre-Columbian texts like *The Popol Vuh* and primary accounts of the conquest, the unit will cover questions concerning labels, nationalism, labor, migration, and memory. Through journal entries, participation in think-pair-share discussions, and short informative and narrative writing assignments, students will trace the construction and transformation of ethnic and national identities and the issue of assimilation among Mexican Americans up to the 1960's.

💻 Unit Assignment(s):

Key Assignment: "Columbus: Hero or Criminal?" Students will read fiction and non-fiction texts about the arrival of Columbus to the Americas, including the 2 poems below. They will work-shop a 3-paragraph response comparing and contrasting the tone and themes of each poem and respond to the following: Whose point of view does each poem reflect and what is the message they each convey? Explain the literary elements of the poems help convey the message. Use evidence from the poems and/or the additional readings to support analysis. Do you agree with one or more than the other? Do you believe Columbus is a criminal or a hero?

"Columbus" By Annette Wynne

An Italian boy that like to play
In Genoa about the ships all day,
With curly head and dark, dark eyes,
That gazed at earth in child surprise;
And dreamed of distant stranger skies.

He watched the ships that came crowding in
With cargo of riches; he loved the din
Of the glad rush out and the spreading sails
And the echo of far-off windy gales.

He studied the books of the olden day;
He studied but knew far more than they;
He talked to the learned men of the school --
So wise he was they thought him a fool,
A fool with the dark, dark dreamful eyes,
A child he was -- grown wonder-wise.

Youth and dreams are over, past
And out, far out he is sailing fast
Toward the seas he dreamed; -- strange lands arise -- The world is made rich by his great emprise --
And the wisest know he was more than wise.

"Columbus Day" By Jimmie Durham

In school I was taught the names
Columbus, Cortez, and Pizzaro and
A dozen other filthy murderers.
A bloodline all the way to General Miles,
Daniel Boone and General Eisenhower.

No one mentioned the names
Of even a few of the victims.
But don't you remember Chaske, whose spine
Was crushed so quickly by Mr. Pizzaro's boot?
What words did he cry into the dust?

What was the familiar name
Of that young girl who danced so gracefully
That everyone in the village sang with her--

Before Cortez' sword hacked off her arms
As she protested the burning of her sweetheart?

That young man's name was Many Deeds,
And he had been a leader of a band of fighters
Called the Redstick Hummingbirds, who slowed
The march of Cortez' army with only a few
Spears and stones which now lay still
In the mountains and remember.

Greenrock Woman was the name
Of that old lady who walked right up
And spat in Columbus' face. We
Must remember that, and remember
Laughing Otter the Taino who tried to stop
Columbus and who was taken away as a slave.
We never saw him again.

In school I learned of heroic discoveries
Made by liars and crooks. The courage
Of millions of sweet and true people
Was not commemorated.

Let us then declare a holiday
For ourselves, and make a parade that begins
With Columbus' victims and continues
Even to our grandchildren who will be named
In their honor.

Because isn't it true that even the summer
Grass here in this land whispers those names,
And every creek has accepted the responsibility
Of singing those names? And nothing can stop
The wind from howling those names around
The corners of the school.

Why else would the birds sing
So much sweeter here than in other lands?

Unit 2: Westward Expansion and "Manifest Destiny"

Unit Description: This unit will present literature that traces the social and cultural outcomes western expansion and "Manifest Destiny" had on Mexico and Mexicans in the U.S. Iconic Mexican American pieces of writing like *Yo Soy Joaquin* and *The Ballad of Gregorio Cortez* and historical documents like *The Treaty of Guadalupe Hidalgo* will be used to focus on the geographical and political shifts between the U.S. and Mexico that led to the present.

💻 Unit Assignment(s):

Key Assignment: CORRIDOS

Can you imagine becoming an immigrant without ever moving? It happened here, in America, in 1848. The Treaty of Guadalupe Hidalgo brought an end to border warfare between the United States and Mexico. How? Mexico ceded a huge area of land - California, Nevada, Utah, part of Colorado, Arizona, and New Mexico - to the U. S. The terms of the treaty stipulated that Mexican citizens could either stay where they were or return to Mexico.

Imagine! Suddenly, your country changes though you haven't moved an inch. Though many of the Mexicans in this situation elected to become American citizens, they did not by some stroke of magic suddenly fit. Their transition and assimilation into American culture was no smoother than other immigrant groups from abroad.

During this turbulent time, Mexican-American literary voices began to be heard, but they were still very distinct from the larger American culture. The evolving literature of this community was spoken, sung, or written in Spanish. Much of the literature was in the oral tradition - it had not ever been written down but had been shared from generation to generation. At its center was personal or historical subject matter. From these traditional literatures a unique form of poetry began to flourish.

Songs and Stories: A style of ballad, called a corrido, (from the Spanish verb corer which means "to run") was a literary result of the cultural conflict between Mexican-Americans and Anglo-Americans in the American Southwest. In terms of the stimulus for their development, corridos might be compared to the blues songs and poetry that were the achievements of 1920s African American culture. Corridos provided an outlet for resentment and frustration caused by discrimination and oppression, and since they were composed in Spanish, corridos could be private from the predominant "Anglo" culture. They poured out the history of the Southwest from the point-of view of the Mexican-American common man. They celebrated cultural clashes, social events, ethnic pride, violence, heroism, villainy, and adventure.

One famous corrido, "The Ballad of Gregorio Cortez," told of a Mexican rancher who killed a white sheriff who was unjustly trying to arrest him. Cortez was subsequently chased by lawmen, captured and then convicted by an Anglo jury. In the ballad Cortez was described like a vaquero - expert horseman and marksman - whose adventures on the lam make for an exciting chase and confrontation with the Texas Rangers. The corrido tells how Cortez uses cunning to elude his captors, while the latter, who think only in stereotypes, are bungling and inept. The lawmen who are persecuting Cortez are described very negatively: They are "whiter than a poppy from the fear they had of Cortez and his pistol." The pejorative tone of these lyrics illustrates the tension in the Southwest.

The corrido continued to enjoy popularity and remains a vital literary and musical form of expression. During the 1960s a corrido immortalized the courage and determination of Cesar Chavez and the plight of migrant workers. A famous memorial ballad "Recordando El Presidente" was written to memorialize the assassination of John F. Kennedy. Other corridos have been composed about everything from bandoleros to bullfighting, riding cars to running drugs, heroes to villains and, of course, love.

Write a two page critique on the film, "Corridos: Tales of Passion and Revolution" that addresses the following questions:
1. How do the stories in the film illustrate the cultural mores of the time? Use details examples from the various scenes to illustrate your point of view.
2. Is the art of writing corridos still relevant today? Why or why not?
3. How do corridos reflect the Mexican spirit or ethnic pride? Is it shown in the film? Is it shown in the corridos we have studies? Provide clear evidence from both the film and the lyrics.

Unit 3: Creating a New Identity (Chicano Movement)

Unit Description: The impact the Mexican American experience through World War I/II and the Zoot Suit Riots had on the Chicano Movement generation will be examined to explore issues of citizenship, assimilation, and cultural identity. The Chicano Movement and the rise of Chicano activists and writers who gave voice to the movement. What is generally referred to as Chicano literature is the relatively recent phenomenon which grew out of the Chicano Movement, the socio-political civil rights movement of the mid-1960s. Yet, this body of literature did not emerge from a cultural or literary vacuum, but was rather a proliferation of continuous literary activities among Mexican-Americans living in the United States.

Unit Assignment(s):

Key Assignment: What is the significance of *I am Joaquin* to the Chicano Movement of the 60's and 70's? Is the poem still relevant today? Why or why not?

This lesson will broadly explore the relationship between identity and movement within the Chicano Rights Movement of the 1970s and the larger historical framework that stretches back over 500 years ago. It will center on a primary source, Corky Gonzales' *I Am Joaquín*, and its descriptions of the distinct Chicano character and the history lesson that is embedded within the text. The lesson will be broken into four parts — each exploring a different aspect of the relationship between identity and the Chicano Movement and the Movement's relationship to historical events. Further, each activity will require students to practice different essential skills expected of high school humanities students. For example, students will be asked to read and compare two primary sources — *I Am Joaquín* and *Demands Made by East Side High School Students Listed* as well as *El Popol Vuh*. Through this activity, students will not only explore accounts describing the Chicano identity and the objectives of the Chicano Movement, but also critically engage with primary texts, exploring their basic meanings and implications. Also, students will be given a broad lecture dealing with significant figures, organizations, and events within Mexican American history This unit, which is designed to give historical context to the primary source going all the way back to pre-Columbian cultures.

Unit Project: Students will be assigned a topic on Mexican-American history and culture referenced in *Yo Soy Joaquin* and conduct extensive research on the internet and the library to write a multi-paragraph essay that summarizes and synthesizes the importance of the topic in context. Students will also create a PowerPoint, Keynote presentation or a collage to present to the class as the "expert" on the topic. Students will take notes on each other's "lectures" and have an opportunity to ask questions of each other. The presentation should be least 10 slides and cite sources according to MLA format.

Unit Essay: *I am Joaquin* has long been touted as the beginning of Chicano literature. It has also promoted Mexican American socio and political equality, doing much to promote the Mexican American people as equals in American society, but it has also managed to largely ignore Chicanas. Explain both the shortcomings and positives of this epic piece of Chicano literature. Use two of the texts we read by Chicanas (Gloria Anzaldua, Ana Castillo, Sandra Cisneros, Dagoberta Gilb, Cherrie Moraga, Ana Nieto Gomez) to include the Chicana perspective of the movement and to critique the shortcomings of *Yo Soy Joaquin*.

Unit 4: Immigration and the Border

Unit Description: The issue of immigration and the border will be one the major themes in this unit as it relates to the socio-political, economic, and cultural reality of Mexican Americans in the U.S. The unit will focus on the territory-based rhetoric of the cultural border, boundaries and borderlands, and immigration. Critiquing the essentialist view that presumes fixed boundaries for a culture; students will explore the constructivist view that assumes an individual's choice in defining and redefining their own cultural identities in a multicultural society. This unit examines the rise of industrialism in agricultural that led to a shift in immigration policies by the U.S.; a focus will be on how migrant farmworkers and other laborers helped shape the economic reality of the Southwest. Students will take a close look at literature that speaks about the border the U.S. shares with Mexico and its constant geographical, political and cultural shifts from past to present. This unit will help students think about and discuss: What is the purpose of a border (physical and otherwise)? Who creates borders and who are they created on? How do Mexican Americans/Chicana/os resist borders and how is this reflected in the literature?

Unit Assignment(s):

Key Assignment: Students will explore and create definitions of the word "border." Students will engage in a multi-perspective way of looking at the border.

Part 1--Individual Writing

Students free write their responses to the questions:

1) What is a border?

2) What words come to mind when you hear the word "border"? (no matter how irrelevant or off-the-wall the word or thought is, write it down);

3) What borders have you crossed in your life?

4) What borders do you not cross?

Part 2--Group Discussion

Students gather in groups of three or four, share responses, then work together to write up and illustrate their own definitions and lists of types of borders. Each group presents their ideas to the class.

Part 3--Class Discussion

How many different kinds of borders can we list using what the groups have written? (Also, can discuss questions #3 and #4 from Part 1.)

Examples: Border as Wall or Fence

Border as a Membrane, Skin, Porous

Border as Meeting Place, Interaction

Border as Marketplace, Goods & Services

Border Between Groups of People, Languages, Economies

Border Between Ways of Life, Cultures, ("Ecosystems")

Border as Edge, Fuzzy or Crisp, Rules, Inside/Outside, Etc.

Border as Psychological, Physical, Social, etc.

Question for discussion: Can a border function in more than one way? Why or why not?

Part 4--Listening & Responding

Students read quotes/passages from writings about the border. Students can either respond to the quotes or create their own statements/poems on the idea of "borders." Starter line: "The border is..."

Sample statements:

"For Mexico, the border is not that rigid Puritan thing, a line; straight lines are unknown in Mexico. The border, like everything else, is subject to supply and demand. The border is a revolving door." --Richard Rodriguez

"The border is transient...the border is a word game...the border is a virtual cesspool"--Atlantic Monthly

"Tijuana has more in common with Santiago, Chilé than San Diego, California." -- Jorge Bustamante, President, El Colegio de la FronteraNorte

"This is the only place I know where you can jump from the First World to the Third World in five minutes." --Julio Chiu, El Paso bank executive and native of Cd. Juárez

"We have people here who have never heard of the word 'environment' or 'ecosystem.' It's as if you were talking in another language." --Naachiely Lopez, Tijuana environmentalist, 1992

"Many Mexicans think of the move from Cd. Juárez across the Rio Grande more like moving to a richer neighborhood than going to another country." -- Washington Post, 1978 Source: La Frontera/The Border: An Enigma for Two Nations. University of Southern California, 1993.

Closure: Students can read aloud a favorite line or phrase from their writings and as a class revise order of lines to create a group poem/writing on the border.

Unit Essay: An essay exploring the various ways the border functions. Consider the questions: What would the region be like if there were no border? What has the border done to the region? To the people? Consider indigenous peoples of the area (particularly in Arizona) who have lived here for over 500 years and say there is no border. How can anyone say that there is no border?

Unit Research Paper: Before finishing this assignment, you will have read Anzuldúa, and Rodriguez' personal experiences of the border. For this assignment, you will be writing your own autobiography in which you address three specific ways in which your individual life connects to the national life. You will be writing your autobiography (or the story of your family) as the story of your people (however you define your people). In the end, you will explain how a few incidents from your own life made you more aware of the possibilities or limitations of connection to the national life of the mythical "America." The three essential parts of this assignment are:

Part 1: What were some of the earliest experiences you had in which you felt included as part of a larger nation? This could be the pledge of allegiance you said in school, or visiting a national monument, or reading through your American history book, or hearing your relatives tell you stories about war, labor struggles, and past American figures. Focus on a scene or two that you remember and describe what made that scene so memorable.

Part 2: What were some of the times that you felt excluded from being part of the larger nation? What happened? Did you realize at the time that you were being excluded, or is it only in looking back that you figured it out? This event need not even be something that happened directly to you — it could be something you heard happening to someone else — but it should be an event that had some consequence in your life.

Part 3: How do you make sense of both being included and being excluded from your idea of what "America" means? Do you now claim your identity as one of many American lives? Do you continue to feel that you are cut off from the early image of "America" that you had? How do you reconcile the incidents from Part 1 and Part 2? Or, if you can't reconcile them, which of the incidents has impacted your identity the most and shaped how you see yourself today?

FORM: Your autobiography will be in the form of a personal essay. It must be between at least 3 full pages and no longer than 6 pages. You must discuss the three parts above, but you can do them in any order you wish (as long as I can see clearly that you have some sort of organization to your thoughts). One way you might want to consider organizing this essay would be based on the following structure:

I: Title (think of something creative)

II: A one-paragraph introduction that begins with something attention grabbing and ends with a thesis statement that quickly answers Part 3 above)

III: One or two paragraphs that describe the experience mentioned in Part 1.

IV: One or two paragraphs that describe of the experience mentioned in Part 2 (these paragraphs should take the form of paragraphs before them)

V: One paragraph that clearly identifies the conflict between Parts 1 and 2

VI: One or two paragraphs that explains the answer to the questions in Part III

VIII: A concluding paragraph that reinforces the one sentence summary of Part III and explains why it is significant to the literature we are reading in this class.

Unit 5: Colonization of Latin America

Unit Description: This course will put Latino and Latina literature in context to the larger literary canon. We will explore important aspects of the works through a mostly historical approach focusing on the impact of colonialism on Latin American culture but will also draw from other components including folklore, memory, social issues, and cultural identity. A broad overview will be given to Latin America as a whole and through the literature, students will examine the influence of Spanish and Portuguese colonial rule on Latin America, as well as the modern day influences of Cuba, the Dominican Republic, Puerto Rico, Central America, and South America on American and Latino identity in the U.S. The primary text is "The Vintage Book of Latin American Stories" edited by Carlos Fuentes and Julio Ortega which will be used for the rest of the semester in conjunction with other texts.

Unit Assignment(s):

Key Assignment: Cultural Diffusion and Latin America

A look at colonization, the Atlantic slave trade, and the Columbian Exchange, its impacts on the culture of Latin America, and the positive/negative impacts of this cultural diffusion.

Write an essay that discusses the literature, art and music that resulted from the encounters of many backgrounds on the stage of colonial Latin America.

- How did the experience of colonization affect Latin American cultures?
- How were people of all backgrounds in colonial Latin America able to express themselves?
- What flavors did their identities add to their cultural expressions?
- What does the art/literature of particular groups say about their worldview or place in society?
- Use the literature we have read as evidence in your responses.

Unit Project: Immigration has been a part of the world since humans first started walking. This phenomenon continues for a variety of reasons today. The U.S. borders Mexico and we have many immigrants from Mexico and Central America. Their reasons for immigrating are many and not always presented by the media in the best light. Students need to know the various reasons that so many Latin Americans are leaving their countries and coming to the U.S. One way to find this information is to gather it through interviews and oral history.

Students will be studying immigration from Latin American countries and the statistics that are known, using the Internet and written material. A foundation will be built around understanding the impact of immigration on the U.S. as well as on Latin-American countries. At the same time students will conduct an interview of a local immigrant(s) in order to have a personal view of the issues that surround immigration. Students will write a detailed essay (minimum 3 pages) about the person you interviewed as well as formal presentation of the information that you found and share it with the class.

Presentation Choices: This will allow students to synthesize the information gathered and respond to a critical issue in our world today. You will present your presentation to the class.

1. PowerPoint presentation. You must have at least 10 slides in your presentation and it must be thorough.

2. Create an "album" containing facts, stories, poetry, drawings, songs of the person you interviewed and the information you gathered.

3. A video production for public access TV in the form of a newscast or documentary.

Unit 6: The Rise of Magical Realism

Unit Description: A look at the rise of Latino/a writers, artists, filmmakers, and others who have become more accepted by the mainstream of U.S. society and the world and yet still retain their cultural identity or are re-shaping that identity. This unit will put Latino and Latina literature in context to the larger literary canon. We will explore important aspects of the works through a mostly historical approach focusing on the impact of colonialism on Latin American culture but will also draw from other components including folklore, memory, social issues, and cultural identity. A focus on the rise of new cultural identity that rejects the old “colonial” styles of literature for fresh approach to writing that saw the rise of Surrealism, Magical Realism, and eventually a hybrid approach to literature in the U.S. by Latino/a writers who are simultaneously part of the mainstream American culture but also redefining what it means to be American.

💻 Unit Assignment(s):

Key Assignment: Theme of Isolation

"The Handsomest Drowned Man in the World" explores the ways in which human beings overcome personal isolation through their collective community. In this story, common beliefs in the mythic or fantastic bring together the members of a small fishing village. The men, women, and children of this community are united by their common desire for self-improvement. Together, they imagine a better future for themselves, a future in which they are as extraordinary as the myths in which they all believe.

Questions about Isolation

1. Does the drowned man create conflict in the village, or bring the village together? (Your answer might change depending on which part of the story you're examining.)

2. How does the village's relative isolation from neighboring towns affect the way we read the story?

3. Why is it so important to the women of the village that they claim the drowned man as their own?

Course Final Essay

From the following prompts, please choose ONE. For each of the writing prompts, students will incorporate critical readings that could best be applied to the arguments/stance/perspective the student is making in the essay. Students are required to use at least one critical reading.

💻 Unit Assignment(s):

Writing prompts

1) "The *corrido*---narrative ballad---constitutes one of the richest and most resilient of genres within the Mexican oral tradition. It is a form of song that extends back into time immemorial," writes Yvonne Broyles-Gonzales in *What Pride Mainstream: Luis Valdez' Corridos on Stage and Film.* In what ways do *corridos* promote stereotypes of Mexicans and Mexican Americans? Can *corridos* also thwart stereotypes? Explain.

2) Gloria Anzaldúa's *To live in the borderlands means you* is a passionate and candid interpretation of living life between more than one cultural mindset. Explain her answer to easing the complications of living "in the borderlands," taking care to note any shortcomings, if any, to her solution.

3) Discuss the significance of space and place with a discussion of the Borderlands, the issue of cultural hybridity, and pragmatic assimilation. What are the complications, the consequences, and the positives of being bicultural?

Semester 1 Texts

Primary Texts:

Bordering Fires: the Vintage Book of Contemporary Mexican and Chicano/A Literature edited by Cristina Garcia

T*his Bridge Called My Back: Writings by Radical Women of Color* edited by Cherrie Moraga and Gloria Anzaldua

Bless Me Ultima by Rudolfo Anaya

Course Title

Mexican/American Literature (CP) - Replacing Chicano Literature

Description of Target Group

Mexican/American literature is a one-semester course designed for all students who have completed freshman English.

Purpose

Mexican/American literature provides an opportunity to investigate the thoughts and feelings of the Mexican/American. This opportunity extends to folklore, theater, poetry, short story, and the novel.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to demonstrate competency in the following:

1. Demonstrate the ability to write or discuss Mexican/American literature in the context of the four literary modes.
2. Demonstrate the ability to write or discuss the romantic and naturalistic elements in Mexican/American literature.
3. Demonstrate in extensive detail an awareness of Mexican/American folklore either in written or oral form.
4. Definition and explanation of Mexican/American literature through the generic approach.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Students will present and interpret works, listen to practicing artists, and take field trips.

Course Title

Modern Novel

Description of Target Group

Modern Novel is a one-semester course designed as an elective for those students who are university/college bound.

Purpose

The purpose of Modern Novel is to develop a more critically thinking reader through the extensive study of fiction.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Ability to distinguish the novel as a distinct literary form.
2. Recognition of and ability to use literary terms necessary to discuss and criticize a novel.
3. Awareness of the changing form of the novel since its inception.
4. Awareness of the changing philosophy, values and concerns throughout history as reflected in the novel.
5. Recognition of some of the classic novels and their authors and their impact on society.
6. Ability to read and extract the ideas in three short novels read as a class.
7. Ability to extract and share the ideas found in any five novels selected by the student.
8. Express oral opinions effectively, demonstrating a regard for the view of others.
9. Enhanced awareness of present social concerns and predictable future concerns.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Modern Novel (continued)

Activities

Several short novels will be read as a group to review the structure and the elements in the novel and to provide common literary vocabulary necessary for discussion. Movies, film stripes and lecture will be used to acquaint the student with some of the classical novels, their authors and themes.

Course Title

Mythology

Description of Target Group

Mythology is a one-semester course designed as an elective for 10th, 11th, and 12th grade college/university bound students.

Purpose

The purpose of mythology is to acquaint students with mythological literature and to understand the historical, philosophical, and cultural implications of mythology.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify the major gods to the Greek, Norse, Aztec, etc., pantheons.
2. Relate the story lives of at least 10 myths.
3. Define at least 100 mythological terms with at least 70% accuracy.
4. Demonstrate knowledge of the themes of the Iliad and the Odyssey.
5. Compare the creations of at least four different cultures including the Bible.
6. Discern the religious, historical, scientific, and cultural essence of the various mythologies studied.
7. Understand some of the major literary contributions made to the world via the myths.
8. Describe the differences between myths, legends, tales, parables, allegories, and fables.

Instructional Material

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Write own myths, vocabulary sheets, crossword puzzles, LP's, oral report, written reports

Course Title

Poetry

Description of Target Group

Poetry is a one-semester course designed for all students who have successfully completed freshman English.

Purpose

The purpose of Poetry is to develop a critically-thinking reader through the extensive study of poetry.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify and use the vocabulary of poetry.
2. Define the various types of poetry.
3. Read poems aloud.
4. Paraphrase a poem.
5. Analyze a poem as to: (a) form, (b) meter, (c) rhyme, (d) meaning.
6. Recognize the poetry of song.
7. Define good poetry.
8. Define great poetry.
9. Compare good and great poetry.
10. Make value judgments about poems.
11. Explain how a poet creates meaning.
12. Discuss poets of various periods.
13. Write various types of poems.
14. Read with a purpose.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

The students will read, discuss, analyze and write various types of poems. He/she will look for poetry in the world around him/her. The student will learn to discriminate between good and great poetry by reading and analyzing works of poets of all periods.

Course

Practical English 4A

Description of Target Group

This course is the first semester of a two-semester elective course designed for seniors planning to begin working immediately upon graduation or planning to enter technical or trade school.

Purpose

The purpose of Practical English 4A is to prepare students for real-life experiences with language, reading, writing, speaking, and listening. Students will write letters, memos, and other forms used in business and personal situations to express ideas or elicit information Students will also do research using technology.

Prerequisites

Successful completion of English 3

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Reading Skills

1. Demonstrate comprehension of an array of written works including news papers, magazines, research materials, nonfiction, movie reviews, biographies, personal correspondence, technical writing/instructional manuals, and information obtained from the Internet.

2) Examine and discuss these topics:
   a) Current affairs/news
   b) Politics
   c) Opinions

Writing

1) Further develop writing skills, including the writing process.
2) Write the following:

   a) Personal letters
   b) Letter to the editor
   c) Opinion/rationale essay
   d) Argument/persuasion essay
   e) Magazine article
   f) Investigative reports-review MWAPA

Practical English 4A (continued)

g) Communication via Internet
h) Book/film reviews

3) Write for a variety of audiences.
4) Evaluate own work as well as that of others.
5) Practice conventions of language.
6) Use vocabulary effectively.
7) Review usage and mechanics.

Speaking Skills
1) Present goals chart and multimedia presentation delineating steps of reaching goal.
2) Participate effectively in class discussion.
3) Participate in group presentation.
4) Defend a point of view.

Listening Skills
1) Listen to and follow oral directions.
2) Take notes from dictation and/or lectures and presentations.
3) Listen attentively to lectures.
4) Evaluate self and others on oral presentation/group participation.

Assessment

Student will demonstrate competence by:
- Completing written assignments utilizing the writing process.
- Passing teacher and text editor-designed tests.
- Competently editing peer work.
- Maintaining a writing portfolio.
- Giving presentations.
- Participating in group work.
- Being graded according to student and teacher designed rubrics.

Instructional Materials

- Newspapers/magazines
- Internet access
- Resume software/computer access
- Multimedia station access
- Refer to "Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District."

Course

Practical English 4B

Description of Target Group

This course is the second semester of a two-semester elective course designed for seniors planning to begin working immediately upon graduation or planning to enter technical or trade school.

Purpose

The purpose of Practical English 4B is to prepare students for real-life experiences with language, reading, writing, speaking, and listening. Students will write letters, memos and other forms used in business and personal situations to express ideas or elicit information. Students will also do research using technology.

Prerequisites

Successful completion of English 3.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Reading Skills

1) Demonstrate comprehension of an array of written works including news papers, magazines, research materials, office correspondence, professional correspondence, technical writing/instructional manuals, and information obtained from the Internet.
2) Examine and discuss these topics:
    a) Current affairs/news
    b) Politics
    c) Opinions

Writing

1) Further develop writing skills, including the writing process.
2) Write the following:
    a) Business letters
    b) Memos
    c) Technical manuals/instructions
    d) Letters of application
    e) Job applications
    f) Resume

Practical English 4B (continued) **ERHS**

g) Written interviews
h) Investigative reports-review MWAPA methods
i) Communication via Internet
j) Proposal letter/letter of complaint

3) Write for a variety of audiences.
4) Evaluate own work as well as that of others.
5) Practice conventions of language.
6) Use vocabulary effectively.
7) Review usage and mechanics.

Speaking Skills

1) Present goals chart and multimedia presentation delineating steps of reaching goal.
2) Participate effectively in class discussion.
3) Participate in group presentation.
4) Defend a point of view.

Listening Skills

1) Listen to and follow oral directions.
2) Take notes from dictation and/or lectures and presentations.
3) Listen attentively to lectures.
4) Evaluate self and others on oral presentation/group participation.

Assessment

Student will demonstrate competence by:

- Completing written assignments utilizing the writing process.
- Passing teacher and text editor-designed tests.
- Competently editing peer work.
- Maintaining a writing portfolio.
- Giving presentations.
- Participating in group work.
- Being graded according to student and teacher designed rubrics.

Instructional Materials

- Newspapers/magazines
- Internet access
- Resume software/computer access
- Multimedia station access
- Refer to "Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District."

Course Title

Reading A Second Language

Description of Target Group

Reading a Second Language is designed as a two-semester course for non-native students of English who need to acquire a functional level of literacy to meet the reading demands imposed by the school environment and community living. The course is individualized to accommodate non-English speakers.

Purpose

The purpose of Reading a Second Language is to prepare non- and limited-English students for entry into Basic English Skills, to apply reading skills to content areas, to acquire the background to pass the district reading and language competency tests and to achieve a functional level of reading in order to become independent in the community.

Standards of Expected Student Achievement

Upon completion of this course the students will demonstrate, at their particular level of bilingual, growth in the ability to obtain meaning from the written English language by using the following skills in combination:

Language Processing Activities

1. Knowledge of symbolic, pragmatic and abstract vocabulary.
2. Recognize spelling differences between target and distractor words.
3. Utilize morphemic clues.
4. Establish class identities.
5. Analyze grammatically basic sentences.
6. Recognize function words.
7. Utilize contextual clues.
8. Become aware of multiple meanings and figurative language.
9. Recognize relationship among sentences.
10. Use punctuation as a due to meaning and style.

Comprehension Skills

1. Locate information.
2. Remember specific facts.
3. Organize the material read.
4. Predict outcomes.
5. Extend ideas.
6. Evaluate critically the material read.

Reading as a Second Language (continued)

Application of Reading Skills to Content Area

1. Knowledge of school vocabulary.
2. Knowledge of home and family vocabulary.
3. Knowledge of neighborhood vocabulary.
4. Read maps, graphs and carts.
5. Summarize passages.
6. Outline chapters.
7. Practice library skills.
8. Adjust reading rate to the task at hand.

Functional Skills Demand of Adult Living in Santa Maria and Similar Urban Communities

1. Bank statements for checking and savings account.
2. Directions for preparing food at home.
3. Job applications.
4. Directions on products used for housecleaning or home improvement.
5. Street and traffic signs.
6. Directions on medicine bottles.
7. Applications for loans from banks, finance companies or for store credit.
8. Health and safety pamphlets.
9. Bills for goods or services.
10. Health and safety pamphlets.
11. Bills for goods or services.
12. State and federal income tax forms.
13. Insurance policies.
14. Size, weight and price information while shopping.

Instructional Materials

The materials available in the Reading a Second Language classroom are too varied in content and reading level to be listed.

Activities

Students will practice the skills listed above receptively (listening and reading) and expressively (speaking and writing).

Pictures will be used to provide situational context for developing vocabulary and language.

Student will have access to a variety of printed material for recreational reading, for building positive self-concept, and for creating attitude towards self-instruction.

Spanish language will be used as a mediator (based on the concept that new content is best learned when first used in a old form, while new form is used with old content.

Because of the highly individualized program, classroom setting and the availability of material, students of other ethic groups also benefit from the program.

Spanish speaking students lacking literacy in the Spanish language will first acquire reading fundamentals in their own language (based on the principle that bilingualism will not positively influence cognitive functioning- as long as the student has deficiency in one language).

An individualized profile of the student achievement will contain information such as: language dominance test, culture dominance test, pre- and post-tests, individualized diagnostic profile, and interest inventory.

Course Title

Reading Across the Curriculum

Description of Target Group

This elective reading course is designed for ninth grade students who read at or below grade level.

Purpose

The purpose of this course is to help improve and enhance the reading comprehension and vocabulary development skills of the ninth grade student. This course will assist the student to read more effectively and efficiently in all content area subjects.

Standards of Expected Student Achievement

Upon the completion of this course, students will successfully be able to:

1. Comprehend material that is written at various levels of difficulty and intent.
2. Use word-attack strategies to decode meaning.
3. Utilize context clues to understand unfamiliar vocabulary.
4. Implement test taking and study skills.

Instructional Materials

Text and supplementary materials

Refer to: Secondary Adopted Text and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Also: novels (refer to the booklists developed by the California State Department of Education for grades seven to twelve), teacher developed materials, and published novel aids for students and teachers.

Activities

1. Diagnostic assessments will be administered to determine strengths and deficiencies of students' reading abilities.
2. Individualized programs will be developed to accommodate student needs.
3. Students will receive individual and whole class instruction.
4. Novels will be read on an independent and entire class basis.

Course Title

Reading Development

Description of Target Group

Reading Development is designed for all students reading at grade level or above grade level.

Purpose

The purpose of Reading Development is to help students improve reading speed and comprehension.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Increase comprehension of material that is written at various levels of difficulty.
2. Increase reading rate of words per minute.
3. Increase reading vocabulary.
4. Recognize reading problems and concentrate on remedying them.
5. Learn the technique of skimming written material for main ideas.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Speed reading, vocabulary and comprehension exercises, skimming material, diagnostic testing.

Course Title

Reading Development

Description of Target Group

Course Title

Reading Improvement

Description of Target Group

This course is designed for all students with reading skills below grade level who wish to improve their reading ability.

Purpose

The purpose of this class is to help students build reading skills in English to grade level through identification of specific weaknesses as measured by diagnostic inventories. Remediation in specific skills will be provided to strengthen these skills.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. Multiple methods of word-attack strategies.
2. Skills necessary for comprehension and content.
3. Study skills necessary to function efficiently and effectively in all classes.
4. The ability to cope with pre-tests, interim-tests, post-tests, interest inventory and information related to learning modality and behavior pattern.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

1. The student will be given an individualized diagnostic reading test to establish reading deficiencies.
2. The teacher will prepare an individualized program to meet the needs of each student.
3. The student will work independently with audio-visual equipment, texts, reading labs, tapes, teacher-made materials, language masters, and other related instructional materials with assistance from the teacher wherever necessary.
4. The student will take interim tests as a skill is mastered.

Course Title

Shakespeare

Description of Target Group

Shakespeare is a one-semester course deigned for college/university bound students who have completed freshman English.

Purpose

The purpose of Shakespeare is to help students understand the plays he provided for the pleasure of the world's society.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify the major works of Shakespeare.
2. Relate the story lines of at least five of them.
3. Define and give examples of works such as: puns, soliloquies, asides, allusions, alliterations, sonnets, etc.
4. Quote at least ten famous lines from Shakespeare.

Activities

The student will study the history of social protest literature and participate in discussions concerning current social problems. The student will read from the reading list and participate in discussion and study the various literary forms used in protest. The student will do various written assignments based on readings.

Course Title

Vocabulary

Description of Target Group

This course is an elective for grades 9 - 12 students who need more work with expanding their vocabulary. No lab fees.

Purpose

The purpose of Vocabulary is to develop and improve vocabulary skills for all students. The course will be 8 weeks in duration, meeting 15 minutes, 4 times a week. At end of eight weeks and completion of all worksheets, quizzes, and tests, students will receive two units. Vocabulary is a course that may be taken four terms (Vocabulary 1, Vocabulary 2, Vocabulary 3, Vocabulary 4) for two units per term, for a total of eight units per year.

Prerequisites: None

Standards of Expected Student Achievement

Upon completion of this course, the students will be able to successfully demonstrate the following skills:

1. Recognize Greek and Latin roots and their English derivatives.
2. Spell and use correctly the assigned vocabulary words.
3. Explain the origin and derivation of words, as required.
4. Explain the importance of roots in word study.

Methods of Assessment of Student Learning

Homework assignments (worksheets), quizzes, and tests.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Vocabulary study, frequent drills, daily homework, quizzes, and tests.

Course Title **SMHS**

World Literature A/B (10) (H)

Description of Target Group

This year long course, required to meet the district's graduation requirement, is designed for only those sophomore students who have passed Introduction to Literature and whose recommendations and portfolios have been accepted by the English Department Honors Committee.

Purpose

This course is designed to provide selected students with a qualitative different and varied curriculum which challenges and enriches their individual potential while maintaining the requirements of the basic course outline. Designed to complement the curriculum of Modern World History, through a multi-cultural and multi-text approach, students will read and write accessing themes which include self-exploration of cultural values, cultural similarities and differences, social issues, as well as personal and human values. Critical writing and reading, listening and speaking skills will focus on using analytical and evaluative thinking. Both group and individual projects will be assigned. In addition, students will explore career and college information and opportunities to develop life-long learning skills.

Students must maintain a grade of "C" or better at the end of each semester to remain in the honors program.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING
A variety of genre from the literature of many world cultures will be read. Students will be expected to:

- read independently
- identify literary genre
- identify elements of literature, literary terms
- construct meaning from a text
- make connections within a text
- extend beyond a text
- include an element of risk taking in constructing meaning
- keep a journal or log
- analyze literature on both symbolic and thematic levels

World Literature A/B (10) (H) (continued)

Core selections include:

novel:	Walkabout - Vance Marshall
drama:	Antigone - Sophocles
	A Raisin in the Sun - Lorraine Hansberry

Other possible selections include:

novel:	Cry, the Beloved Country - Alan Paton
	Farewell to Manzanar - Jeanne Wakatsuki Houston
drama:	A Doll's House - Henrik Ibsen
	The Tempest - Shakespeare
	Oedipus Rex - Sophocles
epic poetry:	Sundrata: An Epic of an Old Man (excerpt)
	The Epic of Gilgamesh (excerpt)
	The Song of Roland (excerpt)

short story, poetry, essays: selections from the basic and supplementary texts

WRITING

Students will be expected to demonstrate the following skills.

Rhetoric:

- present an idea; acknowledge an audience/reader
- use logic and relevant support/details
- state and develop an argument
- demonstrate coherence and style
- attempt an element of risk
- demonstrate improvement

Conventions:

- Practice sentence variety
- use proper word choice/usage and vocabulary development
- demonstrate good mechanics
- improve spelling
- demonstrate improvement

Students will demonstrate the ability to write in the following types of discourse:

- interpretive
- reflective
- speculation about causes and effects
- comparison and contrast
- analytic

RETRIEVING INFORMATION
Students will demonstrate the ability to:

- use the library and computer catalog
- use reference volumes appropriately
- cite works using MLA or APA documentation
- document within a text using MLA or APA format
- take notes on note cards

GROUP/COMMUNICATION SKILLS
Students will demonstrate the ability to:

- participate effectively in class and small group discussions
- communicate information and ideas effectively to others
- respect others; set an example
- both follow directions as well as be an independent learner
- compromise and reach consensus
- be honest and responsible; demonstrate integrity
- show improvement in speaking and listening skills
- demonstrate leadership and be willing to take a risk

CAREER/GROUP INFORMATION
Students will demonstrate the ability to:

- take the UNIACT or other interest inventory
- apply the results of UNIACT or other interest inventory by
    1. choosing a Career Path
    2. writing a research or "I" search paper and/or
    3. research specific jobs and careers
- research educational opportunities beyond high school
    1. vocational/technical schools
    2. 2-year community colleges
    3. 4-year colleges and/or universities
- write a resume or personal data sheet
- complete the written application process

PORTFOLIO REQUIREMENTS
Students will be expected to complete the Portfolio Requirements as outlined on PAGE 4 of this course outline.

INSTRUCTIONAL MATERIALS

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

PORTFOLIO REQUIREMENTS Student Name: _____

1.) Demonstrate reading comprehension/questioning competency in the following areas:

Any three (3):

		Date	Signature
A.)	Read independently	_____	_____
B.)	Construct meaning from a text	_____	_____
C.)	Make connections within a text	_____	_____
D.)	Extend beyond a text	_____	_____
E.)	Take a risk in making connections/meaning	_____	_____
F.)	Analyze literature symbolically & thermatically	_____	_____

Any one (1)

G.)	Reading log	_____	_____
H.)	Double entry journal	_____	_____

2.) Demonstrate writing skills in the following areas:

Any three (3):

A.)	Autobiographical essay	_____	_____
B.)	Reflective essay	_____	_____
C.)	Narrative essay	_____	_____
D.)	Descriptive essay	_____	_____
E.)	Expository essay	_____	_____

3.) Demonstrate the following information retrieval skills:

A.)	Works Cited/Bibliography using MLA	_____	_____
B.)	Documentation using MLA format	_____	_____
C.)	Note taking	_____	_____

4.) Demonstrate the following oral presentation skills:

A.)	Effectively present an idea/project	_____	_____
B.)	Show improvement in speaking skills	_____	_____

5.) Demonstrate the following career skills:

A.)	Identify areas of career interests	_____	_____
B.)	Match interests to specific careers	_____	_____

Course Title **SMHS**

World Literature A/B (10) (L2)

Description of Target Group

This yearlong course, required to meet the district's graduation requirement, is designed for all students who have passed Introduction to Literature (9) (L2).

Purpose

This course is designed to complement the curriculum of Modern World History. Through a multi-cultural and multi-text approach, students will read and write accessing themes which include self-exploration of cultural values, cultural similarities and differences, social issues, as well as personal and human values. Critical writing and reading, listening and speaking skills will focus on using analytical and evaluative thinking. Both group and individual projects will be assigned. Students will also explore career and college information and opportunities to develop life-long learning skills. In addition, sheltered English strategies, authentic assessment, and cooperative learning strategies will be employed to assist students to succeed.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

READING
A variety of genre from the literature of many world cultures will be read. Students will be expected to:

- read independently
- identify literary genre
- identify elements of literature, literary terms
- paraphrase
- construct meaning from a text
- make connections within a text
- extend beyond a text
- include an element of risk taking in constructing meaning
- keep a journal or log

Core selections include:

novel: Walkabout - Vance Marshall
drama: Antigone - Sophocles
A Raisin in the Sun - Lorraine Hansberry

Other possible selections include:

novel: Farewell to Manzanar - Jeanne Wakatsuki Houston

drama: A Doll's House - Henrik Ibsen
The Tempest - Shakespeare
Oedipus Rex - Sophocles

short story, poetry, essays: selections from the basic and supplementary texts

WRITING

Students will be expected to demonstrate the following skills.

Rhetoric:

- ☐ History/Social Science
- ☒ English
- ☐ Mathematics
- ☐ Laboratory Science
- ☐ Language other than English
- ☐ Visual & Performing Arts (for 2003)
- ☐ College Prep Elective

10. Grade Level(s)
10, 11, 12

11. Seeking "Honors" Distinction?
☐ Yes ☒ No

12. Unit Value

- ☒ 0.5 (half year or semester equivalent)
- ☐ 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Date of School Board Approval

14. Was this course previously approved by UC? ☐ Yes ☒ No If so, year removed from list? _____

Under what course title? _____

15. Is this course modeled after an UC-approved course from another school? ☐ Yes ☒ No

If so, which school(s)? _____

16. Pre-Requisites
English 1A/English 1B or Intro to Literature A/B

17. Co-Requisites

18. Brief Course Description
The intention is to acquaint the student with ideas and beliefs, which began as oral literature and then became traditional to different societies because they were of special importance to their members. This literature deals with how different cultures expressed their feelings about fundamental questions and problems that extend across geographical and cultural borders. The literature is organized around six major geographic sections of the world – Africa, the Americas, Europe, the Middle East, Oceania, and South Asia.

B. COURSE CONTENT

Please refer to instructions

19. Course Goals and/or Major Student Outcomes

1. Enhance reading and writing abilities, encourage critical thinking skills and promote holistic learning through completion of written and oral assignments and creative projects.
2. Improve oral communication skills by participating in oral projects and oral evaluations.
3. Bring students in closer contact with their own cultural roots through the exploration of differences and similarities among cultures.
4. Identify the inter-relatedness of literature, the arts, history, science, and mathematics as evidenced in the literature provided for study.

20. Course Objectives

1. Student will prepare written assignments showing their ability to write a grammatically and technically correct five-paragraph essay.
2. Students will complete written and oral assignments, which demonstrate their ability to apply information to solve a problem or create a new concept.
3. Students will give oral synopses of myths to verify their understanding of both vocabulary and content.
4. Students will implement an understanding the inter-relatedness of academic areas of study by completion of specific project activities designed to include information from several academic areas.

21. Course Outline

See APPENDIX - A

22. Texts & Supplemental Instructional Materials

1. WORLD MYTHS (26 booklets), Steck-Vaughn Co., pub. c. 1994
2. ATLAS (any comprehensive Atlas published in the last 5 years, or accessed online by computer)
3. ENCYCLOPEDIA (any Encyclopedia published in the last 5 years, or accessed online by computer)
4. WORKSHEETS (designed to complement the reading texts)
5. STORY SYNOPSES (teacher reference)

23. Key Assignments

.**READING LIST**

The Myth of Wulbari
The Adventurers of Anansi
Kintu, First King of Uganda
Wanjiru Brings the Rain
The Theft of Fire
The Navajo Story of Creation
Glooscap Fights the Water Monster
The Five Worlds and Their Suns
The Twin Brothers
Children of the Sun
The Labors of Heracles
Demeter and Persephone
Aeneas and the Fall of Troy
The Death of Balder
The Adventures of Cú Chulainn
Enuma Elish
Gilgamesh and Utnapishtim
The Time of Ra
Maui's Heroic Adventures
Pele and Hi'iaka
Birth of the Butterflies
Savitri and the Ruler of the Dead
The Creation of the Universe
Ama-terasu, the Sun Goddess
The Silver River
Tangoon, First Emperor

VOCABULARY DEFINITION AND USEAGE

Each story will have its own set of vocabulary words to define and use in sentences.

WRITING

Each story will have a specific five paragraph writing assignment as well as a variety of short written assignments.

SPECIAL ACTIVITIES

Each story has a special activity. They include written work, oral presentations and creative projects (including art work, design, poetry, crafts, and other hands on projects)

COURSE SYNOPSIS

General information about course content, instructional materials, activities, and evaluation methods as they pertain to Independent Study students.

COURSE JOURNAL

State required documentation of student's work progress..

24. Instructional Methods and/or Strategies

1. Independent reading
2. Oral analysis of material
3. Instructional discussions
4. Project-based learning
5. Research utilizing the library or electronic technology
6. Creative hands on assignments
7. Exploring problem solving and decision making strategies
8. Interviewing

25. Assessment Methods and/or Tools

All of the following must receive an evaluation of 70% correct or better.

1. Written assignments
2. Oral assignments
3. Oral exams
4. Final project

Written and oral assignments count as 50% of final grade.
Oral exams count as 25% of final grade.
Final Project counts as 25% of final grade.

C. HONORS COURSES ONLY

Please refer to instructions

26. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

27. Context for Course (optional)

28. History of Course Development (optional)

APPENDIX: A

I. Africa: Introduction – Geographic Location
   A. Book 1
      1. The Myth of Wulbari – explanatory myth – West Africa
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Interpreting map keys
   B. Book 2
      1. The Adventures of Anansi – explanatory myth – West Africa
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Locating travel routes by map
   C. Book 3
      1. Kintu, First King of Uganda – hero myth – Uganda
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Using a time line to study history
   D. Book 4
      1. Wanjiru Brings the Rain – hero myth – Kenya
      2. Vocabulary definition and sentence use Essay mechanics (five paragraphs)
      3. Essay mechanics and content (five paragraphs)
      4. Reading graphs
   E. Book 5
      1. Theft of Fire – explanatory myth – Central Africa
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Charting symbiotic relationships
   F. Closing
      1. Complete sentences using creative thinking skills
      2. Hands on project, conceptualizing and implementing
      3. Research , planning and documenting

II. The Americas: Introduction – Geographic Location
   A. Book 1
      1. The Navajo Story of Creation – creation myth – Navajo
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Interpretive design (picture created from written descriptions)
   B. Book 2
      1. Glooscap Fights the Water Monster – hero myth – Algonquin
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Relating Lifestyles to Environment – written assignment on connections
   C. Book 3
      1. The Five Worlds and Their Suns – creation myth – Aztec
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Symbols – designing a language
   D. Book 4
      1. The Twin Brothers – hero myth – Maya
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (five paragraphs)
      4. Understanding number systems
   E. Book 5
      1. Children of the Sun – explanatory myth – Inca
      2. Vocabulary definition and sentence use
      3. Essay mechanics and content (5 paragraphs)
      4. Using a Web Diagram to Compare
   F. Closing

1. Translating a craft – hands on
2. Interpreting a concept

III. Europe: Introduction – Geographic Location

A. Book 1
1. The Labors of Heracles – hero myth – Greece
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Understanding the past

B. Book 2
1. Demeter and Persephone – explanatory myth – Greece
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Influence on geography on cultures

C. Book 3
1. Aeneas and the Fall of Troy – hero myth – Rome
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Reading relief maps

D. Book 4
1. The Death of Balder – explanatory myth – Viking
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Decision making and problem solving

E. Book 5
1. The Adventures of Cú Chulainn – hero myth – Ulster
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Using a distance scale – importance of math

F. Closing
1. Sequential relationships - charting a family tree
2. Cultural symbols in art
3. Cultural beliefs in manifested architecture

IV. Middle East : Introduction – Geographic Location

A. Book 1
1. Enuma Elish – creation myth – Babylonia
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Importance of detail - creating a map and map key

B. Book 2
1. Gilgamesh and Utnapishtim – hero myth – Sumeria
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Exploring motivation for different types of writing

C. Book 3
1. The Time of Ra – creation myth – Egypt
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Using a Venn Diagram – comparing past and present

D. Closing
1. Decision making
2. Symbolism in art

V. Oceania: Introduction – Geographic Location

A. Book 1
1. Maui's Heroic Adventures – hero myth – Maori, New Zeland
2. Vocabulary definition and sentence use
3. Essay mechanics and content(five paragraphs)
4. Research, hands on creative design

B. Book 2
1. Pele and Hi'iaka – explanatory myth – Hawaii
2. Vocabulary definition and sentence use

3. Essay mechanics and content (five paragraphs)
4. Identifying human and geographic relationships

C. Book 3
1. Birth of the Butterflies – explanatory myth – Aborigine, Australia
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Symbolic art – hands on

D. Closing
1. Understanding adaptation to location
2. Identifying similarities, differences and connections

VI. South Asia: Introduction – Geographic Location

A. Book 1
1. Savitri and the Ruler of the Dead – hero myth – India
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Meterology – Influence of climate and weather

B. Book 2
1. The Creation of the Universe – creation myth – China
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Meterology – Influence of climate and weather

C. Book 3
1. Ama-terasu, the Sun Goddess – explanatory myth – Japan
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Symbolism art – hands on

D. Book 4
1. The Silver River – explanatory myth – Vietnam
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Using a time line to study history

E. Book 5
1. Tangoon, first Emperor of Korea – explanatory myth – Korea
2. Vocabulary definition and sentence use
3. Essay mechanics and content (five paragraphs)
4. Applying cultural information to decision making

F. Closing
1. Role of women in cultures

VII. The World: Introduction – Geographic Location

A. Comprehension and analysis
B. Creative writing skills
C. Outlining and writing a short story
D. Presenting material orally

VIII. Final Project

A. Using symbols
B. Connecting art, literature, history, science and math
C. Making analogies
D. Using critical thinking skills
E. Using mythology as an expression of culture
F. Analyzing cause and effect
G. Using proficient writing skills

Home Economics

Description of the Target Group:
This course is primarily for 10th,11th, and 12th grade students interested in participating in a career cluster of courses in the Home Economics educational sequence for the Fashion Design, Manufacturing and Merchandising career path.

Purpose:
This is the first 5-unit term (semester) of a ten-unit course designed to prepare students interested in pursuing a career in this area. This course may provide students opportunities for school to career activities such as job shadowing, student internships and/or operating a student-run business. Students will study all aspects of the industry including garment construction, merchandising; manufacturing; the newest technology in fashion and design; customer relations; entrepreneurship; cost and profitability analysis; employment and management skills.

Prerequisites:
Clothing and Fashion A/B are recommended.

Standards of Expected Student Achievement:
Upon completion of this course, students will be able to successfully demonstrate the following:
1. Understand cost, production and marketing techniques related to the industry.
2. The use and care of new technology related to the fashion and design industry where applicable.
3. Understand the operational procedures commonly performed in the fashion design, manufacturing, and merchandising industry.
4. Perform tasks related to these industries.
5. Understand the characteristics and maintenance of various textiles.
6. Construct garments and/or projects using home and/or industrial sewing machines and equipment.
7. Understand and demonstrate the sewing skills used to manufacture garments and/or products,
8. Apply integrated academics (i.e. reading, writing, and math) throughout the curriculum where applicable.

Methods of Student Assessment:
Lab evaluations, tests, quizzes, written assignments, self-assessment, client evaluation.

Instructional Materials:

Refer to: Secondary Adopted Texts and Approved Supplementary books Used In the SMJUHSD.

Activities:

Projects, labs, job shadowing, student internships, field trips, etc.

Course Title:

Advanced Clothing B

Department: Home Economics

Description of the Target Group:
This course is primarily for 10th,11th and 12th grade students interested in participating in a career cluster of courses in the Home Economics educational sequence for the Fashion Design, Manufacturing and Merchandising career path.

Purpose:
This is the second 5-unit term (semester) of a ten-unit course designed to prepare students interested in pursuing a career in this area. This course may provide students opportunities for school to career activities such as job shadowing, student internships and/or operating a student-run business. Students will study all aspects of the industry including garment construction, merchandising; manufacturing; the newest technology in fashion and design; customer relations; entrepreneurship; cost and profitability analysis; employment and management skills.

Prerequisites: Advanced Clothing A.

Standards of Expected Student Achievement:
Upon completion of this course, students will be able to successfully demonstrate the following:

9. Broaden their understanding of the operational procedures commonly performed in the fashion design, manufacturing, and merchandising industry.
10. Continue to perform tasks related to these industries.
11. Experiment with the elements and principles of design as they relate to fashion design, manufacturing and merchandising industries.
12. Increase consumer awareness of fashion trends and styles, new fabrics, and innovative equipment and techniques.
13. Continue to construct garments and/or projects using home and/or industrial sewing machines and equipment.
14. Expand understanding and continue to demonstrate the sewing skills used to manufacture garments and/or products,
15. Learn the history of fashion and/or the fashion industry.
16. Apply the fundamentals of mathematics as they relate to patterns and alterations.
17. Explore career opportunities in the field of clothing construction, fashion merchandising, or design technology.
18. Continue to apply integrated academics (i.e. reading, writing, and math) throughout the curriculum where applicable.

Methods of Student Assessment:
Lab evaluations, tests, quizzes, written assignments, self-assessment, client evaluation.

Instructional Materials:
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used In the SMJUHSD.

Activities: Projects, labs, job shadowing, student internships, field trips, etc.
Spring 1994

Course Title (Title changed to "Culinary Arts II in Feb. 2016)

Advanced Foods A/B "Saints Café"

Description of the Target Group

This course is designed primarily for 11th and 12th grade students interested in completing the sequence of courses in the Home Economics Related Occupation (HERO) Career Pathway of Food Service and Hospitality.

Purpose

This ten-unit course is designed to prepare students who are interested in pursuing a career in this area. This course will provide students opportunities for service learning experiences such as job shadowing, student internships and operating a student-run business, thus enabling them to transition from school to career. Students will study all aspects of the industry including safety regulations and safe food handling; nutrition; the newest technology in food preparation and service; customer relations; entrepreneurship; cost and profitability analysis; employment and management skills.

Prerequisite: Foods and Nutrition A/B or instructor's recommendation

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following:

1. Understand the relationship between nutrition and health and wellness.

2. Demonstrate proper food handling techniques for safe food preparation and storage.

3. Exhibit safety and sanitation in a food service/lab environment.

4. Be able to prepare and evaluate a variety of foods including: baked goods, entrees, vegetables, salads, soups, desserts, and beverages.

5. Utilize meal management skills such as time management and meal planning.

1. Use new technology related to the food service and hospitality industry where applicable.

2. Demonstrate proper etiquette and table service skills.

3. Design a table service based on the principle and elements of design.

4. Simulate restaurant management in a food service setting.

5. Explore career opportunities and/or experience in the field of food science, food service, hospitality, or food technology.

6. Understand food cost, production and marketing techniques.

7. Apply integrated academics (i.e. reading, writing, math, and science) throughout the curriculum.

Methods of Student Assessment

Lab evaluations, employer evaluations, tests, quizzes, written assignments,

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary books Used In the SMJUHSD.

Activities

Labs, job shadowing, student internships, field trips, etc.

Course Title

American Economics - Home Economics

Description of Target Group

This course is for 12th grade students.

Purpose

The purpose of AMERICAN ECONOMICS - HOME ECONOMICS is to enable students to understand the principles of economics and of our economic system. Students will compare our system to those of other countries and make reasoned judgements about economic questions. This is a one semester course. It is required to meet the district's graduation requirement. It will meet the state mandated requirement that high school graduates successfully complete a course in economics. Credit will constitute the A-F college entrance requirements.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Fundamental economic concepts and terms.
2. The tools of analysis such as charts and graphs.
3. Economic indicators such as gross national products, inflation, and measures of unemployment.
4. Understanding basic economic problems facing society such as scarcity of resources.
5. All societies have economic systems determining choice of production.
6. U. S. economy characterized by competition and market structure.
7. Individual should use economic concepts in making consumer decisions.
8. Role that labor, agriculture, and business organizations have played in the U.S. economy.
9. Role of government in market economy and establishing monetary policy.
10. Role of financial institutions.
11. Understanding business cycles with periods of inflation, deflation, and unemployment.
12. U.S. economic history.
13. Importance of international trade and migration across international borders.
14. How values influence monetary spending and opportunities for students to develop creative thinking skills.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, demonstrations, audio visual materials, field trips, small group activities, and outside resource people.

Course Title

American Economics

Instructional Materials

Consumer Economics, Warmke and Wyllie, South-Western Pub. Co.

Standards of Expected Student Achievement

I. Definition of Economics (Chapter 1)
   - A. Economics goods and services
   - B. Opportunity costs
   - C. Goals of the American Economy

II. Types of Economic Systems (Chapter 2)
   - A. Traditional
   - B. Command
   - C. Market
   - D. Mixed

III. Circular Flow (Chapter 2)
   - A. Definition of circular flow
   - B. The four questions
     1. What to produce?
     2. How to produce?
     3. How much to produce?
     4. How to distribute the output?

IV. Characteristics of Our Economy (Chapter 2)
   - A. Private property
   - B. Freedom of choice
   - C. Profit motive
   - D. Competition

V. Your Role as a Consumer (Chapter 5)
   - A. Buying is choice making
   - B. Guidelines for buying
   - C. Advertising (Chapter 6)
     1. Functions of advertising
     2. Costs of advertising
     3. Problems with advertising
     4. Regulation of advertising
   - D. Consumer Rights and Protection (Chapters 7-8)
     1. Contracts
     2. Legal protections
     3. Warranties
     4. Implied contracts
     5. Unordered merchandise
     6. Use of lawyers
     7. Government protection
     8. Other consumer protections

VI. Savings and Investing (continued)
- A. Types of insurance (Chapters 18 - 20)
- B. Social Insurance (Chapter 21)

VII. Managing the Nation's Economy
- A. Gross National Product (GNP)
- B. National income and its distribution
  1. Rent
  2. Wages
  3. Interest
  4. Profit
  5. Taxes
- C. Economics fluctuations (Chapter 30)
- D. Individual's role in the economy (Chapter 3)
- E. Business' role in the economy (chapter 22)
  1. Forms of business
  2. Functions of business
  3. Factors of production (Chapter 23)
     a. Characteristics of American production
     b. Role of mass production, specialization, and capital
  4. Marketing (Chapter 24)
- F. Role of government in the economy (Chapter 25)
  1. Growth of government services
  2. Government regulation
  3. Taxation, fiscal policy, and national debt (Chapter 26)
  4. Monetary policy (Chapter 27)

VIII. Economic Fluctuations and International Trade (Chapters 30-31)

IX. Economic Growth (Chapter 28)

Co-requisites: None

Integrated (Academics / CTE)? Yes

Grade levels: 9th, 10th, 11th, 12th

ourse Description

urse overview:

Apparel Construction & Design 1 is an introductory course based on CTE Model Curriculum Standards. Students will be able to create sketches, designs, and construct articles of clothing. This course will provide a comprehensive understanding of the elements of fashion design as applied to textiles and fashion and use them to evaluate clothing designs. This course will also explore manufactured and natural made textiles and their use in fashion as well as the characteristics, production and maintenance of textiles. Students will explore the relationship between American historical events and fashion styles. Each student will keep a portfolio of their designs, sketches and written work.The content concentrates on the skills needed to complete a garment from start to finish. Students become familiar with the sewing machine and many construction techniques. This course provides a strong foundation for entry into the fashion career pathway. The students also will be able to understand the basics of reading a pattern envelope and guide and use pattern pieces to create a finished garment.

Assessment Methods:

1. Written tests and worksheets
2. Research slide presentations on History of Fashion
3. Portfolio of original fashion designs and renderings
4. Elements and Principles of Design Project
5. Instructor and self critique of garment construction.
    1. Projects include Pin Cushion, Sample Portfolio, Pillow Case, Roll Up Bag, Lined ZIpper Bag, and Pajama Bottoms.

urse content:

Unit 1: Introduction to Fashion

Unit Objectives:

- Summarize the importance of fashion
- Define fashion related terms
- Interpret the 4 stage fashion cycle
- Recognize the most common garment features and styles

This unit will introduce the fundamental reasons why people wear certain clothing. Students will analyze the physical, psychological, and social impact of apparel and critically examine how values, attitudes, conformality, individuality, and personality affect clothing selections. Students will utilize industry-accepted vocabulary throughout this section to discuss

fashion and clothing, and will distinguish the different garment styles and components. Finally, students will recognize the concept of fashion cycles that occur over time and analyze the influence that social and economic factors have on fashion.

⮒ Unit Assignment(s):

Students will do a style inventory which will allow them to make infrerences and draw conclusions about their own clothing choices. They will explore how apparel meets social, physical, psychological needs of individuals.They will define appropriate dress for various occasions and analyze how fads abd fashion influence apparel and textile choices. They will ccreate a poster or a slide presentation using photographs and illustrations with descriptions of the garment features and styles.

Students will also create and explain the four stages of the fashion cycle. Students will supply evidence of each stage through the use of pictures and noting the stage it represents. Students will analyze why that photo represents that specific fashion cycle.

Unit 2: Color Theory

Unit Objectives:

- Define basic color terms
- Prove and analyze the relationship between colors on the color wheel
- Define 6 different color schemes
- Apply the concepts of color schemes to their use in garments using artistic processes and analyze the impact on fashion

This unit will introduce the students to the design element of color and the importance of color to apparel. Students will effectively utilize the color wheel to represent the relationships between primary colors, secondary colors and tertiary colors and their connection to color schemes. Students will identify the symbolism of color, color terms, color schemes, and the color wheel and apply the concepts to the fashion industry. Students will apply basic and complex color schemes and color theory to develop and enhance garments.

⮒ Unit Assignment(s):

Students will have guided notes on color vocabulary and color schemes. Students will create a color wheel using the three primary colors. As well as apply their knowledge by changing the value and Intensity of a color.

Students will create a portfolio of pictures that illustrate each of the color schemes and distinguish how the color themes are displayed in each outfil,.

Unit 3: Elements of Fashion Design

Unit Objectives:

- Distinguish between the elements of design and interpret their use in clothing design
- Relate principles of design to the design elements
- Connect the elements of design to clothing design concepts
- Analyze and share aesthetic choices and their impact on the elements of design.

The focus of this unit is for students to be able to identify and interpret the elements of design: line, shape/form amd texture. Students will be introduced to the principles of design rhythm, balance, emphasis, movement, and harmony as they apply to apparel. Students will relate the elements and principles of design as they apply to design styles and garment selection. The objective is for students to be able to use design concepts and draw conclusions on the ways in which fiber, fabric, texture, pattern, and finish can affect visual appearance.

Unit Assignment(s):

The elements of design project starts with the students defining the elements through guided textbook notes and teacher lecture. Students will create a folder or electronic portfolio that includes illustrations or outfit examples of the elements and principles. The student will provide written explanations and analysis that cite evidence of the elements. The project needs to be presented in a way that demonstrates an understanding of the elements of design.

Unit 4: Garment Construction

Unit Objectives:

- Demonstrate knowledge of Sewing Equipment and Tools, proper use and care
- Describe and apply safety rules
- Demonstrate ability to operate sewing and cutting equipment properly
- Construct beginning sewing construction samples
- Utilize correct cutting and pinning techniques
- Understand fabric preperation, written directions, and proper use of marking tools
- Use concepts of pattern envelopes and layouts to create apparel
- Develop and refine techniques and methods in order to interpret and analyze finished projects

The garment construction unit will allow students to apply artiistic knowledge and skills in a variety of visual arts media and use technical processes to communicate meaning and intent through the creation of original garments. Students will demonstrate the ability to make appropriate choices in applying a variey of visual arts media techniques to the personal design making process. Students will exhibit craftsmanship and technical skill when creating works from two-dimensional to three-dimensional forms. Students will establish their ability to take accurate measurements, read and follow technical directions, select suitable fabrics, and construct quality garments. Students will use various types of technology in the design process.

Students will apply the skills needed to construct a garment and the proper tools needed. Students will learn how to properly use sewing equipment including: sewing machine, cutting, measuring and marking tools. The instructor will demonstrate and guide students through these skills along with diagrams and handouts. Students will construct seam samples and create 5-6 construction garments in this unit.

⮒ Unit Assignment(s):

Students will begin the unit with an introduction to safety. Teams will create original posters that demponstrate one of the safety rules in a unique, creative format. Students will create a booklet with sewing/pressing equipment, including diagrams and definitions. Students will complete a diagram of the sewing machine parts and link it to the definitions of all parts.

Tests will be given to demonstrate knowledge and understanding of safety, sewing equipment and machine parts.

Teacher observation will be the form of assessment for individual student demonstration of machine and bobbin threading.

Students will complete a sample portfolio of their work. Samples include french seams, flat felled seams, gathering, darts, staystiching, clipping and notching.

Students will create 5-6 garments building on their technical skills and knowledge with each consruction project. Skills the students will master are straight stitch, zig-zag, turning corners, top stitiching, inserting a zipper, hems, elastic casing, basic hand stitching and use of interfacing. Students follow instructions in a variety of formats, including teacher instruction detailed written steps, and videos. Students will also use concepts of fabric layout and pattern reading to properly create finished products.

Student assignments will consist of:

- Custom pin cushion
- Pillow
- Roll Up bag with pockets
- Lined zipper bag
- Elastic Waistband shorts/pants

Unit 5: Textiles

Unit Objectives:

- Differentiate the sources and processing of natural and man-made fibers
- Identify specific characteristics and care of individual fibers and yarns.
- Compare and contrast the advantages, costs, and marketability of different fibers as they relate to merchandising of apparel.
- Relate details of fashion construction and the limitations of various raw materials.
- Students will be able to identify and construct the different weaves, assessing the advantages and disadvantages of each.

This unit will examine the primary-level suppliers of fashion. Students will understand foundational suppliers for the fashion industry and how they influence manufacturers and consumers alike. Students will distinguish natural fibers from manufactured fibers, and the advantages/disadvantages that each fiber presents to manufacturers and designers. Students will identify different weaves and techniques used in the textile production process. Students will outline the major steps in the fabric production process and will explore the impact of new technologies on textile manufacturing.

⮒ Unit Assignment(s):

Students will gain appropriate terminology for identifying and analyzing textile fibers through textbook assignments and videos. Students will observe a burn test of fabrics to classify different textiles, Students will chart the natural and man-made fibers, evaluating performance characteristics of textile fibers and fabrics. Students will draw the differnet kind of weaves and identify plain, basket and satin weaves.

Unit 6: Historical and Cultural Context

Unit Objectives:

- Summarize and connect the social, cultural, historical, religious, political, economic, and technological influences on clothing design throughout history.
- Compare and contrast fashion styles of today with fashion from the past
- Understand the influence of time periods on fashion design

This unit introduces the student to a look back at how fashion evolved and how the fashion of the past is related to present fashion. Students will understand the cause and effect of historical contribution and cultural dimensions of fashion. Students will assess modern fashion developments throughout history and relate research to factors influencing fashion movements. Students will compare and contrast development of recurring fashions throughout time. Students analyze the role and development of fashion in the past and present cultures throughout the world noting human diversity as it relates to fashion design and designers.

⮒ Unit Assignment(s):

Teams of students will research and create a slide presentation for a specific decade or period of fashion. Students will demonstrate knowledge of historical influence, cultural origins, social, religious, political, economic, and/or technological influenceon fashion. Students analyze, discuss, and present issues of the period and style in terms of design elements, using appropriate terminology from that decade/period. Students identify periods, styles, terminology, and designers of that time. Students will learn collaboration through working with partners to develop good communicatiopn skills and accountability. Students will present their work to the class helping them develop confidence in public speaking. Students identify periods of style and works of designers and labels during that period and the longevity of the brand/company.

Unit 7: Fashion Design, Drawing and Business

Unit Objective:

- Apply concepts of rendering techniques in using a croquis
- Create original designs using croquis templates
- Draw conclusions on which medium best suits the illustration
- Critique the textiles and illustration
- Compare and contrast the advantages and disadvantages between digital and hand-drawn illustrations.
- Interpret, analyze and conceptualize fashion designs for certain target markets

In this unit, students will be able to identify and apply basic drawing tools, scale, mediums and proportion to their design illustrations. Students learn about fashion designers in the industry and the business end of fahsion. Including, target audience, seasons, colors, fashion forecasting,and influences on the fashion industry. Students will create an original company and draw illustrations of men's, women's, or children's apparel using various color schemes and design techniques. Students will utilize various technical processes in execution of their work.

Unit Assignment(s):

Students follow a tutorial to draw a croquis with appropriate proportions and shapes

Students create an original line of clothing. They choose a company name, a logo, type of clothing, choose a season, theme and colors, and a target audience. The students create 4 hand drawn original clothing designs for their line of clothing. They color textile designs onto their renderings to coordinate with the theme of their line.

ourse Description

urse overview:

This capstone course provides students an understanding of fashion, textiles, design and construction. Emphasis of instruction is placed on fashion merchandising, fashion illustration, famous fashion designers, apparel construction, and appearance. It includes units on the elements and principles of design and the application of these concepts to the fashion design process. The course of study will allow students to expand upon their skills in fashion design and construction while also providing them the opportunity to further develop their knowledge and skills necessary to understand and work in this professionally diverse global industry. Students will apply their learned skills to construct a portfolio or body of work, as well as prepare for careers, post-secondary training and beyond. Students in this course will also work together to run a campus business offering embroidery, repairs, and tailoring services.

urse content:

Introduction to the Course, Sewing Tool, Equipment and Safety

Students will be introduced to the advanced fashion course, they will gain a deeper understanding of fashion and how it functions in contemporary culture. Students will expand upon their prior knowledge from previous fashion courses, while developing advanced sewing and garment construction skills and techniques. Students will demonstrate an understanding of advanced tools and equipment utilized in the course for the development of fashion, textile and apparel design works; and understand safety aspects and care of tools and equipment. Students must demonstrate mastery of understanding of safe practices by passing a safety test. Students will review and expand upon their knowledge of industry-standard practices in safety and in operating a sewing machine, serger, industrial embroidery machine and other sewing equipment and tools.

Unit Assignment(s):

Wardrobe Evaluation, Sewing Samples & Safety Test

Students evaluate items in fashion to determine what factors influenced their own personal styles and choose outfits for certain occasions including career and formal attire. Students create a style board for their choices including how their personal culture, customs, and expectations influence their apparel decisions and impact their need for self-expression. Students will review operation of their sewing & serger machine use, participate in machine care, & practice safety

procedures while completing advanced sewing samples. Several class lessons and assignments will be done to prepare students for the Sewing Safety Test, including sewing/serger machine parts identification, sewing tools identification, and safe practice demonstration.

Textile Fibers, Fabrics and Design

Students will expand upon their textile knowledge by creating a fabric sample swatch book. They will identify the fabrics (this requires some textile research on their part), giving the fabric name, it's characteristics (i.e. natural or synthetic, woven or knitted, type of weave, etc.) and then give examples of garments or uses for that type of fabric (i.e. car upholstery, furniture, evening gowns, bath towels, etc.) Students will develop deeper knowledge of fabrics and textiles, investigate issues of sustainability, fast fashion and ethical brands then make appropriate textile choices and apply their knowledge to the fashion design process and the use of the elements and principles of art in fashion. Since fabrics are the artistic medium of the fashion designer, developing an in-depth understanding of the types of textile and fabric choices is an important skill for this industry.

⮒ Unit Assignment(s):

Textile Book and Design

A review of various fabrications is presented, students identify, classify and explain the characteristics of each listed natural and manufactured fiber. Students will determine the name of sample fabrics from modeled garments and suggest the proper fabric content. They will identify and classify a variety of woven, knitted and non-woven fabric samples and will explain the characteristics of these fabric samples and recommend an appropriate end use for each sample. Students will create a chart to compare the characteristics and performance of two commonly used natural fibers and two commonly used manufactured fibers.

Students will apply the artistic process of taking a textile and through the construction methodology create a unique, one of a kind wearable end product.

A discussion on eco-friendly and sustainable clothing is presented. They will apply their understanding of textile fibers, & fabrics to the selection of textile products appropriate for the execution of different designs; and then evaluate and write a reflection describing their textile product selection in one constructed garment of their choice.

Students will design and create an original fabric design. They will relate their use of the elements of art and principles of design to their work. They will design and create an outfit on amini dress form.

Famous Fashion and Costume Designers

Students will conduct research on an iconic apparel or costume designer and write a report on the designer's background, contributions to fashion or costuming, cultural influence, era of time, childhood, educational background, and overall impact on the industry. Students will conduct research to gather information, and apply the writing process as they learn about the area of fashion & costuming, compare and contrast eras, and in doing so will also learn more about the fashion

industry, the requirements of the profession, the education and training needed, and the skills most needed to be successful in the field. Students will determine the target audience and include pictures of outfits by this designer and present their research in a digital slide presentation. Students will critique these fashion/costume designers works based on the use of the elements of art and principles of design; they will describe, analyze, and judge the designs.

⮒ Unit Assignment(s):

Research paper, PowerPoint presentation, Design Sketches

Students will choose an apparel or costume designer of their choice. They will then research, write a paper, and create a slide presentation on this designer. They will discover the designer's life history, education, motivation, notoriety, contributions to the fashion/costuming world, and cultural influences. Students will compare and contrast target market and marketing strategies their designer has used and their impact on the fashion movement and fashion history. Students will then include designs and sketches of fashion/costumes for a presentation incorporating the elements of art and principles of design that are in line with the designer researched. A critique will follow where students will view the creations and discuss within groups the authenticity of the styling for each designer/costumer following a prescribed rubric.

Applied Fashion Design and Construction

Students will demonstrate advanced skills in sewing and garment construction. They will demonstrate mastery of advanced construction techniques, such as: zipper insertion, darts, waistband, interfacing, cover-stitch, over-lock, machine embroidery etc. Students will effectively apply individual body measurements to sizing of garments, fabric selection and budgeting for all materials required. They will learn to read a sewing pattern guide sheet, analyze pattern instructions, or create their own pattern, and apply these skills to construction projects. After constructing a garment, they will learn to conduct a fitting and make any needed alterations. Students will then market their garment using fashion merchandising knowledge that is foundational in the Fashion Design industry.

⮒ Unit Assignment(s):

Sewing samples, various construction projects, customer profile

Students will complete a minimum of 3 construction projects throughout the year, each should expand upon prior skills as new advanced level techniques are introduced. These projects will further demonstrate students' technical proficiency. Projects can be differentiated for student's ability level. Students should be encouraged to select patterns and garments they would like to make that consider advanced techniques such as those needed for modern tailoring (for example using a serger for professional finishing, inserting darts, pockets, waistband, a bodice, etc.). Students will identify the different aspects of the fashion industry by creating a presentation board to market their garment as a Fashion Merchandiser and critique peer work as a Fashion Buyer. Students will also create a portfolio of the appropriate terms for garment styles, including sleeve, necklines, skirt, collars, pant and shirt types. Students will learn how to alter a garment with the goal to upcycle an old clothing item.

Elements of Art and Principles of Design and Visual Merchandising

Students will apply their comprehension of elements of art and principles of design to analyze and evaluate a variety of store displays. Students will learn about how lighting, location, and other marketing factors influence a buyer's feelings and desire to purchase. Students will also apply knowledge about target audience, demographics, psychology of color, color theory and other factors that can attract target customers. Students will create original designs and compose a visual display inspired by their specific customer, and demonstrate their understanding of effective promotion methods in fashion merchandising.

⮒ Unit Assignment(s):

Design sketches, 2 construction projects, visual promotional display

Students will explore and analyze a variety of window displays and visual merchandising techniques. They will review the elements and principles of art and design and learn about visual merchandising techniques. Students will critique a variety of visual displays based on the designer’s use of the elements of art.

Students will be assigned to a mock "store manager" that needs a window display and has a theme in mind. The team of students will interview the manager and create a rendering (sketched or computer generated) of the display which they will present to the "manager." They will make necessary changes until they gain approval. Students will then create a visual display from their design that reflects the "managers" inspiration. The display must include their personal work along with explanations of the designers target market, and their impact on the fashion movement and fashion history. The display must include graphics and 3-D objects. The students will analyze their use of the elements of art and principles of design. The visual display will demonstrate the students understanding of fashion merchandising and promotion methods, mannequins, props, color and lighting should be utilized to create an attractive and creative display.

The Tools of Fashion Design and Illustration

Students will demonstrate their understanding of design principles through the medium of fashion illustration. Using the drawing techniques of “gesture” and observational life drawing skills, students will especially work to demonstrate their mastery of proportion/scale as it applies to the human body. Using traditional charcoal or pastel, students will progress through the design process, from concept to completion. Their fashion designs on their model will demonstrate their mastery of the various principles of design, including unity, balance, emphasis, rhythm, proportion, etc. As part of this process, students further develop their fine art drawing techniques, review industry standard fashion illustration examples, and reinforce the importance of sketching and illustration skills, through multimedia resources.

⮒ Unit Assignment(s):

Gesture/life drawing fashion illustrations

Fashion illustration measurements and techniques are reviewed by the teacher demonstration using the industry "9 Heads" method for manually sketching a fully proportionate body known as a "Croquis" for either the male, female or child. Students sketch the human body in various positions or fashion poses. Proportion, drawing techniques, and various media are reviewed. Students are introduced to new drawing techniques such as gesture, and how to stylize a croquis creating a front view and side view. Students will demonstrate an understanding of human anatomy, proportion, and scale according to assigned criteria; an understanding of the relationship between body position and the lay or position of clothing/fabric/accessories; and an understanding of the behavior of different materials and textiles, in relationship to body position.

Fashion in the Real World, Planning For the Future

In this unit, students will delve deeper into researching the wide variety of careers (many of them extremely lucrative) available within the fashion industry. In addition to researching various career pathways they haven't considered in previous courses, students identify the breadth and depth of education required for various positions and roles. New guest speakers and professionals in the fashion industry act as industry experts, delivering valuable presentations to students, both on the actual discipline of fashion as well as the realities of careers in fashion. For example, Fashion Blogging and Social Media are growing fields in the fashion industry. Students engage in Q and A sessions with these experts, receiving important mentoring and professional advice. Students refine their interests in career pathways and in addition to updating their professional art/design portfolio (or website), students will create a branding suite for their potential careers (including brand logo, business card, and resume). Wherever possible, students are eligible to "shadow" professionals to get a better sense of the day-to-day operations of a fashion career. As a result of these experiences and research, students will evaluate and revise their Career and Education Plan that articulates their goals and strategies for pursuing a career of their choice in the fashion industry.

⮒ Unit Assignment(s):

Students will research a wide variety of professional paths and fields within the contemporary fashion industry, for the primary purpose of identifying future careers within the industry. They should include careers that they have not previously explored in prior fashion courses. Students will refine & present a "Personal Career Plan," that includes: (1) education requirements needed for selected career, (2) salary scale/earning potential, (3) career mapping (indicating transferability of knowledge/skills), and (4) A five year plan including personal/career goals.Students will utilize a career website like Xello to assist in this project.

Recycle and Reuse and Performance Fashion Show

Students will utilize their creative, design skills to plan and implement a fashion show. Student groups will design, sketch, and create a garment with accessories using recycleable items. Students will collaorate with the drama theatre department to ensure proper lighting, sound, media, stage direction, and stage presence for the models and narrators. Students will run

a full rehearsal practicing timing and transitions. Students will build on their prior knowledge of construction skills when devising the garment. They will also use body measurements of the model to assure proper fit, gaining a greater understanding of tailoring and scale. They will be challenged to figure out how to create a pattern from the design sketch and then make it into a werable 3-D outfit, including putting it on and taking it off. They will build upon their knowldge of textiles and the techniques that can be used with thin, stiff, delicate material to ensure ease of movement for the model. The team will troubleshoot issues as they encounter them and learn communication, conflict resolution and time management skills working under a deadline.

⮒ Unit Assignment(s):

Students will work collaboratively to create and direct a fashion show. Teams will choose a theme and draw sketches of outfits they want to create. They will choose music, and create a slide presentation that includes pictures and graphics. They will then construct these garments and accessories out of recycleable materials, using only tape, glue and yarn. Each team will write a script that details the construction process and uses appropriate fashion and garment style terms for the outfit. These outfits will be worn by a student in a fashion show that is organized by the class. The script will be narrated by one student in each team during the fashion show. They will do a rehearsal the day before and incorporate any adjustments necessary. Finally, the students will engage in an evaluation of the production to analyze sucesses and challenges and offer suggestions for future productions. Students will turn in a portfolio of their team project, including the written narration script and design sketches.

Students will bring in a project from home that they want to alter. They will first sketch the garment and then write a detailed list of steps required to change this garment into a new, useable version.

Small Apparel Industry Business

Students acquire skills of time management, project management, problem solving, design skills, and customer relations through our on campus business in which we offer services for small repairs and sewing needs. We have collaborated with drama to create garments for their productions, repaired football jerseys, made schoolwide projects, including window coverings.

We also have an industrial embroidery machine that the students use to create designs, decide on the best options of layout, program the machine, and complete the embroidery process. The students are responsible for all aspects of the business including advertising, completing jobs, writing invoices, and delivering the item. We have embroidered chef coats for our Culinary students. The class has also made pillows to donate to our local homeless shleter.

Through this interactive experience students will acquire and use written, verbal, or nonverbal communication skills in a variety of forms and contexts to convey meaning through the production, presentation, and/or exhibition of works of art through active practice and creation for the consumer.

⮒ Unit Assignment(s):

Students gain real work experience through project based learning. They will interact with staff to write up orders, complete the project and deliver the item, get feedback, and implement the suggestions. Students will learn customer service skills, project management, problem solving, and communication skills. They will learn resposibility and how to

troubleshoot problems. They will gain understanding and an ability to operate a variety machines, including an industrial embroidery machine, sergers, and an industrial sewing machine, heat press, and scan & cut machine.

Course Purpose: *What is the purpose of this course?*

Careers in Family and Human Services provides background knowledge and occupation-specific training that focuses on the development of counseling and mental health services, and family and community services careers. This is a two semester capstone course that is designed for students interested in a career in the area of family and human services. The course will prepare students for employment, technical preparation, or to pursue advance study at the college or university level. Students will study family and human services careers and programs. Students will spend part of their time in the classroom and the other part at a field site in the community for hands on experience.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

I. CAREER AND PROGRAM INTRODUCTION
Types of Careers in Family & Human Services 1. Complete a careers assessment 2. Characteristics of a successful employee 3. The application and interview process 1. Types of Programs 1. Standards of quality for Family & Human Services programs 2. Programs available in the Family & Human Services industry 2. Key Assignments: Careers assessment assignment is to be perfected for inclusion in student's employment portfolio. Interview someone employed in the industry and report findings in a paper to be added to student portfolio.
Academic: LS: 11-12.2 RSIT: 11-12.4 CTE Anchor: Career Planning and Management: 3.1, 3.2, 3.4 Ethics and Legal Responsibilities: 8.2, 8.3 Technical Knowledge and Skills: 10.4 Demonstration and Application: 11.5 CTE Pathway: D1.1, D1.3, D1.4

II. WORKPLACE SAFETY AND LAWS
1. Preventing Injuries 2. First aid and safety 3. Sanitation and Common Illnesses 4. Child, Adult and Elder Abuse 5. Workplace safety Key Assignments: Students will have a guest speaker who will review the basics of first aid and CPR. Students will complete a first aid and CPR course and obtain certification. Students will research the different categories of abuse and create a Power Point to present to the class. The research must include the laws, reporting requirements, and referral resources for clients in need of help.
Academic: LS: 11-12.3 RSIT: 11-12.3 RLST: 11-12.9 WS: 11-12.1, 11-12.1e CTE Anchor: Communications: 2.4, 2.5 Technology: 4.1, 4.4 Health and Safety: 6.1, 6.2, 6.3, 6.4, 6.5, 6.6, 6.7 CTE Pathway: D2.5, D4.1, D4.2, D4.3, D6.2, D7.4, D7.5, D7.6, D7.1, D7.2, D11.1, D11.2, D11.3

III. NUTRITION AND MEAL PLANNING
1. My Plate for all ages and stages of life. 2. Dietary restrictions for age and medical conditions. Planning a nutritional appropriate meal for a child, an adult, an elder adult, and a client with dietary or medical restrictions.
3. 8 10 Academic: WS: 11-12.3 N-Q: 3 CTE Anchor: Technology: 4.1, 4.2 Problem Solving and Critical Thinking: 5.4 Technical Knowledge and Skills: 10.3 CTE Pathway: D5.1, D5.5, D6.1, D6.3, D6.5, D7.1

IV. HEALTHY LIFESTYLES AT ANY AGE
Positive mental health: including strategies for conflict resolution, behavior modification, and independent living. 1. 2. Incorporating exercise and activity as part of a lifelong goal of healthy living. 3. Addressing special needs when planning activities(social and physical). Personal care and well being 1. Adjusting to changes as we age 2. Privacy for clients, patients, and their families 4. Key Assignments: Based on a given age create a week's worth of activities that incorporate both physical and mental ability. Take into consideration any physical and or mental disabilities. Lead your class in one of the activities in your plan. Teacher and students will assess the activity based on specific criteria. Identify and interview a family who has an aging family member (someone 65+) and determine challenges they face in caring for them, how they fit in the family structure, what resources if any the family uses to assist them with the family member and report. Role play different life situations as a group. Present the situation and solution to the class.
10 20 Academic: LS: 11-12.1, 11-12.2 RLST: 11-12.9 WS: 11-12.1, 11-12.1c, 11-12.2a, 11-12.2, 11-12.6, 11-12.7 CTE Anchor: Problem Solving and Critical Thinking: 5.1, 5.4 Technical Knowledge and Skills: 10.2, 10.3, 10.13 CTE Pathway: D6.4, D7.3, D8.3, D9.2, D9.3, D10.1, D10.2, D10.3, D10.5

V. WORKPLACE PRACTICES & ETIQUETTE
Understanding Human Relations
1. The need for human relations skills 2. Attitude in the workplace 3. Teamwork 4. Coworker relationships 5. Relationships with employers 1. Workplace etiquette 1. Proper dress and appearance 2. Customer/client relations 2. Career headhunter visits the class and discusses qualities and attributes employers look for. Gives tips on proper dress and behavior for interviews. Students have mock interviews with industry leaders for jobs in their area of interest. Role-play workplace situations and share with class.
Academic: RSIT: 11-12.1, 11-12.2, 11-12.3, 11-12.4 CTE Anchor: Communications: 2.1, 2.4 Career Planning and Management: 3.2, 3.8, 3.9 Responsibility and Flexibility: 7.2, 7.3, 7.4, 7.7 Ethics and Legal Responsibilities: 8.1, 8.3, 8.7 Leadership and Teamwork: 9.1, 9.2, 9.3, 9.7 Technical Knowledge and Skills: 10.3, 10.4 Demonstration and Application: 11.4 CTE Pathway: D2.1, D2.2, D2.3

VI. INDUSTRY INTERNSHIP/WORKPLACE EXPERIENCE
A. Student placement in industry related site. May be paid or unpaid. B. Students, teacher, supervisors and parents agreement of objectives. C. Student analysis of experience as it relates to their workplace assignment. Progress and check-in with teacher once per week during assignment. 1. Turn in signed time sheets Turn in evaluation of given workplace criteria Locating the facilities and operational procedures in the industry (for example)
1. 2. D. 12 55 Academic: LS: 11-12.3 RSIT: 11-12.4 CTE Anchor: Technical Knowledge and Skills: 10.21 CTE Pathway: D2.4, D3.2, D3.3, D3.4

Course Title

Careers With Children (HERO) 1 A/B

Description of Target Group

This course is designed for 11th and 12th grade students who have successfully completed Child and Family A/B, or Home Living A/B, are responsible with all interest in children, and/or have received permission from instructor.

Purpose

This yearlong course meets the state frameworks for certification in the area of child development and education. It is the exiting course in our career path cluster, Child, Family, Health, and Human Services. This course is designed to prepare students for employment, technical preparation or to pursue advance study at the college or university level. This course gives high school students the opportunity to learn entry-level job skills in the field of childcare while working at: the on-campus preschool, (S.A.P.I.D.), and/or assigned to community classroom sites. The students learn career opportunities and general job skills related to working with children. The students are also involved in a classroom component to work on preparation, evaluation, curriculum development and enrichment. A certificate will be awarded to students who satisfy all the course requirements and who meet the minimum course competencies. Upon completion of Child and Family A/B, and the Allan Hancock College final (with an A or B grade) and this course, students may earn 3 units of credit in Early Childhood Education from Allan Hancock College.

Careers with Children IA/B will count 180 hours towards certification to complete total certification requirements. Students complete both Careers with Children 1A/B and 2A/B for a total of 360 hours.

Standards of Expected Student Achievement and Proficiency

Upon completion of this course, students will successfully substantiate the following:

1. Determine employment opportunities in the field of child development.
2. Demonstrate use of community resources in locating job leads.
3. Complete child study reports using classroom observations in physical, mental, social, and emotional growth in preschool children.
4. Assist in maintaining a healthy and safe preschool environment.
5. Develop and maintain good interpersonal and working relationships with peers.
6. Employ positive guidance techniques in preschool setting.
7. Work in a variety of job roles, as assigned, in a preschool and/or elementary education setting.
8. Appraise and plan appropriate activities suitable for preschool and/or elementary education students relating to:

    A. Foods/Nutrition

Careers with Children (Hero) 1A/B (continued)

B. Creative Art
C. Music and Movement
D. Social Studies (self-esteem, holidays, etc.)
E. Language/ Literature
F. Other Appropriate Activities.

9. Gain some of the skills and experience needed for entry-level employment.
10. Create an atmosphere for diversity training and understanding.
11. Examine potential for extended educational opportunities.
12. Complete a portfolio.
13. Satisfy the core competencies.
14. Gain knowledge of parenting skills.

Job Titles: Family Child Care Provider, Infant/Toddler Program Aide, Playroom Attendant, Preschool Aide, Children's Tutor, Grading Clerk, Recreation Aide, and Teacher Aide.

Instructional Materials

Text and Supplementary Materials (to be determined)

Activities

Practical experience and application in working in a preschool and/or elementary education setting will be supplemented with trips to alternative potential employment sites, guest speakers, videos, class discussions, problem solving and critical thinking activities, and other demonstrative materials as they are made available.

Course Title

Careers With Children (HERO) 2 A/B

Description of Target Group

This course is designed for 11th and 12th grade students who have successfully completed careers with Children 1 A/B, Child and the Family 2 A/B, or Home living 2 A/B, and/or have received permission from instructor.

Purpose

This yearlong course meets the state frameworks for certification in the area of child development and education. It is the exiting course in our career path cluster, Child, Family, Health, and Human Services. This course is designed to prepare students for employment, technical preparation or to pursue advance study at the college or university level. This course gives high school students the opportunity to learn entry-level job skills in the field of childcare while working at: the on-campus preschool, (S.A.P.I.D.), and/or assigned to community classroom sites. The students learn career opportunities and general job skills related to working with children. The students are also involved in a classroom component to work on preparation, evaluation, curriculum development and enrichment. A certificate will be awarded to students who satisfy all the course requirements and who meet the minimum course competencies. Upon completion of Child and Family A/B, and the Allan Hancock College final (with an A or B grade) and this course' students may earn 3 units of credit in Early Childhood Education from Allan Hancock College.

Careers with Children 2A/B will count 180 hours toward certification. To complete total certification requirements, students must complete both Careers with Children 1A/B and 2A/B for a total of 360 hours.

<u>Standards of Expected Student Achievement and Proficiency</u>

Upon completion of this course, students will successfully substantiate the following:

1. Continue employment opportunities in the field of child development.
2. Continue use of community resources in locating job leads.
3. Continue child study reports using classroom observations in physical, mental, social, and emotional growth in preschool children.
4. Continue in maintaining a healthy and safe preschool environment.
5. Continue and maintain good interpersonal and working relationships with peers.
6. Continue positive guidance techniques in preschool setting.
7. Continue in a variety of job roles, as assigned, in a preschool and/or elementary education setting.
8. Continue and plan appropriate activities suitable for preschool and/or elementary education students relating to:

A. Math
B. Science
C. Computers
D. Fine and Gross Motor
E. Other Appropriate Activities

9. Continue to gain the skills and experience needed for entry-level employment.
10. Continue to create an atmosphere for diversity training and understanding.
11. Continue to examine potential for extended educational opportunities.
12. Continue to build a portfolio.
13. Continue to satisfy the core competencies.
14. Continue to gain knowledge of parenting skills.
15. Compose personal resume and practice job interview/ applications.

Description

Edit

Course overview:

Edit

Child Development is a year-long course that provides students the knowledge and practical skills needed in the care and guidance of children. Students study prenatal development and the developmental ages and stages of children from birth to adolescence. Focus is on the social, emotional, cognitive, and physical development of children, including the influence of heredity and environmental factors. Studies also include safety and emergency procedures, nutrition and health practices, positive interaction and guidance techniques, learning theories, developmentally appropriate practices, and career exploration. Students will use reading, writing, listening, verbal communication, technology, and critical thinking skills in the production of collaborative and individual projects, presentations, essays, reflective writing, quizzes, exams, and the development of a professional portfolio.

Course Units:

Edit

Unit 1 – The Study of Children

Unit Summary

Students will understand the importance of studying child growth and development, intellectual, emotional, and social growth through the lifespan. Students will identify and apply major accepted theories and principles within the realm of Child Development. Students learn about developmental theorists and their

application as it relates to child learning, growth, and development. Students will learn and understand aspects that affect the development of individuals and how to build positive relationships. Students will explore various ages and stages of development within the context of physical, social, emotional, and cognitive development.

- Analyze the effects of heredity and environment on the physical, social, emotional, and intellectual development of children.
- Identify factors that contribute to the optimal development of children.
- Identify and compare various theories regarding human growth and development.
- Observe and study children's behavior and interpret findings.
- Compare and contrast major theories of learning and human development.
- Identify the developmental stages and principles of child growth in infants, toddlers, and children.

Unit Assignment(s)

Key Formative Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 1-Summative Assignment:

Developmental Theorist Research Report

Students will be assigned a variety of developmental theorists, including, but not limited to, Piaget, Erikson, Maslow, Vygotsky, Kohlberg, Freud, Pavlov, Gardner, Skinner, and Smilansky. Students will conduct internet and textbook research to identify key concepts within each theory. Students will use their findings to construct a report using appropriate style format, and a bibliography. They will develop and strengthen writing as needed by planning, revising, editing, or rewriting, focusing on addressing the significance of their assigned theorists. In addition to the written portion of the assignment, students will also include graphic organizers (i.e. Venn diagram, spreadsheets, charts) to evaluate, compare, and contrast the different theories chosen.

Unit 2 – Prenatal Development

Unit Summary

Students will analyze the stages of pregnancy, from conception through birth, and the implications of environment and heredity on the health and well-being of the mother and child.

- Summarize the stages of prenatal development and childbirth.
- Analyze the effects of prospective parents' nutrition, health, medical care, heredity, environmental factors, and lifestyle on prenatal development.
- Discuss physical and emotional changes that occur during normal and at-risk pregnancy.
- Analyze how individuals are genetically unique.
- Identify and evaluate community resources that provide information and assistance related to pregnancy and prenatal care.

Unit Assignment(s)

Key Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 2-Summative Assignment:

Pregnancy Journal/Log Power Point

Students research prenatal development as well as steps the mother can take to encourage a healthy pregnancy, including diet, exercise, and healthy habits. From their research, students produce a month-by-month journal/ log that details the fetal growth and development, changes in the mother, the prenatal care necessary, and images of the fetus at each stage of development. Information will be organized using Power Point (or similar type program) with each month of pregnancy represented on a different slide.

Unit 3 – Parenting

Unit Summary

Students understand and interpret the decisions and responsibilities involved in parenting and family communications which build and maintain relationships.

- Analyze factors to consider when determining readiness for parenting in various cultures.
- Describe parenting skills that contribute to the optimum development of children through meeting their physical, emotional, social, and intellectual needs.
- Analyze the major decisions, changes, and adjustments required of parenting.
- Describe and evaluate the responsibilities, styles, and strategies of parenting.
- Evaluate care giving options.
- Understand the role of parental involvement in the physical, intellectual, emotional, and social development of children and adolescents.
- Analyze how language, culture, and educational backgrounds may affect family structures and communication within and among families and communities.

Unit Assignment(s)

Key Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 3-Summative Assignments:

Baby Budget

Students will explore the financial, emotional, and relational costs of having a child. Students will create a budget charting basic baby needs and associated costs, including doctor visits, daycare, diapers, etc. Students will identify newfound challenges within relationships due to the additional stress, lack of sleep, redistribution of wages, etc. In addition, students will identify possible solutions to aid in the given challenges. With the given information students will create a trifold display exhibiting their results.

Baby Think it Over Project

Students will use an infant simulator to mimic the required care of a newborn child. The student will take responsibility for providing daily care for the "baby" for a given time period. Students will log the activity times and general emotions they feel while caring for the child. In addition, students will need to produce a reflective essay on their experience of being a parent. If the student losses points for severe neglect or abuse of their baby, the student must complete a separate research paper on child abuse and neglect.

Unit 4 – Guidance and Discipline

Unit Summary

Students understand positive guidance and discipline techniques that promote feelings of self-worth as they apply appropriately to the developmental stages of children.

- Describe and compare various approaches to child guidance and their effects on self-worth, self-discipline and respect for oneself and others at different stages of development.
- Understand the different parenting styles and their effects on children.
- Analyze techniques used to provide positive reinforcement with children in given situations and at various stages of development.
- Describe the relationship of a child's behavior to the commonly accepted principles of growth and development.
- Analyze the relationship of guidance and communication techniques to the development of self-worth and discipline.
- Identify ways to use opportunities throughout the daily routine to build trusting relationships and effective communication with families and others.
- Describe factors and possible causes that contribute to child abuse and identity those characteristics of the abused and the abuser.
- Identify the importance of building positive relationships between the caregiver, children, and families to provide effective guidance and discipline.
- Identify practical strategies for finding positive solutions to common family stressors, crisis, or behavioral problems.

Unit Assignment(s)

Key Formative Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 4-Summative Assignment:

Prenting Styles Presentation

Students will work in groups to create a presentation highlighting the four main parenting styles- Authoritarian, Authoritative, Permissive, and Uninvolved. Students will research each parenting style, including the positives and negatives of each and the typical outcome of each style. Groups will create a presentation that consists of examples of each parenting style. The examples may come from literature, television, movies, theater, or pop culture. Students will present each of their four examples to the class, without telling them which style is represented in each clip. The class will then identify which parenting style is represented in each clip/example.

Unit 5 – Family and Life Challenges

Unit Summary

Students understand the adjustments needed to adapt to major life changes throughout the human life cycle. Students explore a variety of stresses on the family structure including, but not limited to, birth defects, special needs, single parenting, death, deployment, crisis, addictions and behavioral challenges.

- Identify factors contributing to change in the lives of infants, children, and adolescents and ways in which they might respond to change.
- Analyze how changes and crisis affect infants, children, and adolescents and recommend strategies that help them adapt.
- Explain how role models influence infants', children's, and adolescents' ability to cope.
- Investigate and select community agencies and resources that provide child health care services and information.
- Explain how changes in technology impact children and adolescents and describe methods for managing its appropriate use.

Analyze how individuals are genetically unique.

- Describe and analyze strategies and importance of including, equipment, and techniques for helping children with special needs and agencies who support parents.

- Identify typical and common atypical developmental patterns affect the educational progress of children and adolescents.

Unit Assignment(s)

Key Formative Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 5-Summative Assignment:

Stress Brochure

Using the Publisher program, or similar application, students will create a brochure on a researched family stressor. Students may choose topics such as divorce, addiction, special needs, multiple births, blended families, foster care, death, deployment, unemployment, and so forth. The students will identify and define the stressor, the effects on children and family, strategies to manage the issue, a bibliography of sources, and community resources that provide support for families. The brochure must include graphics and readable font on each panel.

Unit 6 – Learning and Play Development

Unit Summary

Unit 6 – Learning and Play Development

Students understand the adjustments needed to adapt to major life changes throughout the human life cycle.

- Identify and describe the purposes of play and learning activities to the physical, social, emotional, and intellectual development of infants, children, and adolescents.
- Identify factors to consider when selecting, purchasing, or creating play and learning materials that are developmentally appropriate for children.
- Evaluate facilities, equipment, and materials, technology for their contribution to a child's development.
- Analyze how the attainment of self-help skills such as hygiene, dressing, food preparation, and household chores contribute to a child's learning and self-concept and self-worth.
- Describe and demonstrate the caregiver's role in planning, conducting, and evaluating play and learning activities that enhance the development of infants, children, and adolescents.

Unit Assignment(s)

Key Formative Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 6-Summative Assignments:

Toy Evaluation

Students will select a toy and evaluate the safety and age-appropriate features. They will analyze the materials, durability, function, and purpose in relation to ages and stages and level of development. Students will give recommendations on the educational value of the toy as well as the enjoyment of the toy for the child.

Preschool Lesson Plan Activity

Students shall select or develop and present a song, story, or educational activity 3 to 6 minutes in length suitable for preschool children 3 to 4 years of age. The presentation should be suited to the children's attention span. The student shall prepare and submit a copy of a typed information sheet to the teacher. The information sheet shall include ages and stages, Piaget's Theory, purpose, steps to be followed, resources and/or materials used in the presentation. The presentation and typed information sheet must be the result of the student's own effort. Selection of material and terminology used must be age appropriate and suitable for the school setting. Manipulatives, visuals, or props (e.g., flannel boards, puppets, or books) must be used. Materials used need not be original but should challenge and stimulate a child's imagination. Techniques, which reflect animation and personal expression, as well as encourage the participation of children, should be used.

Unit 7- Health and Safety of Children

Unit Summary

Students will learn about health and safety issues that commonly affect children and the steps caregivers can take to ensure a child's safety.

- Understand the importance of regular doctor and dental visits.
- Recognize and understand signs, symptoms, and treatments of common childhood illnesses and diseases.
- Understand and practice basic First Aid techniques and emergency treatments, including the Heimlich Maneuver and Cardiopulmonary Resuscitation (CPR).

Unit Assignment(s)

Key Formative Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 7-Summative Assignment:

CPR/First Aid Training

Students will participate in a CPR/First Aid Training course, such as ProTrainings. Students will complete the course and pass a comprehensive test given at the end of the on-line style course to prove comprehension of the material presented. Students will receive a certificate acknowledging their completion of the course and passing the exam.

Unit 8 - Careers Working with Children

Unit Summary

Students understand and apply the principles of effective oral, written, and multimedia communication in a variety of formats and contexts. Students will integrate multiple sources of information from diverse formats to recognize the essential aspects of the early childhood education, childcare, and development industry. Students make effective decisions, use career information, and manage personal career plans. Students understand the strategies that enable persons to manage and balance personal, family, and work responsibilities to enhance productivity and attain a quality of life.

- Exhibit positive attitudes such as self-confidence, honesty, perseverance, initiative, and self-discipline.
- Explain ways to work cooperatively, share responsibilities, accept supervision, and assume leadership roles.
- Identify the relationship of changing employment trends, societal needs, and economic conditions into career planning to the content areas for consumer and family studies to the home economics related career pathways.

- Describe career pathways and strategies for obtaining employment and advantage in various pathways.
- Research the benefits, educational requirements, and costs of preparing for employment in home economics careers and technology related field included teaching in California.
- Apply job search and acquisition skills such as preparing job applications, resumes, and career portfolios.
- Define and describe employability skills and professionalism and how to practice professional behaviors.
- Analyze the ways in which language, culture, and educational backgrounds effect careers.

Unit Assignment(s)

Key Formative Assignments:

Students will complete weekly assignments as formative assessments to reinforce the conceptual understanding and acquisition of the child development curriculum. Students will maintain a portfolio with evidence of the key assignments for an end-of-year authentic summative assessment.

Unit 8-Summative Assignment:

Career Exploration

Student will use the resources available to research various career opportunities from the California Career Resource Network to explore and complete a career interest inventory. The California Career Zone is a web-based career exploration system. Students can use the online format, or they may download the career workbooks to complete their individual inventory and follow up research of the careers found to fit their work values. Students will create a presentation with information regarding their chosen career. Students will include salary, working hours, required education or experience, positives and negatives of the career, short-term and long-term goals required to successfully pursue this career, and occupational outlook.

Kindergarten Teachers, Except Special Education	25-2012.00	Childcare Workers	39-9011.00

COURSE DESCRIPTION:

Child Development is a year-long course that provides students the knowledge and practical skills needed in the care and guidance of children. Students study prenatal development and the developmental ages and stages of children from birth to adolescence. Focus is on the social, emotional, cognitive, and physical development of children, including the influence of heredity and environmental factors. Studies also include safety and emergency procedures, nutrition and health practices, positive interaction and guidance techniques, learning theories, developmentally appropriate practices, and career exploration. Students will use reading, writing, listening, verbal communication, technology, and critical thinking skills in the production of collaborative and individual projects, presentations, essays, reflective writing, quizzes, exams, and the development of a professional portfolio.

PROGRAM OF STUDY

Grade	Fall	Spring	Year	Course Type	Course Name
11, 12				Concentrator	Relationships and Family Health
11, 12				Capstone	Child Development P A/B

I.	THE STUDY OF CHILDREN	CR	Lab/ CC	Standards
	1. Students will understand the importance of studying child growth and development, intellectual, emotional, and social growth through the lifespan. Students will identify and apply major accepted theories and principles within the realm of Child Development. Students learn about developmental theorists and their application as it relates to child learning, growth, and development. Students will learn and understand aspects that affect the development of individuals and how to build positive relationships. Students will explore various ages and stages of development within the context of physical, social, emotional, and cognitive development. 1. Analyze the effects of heredity and environment on the physical, social, emotional, and intellectual development of children. 2. Identify factors that contribute to the optimal development of children. 3. Identify and compare various theories regarding human growth and development. 4. Observe and study children's behavior and interpret findings. 5. Compare and contrast major theories of learning and human development. 6. Identify the developmental stages and principles of child growth in infants, toddlers, and children.	15	5	**Academic:** WS: 11-12.5, 11-12.6, 11-12.9 LS: LS3, LS3.A, LS3.B **CTE Anchor:** Communications: 2.4 Technology: 4.1, 4.3 Responsibility and Flexibility: 7.2, 7.4 Technical Knowledge and Skills: 10.7 Demonstration and Application: 11.5 **CTE Pathway:** C5.1, C5.2, C5.3, C5.4
II.	**PRENATAL DEVELOPMENT**	**CR**	**Lab/ CC**	**Standards**
	1. Students will analyze the stages of pregnancy, from conception through birth, and the implications of environment and heredity on the health and well-being of the mother and child. • Summarize the stages of prenatal development and childbirth. • Analyze the effects of prospective parents' nutrition, health, medical care, heredity, environmental factors, and lifestyle on prenatal development. • Discuss physical and emotional changes that occur during normal and at-risk pregnancy. • Analyze how individuals are genetically unique. • Identify and evaluate community resources that provide information and assistance related to pregnancy and prenatal care.	15	5	**Academic:** LS: LS3, LS3.A, LS3.B **CTE Anchor:** Communications: 2.4 Technology: 4.1, 4.3 Technical Knowledge and Skills: 10.6 Demonstration and Application: 11.5 **CTE Pathway:** C5.3, C8.2, C8.5
III.	**PARENTING**	**CR**	**Lab/ CC**	**Standards**
	1. Students understand and interpret the decisions and responsibilities involved in parenting and family communications which build and maintain relationships. • Analyze factors to consider when determining readiness for parenting in various cultures. • Describe parenting skills that contribute to the optimum development of children through meeting their physical, emotional, social, and intellectual needs. • Analyze the major decisions, changes, and adjustments required of parenting. • Describe and evaluate the responsibilities, styles, and strategies of parenting. • Evaluate care giving options. • Understand the role of parental involvement in the physical, intellectual, emotional, and social development of children and	15	5	**Academic:** LS: 11-12.2 WS: 11-12.4, 11-12.5 **CTE Anchor:** Communications: 2.4 Technology: 4.1, 4.3 Responsibility and Flexibility: 7.2, 7.4 Technical Knowledge and Skills: 10.5, 10.15 Demonstration and

	adolescents. • Analyze how language, culture, and educational backgrounds may affect family structures and communication within and among families and communities.			Application: 11.5 **CTE Pathway:** C5.1, C5.2, C5.3, C5.4, C6.1, C6.2, C6.3, C6.4, C6.5
IV.	**GUIDANCE AND DISCIPLINE**	**CR**	**Lab/ CC**	**Standards**
	1. Students understand positive guidance and discipline techniques that promote feelings of self-worth as they apply appropriately to the developmental stages of children. • Describe and compare various approaches to child guidance and their effects on self-worth, self-discipline and respect for oneself and others at different stages of development. • Understand the different parenting styles and their effects on children. • Analyze techniques used to provide positive reinforcement with children in given situations and at various stages of development. • Describe the relationship of a child's behavior to the commonly accepted principles of growth and development. • Analyze the relationship of guidance and communication techniques to the development of self-worth and discipline. • Identify ways to use opportunities throughout the daily routine to build trusting relationships and effective communication with families and others. • Describe factors and possible causes that contribute to child abuse and identity those characteristics of the abused and the abuser. • Identify the importance of building positive relationships between the caregiver, children, and families to provide effective guidance and discipline. • Identify practical strategies for finding positive solutions to common family stressors, crisis, or behavioral problems.	15	5	**Academic:** LS: 11-12.6 WS: 11-12.9 **CTE Anchor:** Communications: 2.4 Technology: 4.1, 4.3 Technical Knowledge and Skills: 10.8, 10.14 Demonstration and Application: 11.5 **CTE Pathway:** C5.2, C5.3, C5.4, C6.1, C6.2, C6.3, C6.4, C6.5
V.	**FAMILY AND LIFE CHALLENGES**	**CR**	**Lab/ CC**	**Standards**
	1. Students understand the adjustments needed to adapt to major life changes throughout the human life cycle. Students explore a variety of stresses on the family structure including, but not limited to, birth defects, special needs, single parenting, death, deployment, crisis, addictions and behavioral challenges. • Identify factors contributing to change in the lives of infants, children, and adolescents and ways in which they might respond to change. • Analyze how changes and crisis affect infants, children, and adolescents and recommend strategies that help them adapt. • Explain how role models influence infants', children's, and adolescents' ability to cope. • Investigate and select community agencies and resources that provide child health care services and information. • Explain how changes in technology impact children and adolescents and describe methods for managing its appropriate use. • Analyze how individuals are genetically unique. • Describe and analyze strategies and importance of including, equipment, and techniques for helping children with special needs and agencies who support parents. • Identify typical and common atypical developmental patterns affect the educational progress of children and adolescents.	15	5	**Academic:** LS: 11-12.6 WS: 11-12.4, 11-12.6 WHSST: 11-12.8 **CTE Anchor:** Communications: 2.4 Technology: 4.1, 4.3 Technical Knowledge and Skills: 10.15, 10.17 Demonstration and Application: 11.5 **CTE Pathway:** C5.2, C5.3, C9.1, C9.2
VI.	**LEARNING AND PLAY DEVELOPMENT**	**CR**	**Lab/ CC**	**Standards**

	1. Students understand the adjustments needed to adapt to major life changes throughout the human life cycle. • Identify and describe the purposes of play and learning activities to the physical, social, emotional, and intellectual development of infants, children, and adolescents. • Identify factors to consider when selecting, purchasing, or creating play and learning materials that are developmentally appropriate for children. • Evaluate facilities, equipment, and materials, technology for their contribution to a child's development. • Analyze how the attainment of self-help skills such as hygiene, dressing, food preparation, and household chores contribute to a child's learning and self-concept and self-worth. • Describe and demonstrate the caregiver's role in planning, conducting, and evaluating play and learning activities that enhance the development of infants, children, and adolescents.	15	5	**Academic:** WS: 11-12.4, 11-12.5, 11-12.6 **CTE Anchor:** Communications: 2.4 Technology: 4.1, 4.3 Technical Knowledge and Skills: 10.1, 10.9 Demonstration and Application: 11.5 **CTE Pathway:** C3.3, C7.5, C7.6, C7.1, C10.1, C10.2, C10.3, C10.4
VII.	**HEALTH AND SAFETY OF CHILDREN**	**CR**	**Lab/ CC**	**Standards**
	1. Students will learn about health and safety issues that commonly affect children and the steps caregivers can take to ensure a child's safety. • Understand the importance of regular doctor and dental visits. • Recognize and understand signs, symptoms, and treatments of common childhood illnesses and diseases. • Understand and practice basic First Aid techniques and emergency treatments, including the Heimlich Maneuver and Cardiopulmonary Resuscitation (CPR).	15	5	**Academic:** LS: LS3, LS3.A, LS3.B **CTE Anchor:** Communications: 2.4 Technology: 4.1, 4.3 Technical Knowledge and Skills: 10.17, 10.18 Demonstration and Application: 11.5 **CTE Pathway:** C4.2, C4.3, C4.4, C8.1, C8.2, C8.3, C8.4, C8.5
VIII.	**CAREERS WORKING WITH CHILDREN**	**CR**	**Lab/ CC**	**Standards**
	1. Students understand and apply the principles of effective oral, written, and multimedia communication in a variety of formats and contexts. Students will integrate multiple sources of information from diverse formats to recognize the essential aspects of the early childhood education, childcare, and development industry. Students make effective decisions, use career information, and manage personal career plans. Students understand the strategies that enable persons to manage and balance personal, family, and work responsibilities to enhance productivity and attain a quality of life. • Exhibit positive attitudes such as self-confidence, honesty, perseverance, initiative, and self-discipline. • Explain ways to work cooperatively, share responsibilities, accept supervision, and assume leadership roles. • Identify the relationship of changing employment trends, societal needs, and economic conditions into career planning to the content areas for consumer and family studies to the home economics related career pathways. • Describe career pathways and strategies for obtaining employment and advantage in various pathways. • Research the benefits, educational requirements, and costs of	15	5	**Academic:** WS: 11-12.4, 11-12.5, 11-12.6 WHSST: 11-12.8 **CTE Anchor:** Communications: 2.4 Career Planning and Management: 3.1, 3.2, 3.3, 3.4, 3.5, 3.9 Technology: 4.1, 4.2, 4.3 Responsibility and Flexibility: 7.2, 7.4, 7.7 Ethics and Legal Responsibilities: 8.4

	preparing for employment in home economics careers and technology related field included teaching in California. • Apply job search and acquisition skills such as preparing job applications, resumes, and career portfolios. • Define and describe employability skills and professionalism and how to practice professional behaviors. • Analyze the ways in which language, culture, and educational backgrounds effect careers. Brief Course Description Child Development is a two semester course that focuses on skills needed to guide physical, emotional, and social development of children. Emphasis is given to the study of pregnancy and prenatal development, birth and the newborn, the study of children from birth to age twelve, stages of growth and development, theories of child development, needs of children, health and safety of children, children with special needs, and careers related to the area of child development.

Pre-Requisites:_____ Required _____ Recommended _____

Co-Requisites:_____ Required _____ Recommended _____

COURSE CONTENT

Course Goals and/or Major Student Outcomes

The student will:

1. Develop reading & writing skills through a variety of assignments and projects.
2. Develop research skills by completing individual and group research projects.
3. Improve critical thinking skills through the completion of written and oral assignments as well as creative projects.
4. Improve oral communication skills by participating in oral presentation activities.
5. Develop and enhance teamwork and leadership skills by working with others to complete a variety of assignments and projects.
6. Improve evaluation, synthesis, and discussion techniques through the use of real-world application.

Course Objectives

The student will:

1. Evaluate the effects of parenting roles and responsibilities on strengthening the well-being of individuals and families.
2. Evaluate the effects of parenting roles and responsibilities on strengthening the well-being of individuals and families.
3. Understand what a healthy pregnancy looks like and strategies to encourage a healthy pregnancy.
4. Explain how birth occurs and describe characteristics of normal development.
5. Analyze strategies that influence and promote growth and development in children.

6. Evaluate physical, intellectual, emotional, and social development of children from birth to age twelve.
7. Explore the health and safety of children, including nutritional needs and how to respond to accidents and emergencies.
8. Evaluate the effects of child abuse and neglect.
9. Examine different theorists and their theories of human development.
10. Explore careers that involve working with children

Course Outline

Unit One: Children and Parenting

Learn About Children

- Children and You
- Why Study Children?
- Observing Young Children

Responsibilities of Parenting

- Understanding Families
- Considerations of Parenthood
- Teen Parenthood

Building Strong Families

- Family Characteristics
- Family Types
- Parenting Styles
- Guiding Children's Behavior

Unit Two: Pregnancy and Birth

Prenatal Development

- The Developing Baby
- Problems in Prenatal Development
- Avoiding Environmental Hazards

Preparing for Birth

- A Healthy Pregnancy
- Preparing for the Baby's Arrival

The Baby's Arrival

- The Birth Process
- The Postnatal Period
- Newborn Concerns
    - Sudden Infant Death Syndrome
    - Caring for Premature Babies

Unit Three: The Baby's First Year

Physical Development

- Caring for an Infant
- Growth and Development
- Handling and Feeding
- Other Infant Care Skills

Emotional and Social Development

- Emotional Development
- Social Development and Personality

Intellectual Development

- Understanding Intellectual Development
- Understanding the brain
- Helping infants Learn

Unit 4: The Child from One to Three

Physical Development

- Physical Growth and Development
- Providing Care

Emotional and Social Development

- Emotional Development
- Social Development
- Personality Patterns and Behavior

Intellectual Development

- Understanding Learning and the Mind
- Encouraging Learning

Unit 5: The Child from Four to Six

Physical Development

- Physical Growth and Development
- Providing Care

Emotional and Social Development

- Emotional Development
- Social and Moral Development

Intellectual Development

- Intelligence and Learning
- Schools meeting individual needs

Unit 6: The Child from Seven to Twelve

Physical Development

- Physical Growth and Development
- Providing Care

Emotional and Social Development

- Emotional Development
- Social and Moral Development

Intellectual Development

- Intelligence and Learning

Unit 7: Special Areas of Study

Health and Safety

- Nutritional Needs
- Accidents and Emergencies

Child Abuse and Neglect

Theories of Childhood Development

Careers Working with Children

Text(s)

Usage_____ Primary Text_____ Read in entirety or near entirety

Supplemental Instructional Materials *Please Describe. If using online text or non-standard material, please provide the title of the material or webpage and the URL link.*

Key Assignments

- Applied learning projects
- Article and video reflections
- Guest speaker notes and evaluations
- Worksheets, chapter assignments, and study guides
- Classroom participation and observations
- Chapter quizzes
- Unit exams/evaluations

Instructional Methods and/or Strategies

- Lecture and discussion
- Readings
- Guest speakers
- Videos
- Research projects
- Individual and group projects

Assessment Methods and/or Tools

- Class participation
- Classwork and homework assignments
- Independent and group projects
- Cooperative work with other students
- Quizzes and tests

Course Title

Child and The Family (A)

Description of Target Group

This course is designed for all 11th and 12th grade students at Righetti High School who are interested in the child and the family.

Purpose

This course will provide students with a combination of subject matter and activities designed to develop abilities necessary for parenting, maintaining individual and family health and safety, the family as consumers, consumer buymanship, and child development/guidance.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to:

1. Develop goal selection and decision making skills and relate these principles to parenting, consumer choices, and child development and guidance.
2. Help individuals and the family cope with pressures and crises in their lives, including stress management techniques.
3. Assist individuals and the family to develop communication skills to help them cope with conflicts and disagreements.
4. Understand the personal and socio-economic impact of marriage and parenthood
5. Understand human reproduction, family planning, and the pre- and post-natal care and conditions affecting the expectant mother and unborn child, including pre-natal substance abuse prevention.
6. Identify/understand the importance of preventative health care including communicable diseases such as Stud’s and HIV/AIDS.
7. Contribute to community services that are available to help individuals and families.
8. Develop an awareness of the contributions and special problems of the aged to families and the community.
9. Develop an awareness of the special needs of family members (e.g., gifted, learning disabled, physically, emotionally or culturally handicapped).
10. Recognize the physical, mental, intellectual, social, creative, and emotional development of children.
11. Provide children with various role models.
12. Guide children's behavior and set limits appropriate to their age.
13. Observe and analyze developmental tasks through nursery school.
14. Recognize wise purchasing techniques for children's food, clothing, toys, and equipment.
15. Promote good health standards for children.
16. Be able to select nutritious foods and balance meals to maintain individual and family health.

17. Use consumer resources (magazines, agencies, etc.) to aid them in making decisions in buying goods and services.
18. Discuss pre- and post-natal care and conditions affecting the expectant mother and unborn child.
19. Determine employment opportunities in the Child, Family, Health and Human Services field.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Participation in classroom discussions, laboratory situations, field trips, complete projects, use various audio visuals, hear resource people and guest speakers, watch demonstrations, games, individual and/or group reports, individualized learnings.

Course Title

Child and The Family B

Description of Target Group

This is the second semester of a year long course and is designed for all 11th and 12th grade students who are interested in a more detailed study/understanding of the child and family.

Purpose

This course will provide students with a combination of subject matter and activities designed to develop abilities necessary for parenting maintaining individual and family health and safety, the family as consumers, consumer buymanship, and child development/guidance. The students will culminate this learning through practical application in a laboratory situation. Additionally, students will acquire more detailed knowledge of the later years of child development.

Standards of Expected Student Achievement

Upon completion of the course, students will be able to:

1. Recognize the ages and stages of the developing child.
2. Identify and explain various theories of child development.
3. Select and evaluate age appropriate activities important in a child's development.
4. Determine appropriate techniques for the guidance and discipline of children.
5. Formulate and/or collect materials necessary in various curricular areas for use with preschool students.
6. Evaluate suitable clothing for children.
7. Demonstrate understanding of the basic nutritional needs of the young child.
8. Understand crises that affect young children and select appropriate solutions and/or responses to the situation.
9. Contrast the differing needs of special children and methods to address those needs.
10. Examine various styles of parenting skills.
11. Develop and awareness of a safe environment and operation thereof
12. Show an understanding of various locals and state laws regulating the child care industry.

Child and Family B (Continued)

13. Design a unit to present for the preschool students.
14. Evaluate age appropriate equipment for use by young children.
15. Identify/understand the importance of preventative health care including communicable diseases such as STD's and HIV/AIDS.
16. Identify and understand childhood diseases and the importance of preventative health care.
17. Promote good health standards for children.
18. Examine community resources available to meet the needs of parents/child/child care providers.
19. Compare and contrast various levels of career opportunities in the child care industry.
20. Application of skills may culminate in actual work experience in the home, school, or community.

Instructional Materials

Text and supplementary materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Participation in classroom discussions, laboratory situations, field trips, complete projects, use various audio visuals, hear resource people and guest speakers, watch demonstrations, games, individual and/or group reports, individualized learnings.

Course Title

Child Care Occupations (CHE/HERO)

Description of Target Group

This course is designed for 11th and 12th grade students who have completed successfully Child and the Family A/B, passed the screening process and/or have received permission from instructor.

Purpose

This course is a year long class designed to give high school students the opportunity to learn entry-level job skills in the field of child care while working at: the on-campus preschool, (S.A.P.I.D.) and/or as assigned to community classroom sites. The students learn career opportunities and general job skills related to working with children. The students are also involved in a classroom component to work on preparation, evaluation, curriculum development and enrichment. A certificate of competence will be awarded to students who satisfy all the course requirements and who completed the course. Upon completion of Child and the Family A/B, and the Allan Hancock College final (with an A or B grade) and this course, students may earn 3 units of credit in Early Childhood Education from Allan Hancock College.

Standards of Expected Student Achievement and Proficiency

Upon completion of this course, students will successfully substantiate the following:

1. Determine employment opportunities in the field of child care.
2. Demonstrate use of community resources in locating job leads.
3. Compose personal resume and practice job interview applications.
4. Complete child study reports using classroom observations in physical, mental, social and emotional growth in preschool children.
5. Assist in maintaining a healthy and safe preschool environment.
6. Develop and maintain good interpersonal relationships with peers.
7. Employ positive guidance techniques in the preschool setting.
8. Work in a variety of job roles, as assigned, in a preschool setting.
9. Appraise and plan appropriate activities suitable for preschool students.
10. Gain the skills and experience needed for entry-level employment.
11. Create an atmosphere for diversity training and understanding.
12. Examine potential for extended educational opportunities.
13. Complete a portfolio.
14. Satisfy the following competencies:
15. Gain Knowledge of parenting skills.

THE STUDENT WILL ASSIST THE TEACHER:

a. Maintain health and safety of the children through careful supervision and guidance.
b. Plan and make preparations for children's activities, language, craft, science, math, etc.
c. Conduct and evaluate of children's indoor/outdoor activities.
d. Plan and prepare nourishments and arrange food service.
e. Monitor children's personal needs and resting.
f. Lead/participate in group activities, games, songs, fingerplays.
g. Read and tell stories utilizing various materials and methods.

THE STUDENT WILL:

a. Accept the importance of observing, recording and reporting.
b. Apply basic child development knowledge in work with children 0-6.
c. Relate to a variety of personalities of both children and adults.
d. Use a positive encouraging and accepting attitude toward children, with understanding on fostering good self-esteem.
e. Show understanding of employment opportunities in child care.

GENERAL WORK HABITS:

a. Reports on time.
b. Is dependable.
c. Practices professional ethics.
d. Appropriate grooming and dress.

Instructional Materials

Text and Supplementary Materials (to be determined)

Activities

Practical experience in working in a preschool setting will be included with trips to alternative potential employment sites, guest speakers, videos, class discussions, problem solving and critical thinking activities, and other demonstrative materials as they are made available.

Course Title

Child Care Occupations

Description of Target Group

This course is designed for 11th and 12th grade students, who have completed successfully Child and the Family class, passed the screening process and/or have received permission from instructor.

Purpose

This course is a year long class designed to give high school students the opportunity to learn entry-level job skills in the field of child care while working at: the on-campus preschool, (S.A.P.I.D.) or as assigned to community classroom sites. The students learn career opportunities and geneM1 job skills related to working with children. The students are also involved in a classroom component to work on preparation, evaluation, curriculum development and enrichment. A certificate of competence will be awarded to students who satisfy all the course requirements and who completed the course.

Standards of Expected Student Achievement and Proficiency

Upon completion of this course, students will successfully substantiate the following:

1. Determine employment opportunities in the field of childcare.
2. Demonstrate use of community resources in locating job leads.
3. Compose personal resume and practice job interview applications.
4. Complete child study reports using classroom observations in physical, mental, social and emotional growth in preschool children.
5. Assist in maintaining a healthy and safe preschool environment.
6. Develop and maintain good interpersonal relationships with peers.
7. Employ positive guidance techniques in the preschool setting.
8. Work in a variety of job roles, as assigned, in a preschool setting.
9. Appraise and plan appropriate activities suitable for preschool students.
10. Gain the skills and experience needed for entry-level employment.
11. Create an atmosphere for diversity training and understanding.
12. Examine potential for extended educational opportunities.
13. Complete a portfolio.
14. Satisfy the following competencies:

THE STUDENT WILL ASSIST THE TEACHER:

a. Maintain health and safety of the children through careful supervision and guidance.
b. Plan and make preparations for children's activities, language, craft, science, math, etc.
c. Conduct and evaluate of children's indoor/outdoor activities.
d. Plan and prepare nourishments and arrange food service.
e. Monitor children's toileting, hand washing and resting.

f. Lead/participate in group activities, games, songs, fingerplays.
g. Read and tell stories utilizing various materials and methods.

THE STUDENT WILL:
a. Accept the importance of observing, recording and reporting.
b. Apply basic child development knowledge in work with children 0-6.
c. Relate to a variety of personalities of both children and adults.
d. Use a positive encouraging and accepting attitude toward children with understanding on fostering good self-esteem.
e. Show understanding of employment opportunities in child care.

GENERAL WORK HABITS:
a. Reports on time.
b. Is dependable.
c. Practices professional ethics.
d. Appropriate grooming and dress.

Practical experience in working in a preschool setting will be included with trips to alternative potential employment sites, guest speakers, videos, class discussions, problem solving and critical thinking activities, and other demonstrative materials as they are made available.

Course Title

Clothing and Fashion A

Description of Target Group

Clothing A is designed for all students who possess an interest in sewing.

Purpose

This is the first semester of a one-year course providing instruction in simple garment construction involving fundamental sewing principles and techniques. It supplies students with a knowledge of their garments, both handmade and purchases, and helps them select and make clothes that fit well, are needed, and express their personality types. The student is expected to provide construction materials.

The student will become acquainted with the use of a sewing machine, basic sewing equipment, and basic methods of clothing construction. To fulfill the purposes of this course, the student will complete samples of sewing techniques and a variety of garments.

Standards of Expected Student Achievement

Upon completion of this course, the student will be able to successfully demonstrate the following skills:

1. Select and purchase equipment, fabric, and notions suitable for constructing a garment/project.
2. Take body measurements and select a suitable pattern.
3. Identify the names and the parts of the sewing machine.
4. Identify six items on a pattern envelope.
5. Straighten fabric.
6. Demonstrate proper use of pressing equipment.
7. Identify and describe napped and one-way design fabrics.
8. Construct a garment using a fabric with nap or a one-way design.
9. Select and properly use interfacing.

Clothing and Fashion A (continued)

10. The ability to use the following construction techniques: facing, lapped or centered zipper, buttons and buttonholes, darts, raglan, cut-on or sleeveless garment, hand hemming, creative decoration, topstitching, gathering, and easing.
11. Identify pattern symbols.
12. Explore career possibilities to increase their understanding of the options available to them in the world of work.
13. Use economic understanding and consumer competency to make wise decisions in the use of their resources as related to their clothing.
14. Be aware of good care habits for fabrics and garments.
15. Become acquainted with pattern alterations.
16. Compare cost, time and energy of ready made versus home construction.
17. Use and define terminology related to clothing.
18. Select and design appropriate garments.
19. Determine employment opportunities in the fashion and design industries.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Students will use educational materials which relate to the various areas of clothing construction. These will include handouts, miscellaneous equipment, pattern catalogs, magazines, reference books, filmstrips, and demonstration materials. Students will observe demonstrations and participate in laboratory work.

Clothing and Fashion B

Description of Target Group

This course is designed for all students who possess an interest in sewing. It is recommended that students complete Clothing A prior to enrollment or possess equivalent skills.

Purpose

This one-semester course is directly based upon sewing skills and the standards of expected student achievement acquired in Clothing A. During the second semester, emphasis is placed on construction of a lined garment and other advanced techniques. The student is expected to provide construction materials.

The student will continue to become acquainted with the sewing machine, common sewing equipment, and basic methods of clothing construction. To fulfill the purpose of this course, the student will complete samples of sewing techniques and a variety of garments.

Standards of Expected Student Achievement

1. Using a knit fabric.
2. Awareness of good care habits for fabrics and garments.
3. Familiarity with pattern alterations.
4. Correct use and care of sewing equipment.
5. Explore career possibilities to increase understanding of the options available in the world of work.
6. Economic understanding and consumer competency in making wise decisions in the use of resources as related to clothing choices.
7. Increase in consumer awareness of fashion trends and styles, new fabrics, and innovative equipment and techniques.
8. Comparison of cost, time, and energy of ready made versus home construction.

9. The ability to use the following new and/or advanced construction techniques: handhemming, set-in sleeve, collar application, zipper application, seam finishes, waistline joining using a waistline stay, pattern marking, hooks and eyes and snap application, lining or underlining, interfacing and pocket application.
10. Be knowledgeable of the elements and principles of design as they relate to fashion.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will use educational materials, which relate to the various areas of clothing construction. These will include handouts, miscellaneous equipment, pattern catalogs, magazines, reference books, filmstrips, and demonstration materials. Students will observe demonstrations and participate in laboratory work.

Course Title

Advanced Clothing and Fashion A/B

Description of Target Group

This course is designed for all 10th, 11th, and 12th grade students who have successfully completed Clothing B, have acquired the basic sewing skills and have met the standards of expected student achievement for clothing B. It provides the student the opportunity to contract with the teacher for learning new and varied techniques in clothing construction concerning tailoring, sportswear, sewing with knits, clothes for special occasions, and lingerie.

Purpose

This course is designed to allow the student to become acquainted with the techniques of clothing construction in several of the following categories explored in Advanced Clothing: sportswear, tailoring, lingerie, evening wear, and daytime wear. The student will complete samples of techniques and a variety of garments. The course may be repeated with instructor's permission for credit.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Use and care of various fabrics.
2. Awareness of good care habits for fabrics and garments.
3. Correct use and care of sewing equipment.
4. An increase of consumer awareness of fashion trends and styles, new fabrics, and innovative equipment and techniques.
5. An economic understanding and consumer competency to make wise decisions in the use of their resources as related to their clothing.

Advanced Clothing A/B (continued)

6. Coordinate the ability to use the following new and/or advanced construction techniques as related to the area of study chosen by each student: various seam finishes, topstitching, applique, elastic application on lingerie, hand sewn zipper, covered button, gathering, decorative stitchery, and any other techniques the instructor feels applicable to the project.
7. Coordinate the appropriate pattern, fabric, and accessories.
8. Compare cost, time, and energy of ready made versus home construction.
9. Explore career possibilities to increase their understanding of the options available to them in the world of work.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Students will use educational materials which relate to the various areas of clothing construction. These will include handouts, miscellaneous equipment, pattern catalogs, magazines, reference books, f1lmstrips, and demonstration materials. Students will observe demonstrations and participate in laboratory work.

Course Title

Consumer Awareness

Description of Target Group

This course is designed for 10th, 11th, and 12th grade students who have an interest in improving their roles as purchasers/consumers of the world's products.

Purpose

This one-semester course is designed to develop students who have a constructive and responsible attitude toward improving their roles as allocators of resources and an understanding of the means of achieving a satisfying life-style.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Distinguish between and identify personal values, goals, and resources.
2. Participate in class activities, which will illustrate their knowledge of decision-making process.
3. Be able to identify a hang tag and government label requirement.
4. Identify given fibers found in clothing and textiles.
5. Identify points of good quality construction of clothing.
6. Identify the varying methods of care for garments and its effect on life of the garment.
7. Identify points to look for in purchasing a used car.
8. Participate in class activities, which indicate their knowledge of the different types and coverage of car insurance.
9. Use consumer information and periodicals as a buying guide for new and used cars,
10. List and apply appropriate criteria for purchase of home furnishings.
11. Describe the different types of retail credit.
12. Identify differing values and attitudes, which influence housing choices.
13. Match definitions to titles of medical/dental specialists.
14. Locate on a local map, differing services provided by the local community.
15. List the basic four and their daily requirements.
16. List and apply appropriate criteria for purchasing and comparing foods and food products.
17. The ability to plan carefully for low cost nutritious meals by participating in food purchasing experiences.
18. Explore career possibilities to increase the students' understanding of options available in the world of work.

Consumer Awareness (continued)

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Use of supplementary periodicals, films, filmstrips, visual aids, and demonstration materials.

Course Title

Consumer Mathematics, Home Economics: A/B

Description of Target Group

This course is for 10th, 11th and 12th grade students.

Prerequisites: One year of Algebra 1 or one year of 2-year Algebra

Purpose

The purpose of CONSUMER MATHEMATICS, HE: A/B is to stress the application of Basic Mathematics to consumer problems of personal money records, buying problems and wage income problems.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Reinforced Arithmetic skills
2. Ability to develop methods to handle personal finances
   a. Keeping cash receipts and payment records
   b. Recording and balancing checking account records
   c. Budgeting
3. Show how to handle transactions in wholesale and retail phases of business
   a. Completing sales slips
   b. Computing unit prices
   c. Computing sales taxes
4. Computing income
   a. Salaries, wages, overtime, commissions
   b. Working with different payment methods
   c. Computing deductions
5. Relate life experience to financial needs
   a. Buying investments
   b. Automobile-related expenses
   c. Income taxes and related forms
   d. Mortgages, real estate purchases
   e. Rent, security deposits
6. Relate computations of length, area and volume to real life situations.
   a. Figuring correct amount of wallpaper, paint, roofing materials
   b. Figuring volume of packages, containers and home repair/improvement projects
7. Compute travel expenses and mileage
8. Read airline, rail and bus schedules

Consumer Mathematics HE: A/B (continued)

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Individual work, lectures, class participation, demonstrations, audiovisual materials, guest speakers, and small group activities.

Course Title

Creative Home Arts A

Description of Target Group

Creative Home Arts is designed for 9th, 10th, 11th, and 12th grade students who have an interest in creating artistically designed projects suitable for personal use and/or home decoration. This course may fulfill 5units of credit of the Fine Arts requirement.

Purpose

This is the first semester of a year-long course designed to develop student's use of leisure time in a manner that is creative and self-fulfilling. This course will integrate academic knowledge, skills, and attitudes with application opportunities and career-vocational preparation. Students will be better prepared for continued success in their schooling and in their transition to their chosen careers.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. The ability to define, use and apply specific terminology as it relates to projects.
2. Use basic embroidery techniques and apply them in developing an appropriate project.
3. Use various techniques to create a soft sculpture of their choice.
4. Prepare various holiday art projects.
5. Select an interesting shape and prepare a fabric frame.
6. The ability to recycle materials, normally discarded in the average household, into useful objects and decorations.
7. Recognize and apply the elements and principles of design as they related to their projects.
8. Gain knowledge of the psychology of color as well as color theory and apply these concepts.
9. Apply the elements and principles of design to the skill of flower arranging using various natural and man made materials.
10. Use integrated academic skills as they apply to their various projects.
11. Recognize and construct projects, which incorporate new creative home art design trends.
12. Demonstrate knowledge of selection and purchasing of tools and materials used in the assigned projects.
13. Gain an economic understanding and consumer competency to make wise decisions in the use of their resources as related to design, color and construction of projects.
14. Demonstrate various techniques in tole painting.
15. Demonstrate basic beading techniques.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Use of Supplementary periodicals, video, films, filmstrips, visual aids, and demonstrative materials. Practical experience in creation of projects will be included. Professional guest speakers to be invited.

Course Title

Creative Home Arts B

Description of Target Group

Creative Home Arts is designed for 9th, 10th, 11th, and 12th grade students who have an interest in creating artistically designed projects suitable for personal use and/or home decoration.

Purpose

This is the second semester of a year-long course designed to develop student's use of leisure time in a manner that is creative and self-fulfilling. This course will integrate academic knowledge, skills, and attitudes with application opportunities and career-vocational preparation. Students will be better prepared for continued success in their schooling and in their transition to their chosen careers.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. The ability to define, use and apply specific terminology as it relates to projects.
2. Recognize the elements and principles of design and how they relate to their projects.
3. Gain knowledge of the psychology of color as well as color theory and apply these concepts.
4. Gain an economic understanding and consumer competency to make wise decisions in the use of their resources as related to design, color and construction of projects.
5. Create a needlepoint sampler of 10 different stitches.
6. The application of skills learned in needlepoint into a chosen class project.
7. The ability to recycle use of materials normally discarded in the average household into decorations and useful objects.
8. Compare the costs/savings of home constructed projects versus ready made by construction of candles of various types.
9. Recognize and construct projects, which incorporate new creative art and craft trends.
10. In development of an awareness of career opportunities related to creative home arts.
11. The ability to recycle and use materials normally discarded in the average household into decorations and useful objects.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Use of Supplementary periodicals, video, films, filmstrips, visual aids, and demonstrative materials. Practical experience in creation of projects will be included. Professional guest speakers to be invited.

Course Title

Creative Home Arts, Advanced

Description of Target Group

This course is designed for all 11th and 12th grade students interested in learning creative ways to use leisure time in thorough study of home crafts.

Purpose

This one-semester course is designed to allow the student to accept time for leisure as an opportunity--as something of value. The student will understand creative growth and acquire knowledge of techniques, skills and media, which can be used. The student will complete a variety of projects suitable for use in the home, as gifts, or for personal use made with decoupage and any other current or appropriate home art. Students will provide their own construction materials.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Create, plan and complete individual projects using a variety of media.
2. Select appropriate and coordinated pattern, materials, tools, etc., for individual projects.
3. Compare cost analysis of home-constructed projects versus ready-made.
4. Use and care for equipment correctly.
5. Demonstrate use of basic principles of color and design in class projects.
6. Manage time and resources by completing contact project assignments and following contact plans.
7. Have the ability to define and use specific terminology as it relates to decorative arts projects.
8. Have the ability to complete projects of a quality that are salable and price them for sale.
9. Evaluate completed individual projects.
10. Sell projects as a means of income, such as dual role of homemaker/wage earner.
11. Develop a continuing awareness of career opportunities related to Advanced Creative Home Arts.
12. Will acquire sufficient economic understanding and consumer competency to make wise decisions in the use of their resources.

Instructional Materials

Test and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will use educational materials which related to the various areas of study. These will include books, magazines, pamphlets, miscellaneous equipment, slides, filmstrips, films, demonstration materials, etc. Students will participate in laboratory work and work with resource people.

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: None

Co-requisites: None

Integrated (Academics / CTE)?	Yes
Grade levels:	9th, 10th, 11th, 12th

ourse Description

urse overview:

Culinary Arts 1 is a hands on, work based introduction to the Hospitality and Foodservice Industry Pathway at Santa Maria Joint Union High School District. This concentration course prepares students for gainful employment and/or prepration for the capstone course within the Food Service and Hospitality Pathway. Students will develop marketable skills by demonstrating the principles of safety and sanitation, food preparation skills, and teamwork to manage an environment conducive to quality food production and service operations. Laboratory facilities and experiences, which include food production and service operations, offer school site Work Based Learning opportunities. The Foodservice and Hospitality Industry needs to be staffed at all levels by individuals who are well equipped with the knowledge, skills and appropriate attitudes to satisfy the demands of this dynamic industry. The Culinary Arts 1 course provides students an introductory curriculum designed to develop career specific qualities while strengthening their skills in the core subjects of math, science and English. Common Core Standards will be infused throughout this course to improve critical and creative thinking skills, such as problem solving, information literacy, and quantitative reasoning. Coursework includes kitchen academic preparation, laboratory sessions, and hands-on experience.

Expected student outcomes include:

- Students will develop the level of professionalism as required by an ever-changing foodservice and hospitality industry.
- Students will obtain an ANSI Food Handler Permit through cafoodhandlers.com,
- Students will apply work ethics, attitudes, and professional codes of conduct in the workplace.
- Students will research current and potential issues, trends and problems that could impact foodservice and hospitality operations.
- Students will communicate with co-workers, and instructors by using oral, written, and nonverbal skills required in food services operations.
- Students will demonstrate application of food safety principles in the food production environment. Students will use the concept of The Flow of Food to help ensure food safety.
- Students will gain an understanding of the physical and chemical properties of food.
- Students will improve their mathematical skills through measuring, recording and analyzing data.
- Students will demonstrate skills in the preparation, handling and cooking of foods both basic and creative to produce nutritious, appetizing and attractive meals and specialty items.
- Students will demonstrate reasoning and decision-making skills that reflect critical thinking (problem-solving, creative thinking, quantitative reasoning, application.)
- Students will research career options relating to the Foodservice and Hospitality Pathway.
- Students will maintain a culinary notebook/portfolio.

Direct Instruction

- Demonstrations
- Google Slides or Powerpoints and Lecture/Discussions, Guest Speakers

- Compare and Contrast using Graphic Organizers
- Prior learning assessment and check for understanding- chapter reviews
- Explicit teaching for modeling new skills and techniques
- Drill and Practice Games using Bingo and kahoot.

Indirect Instruction

- Reflective problem solving using personal lab journal
- Creative problem solving used for generating ideas
- Case Studies-from text, current events and competition prompts
- Reflective discussions to stimulate reflection and to extend comprehension
- Writing to Inform-students create menus, brochures, Google Slides presentations
- Concept mapping to explore new information while relating it to previously learned concepts

Experiential Learning

- Field Trips
- Conducting Experiments
- Food Labs, Cafeteria asstiance, Project Based Learning
- Games, Surveys

Independent Study

- Research Projects
- Journals
- Surveys
- Reports

Interactive Instruction

- Role Playing and Brainstorming
- Peer Partner Learning and Discussions
- Kitchen/ Lab Groups
- Think Pair Share-review and check for understanding
- Jigsaw to develop teamwork and cooperative learning
- Interviewing-Job Skills

ɔurse content:

Unit 1: Kitchen Safety & Sanitation

Students will receive instruction on the principles and practices of sanitation and hygiene as applied to the foodservice industry. Students will research the basic local, state and federal sanitation regulations as they pertain to the food industry and understand The Flow of Food and basic HAACP Principles. Students will be able to understand the role of food safety, demonstrate knowledge of sanitation standards, explain various sources of foodborne illnesses and contamination, describe responsibilities of food handlers, as well as present the steps necessary for ensuring safe and sanitary working conditions. Instruction will be given in the form of lecture, videos, and independent reading. Students will verify their understanding of the concepts through passage of quizzes on how the individual can ensure safe food environments and prevent unsafe working conditions in the food industry. Following the unit, students will pass the California Food Handlers exam.

Students will also receive instruction on knife safety and kitchen safety that will be put into practice during kitchen meal preparation and laboratory activities as well as catering projects. Students will be trained on proper knife selection for the task at hand, how to properly hold a knife and how to properly maintain a knife's edge. Students will also be trained on what to do in case of an emergency whether it be a knife cut or a kitchen fire. Students will be tested on first aid, fire safety and the causes of kitchen fires, and the use of fire extinguishers. Students will demonstrate safety skills before participating in food preparation or laboratory activities to ensure a safe and prepared learning environment.

⮒ Unit Assignment(s):

Students must complete and pass the California eFoodHandlers approved safety and sanitation test before food handling is permitted.

During the knife safety section, students will use worksheets to identify proper names and sizes of standard knife cuts. A knife cut test will follow instructor demonstration of proper knife cuts. During the test, students will be required to properly set up a knife cutting station, demonstrate a brunoise, small dice, medium dice, julienne, mince, chop, battonette.

Students will demonstrate their understanding of the proper techniques of dish and small ware washing by entering the dish washing station and washing dishes. Students will explain and demonstrate the chemicals and soaps used in dishwashing, how to wash each item correctly and what steps are taken to ensure proper drying and storage of items washed. Students will write a minimum of one paragraph in their notebooks/portfolios describing the demonstration and methods used. Students will emphasize the importance of dishwashing guidelines in their paragraphs. A rubric will be used to score student notebooks/portfolio.

Unit 2: Culinary Equipment

Students will utilize critical thinking to organize supplies and ingredients as well as setting up equipment in our kitchen pantries. Students will identify tools, uses, safety and storage for tools and equipment. Students will use a variety of techiniques to learn and memorize equipment, smallware and tools. Exit tickets will be used to ensure understanding of equipment and their uses. Students demonstrate proper tools and equipment use through daily food production and labs.

⮒ Unit Assignment(s):

Demonstrate the use and care of a minimum of ten teacher identified pieces of equipment and tools used in the laboratory. Students need to complete and pass a culminating teacher prepared exam on equipment and tool use, care and storage.

Utilizing school and community resources, students will identify, define and demonstrate the safe use and care of facilities and equipment. Students illustrate how to use the facilities and equipment properly when they are participating in the food preparation labs. Students will identify and assess the possible safety hazards commonly occurring in the laboratory

facilities. Through teacher observations students are evaluated on the proper use, care and storage of equipment. Students take a laboratory safety test which includes the safety hazards and emergency procedures specific to the class. A percentage of the student's grade is based on proper sanitation of the facilities and equipment.

Unit 3: Career Awareness and Employability Skills

Students will evaluate career options related to foodservice and hospitality as well as trends in the industry. They will be able to define and describe employability skills and professionalism. Students will describe the expectations of employers, job related responsibilities, positive work habits, work ethics, and ethical behavior as well as evaluate dress, grooming, and personal hygiene appropriate for various job situations. Students will analyze skills needed to work effectively and efficiently as a supervisor or employee and describe and practice the behaviors and attitudes that contribute to success in job retention and promotion.

Students receive instruction on filling out employment applications, interviewing and professional conduct necessary to gain employment. Students will analyze what employers are seeking when hiring. Students must prepare answers to common interview questions in paragraph form using higher-level vocabulary that reflects their skills and desirability for the position they have chosen. Guest speakers are brought in for authenticity and to perform mock interviews. Students research various hospitality job titles and create various projects describing the positions to include duties, salary, hours and promotion possibilities.

⮒ Unit Assignment(s):

Based on focus questions provided by the teacher the student will investigate different careers in the Hospitality, Tourism and Recreation Industry and write a research paper on one of their choices.

Students must fill out an employment application and participate in mock interviews where they must utilitze their prior knowledge of proper interviewing skills to be successful.

Unit 4-Leadership, Communication and Teamwork

Students will demonstrate the characteristics of teamwork, leadership, and citizenship in the school, community, and workplace settings. Students will apply multiple approaches to conflict resolution and their appropriateness for a variety of situations in the workplace. They will also demonstrate how to interact with others in ways that demonstrate respect for individual and cultural differences and for the attitudes and feelings of others.

⮒ Unit Assignment(s):

Through peer, self, and teacher evaluations students evaluate their strengths and weakness related to teamwork skills.

Students work in groups when doing various projects as well as food production labs. Students need to communicate effectively with group members in order to accomplish the task at hand. Students use problem solving skills when facing a group conflict. Communication skills are some of the most important skills the students learn and use in class as well as the workplace. The skills are assessed through self reflections and teamwork and collaboration rubrics. The leadership roles in the lab groups change on a weekly basis giving each student an opportunity to be a leader in their individual group. Students evaluate themselves as well as their team mates at the end of each lab or other group assignment through rubrics.

Unit 5-Culinary Math & Proper culinary measurements

Instructor will present information about measuring equipment and how fractions and math skills are used on a daily basis in a kitchen setting. Students will discuss and practice culinary math skills through recipe conversion and measurements used in food production. Students will have frequent math and measurement activities including recipe conversions in the form doubling, tripling and halving measurements, reinforcement of these skills will be utlized during culinary labs. Students will be able to identify different types of standard measuring; both volume and liquid; and the proper use of each. Students will be able to identify different types of measuring tools, and properly use digital scales.

Supplemental Instructional Materials for Culinary Math:

- http://www.khanacademy.org
- http://www.recipetips.com
- http://www.goodcooking.com

⮓ Unit Assignment(s):

Students will be required to:

1. Identify the parts of a standardized recipe.
2. Utilize and explain the importance of using a standardized recipe.
3. Use math applications to vary the yield of a standardized recipe.
4. Describe factors that could impact conversions in a standardized recipe.
5. Demonstrate correct technique for measuring and portioning ingredients by weight and by volume.

Unit 6-Baking Fundamentals and Food Science

Students will be introduced to the fundamentals of baking and will demonstrate a knowledge of basic ingredients, bread production, quick breads and muffins, cookies, cakes and pies. Students will be able to demonstrate a variety of mixing methods to produce the appropriate bakery product. Students will be able to interpret formula instructions and convert measurements. Students will acquire this knowledge through instructor lectures and demonstrations, textbook reading, laboratory activities and baking labs. Students will understand the difference between chemical, physical and biological leaveners. Students knowledge will be assessed through quizzes and analysis of prepared baked items.

Topics to be covered

- Yeast dough
- Creaming method
- Muffin method
- Egg Foam method
- Biscuit Method
- Various cookie types (bar, drop, rolled, ice box, etc.)
- Cakes

Key Assessments:

Through a variety of teacher led lectures and demonstrations students will learn each of the different baking and pastry methods for each topic. Students must learn the fundamentals of the variety of baking and pastry methods and demonstrate their understanding through labs. Students must follow a mutlistep procedure in order to be succesful and aquire the desired end result.

Students must reflect on their laboratory procedures, method, and skills they are obtaining and ways they can improve upon. This also includes problem solving with their peers to correctly indentify mistakes and ways to work collabortively with their peeers.

Students will conduct experiments to determine the environmental requirements for yeast to produce fermentation and how it changes sugar to carbon dioxide and also experiment with different water temperatures with activation of yeast. Students will conduct experiments to illustrate the production of gas with chemical leavening agents using a vareity of acids to activiate chemical leaveners.

Students will expriment using different fats with a particular recpie. After the product has been baked the students must examine each of the different groups baked good by measuring the product using a kitchen ruler, compare the brownness of the product, flavor, density, and moistness.

Unit Assignment(s):

Teacher led instruction on proper measurement techniques through lecture and demonstration. Students practice proper measurement techniques using both dry and liquid measuring equiptment. Introduction to measuring by weight using a standard kitchen scale. Students will compare and contrast measurements by volume and by weight and discuss the benefit of each.

Students will complete various culinary math assignments that require students to cut a recipe in half, doubling or tripling a recipe. Students will also have to identify proper equipment for various ingredients to measure them properly.

Unit 7-Cooking Fundamentals

Students will be introduced to fundamental cooking techniques and theory with textbooks, instructor-led lectures, peer presentations and application of knowledge through kitchen activities. Students will identify ways to manage time and resources when planning and preparing their recipe.Students will be able to indentify and implement mise en place. Students will be able to apply appropriate cooking methods for potatoes, eggs, vegetables, grains and sauces. Students will learn to identify and prepare nutritious foods. Students will also demonstrate time management skills in order to complete assigned kitchen station assignments, laboratory activities, and clean up.

Topics to be covered: Stocks and sauces, variety of heat cooking methods, Breakfast menu items, vegetable techniques, and starch cooking.

⮒ Unit Assignment(s):

Through a variety of teacher led lectures and demonstrations students will learn each of the different cooking methods for each topic. Students must learn the fundamentals of the variety of cooking methods and demonstrate their understanding through labs. Students must follow a mutlistep procedure in order to be succesful and aquire the desired end result.

Students will utilize mise en place throughout all laboratory procedures.

Students must reflect on their laboratory procedures, method, and skills they are obtaining and ways they can improve upon. This also includes problem solving with their peers to correctly indentify mistakes and ways to work collabortively with their peeers.

Industry Business and Marketing

Knowing the industry and how to maintain a viable business and utilize proper marketing is essentail within the hospitality industry. Students will learn how local and international businesses market themselves and their products they offer to consumers. They will examine and learn the broad scope of promoting, pricing and distrubution of products and services. Promotional mixes will be covered including advertising and logo design/packaging and publicity. Students will refine their public speaking skills by presenting their business plan in front of their peers.

⮒ Unit Assignment(s):

Students will research various food truck businesses and their menus to devise their own concept of a food truck business. Students will observe various food truck businesses through mutlimedia presentations and guest speakers to gain insight and knowledge to the business. Through teacher led instruction, students will develop a 3D food truck concept complete with a customized logo and menu. Students will market their business using a social media account and appropriate marketing techniques. They will type out a business plan that includes their overall theme, marketing techniques, menu items, and tips for operating a successful business within the hospitality industry. Students will present their business plan, social media account and logo to the class and partcipate in a class competition. Each student will be a consumer deciding where they would spend their money based upon the business plan presented. Whichever business plan aquires the most money, the entire class will be able to make one menu item from the winning business truck.

Course Title

Culinary Arts I A

Description of Target Group

This course is designed for students who have an interest in preparing themselves to understand and apply the principles of Culinary Arts and their relationship to health and well-being. There is no prerequisite for this course.

Purpose

Culinary Arts is a two-semester course designed to provide individuals with the competencies needed in the areas of food and nutrition. The skills, knowledge, and attitudes taught in this course will enable students to develop goals and practice decision-making skills relating to: basic concepts of nutrition, resource conservation, food preparation, use and care of equipment and appliances, kitchen organization, food buying, food preparation, food preservation, use of consumer resources and agencies, and the relationship of nutrition and physical fitness to good health. Changes in eating patterns, life-styles, and technological innovations complicate the ability of individuals and families to maintain and/or improve their nutritional status. A sound approach to meeting individual and family nutritional and health needs is to apply knowledge in the selection and preparation of foods and to achieve a balance between caloric intake and exercise.

The first semester will focus on safety and sanitation in the kitchen, service and eating, food preparation terms, following recipes and the differences between, and advantages of, different cooking methods, analyzing diet in relation to proteins, carbohydrates and fats and the use of a microwave oven.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully:

1. Apply the basic academic skills of reading, writing, speaking, and listening as well as mathematical and scientific skills as required for occupations related to foods, food science, and nutrition and for transfer to other jobs and careers.
2. Apply critical thinking skills to the occupations related to the area of foods, food science, nutrition, and for transfer to other jobs and careers.
3. Develop goal selection and decision-making skills and apply this knowledge to food and nutrition including service and eating, the diet as it relates to foods that provide the essential energy nutrients and diet modification related to these nutrients.
4. Understand basic concepts of nutrition and recognize valid nutritional information, and complete a personal diet analysis.
5. Demonstrate food preparation skills using current technology and nutritional knowledge in preparing foods rich in vitamins, minerals and water (fruits, vegetables, beverages, soups) and the effect of fats in the diet and meal management.

Culinary Arts 1 A (continued)

6. Demonstrate effective use and care of essential equipment and appliances.
7. Compare cost, quality, and nutritional value when buying, preparing food.
8. Use appropriate methods to preserve and store foods.
9. Identify and use resources and agencies that provide food and nutritional information and protection.
10. Examine the relationship of nutrition and physical fitness to good health.
11. Develop and demonstrate leadership skills as an integral part of food and nutrition.
12. Demonstrate teamwork, sportsmanship, and citizenship in cooperative and competitive situations.
13. Develop personal and social interaction skills.
14. Apply effective problem-solving techniques in personal, family, and work situations.
15. Manage all available resources related to food and nutrition.
16. Demonstrate awareness of careers related to food and nutrition.
17. Develop and demonstrate skills, knowledge, and attitudes related to jobs and careers in food and nutrition.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Lectures, participation in class discussions, demonstrations, films, filmstrips, books, magazines, videos, computer programs, diet analysis, miscellaneous equipment, laboratory work, experiments, field trips, and working with resource people.

Course Title

Foods and Nutrition B

Description of Target Group

This course is designed for students who have an interest in preparing themselves to understand and apply the principles of food and nutrition and their relationship to health and well-being. Prerequisite: Successful completion of Foods and Nutrition A or instructor's approval.

Purpose

Foods and Nutrition is a two-semester course designed to provide individuals with the competencies needed in the areas of food and nutrition. The skills, knowledge, and attitudes taught in this course will enable students to develop goals and practice decision-making skills relating to: basic concepts of nutrition, resource conservation, food preparation, use and care of equipment and appliances, kitchen organization, food buying, food preparation, food preservation, use of consumer resources and agencies, and the relationship of nutrition and physical fitness to good health. Changes in eating patterns, life-styles, and technological innovations complicate the ability of individuals and families to maintain and/or improve their nutritional status. A sound approach to meeting individual and family nutritional and health needs is to apply knowledge in the selection and preparation of foods and to achieve a balance between caloric intake and exercise.

The second semester will build knowledge, skills, and diet analysis from Foods and Nutrition A, and focus on diet revision and analysis in relation to fats, water, vitamins, minerals, and preparation of fruits, vegetables, beverages, soups and regional foods.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully:

1. Apply the basic academic skills of reading, writing, speaking, and listening as well as mathematical and scientific skills as required for occupations related to foods, food science, nutrition, and for transfer to other jobs and careers.
2. Apply critical thinking skills to the occupations related to the area of foods, food science, nutrition, and for transfer to other jobs and careers.
3. Develop the goal selection and decision-making skills and apply this knowledge to food and nutrition including diet revision as it relates to foods that provide vitamins, minerals, nutrients and water.
4. Understand basic concepts of nutrition, recognize valid nutritional information and complete a revised personal diet analysis.
5. Conserve resources when planning and preparing foods.

Foods and Nutrition B (continued)

6. Demonstrate food preparation skills using current technology and nutritional knowledge in preparing protein foods (dairy, meat, poultry, fish, meat alternates), grains, pasta, and breads.
7. Demonstrate effective use and care of essential equipment and appliances.
8. Organize and maintain a safe, sanitary, and efficient kitchen.
9. Use appropriate methods to preserve and store foods.
10. Identify and use resources and agencies that provide food and nutritional information and protection.
11. Develop and demonstrate leadership skills as an integral part of food and nutrition.
12. Demonstrate teamwork, sportsmanship, and citizenship in cooperative and competitive situations.
13. Develop personal and social interaction skills.
14. Apply effective problem-solving techniques in personal, family, and work situations.
15. Manage all available resources related to food and nutrition.
16. Demonstrate awareness of careers related to food and nutrition.
17. Develop and demonstrate skills, knowledge, and attitudes related to jobs and careers in food and nutrition.

Instructional Materials

Text and Supplementary Materials

Title: Culinary Arts 2 A/B

Length of course: Full Year

Subject area: College-Preparatory Elective (G) / Interdisciplinary

UC honors designation? No

Prerequisites: Culinary Arts 1 (Required)

Co-requisites:	None
Integrated (Academics / CTE)?	Yes: Food Service and Hospitality
Grade levels:	11th, 12th

ourse Description

urse overview:

Culinary Arts 2 is a capstone course in the Food Service and Hospitality Career Pathway. This course will build upon the foundation techniques of Culinary Arts 1, which gave students an opportunity to utilize a hands-on laboratory learning environment to begin industry driven culinary arts and baking and pastry skills.

Students pursuing a career in food service and hospitality will study all aspects of the food service and hospitality industry through this course, including laws and regulations; safety and emergency procedures; sanitation and food handling; tools, utensils, appliances and equipment; facilities management; customer service and guest relations; food and beverage production, preparation and service; sales and marketing strategies; costing and cost analysis; entrepreneurship, personal, interpersonal and communication skills, thinking and problem-solving skills; balancing personal, family, and work responsibilities; and teamwork and leadership.

Students will have an opportunity to take industry certification for management positions in the food service and hospitality industry.

This course provides rigorous, standards-driven instruction and assessment, integrates academic and career-technical concepts through the Foundation and Pathway Standards, and contributes significantly to students' academic achievement. Students will be challenged to build leadership and problem-solving skills; as well as reading, writing and speaking skills throughout the entire course.

urse content:

Professional Standards/Dignity of Work

Students will learn a variety of work place ethics where critical thinking will be utilized to determine the need for a code of ethics, ethical behaviors, legal behaviors and their role of personal integrity. Students will demonstrate professionalism in the work place which include appropriate grooming, clothing, and personal hygiene necessary for work in the industry.

Unit Assignment(s):

Students will examine a variety of work place environments and dissect and discover appropriate professional behaviors. In small collaborative groups students will make a list of desirable traits that an employer will be looking for and compare and contrast with the entire class. During this process students will discover the variety of ethical issues that different work environments face and how to appropriately manage these issues.

Career Planning

Through out the content of the curriculum, students will focus their learning on the many career opportunities. Students will investigate the differences amongst the various careers in the industry. Students will explore their career interests within the food service and hospitality industry. They will learn the variety of careers, qualifications, knowledge and skills needed for a career in the industry. Students will also build a resume and learn interview techniques to be successful in their post high school endeavours. Students will also be able to demonstrate appropriate interview techniques.

⮒ Unit Assignment(s):

Through out the content of the curriculum, students will focus their learning on the many career opportunities. Students will investigate the differences amongst the various careers in the industry and compile a typed research paper. The paper will be 3 pages in length and must explain one specific career within the hospitality industry. Students will present their findings to the class through an oral presentation. During this unit of career planning, students will assemble a resume that will include their experience and knowledge within the food service and hospitality industry. Each student will present their resume and will be a part of a mock interview to demonstrate their understanding of proper interview skills.

Safety, Security, and Emergency Procedures

Students will identify common causes of accidents in the workplace and how this affects the establishment. They will analyze the cause, discover ways to prevent common accidents and devise a plan for treatment for work related accidents.

During this unit students will discuss security procedures, their importance to the hospitality industry and what it means to maintain employee and guest security as well as maintaining equipment security.

Emergency procedures will also be covered during this unit and handling disasters.

⮒ Unit Assignment(s):

Throughout this unit students will examine real world case studies within the hospitality industry, point out key elements that are related to safety, security and emergency procedures and write an essay on which is the proper procedure to follow in their case. Students must use their prior knowledge of professional standards in the workplace and as well,

demonstrate their understand of their new knowledge and correctly identify the proper procedures. Students will have to use their analytical thinking and use proper written language, punctuation and grammar.

Students will work together in small collaborative groups of 3-4 students and discuss various hospitality experiences and if they were managed properly. During this time students will brainstorm and put themselves in the managers shoes and express how they would have handled the situation differently and appropriately.

Principles of Sanitation and Safe Food Handling

Maintaining sanitary conditions and standards in personal grooming and hygiene is essential in the culinary industry. Students will examine how sanitation and hygiene will affect the hospitality industry. Students will examine local, state and federal sanitation regulations. Causes and prevention of food-borne illnesses. Purpose and process of required certification.

Food contamination, the different types, causes and ways to prevent contamination. Proper sanitation techniques, safe use of chemicals.

⮒ Unit Assignment(s):

Students will be reviewing material from the ServSafe Food Handlers course book. Management of any hospitality industry is held to a higher standard and must be knowledgeable to effectively manage their staff to ensure they are providing safe and sanitary food to the public. This exam in an industry recognized exam which is comprised of 90 questions that must be completed within 2 hours and have a certified proctor from the National Restaurant Association present. This rigorous unit and exam will have students understanding more about sanitation and serving food safely. In order to obtain this certification students must pass with a 75% or better.

In order to prepare for the exam students will take part in cooking labs to experience how to avoid several sanitation hazards (biological, chemical, physical). Students will also explore ServSafe standards through an industry field trip. The field trip puts the students in an industry restaurant and allows them to identify and examine their procedures to ensure they are meeting ServSafe standards.

Weekly reading will be required until the date of the exam. The course book contains 10 chapters, approximately 20-30 pages in each chapter. Students will revisit each chapter after they have read the book in its entirety.

Students will comprise a Powerpoint or Prezi presentation regarding an assigned chapter within the book and present it to their peers. Students will orally present the information to the class as they are showcasing their technological review.

Operating and Managing Cafe

Operating a student run cafe. Proper use of industry equipment, customer service, accounting and record keeping. Producing pastries and beverage for resale for the public.

Students will work in teams and as a whole to successfully complete all orders within the 50 minutes.

⮒ Unit Assignment(s):

Students will run a student run cafe that offers freshly baked pastries, latte's, mocha's, Chai lattes, etc. from an industry espresso machine. Students will have to learn the different parts of the equipment and how to effectively use their time. Students will actively be working in the kitchen lab reading recipe's and using appropriate measurements and tools in order to be successful.

Students will take orders from customers, communicate with their team to ensure they are meeting all of the customers needs, including allergy information. Deliver fresh pastries or freshly brewed coffee, or espresso drinks. Ensure they are using their customer service skills to give the customer quick and excellent service, provide appropriate change and proper record keeping. (Providing the customer with a receipt)

Once all deliveries have been completed students will have to count their money and provide the instructor with appropriate documentation that they have been successful with deliveries.

During this unit students will have to reflect on their efforts in the cafe and provide a written reflection in which they examine their behaviors as well as their interaction with their peers to ensure they are meeting the demand and needs of their customers.

The cafe provides students with a real world experience of how to operate a business. They must think critically with each aspect of the cafe to ensure they are following ServSafe food safety standards, professional standards, prevention of food borne illnesses, safety and security procedures. Students will continually be challenged with running the cafe as they will add new items each week to meet the demand of their customers.

Baking and Pastry

Students will continue their baking and pastry education that they previous learned from the prior year course. During this second year course students will review the fundamentals of baking and pastry with increased levels of difficulty with their recipes and techniques. Students will gain knowledge through instructor lectures, laboratory activities, and textbook materials. Students will be able to demonstrate a variety of mixing methods and techniques to prepare and create a baked good. Students will learn and practice to master the creaming method, muffin method, an egg foam method, working with yeast. Students will also have an opportunity to learn a variety of different cookie methods such as; drop, cut-out, and piping. Students will also learn and be able to demonstrate how to make a laminated dough by hand as well as using industry lamination equipment. After each section students will complete a written quiz to assess their knowledge.

⮒ Unit Assignment(s):

At the conclusion of each section, students will be challenged to demonstrate their understanding of related key concepts learned during this unit. Students will have hands on experiences as well as formal lectures by instructors and peers. During labs, students will work individually as well as a member of a team working to create the desired end product. Students must first prepare themselves before the lab by analyzing the recipe, looking at their ingredients and decide what tools and equipment they must use. Students will self reflect after the lab to examine their ability to follow the recipe and use the appropriate tools, and how they feel they participated as a member of the team through a written report.

The final project for this unit, students must create a single layer specialty cake. Students must develop a plan and draw their projected specialty cake. The cake must meet certain specifications which include, the cake must be filled, Iced with buttercream, include a decorative boarder, 3 design elements using fondant, marzipan, decorators chocolate

---

Chef Research

Students will select a famous chef from history and research their background; schooling, experience, authored books, etc. Through this unit students will examine what it took for these chefs to become successful and analyze their path.

Students must be proficient with search engines and make sure the information they are collecting is valid.

⮒ Unit Assignment(s):

Students will create a 2 page paper using MLA format to discuss their famous chef, their background, their successes, etc. Students will also create a 3-d display on their chef with the most important information they want to share.

Upon completion of this assignment students will orally share their findings on their chef.

Culinary Math and Equivalences

The chef instructor will review a variety of techniques and measurements to be successful. Measuring equipment and how fractions and algebra skills will be used on a daily basis while working in the cafe kitchens. Students will need to be proficient in culinary math skills through recipe conversion, measurements used in large quantity food production and recipe costing.

⮒ Unit Assignment(s):

Students will continually practice recipe conversion in the from of tripling, quadrupling, halving, and quartering measurements including whole numbers and fractions through repeated class work and homework. Students will have to select a recipe and "shop" for the ingredients from a local grocery store. They must find each item and record its cost. They will have to do a cost analysis per the yield on the recipe and analyze if they can make the item more cost affordable and how much they would resale the item to offset the business expenses.

Brief Course Description

This ten-unit course is designed to prepare students who are interested in pursuing a career in culinary arts. This course will provide students opportunities for service learning experiences such as job shadowing, student internships and operating a student-run business, thus enabling them to transition from school to careers. Students will study all aspects of the industry including safety regulations and safe food handling; nutrition; the newest technology in food preparation and service; customer relations; entrepreneurship; cost and profitability analysis; employment and management skills.

B. COURSE CONTENT

Upon completion of this course students will be able to successfully demonstrate the following;

1. Understand the relationship between nutrition and health and wellness.
2. Demonstrate proper food handling techniques for safe food preparation and storage
3. Exhibit safety and sanitation in a food service/lab environment.
4. Be able to prepare and evaluate a variety of foods including; baked goods, entrees, vegetables, salads, soups, desserts, and beverages.
5. Utilize meal management skills such as time management and meal planning.
6. Use new technology related to food service and hospitality industry where applicable
7. Demonstrate proper etiquette and table service skills.
8. Design a table service based on the principle and elements of design.
9. Simulate restaurant management in a food service setting.
10. Explore career opportunities and/or experience in the field of food science, food service hospitality, or food technology.
11. Understand food cost, production and marketing techniques
12. Apply integrated academics (i.e. reading, writing, math, and science) throughout the curriculum.

9. Subject Area

- ☐ History/Social Science
- ☐ English
- ☐ Mathematics
- ☐ Laboratory Science
- ☐ Language other than English
- ☐ Visual & Performing Arts (for 2003)
- ☒ College Prep Elective

10. Grade Level(s)
11th & 12th

11. Seeking "Honors" Distinction?

☐ Yes ☒ No

12. Unit Value

- ☐ 0.5 (half year or semester equivalent)
- ☒ 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Date of School Board Approval

14. Was this course previously approved by UC? ☐ Yes ☒ No If so, year removed from list? _____

Under what course title? _____

15. Is this course modeled after an UC-approved course from another school? ☒ Yes ☐ No

If so, which school(s)? Calexico High School

_____

16. Pre-Requisites
11th or 12th grade designation

17. Co-Requisites
None

18. Brief Course Description

B. COURSE CONTENT

Please refer to instructions

19. Course Goals and/or Major Student Outcomes

1. **Promote reading & writing abilities, critical thinking skills, and logical thinking through the completion of written and oral assignments as well as creative projects.**
2. **Improve oral communication skills by participating in oral presentation activities.**
3. **Enhance teamwork and leadership skills by working with others to complete a variety of assignments.**
4. **Identify the inter-relatedness of working with children (teaching), parenting and community work as evidenced by the study of the major theories of development.**
5. **Improve evaluation, synthesis and discussion techniques through the use of real-world application of core knowledge.**

20. Course Objectives

The Student will:

1. Identify, describe and interpret the major theories of development related to the principles of heredity and describe the range of environmental influences on prenatal development.
2. Explain how birth occurs and describe characteristics of normal development.
3. Recognize the basic characteristics or perceptual development.
4. Demonstrate the process of language development and analyze how children learn language. Study the influence of language on thought processes and the relationship of social class and culture on language development.
5. Describe the concept of personality and identify some of its components.

21. Course Outline

I. Major Theories
A. Similarities or differences
B. From conception to birth
1) Nature vs. nurture
2) Developmental change
C. Theories of development
1) Biological
2) Learning
3) Psychoanalytic
4) Cognitive-developmental
5) Contrasting
D. Research on development

II. Prenatal Development
A. Conception
B. From conception to birth
C. Genetic errors
D. Environmental influences
E. Other characteristics affecting development

III. Birth and the Newborn
A. Birth
B. Newborn abilities and reflexes
C. Daily life of infants
D. Individual differences

IV. Physical Development
A. Reasons to study
B. Basic sequences and patterns
C. Development of sexual maturity
D. Physical changes: Effect of behavior
E. Motor development and toys
F. Determinants of growth

V. Perceptual Development
A. Basic sensory skills
B. Complex perceptual skills
C. The object concept
D. Individual differences in perception
E. Explanations of perceptual development

VI. Cognitive Development
A. Three views of intelligence
B. Measuring intellectual power IQ Test
C. Alternative views
D. Influence of environment
E. Group differences: Race and sex
F. Piaget's basic ideas
1) Sensorimotor period
2) Preoperationsl thought
3) Concrete operational thought
4) Formal operational thought
5) Criticisms of Piaget's theory
6) Information processing

VII. Language Development
A. Early steps

B. Grammar development

C. Development of word meaning

D. Influence of environment

E. The child's role

F. Individual differences

VIII. Personality Development

A. Biological

B. Learning approach

C. Psychoanalytic theories

IX. Self-concept in children

A. Developmental patterns

B. Individual differences

C. Gender and sex-role concepts

X. Development of Social Relationships

A. Attachment theory

B. Parent/child bonding

C. Attachment process

D. Horizontal relationships

XI. Social Cognition

A. General principles

B. Feelings toward other people

XII. Impact of Families, School and Culture

XIII. Atypical Development

22. Texts & Supplemental Instructional Materials

The Developing Child

23. Key Assignments

24. Instructional Methods and/or Strategies

Textbook materials will be supplemented with videos, human resources, and projects using the Internet. Ongoing discussion, oral presentations of class assignments and group projects will be completed. Emphasis will be placed on relevant real-world application of curriculum and on oral and written projects requiring active participation in teams or as individuals.

25. Assessment Methods and/or Tools

Class participation
Quizzes and tests
Teacher evaluation
Independent and group projects
Cooperative work with other students
Final examination

C. HONORS COURSES ONLY

Please refer to instructions

26. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

27. Context for Course (optional)

28. History of Course Development (optional)

Course Title

FAMILY HEALTH (previously Individual Family Health)

Description of Target Group

This course is designed for 9th to 12th grade students who need to meet the state health and life science B requirements for graduation as well as a career path related to the health field.

Purpose

This course meets the state frameworks in the area of Health and Life Science B, in addition to meeting the Life Science B requirement for graduation. It is also an integral part of the career path in Family Health. It is a one semester course designed to prepare students to understand the basic principles of physical and emotional health for personal family well being.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully substantiate the following:

1. Understand the relationship of the health of an individual to the well being of the family.
2. Develop and maintain good personal health habits.
3. Learn stress management techniques.
4. Develop goal selection and decision making skills and apply this knowledge to individual and family health.
5. Be able to select nutritious foods and plan balanced menus to maintain individual and family health.
6. Analyze the relationship between a healthy body system and wellness.
7. Demonstrate responsible behavior in order to avoid health-related risks, including S.T.D.s and HIV/AIDS education.
8. Develop knowledge, understanding and awareness about the use and misuse of substances (alcohol, drugs, narcotics, tobacco, etc.) by individuals.
9. Recognize the value and function of families, and individual and family member responsibilities.
10. Assess needs of family as they assume changing roles and responsibilities.
11. Demonstrate a positive mental attitude towards life situations.
12. Understand the cycle of development from conception through birth.
13. Be able to promote and maintain individual and family health and safety.
14. Show appropriate responses for emergency situations as well as basic first aid.

15. Develop the understanding that an environment in ecological balance enhances one's mental, social and physical well being.
16. Determine employment opportunities in the health field.
17. Understand how the structures of living things perform their functions, interact with each other, and contribute to the maintenance and growth of the organism.
18. Know how humans interact with other living things.
19. Understand the biochemical basis of life and of metabolism.
20. Understand how heredity determines the development of individual organisms and apply this to human genetics.
21. Demonstrate responsibilities of humans toward ecosystems.

Instructional Materials

Text and Supplementary Materials to be determined.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Class discussions, problem solving and critical thinking activities, guest speakers, videos, practical experiences where appropriate, field trips to possible employment sites, etc.

Fashion Design A/B
