This is a two semester college preparatory laboratory science course designed to teach students about Earth & space science. Students will learn about the tectonic processes that shape the Earth, how the tectonic processes are the driving forces of the Earth's resources, and how those resources are affected by different geologic hazards. Students will learn how to read & interpret both geologic maps and cross-sections in order to successfully complete the given projects. There will also be a unit that will cover space science including the big bang theory, stellar evolution, and planetary geology. Hands-on activities & labs occupy approximately 40% of the given class time & are designed to reinforce student understanding of scientific investigation & experimentation within the realm of geologic science.

Santa Maria Joint Union High School District

Course Description/Major Concepts

Course Title: Geology A (P) **Department: Righetti Science**

Course Length: One Semester, 5 units **Course Adoption:** UC/CSU "a-f" inclusion

Textbook: Refer to: Secondary Adopted texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Prerequisites:
Successful completion of two years college preparatory high school science with a "C" or better.
Successful completion of two years of high school English.
Successful completion of one year of high school algebra.

Course Description

This is a two semester college preparatory laboratory science course designed to teach students about Earth and space science. Students will learn about the tectonic processes that shape the Earth, how the tectonic processes are the driving forces of the Earth's resources, and how those resources are affected by different geologic hazards. Although part of the class will cover major events in the geologic history of North America, most of the emphasis will be on the geologic history of California and the local area (Santa Barbara County). Students will also learn how to read and interpret both geologic maps and cross-sections in order to successfully complete the given projects. There will also be a unit that will cover space science including the big bang theory, stellar evolution, and planetary geology. Hands-on activities are an important part of the curriculum in order to reinforce student understanding of scientific investigation and experimentation in the realm of geologic sciences. These hands-on activities and laboratory activities will occupy approximately 40% of the given class time.

Course Goals

At the completion of the course, Geology, students will be able to do the following:

- Students will be able to think critically in order to solve real-world problems by completing standards-based group and individual projects, laboratory experiments and assignments.
- Students will be able to determine areas which may be threatened by natural disasters, by using learned geologic concepts, when looking for places to live in later life.

- Students will be able to explain the physical and historical geology of an area around the world whether for school projects or individual vacations.

Geology A (P)

Course Objectives

At the completion of the course, Geology, students will:

- Describe the process of stellar evolution, the life & death of stars, in order to fully explain the process of our own sun within the solar system.
- Create reproducible labs dealing with real-world geology & engineering.
- Explain how the economic resources of California, including water, gold and silver, has influenced the history and politics of California over time.
- Describe how economic resources and natural disasters in California and our local area, Santa Barbara County, are affected by geologic processes.
- Explain how oil is formed, the economics & politics behind oil drilling, and how it affects our local economy, Santa Barbara County.
- Define and describe plate tectonics and identify the effects plate tectonics has around the world.
- Assess volcanic hazards around the world and it's impact economically, environmentally and on human life.
- Identify geologic hazards around the world and develop earthquake-proof buildings given the socioeconomic status of those areas.
- Develop an earthquake preparedness plan for their home and help the school to strengthen their own preparedness plans.
- Assess seismic data to determine where the epicenter is located.
- Apply geologic principles when interpreting geologic maps and creating geologic cross-sections.
- Identify rocks and minerals.
- Utilize identity of rocks and minerals to interpret the depositional environment of an area.
- Assess the affects of pollution, acid rain and volcanic outgassing through laboratory experiences and the impact it has on our environment.
- Identify how the atmosphere and topography have changed over geologic time and how these changes gave way to the evolution of species over time.
- Demonstrate writing competency through written and oral presentations.

Geology A (P) Course Outline	Key Activities & Assignments
General Science	
*Observation vs. Inference	*Collapse Video:* Take observation notes. Write an inference as to why collapses occurred.
*Metric Conversions	
-Metric-Metric Conversions	*Lab:* How big is our room. Can a dinosaur fit inside?
-Metric-English Conversions	*Lab:* Dinosaur Dimensional Analysis
*Density	*Lab:* Density Lab
	Lab: Salinity Lab
	Quiz: Metric Conversions
Astronomy	
*Big Bang Theory	*Give background in astronomy.
*Stellar Evolution	*Go over astronomy standards with students.
*Standards-based astronomy unit to include:	*In groups, students to research a specific astronomy standard.
-Nuclear fusion & the sun	*Students to present information to class.
-The formation of the solar system & how the earth's atmosphere has changed over time. Including how asteroid impacts have had an impact on extinctions throughout geologic time.	*Entire class to answer standards-based astronomy questions pertaining to information given during presentations.
-Galaxies, quasars, black holes & Einstein's theory of general & special relativity.	*Students to create an individual portfolio of what they've learned throughout the astronomy unit. Students to write a paper on their growth over time.
	*Students to take a written standards-based astronomy exam based on everything they've learned.
*Formation of the Solar System	*Lab:* Creating a scaled model of the solar system
*Eclipses	*Lab:* Eclipses & the Earth
*Phases of the Moon	*Lab:* Phases of moon & tidal effects on Earth
-Tides	
	Video & Paper: Watch Contact. Students to observe discriminations/conflicts in movie & relate these to their lives. Students to write a 2-3 page, typed paper on discussing this.
	Lab: Creating a constellation & myth writing
Earth Science	
Minerals	
*Mineral Identification	*Lab:* ID Minerals
*Physical & Chemical Properties	
*Bowen's Reaction Series	*Lab:* Put minerals in order with Bowen's Reaction Series. Look at iron vs. silica content. Write down observations: color, physical characteristics, density, etc.
*Moh's Hardness Scale	*Lab:* Hardness of Minerals
	Exam: Mineral Identification

(Minerals Cont.) *Minerals associated with economic resources	*Project:* Students to research the minerals associated with the California gold rush. Students to research the history of the gold rush & present information to the class. *Paper:* Students to take information learned from the presentations on the history of the gold rush and write a paper on how economic resources have shaped the history of California
Rocks *Igneous intrusive *Igneous extrusive *Properties of sedimentary rocks -Sandstone -Shale -Limestone *Properties of metamorphic rocks -Foliated -Non-foliated	*Lab:* Properties of igneous intrusive & extrusive rocks. *Lab:* Igneous rocks & Bowen's Reaction Series *Lab:* ID Igneous rocks *Lab:* Sand vs. Sandstone *Lab:* Properties of sedimentary rocks. ID rocks *Lab:* Properties of metamorphic rocks. ID rocks *Exam:* Rock Identification & Bowen's Reaction Series
Plate Tectonics *Continental Drift *Sea-Floor Spreading *Paleomagnetics *Tectonic Plate Boundaries -Convergent Boundaries --Oceanic-oceanic boundary --Oceanic-continental boundary --Continental-continental boundary -Divergent Boundaries -Transform Boundaries *Physical geography of the world	*Lab:* Paleomagnetics & Plate Movements *Lab:* Cross-sections of plate boundaries of world *Lab:* Geologic features around world due to tectonic processes.
Volcanoes *Volcanoes & Plate boundaries -Ring of Fire *Volcanoes & Igneous Rocks *Viscosity -Viscosity & explosive volcanoes -Viscosity & non-explosive volcanoes *Types of volcanoes	*Lab:* Geologic features around the world due to tectonic processes. Add in specific types of volcanoes would find in each area & reasons why. *Lab:* Viscosity of water, warm honey & cold honey. *Lab:* Viscosity & explosiveness of volcanoes. *Videos:* Explosive vs. nonexplosive volcanoes. Mt. St. Helens & Hawaii. Students to watch videos & determine why they are so different using knowledge from rock identification & Bowen's reaction series.

(Volcanoes Cont.) -Cinder cones -Composite volcanoes -Shield volcanoes	
*Hot Spots -Continental hot spots -Oceanic hot spots -Hot spots & plate velocities	*Videos & Activity:* Watch videos of Hawaiian hot spot & Yellowstone hot spot. Compare & contrast these hot spots. How do scientists find velocities of plate movements from these?
*Environmental hazards associated with volcanoes	*Video & Paper Assignment:* Students to watch Dante's Peak. Students will write a 2-3 page, typed paper to explain the tectonic boundary of area in movie. Geologic features, type of volcano, types of igneous intrusive & extrusive rocks, and hazards assoc *Exam:* Written exam on plate tectonics & volcanoes. *Final:* Physical Geology & Astronomy

Texts & Supplemental Instructional Materials:

Basic Text:
Title: Modern Earth Science
Authors: Sager, Ramsey, Phillips, Watenpaugh
Publisher: Holt, Reinhart, Winston

Supplemental Text(s):
Title: Geology of National Parks
Authors: A. Harris, E. Tuttle, S. Tuttle
Publishers: Kendall/Hunt Publishing Co.

Instructional Methods:

Concepts will be taught in a variety of ways so students with different learning styles can excel in the course. It should be noted that learning levels are determined at the beginning of the year and the methods of instruction are flexible throughout the year so everyone can learn to the best of their ability.

Laboratory Work		40%
Project-based Learning	20%	
Lecture	20%	
Group Work		10%
(Includes group discussions of real-world problems)		
Videos		5%
Library & Internet Research		5%
		100%

Student Assessment Methods:

Grades will be determined according to the criteria listed below. It should be noted that the grading system is flexible and these averages may differ minutely due to the concepts taught during the first semester compared to the second semester.

Relative Weighting of Grades:

Laboratory Experiences	40%
(Includes real-world problem solving)	
Written Exams	30%
(Includes rock & mineral ID)	
Classwork,	15%
(Includes standards-based presentations & projects)	
Quizzes	10%
Homework:	5%
	100%

Note: For further information on labs, exams, quizzes, etc., see attached samples.

Assessment Criteria:

Righetti High School has set goals through our Expected Schoolwide Learning Results, ESLR's. These goals were set by both teachers and administrators at Righetti High School. All students are expected to achieve these goals before graduation. As a result, the assessment criteria for the Geology course takes into account for these goals and students are held accountable to achieve these goals.

These goals are:

- Students will demonstrate effective communication skills in both reading and writing.
  a) Students will use reading skills to build meaning, and gather information from a variety of grade level materials.
  b) Students will write text with a clear purpose, supporting evidence, using accurate punctuation, and sentence structure.

- Students will demonstrate essential mathematical skills in:
  *Statistics, Data Analysis & Probability
  *Algebra and Functions
  *Mathematical Reasoning
  *Number sense
  *Measurement & Geometry
  *Algebra 1

- Students will demonstrate critical thinking skills.
  a) Can identify, define and develop solutions to problems.
  b) Organize, analyze, interpret, and evaluate information.
  c) Utilize acquired skills in new situations.

- Students will demonstrate goal setting skills:
  a) Assessment and Research

- Students will demonstrate the ability to work cooperatively with culturally diverse groups.
  a) Student involvement in diverse groups.

The assessment criteria of the Geology course was set to reflect these goals along with the goals of teaching towards a 75% passage rate of California State Earth Science Standards exam written by an instructor at Righetti High School. Students will also be taking the Earth Science portion of the Star-9 exam.

Prerequisites:
Successful completion of two years college preparatory high school science with a "C" or better.
Successful completion of two years of high school English.
Successful completion of one year of high school algebra.

Course Description

This is a two semester college preparatory laboratory science course designed to teach students about Earth and space science. Students will learn about the tectonic processes that shape the Earth, how the tectonic processes are the driving forces of the Earth's resources, and how those resources are affected by different geologic hazards. Although part of the class will cover major events in the geologic history of North America, most of the emphasis will be on the geologic history of California and the local area (Santa Barbara County). Students will also learn how to read and interpret both geologic maps and cross-sections in order to successfully complete the given projects. There will also be a unit that will cover space science including the big bang theory, stellar evolution, and planetary geology. Hands-on activities are an important part of the curriculum in order to reinforce student understanding of scientific investigation and experimentation in the realm of geologic sciences. These hands-on activities and laboratory activities will occupy approximately 40% of the given class time.

Course Goals

At the completion of the course, Geology, students will be able to do the following:

- Students will be able to think critically in order to solve real-world problems by completing standards-based group and individual projects, laboratory experiments and assignments.
- Students will be able to determine areas which may be threatened by natural disasters, by using learned geologic concepts, when looking for places to live in later life.

- Students will be able to explain the physical and historical geology of an area around the world whether for school projects or individual vacations.

Geology B (P)

Course Objectives

At the completion of the course, Geology, students will:

- Describe the process of stellar evolution, the life & death of stars, in order to fully explain the process of our own sun within the solar system.
- Create reproducible labs dealing with real-world geology & engineering.
- Explain how the economic resources of California, including water, gold and silver, has influenced the history and politics of California over time.
- Describe how economic resources and natural disasters in California and our local area, Santa Barbara County, are affected by geologic processes.
- Explain how oil is formed, the economics & politics behind oil drilling, and how it affects our local economy, Santa Barbara County.
- Define and describe plate tectonics and identify the effects plate tectonics has around the world.
- Assess volcanic hazards around the world and it's impact economically, environmentally and on human life.
- Identify geologic hazards around the world and develop earthquake-proof buildings given the socioeconomic status of those areas.
- Develop an earthquake preparedness plan for their home and help the school to strengthen their own preparedness plans.
- Assess seismic data to determine where the epicenter is located.
- Apply geologic principles when interpreting geologic maps and creating geologic cross-sections.
- Identify rocks and minerals.
- Utilize identity of rocks and minerals to interpret the depositional environment of an area.
- Assess the affects of pollution, acid rain and volcanic outgassing through laboratory experiences and the impact it has on our environment.
- Identify how the atmosphere and topography have changed over geologic time and how these changes gave way to the evolution of species over time.
- Demonstrate writing competency through written and oral presentations.

Geology B (P) Course Outline	Key Activities & Assignments
Earthquakes	
*Earthquakes & Plate Boundaries	
*San Andreas Fault	*Video & Notes on San Andreas Fault.*
-San Andreas Fault & SB County	*Fieldtrip:* Observe mountains outside our classroom. Why are they there? How are we affected by San Andreas Fault?
*Epicenters, hypocenters, focus	*Lab:* Finding the epicenter of an earthquake using triangulation.
*Earthquake preparedness	*Video & Activity:* Watch earthquake preparedness video. Students to put together individual earthquake preparedness plans for their homes. *Lab:* Assess school's earthquake preparedness. Do an actual earthquake drill as a class. Evacuate building. Assess possible school evaculation problems.
*Earthquake hazards around the world	*Videos & Activity:* Watch videos of Loma Prieta, Mexico City & Kobe, Japan earthquakes. Students to explain the different types of tectonic boundaries associated with each. *Students to explain geologic hazards associated with each area & explain how loss of life could be directly related to socioecconomic status of that area.
*Seismic Retrofitting	*Lab:* Create a building that could withstand a 7.0 magnitude earthquake given the socioeconomic status of your given area.
Faulting & Folding	
*Types of Faults	*Lab:* It's not your fault. Create 3-D fault block modelsw/lab questions.
-Normal faults	
-Reverse faults	
-Strike-slip/transform faults	
(Faulting & Folding Cont.)	
*Stress & Strain	
-Compressional stress	
-Extensional stress	
*Faults & Stress associated	
*Types of Folds	Lab: Anticlines & Synclines. Create 3-D models & answer lab questions pertaining to those models.
-Anticlines	
-Synclines	
*Geology of oil deposits & oil traps	*Lab:* Where does our oil come from? What specific events have occurred in our area giving way to this economic resource?
*Geology of oil deposits in SB County	*Exam:* Written exam on earthquakes, faults & folds.

Rock Cycle	
*Types of Rocks -Igneous -Sedimentary -Metamorphic	*Video:* The rock cycle *Lab:* Rock Cycle Roulette *Lab:* Review rocks.
*Water Cycle	*Lab:* Water Cycle. How does the water cycle work & where does our water come from in SB County. Why is water such a big issue in California?
*Depositional Environments	*Book activity:* Read about depositional & erosional environments. Answer given questions pertaining to these.
*Erosional Environments	*Homework:* Look for erosional problems around town.
*Effects of acid rain in our environment	*Lab:* Acid rain & it's effects on our environment. *Exam:* Given rock clues, draw a picture of environments each specific rock formed in. Include what occurred during erosion & depostion.
Geologic Laws & Unconformities	
*Law of Superposition *Law of Original Horizontality *Law of Cross-cutting Relations *Principle of Uniformitarianism *Unconformities -Angular unconformities -Nonconformities -Disconformities	*Lab:* Cross-cutting relations. *Lab:* Creating 3-D block models showing unconformities. Students to answer the given questions pertaining to these block models.
Historical Geology	
*Absolute Age Dating *Relative Age Dating	*Video:* Geology of Grand Canyon *Quiz:* Geologic Timescale
*Geological Timescale	*Video & Activity:* Walking with Dinosaurs. Students to piece together evolution of dinosaurs & how they went extinct.
*Fossil ID	*Lab:* ID Fossils *Lab:* Making fossils

California Geology *Geology of California -How geology has shaped the history of CA *Geologic History of SB County -Why is there oil in our area? -Why are there earthquakes in our area? -Why do we have so much agriculture?	 *Video:* Geology of Santa Barbara Area *Project:* Using the geology knowledge learned, students will create a geologic timeline of the geologic history of California including how the gold was emplaced & how it was deposited. Students will explain how oil was formed in our area & how the San A
Geological Investigations *Reading & Interpretting Geologic Maps *Creating Cross-Sections from Geologic Maps *Interpreting Geologic Cross-Sections	 *Lab:* Geologic Maps--reading & interpretting *Lab:* Creating cross-sections. *Lab:* Interpretting the geology from cross-sections *Exam:* Geologic Principles

   a) Student involvement in diverse groups.

The assessment criteria of the Geology course was set to reflect these goals along with the goals of teaching towards a 75% passage rate of California State Earth Science Standards exam written by an instructor at Righetti High School. Students will also be taking the Earth Science portion of the Star-9 exam.

Course Title

Geoscience (P)

Description of Target Group

11th and 12th grade students who are interested in a laboratory Physical Science elective.

Purpose: a) A year long course b) Ten units

Prerequisites: Successful completion of two years of college preparatory high school science with a UC" or better.

Successful completion of two years of high school English and one year of high school algebra.

Course Description

This is a year long college preparatory class designed to teach students about Earth and space science. Students will learn about the tectonic processes that shape the Earth, how the tectonic processes are the driving force of the Earth's resources, and how those resources are affected by different geologic hazards. Although part of the class will cover major events in the geologic history of North America, most of the emphasis will be on the geologic history of California and the local area (Santa Barbara County). There will also be a unit which will cover space science including the big bang theory, stellar evolution, and planetary geology. Activities and laboratory activities will occupy approximately 40% of the given class time.

Activities

Laboratory investigations, geologic map reading/interpretations, projects, and fieldtrips

Assessment

Laboratory experiments, written exams, portfolios, community projects

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

State Standards: Available in more detailed outline

16. Pre-Requisites

Successful completion of two years college preparatory high school science with a "C" or better.

**One year shall be general science which covers the California State Science Standards for chemistry, physics and earth science.

**One year of high school chemistry required with a "C" or better.

Successful completion of two years of high school English

Successful completion of one year high school algebra

17. Co-Requisites

None

18. Is this course a resubmission? ☒ Yes ☐ No

If yes, date(s) of previous submission? February 2005

Title of previous submission? Geology A/B (P)

19. Brief Course Description

This is a two semester college preparatory laboratory science course designed to teach students about Earth and space science. Students will learn about the tectonic processes that shape the earth, how the tectonic processes are the driving forces of the earth's resources including the formation of fossil fuels and gold deposition, and how those resources are affected by different geologic hazards. Students will use their knowledge of chemistry and build upon this when looking at the physical and chemical properties of rocks, minerals and the explosivity of volcanoes. Students will learn how to read and interpret both geological maps and cross-sections in order to successfully complete the given projects. There will also be a unit that will cover space science including the big bang theory, stellar evolution including how elements on the periodic table were formed, and planetary geology. Hands-on activities and labs occupy approximately 40% of the given class time and are designed to reinforce students understanding of scientific investigation and experimentation within the realm of geologic science. This course is articulated with Allan Hancock College's PHY SCI 159 (Adv.) course or Geology 131. When taken in conjunction with one of the courses listed above, this course will count at 4.0 units of Allan Hancock College's GEOL 100 course.

Course Description

Course Description/Major Concepts

Course Title: Geology A/B (P) **Department: Righetti Science**

Course Length: Two Semesters, 10 units **Course Adoption:** UC/CSU "a-f" inclusion

When taken in conjunction with one of the courses listed above, this course will count as 4.0 units of Alan Hancock College's GEOL 100 course.

Course Goals

At the completion of the course, Geology, students will be able to do the following:

- Students will be able to think critically in order to solve real-world problems by completing standards-based group and individual projects, laboratory experiments and assignments.
- Students will be able to determine areas which may be threatened by natural disasters, by using learned geologic concepts, when looking for places to live in later life.
- Students will be able to explain the physical and historical geology of an area around the world whether for school projects or individual vacations.

Geology A/B (P)

Course Objectives

At the completion of the course, Geology, students will:

- Describe the process of stellar evolution, the life & death of stars, in order to fully explain the process of our own sun within the solar system and be able to explain how the elements on the periodic table were formed.
- Using principles in chemistry, identify the chemical and physical properties of rocks and minerals.
- Create reproducible labs dealing with real-world geology & engineering.
- Explain how the economic resources of California, including water, gold and silver, has influenced the history and politics of California over time.
- Describe how economic resources and natural disasters in California and our local area, Santa Barbara County, are affected by geologic processes.
- Explain how oil is formed, the economics & politics behind oil drilling, and how it affects our local economy, Santa Barbara County.
- Define and describe plate tectonics and identify the effects plate tectonics has around the world.
- Apply chemical and physical properties of igneous rocks and the associated minerals to determine the explosivity of a volcano.
- Assess volcanic hazards around the world and it’s impact economically, environmentally and on human life.
- Identify geologic hazards around the world and develop earthquake-proof buildings given the socioeconomic status of those areas.

- Develop an earthquake preparedness plan for their home and help the school to strengthen their own preparedness plans.
- Assess seismic data to determine where the epicenter is located.
- Apply geologic principles when interpreting geologic maps and creating geologic cross-sections.
- Utilize identity of rocks and minerals to interpret the depositional environment of an area.
- Assess the affects of pollution, acid rain and volcanic out-gassing through laboratory experiences and the impact it has on our environment.
- Identify how the atmosphere and topography have changed over geologic time and how these changes gave way to the evolution of species over time.
- Demonstrate writing competency through written and oral presentations.

Pink highlights indicate areas in which chemistry concepts are reviewed, built upon or taught in the curriculum. Attached at the end of this document is an outline of the majority of lab overviews and lab objectives.

Geology A/B (P) Course Outline	Key Activities & Assignments
General Science	
*Observation vs. Inference	*Collapse Video:* Take observation notes. Write an inference as to why collapses occurred.
*Metric Conversions	
-Metric-Metric Conversions	*Lab:* How big is our room. Can a dinosaur fit inside?
-Metric-English Conversions	*Lab:* Dinosaur Dimensional Analysis
*Density	*Lab:* Density Lab
**Looking at physical properties of substances and how they Affect our environments. (Hypopycnal, homopycnal & heteorpycnal (densities) environments)	*Lab:* Salinity Lab
	Quiz: Metric Conversions
Astronomy	
*Big Bang Theory	*Give background in astronomy.
*Stellar Evolution	*Go over astronomy standards with students.
*Standards-based astronomy unit to include:	*In groups, students to research a specific astronomy standard.
-Nuclear fusion & the sun	*Students to present information to class.
**Includes how elements are formed on the periodic table.	
**Law of Conservation of Energy	
-The formation of the solar system & how the earth's atmosphere has changed over time. Including how asteroid impacts have had an impact on extinctions throughout geologic time.	*Entire class to answer standards-based astronomy questions pertaining to information given during presentations.
Mini-Unit on Atmosphere within the astronomy unit:	
**How the chemical composition of the Earth's atmosphere has changed over time.	
**Chemical composition of primary Earth's atmosphere compared to the current composition.	
**Evolution of Earth's atmosphere due to photosynthesis of cyanobacteria billions of years ago.	
**How pollution today is causing both ecological and environmental problems.	
**(Chemical & physical properties of the Earth's atmosphere. Talk about problems with a runaway greenhouse effect and compare this to Venus)	
-Galaxies, quasars, black holes & Einstein's theory of general & special relativity.	*Students to create an individual portfolio of what they've learned throughout the astronomy unit. Students to write a paper on their growth over time.
**Due to the Big Bang Theory-Hydrogen, Helium & Lithium were formed.	*Students to take a written standards-based astronomy exam based on everything they've learned.
**Through novas & supernovas additional elements on the periodic table were formed.	
**Laws of Thermodynamics & the background radiation of the universe.	
*Formation of the Solar System	*Lab:* Creating a scaled model of the solar system
**Due to elements found on the Periodic Table of Elements, we know our sun is a 2nd or 3rd generation star.	
*Eclipses	*Lab:* Eclipses & the Earth
*Phases of the Moon	

(Astronomy Cont.) -Tides	*Lab:* Phases of moon & tidal effects on Earth *Video & Paper:* Watch Contact. Students to observe discriminations/conflicts in movie & relate these to their lives. Students to write a 2-3 page, typed paper on discussing this. *Lab:* Creating a constellation & myth writing
Earth Science **Minerals** *Review:* Elements on the Periodic Table of Elements & atomic structures. *Review:* Ionic & covalent bonding *Review:* Physical & chemical properties on chemistry **Use these concepts to show how a mineral is formed 7 how the crystalline structure of a mineral is associated with this. *Physical & Chemical Properties of minerals *Crystalline structures of minerals **How they've bonded ionically determines crystallographic structure of minerals (crystal lattice). **Chemical formulas of minerals. **Atomic Theory & crystallography. **Allotropes *Bowens Reaction Series **The chemistry of a magma and the associated elements within it determine what type of rocks will be formed at different temperatures. This covers both physical & chemical properties in chemistry. **Bond strength & electronegativity in ionic bonding show melting points in Bowens Reaction Series. *Fractionation Proecess **Which minerals crystallize out at each temperature in a magma is based on the physical properties of the elements associated with the minerals. *Moh's Hardness Scale **The ionic bonds associated with the elements of each mineral will determine it's hardness. This is a physical property and it is used as a tool in identifying minerals. *Mineral Identification & their chemical formulas **Review molar mass	Give review of chemistry especially—The Periodic Table of Elements, Ionic & Covalent Bonding, & Physical and Chemical Properties of Chemistry. *Notes:* Minerals, Bowens Reaction Series & the Fractionation Process *Lab:* Put minerals in order with Bowen's Reaction Series. Look at iron vs. silica content. Write down observations: color, physical characteristics, density, etc. Lab: Crystallography & how crystal lattice structure gives metals physical properties such as malleability, fracture & cleavage. *Notes:* Mohs Hardness Scale *Lab:* Hardness of Minerals *Lab:* ID Minerals—including looking at their chemical formulas & their molar mass. *Written & Performance Exam:* Minerals & Mineral Identification

*Minerals associated with economic resources **The type of chemical properties are associated with a magma can determines where economic resources such as native gold, silver and Tungsten are formed. Also—specific types of ore deposits are formed from the chemistry of a magma and hydrothermal vents such as blacksmokers.	*Project:* Students to research the minerals associated with the California gold rush. Students to research the history of the gold rush & present information to the class. Paper: Students to take information learned from the presentations on the history of the gold rush and write a paper on how economic resources have shaped the history of California.

Rocks	
*Igneous intrusive *Igneous extrusive **Review Balancing Equations. **Chemical equations & Ignous rocks	*Lab:* Properties of igneous intrusive & extrusive rocks. Assign: Chemical Equations in creating igneous rocks. Balance given equations and figure out what specific types of rocks would be formed when looking at the specific equation.
**Different rocks will be formed due to different elements found within magma. This will determine the types of igneous rocks formed. (Chemical properties concept)	*Lab:* Igneous rocks & Bowen's Reaction Series
	Lab: ID Igneous rocks
*Properties of sedimentary rocks	*Lab:* Sand vs. Sandstone
-Sandstone -Shale -Limestone **As these sedimentary rocks are cemented together, students will use their chemistry knowledge for the cementation proecess. (Chemical formulas + balancing equations)	*Lab:* Properties of sedimentary rocks. ID rocks
*Properties of metamorphic rocks -Foliated -Non-foliated *Chemistry & metamorphic rocks—different minerals tell us clues about the different temperature & pressures the rocks were "changed" at. (Both chemical & physical properties of chemistry)	*Lab:* Properties of metamorphic rocks. ID rocks *Exam:* Rock Identification & Bowen's Reaction Series
Plate Tectonics	
*Continental Drift *Sea-Floor Spreading *Paleomagnetics	*Lab:* Paleomagnetics & Plate Movements
*Tectonic Plate Boundaries -Convergent Boundaries --Oceanic-oceanic boundary --Oceanic-continental boundary --Continental-continental boundary **Density determines which plate will be subducted and the type of magma that will form. The elements iron and silica determine plate density. (Both chemical & physical properties of chemistry) -Divergent Boundaries **Chemical make up of the magma will determine the explosivity of a mid-ocean ridge. (Melting points in chemistry) -Transform Boundaries	*Lab:* Cross-sections of plate boundaries of world
*Physical geography of the world	*Lab:* Geologic features around world due to tectonic processes.
Volcanoes	
*Volcanoes & Plate boundaries	*Lab:* Geologic features around the world due to tectonic processes. Add in specific types of volcanoes would find in each area & reasons why.

(Volanoes Cont.) -Ring of Fire *Volcanoes & Igneous Rocks **Physical properties of chemistry—Density of basaltic rock and it's iron rich nature versus granitic rock and the silica it's silica rich nature. (Chemical & physical properties of chemistry. *Viscosity -Viscosity & explosive volcanoes -Viscosity & non-explosive volcanoes **Viscosity of a magma is determined by the physical and chemical properties of the magma mostly due to the iron and silica content of the magma. *Type of volcanoes -Cinder cones -Composite volcanoes -Shield volcanoes *Hot Spots -Continental hot spots -Oceanic hot spots -Hot spots & plate velocities *Type of Magma -acidic -intermediate -basic **Review chemistry concepts related to Bowen's Reaction Series & Fractionation Process. (Melting points & crystallization of chemicals in chemistry) *Environmental hazards associated with volcanoes. **Chemistry of ash rich soil—Soils from ash of volcanoes creates good agricultural conditions. This creates hazardous areas where people are living & reaping the benefits of ash in the soil near volcanoes (pH in chemistry, soil science.)	Demo*:* Viscosity of water, warm honey & cold honey. Lab: Viscosity & explosiveness of volcanoes. Videos & Activity: Watch videos of the Hawaiian hot spot & Yellowstone hot spot. Compare & contrast these hot spots. How do scientists find velocities of plate movements from these? Video & Paper Assignment: Students to watch Dante's Peak. Students will write a 2-3 page, typed paper to explain the tectonic boundary of area in movie. Geologic features, type of volcano, types of igneous intrusive & extrusive rocks, and hazards associated. Exam: Written exam on plate tectonics & volcanoes. Final: Physical Geology & Astronomy

Earthquakes	
*Earthquakes & Plate Boundaries	
*San Andreas Fault	*Video & Notes on San Andreas Fault.*
-San Andreas Fault & SB County	*Fieldtrip:* Observe mountains outside our classroom. Why are they there? How are we affected by San Andreas Fault?
*Epicenters, hypocenters, focus	*Lab:* Finding the epicenter of an earthquake using triangulation.
*Earthquake preparedness	*Video & Activity:* Watch earthquake preparedness video. Students to put together individual earthquake preparedness plans for their homes. *Lab:* Assess school's earthquake preparedness. Do an actual earthquake drill as a class. Evacuate building. Assess possible school evaculation problems.
*Earthquake hazards around the world **Liquefaction—how does water move through aquifers. (Physical properties in chemistry.)	*Videos & Activity:* Watch videos of Loma Prieta, Mexico City & Kobe, Japan earthquakes. Students to explain the different types of tectonic boundaries associated with each. *Students to explain geologic hazards associated with each area & explain how loss of life could be directly related to socioecconomic status of that area.
*Seismic Retrofitting	*Lab:* Create a building that could withstand a 7.0 magnitude earthquake given the socioeconomic status of your given area.
Faulting & Folding	
*Types of Faults -Normal faults -Reverse faults -Strike-slip/transform faults	*Lab:* It's not your fault. Create 3-D fault block modelsw/lab questions.

*Stress & Strain -Compressional stress -Extensional stress	
*Faults & Stress associated	
*Types of Folds -Anticlines -Synclines	Lab: Anticlines & Synclines. Create 3-D models & answer lab questions pertaining to those models.
*Geology of oil deposits & oil traps **Review covalent bonds, specifically how they pertain to hydrocarbons & their molecular formula. **Chemistry of hydrocarbons **Compare chemical differences between oil & coal.	*Lab:* Where does our oil come from? What specific events have occurred in our area giving way to this economic resource?
*Geology of oil deposits in SB County	*Exam:* Written exam on earthquakes, faults & folds.

Rock Cycle *Types of Rocks -Igneous -Sedimentary **Limestone fizzes with acid=good identifying tool. **How caves are formed. (Chemical reactions) -Metamorphic **Different minerals form at different temperatures & pressures during metamorphosis. (Physical & chemical properties in chemistry)	*Video:* The rock cycle *Lab:* Rock Cycle Roulette *Lab:* Review rocks.
*Water Cycle **Chemistry of our ocean waters. **Physical properties of water. **Specific heat capacity **Solutes & Solvents	*Lab:* Water Cycle. How does the water cycle work & where does our water come from in SB County. Why is water such a big issue in California? *Lab:* Cave formation. How solutes & solvents work to create both primary & secondary cave formations.
*Depositional Environments	*Book activity:* Read about depositional & erosional environments. Answer given questions pertaining to these.
*Erosional Environments **Chemical weathering. (Chemical reactions occurring due to the weathering process. Physical properties in chemistry.)	*Homework:* Look for erosional problems around town.
*Effects of acid rain in our environment **Chemicals from pollution causing environmental problems today.	*Lab:* Acid rain & it's effects on our environment.
	Exam: Given rock clues, draw a picture of environments each specific rock formed in. Include what occurred during erosion & depostion.
Geologic Laws & Unconformities *Law of Superposition *Law of Original Horizontality *Law of Cross-cutting Relations *Principle of Uniformitarianism *Unconformities -Angular unconformities -Nonconformities -Disconformities	*Lab:* Cross-cutting relations. *Lab:* Creating 3-D block models showing unconformities. Students to answer the given questions pertaining to these block models.

Historical Geology *Absolute Age Dating **Testing of the mineral zircon which contains the element zirconium gives an absolute age dating, along with Carbon-14 dating. (Review of isotopes.)	*Lab:* Absolute age dating & half-life
*Relative Age Dating	*Video:* Geology of Grand Canyon *Quiz:* Geologic Timescale
*Geological Timescale	*Video & Activity:* Walking with Dinosaurs. Students to piece together evolution of dinosaurs & how they went extinct.
*Fossil ID	*Lab:* ID Fossils

California Geology *Geology of California -How geology has shaped the history of CA *Geologic History of SB County -Why is there oil in our area? -Why are there earthquakes in our area? -Why do we have so much agriculture?	*Video:* Geology of Santa Barbara Area *Project:* Using the geology knowledge learned, students will create a geologic timeline of the geologic history of California including how the gold was emplaced & how it was deposited. Students will explain how oil was formed in our area & how the San A
Geological Investigations *Reading & Interpretting Geologic Maps *Creating Cross-Sections from Geologic Maps *Interpreting Geologic Cross-Sections	*Lab:* Geologic Maps--reading & interpretting *Lab:* Creating cross-sections. *Lab:* Interpretting the geology from cross-sections *Exam:* Geologic Principles

Texts & Supplemental Instructional Materials:

Basic Text:
Title: Modern Earth Science
Authors: Sager, Ramsey, Phillips, Watenpaugh
Publisher: Holt, Reinhart, Winston

Supplemental Text(s):
Title: Geology of National Parks
Authors: A. Harris, E. Tuttle, S. Tuttle
Publishers: Kendall/Hunt Publishing Co.

Title: Simon & Schuster's Guide to Rocks & Minerals
Authors: A. Mottana, R Crespi, G. Liborio
Publishers: Simon & Schuster

Instructional Methods:

Concepts will be taught in a variety of ways so students with different learning styles can excel in the course. It should be noted that learning levels are determined at the beginning of the year and the methods of instruction are flexible throughout the year so everyone can learn to the best of their ability.

Laboratory Work	40%
Project-based Learning	20%
Lecture	20%
Group Work (Includes group discussions of real-world problems)	10%
Videos	5%
Library & Internet Research	5%
	100%

Student Assessment Methods:

Grades will be determined according to the criteria listed below. It should be noted that the grading system is flexible and these averages may differ minutely due to the concepts taught during the first semester compared to the second semester.

Relative Weighting of Grades:

Laboratory Experiences *(Includes real-world problem solving)*	40%
Written Exams *(Includes rock & mineral ID)*	25%
Classwork, *(Includes standards-based presentations & projects)*	15%
Quizzes	10%
Homework:	10%
	100%

Note: For further information on labs, exams, quizzes, etc., see attached samples.

Assessment Criteria:

Righetti High School has set goals through our Expected Schoolwide Learning Results, ESLR's. These goals were set by both teachers and administrators at Righetti High School. All students are expected to achieve these goals before graduation. As a result, the assessment criteria for the Geology course takes into account for these goals and students are held accountable to achieve these goals.

These goals are:

- Students will demonstrate effective communication skills in both reading and writing.
    1. Students will use reading skills to build meaning, and gather information from a variety of grade level materials.
    2. Students will write text with a clear purpose, supporting evidence, using accurate punctuation, and sentence structure.

- Students will demonstrate essential mathematical skills in:
  *Statistics, Data Analysis & Probability
  *Algebra and Functions
  *Mathematical Reasoning
  *Number sense
  *Measurement & Geometry
  *Algebra 1

- Students will demonstrate critical thinking skills.
  1. Can identify, define and develop solutions to problems.
  2. Organize, analyze, interpret, and evaluate information.
  3. Utilize acquired skills in new situations.

- Students will demonstrate goal setting skills:
  1. Assessment and Research

- Students will demonstrate the ability to work cooperatively with culturally diverse groups.
  a) Student involvement in diverse groups.

The assessment criteria of the Geology course was set to reflect these goals along with the goals of teaching towards a 75% passage rate of California State Earth Science Standards exam written by an instructor at Righetti High School. Students will also be taking the Earth Science portion of the Star-9 exam.

Laboratory Objectives & Overviews for Geology Course

***Note: 40% of instructional time for this course constitutes laboratory work.*

Topic: Observation vs. Inference, Metrics & Density

Lab 1: Collapse!

Lab Overview: This is a video laboratory. Students will watch a segment of a video where a bridge collapses and where a dam breaks. Students will write down their observations of the video. When the video is stopped, they will infer why the collapses occurred.

Lab Objective: This lab is meant to teach students the difference between observation and inference. In geology, this is a very important concept. Geologists must infer what occurred geologically based on their observations of an area such as type of rocks, texture of rock, structures within the rock beds (anticlines & synclines) and types of fossils found in the rock record.

Lab 2: Metric System—Length

Lab Overview: This is a hands-on laboratory. Students will use their knowledge of metric conversions to complete the given lab. Students will measure items around the classroom such as a microscope slide, the room, their desks, the walls, the door, etc. Students will take these measurements and practice metric conversions.

Lab Objective: This lab will reinforce how to do metric conversions. Science uses the metric system exclusively so it's important that this becomes second nature for the students.

Lab 3: How big is our room?

Lab Overview: This is a hands-on laboratory. Students will measure the room in meters. They will then use their metric system knowledge to convert the meters into centimeters. Given the lesson on maps and scale given in class, students will take their measurements and create a 1:40 scale model of the classroom. Once this is done, students will take their assigned 1:40 scale dinosaur and answer questions in their lab write-ups that pertain to their data.

Lab Objective: This lab will reinforce the idea of scale. Scale is important in geology because geologists use the idea of scale in mapping. This also gives students practice with their metric to metric conversions.

Lab 4: Dinosaur Dimensional Analysis

***Lab Overview*:** This is a mathematical lab. Students will read a section on about dinosaurs. (It's real life information about the dinosaurs that were used in the "How big is our room" lab.) Given the reading, students will use the given information to perform metric to English conversion problems. To make it more interesting for the students, they will be asked to draw the environment a certain dinosaur lives in. Students MUST show all their work to get full credit for this lab.

Lab Objective: The purpose of this lab is to have students perform one and two step dimensional analysis problems based on how the dinosaurs would roam the Earth. This not only gives students dimensional analysis practice, it also educates students about dinosaurs.

Lab 5: Density

Lab Overview: This lab helps students understand the concept of density. Students are to measure different materials such as aluminum bars, aluminum cubes, metal spheres, glass spheres and minerals. Students will find their mass by using a balance. They will then find the volume of the different materials by either using volume equations or by measuring the displacement of water in a graduated cylinder. They will then find the density by using the density equation. Students will finish the lab write-up by answering the conclusion questions.

Lab Objective: Density is a concept that is VERY important in geology and in chemistry. In geology, we need to understand the difference in plate densities so we can understand why plates subduct under other plates. Students need a strong understanding of density in order to understand many of upcoming concepts of the class. We will hit upon this concept time and time again throughout the course.

Lab 6: Salinity & Reproducible Labs

Lab Overview: Students will be given a real life situation to answer in class: "How could a fisherman fishing in the Gulf of Mexico drink a cup of seawater without having kidney failure". This starts a good conversation about salinity and density. It's a stepping stone to the real lab: Create a reproducible lab write-up that will help a freshmen in my general science class get 4 different colors of water in one piece of straw. That is all the guidance given. Students must use their knowledge of density to solve the problem. First they must solve the problem—getting all 4 colors in the straw. Then they must complete a detailed lab write-up that can be reproducible. (The freshman general science class grades these labs.)

Lab Objective: Any scientist knows the importance of reproducible experiments. If the experiment cannot be reproduced the scientist won't get published and if they can't be published they won't get more funding for future projects. Students by the end of this lab understand this concept very well. They must problem solve based on their basic knowledge of density and then create a really good lab write-up. If the lab cannot be reproduced by anyone else, they get a zero.

Topic: Astronomy Unit

Lab 7: Stellar Evolution Comics

Lab Overview: Students will take notes on stellar evolution—the life cycle of stars. Based on this knowledge, students need to create a comic strip, storyboard or play that goes through all phases of stellar evolution. In their lab, students must correctly identify whether a star will become a white dwarf, neutron star or a black hole depending on how much mass the star starts with.

Lab Objective: This lab is one in which students use the information given to them via notes to show what happens during the life cycle of a star. This lab is used as a sort of performance exam to see if the students truly understand that mass is the determining factor in which phase a star will go through in life.

Lab 8: Standards Based Astronomy Project (Major 3 week project!)

Lab Overview*:* This is a huge research project in which students will be given a topic in astronomy. Specifically, they are given one of the California State Science Standards in astronomy. Students will research this topic based on the guiding questions I have given them. They must then create a PowerPoint presentation based on their topic using the computers I acquired from a grant a few years ago. Students present their topics to the class and from these presentations students ask questions and have conversations based on astronomy. This is an important lab because it teaches not only how the universe and solar system formed billions of years ago but it incorporates a lot of chemistry concepts in it. From these presentations students have a working knowledge of how the elements were formed on the periodic table, how the chemistry of Earth's atmosphere has changed over time and how important the process of photosynthesis is.

Lab Objective*:* This lab ties in how all branches of science are intertwined. While learning about the formation of the universe and the solar system, students gain a working knowledge of how the Earth's atmosphere has changed over time so life can be sustained on Earth. Students also get valuable experience researching their topics, putting together PowerPoint presentations, and putting together a portfolio that will help them study for the major written astronomy exam.

Lab 9: Creating a scaled model of the solar system

Lab Overview: Students will learn exactly what an astronomical unit is. Given a conversion for these astronomical units, students will create a scaled model of the solar system on a piece of register tape. Students will then complete a lab write-up, which will include questions that will use the scaled distances of the planets. For example, students will have to figure out why the outer planets could retain their original atmospheres where the inner planets could not. Students will see that the inner planets are closer to the sun so when nuclear fusion first took place the primary

atmosphere was blown off whereas the outer planets are very far away and therefore weren't affected by this.

Lab Objective: Students will again use the concept of scale. They will also be able to explain why the asteroid belt is located where it is and why the outer planets were able to retain their primary atmospheres while the inner planets could not.

Lab 10: Moon Phases & Tidal Affects

Lab Overview: Using the notes given in class about the moon, students will create a 2-dimensional diagram showing the phases of the moon. They will also label waxing crescent, waxing gibbous, waning crescent and waning gibbous. Students will show what happens during a spring and neap tide.

Lab Objective: Students will complete a diagram of the moon phases. They will explain the difference between a synodic month and a sidereal month. They will also explain the difference between a spring and neap tide. Students will also be able to define "mare".

Lab 11: Eclipses and the Earth

Lab Overview: Students will define words such as eclipse, umbra, penumbra, solar eclipse and lunar eclipse. The will create a diagram showing a solar eclipse and a lunar eclipse and they will answer questions pertaining to both types of eclipses in a written lab report such as: What conditions must be present for a solar eclipse? Lunar eclipse? Why man lunar eclipses last several hours compared to a very short solar eclipse?

Lab Objective: Students will know the difference between a solar eclipse and a lunar eclipse. They will also be able to define the given vocabulary words.

Topic: Chemistry Review & Minerals Unit

Lab 12: History of California & the Gold Rush

Lab Overview: Students will watch a video about the gold rush. They will then research the minerals associated with the California gold rush and how the gold was mined. They will research the history of the gold rush. Students will take this information (given to them through student presentations) and write a paper on how economic resources have shaped the history of California.

***Lab Objective*:** Students will understand that the miners had very little information on how the gold was deposited but they figured out a way to mine it. The placement of this lab is intentionally placed before the plate tectonics unit because students need to understand that the theory of plate tectonics is a recent concept and scientists, miners and geologists didn't have knowledge of how the economic

resources were emplaced. Students will know the economic resources of California and how they have shaped California's history. This will also be a springboard into the upcoming minerals unit.

Lab 13: Overview of Chemistry

***Lab Overview**:* Students will do a series of small experiments that will help them review physical and chemical properties of chemistry. These small experiments will help them review ionic and covalent bonding although students will mostly be dealing with ionic bonding concepts during the minerals units. Some of these experiments will include flame tests, saturated vs. unsaturated solutions, making crystals and creating polymers out of alginate from seaweed (kelp ball lab).

Lab Objective: The objective of this series of small experiments is to help students review chemistry before getting into ionic bonding and chemical formulas of minerals, crystal structures of minerals and melting points of minerals.

Lab 14: Crystal Structures

Lab Overview: Students will create 3-dimensional crystal structures and compare these to minerals in their rock & mineral bins. Students will create a lab write up that will show drawings of these crystal structures and relate them to the chemical and physical properties of the minerals such as melting points, crystal structures, Mohs Hardness Scale, etc.

Lab Objective: Students need a good working knowledge of what determines the physical and chemical properties of the minerals. This lab shows students the correlation between crystal structure, ionic bonding and the physical and chemical properties of the different minerals.

Lab 15: Mohs Hardness Scale & Cleavage

Lab Overview: Given the notes on physical & chemical properties of minerals, students will complete the given Mohs Hardness Scale lab. They will also complete the given lab on cleavage in which they will CAREFULLY break apart minerals.

Lab Objective: Students will know how to use Mohs Hardness Scale for the upcoming mineral identification lab. Students will also know how to identify whether a mineral has cleavage and thus use this characteristic in identifying minerals.

Lab 16: Mineral Identification

Lab Overview: Using the given mineral specimen key, students will identify the minerals in their rock and mineral specimen boxes. Students will write in key characteristics of the minerals such as hardness, cleavage and whether it's an igneous rock forming mineral, a sedimentary rock forming mineral or whether it's an

ore or gangue mineral. Students will also write in the chemical formulas for the minerals and figure out their molecular mass.

Lab Objective: Students will learn the important igneous rock forming minerals by sight. They will be able to identify minerals using the concept of cleavage and hardness. They will be using their mineral identification labs on the mineral identification exam.

Topic: Igneous Rocks & Volcano Unit

Lab 17: Bowens Reaction and the Fractionation Process

Lab Overview: Students will learn about Bowens Reaction Series and how different rocks will form out of the different elements within the magma. This will be based on what types of minerals are formed at different temperatures within the magma. Students will then get out their igneous rock forming minerals and put them in order of Bowens Reaction Series. They will then create a lab write-up that will explain which minerals will crystallize out of a magma first at the highest temperature and which ones will crystallize out last at the lowest temperature. Students will also explain why an olivine, which is found at the top of Bowens Reaction Series and quartz, which is found at the bottom of Bowens Reactions Series, can never be found in the same rock.

Lab Objective: Students will learn about how crystals form out of a magma and how the chemistry of that magma changes over time. As the chemistry of the magma changes (due to the densest material crystallizing out first and falling to the bottom of the magma chamber) different igneous rocks are formed.

Lab 18: Identifying Igneous Rocks

Lab Overview: Using the idea of Bowens Reaction Series and Igneous Rocks, students will identify the igneous rocks. They will use their knowledge of minerals to identify these rocks and use their igneous rock notes to define their texture. From these textures students will be able to tell the cooling history of the rocks.

Lab Objective: Students will be able to determine the cooling history of the given igneous rocks. They will also be able to put together the concepts of the fractionation process and Bowens Reaction Series while identifying these rocks. Students will be using their igneous rock identification labs on the igneous rock identification exam.

Lab 19: Viscosity—Water, Warm Honey & Cold Honey

Lab Overview: Students will use household items to fully understand the concept of viscosity. Students will do a mini-lab using water, warm honey and cold honey to determine viscosity. Students will also be using the concept of viscosity when we get to the oil unit.

Lab Objective: Students will be able to show which has more viscosity—water, warm honey or cold honey. Based on this, they will explain how gas bubbles move

through the materials. They should come up with the conclusion that cold honey has the highest viscosity therefore the air bubbles they are blowing into it cannot easily escape. This will be used as a springboard into the explosivity of volcanoes.

Lab 20: Viscosity & Explosivity of Volcanoes

Lab Overview: This is a video lab. Students will first watch a video about the Kalapana, Hawaii (non-explosive volcanoes). In this video, they will take observation notes on the viscosity of the magma. They will note how destructive the lava flow is. They will also note whether they can see the gas bubbles escaping. (One can see them bubble out.) Students will write a conclusion putting all their observations together. They will include the difference between aa and pahoehoe, what temperature the magma would be in the magma chamber based on the type of igneous rocks formed (going back to Bowens Reaction Series) and what texture of rock was observed (aphanetic). They will also learn about the Hawaiian hot spot. They will also learn about different types of magma—acidic, intermediate and basic. These will correlate with the different types of igneous rocks they previously learned about.

The next day students watch a video about explosive volcanoes. They will take observation notes on the viscosity of the magma. They will note the destruction associated with these types of volcanoes. They will write a conclusion about the types of rocks being formed by this volcano, types of geologic features associated with the area and the destructiveness of lahars and pyroclastic flows.

Lab Objective: The objective of this video lab is to get students to observe the different types of volcanic eruptions. They will put together that the different types of eruptions have to do with the differences in viscosity. The differences in viscosity have to do with the iron content. High iron content magma has a low viscosity and will produce non-explosive volcanoes. The minerals that are associated with this magma will crystallize out high in the Bowens Reaction Series. Low iron content magma is rich in silica. The silica makes the magma thick and sticky and has a high viscosity. As a result, students will be able to correlate the minerals from our mineral unit with Bowens Reaction Series and the igneous rocks in order to tell the explosivity of the magma. This will help them determine what types of volcanoes will be found in different types of boundaries during the plate tectonics unit.

Lab 21: Dante's Peak

Lab Overview: This is another video lab. Students will watch the movie, Dante's Peak. Throughout the movie they will write clues that tell them the mountain will erupt. In the process, they will learn about the magma source in Mammoth Mountain. (Long Valley Caldera area has forests that are dying due to too much carbon dioxide being emitted in the area. This happens in Dante's Peak, too.) They will put all their observations/clues in a paper about the movie. They will include type of volcano Dante's Peak, viscosity of magma and volcanic hazards associated with the area and what type of igneous intrusive and extrusive rocks that would be formed.

Lab Objective: Students will put together their knowledge of rocks, minerals & volcanics to write a paper about Dante's Peak. They will also write about the fictional components of the movie such as the characters out-driving a pyroclastic flow or the low viscosity lava scenes. (The lava associated with this type volcano in real life would be high viscosity.)

Lab 22: Volcanoes PowerPoint Presentations

Lab Overview: Students will create a PowerPoint Presentation on a volcano around the world. Students will research areas with explosive volcanoes (Yellowstone, Long Valley Caldera, Crater Lake, Mt. Pinatubo, Krakatau) and areas with non-explosive volcanoes (Heimey Iceland, Hawaii). In their research, students will find the eruption history, type of volcano, type of rocks associated with the volcano, and other geologic hazards associated with the area. Students will put together a PowerPoint presentation that will be presented to the class. Students will also create either a 2-dimensional cross-section or a 3-dimensional model of their volcano that is correctly labeled with igneous intrusive and extrusive rocks and the plates that are associated with this volcano. (We have not done plate tectonics at this point so this will be a challenge for students to figure out why the volcano is there.)

Lab Objective: Students will learn specific information pertaining to volcanoes around the world including number of deaths, amount of destruction and types of igneous rocks associated with the area. They will also start thinking about plate tectonics. Best of all—their cross-sections and models will be donated to a local elementary school so students there can enjoy these and have a visual for their understanding of the earth science standards.

Topic: Plate Tectonics Unit

Lab 23: Paleomagnetics & Plate Movements

Lab Overview: Given the notes on paleomagnetics and seafloor spreading, students will complete first the given pre-lab on how some iron-bearing minerals line up to magnetic north while in the magma chamber. Students need to understand this concept before they can understand the concept of paleomagnetics and polar wandering. After the pre-lab, students will complete the given paleomagnetics lab and based on their given data, they will figure out the average rate of movement of the North American Plate away from the European Plate. From this, students will figure out how far Africa has split from South America from the time of Pangaea.

Lab Objective: Students will use their metric to metric conversions to help them figure out plate velocities. Using real-life data, students will figure out plate velocities and will use this knowledge when looking at the current rates of motions of plates around the world today (such as India crashing into Asia at 5 cm/yr.). Students will also use this as background knowledge during the upcoming physical geography and plate tectonics of the world lab while looking at geologic areas around the world.

Lab 24: Physical Geography & Plate Tectonics of the World

Lab Overview: Students will take their colored plates of the world map and determine the types of boundaries at specific locations around the world such as the Himalayas, Red Sea, East African Rift Valley, Papua New Guinea, Italy, Aleutian Trench, Indonesia, Andes Mountains, Basin & Range Topography, Reelfoot Rift etc. Students will use their knowledge of plate tectonics and plate movements to determine what specific type of plate boundary they are on. Students will then also log in the geologic features associated with the area and whether volcanoes would be found along this area. If there are areas associated with the area, students have to log in what type of viscosity it has (high or low) and whether it would be an explosive or non-explosive volcano associated with it.

Lab Objective: Students are bad at geography so this lab helps them look at the geography of the world while doing geology. Students should start to see a pattern emerge such as the Ring of Fire where there are volcanoes and earthquakes associated with the area and that there is a tectonic boundary associated with it. Students will also use their knowledge of Bowens Reaction Series again and the viscosity of the magma.

Lab 25: Cross-Sections and Plate Boundaries of the World

Lab Overview: This lab is a performance exam of sorts. Students will use all their knowledge of igneous rocks, viscosity, explosivity of volcanoes and plate boundaries to create detailed cross-sections of plate boundaries around the world. On their colored plates of the world map, students will note letters such as A-A', B-B',, C-C', etc. At these locations, students are to draw a detailed cross-section of the plate boundary. Students will name the plates, color plates according the plate densities, draw and label the types of volcanoes associated with the area and label the types of rocks that would form.

Lab Objective: This is a difficult task in which students must use all their geology knowledge and their knowledge of density to create detailed cross-sections. They must also include a key that answers questions pertaining to their cross-section. Students will be able to use this lab on the upcoming plate tectonics lab.

Topic: Earthquakes, Transform Boundaries & the San Andreas Fault

Lab 26: Comparing Major Earthquakes around the World

Lab Overview: This is a video laboratory. Students will watch 3 different videos on earthquakes that have occurred in recent years: The 1989 Loma Prieta Quake, The 1985 Mexico City Quake, and the 1995 Kobe, Japan Quake. Students will take observation notes on each video. They will be required to explain what type of tectonic boundary each area lies on, what types of other geologic hazards are associated with the area (liquefaction, volcanoes, pyroclastic flows, tsunamis, etc.) and how much death and destruction is associated with each. From these notes, students will be required to write a paper comparing the three areas.

Lab Objective: This video laboratory gives students the opportunity to see the amount of destruction large earthquakes can produce. This is important for students to see so they can be prepared for the next big earthquake that is expected in Southern & Central California. Also—this will give students the background knowledge needed for the upcoming Seismic Retrofit Lab.

Lab 27: Seismic Retrofit 'R'Us

Lab Overview: Using the concepts learned from the plate tectonics unit and from the previous video laboratory, students will, in the first part of this lab, create a scaled 13,000 square foot floor plan of an earthquake safe building. In this floor plan, they will show evacuation routes/plans, include a key showing what types of special building materials they will need to create this earthquake proof building and what furniture will be in these rooms. (Students will do this on graph paper where 1 square = 4 feet.) Students will also put together a plan view (front view) of the building. The plan view does not need to be to scale.

In the second part of this lab, students will actually build an "earthquake proof building out of cards, masking tape and straws. The amount of money students will have to buy supplies is based on the socioeconomics of the chosen area. Students will randomly choose these earthquake prone areas from rich areas to poor areas: Los Angeles, California; San Francisco, California; Kobe, Japan; Lima, Peru; Mexico City, Mexico; Papua New Guinea; New Delhi, India.

Students must build an earthquake-proof building that can withstand a 7.0 magnitude on the earthquake table. Students must also complete a write-up about the building process and include in this write-up what type of other geologic hazards are associated with their area and what type of tectonic boundary their area is found along.

Lab Objective: Students will use the concept of scale again to create their floor plan. They will also use their imagination to plan an earthquake proof building. They must use their mathematics knowledge to figure out the square footage of the building. They draw upon their plate tectonics knowledge as they figure out the geologic hazards associated with their chosen area. Students will actually build their buildings in class. Because some of these buildings will fall down, student grades are based on their participation on their building but mostly on the floor plans & plan view. Students will also understand why there is so much destruction associated with moderate earthquakes in third world countries.

Lab 28: Righetti High School's Earthquake Preparedness

Lab Overview: Students will look at all the evacuation routes for each block on campus. They will then walk the evacuation route and document possible problems with the routes. For example: Is there handicap accessibility in the route? Is there a high voltage area nearby? Is there a fire hydrant near one of the evacuation routes? Are student evacuation areas between cars in the parking lots? (They are!)

Students will then go through the disaster kits located at 4 different areas on campus. Will there be enough supplies for all students during the event of a disaster?

From these notes, students will create a write up that will be turned in to safety committee for administration to look over.

Lab Objective: Students will assess the evacuation plans/routes for the school. This will help the school but it will also help them with their homework assignment: Creating an earthquake evacuation plan for the home. (There is a major threat of earthquakes in Santa Maria due to the San Andreas Fault. We live near the locked portion of the fault so it's important for students to understand the threat and know what to do during an earthquake.)

Lab 29: Finding the Epicenter of an Earthquake Using Triangulation

Lab Overview: Given the notes on earthquakes including definitions of the focus, the epicenter, P waves and S waves, students will use given information to find the earthquake epicenter using triangulation. Students will use data received at a seismic station to determine lag time. They will then plot this data on a graph and find the distance from the epicenter. They will use compasses to find the epicenter.

Lab Objective: Students will use compasses to find the epicenter of an earthquake. Students will be able to define lag time. They will also know how a seismograph works. Given the conversations that arise about the seismograph and the Richter Scale, students will be able to explain the difference between the Richter Scale and the Mercalli Scale.

Topic: Faulting, Folding & Oil Deposition

Lab 30: It's Not Your Fault

Lab Overview: After taking notes on the different types of faults, students will create 3-dimensional fault block models. Within this lab, students will create a normal, reverse and a right lateral strike-slip fault. They will create a lab write-up that will include diagrams of faults, type of stress and strain associated with each type of fault and relative movement of the hanging wall and footwall for reverse faults and normal faults. Students will also give examples of where each of these types of faults can be found. (Example: We live along the locked portion of the San Andreas Fault, which is a right lateral strike-slip fault. Due to the stress and strain associated with the locked portion, we see a lot of compression, hence the Transverse Ranges in our area and the local Santa Maria East-West trending mountains.)

Lab Objective: Students will create 3-dimensional fault block models so they can better visualize the movement of the hanging wall and the footwall. They will also be able to answer the homework assignment: Why are the mountains in Santa Maria area trending East-West when the majority of mountains around the world (due to plate tectonics) trend North-South. Students can also observe see what a fault scarp looks like and what can happen to roads, streams, railroads, etc. due to faulting.

Lab 31: Anticlines & Synclines & Oil Deposition

Lab Overview: Students will create 3-dimensional geo-blocks for anticlines and synclines. Within this lab, students will use their knowledge of compressional stress and strain to explain how anticlines and synclines are formed in the lab write up. (Students will have a review of covalent bonding prior to this lab. They will have a lesson on hydrocarbons and their molecular formulas. Within this lesson they will compare the chemical differences between oil & coal.)

Students will need to include in their lab write up how oil is formed. They must explain the specific events that must occur in oil formation and what specific events occurred in the Santa Maria area to give us oil in our area. (They need to go through the process of accumulation of phytoplankton on the ocean floor through the compression associated from the locked portion of San Andreas Fault giving our specific location oil deposits.)

Lab Objective: Students will use their chemistry knowledge to help them understand how oil if formed. They will be able to explain, in detail, the process of oil formation to oil deposition within an anticline and syncline. They will understand a little more of our local history—we are on the map due to oil production in the area. Students will learn about another economic resource of California—Oil.

Topic: Rock Cycle Unit

Lab 32: Rock Cycle Roulette

Lab Overview: After taking notes on the different types of rocks and their depositional environments, students will complete this lab. During this lab, students will move around the room at different "depositional stations". They will roll a die to find out whether they will stay for 200,000 more years or move to a different depositional environment. At the end of their trek through the rock cycle, students will create a lab write up showing their movement through the rock cycle. They will also answer the questions pertaining to the lab.

Lab Objective: Students will be able to see a pattern on their trek through the rock cycle. They will understand that rocks go through different paths through the rock cycle and that the rock cycle is always on going. Since each roll is worth 200,000 years, they can better understand the time it takes for rocks to change.

Lab 33: Sedimentary & Metamorphic Rock Identification

Lab Overview: Students will identify the sedimentary & metamorphic rocks that are in the rock & mineral specimen bins. Students will write down their observations of what each rock looks like and the depositional environment of each. For the metamorphic rocks, students will write down what type of metamorphism occurred for each rock and what the parent rock would be.

Lab Objective: Students will be able to pick up a rock and be able to determine whether it is an igneous, metamorphic or sedimentary rock. Students will be able to explain how each rock was formed. Students will know that the state mineral and state rock of California is gold & serpentinite.

Lab 34: Depositional Environments

Lab Overview: Students will pick their assignment out of a bag. Their slip of paper will explain the assignment and give them clues about the different types of rocks that have formed in each scenario. Students will draw and label cross-sections for each depositional environment including what specific type of rock is formed. This is used as a performance exam and is a good review for the upcoming rock identification exam.

Lab Objective: Students will use their knowledge of the rock cycle to show the different depositional environments of rocks. Students will be able to explain what rocks are deposited in certain environments. They will be able to explain what types of rocks are being deposited around the world today. Students will use the geologic law of uniformitarianism, "The present is the key to the past".

Lab 35: Water Cycle

Lab Overview: Students will draw a detailed and labeled cross-section of the water cycle. Students will define key words in a key such as: Run-off, percolation, transpiration, evaporation, condensation, precipitation, ground water, infiltration, etc. Students will answer questions in their lab write up regarding pollution and contamination of the ground water. Students will also include in their write up why water is such a big issue in California.

Lab Objective: This lab is designed to review phase changes and provides students with basic knowledge of the water cycle. Students will be able to have a conversation/debate in class about water contamination, the LA Aqueduct and other environmental problems associated with the water in our world today. Students will also use their knowledge of the water cycle to understand depositional and erosional environments of the rocks.

Lab 36: Acid Rain & it's Effects on our Environment

Lab Overview: After a lesson on acid rain and its effects on the environment, students will carve a figurine out of a large piece of sidewalk chalk. They will then drip vinegar on it each day for a week logging any observations of change. Students will then complete a lab write up that will include their data and conclusion questions about how acid rain effects our environment. Students will then take this a step further and do a write up about cave formation. In this write up students will write about how solutes and solvents work to create both primary and secondary cave formations.

Lab Objective: Acid rain definitely effects the environment we live in and it's important for students to understand where acid rain comes from and what types of

destruction it causes. By observing the changes of the chalk over time, students will be able to explain the process of cave formation in geology.

Topic: Geologic Laws & Unconformities

Lab 37: Topographic Maps

Lab Overview: Students will be able to read a topographic map during this lab. Students will first start with easy topographic maps and then they will get gradually more difficult. Students will look for different types of features on topographic maps such as hills, valleys, cliffs and depressions. Students will use this knowledge to successfully navigate the more difficult maps in order to answer the given lab questions.

Lab Objective: The topographic map is a very important tool in geology. Geologists look for different geologic features within the topographic map to help them infer what occurred there geologically. Students will take the knowledge of reading the topographic map one step further in an upcoming lab when they take information from topographic maps and create cross-sections from A-A'.

Lab 38: Over & Under

Lab Overview: Students will use their knowledge of topographic maps and create cross-sections from the information given on the topographic map such as strike and dip. By looking at this information, students will be able to "infer" what has happened geologically and will be able to create a detailed geologic cross-section. Based on this cross-section, students will be able to explain what has occurred in the area geologically, for example: anticlines, synclines, normal or reverse faulting.

Lab Objective: Students will use all their knowledge of geology learned thus far for this lab. Students will be able to take information from the birds-eye view of the topographic map and create a 2-dimensional cross-section. Students will also explain what types of geologic processes would form these cross-sections.

Lab 39: Cross-Cutting Relations

Lab Overview: Students will look at the given cross-sections and determine the relative age of the given rock layers and faults. They will log the ages in a key, at the side of the cross-sections from oldest on the bottom to youngest at the top.

Lab Objective: Students will interpret age dating based on their observations of the given rock layers. They will also determine how certain rock structures were formed based on their location in the rock record. For example: Breaks in the rock record are interpreted as an unconformity or a time of erosion which means those rocks must have been located above sea level at the time.

Lab 40: Unconformities

Lab Overview: Students will create 3-dimensional models showing the different type of unconformities: Nonconformities, disconformities and angular

unconformities. Students will use their knowledge of the geologic laws to infer what has happened geologically for each type of unconformity.

Lab Objective: Students will be able to explain the difference between a nonconformity, disconformity, and angular unconformity. They will be able to explain how each is formed and give an example of where they could find each. Our local geology has angular unconformities and disconformities and students will be able to explain how each was formed in our local area.

Lab 41: Geologic Timescale

Lab Overview: Students will create a scaled model of the geologic timescale using register tape. Students will mark the major eras & epochs on this timescale. They will draw pictures of important index fossils such as the trilobite and ammonite in the correct time of the timescale. Students will answer questions pertaining to the Paleozoic and Mesozoic mass extinctions.

Lab Objective: Students will understand that the majority of geologic time is in the Precambrian. Students will be able to explain that hard parts came about in the Cambrian and this is where much of the fossil record comes into play. Students will be able to explain what happened during the Paleozoic and Mesozoic mass extinctions and how this has affected life on Earth.

Lab 42: Fossil Environments

Lab Overview: Students will chose a given fossil species to research such as: Tyrannosaurus, ammonite, conodont, mammoth, etc. Students will research what type of environment their fossil lived in, what period of time and why it went extinct. They will also include the classification taxonomy. Students will then create a poster or 3-dimensional model showing the environment the fossil lived in. In a key they will include what it ate, whether it was a herbivore or carnivore, what part of the world it lived in and what climate it lived in. Students will also type up answers to the given lab questions.

Lab Objective*:* Students will create the environment their species lived in based on their research. This reinforces the concept of uniformitarianism. Students will be able to explain why the wooly mammoth went extinct. Students will be able to have a conversation about endangered species in our world today and the politics involved.

Lab 43: Walking with Dinosaurs

Lab Overview: This is a video lab in which students will watch part of the Discovery Series, “Walking with Dinosaurs”. Students will make observations on the types of environments dinosaurs lived in and what was happening geologically at the time, for example, the break up Pangaea during the Triassic and the volcanically active time in the Cretaceous, before the ultimate demise of the dinosaurs. Students will create a lab write up at the end, answering questions pertaining to parts of the video and the ultimate demise of the dinosaurs.

Lab Objective: Students will be able to see the different climates of the Mesozoic. Students will be able to have a discussion about the mass extinction of the dinosaurs and how this opened a niche for the evolution of mammals. Students will be able to talk further about their thoughts and feelings of species on the endangered species list in the world today.

Course Title

Integrated Agricultural Biology (P)

Course Description

Agricultural Biology is a one-year, laboratory science course designed for the college-bound student with career interests in agriculture. Using agriculture as the learning vehicle, the course emphasizes the principles, central concepts, and inter-relationships among the following topics:

- The molecular and cellular aspects of life
- The chemical structural basis of life
- Energetic of life
- Growth and reproduction in plants and animals
- Evolution of modern plants and domestic livestock species
- Plant and animal genetics
- Taxonomy of modern agricultural plants and animals
- Animal behavior
- Ecological relationships among • • plants, animals, humans, and the environment
- Nutrition in animals
- Health and diseases in animals
- The similarities between animals and humans

The course is centered around an extensive laboratory component in order to connect the central idea of biological science with agricultural applications, earth and physical science principals, and other curricular areas, includes extensive written and oral reporting skills.

Standards of Expected Student Achievement

1. Utilize agricultural applications as a relevant vehicle to teach biological science principles and improve the scientific literacy of students.
2. Strengthen instruction in science for students pursuing professional level careers in agriculture.
3. Integrate mathematics standards, language arts standards, and career employability standards including creative thinking and problem solving skills, and technological literacy related to the agricultural industry.
4. Meet a portion of the laboratory science requirement for admission to the University of California and California State University systems.
5. Develop a sense of the interrelationships between life, earth, and physical science and their relationship to agricultural applications.
6. To motivate under represented populations to study and pursue careers in science and agriculture.

Integrated Agricultural Biology (P) (continued)

Prerequisite: This course is recommended for students in grades 10 through 12. Students must have completed at least one year of introductory agricultural science, and an agriculture instructor's recommendation.

Course Format
Classroom instruction, including:
- Discussion
- Demonstration
- Lecture
- Examinations
- Extensive reading assignments
- Guest speakers

Laboratory and field instruction, including:
- Science laboratory experience
- Field research projects

FFA leadership experience, including:
- Verbal and written communication exercises
- Leadership development activities

Ten percent supervised workplace learning, including:
-Individually developed supervised occupational experience projects

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Introduction to Athletic Training

Title: Introduction to Athletic Training

Length of course: Full Year

Subject area: Science (D) / Interdisciplinary Sciences

UC honors designation? No

Prerequisites: Biology (Required)

Co-requisites: None

Integrated (Academics / CTE)? Yes

Grade levels:

11th, 12th

ourse Description

urse overview:

This course will introduce students to the anatomy and physiology of the human body and how the systems interact with each other through exercise and sport. The course will also address sports injuries and analyze various treatments available. Multiple laboratory activities and case studies are included to further aid in the learning process. Students will utilize critical thinking and scientific problem solving for research and lab experiments. Model approaches to scientific topics are achieved through analysis of data, critical thinking, and application of learned concepts. An emphasis will be placed on primary sources for gathering and analyzing scientific studies. The course will develop communication skills in writing, reading, and discussing scientific issues.

The course will include unit tests, individual and group assignments, class participation, quizzes, labs, reports, case studies, research studies, a final exam, and a final practicum each semester. Classroom instruction will include Google Slide presentations, student notes, homework, collaborative group worksheets, and special topics. Math applications are explained in class and examples given to apply the concepts. Demonstrations and models are used to encourage students to relate sports exercise to real life. Many of the labs will require physical activity as we will study how exercise affects the various body systems covered throughout the course. The nature of this course allows students to study and discuss topics in the field of sports and exercise. Reading and research of these topics will be an integral part of the class. Laboratory activities will include the use of computers to collect, graph, analyze data to draw results and conclusions. Students must be prepared to do independent reading throughout the year and be prepared to research topics brought up and discussed in class. Class participation is encouraged to stimulate interest, application and inquiry.

All labs will follow a consistent format. Various device such as heart rate monitors, blood pressure monitors, hand dynamometer and spirometers are used to collect data to be entered on a computer. The data is graphed, analyzed, and reported through Google Sheets. The experiments are designed to encourage students to think about the physiology of various human systems by measuring the activity of the upper respiratory tract, lungs, heart, musculoskeletal system, and nervous system. Many experiments illustrate the response of the human body to stress or external influences. Other labs include activities that simulate disease states to enable students to compare normal and abnormal functioning. Each lab experiment will be reported in a common accepted scientific manner. Lab activities will take up approximately 35% of class time.

ADDITIONAL ITEMS

Academic Standards:

This course is aligned to address Common Core State Standards in addition to CTE model standards for the Health Science and Medical Technology Sector and the Patient Care Pathway.

INSTRUCTIONAL STRATEGIES:

Our class has an emphasis on hands on learning. The students learn certain skill or knowledge and then are given a chance to implement those skills in hands on situations and lab activities. The goal is that students would apply their new found skills and knowledge in some type of employment area as is the goal of CTE programs.

ɔurse content:

Unit 1: Intro to Sports Medicine

Students will gain knowledge of the history of Sports Medicine. Students will learn about various career paths that all play a role in Sports Medicine team and the education requirements needed for those professions.

Learning Objectives:

- Discuss the history of Sports Medicine and its' evolution over time
- Explore current employment trends for various medical professions to determine if their career goals align with current trends
- Identify members of the Sports Medicine Team including:
  - Role within the team
  - Education requirements
  - Schools that provide the education needed
- Organizational and Legal Concerns in Sports Medicine
  - Pre-Participation Examination and Record Keeping

Unit Assignment(s):

Students will utilize various professional web pages to gather and synthesize information about a self-selected Sports Medicine team member to determine a potential career path they wish to pursue. Students will be presented with case studies related to legal concerns within Sports Medicine to challenge students to develop opinions involving controversial topics. Understanding the legal considerations is essential for students to protect themselves and their mentors while completing after school coursework. As a whole the assignments in the unit will challenge students to investigate if a career in the Sports Medicine arena is right for them.

Students will do critical thinking questions in organization and legal concerns subject, both individual and then small group collaboration. Example of questions:

1. You are a collegiate athletic trainer preparing for the administration of pre-participation examinations. Why is it important to ensure that athletes receive a thorough pre-participation examination? What objectives can be gained by completing the examination?

1. Why is the medical history such a key component of the pre-participation examination? What general areas should be the focus of the medical history questionnaire? How can an athletic trainer ensure the accuracy of the questionnaire responses?

Unit Lab Activities:

Career Investigation. This lab will require students to use primary sources to investigate a medical career in greater detail. This lab will establish the procedures for all labs completed in this course. Students will be guided to develop an essential question and then guided through the process used to answer their essential question. Part of the process will include completing an interview of a professional currently working in the profession of the student's chosen career. At the end of the lab students will have learned how to develop an essential question, explore/ research to answer their essential question, and then present their findings to a group of individuals.

Medical history. Students will conduct a complete medical history on each other and record results. Lab is designed to expose the student to what is needed for a complete pre-participation physical and also re-enforces good communication skills. Lab will consist of both a written portion to be turned in and also an oral component assessed by the teacher.

Vital signs: Students will conduct taking vital signs on each other. This will include: blood pressure, heartrate, and temperature. Lab will consist of a live assessment by the teacher to assess proficiency in performing exam. A written component evaluating their knowledge of the anatomy/physiology of the cardiovascular system and what normal and abnormal values are.

Physical Fitness Profile. Students will perform the *Harvard Stress Test* on each other. In this lab they will perform the following test: The objective of this test is to monitor the development of the athlete's cardiovascular system (http://www.brianmac.co.uk/physiolc.htm), performing timed step test. Lab will consist of a live assessment by the teacher to assess proficiency in performing exam. A written component evaluating their knowledge of the anatomy/physiology of the cardiovascular system and what normal and abnormal values are.

Unit 2: Introduction to Anatomy

Students must have a foundation of understanding about the human body before they can study the body's response to exercise. Students must also understand the basic anatomical terms used to study the human body. In order to gain this basic knowledge students will use a variety of resources (models, textbooks, handouts, videos, and labs) to explore human anatomy and terminology.

Learning Objectives:

- Identify areas of the body by anatomical planes and sections
- Use terms of position and direction to locate anatomical structures within the body
- Identify and locate various regions of the human body
- Identify and locate various types of tissues throughout the body

Unit Assignment(s):

Students will utilize anatomical models and charts to label common anatomical structures including planes and major landmarks. Students will be required to use post-it to label the structures and pronounce them correctly. For another assignment students will practice with one another and produce some kind of learning aid (mnemonic, rhyme, song, etc) to help retain anatomical terms. Understanding the basic anatomical terms are essential when studying the human body.

Unit Lab Activities:

Anatomical positions and directions of the human body: This lab investigation uses models and lab handouts to determine anatomical movements and locations of structures within the human body. Students will use Gummy Bears to demonstrate the different anatomical planes by biting the bears in half. Students will then place a toothpick into the Gummy Bear to demonstrate the different axis'. Students will then draw the Gummy Bears with the toothpicks for future reference. In order to learn different directional terms and movements students will participate in a Simon Says game. Students will be asked to move specific bones in specific ways to demonstrate their knowledge. Models will be used as another supplementary learning device for students throughout the unit. As previously stated, students will use post-it notes to label specific anatomical structures to demonstrate their knowledge as well. Furthermore, students will use edible items to create an anatomical model of a self-selected structure.

Unit 3: Classification / Mechanisms of Injuries

Students will gain knowledge of basic injury principles, including: the various forces causing injury, how these forces are applied to the body, and identify types of injuries caused by these forces. Students will continue their exploration of forces by creating a device using household items to limit the amount of damage to an item simulating the human body.

Learning Objectives:

- Describe the forces exercise and sporting activities place on the body
    - Tension, compression, torsion, and shearing
- Identify injuries as either acute or chronic in nature
- Describe and classify types of injuries
    - Sprain, strain, contusion, inflammation, fracture, and dislocation
- Psychology of Injured Athletes

Unit Assignment(s):

Students will utilize textbooks, multimedia resources and laboratory experiments to define the types of forces applied to the body, injury classifications and joint classifications. Once students have mastered the types of forces and levers in the body students will apply their knowledge by identifying these forces and levers in everyday items/activities.

Students will have an understanding of mechanism of injury and body's response in relationship to specific tissues/body systems: injury mechanisms, soft-tissue injuries and healing, bone injuries and healing, nerve injuries and healing, pain. Students will do a discussion board on the psychology of the injured athlete and how motivation and different personalities play an important role in communication of the injuries.

Unit Lab Activities:

Forces and levers exploration: This lab will include the use of Google Sheets, class supplies (textbooks, pencils, ruler, etc), and spring scales to investigate different lever types and forces that cause injury within the human body. Students will test the strength of various household items using a spring scale. Students will then investigate the properties of these items in order to apply them to prevent injury to the human body. Through this series of labs students will collect data and create graphs to analyze which types of levers and the forces that are able to a variety of joints types in the human body. The end product of this lab students will create a protective device to assist in preventing an injury classification within the human body and be able to demonstrate the amount of force the device withstood.

Histology – Classification of Tissues: to view the four types of tissues, compare, and contrast the different tissue types. Student will be able to list the general structural characteristic, functions, and location of epithelia in the body and identify the subcategories when presented with a diagram or slide. Student will be able to list the general structural characteristic, functions, and location of connective tissues in the body and identify the subcategories when presented with a diagram or slide. Student will be able to list the general structural characteristic, functions, and location of muscle tissue in the body and identify the subcategories when presented with a diagram or slide. Student will be able to list the general structural characteristic, functions, and location of nervous tissue in the body and identify neurons when presented with a diagram or slide.

Unit 4: Foot, Ankle, Lower Leg

Students will begin to investigate the lower kinetic chain in depth with an exploration of the ankle mortise. Students will begin with an exploration of the bony anatomy and then progressing through the ligamentous and muscular anatomy of the foot, ankle, and lower leg. Students will learn that the anatomy of the these segments play a large role in the functional anatomy and movements of the lower kinetic chain.

Learning Objectives:

- Identify primary anatomical structures of the foot, ankle and lower leg using models and handouts.
- Recognize anatomical abnormalities that may lead to athletic injury
- Collect goniometric measurements of the ankle joint to assess range of motion before and after proprioceptive taping
- Describe and utilize a variety of injury prevention techniques
- Describe and recognize common athletic injuries

Unit Assignment(s):

Students will use anatomical charts and models to learn the primary anatomical structures. Students will then continue by working in groups to learn the surface anatomy while practicing their palpation techniques. They will then apply this knowledge to demonstrate through critical thinking assignment how an athlete's anatomy can be a predisposing factor for various athletic injuries.

🧪 Unit Lab Activities:

Using ankle taping to restrict range of motion: This lab will use athletic tape, goniometers, and Google Sheets to investigate how different parts of proprioceptive ankle taping restricts range of motion in the ankle. Students will first measure ankle range of motion to establish a baseline measure. Then they will apply each component of the ankle taping technique individually and with various tapes (duct tape, packing tape, painter's tape, and athletic tape) and again collect range of motion measurements using a goniometer. Finally, students will apply a complete taping and measure range of motion. With the collected data students will analyze (using Google Sheets) the various taping techniques and tapes to determine which combination provides the greatest reduction of range of motion. Once students have determined the ideal taping technique to reduce ankle range of motion, they will create and present all components to industry professionals.

Unit 5: Knee, Thigh, and Hip

Through this unit students will continue to investigate the lower kinetic chain by analyzing gait patterns. This unit will emphasise the angles within the hip and knee in regards to injury potential. Students will investigate how the anatomy of the knee and hip play a large role in the movement patterns of those who are in motion.

Learning Objectives:

- Identify primary muscles, bones, and ligaments of the knee, thigh and hip
- Recognize anatomical abnormalities through basic functional movements
- Collect goniometric measurements to identify anatomical abnormalities
- Analyze normal and abnormal gait patterns

💻 Unit Assignment(s):

Students will utilize anatomical models and handouts to gain a basic understanding of the knee, thigh, and hip anatomy. Students will then continue to investigate various angles within the knee, thigh and hip to utilizing goniometric measurements on individuals. Finally, students will understand how these angles can lead to variety of injuries.

🧪 Unit Lab Activities:

Gait analysis: Student will use a video recording device to record a student's gait. Students will compare the video recording to a normal gait pattern to identify risk of injury to all joints of the lower kinetic chain. Students will then create an experiment to explore how different gait improvement techniques can reduce the risk of injury.

Wrapping: Students will use a variety of wrapping techniques to support the knee, thigh and hip for a various injuries discussed and explored in class. Students will then be required to design a taping/wrapping technique that uses the least amount of material to provide the greatest amount of support for an injury of their choosing. Students will use goniometric measurements and statistics to determine which supportive technique is the best.

Unit 6: Head, Neck, and Back

Through this unit students will explore the complexity of head, neck and back injuries. The primary focus of the unit will be concussions. Students will complete a Project Based Learning unit and work together to gain an in depth knowledge of the concussion crisis in sports today.

Learning Objectives:

- Identify and locate primary anatomical structures of the head, neck, and back.
- Explore the complexity of concussions including:
  - Concussion management techniques
  - Concussion testing techniques
  - Development of protective equipment
  - Legal considerations related to concussion and head injury

Unit Assignment(s):

Students will complete a research paper to answer a group developed essential question related to one component of the concussion crisis: concussion treatment, prognosis, or legal concerns. As a part of this assignment students will explore the history and evolution of the football helmet. This investigation will demonstrate to students how complex this public health issue is. Students will examine case studies to evaluate the care injured athletes have received in a variety of setting. From this students explore concussion laws in various states and evaluate whether or not any laws were broken. This evaluation will be set up as a mock trial during which students will self-assign roles and responsibilities.

Unit Lab Activities:

Helmet Development Lab: Using their previously stated research assignment, students will develop a football helmet using household items to mimic what they feel is the best method for reducing the risk of concussions. The helmets will be presented in class to show what the thought process was behind the helmet and how it will help to reduce the concussion potential. The helmet will then be tested by being hit with a rubber mallet with a simulated brain in the helmet. The tests will be video recorded and the students will write a lab summary evaluating their design and how they would improve it for the next time.

Concussion Testing Mini-Labs: As a part of their lab assignments, students will complete the ImPACT, SCAT 5, and BESS tests. These tests are all currently in use by medical professionals in a variety of setting to help in the management of concussions. Students will have first-hand experience completing these tests as patients and as test proctors.

Unit 7: Shoulder

Students will continue their exploration of major joints in the body with the shoulder joint. For this unit students will focus on the overhead throwing mechanics of the shoulder and how this activity causes injury in the overhead throwing athlete. Students will be completing this unit during the spring sports season so they can watch a variety of athletes and evaluate their throwing mechanics.

Learning Objectives:

- Identify and locate primary anatomical structures of the shoulder joint including:
  - Bony landmarks
  - Muscles
  - Ligaments
- Describe the phases of the proper overhead throwing motion.
- Explore how alterations to the throwing motion can cause injury to any part of the upper extremity kinetic chain.

Unit Assignment(s):

Students will investigate the proper throwing mechanics for an overhead throw. Students will learn the proper sequence of events in the throwing motion and the range of motion necessary to complete the different phases of the throwing motion. Students will then watch a group of high school pitchers to find common errors in the throwing motion. Students will then investigate how these errors lead to a variety of injuries to the shoulder, elbow and wrist. Students will continue their investigation by watching videos of surgeries as a result of these injuries.

Unit Lab Activities:

Throwing lab: After students have gained an understanding of proper throwing mechanics and have watched various athletes throw, the students will collect data while attempting to throw with a variety of modifications to the throwing motion (i.e. longer stride, side arm, off hand, etc). Students will collect subjective and objective data during this lab. The objective data that will be collect is the accuracy with which they threw and will be entered into Google Sheets for analysis. Students will look to determine if the throwing modifications had a significant impact on their throwing accuracy. The students will also collect subjective data. Students will record how the different modifications felt while throwing and also how it looked while someone threw. By combining the subjective and objective data from this lab and from the other assignments in this unit, students will be able to determine which throwing errors/modifications have the greatest impact on the health of the athletes arm.

Unit 8: Elbow, Hand, Wrist

This unit students will use models and anatomical charts along with a lab activity to explore the elbow, hand and wrist joints. Due to the vast number of anatomical structures within these joints greater emphasis will be placed on the anatomy and injury prevention portions of this unit.

Learning Objectives:

- Identify and palpate primary anatomical structures of the elbow, hand, and wrist
- Recognize common athletic injuries to this region of the body
- Apply various wrapping and taping techniques to various joints

Unit Assignment(s):

Using anatomical charts and models students will locate primary anatomical structures in the elbow, hand, and wrist. Students will then continue to locate structures using palpation and surface anatomy. By applying their basic anatomical knowledge to surface anatomy students will gain a better understanding of where the injuries researched in this unit are occuring. Once students have a firm understanding of the anatomy they will investigate how different mechanisms of injury lead to a variety of injuries. One key thing students will learn through this investigation is how to fall properly, as this is one of the most common mechanisms of injury for the entire upper extremity.

Unit Lab Activities:

Grip strength: For this lab students will be utilizing hand dynamometers to test the amount of force they can produce with their hand with and without tape. The purpose of this lab is to explore a common idea presented by athletes; and that is that having their wrist, hand or elbow taped makes them stronger. In order to explore this claim students will first measure the amount of force produced by their hand using a dynamometer. Students will then apply tape/braces to different parts of the hand, elbow and wrist and again use the dynamometer to measure the amount of force they are able to produce. The data collected will be entered into Google Sheets to be analyzed and to produce charts and tables to support the student's conclusions.

Wrapping and Bracing: In a similar lab activity, students will be using goniometers to measure range of motion with and without tape or brace. Students will measure range of motion prior to the application of tape to establish a baseline measure. Students will then apply taping techniques using a variety of taping materials and again collect goniometric measurements. This data will also be entered into Google Sheets to produce tables, charts, and statistics to support the student's conclusions.

Unit 9: Human Performance

As the culminating unit, students will be combining what they have learned to investigate the body as a whole. Students will complete a biomechanical analysis of each other to identify limitations in range of motion and strength.

Learning Objectives:

- Investigate the difference between flexibility and mobility and how this relates to range of motion
- Students will be introduced to the principles of strength training including
    - proper movement patterns
    - the SAID principle
    - the phases of muscle generation

🖳 Unit Assignment(s):

To start students will investigate the structure of a muscle (from muscle group to individual muscle fibers). Students will continue with researching the phases of muscle generation, normal ranges of motion during gross movements, and normal movement patterns during basic strengthening exercises utilizing a variety of resources. Once students have learned proper movement patterns they will learn target heart rate zones for a variety of types of physical activity. By adding this knowledge students will be able to apply what they have learned to maintain a healthy lifestyle.

🧪 Unit Lab Activities:

Biomechanical analysis including heart rate and blood pressure relationship: Students will complete a biomechanical analysis of their fellow students. To start students will measure resting heart rate with a heart rate monitor. The participant will then begin the biomechanical analysis exercises. Throughout the analysis, students will be evaluating the movement patterns of their peers while collecting heart rate and blood pressure data. Using all of the data collected students will create a wellness plan for their peers to improve their movement patterns, resting heart rate, resting blood pressure, active heart rate and blood pressure and heart rate recovery. Students will analyze the data to show the relationship of heart rate and blood pressure with a variety of physical activities. At the end of the unit students will have combined information from all units to develop a strength and conditioning program for an individual's needs.

Unit 10: Immunity and Infectious Diseases

Students will gain knowledge about the components of the blood and lymphatic system that contribute to natural and adaptive immunity. They will also learn about several communicable diseases including those that are vaccine-preventable.

Learning Objectives:

Immunity

- Identify anatomical structures of the lymphatic system
- Identify the various components of the blood and how it affects immunity
- Discuss functions of the lymphatic system and blood components
- Discuss the interactions between the lymphatic system and blood components and other body systems
- Identify medical terminology related to the lymphatic system, and blood components, and immunity
- Discuss common lymphatic system hypersensitivities and malignancies
- Discuss common blood pathology, laboratory tests, and clinical procedures

- Discuss common lymphatic system laboratory tests and clinical procedures

Infectious diseases

- Bloodborne pathogens
- Spread of infectious diseases
- Methods to preventing the spread of infectious diseases
- Biohazard and universal precautions
- Personal Protective Equipment
- Hygiene
- Role of the Center of Disease Control

Unit Assignment(s):

Students will investigate and discuss vaccine risks and benefits, create terms using system-specific root words, and discuss AIDS, lymphoma, and allergies. Students will discuss and practice using methods of hygiene and personal protective equipment to prevent the spread of communicable diseases. Students will also have the opportunity to become blood borne pathogen certified.

Unit Lab Activities:

Students will investigate an infectious disease to present to the class. Students will chart the similarities and differences between several communicable diseases as well as some statistics associated with each of them to compare.

Unit 11: First Aid and Emergency Care

This unit focus on the students First Aid and Emergency Care. For First Aid, students will expand upon the knowledge they gained during their CPR/First aid training. The students will review how to assess injuries, manage injuries, manage obstructed airways, provide CPR, use an AED and correctly identify correct techniques for moving and transporting injured athletes. For emergency care, students will be introduced into the roles and responsibility of the Athletic trainer within the guidelines of the school and CIF organizations in the following roles: Prevention, Evaluation and Diagnosis; both emergency and non-emergency situations, Emergency preparedness, game and non-game setting, Emergency Action Plan. Students will also watch, read, and research various case studies about First Aid and Emergency Care, helping to broaden their knowledge.

Learning Objectives:

- Explain the importance of knowing CPR/AED and how to manage an obstructed airway
- Injury assessment
- Understand how to make a plan for handling emergency situations
- Describe the processes involved in the visual observation and inspection of an injury
- Identify various types of tests included in the physical examination of an injury
- Identify the responsibilities of an emergency response team
- List supplies and equipment that should be on-site in case of medical emergency

- Injury prevention
- Revisit and describe the difference between acute and chronic injuries
- Revisit and describe how sports injuries are classified
- P.R.I.C.E
- Name and explain the steps of the P.R.I.C.E regimen
- Describe the purpose of each step
- Describe techniques for moving and transporting the injured athlete.
- Describe appropriate care for skin wounds.
- Overview of environmental conditions. Special consideration for Asthma, Diabetes Mellitus, and Seizure Disorders.
- Heat- related conditions
- Cold-related conditions
- Exercising in Thunderstorms
- Signs and symptoms of Abdominal Injuries
- Signs and symptoms of: Bronchial Asthma, Diabetes Mellitus, Seizure disorders
- Management of: Bronchial Asthma, Diabetes Mellitus, Seizure disorders

🖳 Unit Assignment(s):

First Aid Response to Superficial Wounds. Students will understand the body's response to injury, learn appropriate techniques to effectively respond to superficial wounds. For this assignment the student will learn the proper ways to take pulse for both adults and children and be able to tell if the individual needs medical care.

Emergency Response Scenario. Utilize care dummies and the physical environment of the school, student will be put into situations where they have to correctly respond to one of a variety of scenarios and respond to an emergency. Students will be observed and assessed on the steps and techniques they employ in responding to and offering proper First Aid response.

Emergency vs Nonemergency injury. Discussion Board: Using what you have learned so far about Sport Medicine, provide your interpretation of what constitutes an emergency type injury from a nonemergency type injury. Provided a scenario for each type. You are two respond to two other classmates post as to their scenario they have given and why you agree or disagree with their scenario.

🧪 Unit Lab Activities:

Emergency Action Plan. This lab is designed for the student to work in groups of two and to come up with an Emergency Action Plan after meeting with a certified ATC and touring their facility (either one of our schools or from another school/university). Students will turn in a well writing action plane, meeting the requirements set forth in their chapter reading and class room discussion. A copy of the Emergency Action Plan of the ATC that they interviewed will also be required with their lab. This lab is designed to help the students understand the importance of having an action plan and the components of such a plan prior to an emergency and also how to work in small groups and collaborate.

Spine Boarding. This lab is designed for the students to follow their emergency action plan and work together in groups of 6-8 to go through from start to finish the emergency action procedures: sizing up the scene, evaluating the patient/athlete, alerting the emergency response system, and modeling after a medical professional to properly spine board the patient.

Comments:

Course Purpose: *What is the purpose of this course?*

To expose students to the science of ecology. Ecology is the study of the interactions between organisms and their environment. This course provides a background in the fundamental principles of ecological science, including concepts of natural selection, population and community ecology, biodiversity, and sustainability. Students will acquire an "ecological literacy" about how the natural world works, and develop an understanding of how scientific methods are used to construct ecological knowledge. The course will also explore some of today's major ecological challenges, and the important research that is being done to address these concerns.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

Course Content (units overlap, and are revisited quite often in a circular/reinforced curriculum)

1) Introduction to Environmental Science
2) Tools of Environmental Science—Science Safety and Scientific Method, Modeling
3) Recycling and Waste
4) Dynamic Earth and impact on environment—geosphere, atmosphere, hydrosphere, biosphere
5) Organization of Life—ecosystems, evolution, diversity of living things
6) How Eco-Systems Work—energy Flow, cycling, changes
7) Polar Ice Caps and their impact on Climate Change
8) Biomes—Desert, Tundra, Grasslands
9) Biomes—Forests: Deciduous, Coniferous, Temperate Rainforests, Tropical Rainforests
10) Biomes—Freshwater and Marine
11) Celebrate Earth Event (semester project)
12) Energy Efficiency
13) Environmental and Human Health Economics and Polices
14) Population Impacts, Natural and Non-renewable Resources, Alternative Energy sources

Course Resources

Content Standards

Course Objectives:
1. Students will gain valuable and accurate information about how ecology issues impacting planet earth.
2. Students will understand the role that ecology play in our lives.
3. Students will develop scientific reasoning and process skills.
4. Students will work in teams and independently and be able to evaluate his/her progress.
5. To help prepare students for the demands of higher education.

Outcomes: Students will…
1. develop proper laboratory skills.
2. trace the development of planet earth and it's impact on it's environmental wellness.
3. develop writing skills to show comprehension of learned materials.
4. develop critical thinking processes and make value judgments regarding ecology and environmental issues

Investigation and Experimentation:
Scientific progress is made by asking meaningful questions and conducting careful investigations. As a basis for understanding this concept and addressing the content in the other three strands, students should develop their own questions and perform investigations. Students will:
a. Plan and conduct a scientific investigation to test a hypothesis.
b. Evaluate the accuracy and reproducibility of data.
c. Distinguish between variable and controlled parameters in a test.
d. Recognize the slope of the linear graph as the constant in the relationship yŁ=Łkx and apply this principle in interpreting graphs constructed from data.

Course Title

Introductory Physical Science A (P)

Prerequisites: Above average performance in 8th grade Science work.

Description of Target Group

This yearlong course is designed for 9th and 10th grade students who plan to go to a four-year college or university.

Purpose

To provide students experience and practice in analysis, reasoning, problem solving, and experimentation. Average or above average math and reading comprehension skills recommended.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Indicate by multiple choice test answers an understanding of the relationships of data indicated by a line graph.
2. Follow instructions, both oral and written, and run a laboratory exercise, collect data and clean up after the lab.
3. Analyze lab data and write conclusions relating the data to the purpose for each lab.
4. Develop and use a notebook for this class (a learning tool).
5. Solve problems, which will help them understand the concepts presented in the lab experiences.
6. Analyze, reason, and solve problems, which have a carry over value to all other student activities and future job applications.
7. Answer questions indicating an understanding of the metric system.
8. Use and explain volume, mass, and density.
9. Gain an understanding of the characteristic properties of matter and then how we can use these properties.
10. Explain some methods to synthesize, decompose, and analyze matter.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Lab experiences, problem solving, question and answer sessions, discussions, compositions, computer and Internet practices, testing, critiques, and films.

Course Title

Introductory Physical Science B (P)

Prerequisites: Above average performance in 8th grade Science work.

Description of Target Group

This yearlong course is designed for 9th and 10th grade students who plan to go to a four-year college or university.

Purpose

To provide students experience and practice in analysis, reasoning, problem solving, and experimentation. Average or above average math and reading comprehension skills recommended.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Indicate by multiple choice test answers an understanding of the relationships of data indicated by a line graph.
2. Follow instructions, both oral and written, and run a laboratory exercise, collect data and clean up after the lab.
3. Analyze lab data and write conclusions relating the data to the purpose for each lab.
4. Develop and use a notebook for this class (a learning tool).
5. Solve problems, which will help them understand the concepts presented in the lab experiences.
6. Analyze, reason, and solve problems, which have a carry over value to all other student activities and future job applications.
7. Answer questions indicating an understanding of the metric system.
8. Use and explain volume, mass, and density.
9. Gain an understanding of the characteristic properties of matter and then how we can use these properties.
10. Explain some methods to synthesize, decompose, and analyze matter.

19. Brief Course Description

This course is for the advanced lab student. Students will be involved in preparing lab materials in advance for the teacher, as well as assisting the teacher and students during labs. This includes but is not limited to gathering materials, preparing solutions, inventory, knowledge of technology (i.e. appliances, computers…) assisting the teacher during labs and demonstrations and reading lab procedures.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Lab Technicians will:

- Be able to read a lab procedure and gather all of the necessary materials for the lab.
- Be able to use good lab safety when they are in the lab.
- Assist other students during the lab activity.

21. Course Objectives

Home Economics Lab Technicians will:

- Assist the instructor in setting up lab stations with the necessary equipment and materials needed to complete the lab activity.
- Inventory, organize, and clean equipment and supplies. (lab maintenance)
- Demonstrate knowledge of computer skills to assist instructor in preparing power point slides, recipes, lab notes, etc.
- Assist the instructor during demonstrations.
- Assist the instructor during labs and in helping the other students.
- Monitor supplies for students.
- Aid in replenishing lab supplies.

22. Course Outline

Students will learn the following lab techniques as a home economics lab technician:

- Demonstrate knowledge of computer skills to assist instructor in preparing power point slides, recipes, lab notes, etc.
- Be responsible for helping to maintain a clean organized lab room.
- **Computer lab**
- Assisting students researching and formatting data for reports.
- Computer skills (acquired as lab tech)
- Basic spread sheet development.
- Word processing.
-

- **Foods lab Management**
- Monitor supplies for students.
- Aid in replenishing lab supplies.
- Calculating measurements for recipes.

23. Texts & Supplemental Instructional Materials

24. Key Assignments

25. Instructional Methods and/or Strategies

26. Assessment Methods and/or Tools

Title of previous submission?

_____

19. Brief Course Description

This course is for the advanced lab student. Students will be involved in preparing lab materials in advance for the teacher, as well as assisting the teacher and students during labs. This includes but is not limited to gathering materials, aliquoting solutions and supplies, creating dilutions, cutting or building materials, making solutions, repairing lab equipment, and reading lab procedures.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Lab Technicians will:

- Be able to read a lab procedure and gather all of the necessary materials for the lab.
- Be able to use good lab safety when they are in the lab.
- Assist other students during the lab activity.

21. Course Objectives

Science Lab Technicians will:

- Accurately mass crystalline powders.
- Be able to follow a lab protocol to make a solution or dilution.
- Accurately setup water baths of varied temperatures.
- Neutralize acids and/or bases.
- Dispose of chemicals properly.

22. Course Outline

Students will learn some or all of the following lab techniques as a science lab technician:

- Distillation of water
- Solution preparation
- Dilution preparation
- Massing of crystalline solids
- Acid/base neutralization
- Making distilled water
- Using an autoclave
- Aliquot lab materials
- Reading lab protocols
- Making and pouring gels

- Using a gel box and comb
- Freezing DNA
- Growing bacterial colonies
- Incubating bacteria
- Reptile husbandry
- Repairing lab equipment
- Rearing and maintaining insect colonies
- Learn chemical disposal techniques
- Become familiar with an MSDS
- Maintain/clean/glassware, check glassware integrity before labs
- Demonstrate safe lab techniques during class
- Make nontoxic, non-corrosive solutions
- Assist special needs students with experimental procedures
- Assist the teacher with any other classroom duties

23. Texts & Supplemental Instructional Materials

24. Key Assignments

25. Instructional Methods and/or Strategies

26. Assessment Methods and/or Tools

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

Course Title **SMHS**

Life Science A (P)

Prerequisites: Completion of Home Physical Science, AG 1 and AG 2, or General Science.

Description of Target Group

This course is designed for 10th, 11th, and 12th grade students.

Purpose

This course is designed to develop basic biological concepts with the non-science major in mind. This course will stress the cell as the basis of all life and variations in plants and animals in nature. The course will also identify basic ecological relationships between man and nature, causes of changes in organisms, reproduction, genetics, and human anatomy.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. List and use the basic scientific tools and instruments.
2. Discuss ecological relationships and conservation of biological resources, which may be used.
3. Identify basic trophic levels.
4. Explain the cell as the basis of all life.
5. Recognize the basic differences in plants and animals.
6. Work in a laboratory environment displaying proper technique.
7. Show knowledge of the structure and function of the human body.
8. Explain the process of reproduction.
9. Discuss heredity and genetics.
10. Use metrics as a system of weights and measures.
11. Gain the necessary tools to help them in their chosen fields by using the scientific method for solving problems.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lab, discussion, films, video tapes, film strips, cassettes, laser discs, TV, computer, classroom participation, lectures, guest lecturers, demonstrations, field trips, and library.

Course Title **SMHS**

Life Science B (P)

Prerequisites: Completion of Home Physical Science, AG 1 and AG 2, or General Science.

Description of Target Group

This course is designed for 10th, 11th, and 12th grade students.

Purpose

This course is designed to develop basic biological concepts with the non-science major in mind. This course will stress the cell as the basis of all life and variations in plants and animals in nature. The course will also identify basic ecological relationships between man and nature, causes of changes in organisms, reproduction, genetics, and human anatomy.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. List and use the basic scientific tools and instruments.
2. Discuss ecological relationships and conservation of biological resources, which may be used.
3. Identify basic trophic levels.
4. Explain the cell as the basis of all life.
5. Recognize the basic differences in plants and animals.
6. Work in a laboratory environment displaying proper technique.
7. Show knowledge of the structure and function of the human body.
8. Explain the process of reproduction.
9. Discuss heredity and genetics.
10. Use metrics as a system of weights and measures.
11. Gain the necessary tools to help them in their chosen fields by using the scientific method for solving problems.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lab, discussion, films, video tapes, film strips, cassettes, laser discs, TV, computer, classroom participation, lectures, guest lecturers, demonstrations, field trips, and library.

Course Title **ERHS**

Marine Science (P)

Prerequisites: Successful completion of either General Science or Introductory Physical Science or their equivalent and successful completion of at least one semester of Biology with a grade "C" or better.

Description of Target Group

This course is designed for 10th, 11th, and 12th grade students who are planning to continue their education in college.

Purpose

To provide the students information about the physical and biological aspects of the marine environment, the interaction of these two aspects and their affect upon our everyday lives. This course is designed to better prepare college entry students for college Biology.

Expected Student Achievement

Upon completion of this course, students should be able to:

1. Correctly and accurately use basic scientific equipment, such as a microscope, triple beam balance, hydrometer, graduate cylinder, etc.
2. Make and interpret graphs using both regular and semilog graph paper.
3. Solve mathematical problems using simple algebraic techniques involving salinity, tides, currents, waves, unit conversions, basic navigation and time zone calculations, etc.
4. Identify living organisms to their major taxa using modern and accepted taxonomy.
5. Construct and use dichotomous keys in classifying organisms.
6. Demonstrate how marine organisms interact with each other and how they affect us economically and ecologically.
7. Identify various career opportunities in the field of oceanography.
8. Demonstrate a basic knowledge and understanding of the processes and occurrences commonly associated with the ocean, both past and present.

Course Content

The following subjects are expected to be presented to Marine Science students:
(Note: other appropriate subjects may be added if time permits)

History of Oceanography	Classification
Ocean Basins and Plate Tectonics	Phylogenetic Study of Major Taxa
Seawater	Plankton
Atmosphere and Climate	Nekton
Currents	Benthic Organisms
Waves	Biochemical Processes
Tides	Coastal Ocean

Instructional Materials

Text: Oceanography, a view of the earth / M. Grant Gross. ---5th edition
Prentice Hall, Englewood Cliffs, New Jersey 07632

Activities

Lectures, class discussions, demonstrations, laboratory investigations, video presentations, individual and group oral reports and projects, field trip(s) and more.

Course Title

Marine Science A/B (P)

Description of Target Group

This course is designed for 10th, 11th, and 12th grades students who are planning to go on to a university of technical prep school, and who are going to major in a science-related field.

Purpose

To provide the students information about the physical and biological aspects of the marine environment, the interaction of these two aspects and their affect upon our everyday lives. A grade of C or better in Algebra 1 and a grade of C or better in either BSCS Biology of Introductory Physical Science is recommended.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Manipulate correctly basic scientific equipment, such as a microscope, balance, hydrometer, pocket transit, graduate cylinder, etc.
2. Assemble, maintain, and bring to class a notebook.
3. Identify by common name the marine plants and animals commonly found along the central California coast.
4. Use the modern taxonomic system of classification and identify the relationship of common marine organisms to the system.
5. Solve problems involving tides, wave motion, salinity, pressure, wind circulation, currents, and other marine-related phenomena.
6. Construct and interpret graphs and solve problems involving graph data in the field of marine science.
7. Identify economically important marine resources, their uses, methods of extraction or collection and economic significance.
8. Identify various existing and projected career opportunities in the field of marine science.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, participation in class discussions, demonstrations, experiments, film, field trips, individualized and group projects and reports.

18. Brief Course Description

180 hours (one year equivalent) of this total 360 hour (two year equivalent) course is devoted to a rigorous laboratory science curriculum in microbiology, anatomy and physiology. This course was designed for students who are interested in biology, medicine and related professions. During the first half of this course students will be introduced to microbiology, anatomy and physiology. They will undertake many lab exercises that will help them to understand both the human body and the important of correct laboratory procedures. During the second half of this course students will take part in multi-faceted mentorships two to three days per week at a participating local medical center and apply their knowledge of microbiology and anatomy/physiology gained during the first half of this science program. The other two to three days per week will be spent back at their core science classroom.

Course Content

Course Goals

1. Acquire knowledge of microbiology, anatomy/physiology, and their relationship to health careers by effectively completing challenging group and individual projects, laboratory activities, written assignments, a portfolio, and a mentorship evaluation report.

2. Demonstrate knowledge of California standards in life science, health, language arts, and mathematics by completing laboratories and various written projects.

Course Objectives

1. During the first half of this two year equivalent course students will undertake a rigorous lab science course of study which includes:

    A. One third of a year of microbiology in which students will increase their knowledge of various microbes and diseases associated with them. They will be performing a series of nine laboratory activities involving the culture and analysis of various bacteria. Most of these activities require two days to complete.

    B. Two thirds of a year of anatomy and physiology in which students will increase their understanding of the human body and the diseases associated with it and will learn the appropriate medical terminology associated with each body system. Numerous laboratory activities will be performed during the course of this unit, including an on-going animal dissections to examine organs of the various body systems. See syllabus for specific labs associated with each unit.

2. During the second half of this two year equivalent course:

    A. Students will spend 2 to 3 days per week working with mentors in various health care professions. This experience will allow them to research various clinical fields and apply their knowledge of microbiology and anatomy/physiology.

    B. The other two to three days per week will be spent back in their core class on campus covering additional science and health curriculum with their instructor.

3. Students will demonstrate their knowledge of the following topics by passing a series of tests. In each of the following subject areas: Microbiology, Anatomy and Physiology, Personal Characteristics of a Health Care Worker, Medical Ethics and Legalities, Safety, Infection Control, and Standard Precautions.

4. To demonstrate their knowledge of basic job seeking skills needed for obtaining employment in medical science/health careers, the students will complete a portfolio.

Course Outline

Unit 1: Microbiology

1. General principles of microbiology
2. Study of microbes
3. Study of chain of infection and infection control including standard precautions
4. Viral and bacterial disease research report
5. Laboratory Activities:
    a. Use of the Light Microscope
    b. Growth of Organisms from the Environment
    c. Bacterial Identification
    d. Aseptic Technique
    e. Streak Plate Method for Isolation
    f. Gram Stain
    g. Antibiotic Sensitivity Testing
    h. Hand Disinfection
    i. Antiseptics vs. Disinfectants

Unit 2: Anatomy and Physiology

1. Introduction to Anatomy and Physiology
    a. Body plans and organizations
    b. Body systems and parts
    c. Cell structure and chemistry
    d. Tissues
    e. Systems organization
    f. Labs - cell model, body systems

2. Integumentary System
    a. Structure and function of mitosis
    b. Diseases and associated conditions
    c. Lab: Microscopic Analysis of Cells and Tissues
    d. Medical Terminology

3. Skeletal System
    a. Anatomy of the human skeleton
    b. Anatomy and physiology of bones
    c. Labs: Bone Dissection, axial skeleton
    d. Physiology related to joints and articulation
    e. Diseases and conditions associated with the skeletal system
    f. Medical terminology

4. Muscular System
    a. Types of muscle tissue
    b. Structures and functions
    c. Lab: Microscopic Analysis of Muscles
    d. Cartilage and Tendons
    e. Movement
    f. Diseases associated with muscles
    g. Medical Terminology

5. Nervous System
    a. Organization of the nervous system
    b. Parts of neuron and basic functions of synapsis and neurotransmitters
    c. Motor function of spinal cord and cord reflexes
    d. Function of the parts of the brain
    e. Contrast sympathetic and parasympathetic nervous systems
    f. Anatomy/physiology of senses
    g. Diseases and conditions associated with nervous system
    h. Appropriate medical terminology
    i. Lab - Reflexes and Neurons

6. Circulatory System
    a. Anatomy of heart
    b. Differentiate between systole and diastole
    c. Identify different types of blood vessels and their functions
    d. Structure and function of different blood cells
    e. Lab: Blood Cell Identification (microscopic analysis)
    f. Diseases and disorders associated with the circulatory system
    g. Lymphatic system
    h. Medical Terminology
    i. Lab: Measuring Pulse, Respirations, and Blood Pressure
    j. Lab: Rat Dissection – examine organs of the circulatory system
    k. Lab: Sheep Heart Dissection
    l. Lab: CPR Instruction

7. Respiratory System
    a. Parts of the respiratory system
    b. Gross and microscopic anatomy of lung
    c. Lab: Rat dissection – examine organs of respiratory system
    d. Lab: Microscopic Analysis of Lung Tissue – normal and diseased
    e. Processes of inspiration and expiration
    f. Gas exchange in capillaries and alveoli
    g. Diseases and Conditions associated with respiratory system
    h. Medical Terminology

8. Digestive System
    a. Identify and label major organs of digestive system and their functions
    b. Describe the process of digestion and function of each organ
    c. Explain the process of nutrient absorption by villi
    d. Describe functions of auxiliary glands and organs related to digestion: liver, pancreas, gall bladder
    e. Lab: Rat Dissection – examine the organs of digestion
    f. Diseases and disorders associated with digestive system
    g. Medical Terminology

9. Nutrition/Energy
    a. Energy in matter
    b. Dietary analysis
    c. Six groups of essential nutrients: functions and sources
    d. Cooperative Research Report Activity: Oral presentation to class on nutrients
    e. Labs: What is in the food you eat, well-balanced diet daily menu
    f. Name, describe and explain the purposes of eight therapeutic diets
    g. Medical Terminology related to nutrition

10. Urinary System
    a. Structures and functions
    b. Lab: Rat dissection – identify the parts of urinary system
    c. Lab: Dissection of Sheep Kidney
    d. Anatomy/Physiology of nephron including filtration, reabsorption, secretion, and water balance
    e. Diseases and disorders associated with urinary system
    f. Medical Terminology

11. Endocrine System
    a. General principles of endocrine physiology and anatomy
    b. Explain the action of various hormones
    c. Disorders and diseases associated with the endocrine system including symptoms, cause, tests, and treatments
    d. Medical Terminology
    e. Lab: Stress test

12. Lymphatic System
    a. Structures and functions
    b. Body's defense mechanisms
    c. Immunity

13. Reproductive System
    a. General principles of male and female anatomy and physiology
        (1). Pathway of sperm
        (2). Organs that secrete fluids added to semen
        (3). Ovulation
        (4). Functions of hormones related to reproduction
        (5). Functions of male and female anatomy
    b. Meiosis
    c. Lab: Rat Dissection – examine male and female reproductive organs
    d. Diseases and disorders of the reproductive system
    e. Medical Terminology related to reproduction

14. Human Growth and Development
    a. Stages of life and development
    b. Causes and treatments of eating disorders and chemical abuse
    c. Suicide prevention
    d. Stages of grieving
    e. Medical terminology

Unit 3: Mentorship Program

During the last half of this two year equivalent course, students will spend 2 – 3 days per week working with mentors in various health care professions. This experience will allow them to research various clinical fields and apply their knowledge of microbiology and anatomy/physiology. A term project will include a series of written evaluations describing their experiences and observations while working with various mentors in different clinical areas.

Unit 4: Health Careers Study and Research Project

1. Complete Personal Job Search Notebook
2. Health Care Occupation Overview Activities
3. Health Occupation Research Project

Unit 5: Health Care Preparation

The other 2-3 days per week during the second half of this two year equilvalent course will be devoted to the following instructional topics:

1. Personal Characteristics of a Health Care Worker
2. Medical Ethics and Legalities including Confidentiality
3. Safety
4. Infection Control
5. Standard Precautions
6. The Relationship of Science to Health Careers
7. Advanced Topics in Microbiology, Anatomy and Physiology

Texts and Supplemental Instructional Materials

1. Human Anatomy and Physiology, 4th. Edition. Elaine N. Marieb. Benjamin/Cummings Science Publishing, 1998.
2. Diversified Health Occupation,5th edition. Louise Simmers. Delmar Thompson Learning Publications,2001.
3. The Language of Medicine, 6th edition, Davi-Ellen Chabner, Saunders Publications, 2001.
4. Videos
5. Internet

Key Assignments

Laboratories with Lab Write-Ups

Microbiology

a. Use of Light Microscope
b. Growth of Organisms from the Surrounding Environment
c. Bacterial Identification
d. Aseptic Technique
e. Streak Plate Method of Isolation
f. Gram Stain
g. Antibiotic Sensitivity Testing
h. Hand Disinfection
i. Antiseptics vs. Disinfectants

Anatomy and Physiology

a. Microscopic Analysis of Cells and Tissues
b. Bone Dissection
c. Microscopic Analysis of Muscle tissue
d. Blood Cell Identification
e. Measuring Pulse, Respirations and Blood Pressure
f. Rat Dissection – on-going lab
g. Sheep Heart Dissection
h. Microscopic Analysis of Lung Tissue
i. Sheep Kidney Dissection
j. CPR Instruction

Research Projects – Individual and Group

a. Personal Job Search Workbook
b. Health Occupation Research Project
c. Viral and Bacterial Disease Research Report
d. Cooperative Group Research Report – Nutrients

e. Mentorship Evaluation Report

Textbook Reading and Writing Assignments

Instructional Methods and Strategies

1. Dissections
2. Laboratory Experiments
3. Lecture and Discussions
4. Demonstrations
5. Project-Based Learning
6. Cooperative Learning Activities
7. Videos/CD Roms
8. Internet Research
9. Clinical Mentorships
10. Field Trips
11. Guest Speakers
12. Computer Simulations
13. Model Constructions
14. Critical Thinking Essays

Assessment Methods/Tools

Written/Oral Tests and Quizzes	**50%**

Assignments

a. Essays, oral reports & projects — 30%
b. Laboratories
c. Textbook assignments

Portfolio — 10%

Mentorship Evaluation Report — 10%

Context for Course: The first half of this two year equivalent course is devoted to anatomy, microbiology and physiology which are necessary in preparing students for university or advanced training in a health science related career. Course enrollees will develop science skills necessary for medically oriented professions and workplace relationships. In addition, students will learn safe and correct laboratory procedures.

The second half of this course allows the students to apply and see the relevance of their scientific knowledge as they participate in health career mentorships in a local medical center. They will also continue their science based curriculum in a core classroom.

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

This course was designed to prepare students for careers in the field of Medical Assisting through the integration and development of core academic content. Students will also learn the professional norms, skills, and competencies related to a career in Medical Assisting. The course is based on currently accepted academic and career and technical education standards. Students will learn and practice the many skills required of medical assistants, including ability to prepare patients for examination and treatment, ability to perform various laboratory tests, and management of patient records. Emphasis is placed the relationship between patient health and biological processes. This course includes work-based learning with internships and job shadowing in medical offices/clinics. Other opportunities for industry partners to invite our students into the medical field, as well as medical guests into our classrooms to further bridge the medical field to our classrooms will also be offered.

The purpose of this course is to prepare students for careers in Medical Assisting. Additionally, it is the hope of Career Technical Education (CTE) that students will be encouraged to explore additional educational opportunities which lead to careers in the health care field. This course has been structured with the intent of engaging students through the use of socially relevant instructional content and delivery. It is also the intent of CTE to encourage students to play an active role in community health.

MEDICAL ASSISTANT-GENERIC MEDICAL TECHNICIAN

COURSE GOALS

The students will…

1. Describe the contributions of individual organs, tissues, and cells to the overall body system.

2. Explain how medical asepsis and infection control are crucial in preventing the spread of disease.

3. Identify the basics of pharmacology, including the classification and use of drugs.

4. Demonstrate how the act of taking vital signs is utilized to evaluate and assess the health status of patients by use of the manikin Nurse Kelly and the SimPlus pad and monitor.

5. Demonstrate the ability to collect and format information by using facility protocols and regulatory guidelines.

Prerequisites:
Biology (Required)
Human Anatomy and Physiology (Recommended)
Elementary Algebra (Recommended)
Co-requisites:
None
Course content:

Assessments are done daily in both formal and informal fashion. The following strategies are used daily and are incorporated in each unit of instruction.

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

Informal Assessments:

Daily Opening Activity: addresses previously covered topics to establish a connection with material to be covered for the day.
Daily Closing Activity: topics form the day are reviewed.
Classroom Discussion
Small Group Discussion
Teacher led inquiry
Socratic Seminar of upcoming events
Educational games

Formal Assessments:

Unit vocabulary quizzes: used to encourage reading comprehension
Chapter quizzes: covering major themes in text chapters
Chapter review questions: used to assess comprehension of subject matter. Questions typically fall within levels 1-3 in Bloom's Taxonomy.
Unit examinations: short answer examinations focused on critical thinking skills and connecting concepts
Medical scenario documentation: collaboration, writing skills, analysis, and reasoning
Mock clinic: demonstrate: (a) comprehension and collaboration, (b) speaking and listening skills, (c) appropriate use of terminology, and (d) subject matter understanding through the ability to integrate major themes covered throughout the course

Performance Assessments

Hands-on skills
Documentation of data
Daily journal entries
Oral presentations
Case studies

Research projects

Students describe and locate respiratory structures on models/charts, and trace the movement of air through the system. Students write a 2-3 page report detailing the process in MLA format.

4-5 page research paper on selected cardiovascular diseases. Must be in MLA format and include at least 3 peer reviewed resources and include the following information:

-Description of Disease

-Causes of Disease

-Symptoms present in the disease

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

-Treatment for the disease, prevention, diets and exercise

Research, write, and present 4-5 page paper on a disease or injury of the spinal cord using MLA formatting and at least three peer reviewed resources.

Using the CDC website, students will research three blood borne pathogens and the diseases they may cause. Students will write a 2-3 page paper in MLA format and report findings to class.

Write and present a summary of a current news article that involves HIPAA regulations.

Prepare a fictitious medical records chart.

Key Assignments

Professional Communication. One of the most important skills that a medical assistant can possess is the ability to communicate. Clinical and administrative medical assisting require a constant exchange of oral, written and non-verbal information. Business Communications. The medical assistant must be prepared to effectively deal with a variety of telephone and electronic messages each day. Communication and good listening skills are necessary to provide good customer service to the patients. Grammar, computer and writing skills are fundamental. Medical terminology, verbal and non-verbal communication skills are an essential part of business communications.

Students will compose and generate 3 letters in the appropriate business format, physician to patient, physician's office to supplier, and physician to physician. Letters will be evaluated by teacher for grammar, formatting, and sentence structure using a rubric.

Pharmacology Fundamentals: Students will research six diseases for which the CDC has issued immunization guidelines for healthcare workers and write a 2 page informational essay explaining the importance of healthcare worker immunizations. Students will identify safety guidelines for the proper administration of medications. Students will describe how to use the PDR to correctly identify drugs, describe adverse reactions, appropriate medication references, indications and usage, contraindications, dosage, administration and how the drug is supplied.

Drugs and Alcohol: Group Research. Following a lecture, video, and class discussion on the short and long term effects of drugs and alcohol on the human body, students will work in small groups to research current local cases involving alcohol or drug related deaths. They will create a multimedia presentation summarizing the case, its connection to alcohol or drug consumption, and its impact on society. They will present their findings to the class.

Students will research the principles of good body mechanics and ergonomics and describe how to make the home safer for people using mobility devices and the importance of patient rehabilitation following injury or surgery. Students will prepare a 2 page informative essay and present it orally to the class.

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

Chapter Review Questions

Unit Vocabulary

Course Outline:

Unit 1: Orientation and Introduction Medical Assisting Foundations

In this first unit, the students will review: school and classroom policies, course content, and course objectives. This foundational unit will also introduce students to basic concepts in medical assisting. Students will explore the skills and responsibilities of the medical assistant, examine behaviors necessary to be successful in the health care industry and discuss the necessary training and opportunities for credentialing in the field. This unit also includes the history of medicine and the technological and pharmaceutical advances in the industry. Students will research legal and ethical issues and the importance of cultural diversity and sensitivity in health care. Professional communication skills and medical terminology will be introduced in this unit of study.

Resources: Medical Assisting Administrative and Clinical Competencies, Blesi, Wise, Kelley-Arney: Chapters 1- 8. Introduction to Medical Terminology, Ehrlich, Schroeder, entirety. Guest speaker: Medical professional to discuss education and training requirements for entry level position in profession, description of job duties, and personal experiences. Articles, Case Studies, Videos, Handouts, and Electronic Resources.

A. Orientation
   Know and understand course objectives
   Know and understand course content
   Know and understand teacher expectations
   Know and understand school and class policies
   Know and understand industry standards and career opportunities
B. Introduction
   Understand the definition and scope of practice of a medical assistant.
   Understand and discuss the history and development of the health care field.
   List and describe the significance of key events and important figures in the history of medicine.
   Identify members of the health care team and explain their responsibilities.
   Discuss the roles, responsibilities, education and licensure requirements.
   Describe the professional, safety and health organizations related to medical assisting.
   Examine the many legal and ethical issues that arise in the medical field.
   Research and discuss the importance of cultural diversity in health care.
   Professional communication skills, to include oral and written communications.

10. Introduction of medical terminology.

Unit 2: Structure and Function of the Human Body

This unit of instruction will introduce students to medical terminology, pronunciation and definitions. Using word building skills, students will identify and properly arrange roots, prefixes, and suffixes to create commonly used in terms used medicine. Students will learn basic human body structure and function in relationship to specific care between prevention, diagnosis, pathology, and treatment. They will identify and describe the significance of basic stages of growth and development. Students will learn about common diseases and disorders of the human body and identify signs and symptoms of each disease. Students will work in small groups to research the

prevention, diagnosis, treatment, and rehabilitation of a disease. They will create an informative multimedia presentation to present their findings to the class. Students will examine genetic susceptibility to disease. Disease rates in the population and public health arenas will also be examined through the lenses of gender, race, ethnicity, and socio-economic status.

Resources: Medical Assisting Administrative and Clinical Competencies, Chapter 23-35. Blesi, Wise, Kelley-Arney: Anatomy and Physiology Excerpts from Chapters 1through 15. Videos, Case Studies, Handouts, and Electronic Resources.

C. Anatomic Descriptors and Fundamental Body Structure
- Describe the anatomical positions.
- Apply appropriate terminology to anatomical directional references on the human body.
- Locate the eight body cavities.
- Name the major organs located within the body cavity
- Identify regions of the abdomen.
- Explain the condition of hemostasis.
- Describe the four main types of body tissue.
- Name the systems of the body.
- Identify characteristics of genetic conditions.

D. The Nervous System
- Name the two major divisions of the nervous system.
- Identify the two types of peripheral nerves and explain the function of the spinal nerves.
- Simple and complex reflex action.
- The Brain and its function.
- Diseases, tests, disorders, and treatments of the nervous system.

E. The Senses
- Name the senses of the human body, identify the corresponding organs responsible for perception.
- Identify on an anatomical illustration the structures of the eye, ear, nose, tongue, and skin.
- Describe the diseases or disorders of the eye, ear, nose, mouth and tongue.
- Age related changes to the senses.

F. The Integumentary System
- Five functions of the skin.
- Temperature regulation.
- Three layers of the skin and the characteristic structures of each layer.
- Skin cancer.
- Blushing, birthmarks, moles, and albinism.
- Diseases, disorders, and treatments of the skin.

G. The Skeletal System
- Divisions of the skeletal system.
- Structure of the long bones.
- Elements of bone tissue.
- Functions of the skeletal system.
- Joints.
- Diseases, disorders, treatments of the skeletal system.
- Correlation between age and fractures.

H. The Muscular System

Skeletal muscles.
Muscle Tone.
Structure and function of tendons and ligaments.
Muscles of respiration and breathing.
Peristalsis

Diseases, disorders, and treatments of the muscle system.

I. The Respiratory System
- Importance of oxygen.
- Structure and function of the nose, pharynx, epiglottis, larynx, trachea, bronchus, bronchiole and alveolus.
- Five normal occurrences that alter breathing.
- Diseases, disorders test and treatments of the Respiratory system.

J. The Circulatory System
- Four main parts of the Circulatory System.
- Anatomy of the heart.
- Pulmonary, systemic and portal circulation.
- Clotting process.
- Components of blood.
- Rh factors.
- Diseases, disorders, test, and treatments of the Circulatory System.

K. The Immune System

- Three main lines of defense against antigens.
- Function of the immune system.
- Inflammatory response.
- Immunizations and vaccines.
- Diseases, disorders, tests, and treatments of the Immune System.

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

L. The Digestive System
Four phases of the Digestive System
Describe the structure and function of the digestive system.
List the functions of the liver, including the portal circulation connection.
Describe the roles of the gallbladder and pancreas.
Diseases, disorders, tests, and treatments of the Digestive system.

M. The Urinary System

1. Three main functions of the urinary system.
2. Identify the organs of the urinary system and their physical characteristics.
3. How the urinary system functions with other systems.
4. Diseases, disorders, tests, and treatments of the Urinary System.

N. The Endocrine System
Differentiate between endocrine and exocrine glands.
Body functions affected by hormones.
Functions of pituitary, thyroid, parathyroid, adrenal, pancreas, and thymus gland.
Diseases, disorders, tests, and treatments of the Endocrine System.

O. The Reproductive system

1. Sexual and asexual reproduction.
2. Fertilization
3. Location and function of male sex organs.
4. Male secondary sex characteristics.
5. Diseases, disorders, tests, and treatments of the Male Reproductive System.
6. Location and function of the female sex organs.
7. Female secondary sex characteristics.
8. Purpose and phases of the menstrual cycle.
9. Pregnancy and fetal development.
10. Diseases, disorders, tests, and treatments of the Female Reproductive System.

Unit 3: Clinical Procedures

In this unit of instruction, students will begin preparing for clinical activities by reviewing foundational subjects such as: principles in infection control, laboratory procedures, general and specialized examination procedures, and suture/staple removal. Students will demonstrate the knowledge and delivery of specific skills and procedures as outlined within the scope of practice appropriate for patient care in the prevention, diagnosis, and treatment of illness and disease. Students will use informational interviewing and note taking skills to conduct patient intake assessments. Students will collect, synthesize, and document information and/or data. Students

will use appropriate medical terminology to document signs (witnessed by students/care provider) and symptoms (reported by patient). Students will use appropriate communication strategies to respond to patient questions/concerns and to provide effective post-visit and post-operative instruction. Students will note respiration rate while taking a blood pressure and use the pulse oximeter to determine the oxygen saturation and pulse. Students will learn to differentiate between normal and abnormal values. Students will examine the significance of ECG/EKC testing and become proficient in 12-lead EKG hook-ups and troubleshooting. Students will learn to differentiate between normal and abnormal EKGs and will learn to recognize the most commonly occurring major arrhythmias. They will also perform a pulmonary function test, urinalysis, and learn how to assist with minor surgeries. Students will learn how to analyze diagrams, charts, graphs, and tables to interpret health care results.

Resources: Medical Assisting Administrative and Clinical Competencies, Chapter 36-50. Blesi, Wise, Kelley-Arney: Videos, Case Studies, Handouts, and Electronic Resources.

P. Infection Control and Medical Asepsis
- Transmission, incubation time, symptoms, and treatment for a given communicable disease.
- Infection control cycle.
- Direct and indirect contact.
- Universal and standard precautions.
- Disposal of biohazardous material.
- Medical asepsis.
- Personal protective equipment.
- Sanitization, disinfection, and sterilization.

Q. Medical History and Patient Screening
- Patient screening.
- Triage.
- Characteristics of chief complaints.
- Health history.
- Documentation.

R. Body Measurements and Vital Signs
- Five types of mensurations.
- Vital signs and body functions they measure.
- Normal ranges for vital signs.
- Conversion rates.
- Factors that affect vital signs.
- Documentation.

S. Preparing for Examination
- Examination room equipment and supplies.
- Examination positions and purpose of each.
- Techniques and purpose of draping the patient for examination.

T. Physical Exam, Specialty Exam and Procedures
The role of the medical assistant in the examination process.
Patient education.
Six examination techniques used by the physician.
Examination format.
Specialty procedures.

U. OB/GYN Examinations
Compare and contrast Gynecology and Obstetrics
Patient preparation.
Breast exam.
Role of the medical assistant in the examination process.
Naegele's rule.

V. Pediatric Examinations
AAP's recommendations for preventive pediatric healthcare.
Developmental stages.
Growth charts.
Well-child vs. sick-child visits.
Neglect vs. abuse.
Immunization schedules.
Pediatric vision and hearing screening.
Roles and responsibilities of the medical assistant.

W. Laboratory Procedures

Capillary blood collection.
CLIA.
Describe the POL.
Universal and standard precautions.
Hemoglobin and hematocrit.
Glucose testing.
Allergy testing.
Testing outside the POL.
Specimen preparation.

10. Collecting and testing urine specimens.

11. Occult blood.

12. Cultures.

X. Cardiology and Radiology Procedures
ECG
Holter Monitor
Stress test
Patient instructions and patient preparation.

Y. Minor Surgical Procedures
Surgical asepsis.
Preparing/maintaining treatment areas.
Patient preparation and assisting the physician.
Processing specimens.
Function of instruments.
Consent forms.
Follow up forms.
Sterile technique.
Wound care.

10. Suture and staple removal.

Unit 4: Medication Administration Procedures

This unit of instruction focuses on pharmacology and the administration of medication. It is an introduction to the principles of pharmacology, focusing on the knowledge and skills required for safe and effective drug therapy. Students will research the relationship of drug therapy and pathophysiologic conditions and the importance of patient education regarding medications. Emphasis will be placed on the following pharmacologic information: sources of drugs, sources of drug information, drug legislation and standards, classification of drugs, drug action, factors that affect drug action, adverse effects of drugs, administration of drugs, record keeping, abbreviations and symbols, and drug calculation. Students will use the Physician's Desk Reference to research this pertinent drug information. Students will define the Medical Assistant's scope of practice as it relates to drug therapy. Specific drugs and the procedures for administering drugs will be discussed and practiced where applicable within this unit of instruction. Students will use mathematical formulas to calculate drug dosages and to convert measurements between metric and standard systems. As in previous units, students will acquire and accurately use medically related terminology and will demonstrate appropriate use and accurate pronunciation. At this point students should begin to demonstrate independence in gathering vocabulary knowledge when considering a word or phrase which is important to comprehension or the expression of ideas. Students will also learn the meanings of symbols and other charting notation and apply this knowledge in the completion of documentation exercises.

Resources: Medical Assisting Administrative and Clinical Competencies, Chapter 51-54. Blesi, Wise, Kelley-Arney: Videos, Case Studies, Handouts, and Electronic Resources.

Z. Pharmacology Fundamentals
FDA and DEA

Commonly used prescription and non-prescriptions medications.
Common drug forms.
Medical, legal, and ethical concerns.
Controlled substances.
Referenced sources.
Proper storage and disposal.

AA. Measurement Systems, Basic Mathematics and Dosage calculations
Measurement systems.
Basic units of measurement and equivalents in metric, apothecary, and household systems.
Basic math computations.
Abbreviations and symbols used in calculating medication dosages.

BB. Administering Oral, injectable and non-injectable medication
Elements that constitute a complete and accurate prescription.
Routes of medication administration.
Legal aspects.
Seven Rights of medication administration.
Medication errors.
Documentation.
Syringes.
Angles of injections and injection sites.
Patient education and documentation.

10. Immunizations.

Unit 5: Emergency Procedures

Based upon knowledge of anatomical and physiological function, homeostasis, and disease, acquired in previous units, students will learn how to apply observation techniques to detect changes in the health status of patients. Students will use observation and assessment techniques to differentiate between normal and abnormal patient health status. Students will demonstrate the steps involved in first aid and cardiopulmonary resuscitation, and will earn AHA CPR and First Aid certifications.

Resources: Medical Assisting Administrative and Clinical Competencies, Chapter 55-56. Blesi, Wise, Kelley-Arney: American Heart Association BLS/HCP training manual 2012, Videos, Case Studies, Handouts, and Electronic Resources.

CC. Emergencies in the Medical Office
Office policy manual and documentation.
Emergency supplies and equipment.
Responding to an emergency.
Documentation.
CPR and AED procedures and certification.

DD. First Aid for Accidents and Injuries
American Heart Association first aid training and certification.

Unit 6: Rehabilitation and Healthy Living

In this unit of instruction, students will learn about ergonomic principles as they apply to both patient and health care provider. Related skills will be learned and practiced. Students will demonstrate the principles of body mechanics as they apply to the positioning, transferring, and transporting of patients. Students will determine appropriate equipment for transportation and transfer, including the modification of equipment and techniques to accommodate the health status of the patient. Students will demonstrate proper body mechanics, technique, ergonomics, and use of safety equipment in patient transport and transfer methods to accommodate the health of patients and personnel. Explore consequences of not utilizing available wellness services and behaviors that prevent injury and illness. Students will also explore alternative and holistic care options available to patients.

Resources: Medical Assisting Administrative and Clinical Competencies, Chapter 57-58. Blesi, Wise, Kelley-Arney: Videos, Case Studies, Handouts, and Electronic Resources.

EE. Rehabilitation
Principles of body mechanics and ergonomics.
Home safety.
Patient education.

FF.Nutrition, Exercise, and Healthy Living

Guidelines for good health.
Nutrition.
Vitamins and minerals.
Nutrition facts labels.
Dietary supplements.
Cultural influence on diet.
Health concerns in adolescents.
Exercise.
Healthy spirit.

10. Sleep.

Unit 5: General Workplace Skills

The skills described in this unit are introduced, integrated, reinforced, and assessed throughout the course as applicable. The objective of this unit is to learn and demonstrate appropriate workplace behaviors, including teamwork, participation, etiquette, and flexibility. The knowledge gained from this unit will allow the student to identify appropriate procedures to obtain and retain employment in the field of Medical Assisting. These same behaviors, once learned, will also assist the student in achieving their educational goals. Evaluation of a culminating student portfolio will be used to assess mastery of the skills taught in this course. Throughout the

course, students will collect samples of their work to include in their portfolios. Additionally, students will prepare the items needed for job search for inclusion in the portfolio assignment.

Unit Resources: Informative handouts, Rubrics, Portfolio exemplars.

Understand how interpersonal skills developed in the classroom are applicable in the workplace.

a) Maintain record of good attendance and punctuality
b) Demonstrate understanding of classroom policy
c) Define, explain and practice business ethics and social responsibilities in the workplace
d) Discuss laws that apply to sexual harassment and tactics for handling harassment
e) Discuss the importance of the following personal skills in the workplace: sociability, self-esteem, integrity and honesty, self-management, and working independently
f) Identify and exhibit acceptable business attire and personal hygiene
g) Prioritize tasks and meet deadlines

Identify, organize, plan, and demonstrate proper use of : time, materials, and facilities

Demonstrate interpersonal skills: working well with others, leadership, willingness to assist team members, cultural sensitivity, and a willingness to work with others from diverse backgrounds

Acquire and use information in texts, computers, and specialized references, acquire information through listening, observing, and reading. Interpret and communicate information and use computers to process information

Work with a variety of technologies (computers, printer, pulse oximeter, ECG machine, centrifuge,online services, and office equipment). Identify the best technology suited to complete given tasks.

Understand the importance of basic skills such as math, reading comprehension, writing, speaking and listening

Use of critical thinking skills: extracting and interpreting information from graphic organizers to make judgments and draw conclusions

Practice occupational safety: use of appropriate clothing, personal protective equipment, and safety equipment

Develop job search skills including: job search strategies, interviewing, resume preparation, completion of application for employment, and demonstration of interviewing skills

This course is delivered through the OPD method requiring the student to Observe, Participate, and Demonstrate understanding of subject matter. The following instructional methods and strategies are used to facilitate this process.

Demonstrations and Hands-on Activities
Lecture
PowerPoint
Vocabulary Quizzes
Peer Evaluation
Chapter Review Questions: Short answer questions
Case Studies: Research and report on medical office case studies and exercise critical thinking skills to determine the role of the Medical Assistant ethically, legally and medically.
Online medical documentaries
Internet research
Current events from peer reviewed journals and online resources
Oral and written debate and class discussion

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

Guest Speakers
Instructional video
Video excerpts from Medical Shows (Boston Medical, New York Medical): Depicts real-life medical emergencies, and the professionals who provide patient care
Student prepared PowerPoint presentations
Student led Mock Clinics
Student Internships

Labs

Lab assignments in this course comprise 40% of total class time. Lab assignments in this course incorporate inquiry, observation, and analysis. Students will maintain a lab journal in which they will record their findings, including detailed sketches (following a teacher prescribed format) and response to teacher prompts.

All lab assignments are evaluated using a rubric

Unit 2

Sheep Brain Dissection

Following teacher led lecture, discussion, and questions from class, teacher will lead student dissection of a sheep's brain. The instructor will demonstrate each step via document camera. Students will identify the structures of the brain through the dissection activity. Students will sketch each structure as it is separated through the dissection process.

Cow Heart Dissection

Following teacher led lecture, discussion, and questions from class, teacher will lead student dissection of a cow's heart. The instructor will demonstrate each step via document camera. Students will dissect a cow heart and will sketch and identify the structures. Students will be asked to label the heart in accordance with the flow of blood.

Cow Eye Dissection

Following teacher led lecture, discussion, and questions from class, teacher will lead student dissection of a cow's eye. The instructor will demonstrate each step via document camera. Students will dissect a cow eye and sketch and identify the structures of a mammalian eye.

Unit 3

Body Measurements and Vital Signs:

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

Following teacher led lecture, demonstration, and questions, students will identify the equipment utilized to perform vital signs and body measurements, including adult and infant scale, tape measure, blood pressure, pulse, temperature, respiration, and pulse oximetry.

Following teacher led lecture, demonstration, instructional video and questions, students will perform body measurements and vital signs on 20 other students and record the results. They will also practice taking a wide range of blood pressures on blood pressure arm. They will identify the differences in the results obtained and speculate on the cause of the differences. They will record vital signs on a rotating basis over a period of two weeks to determine the effects of exercise, medications, time of day and nutrition on the results and produce a graph showing the change in values. They will also take vital signs on the Nurse Kelly manikin.

Mock Clinic: Following teacher led lecture, demonstration, and questions, students will participate in this mock clinic role play exercise using Nurse Kelly and the SIMpad and each other. They will rotate roles of patient and medical assistant and participate in clinical scenarios. The medical assistant role will be to obtain Ht, Wt, TPR and B/P and record all values in various clinical formats. Chief complaints, both object and subjective will be obtained and accurately recorded using appropriate medical terminology and abbreviations. (Reinforcing medical terminology, grammar, and listening skills).

Assisting with Exam and Specialty Exams: The medical assistant has many responsibilities in preparing for examinations, including setting up the room and supplies as well as preparing the patient for exam.

Following teacher led lecture, demonstration, and questions, students will be presented with a variety of equipment representing the various equipment used in specialty exams. Students will be given a scenarios card with a specific exam. Students will determine what equipment is to be used to facilitate the exam. They will be required to set up the clinical room for the exam, prepare the patient and explain the procedure to the patient. Students will be evaluated using the textbook generated rubric.

Skin Puncture: Following teacher led lecture, demonstration, and questions, students will follow the procedure for skin puncture. They will puncture skin with a sterile lancet to obtain a few drops of capillary blood for screening tests. Students will follow textbook generated rubric, all safety guides lines for OSHA and CLIA must be maintained for student safety. Procedure must be documented in fictitious patient chart.

Finger Stick: Following teacher led lecture, demonstration, and questions, students will perform finger stick procedure using a sterile lancet and obtain a sample in a micro-hematocrit tube then seal the tube with clay. Specimen will be placed in a centrifuge, spun and the results read and recorded in the fictitious patient chart. Students will determine if the results fall within the normal or abnormal range for age and gender. Students will write a one page description describing their findings and explaining their conclusions.

Blood Specimen: Following teacher led lecture, demonstration, and questions, students will obtain a capillary blood specimen and will perform glucose testing on the sample. Various Glucometers will be used. Results will be documented in the fictitious patient chart and vales will be analyzed to determine if the results fall within the normal blood sugar range. Students will write a one page description describing their findings and explaining their conclusions

Urinalysis Testing: After teacher led lecture and discussion and questions from class, teacher will demonstrate urine testing with reagent strips. Lab: Types of urine collection will be discussed and demonstrated with use of

manikins (Pediatric, first morning, clean catch mid-stream, 24 hour and catheterization Urine). Students will be instructed on Physical urinalysis- color, clarity, volume, odor, and specific gravity. Students will be given 4 urine specimens and they will perform a chemical urinalysis on each using the text book generated lab slip. Results will be recorded and then entered on fictitious patient chart. Normal and abnormal results will be evaluated. Students will write a one page description describing their findings and explaining their conclusions.

Throat Culture: Throat cultures are obtained to isolate disease-causing organisms to determine effective treatment of the patient. Following teacher led lecture and video to accompany the text book, students will observe and then return demonstration on the proper collection and handling of throat culture specimens.

Wound Culture: Obtaining a wound culture from a patient, using sterile technique that protects the integrity of the specimen. After teacher led lecture and discussion, students will watch a video and then teacher will demonstrate the correct procedure for obtaining and documentation of specimen collection. Students will return the demonstration and document the collection in the fictitious patient chart.

ECG: Students will receive a demonstration on obtaining the necessary information for preforming an ECG, patient preparation, lead placement, and documentation of procedure. Students will discuss all parts of a 12 lead ECG including standardization and artifacts. Holter Monitor and Stress Test procedures will be discussed and examples of testing viewed in video to accompany text book. Stations will be set up and students will pair off and perform ECGs on each other. Students will document procedure in fictitious patient chart.

Instrumentation: Following teacher led lecture, demonstration, and questions, students will identify common instruments and supplies and set up instruments used in minor surgical procedures and the various forms used in documentation of procedures.

Sterile Field: Following teacher led lecture, demonstration, instructional video, and questions students will demonstrate the ability to maintain a sterile field with any procedure. (Rubric)

Suture Removal: Following teacher led lecture, demonstration, instructional video, and questions, students will demonstrate the proper procedure for removing sutures and staples from a ficticious wound on a pigs foot to simulate human tissue. (Rubric)

Surgical Prep: Following teacher led lecture, demonstration, and questions, students will discuss the necessary steps in preparing a patient for a surgical procedure including verifying necessary paperwork/consent forms and the proper documentation required: correctly identify, spell, and pronounce key terms. Students will write one page informative essay describing the rationale behind each step in the procedure.

Unit 4

Measurements Systems and Drug Calculations:

Following teacher led lecture, demonstration, practice, and questions, students will define basic units of measurements and equivalents in metric, apothecary, and household systems. Basic mathematical systems will be reviewed, including, addition, subtraction, multiplication and division, fractions, proportions, conversions and ratios. Students will also need to be able to recognize relative terminology, correctly interpret chart notation, and think critically to solve purposefully inserted contraindicative information and/or orders.

Medical Assisting Foundations/Prep Therapy Med OFC
Basic Course Information (modeled after Baldy View ROP)

In a mock clinical setting, students will calculate and prepare correct dosages per doctor's orders of various mock medications in oral, Sublingual, Buccal, Transdermal, Nasal, Ophthalmic, Otic, Topical, Rectal, Vaginal and Inhalation forms.

Following teacher led lecture, demonstration, instructional video, and questions, students will identify and examine the parts of syringes and the various types. Under direct supervision of the instructor, students will draw up mock injectable medication and administer injections to clinical models.

Students will administer a minimum of 10 each, intradermal, sub cutaneous, and intramuscular injections. Student & instructor will maintain a log of the number of injections given by student.

Unit 5

Following Certified BLS Instructor led lecture, instructional video, demonstration, and questions, students will complete the necessary requirements for American Heart Association Basic Life Support CPR and First Aid in order to obtain certification.

Skills practice in CPR, Choking victim and First Aid medical emergencies. Written and skills testing

Course Title

PHYSIOLOGY-ANATOMY A (P)

Description of Target Group

This course is designed for 11th and 12th grades students who are interested in pre-nursing and pre-medical careers.

Purpose

To provide the students information on the physiology and anatomy of the human body. Successful completion of Biology with a grade of C or better is recommended.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Define many associated fields of study, e.g., histology, pathology, etc.
2. Have an awareness and understanding of body planes and surfaces
3. Identify and describe the functions of the parts and organelles of a cell, e.g., mitochondria, lysosome, etc.
4. Differentiate between the types of tissues found in the body, e.g., smooth muscle, adipose, pseudostratified ciliated columnar epithelium.
5. Name the bones of the human skeleton.
6. Identify and describe the structures, both gross and microscopic, of skeletal muscle.
7. Identify the origin, insertion, and action of the approximately 50 muscles known as prime movers.
8. Identify and describe the functions of the parts of the neuron and the propagation of the action current and the transmitter chemicals at the myoneural junction
9. Describe the structure of the spinal cord, its meninges, and the spinal nerves and the routing of the reflex arc.
10. Locate and describe the major parts of the brain and list the functions located therein
11. Describe the structures involved in the autonomic nervous system and the effects of sympathetic and parasympathetic stimulation.
12. Identify and describe the locations and functions of the visceral and cutaneous receptors.
13. Describe the chemoreceptors in the aortic and carotid bodies; those involved in olfactory and gustatory senses.
14. Describe the structure and function of the parts of the human eye.
15. Be conversant with the visual abnormalities attendant with the human eye and possible corrections available
16. Describe the structure and functions of the parts of the human eye in hearing and equilibrium.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Learning approaches used in the course will be: lectures, participation in class discussion, demonstrations, experiments, films, field trips, etc.

Course Title

PHYSIOLOGY-ANATOMY B (P)

Description of Target Group

This course is designed for 11th and 12th grades students who are interested in pre-nursing and pre-medical careers.

Purpose

To provide the students information on the physiology and anatomy of the human body. Successful completion of Biology with a grade of C or better is recommended.

19. Brief Course Description

This nine-week course has been designed to help Pioneer Valley students successfully transition into the high school environment. Besides proving academic support, this interdisciplinary class, which focuses on science, has several related goals: Promoting a healthy attitude about school and academics; while emphasizing goal setting and developing and maintaining a personal responsibility for learning and remaining a life long learner.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Students will learn how to:

- Develop reading strategies
- Develop scientific vocabulary
- Improve lab skills
- Promote a positive attitude towards school.

21. Course Objectives

Students will:

- Learn the scientific method
- Do current event projects
- Learn about the continuity of a course
- Learn about how people learn.
- Develop graphing skills and interpreting tables and charts.
- Improve summarizing skills
- Learning how to use science lab equipment

22. Course Outline

Students will complete the following activities in Physical Science Study Skills

- Building the perfect airplane
- Graphing practice
- Scientific measurements
- Metric system practice
- Measuring lab
- Solar radiation lab
- Barometer lab
- Vinegar and milk lab
- States of matter
- Current event project
- Plate tectonics project
- Spectrum lab
- Volcano lab
- Goal planning
- Life skills survey
- Career planning
- Scaling the solar system
- Pinpointing an earthquake
- Energy sources project
- Rocks/Crystals/Minerals computer simulation
- Electromagnetic activity with waves

23. Texts & Supplemental Instructional Materials

None

24. **Key Assignments**
25. **Instructional Methods and/or Strategies**
26. **Assessment Methods and/or Tools**

C. HONORS COURSES ONLY

Please refer to instructions

27. **Indicate how this honors course is different from the standard course.**

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

28. **Context for Course (optional)**
29. **History of Course Development (optional)**

Course Title

Physics A/B (P)

Description of Target Group

This course is designed for students in the 11th and 12th grades who intend to pursue careers in Math, Engineering, or Science.

Prerequisites: The completion of Chemistry B, Algebra 2 and Geometry, all with a grade of C or better.

Purpose

To present an advanced study of the physical properties of matter and energy. The course is divided into five major units: Mechanics, Properties of Matter; Waves, Sound and Light, Electricity and Magnetism; and Modern Physics.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully able to demonstrate the following skills:

1. Identify various types of light sources.
2. Find an image in all types of mirrors, by ray tracing methods.
3. Identify incident and reflected rays.
4. Apply the laws of reflections.
5. Recognize virtual and real images.
6. Apply mirror formulae.
7. Use Snell's Law to predict the passage of light through a medium.
8. Determine the index of a material by the standard lab technique of ray tracing.
9. Predict the properties of an image formed by a lens configuration.
10. Calculate the critical angle experimentally and mathematically.
11. Qualitatively predict the dispersion of white light through a prism.
12. State a hypothesis and then verify that statement in nature.
13. Derive mathematical statements to support the above.
14. Set up mechanical analogs to study a phenomenon.
15. Discriminate between a model and reality.
16. Apply the law of superposition to two intersecting wave pulses.
17. Describe the reflected and transmitted (refracted) pulse as it travels from one medium to another.
18. Apply wave behavior to light.
19. Identify the characteristics of wave phenomenon.
20. Demonstrate the phenomenon of light with the ripple tank in accordance with the principles of wave theory.

21. Apply observations and theory to problems.
22. Construct wave front diagrams.
23. Calculate the wavelength of an unknown light source using a double slit experiment.
24. Apply Interference and Diffraction equations.
25. Identify a single slit or a double slit source by its projected pattern.
26. Graphic analysis of d-t, v-t, and a-t curves.
27. Calculation of d, v, and a from raw data.
28. Use of Equations of Motion.
29. Perform a dimensional analysis on any equation.
30. Compute the sine, cosine, and tangent of an angle.
31. Set up vector diagram and solve for the resultant by the trig method.
32. Vector analysis of motion involving forces.
33. Application of the equations of motion to free fall, projectile, or harmonic motion problems.
34. Application of circular motion relationships.
35. Solve Newton's equation for the gravitational force between two bodies.
36. Solve satellite motion and equilibrium problems.
37. Solve collision problems by applying momentum concepts.
38. Perform collision experiments with carts and air track and analyze the data.
39. Apply work-energy relationships to almost all types of motion problems.
40. Identify an elastic collision.
41. Compute the net force of a system and compute the work.
42. Analyze collisions.
43. Compute the area under a curve and equate it to the work.
44. Apply potential energy concepts to analyze energy problems.
45. Compute the energy equivalent in a problem.
46. Compute the work done in moving a body from one point to another in a potential field.
47. Apply kinetic and potential energy concepts to planetary motion.
48. Apply the techniques of charging by conduction and induction.
49. Determine the forces on two or more charged particles using Coulomb's Law.
50. Calculate the electric potential of a test charge in an electric field.
51. Apply Ohm's Law to resistive systems.
52. Define ampere and coulomb in terms of elementary charges.
53. Apply the laws of electromagnetic induction.

Course Purpose: *What is the purpose of this course?*

This physics course is aligned to the California Next Generation Science Standards (CA NGSS) and the California Science Framework High School Three Course Model. Students in this course will learn content based on the three dimensions of CA NGSS science: Science and Engineering practices (SEPs), Disciplinary Core Ideas (DCIs), and Crosscutting Concepts (CCCs). The course is divided into seven units including the six instructional segments from the California Science Framework and is centered on questions about a specific phenomenon.

SMJUHSD NGSS Physics of the Universe A/B

Title:	Physics of the Universe A/B
Length of Course:	Full Year
Subject Area:	Laboratory Science ("d) / Physics
UC Honors Designation:	No
Prerequisites:	None
Co-requisites:	None
Integrated (Academics / CTE):	No
Grade Levels:	9th, 10th, 11th, 12th

This physics course is aligned to the California Next Generation Science Standards (CA NGSS) and the California Science Framework High School Three Course Model. Students in this course will learn content based on the three dimensions of CA NGSS science: Science and Engineering practices (SEPs), Disciplinary Core Ideas (DCIs), and Crosscutting Concepts (CCCs). The course is divided into seven units including the six instructional segments from the California Science Framework and is centered on questions about a specific phenomenon.

As students achieve the Performance Expectations (PEs) within the unit through laboratory experiments, projects, and in-class demonstrations, they uncover Disciplinary Core Ideas (DCIs) from Physical Science, as well as Earth and Space Science. Students engage in multiple Science and Engineering Practices (SEPs) in each unit, not only those explicitly indicated in the PEs. Students also focus on one or two Crosscutting Concepts (CCCs) as tools to make sense of their observations and investigations. This course will provide a foundation in the laws of physics to support student understanding of the processes that shape Earth and space systems.

Physics of the Universe A/B meets the District Graduation requirement for physical science.

---

0. Introduction to Physics

This introductory unit introduces students to physics and the NGSS Science and Engineering Practices. The unit focuses on planning and conducting an investigation, collecting and analyzing data, using mathematics and computational thinking, and engaging in argument from evidence. Connections to Earth and Space Science include seafloor spreading rates, the speed of light, and distances to solar system objects.

Essential Questions:

1. What is physics?
2. What skills are needed to conduct physics investigations?
3. How are Scientific Questions generated and tested?
4. How can trends in data be identified, analyzed, and applied?

Students will be able to:

- Generate scientific questions
- Identify and measure independent and dependent variables and constants
- Write a data collection procedure
- Convert between metric units as needed
- Identify and analyze linear trends
- Interpret and apply slope of linear trendlines
- State a claim about the scientific question being investigated through a written Claim-Evidence-Reasoning concluding paragraph.
- Evaluate the consistency of the data and relate to sources of error

NGSS Science and Engineering Practices (SEPs):

- Analyzing and interpreting data
- Using mathematics and computational thinking
- Engaging in argument from evidence

NGSS Cross-cutting Concepts (CCCs):

- Patterns
- Scale, proportion, and quantity
- Structure and Function

Unit Assignment(s):

Assignments in this unit aim to aid students in the development of scientific reasoning skills. Observing phenomena through the lenses of the SEP's and CCC's will be included.

Unit Lab Activities:

The Spaghetti Bridges Lab Activity described below is the main assignment for this unit. Students will design an experiment to answer the question, "What is the relationship between a number of strands and bridge strength?" Groups choose thick or thin spaghetti, conduct their experiment, and analyze the data. Students apply this learning in an engineering design challenge: determine (with an accuracy of ±1) the number of Angel Hair spaghetti strands in a bridge of unknown strands based on its strength. This engineering design challenge comes with constraints, allowing students a maximum of 3 bridge trials using angel hair before the mystery bridge is tested.

1. Forces and Motion

The Forces and Motion unit engages students in constructing an understanding of Newton's Laws through hands-on inquiry investigations and engineering design challenges. Related Earth and Space Science connections for this unit include the forces involved in plate tectonics (buoyancy, shear, tension, and compression).

Essential Questions:

1. How can we apply Newton's Laws of Motion (inertia, force, action/reaction) to explain or predict our environment?
2. How can motion be represented in a graph, diagram, equation, or explanation?
3. What types of forces act on Earth and what are the two objects interacting for each type of force?
4. How can we plan and conduct an experiment to identify which variables affect acceleration?
5. How can we produce a specific acceleration on a cart?

NGSS Performance Expectations (PEs):

- **HS-PS2-1.** Analyze data to support the claim that Newton's second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration.
- **HS-PS2-2.** (partial) Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system. (constant velocity = no net force)
- **HS-PS2-3.** Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.
- **HS-ESS 2-1.** Develop a model to illustrate how Earth's internal and surface processes operate at different spatial and temporal scales to form continental and ocean-floor features.

NGSS Science and Engineering Practices (SEPs):

- Analyzing and interpreting data
- Using mathematics and computational thinking
- Engaging in argument from evidence

NGSS Cross-cutting Concepts (CCCs):

- Patterns
- Cause and Effect

Unit Assignment(s):

In this unit, students will learn how to use motion sensors during a Motion Sensor Lab. They will use this learning to engage in a Newton's 2nd Law Lab and an Acceleration Challenge.

Students will use Gizmo and PhET simulations and academic text readings (NewsELA) to reinforce skills and knowledge constructed during their hands-on learning. Model building will be used to demonstrate geological folding and mountain-building to illustrate forces in plate tectonics.

Unit Lab Activities:
Students investigate Newton's 2nd Law through the use air tracks to determine the relationships among force, mass, and acceleration. Students collect and analyze their data, use mathematics and computational thinking, and then use this work to engage in arguing from evidence. Students apply this knowledge to engage in an engineering design challenge to collect data, produce a graph, and build a device that achieves an acceleration of exactly 0.6 m/s^2.

---

2. Forces at a Distance

This unit builds upon the foundation of the Forces in Motion Unit by examining gravity and electromagnetism, forces that can be modeled as fields that span space. Despite the fact that we cannot see them, we interact with these fields on a daily basis and students are already familiar with their pushes and pulls. Students investigate gravitational and electromagnetic forces and describe them mathematically. They predict the motion of orbiting objects in the solar system. They link the macroscopic properties of materials to microscopic electromagnetic attractions.

Essential Questions:

1. How can different objects interact when they are not even touching?
2. How can electric charge move and carry energy that can be transformed through devices such as generators, motors, speakers, and microphones?
3. How do interactions at the microscopic scale affect the macroscopic properties of matter that we observe?

NGSS Performance Expectations (PEs):

- **HS-PS2-4.** (partial) Use mathematical representations of Newton's Law of Coulomb's Law to describe and predict the electrostatic forces between objects.
- **HS-PS2-5.** Plan and conduct an investigation to provide evidence that an electric current can produce a magnetic field and that a changing magnetic field can produce an electric current.
- **HS-PS2-6.** Communicate scientific and technical information about why the molecular-level structure is important in the functioning of designed materials.
- **HS-PS3-5.** Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in the energy of the objects due to the interaction.
- **HS-ESS1-4.** Use mathematical or computational representations to predict the motion of orbiting objects in the solar system.

NGSS Science and Engineering Practices (SEPs):

- Constructing explanations and designing solutions
- Planning and carrying out investigations
- Using mathematics and computational thinking

NGSS Cross-cutting Concepts (CCCs):

- Cause and Effect
- Systems and Systems Models
- Patterns

Unit Assignment(s):

Students will design an experiment to determine which factors (number of coils/batteries, and core diameter) affect the strength of an electromagnet as measured by the number of BB's held in a vertical strand from each other. Students will explore how a compass needle will deflect when placed over a current-carrying wire and how they can use a solenoid with a magnet and LED to show a spike in the current as a magnet falls through a copper pipe. Students will use Earth Science Gizmo and PhET simulations (gravity) along with academic text readings to reinforce skills and knowledge constructed during their hands-on learning.

Unit Lab Activities:

Students will design and tests a device for the following scenario: A large internet retailer needs electromagnets to move packages from stock shelves to conveyor belts. Students design an experiment to determine which factors (number of coils/batteries, and core diameter) affect the strength of an electromagnet as measured by the number of BB's held in a vertical strand from each other. Students then use that data to design a device to pick up a set number of BB's using as few materials as possible.

---

3. Energy, Conversion and Renewable Energy

In this unit, students track energy transfer and conversion through inquiry and investigative assignments. They evaluate different technologies in renewable energies, such as obtaining and communicating information about how solar and wind energy systems operate. They design and test their own energy conversion devices.

Essential Questions:

1. What factors affect potential energy and kinetic energy of an object?
2. How can we show conversions of energy from one type to another graphically and mathematically?
3. How can we design, build, and revise a device to convert one type of energy to another?
4. What happens when the mechanical energy of a system changes?
5. Since energy cannot be created or destroyed, how is it transformed from one energy into another?

NGSS Performance Expectations (PEs):

- **HS-PS3-1.** Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.
- **HS-PS3-2.** Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motions of particles (objects) and energy associated with the relative positions of particles (objects).
- **HS-PS3-3.** Design, build and refine a device that works within given constraints to convert one form of energy into another form of energy.
- **HS-PS4-5.** Communicate technical information about how some technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy.
- **HS-ESS3-2.** (partial) Evaluate competing design solutions for developing, managing, and utilizing energy and mineral resources.
- **HS-ESS3-3.** Create a computational simulation to illustrate the relationships between the management of natural resources, the sustainability of human populations, and biodiversity.

NGSS Science and Engineering Practices (SEPs):

- Asking questions and defining problems
- Using mathematics and computational thinking

NGSS Crosscutting Concepts (CCCs):

- Systems and systems models
- Energy and Matter

Unit Assignment(s):

Students engage in an engineering design challenge to solve a major global challenge of delivering packages. Students convert elastic potential energy to kinetic energy by creating a rubber band washer launching device. Students will create and develop a solar and/or wind conversion device. Students will use Gizmo and PhET simulations and academic text readings to reinforce skills and knowledge constructed during their hands-on learning.

Unit Lab Activities:

Students investigate the conversion of gravitational potential energy into kinetic energy by designing roller coasters. Investigations into energy conversions will continue through inquiry regarding renewable resources including solar and wind energy.

4. Nuclear Processes and Earth History

In this unit, students develop a model of the internal structure of atoms and then extend it to include the processes of fission, fusion, and radioactive decay. They apply this model to understanding nuclear power and radiometric dating. They use evidence from rock ages to reconstruct the history of the Earth and processes that shape its surface.

Essential Questions:

1. How does Einstein's equation of $E=mc^2$ relate to nuclear processes and Earth history?
2. How do nuclear reactions illustrate conservation of energy and mass?
3. How do we determine the age of rocks and other geologic features?

NGSS Performance Expectations (PEs):

- **HS-PS1-8.** Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.
- **HS-ESS1-5.** Evaluate evidence of the past and current movements of continental and oceanic crust and the theory of plate tectonics to explain the ages of crustal rocks
- **HS-ESS1-6.** Apply scientific reasoning and evidence from ancient Earth materials, meteorites, and other planetary surfaces to construct an account of Earth's formation and early history.
- **HS-ESS2-1.** Develop a model to illustrate how Earth's internal and surface processes operate at different spatial and temporal scales to form continental and ocean-floor features.

NGSS Science and Engineering Practices (SEPs):

- Developing and Using Models
- Constructing Explanations (for science)
- Designing Solutions (for engineering)
- Engaging in Argument from Evidence

NGSS Crosscutting Concepts (CCCs):

- Patterns
- Energy and Matter: Flows, Cycles, and Conservation
- Stability and Change

Unit Assignment(s):

To introduce the concept of radioactive decay students will create a model with the Microwave Popcorn Decay activity. Student will simulate the transformation of a radioactive isotope over time, graph the data and relate it to radioactive decay and half-lives. Students will uses Gizmo and PhET simulations to develop a model of the internal structure of atoms and then extend to include the processes of fission, fusion, and radioactive decay.

Unit Lab Activities:
Using ENSI lessons Deep Time and Patterns in Time students will understand the history of Earth and how nuclear processes shape the Earth's surface. The ENSI lesson, Patterns in Time, will support student understanding of geologic time as related to the personal lifespan of a human. The ENSI lesson, Deep Time, will give students an understanding of the age of rocks and the formation of other geologic features.

---

5. Waves and Electromagnetic Radiation
In this unit, students make mathematical models of electromagnetic waves and apply them to seismic waves traveling through the Earth. They obtain, evaluate, and communicate information about health hazards associated with electromagnetic waves. They use models of wave behavior to explain information transfer using waves and the wave-particle duality.

Essential Questions:
1. How does energy travel in the form of a wave?
2. How does wavelength relate to a frequency in the electromagnetic spectrum?
3. How and why does wave speed change in different mediums?
4. What types of information can waves carry?

NGSS Performance Expectations (PEs):
- **HS-PS4-1.** Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.
- **HS-PS4-2.** Evaluate questions about the advantages of using a digital transmission and storage of information.
- **HS-PS4-3.** Evaluate the claims, evidence, and reasoning behind the idea that electromagnetic radiation can be described either by a wave model or a particle model and that for some situations one model is more useful than the other.
- **HS-PS4-4.** Evaluate the validity and reliability of claims in published materials of the effects that different frequencies of electromagnetic radiation have when absorbed by matter.
- **HS-PS4-5.** Communicate technical information about how some technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy.*
- **HS-ESS2-1.** Develop a model to illustrate how Earth's internal and surface processes operate at different spatial and temporal scales to form continental and ocean-floor features.

NGSS Science and Engineering Practices (SEPs):
- Asking questions and defining problems
- Using mathematics and computational thinking
- Obtaining, evaluating, and communicating information

NGSS Crosscutting Concepts (CCCs):

- Stability and Change
- Cause and Effect
- Systems and systems models

Unit Assignment(s):

Engage students by having them watch the Tacoma Narrows Bridge collapse. Each class constructs a gummy bear wave machine to view wave propagation and learn the parts of a wave and relevant vocabulary. Students then select a variable and design an experiment to test the effect of different mediums on wave speed. Using Gizmo and PhET simulations students will be explore sound to investigate the relationship between wavelength and frequency in a constant medium.

Unit Lab Activities:

Students will use different lengths of straws to measure the frequency of the sound produced (using data probes or phone apps). Students use this data to calculate the speed of sound in air at room temperature. Students will use their understanding of this data to correlate the speed of sound through various mediums, such as in the movement of seismic waves through Earth.

---

6. Stars and the Origin of the Universe

In this unit, students will examine the processes governing the formation, evolution, and workings of the solar system and universe. Students apply their understanding of nuclear fusion to trace the flow of energy from the Sun's core to Earth. They use evidence from the spectra of stars and galaxies to determine the composition of stars and construct an explanation of the origin of the universe.

Essential Questions:

1. How do we know what stars are made of?
2. What fuels our Sun?
3. Will our Sun ever run out of that fuel?
4. Do other stars work the same way as our Sun?
5. How do patterns in motion of the stars tell us about the origin of our universe?

NGSS Performance Expectations (PEs):

- **HS-ESS1-1.** Develop a model based on evidence to illustrate the lifespan of the sun and the role of nuclear fusion in the sun's core to release energy in the form of radiation.
- **HS-ESS1-2.** Construct an explanation of the Big Bang theory based on astronomical evidence of light spectra, the motion of distant galaxies, and composition of matter in the universe.
- **HS-ESS1-3.** Communicate scientific ideas about the way stars, over their life cycle, produce elements.

NGSS Science and Engineering Practices (SEPs):

- Developing and using models
- Constructing explanations and designing solutions
- Obtaining, evaluating, and communicating information.

NGSS Crosscutting Concepts (CCCs):

- Patterns
- Stability and Change
- Scale, proportion, and quantity
- Energy and Matter
- Structure and Function

Unit Assignment(s):

Students will use Gizmo and PhET simulations to construct an explanation of the role of nuclear fusion in the sun's core to release energy in the form of radiation. Students will explore the composition of stars using spectral analysis with emission tubes and spectroscopes.

Unit Lab Activities:

Students will build a model of the HR Diagram through examining data patterns in raw star data. They will use this model to better understand the life cycle of stars, types of stars, evidence of light spectra, the motion of distant galaxies, and composition of matter in the universe.

Name: Dee Ringstead

Title/Position: Principal

Phone: 922-4573 **Ext.:** 4211

E-mail: jarmstrong@smjuhsd.org

9. Subject Area

- ☐ History/Social Science
- ☐ English
- ☐ Mathematics
- ☒ Laboratory Science
- ☐ Language other than English
- ☐ Visual & Performing Arts
  - ☐ Intro ☐ Advanced
- ☐ College Prep Elective

10. Grade Level(s) for which this course is designed

11th 12

11. Seeking "Honors" Distinction?

☐ Yes ☐ No

12. Unit Value

- ☐ 0.5 (half year or semester equivalent)
- ☐ 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Is this an Internet-based course? No

If "Yes", who is the provider? ☐ UCCP ☐ PASS/Cyber High ☐ Other _____

14. Complete outlines are not needed for courses that were previously approved by UC. If course was previously approved, indicate in which category it falls.

- ☐ A course reinstated after removal within 3 years. Year removed from list? _____
  - Same course title? ☐ Yes ☐ No
  - If no, previous course title? _____
- ☐ An identical course approved at another school in same district. Santa Maria High School
  - Same course title? ☐ Yes ☐ No
  - If no, course title at other school? _____
- ☐ Year-long VPA course replacing two approved successive semester courses in the same discipline
- ☐ Approved Advanced Placement (AP) or International Baccalaureate (IB) course
- ☐ Approved UC College Prep (UCCP) Online course
- ☐ Approved CDE Agricultural Education course
- ☐ Approved P.A.S.S./Cyber High course
- ☐ Approved ROP/C course. Name of ROP/C? _____
- ☐ Approved A.V.I.D. course
- ☐ Approved C.A.R.T. course
- ☐ Approved Project Lead the Way course
- ☐ Other. Explain: _____

15. Is this course modeled after an UC-approved course from another school <u>outside</u> your district? ☐ Yes ☒ No

If so, which school(s)? _____

Course title at other school _____

16. Pre-Requisites

Successful completion of Biology with a grade of C or better is recommended

17. Co-Requisites

None

18. Is this course a resubmission? ☐ Yes ☐ No

If yes, date(s) of previous submission? _____

Title of previous submission? _____

19. Brief Course Description

This course provides students with information on the physiology and anatomy of the human body.

B. COURSE CONTENT

Please refer to instructions

18. Course Goals and/or Major Student Outcomes

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Define many associated field of study, e.g., histology, pathology, etc.
2. Have an awareness and understanding of body planes and surfaces.
3. Identify and describe the functions of the parts and organelles of a cell, e.g., mitochondria, lysosome, etc.
4. Differentiate between the types of tissues found in the body, e.g., smooth muscle, adipose, pseudo stratified ciliated columnar epithelium.
5. Name the bones of the human skeleton.
6. Identify and describe the structures, both gross and microscopic, of skeletal muscle.
7. Identify the origin, insertion, and action of the approximately 50 muscles known as prime movers.
8. Identify and describe the functions of the parts of the neuron and the propagation of the action current and the transmitter chemicals at the myoneural junction.
9. Describe the structure of the spinal cord, its meninges, and the spinal nerves and the routing of the reflex arc.
10. Locate and describe the major parts of the brain and list the functions located therein.
11. Describe the structures involved in the automatic nervous system and the effects of sympathetic and parasympathetic stimulation.
12. Identify and describe the locations and functions of the visceral and coetaneous receptors.
13. Describe the chemoreceptors in the aortic and carotid bodies: those involved in olfactory and gustatory senses.
14. Describe the structure and function of the parts of the human eye.
15. Be conversant with the visual abnormalities attendant with the human eye and possible corrections available.
16. Describe the structure and functions of the parts of the human eye in hearing and equilibrium.

19. Course Objectives

The objective of this course is to provide the students information on the physiology and anatomy of the human body.

20. Course Outline

21. Texts & Supplemental Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in Santa Maria Joint Union High School District

22. Key Assignments

23. Instructional Methods and/or Strategies

1. Individual Work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Small group activities
7. Outside resource people
8. Field Trips
9. Individualized and group projects and reports

24. Assessment Methods and/or Tools

Students will take quizzes and multiple choice examinations, participate in classroom activities and create projects.

C. HONORS COURSES ONLY

Please refer to instructions

25. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

26. Context for Course (optional)

27. History of Course Development (optional)

Course Title

Practical Science A (P)

Description of Target Group

This course is designed for students in grades 9 and 10. Recommended for job prep students.

Purpose

To gain a better idea of the role of science in the world today.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify a balance.
2. Identify a graduate cylinder.
3. Identify a meter stick.
4. Identify a thermometer.
5. Manipulate a balance.
6. Manipulate a graduate cylinder.
7. Manipulate a meter stick.
8. Manipulate a thermometer.
9. Interpret the balance.
10. Interpret the graduate cylinder.
11. Interpret the meter stick.
12. Interpret the thermometer.
13. Guesstimate the dimensions of familiar objects using the metric system.
14. Guesstimate the volume of familiar objects using the metric system.
15. Guesstimate the mass of familiar objects using the metric system.
16. Guesstimate the temperature of everyday conditions on degrees celsius.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approves Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, labs, demonstrations, films, slides.

Course Title

Practical Science B (P)

Description of Target Group

This course is designed for students in grades 9 and 10. Recommended for job prep students.

Purpose

To gain a better idea of the role of science in the world today.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify a balance.
2. Identify a graduate cylinder.
3. Identify a meter stick.
4. Identify a thermometer.
5. Manipulate a balance.
6. Manipulate a graduate cylinder.
7. Manipulate a meter stick.
8. Manipulate a thermometer.
9. Interpret the balance.
10. Interpret the graduate cylinder.
11. Interpret the meter stick.
12. Interpret the thermometer.
13. Guesstimate the dimensions of familiar objects using the metric system.
14. Guesstimate the volume of familiar objects using the metric system.
15. Guesstimate the mass of familiar objects using the metric system.
16. Guesstimate the temperature of everyday conditions on degrees celsius.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approves Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, labs, demonstrations, films, slides.

Course Title

PSSC Physics A/B (P)

Description of Target Group

This course is designed for students in the 11th and 12th grades; 10th grade with teacher approval.

Purpose

To present an advanced study of the physical properties of matter and energy.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully able to demonstrate the following skills:

1. Identify various types of light sources.
2. Find an image in all types of mirrors, by ray tracing methods.
3. Identify incident and reflected rays.
4. Apply the laws of reflections.
5. Recognize virtual and real images.
6. Apply mirror formulae.
7. Use Snell's Law to predict the passage of light through a medium.
8. Determine the index of a material by the standard lab technique of ray tracing.
9. Predict the properties of an image formed by a lens configuration.
10. Calculate the critical angle experimentally and mathematically.
11. Qualitatively predict the dispersion of white light through a prism.
12. State a hypothesis and then verify that statement in nature.
13. Derive mathematical statements to support the above.
14. Set up mechanical analogs to study a phenomenon.
15. Discriminate between a model and reality.
16. Apply the law of superposition to two intersecting wave pulses.
17. Describe the reflected and transmitted (refracted) pulse as it travels from one medium to another.
18. Apply wave behavior to light.
19. Identify the characteristics of wave phenomenon.
20. Demonstrate the phenomenon of light with the ripple tank in accordance with the principles of wave theory.
21. Apply observations and theory to problems.
22. Construct wave front diagrams.
23. Calculate the wavelength of an unknown light source using a double slit experiment.
24. Apply Interference and Diffraction equations.
25. Identify a single slit or a double slit source by its projected pattern.
26. Graphic analysis of d-t, v-t, and a-t curves.

27. Calculation of d, v, and a from raw data.
28. Use of Equations of Motion.
29. Perform a dimensional analysis on any equation.
30. Compute the sine, cosine, and tangent of an angle.
31. Use the trig tables in finding angles and function values
32. Set up vector diagram and solve for the resultant by the trig method.
33. Vector analysis of motion involving forces.
34. Application of the equations of motion to free fall, projectile, or harmonic motion problems.
35. Application of circular motion relationships.
36. Solve Newton's equation for the gravitational force between two bodies.
37. Solve satellite motion and equilibrium problems.
38. Solve collision problems by applying momentum concepts.
39. Perform collision experiments with carts and air track and analyze the data.
40. Apply work-energy relationships to almost all types of motion problems.
41. Identify an elastic collision.
42. Compute the net force of a system and compute the work.
43. Analyze collisions.
44. Compute the area under a curve and equate it to the work.
45. Apply potential energy concepts to analyze energy problems.
46. Compute the energy equivalent in a problem.
47. Compute the work done in moving a body from one point to another in a potential field.
48. Apply kinetic and potential energy concepts to planetary motion.
49. Apply the techniques of charging by conduction and induction.
50. Determine the forces on two or more charged particles using Coulomb's Law.
51. Calculate the electric potential of a test charge in an electric field.
52. Apply Ohm's Law to resistive systems.
53. Define ampere and coulomb in terms of elementary charges.
54. Apply the laws of electromagnetic induction.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, demonstrations, lab, problem sessions, PSSC films and other related audio-visual aids.

II. Course List Discrepancy

Title of Course: AP Physics 1

A-G Subject Area (select one): ☐ History / social science ("a") ☐ English ("b")

☐ Mathematics ("c") ☑ Laboratory science ("d") ☐ Language other than English ("e")

☐ Visual / performing arts ("f") ☐ College preparatory elective ("g")

Academic year(s) affected by the course list discrepancy:

☐ 20 14 -20 15 ☐ 20 _____ -20 _____

☐ 20 _____ -20 _____ ☐ 20 _____ -20 _____

Has this course previously been submitted and UC-approved for your institution? ☑ Yes ☐ No

If no, please submit the course to UC via the A-G Online Update website: https://doorways.ucop.edu/update/

Date of Course Submission: August 2013

III. Petition Justification

In an attached one-page statement, please provide a detailed explanation of the discrepancy to the "a-g" course list and the specific course of action the institution is requesting. The statement must be submitted on official letterhead and it must be signed by the Head of School (or Head of Curriculum in the case of online course publishers).

IV. Certification

☑ I have read the instructions and terms of the petition procedure for "Retroactive Change to A-G Course List" outlined by the University of California, Office of the President – High School Articulation and certify that all information submitted herein is factual.

Name _____ Position / Title _____

Signature _____ Date _____

Please submit the completed form to: hsupdate@ucop.edu

Retroactive Change to A-G Course List

To petition for a retroactive "a-g" course list change, please complete this form to explain your institution's course list discrepancy.

Petition Criteria:

1. Only course discrepancies noted within the current academic year and up to three previous academic years may be petitioned for change. The number of petition submissions for a retroactive course list change is limited to ***three per institution, every five academic years***.
2. No exceptions will be made in cases requesting an addition of the "honors" designation to a course, as such designation does not affect a student's ability to meet the University of California's minimum freshman admission requirements.

I. Basic Information

Name of Institution: Santa Maria High School

College Board Code (ATP/CEEB Code): 053305

California Department of Education CDS Code: _____ – _____ – 42693104236030

Name of Course List Contact Person: John Davis

Position Title: Asst. Superintendent of Curriculum & Instructions

Phone: 805 922-4573 x: 4211 E-mail: jdavis@smjuhsd.org

For districts submitting a petition on behalf of any school within the district, please complete the below fields:

Name of District: Santa Maria Joint Union High School District

District's California Department of Education CDS Code: 42 – 69310

Please attach a separate sheet listing the: (a) name of the school(s) affected and (b) the ATP/CEEB* code(s).

**American Testing Program (ATP) Code or College Entrance Examination Board (CEEB)*

II. Course List Discrepancy

To Whom It May Concern,

RE: **Retroactive Change to A-G Course List Petition**
AP Physics 1

The College Board discontinued the AP Physics B curriculum effective for the 2014-15 academic year. The High School Articulation unit removed all AP Physics B courses from Righetti (Ernest) High School and Santa Maria High School off the 2014-15 "a-g" course lists.

Unfortunately, the school and the district inadvertently missed the deadline to submit a request to add the AP Physics 1 to the Righetti (Ernest) High School's and Santa Maria High School's 2014-15 "a-g" course lists.

The AP Physics 1 course is being offered at Righetti (Ernest) and Santa Maria High Schools during the 2014-15 academic year and as directed by the UC, AP Physics 1 course was submitted for "a-g" review for the 2015-16 year on February 4, 2015.

Sincerely,

John Davis
Assistant Superintendent
Curriculum and Instruction

SANTA BARBARA COUNTY ROP / PIONEER VALLEY HIGH SCHOOL
SPORTS MEDICINE KINESIOLOGY COURSE OUTLINE

A. Introduction

1. History of kinesiology including all disciplines involved with sports medicine.

2. Methods of Biological Investigations
    a. Safety
    b. Scientific Method
        i. Testable hypothesis
        ii. Experimental design
        iii. Independent/dependent variable

3. Review of Cell Structure, Chemistry of cells

B. Anatomy and Physiology

1. Language of Anatomy

a. Anatomical Position
b. Body Orientation and Directional terms
c. Body Landmarks
d. Planes and Sections
e. Body Cavities

Objectives: Objectives: Students will be able to

1. Explain how anatomy and physiology are related
2. Describe the anatomical position verbally or by demonstrating it.
3. Demonstrate proficiency in using terms describing body landmarks, directions, planes, and surfaces.
4. Be able identify organ systems

Labs: **Orientation Terms**

Organ Systems Overview

2. Homeostasis for proper body function

a. Body temperature regulation

b. Heart Rate

c. Blood pressure

Lab: Compare and contrast the blood pressure and heart rate.

d. Nutrition

e. Nutritional Supplements

f. Response to lack of homeostasis

1. Identify various signs of trauma

Objectives: Students will be able to:

1. Define Homeostasis and explain its importance.
2. Define negative feedback and describe its role in maintaining homeostasis and normal body function.

3. Tissue

a. The structure and function of normal tissue

1. Epithelial

Lab: Measure the sensation of various pressure points using a variety of items for comparison of response on the epithelial tissue

2. Connective

3. Muscle

4. Nervous

Lab: Histology – Classification of Tissues

b. Tissue

1. Healing times for various types of tissue

c. Tissue response to physical injury

d. Physiology of the inflammatory response

1. Pain-spasm-pain cycle

2. Pharmacology

Objectives: Students will be able to:

1. Name the four tissue types and their chief subcategories.

2. Explain how the four major tissue types differ structurally and functionally.

3. Give the chief location of the various tissue types in the body.

4. Describe the process of tissue repair.

4. The Circulatory System

a. Medical terminology pertaining to the cardiovascular system

b. Anatomy of the heart and circulatory system

1. Major vessels and chambers
2. Blood's path through the heart

Lab: Comparing Arteries and Veins

Lab: Dissection of Sheep Heart

c. Functions of the heart and circulatory system

1. Blood pressure
   i. Factors effecting blood pressure
   ii. Heart sounds
2. Heart rate

Lab: Analyze heart rates and blood pressure

Lab: Analysis of CPR functions to create an understanding of how the blood maintains life.

d. Disorders and Diseases of the Heart

e. Human blood components

1. Red blood cells/hemoglobin
2. Oxygen/carbon dioxide transport
3. White blood cells and defense
4. Blood clotting
5. Blood typing: ABO groups

Lab: Simulated Blood Typing

Objectives: Students will be able to:

1. Describe the location of the heart in the body and identify its major anatomical areas on an appropriate model or diagram.
2. Trace the pathway of blood through the heart.
3. Compare the pulmonary and systemic circuits.
4. Explain the operation of the heart valves.
5. Name the elements of the intrinsic conduction system of the heart and describe the pathway of impulses through this system.
6. Define systole, diastole, stroke volume, and cardiac cycle.
7. Compare and contrast the structure and function of arteries, veins, and capillaries.
8. Define blood pressure and pulse and name several pulse points.
9. List factors affecting/or determining blood pressure.
10. Define hypertension and atherosclerosis and describe possible health consequences of these conditions.
11. Indicate the composition and volume of whole blood.
12. Describe the composition of plasma and discuss its importance in the body.
13. List the cell types making up the formed elements and describe the major functions of each type.
14. Describe the blood-clotting process.

5. Respiratory System

a. Anatomy of the respiratory system

1. Part of the human respiratory system

Lab: Create their own sponge models of the respiratory system

b. Function of the respiratory system

1. Mechanics of breathing
2. Regulation of breathing
3. Air filtration
4. Gas exchange: Diffusion of gases
5. Blood transport of gases
6. Cellular respiration

Lab: Create a balloon lung

c. Discuss affects of exercise on the respiratory system

Lab: Use spirometers to record and analyze max VO_2 volumes

Objectives: Students will be able to:

1. Name the organs forming the respiratory passageway and describe the function of each.

2. Describe several protective mechanisms of the respiratory system.

3. Explain how the respiratory muscles cause volume changes that lead to air flow into and out of the lungs (breathing)

4. Define the following respiratory volumes, tidal volume, vital capacity, expiratory reserve volume, inspiratory reserve volume and residual air.

5. Describe the process of gas exchanges in the lungs and tissues.

6. Describe how oxygen and carbon dioxide are transported in the blood.

7. Name several physical factors that influence respiratory rates.

8. Explain the importance of oxygen and carbon dioxide in modifying the rate and depth of breathing.

6. Nervous System

a. Terminology of the Nervous System

b. Anatomy of the Nervous System

1. Brain

2. Spinal Cord

3. Spinal Nerves

c. Functions of the nervous system

1. Peripheral nervous system

i. Somatic and autonomic systems
ii. Sympathetic and parasympathetic systems
iii. Reflex

Lab. Human Reflex Physiology

Lab: Hypothesis how much force it would take to elicit a flex action with the use of a reflex hammer on different joints-

d. The nerve cell

Lab: Neuron Anatomy and Physiology-

e. Neurological diseases and how it affects human function.

f. Dermatomes and Myotomes

Lab: Replicate a life size image of the individual dermatomes and myotomes of the upper and lower body

g. Types of injures associated with the CNS and vertebrae

Lab: Special tests for CNS injury, along with spine board use and practice in emergency situation

Objectives: Students will be able to:

1. List the functions of the nervous system.
2. Explain the structural and functional classification of the nervous system.
3. Define the central nervous system and peripheral nervous system and list the major parts of each.
4. Describe the structure of a neuron and name its important anatomical regions.
5. Describe the composition of gray matter and white matter.
6. List the two major functional properties of neurons.
7. Define reflex arc and list its elements.
8. Identify and indicate the functions of the major regions of the cerebral hemisphere, diencephalon, brain stem, and cerebellum on a human brain model or diagram.
9. Name the meningeal layers and state their functions.
10. Define EEG and explain how it evaluates functioning.
11. Describe spinal cord structure.
12. Describe the general structure of a nerve.
13. Name the four major nerve plexuses, give the major nerves of each and describe their distribution.
14. Contrast the effect of the parasympathetic and sympathetic divisions on different organs.

7. Skeletal System

a. Medical terminology pertaining to the skeletal system

b. Functions of the skeletal system

b. Anatomy of the human skeleton
   i. Axial and appendicular skeleton
   ii. Bone types
   iii. Ligaments and muscle attachment

   Lab: Identify the basic bones of a human skeletal model-

c. Growth and formation

   Lab: identify bone structure and formation-

d. Joints

   1. Types of joints
   2. Types of joint movements- Range of Motion
   3. Lever arms

      Lab: Analysis of the different functions of level arms using rubber bands and wooden dowels/metal rods

      Lab**: Joints and Body Movements-**

e. Injures

   Lab: Analyze external and internal forces applied on the skeletal system-

   1. Fracture
      (a) Types
   2. Arthritis
   3. Skeletal and joint injures in sport
      (a) Foot
      (b) Ankle
      (c) Knee
      (d) Hip
      (e) Hand/wrist
      (f) Elbow
      (g) Shoulder
      (h) Spine

      Lab: **Analyze for each body part above the bones and joints stability through a normal range of motion with manual applications**

      Objectives: Students will be able to
      1. Identify the subdivisions of the skeleton.
      2. List the functions of the skeletal system
      3. Name the four major types of bones.
      4. Identify the major anatomical areas of a long bone.
      5. Name and describe the types of fractures.
      6. Identify and name the bones of the skull.
      7. Name the parts of a typical vertebra and explain how the cervical, thoracic and lumbar vertebrae differ from one another.
      8. Explain how the abnormal spinal curvatures differ from one another.
      9. Identify the bones of the shoulder and pelvic girdles and their attached limbs.
      10. Describe the differences between male and female pelvises.
      11. Name the three major categories of joints and compare the amount of movement allowed by each.
      12. Identify some of the causes of bone and joint problems throughout life.

8. Muscular System

a. Anatomy of the muscular system

1. Types of muscle
2. Skeletal-muscular system
   i. parts of a muscle
3. Skeletal muscle contraction
4. Muscle strength and exercise
5. Cellular respiration and Muscle Fatigue
6. Identify origin and insertions of skeletal muscles

Lab: Dissection of a Chicken Wing-

Lab: Create clay models on small human skeleton model showing muscle from origin to insertion

Lab: Create muscles our of ribbon and rubber bands on a small human skeletal model

b. Anatomical Planes of Movement

1. Path of movement in each plane

Lab: Hypothesize what planes the body is going to be stronger in.

c. Muscle movement and injury in sport

1. Foot
2. Ankle
3. Knee
4. Hip
5. Hand/wrist
6. Elbow
7. Shoulder
8. Spine

Lab: Analyze for each body part above the muscles that move the joint.

Objectives: Students will be able to:

1. Describe similarities and differences in the structure and function of the three types of muscle and indicate where they are found in the body.
2. Describe the microscopic structure of skeletal muscle and explain the role of actin and mysin-containing myofilaments.
3. Describe how an action potential is initiated in a muscle cell.
4. Describe the events of muscle cell contraction.
5. Define origin, insertion, prime mover, antagonist, synergist, and fixator as they relate to muscles.
6. Demonstrate or identify the different types of body movements.
7 List the criteria used in naming muscles.
8. Name and locate the major muscle of the human body.

SMJUHSD

SOCIAL SCIENCE

Course Title

Academic Decathlon 1 A/B, 2 A/B, 3 A/B, 4 A/B

Department

Social Science Students will be given the option to receive credit for Modern World History or U.S. History (Two years of Academic Decathlon will equal one year of either history course). If they do not take this option, they will receive non-departmental units, which cannot supplant regular elective units.

Description of Target Group

This course is designed for all students in grades 9-12, although it is recommended that students be juniors or seniors. It is an A Block course. Students must be willing to work both independently and in small study groups to prepare for the Academic Decathlon Competition.

Purpose

This course is designed to prepare students to compete in the interscholastic Academic Decathlon. Students will study ten academic areas while learning advanced study skills and techniques. The course will also work to improve oral and written expression skills.

Prerequisites

Instructor approval.

Standards of Expected Student Achievement

Upon successful completion of this course, students will be able to demonstrate proficiency in the following areas:

- speech- composition and performance
- interview- successful interview techniques, including body language and oral expression
- essay- effective written composition in response to a given unknown prompt
- math- algebra, geometry, trigonometry and basic calculus
- science- structure and behavior of matter
- social science- world events, U.S. history, popular science and popular culture
- language and literature- critical reading, one novel selection, various poetry selections
- fine arts- fundamentals of composition, study of various selections
- music- basic music theory, study of various selections
- Super Quiz- focused study on one aspect of the other nine areas (rotates yearly)

Assessment of Student Learning

1. Students will present evidence of learning by cooperating with groups or by individual assignments and presentations based on the above subjects.

2. Students will demonstrate evidence of learning by presenting ideas, solutions and conclusions to proposed academic areas stated above.

3. Teacher observations and evaluations.

4. Students will present evidence of learning through quizzes, tests, homework and group activities.

5. Students will present evidence of learning through interscholastic competition in the above stated areas.

Instructional Materials

Various Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.
Supplementary materials published yearly by and purchased yearly from California Academic Decathlon.

Activities

- individual work
- lectures
- student presentations
- guest speakers
- field trips
- small group activities
- independent research
- interscholastic competition

AMERICAN ECONOMICS COURSE OUTLINE

Textbook: Consumer Economics by Warmke and Wyllie, South-Western Pub. Co.

I. Definition of Economics (Chapter 1)

- A. Economic goods and services
- B. Opportunity costs
- C. Goals of the American Economy

II. Types of Economics (Chapter 2)

- A. Traditional
- B. Command
- C. Market
- D. Mixed

III. Circular Flow (Chapter 2)

- A. Definition of circular flow
- B. The four questions
  1. What to produce?
  2. How to produce?
  3. How much to produce?
  4. How to distribute the output?

IV. Characteristics of our Economy (Chapter 2)

- A. Private property
- B. Freedom of choice
- C. Profit motive
- D. Competition

V. Your role as a Consumer (Chapter 5)

- A. Buying is choice making
- B. Guides for buying
- C. Advertising (Chapter 6)
  1. Functions of advertising
  2. Costs of advertising
  3. Problems with advertising
  4. Regulation of advertising

- D. Consumer Rights and Protection (Chapters 7 - 8)
  1. Contracts
  2. Legal Protections

3. Warranties
4. Implied contracts
5. Unordered merchandise
6. Use of lawyers
7. Government protection
8. Other consumer protections

VI. Demand and Supply (Chapter 29)

A. The price system
B. Supply
C. Demand
D. Price and competition
E. Substitution principle
F. Competition and monopoly
G. Price controls
H. Price indexes and inflation

VII. Money and Credit (Chapter 9)

A. Functions of money
B. Types of money
C. Why is money accepted as legal tender?
D. Credit
   1. Types of credit
   2. Consumer credit
   3. Government credit
E. Functions of Federal Reserve System and Monetary Policy (Chapter 27)
   1. Creation of money
   2. Regulating the supply of money

VIII. Financial Institutions (Chapter 10)

A. Types of institutions
B. Services of financial institutions
C. Understanding credit (Chapters 11 - 12)
   1. Kinds of credit
   2. Costs of credit
   3. Your credit rating
   4. Problems of credit
   5. Installment buying
   6. Rights of buyers and sellers
   7. Problems of installment buying

D. Obtaining loans (Chapter 13)

IX. Savings and Investing (Chapter 14)

A. Managing income
   1. Savings plan
   2. Investing savings

B. Owning or renting a home (Chapter 15)
   1. Financing a home (Chapter 16)
   2. Legal aspects of home ownership

C. Investments (Chapter 17)
D. Types of insurance (Chapters 18 - 20)
E. Social Insurance (Chapter 21)

X. Managing the Nation's Economy

A. Gross National Product (GNP)
B. National income and its distribution
   1. Rent
   2. Wages
   3. Interest
   4. Profit
   5. Taxes
C. Economic fluctuations (Chapter 30)
D. Individual's role in the economy (Chapter 3)
E. Business' role in the economy (Chapter 22)
   1. Forms of business
   2. Functions of business
   3. Factors of production (Chapter 25)
      a. Characteristics of American production
      b. Role of mass production, specialization, and capital
   4. Marketing (Chapter 24)
F. Role of government in the economy (Chapter 25)
   1. Growth of government services
   2. Government regulation
   3. Taxation, fiscal policy and national debt (Chapter 26)
   4. Monetary policy (Chapter 27)

XI. economic Fluctuations and International Trade (Chapters 30 – 31)

XII. Economic Growth (Chapter 29)

Course Title

American History A

Description of Target Group

This course is for 11th grade students.

Purpose

The purpose of American History A is to acquaint the student with the history of the United States from colonial times to the Civil War. This is the first semester of a one year course. This is a required course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Describe the exploration and settlement of the United States.
2. Discuss the Colonial Period and the Revolutionary War.
3. Discuss state's rights and their importance in our development as a nation.
4. Discuss the causes and results of the Civil War
5. Describe Reconstruction and its affect on the nation
6. Discuss the causes and sequence of Westward expansion

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

American History B

Description of Target Group

This course is for 11th grade students.

Purpose

The purpose of American History B is to acquaint the student with the history of the United States from the Industrial Revolution to current times. This is the second semester of a one year course. This is a required course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Discuss the causes and results of the Industrial Revolution.
2. Describe the opening of the last West
3. Discuss Colonialism vs. Isolationalism as practiced by the United States
4. Discuss the causes and effects of the Great Depression
5. Discuss the causes and results of World Wars I & II
6. Discuss the Cold War, the wars in Korea, and Vietnam, and their effect on United States economy and politics.
7. Discuss the Civil Rights Movement and its achievements.
8. Discuss the following current events
    a. Changes in World diplomacy
    b. Economic impact of world changes
    c. The fall of the Berlin Wall and the Union of Soviet Socialist Republics
    d. Social changes in the United States
    e. Conservation movement and Ecological problems
    f. Urban decay

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

9. Subject Area

- [X] History/Social Science
- [ ] English
- [ ] Mathematics
- [ ] Laboratory Science
- [ ] Language other than English
- [ ] Visual & Performing Arts (for 2003)
- [ ] College Prep Elective

10. Grade Level(s)
9th

11. Seeking "Honors" Distinction?
[ ] Yes [x] No

12. Unit Value

- [X] 0.5 (half year or semester equivalent)
- [ ] 1.0 (one year equivalent)
- [ ] 2.0 (two year equivalent)
- [ ] Other: _____

13. Date of School Board Approval

14. Is this course previously approved by UC? [x] Yes [ ] No If so, year removed from list? [x] Yes [ ] No

Under what course title? World History Medieval

15. Is this course modeled after an UC-approved course from another school? [ ] Yes [X] No

16. Pre-Requisites

17. Co-Requisites

18. Brief Course Description

World History, Medieval will prepare the student for AP test through the study of the history of the world from the Roman Republic to the 1450 A.D. AP strategies will be taught in preparation of the AP History tests. This is a one semester elective course.

B. COURSE CONTENT

19. Course Goals and/or Major Student Outcomes

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Upon completion of this course, students will be able to successfully demonstrate the following skills: Understand how the past relates to the present.
2. Trace the development of civilization in the Near East, Far East, and the Americas.
3. Discuss the political, economic, and social philosophies developed/practiced from the end of the Roman Empire to the beginning of the Renaissance
4. Trace the development of the Feudal System and its effect on Europe
5. Discuss the spread of Christianity and Protestantism and their relationships to the political systems of the period.
6. Describe new styles of art developed during the period.
7. AP strategies will include:
    - Drawing inferences
    - Three levels of questioning
    - Subject-Occasion-Audience-Purpose-Speaker (SOAPS) strategy for analyzing point of view and context
    - Dialectical notebooks/journals
    - Yes-But strategy for analyzing argument
    - Synthesizing perspectives from different points of view

20. Course Objectives

Students will be able to demonstrate an understanding of the development of human society from the fall of Rome to 1450 A.D.

21. Course Outline

World History, Medieval will prepare the student for AP tests through the study of the history of the world, with emphasis on the development of civilizations from the end of the Roman Empire to the Renaissance. AP strategies will be taught in preparation for the AP History tests. This is a one semester elective course.

22. Texts & Supplemental Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union Highs School District

23. Key Assignments

Study of the Viking invasions and settlements, Feudalism Webquest, Research paper on the development of the English monarchy from the end of the Roman occupation to Henry V.

24. Instructional Methods and/or Strategies

Textbook materials will be supplemented with lectures, slides, movies, filmstrips, and projects to include computer research and webquest.

25. Assessment Methods and/or Tools

Multiple choice tests in the AP style, essays and DBQ's

AP MACROECONOMICS

The purpose of the AP course in macroeconomics is to give students a thorough understanding of the principles of economics that apply to an economic system as a whole. The course places particular emphasis on the study of national income and price-level determination, and also develops students' familiarity with economic performance measures, the financial sector, stabilization policies, economic growth, and international economics. There is no single approach that an AP Macroeconomics course is expected to follow. Whatever the approach, however, AP teachers are advised to take into account certain topics generally covered in college courses. The following is a brief discussion of these topics and some aspects of them that a teacher may choose to explore.

Topics

I. Basic Economic Concepts

A macroeconomics course introduces students to fundamental economic concepts such as scarcity and opportunity costs. Students understand the distinction between absolute and comparative advantage, and apply the principle of comparative advantage to determine the basis on which mutually advantageous trade can take place between individuals and/or countries, and to identify comparative advantage from differences in opportunity costs. Other basic concepts that are explored include the functions performed by an economic system, and the way the tools of supply and demand are used to analyze the workings of a free market economy. The course should also introduce the concept of the business cycle to give students an overview of economic fluctuations and to highlight the dynamics of unemployment, inflation, and economic growth. Coverage of these concepts provides students with the foundation for a thorough understanding of macroeconomic concepts and issues.

II. Measurement of Economic Performance

To provide an overview of how the economy works, the course should start with a model of the circular flow of income and products that contains the four sectors: households, businesses, government, and international. It is important to identify and examine the key measures of economic performance: gross domestic product, unemployment, and inflation.

In studying the concept of gross domestic product, it is also important that students learn how gross domestic product is measured, have a clear understanding of its components, and be able to distinguish between real and nominal gross domestic product.

The course should examine the nature and causes of unemployment, the costs of unemployment, and how the unemployment rate is measured, including the criticisms associated with the measurement of the unemployment rate. It is also important to understand the concept of the natural rate of unemployment and the factors that affect it. Students should also have an understanding of inflation and how it is measured. In this section, the course should cover the costs of inflation; the main price indices, such as the consumer price index (CPI) and the gross domestic product deflator. Students should learn how these indices are constructed and used to convert nominal values into real values, as well as to convert dollar values in the past to dollar values in the present. It is also important to highlight the differences between the two price indices as a measure of inflation, as well as the problems associated with each measure.

© 2012 The College Board. Visit the College Board on the Web: www.collegeboard.org.

III. National Income and Price Determination

This section introduces the aggregate supply and aggregate demand model to explain the determination of equilibrium national output and the general price level, as well as to analyze and evaluate the effects of public policy. It is important to discuss the aggregate demand and aggregate supply concepts individually to provide students a firm understanding of the mechanics of the aggregate demand and aggregate supply model.

The aggregate demand and aggregate supply analysis often begins with a general discussion of the nature and shape of the aggregate demand and aggregate supply curves and the factors that affect them. A detailed study of aggregate demand may begin by defining the four components of aggregate demand: consumption, investment, government spending, and net exports. It also examines why the aggregate demand curve slopes downward and how changes in the determinants affect the aggregate demand curve. The spending-multiplier concept and its impact on aggregate demand, and how crowding out lessens this impact, should be demonstrated as well. The course can then present the definition and determinants of aggregate supply, the different views about the shape of the aggregate supply curve in the short run and in the long run, and highlight the importance of the shape in determining the effect of changes in aggregate demand on the economy. It is also important to understand the notion of sticky-price and sticky-wage models and their implication for the aggregate supply curve in comparison to flexible prices and wages.

Students should be able to use the aggregate demand and aggregate supply model to determine equilibrium income and price level and to analyze the impact of economic fluctuations on the economy's output and price level, both in the short run and in the long run.

IV. Financial Sector

To understand how monetary policy works, students must understand the definitions of both the money supply and money demand and the factors that affect each of them. Here the course introduces students to the definition of money and other financial assets, such as bonds and stocks, the time value of money, measures of the money supply, fractional reserve banking, and the Federal Reserve System. In presenting the money supply, it is important to introduce the process of multiple-deposit expansion and money creation using T-accounts, and the use of the money multiplier. In learning about monetary policy, it is important to define money demand and examine its determinants. Having completed the study of money supply and money demand, the course should proceed to investigate how equilibrium in the money market determines the equilibrium nominal interest rate. Using the investment demand curve, the students should establish the link between changes in the real interest rate and changes in aggregate demand and understand how changes in aggregate demand affect real output and price level. Students should have an understanding of financial markets and the working of the loanable funds market in determining the real interest rate. It is also important that students develop a clear understanding of the differences between the money market and the loanable funds market.

© 2012 The College Board. Visit the College Board on the Web: www.collegeboard.org.

Having an understanding of the financial markets, students should identify and examine the tools of central bank policy and their impact on the money supply and interest rate. Students should understand the distinction between nominal and real interest rates. Students should also be introduced to the quantity theory of money, and examine and understand the effect of monetary policy on real output growth and inflation.

V. Stabilization Policies

Public policy can affect the economy's output, price level, and level of employment, both in the short run and in the long run. Students should learn to analyze the impacts of fiscal policy and monetary policy on aggregate demand and on aggregate supply, as well as on the economy's output and price level, both in the short run and in the long run. It is also important to understand how an economy responds to a short-run shock and adjusts to long-run equilibrium in the absence of any public policy actions.

With both monetary and fiscal policies now incorporated in the analysis of aggregate demand and aggregate supply, an understanding of the interactions between the two is essential. Students should also examine the economic effects of government budget deficits, including crowding out; consider the issues involved in determining the burden of the national debt; and explore the relationships between deficits, interest rates, and inflation. The course should distinguish between the short-run and long-run impacts of monetary and fiscal policies and trace the short-run and long-run effects of supply shocks. Short-run and long-run Phillips curves are introduced to help students gain an understanding of the inflation-unemployment trade-off and how this trade-off may differ in the short and long run. In this section, the course identifies the causes of inflation and illustrates them by using the aggregate demand and aggregate supply model. A well-rounded course also includes an examination of the significance of expectations, including inflationary expectations.

VI. Economic Growth

The course should introduce the concept and meaning of long-run economic growth and examine how economic growth occurs. Students should understand the role of productivity in raising real output and the standard of living, and the role of investment in human capital formation and physical capital accumulation, research and development, and technical progress in promoting economic growth. Having learned the determinants of growth, students should examine how public policies influence the long-run economic growth of an economy.

VII. Open Economy: International Trade and Finance

An open economy interacts with the rest of the world both through the goods market and the financial markets, and it is important to understand how a country's transactions with the rest of the world are recorded in the balance of payments accounts. Students should understand the meaning of trade balance, the distinction between the current account balance and the financial account (formerly known as capital account) balance, and the implications for the foreign exchange market.

© 2012 The College Board. Visit the College Board on the Web: www.collegeboard.org.

The course should also focus on the foreign exchange market and examine how the equilibrium exchange rate is determined. Students should understand how market forces and public policy affect currency demand and currency supply in the foreign exchange markets and lead to currency appreciation or depreciation. How financial capital flows affect exchange rates, and how appreciation or depreciation of a currency affects a country's exports and imports should be an integral part of the presentation. Having learned the mechanics of the foreign exchange markets, students should then understand how changes in net exports and financial capital flows affect financial and goods markets.

It is important to examine what the effects of trade restrictions are, how the international payments system hinders or facilitates trade, how domestic policy actions affect international finance and trade, and how international exchange rates affect domestic policy goals.

Summary Outline

On the following pages is a summary outline of the major content areas covered by the AP Macroeconomics Exam. The percentages indicated reflect the approximate percentage devoted to each content area in the multiple-choice section of the exam. The outline is a guide and is not intended as an exhaustive list of topics.

© 2012 The College Board. Visit the College Board on the Web: www.collegeboard.org.

Content Area	*Percentage Goals of Exam (multiple-choice section)*

I. Basic Economic Concepts ..... (8–12%)
- A. Scarcity, choice, and opportunity costs
- B. Production possibilities curve
- C. Comparative advantage, specialization, and exchange
- D. Demand, supply, and market equilibrium
- E. Macroeconomic issues: business cycle, unemployment, inflation, growth

II. Measurement of Economic Performance..... (12–16%)
- A. National income accounts
  1. Circular flow
  2. Gross domestic product
  3. Components of gross domestic product
  4. Real versus nominal gross domestic product
- B. Inflation measurement and adjustment
  1. Price indices
  2. Nominal and real values
  3. Costs of inflation
- C. Unemployment
  1. Definition and measurement
  2. Types of unemployment
  3. Natural rate of unemployment

III. National Income and Price Determination..... (10–15%)
- A. Aggregate demand
  1. Determinants of aggregate demand
  2. Multiplier and crowding-out effects
- B. Aggregate supply
  1. Short-run and long-run analyses
  2. Sticky versus flexible wages and prices
  3. Determinants of aggregate supply
- C. Macroeconomic equilibrium
  1. Real output and price level
  2. Short and long run
  3. Actual versus full-employment output
  4. Business cycle and economic fluctuations

IV. Financial Sector..... (15–20%)
- A. Money, banking, and financial markets
  1. Definition of financial assets: money, stocks, bonds
  2. Time value of money (present and future value)
  3. Measures of money supply
  4. Banks and creation of money
  5. Money demand
  6. Money market and the equilibrium nominal interest rate

© 2012 The College Board. Visit the College Board on the Web: www.collegeboard.org.

B. Loanable funds market
   1. Supply of and demand for loanable funds
   2. Equilibrium real interest rate
   3. Crowding out
C. Central bank and control of the money supply
   1. Tools of central bank policy
   2. Quantity theory of money
   3. Real versus nominal interest rates

V. Stabilization Policies ..... (20–30%)
A. Fiscal and monetary policies
   1. Demand-side effects
   2. Supply-side effects
   3. Policy mix
   4. Government deficits and debt
B. The Phillips curve
   1. Short-run and long-run Phillips curves
   2. Demand-pull versus cost-push inflation
   3. Role of expectations

VI. Economic Growth ..... (5–10%)
A. Definition of economic growth
B. Determinants of economic growth
   1. Investment in human capital
   2. Investment in physical capital
   3. Research and development, and technological progress
C. Growth policy

VII. Open Economy: International Trade and Finance ..... (10–15%)
A. Balance of payments accounts
   1. Balance of trade
   2. Current account
   3. Financial account (formerly known as capital account)
B. Foreign exchange market
   1. Demand for and supply of foreign exchange
   2. Exchange rate determination
   3. Currency appreciation and depreciation
C. Imports, exports, and financial capital flows
D. Relationships between international and domestic financial and goods markets

© 2012 The College Board. Visit the College Board on the Web: www.collegeboard.org.

AP WORLD HISTORY

Course Themes:

1. The relationship of change and continuity from 8,000 BCE to the present.
2. Impact of interaction among and within major societies.
3. Impact of technology, economics, and demography on people and the environment.
4. Systems of social structure and gender structure.
5. Cultural, religious, and intellectual developments.
6. Changes in functions and structures of states and in attitudes toward states and political identities, including the emergence of the nation-state.

Course Materials:

Text
Bentley, Jerry and Herbert Ziegler. ***Traditions and Encounters****: A Global Perspective on the Past.* New York: McGraw-Hill, 2003.

Supplements
Reilly, Kevin. *Worlds of history:* ***A comparative Reader****.* Vols. 1 and 2. New York: Bedford/St. Martin's 2004.

Grading

Students will be evaluated at the end of each unit. Test will consist of multiple-choice questions, and either a change-over-time essay, or comparative essay. They will receive four essays each unit that they must outline and be prepared for testing. Students will be given DBQ's each unit that will be gradually equip them towards timed DBQ's at the end of the course.

Course Outline

1. Foundations (3 weeds)
    A. Introduction
    B. Text Ch 1-12
    C. Neolithic Revolution & Ancient Civilizations
        1. Four Ancient Civilizations
        2. Maps of Ancient Civs.
        3. Political organizations
        4. Religious beliefs
        5. Trade and diffusion
    D. Classical Civilizations
        1. Greece/Rome, Persia, Mauryan and Gupta India, Han China
        2. Maps of Classical Civs
        3. Trade routes of Silk Road and Indian Ocean
        4. Migrations and cultural diffusion
        5. Collapse of empires
    E. World Belief Systems
        1. The religions of South Asia-Hinduism, Buddhism, Polytheism

2. Religious and philosophies of South East Asia-Confucianism, Daoism
3. Compare and contrast Monotheistic religions-Judaism, Christianity and Islam

F. Social, Economic and Cultural Systems
1. Caste system
2. Slave systems
3. The rise of Manorialism

G. Trade and Migrations
1. The influence of nomadic people groups
2. The influence of Missionaries
3. The influence of disease

H. Skills Developed
1. Comparing and contrasting of civilizations, religions, etc.
2. Demonstrating change and continuity of trade patterns, migrations, religions, etc.
3. Reading of original documents

II. The Post Classical Era: 600 to 1000 CE (2 weeks)

A. Text: Ch. 13-17, with various primary and secondary sources
B. Last Classical Period
1 Major agent of movement – The Huns
2 Essay prompts
3 Theme charts
C. The Collapse of Empires
1 Han
2 Gupta
3 Rome
D. The Islamic World
1 The origins of Islam
2 The spread of Islam
3 The diffusion of culture, economics, religion, and sciences
4 DBQ – from the Quran
E. Charting Interregional networks
1 Mapping major trade cities and networks
2 The changing roles of women
F. Sui/Tang/Song China
G. Islamic and Hindu Kingdoms of India
H. Feudal West Europe
I. Early Societies of Meso and South America
J. Skills Developed
1 Components of a good Thesis
2 Historical Analysis of original documents
3 Analyzing point of view

III. The Age of Cross-Cultural Interaction: 1000-1450 CE (2 weeks)

A. Text: Ch. 18-22, with various outside readings
B. Essay prompts and important concepts

C. The Nomadic groups
    1 Turks
    2 Banu's
    3 Mongols
D. Civilizations in the Americas
    1 Mayans
    2 Aztecs
    3 Incan Empire
E. Sub-Saharan Africa
F. The Mongols
    1 Mongol Trial
    2 Mongol DBQ
G. Expansion of Chinese Empires
    1 Influence on Japan, Korea
    2 Japanese feudalism compared with European feudalism
H. A Changing Europe
    1 Crusades
    2 East/West Schism
    3 Revival of Empire-France, Spain
I. Dar-al-Islam
J. Key skills
    1 As of this time, students will be equipped to do all three FRQ's and will be tested on either a Change over Time, Compare and contrast essay each unit. A Document Based Question will be given each unit from now on also.

IV. The Origins of Global Interdependence: 1450-1750 CE (3 weeks)
A. Text: Ch. 22-28, various outside readings
B. Essay prompts and key concepts
C. European Exploration
    1 The effect of Renaissance and scientific revolution
    2 Transformation of Europe project
    3 Enlightment
    4 Comparing European Empires and Kingdoms
D. Comparing African kingdoms
E. Triangular Trade
F. The expanding role of women
G. Ottoman expansion
H. A developing Russia
I. Comparing Asian Empires
    1 Mughul India
    2 Tokugawa Japan
    3 Ming China

V. The Age of Revolution, Industry, and Empire: 1750-1914 CE (3 weeks)
A. Text: Ch. 29-33, various outside readings
B. Essay prompts and key concepts
C. Political Revolutions
    1 American

2 French
3 Haitian
4 Mexico

D. The rise of Nationalism and consolidation of states in Europe

3 Long term struggles after independence
G. Social and Cultural changes
1 Women's movements
2 The Rise of Pop. Culture

AP WORLD HISTORY – PIONEER VALLEY HIGH SCHOOL

Brian Hook

Course Themes:

1. The relationship of change and continuity from 8,000 BCE to the present.
2. Impact of interaction among and within major societies.
3. Impact of technology, economics, and demography on people and the environment.
4. Systems of social structure and gender structure.
5. Cultural, religious, and intellectual developments.
6. Changes in functions and structures of states and in attitudes toward states and political identities, including the emergence of the nation-state.

Course Materials:

Text
Bentley, Jerry and Herbert Ziegler. ***Traditions and Encounters****: A Global Perspective on the Past.* New York: McGraw-Hill, 2003.

Supplements
Reilly, Kevin. *Worlds of history:* ***A comparative Reader****.* Vols. 1 and 2. New York: Bedford/St. Martin's 2004.

Grading

Students will be evaluated at the end of each unit. Test will consist of multiple-choice questions, and either a change-over-time essay, or comparative essay. They will receive four essays each unit that they must outline and be prepared for testing. Students will be given DBQ's each unit that will be gradually equip them towards timed DBQ's at the end of the course.

Course Outline

1. Foundations (3 weeds)
    A. Introduction
    B. Text Ch 1-12
    C. Neolithic Revolution & Ancient Civilizations
        1. Four Ancient Civilizations
        2. Maps of Ancient Civs.
        3. Political organizations
        4. Religious beliefs
        5. Trade and diffusion
    D. Classical Civilizations
        1. Greece/Rome, Persia, Mauryan and Gupta India, Han China
        2. Maps of Classical Civs
        3. Trade routes of Silk Road and Indian Ocean
        4. Migrations and cultural diffusion
        5. Collapse of empires
    E. World Belief Systems

1. The religions of South Asia-Hinduism, Buddhism, Polytheism
2. Religious and philosophies of South East Asia-Confucianism, Daoism
3. Compare and contrast Monotheistic religions-Judaism, Christianity and Islam

F. Social, Economic and Cultural Systems
1. Caste system
2. Slave systems
3. The rise of Manorialism

G. Trade and Migrations
1. The influence of nomadic people groups
2. The influence of Missionaries
3. The influence of disease

H. Skills Developed
1. Comparing and contrasting of civilizations, religions, etc.
2. Demonstrating change and continuity of trade patterns, migrations, religions, etc.
3. Reading of original documents

II. The Post Classical Era: 600 to 1000 CE (2 weeks)

A. Text: Ch. 13-17, with various primary and secondary sources
B. Last Classical Period
1 Major agent of movement – The Huns
2 Essay prompts
3 Theme charts
C. The Collapse of Empires
1 Han
2 Gupta
3 Rome
D. The Islamic World
1 The origins of Islam
2 The spread of Islam
3 The diffusion of culture, economics, religion, and sciences
4 DBQ – from the Quran
E. Charting Interregional networks
1 Mapping major trade cities and networks
2 The changing roles of women
F. Sui/Tang/Song China
G. Islamic and Hindu Kingdoms of India
H. Feudal West Europe
I. Early Societies of Meso and South America
J. Skills Developed
1 Components of a good Thesis
2 Historical Analysis of original documents
3 Analyzing point of view

III. The Age of Cross-Cultural Interaction: 1000-1450 CE (2 weeks)

A. Text: Ch. 18-22, with various outside readings

B. Essay prompts and important concepts
C. The Nomadic groups
    1 Turks
    2 Banu's
    3 Mongols
D. Civilizations in the Americas
    1 Mayans
    2 Aztecs
    3 Incan Empire
E. Sub-Saharan Africa
F. The Mongols
    1 Mongol Trial
    2 Mongol DBQ
G. Expansion of Chinese Empires
    1 Influence on Japan, Korea
    2 Japanese feudalism compared with European feudalism
H. A Changing Europe
    1 Crusades
    2 East/West Schism
    3 Revival of Empire-France, Spain
I. Dar-al-Islam
J. Key skills
    1 As of this time, students will be equipped to do all three FRQ's and will be tested on either a Change over Time, Compare and contrast essay each unit. A Document Based Question will be given each unit from now on also.

IV. The Origins of Global Interdependence: 1450-1750 CE (3 weeks)
A. Text: Ch. 22-28, various outside readings
B. Essay prompts and key concepts
C. European Exploration
    1 The effect of Renaissance and scientific revolution
    2 Transformation of Europe project
    3 Enlightment
    4 Comparing European Empires and Kingdoms
D. Comparing African kingdoms
E. Triangular Trade
F. The expanding role of women
G. Ottoman expansion
H. A developing Russia
I. Comparing Asian Empires
    1 Mughul India
    2 Tokugawa Japan
    3 Ming China

V. The Age of Revolution, Industry, and Empire: 1750-1914 CE (3 weeks)
A. Text: Ch. 29-33, various outside readings
B. Essay prompts and key concepts
C. Political Revolutions

1 American
2 French
3 Haitian
4 Mexico

D. The rise of Nationalism and consolidation of states in Europe
E. Industrial Revolution
1 Cpaitalism
2 Socialism
3 Marxism
F. Imperialism
1 Imperialism in Asia (British, French, Dutch, Spanish)
2 The Scramble for Africa-Excerpts from *"Things Fall Apart"*
3 Methods of rule
G. Legacies of Imperialism
1 Empire and Economy
2 Labor migration
3 Social change and continuity
4 Rising Nationalism
H. Societies at a Crossroads
1 Russian and Ottoman Empires
2 Comparing China and Japan
3 Russian DBQ

VI. The 20th Century: 1914-Present (4 weeks)
A. Text: Ch 34-39, various outside readings
B. Essay prompts and key concepts
C. The Great War
1 The Russian Revolution
2 Global implications of Versailles-mandate system
3 1918 Flu Pandemic
D. World War II
1 Origins
2 Battles
3 Homefront
4 Postwar settlement
E. The Cold War
1 Origins
2 Challenges to superpower hegemony-Europe, China, Détente
3 Communist Revolution in China
4 Collapse of the USSR
F. Decolonization
1 Asia
2 Africa
3 Long term struggles after independence
G. Social and Cultural changes
1 Women's movements
2 The Rise of Pop. Culture

- ☒ 0.5 (half year or semester equivalent)
- ☐ 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Complete outlines are not needed for courses that were previously approved by UC. If course was previously approved, indicate in which category it falls.

- ☐ A course reinstated after removal within 3 years. Year removed from list? _____
  Same course title? ☐ Yes ☐ No
  If no, previous course title? _____
- ☒ An identical course approved at another school in same district. Which school? Santa Maria High
  Same course title? ☒ Yes ☐ No
  If no, course title at other school? _____
- ☐ Alternative course title for course with identical content at this school
  Title of previously-approved identical course: _____
- ☐ Approved Advanced Placement (AP) or International Baccalaureate (IB) course
- ☒ Approved UC College Prep (UCCP) Initiative course
- ☐ Approved P.A.S.S. course
- ☐ Approved ROP/C course. Name of ROP/C? _____
- ☐ Combining two UC-approved semester VPA courses into a single, year-long VPA course
  Titles of previously-approved semester courses: _____
- ☐ Other. Explain: _____

14. Is this course modeled after an UC-approved course from another school outside your district? ☐ Yes ☒ No

If so, which school(s)? _____

Course title at other school _____

15. Pre-Requisites

None

16. Co-Requisites

None

17. Brief Course Description

This course is designed to enable students to understand the principles of economics and of our economic system. Students will compare our system to those of other countries and make reasoned judgments about economic questions.

B. COURSE CONTENT

Please refer to instructions

18. Course Goals and/or Major Student Outcomes

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Fundamental economic concepts and terms.
2. The tools of analysis such as charts and graph.
3. Economic indicator such as gross national products, inflation, and measures of unemployment.
4. Understanding basic economic problems facing society such as scarcity or resources.
5. All societies have economic systems determining choice of production.
6. U.S. economy characterized by competition and market structure.
7. Role that labor, agriculture, and business organizations have played in the U.S. economy.
8. Role of government in market economy and establishing monetary policy.
9. Individual should use economic concepts in making consumer decisions.
10. Role of financial institutions.
11. Understanding business cycles with periods of inflation, deflation, and unemployment.
12. U.S. economic history.
13. Importance of international trade and migration.
14. How values influence monetary spending and opportunities for students to develop creative thinking skills.

19. Course Objectives

General Science AB concentrates on the following aspects of science: measurement matter, fluids, thermal energy, selected topics in biology, weather and earth.

20. Course Outline

21. Texts & Supplemental Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

22. Key Assignments

23. Instructional Methods and/or Strategies

1. Individual Work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Small group activities

24. Assessment Methods and/or Tools

Students will take quizzes and multiple choice examinations, participate in classroom activities and create projects.

C. HONORS COURSES ONLY

Please refer to instructions

25. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

26. Context for Course (optional)

27. History of Course Development (optional)

Course Outline

Career Decisions

Description of Target Group

This 5-unit course is designed to assist GATE students in their career decision-making development.

Purpose

This course will provide GATE students with the means to properly and comprehensively make career and educational decisions. Students will complete their units: Self-Inventory, Career Investigation, and Post High School Education.

Standards of Expected Student Achievement

Upon completion of this course, students will have successfully achieved the following decision-making processes:

1. Completed and interpreted two (2) interest area assessments.
2. Determined personal values.
3. Established long-term high school goals.
4. Developed a four-year academic plan.
5. Completed a summary student Profile Form.
6. Researched and completed a report on two (2) careers.
7. Identified seven (7) sources of information for researching a career.
8. Researched and completed a report on requirements for a Bachelors degree for three (3) schools (U.C., U.S.C., Junior College).
9. Completed a report showing entrance requirements for one of the three schools listed.
10. Written an essay explaining why the particular school was chosen.
11. Written an application for the school chosen (a "self portrait", personality statement of self-assessment, consisting of at least 300 words).

Career Decisions (continued)

12. Arranged an appointment with Guidance Technician to review a four-year plan for meeting entrance requirements of the school selected.

13. Written an essay stating reasons for choosing a particular major and its expected future benefits.

14. Written a brief description of the five (5) major student Federal financial aid programs: Pell Grants, SEOG, College Work Study Program, NDSL, and Guaranteed Student Loans.

15. Written a brief description of the Cal Grant program.

16. With parents' assistance, completed a copy of the Student Aid Application for California.

19. Brief Course Description

This course explores Latino experiences from pre-Columbian civilizations to the present. It is an interdisciplinary course that investigates the diversity of Chicano/Latino culture as it is conditioned by the intersections of race, class, gender, regional variation and power. Through culturally relevant curriculum, this class will provide a historical, political, and economic analysis of Chicano/Latino people's quest for equality. This course will address the Chicana/o Movement, immigration, literature, music and film to discuss the factors that contribute to the formation of Chicano/Latino identity today.

In addition to rigorous reading assignments, contemporary information is drawn from students' experiences, major newspapers, popular culture, and other media. Students will be encouraged to read a major newspaper everyday and to listen to various radio programs. The current information will allow us to see historical trajectories, and make course material relevant.

The course will begin with an in-depth study of Indigenous peoples in Latin America, primarily the Maya, Taino and Aztec civilizations, and the "conquest" of the Americas. The concepts of race, class, gender, culture, colonialism, and oppression will be addressed in this process. This will immediately follow with the 19th and 20th centuries and themes ranging from *Mestizaje* (mixed-race identity), Diaspora, Spanish language in the Southwest, the Zoot Suit Riots, the Bracero Program, the United Farm Workers, the Chicano/a Movement, Latina and Chicana literature, the Central American civil wars of the 1970's, 1980's and 1990's, and Latinos in higher education.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

a. Students will develop strategies to strengthen knowledge of students' own ethnic/cultural/racial background(s) and those of others.
b. Students will develop research skills by completing individual and group research projects.
c. Students will improve their analytical skills by identifying bias, evidence, and point of view in historical accounts or primary sources.
d. Students will advance their critical thinking, speaking and writing skills.
e. Students will develop a multicultural perspective that respects the rights of all people, by writing culturally based poems, participating in peer dialogues and completing an ethnographic interview of an elder.
f. Students will acquire positive communication skills by regularly interacting with other students around controversial issues and articulating their personal position.

21. Course Objectives

a. Students will examine the distinctions of race, class, gender, regional variation and power as they intersect with cultural practices and identity.
b. Students will be able to explain the difference between an “Identity” and a “Label.”
c. Students will analyze how geographical factors influenced the historical development of the United States and as well as those of other Latin American countries. Such factors include migration, settlement patterns, and the distribution of natural resources across regions, physical systems and human systems.
d. Students will examine the Mexican influence in California and the Southwest.
e. Students will be able to discuss the economic, social, and political advances of the “Chicana/o Movement.”
f. Students will do an in-depth examination of the dimensions, causes, and dynamics of social injustices in the U.S. Latino community, by analyzing various case studies.
g. Students will be able to ask historical questions, evaluate historical data, compare and contrast differing sets of ideas, and consider multiple perspectives.
h. Students will analyze the difference between acculturation and assimilation.
i. Students will understand the changes and status of Chicanos/Latinos and women in different times in American history.
j. Students will understand the unique experiences of immigrants from Latin America.
k. Students will learn how to do qualitative research through ethnographies.
l. Students will develop arguments from varying political perspectives, by preparing and participating in debates.

<u>The above stated objectives are based on the following California Standards for Social Science.</u>

- CA Standard 10.10.1 Understand the challenges in the regions, including their geopolitical, cultural, military, and economic significance and the international relationships in which they are involved.
- CA Standard 10.10.2 Describe the recent history of the regions, including political divisions and systems, key leaders, religious issues, natural features, resources, and population patterns.
- CA Standard 10.10.3 Discuss the important trends in the regions today and whether they appear to serve the cause of individual freedom and democracy.
- CA Standard 11.6.5 Trace the advances and retreats of organized labor, from the creation of the American Federation of Labor and the Congress of Industrial Organizations to current issues of a postindustrial, multinational economy, including the United Farm Workers in California.
- CA Standard 11.8.2 Describe the significance of Mexican immigration and its relationship to the agricultural economy, especially in California.
- CA Standard 11.10 Students analyze the development of federal civil rights and voting rights.
- CA Standard 11.10.1 Explain how demands of African Americans helped produce a stimulus for civil rights, including President Roosevelt's ban on racial discrimination in defense industries in 1941, and how African Americans' service in World War II produced a stimulus for President Truman's decision to end segregation in the armed forces in 1948.
- CA Standard 11.10.2 Examine and analyze the key events, policies, and court cases in the evolution of civil rights, including *Dred Scott* v. *Sandford, Plessy* v. *Ferguson*, *Brown* v. *Board of Education, Regents of the University of California* v. *Bakke,* and California Proposition 209.
- CA Standard 11.10.3 Describe the collaboration on legal strategy between African American and white civil rights lawyers to end racial segregation in higher education.
- CA Standard 11.10.4 Examine the roles of civil rights advocates (e.g., A. Philip Randolph, Martin Luther King, Jr., Malcolm X, Thurgood Marshall, James Farmer, Rosa Parks), including the significance of Martin Luther King, Jr. 's "Letter from Birmingham Jail" and "I Have a Dream" speech.
- CA Standard 11.9.7 Examine relations between the United States and Mexico in the twentieth century, including key economic, political, immigration, and environmental issues.
- CA Standard 11.10.6 Analyze the passage and effects of civil rights and voting rights legislation (e.g., 1964 Civil Rights Act, Voting Rights Act of 1965) and the Twenty-Fourth Amendment, with an emphasis on equality of access to education and to the political process.

- CA Standard 11.11.1 Discuss the reasons for the nation's changing immigration policy, with emphasis on how the Immigration Act of 1965 and successor acts have transformed American society
- CA Standard 11.11.6 Analyze the persistence of poverty and how different analyses of this issue influence welfare reform, health insurance reform, and other social policies.
- CA Standard 12.2 Students evaluate and take and defend positions on the scope and limits of rights and obligations as democratic citizens, the relationships among them and how they are secured.
- CA Standard 12.8 Students evaluate and take and defend positions on the influence of the media on American political life.
- CA Standard 12.10 Students formulate questions about and defend their analyses of tensions within our constitutional democracy and the importance of maintaining a balance between the following concepts: majority rule and individual rights: liberty and equality: state and national authority in a federal system; civil disobedience and the rule of law; freedom of the press and the right to a fair trial; the relationship of religion and government.

22. Course Outline

FIRST TERM

(CA. Standard 10.10.1, 10.10.3, 11.11.6, 12.2.5)

Unit 1 Hispanic, Latina, Boricua or Chicana/o? What's in a Name? The Name-Game and other issues of Identity

A. Race, Class, Ethnicity, and Culture
B. Identities vs. Labels
C. Diversity and Identity Development
D. Assimilation vs. Acculturation

Unit 2 Mesoamerican and Taino History

(CA. Standard 10.10.1, 10.10.2)

A. Who and What are Indigenous People?
B Aztec and Mexica Civilizations
C. The Maya Civilization
D. The Taino Civilization
E. Mestizaje and African Diaspora

Unit 3 Spanish Colonization of the Americas

(CA. Standard 10.10.1, 10.10.2, 11.9.7)

A. Conquest of the Americas
B. What is Colonialism?
C. Spanish in the Southwest
D. Treaty of Guadalupe Hidalgo, 1848
E. Colonization of California

Unit 4 Chicanos and Latinos in the early 20th Century

(CA. Standard 10.10.1, 11.8.2, 11.10.2, 11.9.7)

A. Case Study: Reparations Bill for the deportations of Mexican Americans during the Great Depression.
B. Chicanos and World War II
C. Zoot Suit Riots
D. The Bracero Program
E. Case Study: Lemon Grove and Mendez vs. Westminster
F. Birth of La Raza Unida Party and the National Council of La Raza

Unit 5 The Chicana/o Movement

(CA. Standard 10.10.1, 11.6.5, 11.8.2, 11.10, 11.10.1, 11.10.4, 11.10.6)

A. The Farm Worker Movement
   - Teatro Campesino

B. Case Study: Cesar Chavez, Dolores Huerta and the United Farm Workers
C. Community Activism/Community Grassroots Organizing
D. The Civil Rights Movement
    - Case Study: Martin Luther King, Jr.
E. Chicana/o Moratorium
F. East L.A. Chicano Blowouts and the L.A. 13.
    - Film: Walkout
G. Origins of the Black Student Union and M.E.Ch.A.
H. Chicana and Latina Feminism in the Late 1960's

SECOND TERM

Unit 6 Chicana and Latina Studies/Literature
(CA Standard 10.10.3, 11.11.1, 11.11.6)

A. What is Sexism? Machismo? Heterosexism? Feminism?
    - Narrative Reflections: How do you define each? Have you ever encountered any such discrimination?

B. When I was Puerto Rican: A Memoir (Excerpts of Literature)
    - Character Analysis

C. How the Garcia Girls Lost Their Accent (Excerpts of Literature)
    - Compare and Contrast the styles of Santiago and Alvarez

D. The Moths and Other Stories (Excerpts of literature)
    - Themes

Unit 7 Chicano/a Adolescent Development through Literature
(Ca Standard 10.10.1, 10.10.3, 11.11.1, 11.11.6)

A. Always Running: La Vida Loca, Gang Days in LA (Excerpts of Literature)
    - Character Analysis
    - Literary Devices

B. And the Earth Did Not Devour Him (Excerpts of Book)
C. Sandra Cisneros (Selected Poems and Short Stories from *Woman Hollering Creek*)
D. Izote Voces: Collection of U.S. Central American Youth Narratives
    - Students create their own narratives

Unit 8 Chicano/a and Latino/a Cultural Production
(Ca Standard 10.10.1, 10.10.3, 10.10.3, 11.6.5, 11.11.1, 11.11.6, 12.8)

A. Chicano/Latino Hip-Hop and Music as Poetry and Prose
    - Poetry analysis: Analysis of poetic devices in music and their effects on the piece and listener.
    - Literary Figures
        - Quetzal
        - Olmeca
        - Rebel Diaz
        - In Lak Ech
        - La Bruja
        - Tupac Amaru Shakur
        - Immortal Technique

B. Poetry Workshop with "In Lak Ech" (Chicana Women's Poetry Collective from L.A.)
C. Chicano/Latino Art: What story is told through Art? What similar themes are presented in art as in literature and music?
        - Judy Baca
            - Feminist Art and Muralism
        - Los Tres Grandes (Rivera, Siquieros, Orozco)
            - Traditional Mexican Muralism
        - Frida Kahlo
            - Surrealism
        - East Los Angeles Murals/Chicano Park (San Diego)
            - Popular Culture and Art forms

C. Chicano/a and Latino/a Film
        - And The Earth Did Not Devour Him (Compare and Contrast the film and book)
        - Zoot Suit

Unit 9 Central American Testimonies and Literature
(CA. Standard 10.10.1, 10.10.2, 12.10)

A. The Civil Wars of Central America
B. Historical/Political Background of El Salvador
   - El Mozote Massacre (Excerpts from Book)
   - Case Study: Archbishop Oscar Romero
   - Liberation Theology
C. Historical/ Political Background on Guatemala
   - Indigenous Rights Movement
   - Rigoberta Menchu's Book (Excerpts from Book)

Unit 10 Immigrant Right's Movement
(CA. Standard 10.10.1, 10.10.3, 11.3.4, 11.8.2, 11.11.1, 12.8, 12.10)

A. Historical Background on immigration in the United States.
B. Causes of "Global Migration"
C. Case Studies: Chinese Exclusion Act and the Japanese Internment Camps
D. L.A. Garment Center Workers vs. Forever 21 (Film: Made in L.A.)
E. Comparison Study: The Minute Men vs. CHIRLA

24. Key Assignments

Poetry Portfolio – 10%

Students will create poems for each thematic unit presented throughout the course. Students will orally present their poems to the class.

Final Poetry Portfolio will result in (a) an understanding of the development and basic features of major societies and cultures, and (f) an openness to a variety of cultures and perspectives.

Essays (Journals)- 15%

Students will be required to write expository, narrative, and persuasive essays throughout the academic year.
Possible writing prompts:
How would you characterize your educational experience?
Should people of color, particularly Chicanos and Latinos, acculturate or assimilate in order to obtain economic and social mobility?
What family values, traditions, and belief systems will you eventually stop practicing and which ones would you continue with your children? Why?
How do you feel about Immigration and the issues surrounding this debate?
Should young people be concerned about "social justice"? Why?
Compare and contrast the Black Civil Right's Movement to the Chicano Civil Right's Movement?
Do women currently have equal access to social, political, and economic opportunities?

All writing assignments will result in (a) an understanding of the development and basic features of major societies and cultures, (b) an examination of the historic and contemporary ideas that have shaped our world, (c) an understanding of the fundamentals of how differing political and economic systems function (d) an examination of the nature and principles of individual and group behavior, (e) a study of social science methodologies, (f) an openness to a variety of cultures and perspectives.

Ethnography- 15% (first term)

Each student will be required to interview an elder that experienced the 1960's, The Vietnam War, The Black Civil Rights Movement and/or the Chicana/o Movement. Interview must be recorded, summarized, and presented to the class. Students will present their findings and discuss the generational, cultural, gender, economic, political and social differences they encountered and the conclusions they made about his or her experience. Students will be provided with a list of questions related to the themes in the course.

Final Ethnography assignment will result in (a) an understanding of the development and basic features of major societies and cultures, (b) an examination of the historic and contemporary ideas that have shaped our world, (d) an examination of the nature and principles of individual and group behavior, (e) a study of social science methodologies, (f) an openness to a variety of cultures and perspectives.

Debate- 5%

Students will be required to research and develop arguments for an assigned topic. Possible debate topics are affirmative action, segregation laws, immigration reform, activism, educational opportunity, police brutality, gender

discrimination, sexual orientation, labor rights, wage disparities, race discrimination, health care, ecology, juvenile justice, etc.

All debates will result in (a) an understanding of the development and basic features of major societies and cultures, (b) an examination of the historic and contemporary ideas that have shaped our world, c) an understanding of the fundamentals of how differing political and economic systems function (d) an examination of the nature and principles of individual and group behavior, (e) a study of social science methodologies, (f) an openness to a variety of cultures and perspectives.

Current Events- 20%
Students will be required to listen to various media outlets every week and write 1-2 page current events reflections regarding how public policy is affecting the Latino/a community here and abroad. Possible stations and radio shows include KPFK 90.7fm, National Public Radio (NRP) and any major newspaper.

All current events will result in (a) an understanding of the development and basic features of major societies and cultures, (b) an examination of the historic and contemporary ideas that have shaped our world, c) an understanding of the fundamentals of how differing political and economic systems function (d) an examination of the nature and principles of individual and group behavior, (e) a study of social science methodologies, (f) an openness to a variety of cultures and perspectives.

Creative Project- 15%
Students are required to write a song, play, short story, or other narrative project. Students with advanced training in video, film, music or acting may elect to create an artistic project appropriate for their skills. The topic for the creative project must emerge from the course material. Teacher's consent is required in order to choose this option.

The Creative Project will result in (a) an understanding of the development and basic features of major societies and cultures, (b) an examination of the historic and contemporary ideas that have shaped our world, (d) an examination of the nature and principles of individual and group behavior, (f) an openness to a variety of cultures and perspectives.

Research paper- 15% (Second Semester)
Students will prepare a 5-7 page research paper on a Latino author, poet, or musician. Students have to analyze at least two pieces of his or her work and compare and contrast them. Students will have to analyze historical accounts, literary devices, and the themes incorporated.

Final assignment will result in (a) an understanding of the development and basic features of major societies and cultures, (b) an examination of the historic and contemporary ideas that have shaped our world, (c) an understanding of the fundamentals of how differing political and economic systems function (d) an examination of the nature and principles of individual and group behavior, (e) a study of social science methodologies, (f) an openness to a variety of cultures and perspectives.

Unit Exams-10%
Upon the completion of each unit, the students will take a cumulative exam that will consist of essay questions, a short-answer section and multiple-choice. It is based on the assigned readings, lectures, videos, in-class assignments, and discussion. In order to assist students in preparing for the unit exam, the instructor will lead a student-centered review discussion or game. In addition, the instructor will provide a study guide to the exam during the last week of class.

Final Exam- 20%
Upon the completion of the course, students will take a cumulative final exam that will consist of essay questions, a short-answer section and multiple-choice. It is based on the assigned readings, lectures, videos, in-class assignments, and discussion. In order to assist students in preparing for the final exam, the instructor will lead a student-centered review discussion or game. In addition, the instructor will provide a study guide to the exam during the last week of class.

25. Instructional Methods and/or Strategies

a. Explicit Direct Instruction.
b. Class discussions: Fishbowl, Socratic Seminar, and Philosophical Chairs.
c. AVID WICR
d. Readings and supplemental handouts.
e. Issue analysis.

f. Power Point Presentations.
g. Group/Class exercises and activities.
h. News media scanning and analysis.
i. Writing assignments.
j. Unit Exams.
k. Individual presentations.
l. Video/film segments.
m. Guest speakers.
n. Debates.
o. Thinking maps

26. Assessment Methods and/or Tools

a. Journals: Weekly Reflections on Reading Assignments
b. Video Discussion Questions
c. Essays with writing rubric
d. Current Events
e. Written Assignments
f. Student Participation
g. Poetry
h. Unit Exams
i. Project Based Assessment
j. Oral Presentations
k. Ethnographic Interview
l. Debate
m. Research Paper
n. Final Exam

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

Not Applicable

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

Santa Maria High School serves a predominantly working class and recent immigrant Latino/a community. A significant amount of our students do not finish high school, make their A-G requirements or go on to a four-year university. Through culturally relevant education, our students' histories and experiences are placed at the center of the curriculum, making them the subject of what they are learning while validating them for who they are. It is difficult for our students to socially locate themselves globally if they do not have a sense of where they came from. This Mexican American History course is designed to empower students to want to go to college, make parallels with the history and struggles of other discriminated groups, and contribute to the self-esteem and dignity of our youth. In addition, this course seeks to create a safe space for multicultural education and understanding, thus, contributing greatly to a safer school climate and community.

Course Title

Economics, American

Description of Target Group

This course is a one-semester course required to meet the district's social studies graduation requirement. American Economics is designed for 12th grade students.

Purpose

The course is designed to enable students to understand the principles of economics and of our economic system. Students will compare our system to those of other countries and make reasoned judgments about economic questions.

This course will meet the state mandated requirement that high school graduates successfully complete a course in economics.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to demonstrate fundamental economic skills and knowledge in the following areas:

1. Fundamental economic concepts and terms.
2. The tools of analysis such as charts and graphs.
3. Economic indicators such as gross domestic products, inflation, and measures of unemployment.
4. Understanding basic economic problems facing society such as scarcity of resources.
5. All societies have economic systems determining choice of production.
6. U.S. economy characterized by competition and market structure.
7. Individual should use economic concepts in making consumer decisions.
8. Role that labor, agriculture, and business organizations have played in U.S. economy.
9. Role of government in market economy and establishing monetary policy.
10. Role of financial institutions.

11. Understanding business cycles with periods of inflation, deflation, and unemployment.

12. U.S. economic history.

13. Importance of international trade and migration across international borders.

14. How values influence monetary spending and opportunities for students to develop creative thinking skills.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Audio-visual materials: filmstrips, films, videocassettes, records, audiotapes

COURSE TITLE

Economics, United States (AP)

DESCRIPTION OF TARGET GROUP

This one semester course will meet the district's Social Studies graduation requirement. United States Economics (AP) is designed for highly motivated, intellectually advanced, twelfth-grade students.

PURPOSE

First, to develop students' abilities to comprehend, apply and synthesize complex economic terms and concepts. Second, to apprehend and appreciate the economic structures which surround individuals on both the micro-economic and macro-economic levels. Third, to direct participants toward the recognition of economic problems with the desire to construct creative, yet tenable, solutions to these problems. Fourth, to provide exposure to a dynamic and profitable career in economics or the related fields of business, accounting and marketing. Finally, to prepare students for the national Advanced Placement Examination.

STANDARDS OF EXPECTED STUDENT ACHIEVEMENT

Students will be able to demonstrate knowledge and application of fundamental economic concepts in a manner that reflects a high degree of written, critical expression. This will include, but not be limited to, the following:

a) Economic concepts and terms
b) Tools of analysis including charts and graphs
c) Economic indicators such as gross domestic product, inflation and measure of unemployment
d) Basic economic problems including scarcity
e) Economic systems determining choice of production
f) Characterizations of competition and market structure
g) Consumer decisions
h) The role of labor, agriculture, business and government
l) Fiscal & monetary policy
i) Business cycles and their ramifications
j) The importance of trade and demographics
k) United States economic history

METHODODOGIES & ACTIVITIES

Utilizing a variety of mediums including, but not limited to, textbooks, periodicals, videos, debates, kinesthetic and collective projects students would proceed through the aforementioned topics. Once again, strong emphasis will be placed on frequent engagement of analytic and synthetic thinking skills. These will be evidenced via frequent written examinations.

Ethnic and Social Justice in American Government

Subject area:	History / Social Science (A) / Civics / American Government
UC honors designation?	No
Prerequisites:	None
Co-requisites:	None
Integrated (Academics / CTE)?	No
Grade levels:	12th

ourse Description

urse overview:

The curriculum for the course will be completed in a semester. The semester will focus on the fundamentals of American government structures and political systems, using issues of social justice to illustrate the real-world application of theory and concepts.

This course is designed to take an in-depth approach to the study of government, exploring the nature of government, government organization, powers, and functions, as well as economic, political, and social principles and their implementation in the American Government over time. Students will learn various political principles of government theory and structure, as well as differing perspectives that support these structures and theories. This course will also include the United States' government and various administrations' involvement in domestic and foreign affairs.

The goal of this learning is for students to become informed, critical citizens that will participate in the governing process and advocate for their beliefs and ideals. This course focuses on individual rights and responsibilities, participation in American democracy, and the effects and influences of particular movements, court cases, and individuals in enacting change in politics, society, and economics. Special attention will be made to instruct students about the contributions and struggles of marginalized groups in America by shifting the curricular lens to highlight those voices that would connect more to the student body and local community.

This course will have a central role in equitably cultivating the qualities that will enable our youth to mature and participate in our society. The chief benefits of civic learning are a vibrant and informed civic life and democracy and a healthy society. High-quality civic learning also helps teach children the skills they need for the 21st-century workplace, such as critical thinking, problem-solving, communication, collaboration, creativity, initiative, and innovation. In addition, civic learning done right engages students by making what they learn at school more relevant to real life. It promotes academic achievement, as well, and prevents some students from dropping out.

The instruction of this course adheres to the California Department of Education's Social Science Framework for Government instruction, 12th grade Common Core Standards, and the FAIR Act. Along with readings from the textbooks, supplemental readings are required within each unit, along with Socratic seminars and a culminating project that analyzes a specific school or community issue using appropriate disciplinary lenses from civics and economics.

urse content:

Government Unit 1: Power, Authority, and Government

Essential Questions- What questions are asked when establishing power? How are those questions answered? By whom? Whose voice is heard and whose voice is ignored?

Unit One will allow students to explore the foundation of the American government through multiple perspectives. Students will use primary source analysis, Socratic Seminar discussion, and analysis of multiple secondary supplemental materials to gain knowledge about American Political systems and policy. Students will be able to comprehend, analyze, examine, compare, and justify differing perspectives, opinions, conflicting policies, and ideologies regarding the formation of American politics. Students will also be able to apply concepts about American politics to historic and contemporary economic policy, social movements, and political agendas. Students will study the structure of government, Constitutional

law, and rights addressed within the Constitution, political theories, as well as the purpose of government. Students examine the concept of power and how it influences politics and shapes government authority. They will develop an analysis of the relationship between power and authority and how this manifests on many levels. Throughout the unit and beyond students will craft a working definition for the purpose and role of government, to be revised and amended as the course progresses and new content is absorbed.

Themes and Material to be covered by students in Unit 1:

What is the purpose of government? What rights and responsibilities go along with this?

- *Identify the actions and abilities of the government and ways in which it regulates the lives of citizens.*
- *Analyze the social contract between the government and its people in order to maintain democracy.*

What Constitutional rights and responsibilities do citizens possess?

- *Describe characteristics and ideals key to a functioning democracy*

How and why did the Framers distribute power in the Constitution?

- *Examine the fundamental governing principles on which the Constitution is based and how those principles are embodied in the document.*
- *Analyze how the Constitution establishes a limited government in which powers are distributed, then checked, among different levels and branches*

How are your rights defined and protected under the Constitution?

- *Examine the Bill of Rights and Supreme Court decisions to illustrate implementation*
- *Discuss the meaning and significance of each right secured by the Bill of Rights*
- *Debate landmark Supreme Court cases to explore when rights are denied or conflict*
- *Evaluate modern issues involving a conflict of rights to determine constitutionality*

⮒ Unit Assignment(s):

Sample Assignments:

1. Students produce a multi-media PowerPoint or Prezi presentation comparing original founding ideals about what America would become according to the Constitution and Bill of Rights to a contemporary political or social movement in the United States. Students will use primary source evidence. Students will also make comparisons to 12th Grade English literature by analyzing and using evidence from George Orwell's 1984 or Animal Farm to discuss themes of power.

2. At the end of the unit students participate in a response group activity, taking on the role of representatives at a constitutional convention that is charged with creating a stable government and an economic system for a fictitious country that has just achieved independence. Groups must work together to establish a new form of government, create a system of organization for that government, and choose an economic system for their newly independent country. Students suggest government and economic systems based on a new country's various priorities. At the end of the activity students will debrief through a class discussion on how might this constitutional convention be similar to what a country would go through in forming a government and economic system today? How might it be different?

3. Federalism case study: school funding. First students read the summary of the Lopez vs the United States court case and attempt to determine whether the action of the case was the right of the federal government or Constitutionally should have been left to the states. In this particular case, the Supreme Court ruled it should have been left to the states and the

federal government overreached its power. This sets the stage looking at the power of states and local governments and the impact thereof. Special attention is paid to the difference this can create between different groups and communities. The first step in this process is a powerpoint on school funding. Students are to take notes on how schools are funded, as well as how this creates difference, particularly in regards to property taxes. To supplement this study students will listen to the This American Life episode "The Problem We All Live With." Class discussion to follow, culminating in a written summary and reflection. This set of tasks requires students to thoughtfully and meaningfully understand the differences between state and federal powers and how they manifest in the real world.

Government Unit 2: The Three Branches of Government

Essential Questions: Why does the Constitution both grant power and take it away? What is the most powerful branch of government? Why does it take so long for government to act?

In this unit, students will explore the powers, checks, and interactions of the three branches of government. Students will compare, contrast, and evaluate Constitutional intent versus practice in the modern era. They will consider how the powers of each branch have expanded or contracted over time and the implications thereof. To illustrate the powers and actions of each branch, the course will incorporate real examples of executive, legislative, and judicial action at the national, state, and local levels of government to make the material as impactful as possible to address issues and concerns of the student population.

Themes and materials covered:

What makes an effective legislator?

- *Analyze the formal and informal qualifications for members of Congress*
- *Identify the enumerated powers of the legislative branch and the checks provided by the Constitution to that branch on the other branches of government*
- *Analyze graphs, tables, diagrams, and political cartoons to understand the responsibilities and challenges of being a legislator*

What is the formal law-making process and what other factors can influence the procedure?

- *Chart and explain the pathway through committees and houses a bill must make in order to become a law*
- *Identify other factors that influence the lawmaking process such as lobbying and special interest groups*
- *Chart and explain the formal and informal amendment process to changing or adding to constitutions*
- *Practice their persuasive speech and debate skills*

What are the formal and informal roles of the President?

- *Identify the responsibilities and roles of the modern presidency and the ways in which presidential power has increased over time*
- *Explain the organization and functions of the executive branch*
- *Evaluate the current president based on performance in various presidential roles*

How is the U.S. judicial system organized to ensure justice?

- *Identify the organization and jurisdiction of federal, state, and local courts*
- *Determine the role that judges play in the court system and describe the ways they are appointed*
- *Explain the structure, function, and process of the Supreme Court*
- *State and support an opinion on how effective the U.S. judicial system is in ensuring justice for all*

How just is the criminal justice system?

- *Identify the constitutional rights of individuals in the criminal justice system*
- *Explain how an individual's due process rights uphold the principles of limited government and judicial review*
- *Examine systems or structures which act as barriers to due process or justice for all members of society*
- *Analyze whether a defendant was afforded due process in the criminal justice system*

Unit Assignment(s):

Sample Assignments:

1. In an Experiential Exercise, students "walk through" the National Statuary Hall in the U.S. Capitol to interview historical figures about key legislation that influenced democratic government in the United States. To accomplish this, students will pretend to be statues of historical figures who influenced the development of democratic government in the United States. Pairs will take turns role-playing as the statue/interviewer then switch off so each person does both roles. Students will complete a graphic organizer during the activity which they will use afterward to apply what they learned in the activity by composing journal entries on their lives today have been affected by the legislation discussed.

2. Roles of the President. Using their notes on the eight roles of the President, the students use a series of real-life examples of presidential conduct to properly identify the roles in action. Using careful and thoughtful analysis, students must explain in writing which role they believe the action to be and incorporate a quote justifying their identification. Students then consider the other roles/action available to the president and argue if they believe the President choose the correct course of action or if they felt a different approach would have been more prudent.

3. Socratic Seminar on Bostock vs. Clayton County, Georgia. Students will examine the text of Title VII of the Civil Rights Act of 1964 in order to have a Socratic Seminar discussion on whether or not the language in Title VII protects the LBGTQ community from workplace discrimination based on sex. Students will also look at the Justices consenting and dissenting opinions in the pivotal 6-3 decision. At the end of the seminar, the class will post if they agreed or disagreed with the Supreme Court on the class' LMS discussion board.

Government Unit 3: Political Ideology, Behavior & the Role of the Media in American Public Life

Essential Question- How much should the government be involved in the lives of citizens? What should the balance be between political involvement and privacy?

Unit three will allow students to explore differing political ideology as it has applied to many movements and policies involving rights and freedoms over time. Students will use primary source analysis, Socratic Seminar discussion, and analysis of multiple secondary supplemental materials to gain knowledge about the political spectrum and how far people think the government should be involved in their lives. Ideologies such as Totalitarianism, Libertarianism, Tea Party ideology, Black Lives Matter, and Socialism will be examined.

Students will explore the nature of the two-party system and the implications it presents with divided government in our modern democracy. Benefits and hindrances created by minor parties will add to the students' understanding of the American political structure. Students will also scrutinize the current role of the press in American democracy. This understanding will extend to modern elections with a focus on change over time and will consider trends/patterns for future elections. Special attention will be given to voter trends, patterns, and instances of disenfranchisement.

Themes and material covered in this unit:

How do political parties and interest groups influence political decision making?

- *Track modern political ideologies using the political spectrum*
- *Analyze the platforms of major and minor parties*
- *Discuss and debate the role of minor parties in our modern democracy*
- *Evaluate the significance of interest groups in terms of their goals, methods, and influence on government and public policy*
- *gerrymandering and disenfranchisement*

What impact does the media (4th Estate) have on political opinion?

- *Analyze the role of the media in shaping public opinion*
- *Analyze the influence of media coverage, political advertising, and public opinion polls on elections*
- *Identify and evaluate the effectiveness of propaganda strategies*
- *To what extent are the press and the media fulfilling a watchdog role?*
- *Do media outlets provide enough relevant information about government and politics to allow citizens to vote and participate in a well-informed way?*
- *How has the Internet revolution impacted journalism, and what are its effects on the coverage of public affairs and current issues?*

Unit Assignment(s):

Sample Assignments:

1. Students will analyze campaign posters, commercials, social media posts, beginning with the 2008 election, to identify the persuasive techniques used in them. During the analysis of each poster and commercial students will attempt to answer the following questions: What is this commercial's message? , What type of commercial (positive, negative, or issue-based) is this? What persuasive technique or techniques are used?, What do you think makes this commercial effective or ineffective? After viewing a class discussion will be held. When all are finished they will use the techniques they learned about to write and produce 30-second campaign commercials for their favorite candidate. As each group performs, students will once again apply what they learned by identifying the techniques used and answer the same questions from the ones created by each group.

2. Poll the class, either on the board or have them respond electronically from their phones to make it anonymous via a poll tool such as *polleverywhere*, recording their responses to the following questions:
• How many of you think the president is doing a good job?
• How many of you think Congress is doing a good job?
• Is your governor an effective leader?
Then have students find survey data done by reputable national polling organizations like FiveThirtyEight or Pew Research:
• How do the survey results compare to our classroom poll?
• Do you agree with the survey results? Why or why not?
• Is there anything that stands out that surprises you?
After the discussion students will apply what they have learned by creating and conducting an opinion survey to evaluate the current president's job performance. In an election year, consider having students instead create and conduct an opinion survey on the strength of the presidential candidates for each of the eight presidential roles or write and submit a letter to the editor supporting one or more candidates.

Government Unit 4: Electoral Process & Civic Engagement in American Democracy

Essential Questions: How do you get elected? Why should I vote? Why are elections significant to the average member of society?

In today's society, individuals participate as citizens by voting, jury service, volunteerism, serving as members of advisory bodies, in military service, in community organizations, and by engagement in the electoral and political process. In this unit, students study the role of political parties, the nomination process for presidential candidates, including the primary system, and the role of polls, campaign advertising and financing, the Electoral College, and methods of direct democracy utilized in California and various states.

Students also learn about how citizens participate in the political process through voting, campaigning, lobbying, filing legal challenges, demonstrating, petitioning, picketing, and running for office. As a practical matter, students should know how to register to vote—both online and by mail—what the requirements are for registration; how to request, fill out, and return an absentee ballot; what to expect on election day; how to find a polling place; and where and how to access and understand the voter information pamphlet and other materials to become an informed voter.

Themes and materials covered in this unit:

The Electoral Process

- *What are the requirements for voting?*
- *Who gets elected, and who does not?*
- *What impact do polls, political parties, and PACs have upon elections?*
- *Analyze party identification and voter behavior in the United States*
- *How do I vote on election day?*
- *How can I get involved in a campaign?*
- *Identify ways in which voting rights in the United States have expanded over time. In what ways are these rights still limited or difficult to access for marginalized groups in America?*

Ways for students to be civically engaged

- *Students can also analyze proposed initiatives, controversial issues surrounding campaign financing, voter identification laws, redistricting, and negative campaign ads.*
- *Evaluate message and rhetoric of political debates*
- *Community Service projects with nonprofit organizations*
- *take part in the Secretary of State's Poll Worker program*
- *serve as campaign volunteers during an election.*
- *To learn more about how the election process affects them and their education, students might be encouraged to study a school board race, candidate positions on education, or a local school bond or parcel tax campaign.*

Unit Assignment(s):

Voter Turnout Analysis. Using data from the Census Bureau, students create a bar graph of voter turnout rates for various groups. The breakdown refers to gender, race, region, age, income, etc. Once the graph is created students analyze the data to brainstorm trends, patterns, and hypothesize possible reasons for low voter turnout.

Choosing one target demographic, the students will craft their own "get out the vote" campaign to try and encourage that particular group to engage in the democratic process. Incorporating the major ideals and issues which might be relevant to their target group (i.e. the over 65 bracket would be very interested in Social Security), students must generate a

meaningful and thoughtful appeal to a voting group, demonstrating their thorough understanding of the powerful role each citizen plays in a democracy. Students have choice in the final product, as it must appeal to their demographic. Utilizing SnapChat versus the newspaper would target two very different audiences.

This task requires students to synthesize information learned over the unit such as voting trends, party platforms, propaganda strategies, and reasons why many voters are disaffected.

Government Unit 5: Rights and Responsibilities of Citizens

Essential Questions- When in American history have minority voices been mitigated? How can the government protect the voice of the minority from the opinions of the majority? What acts of civil disobedience produced positive effects? What methods have successfully brought about lasting political change?

Unit Five will allow students to examine the background, motives, and evolution of various civil rights movements in American history and make comparisons to contemporary American issues involving civil rights. Students will engage in analysis of historical documents and critiques of current events involving civil rights. Issues of race will be explored through the lenses of Supreme Court case influence, multi-media portrayal, and policy regarding equality for all citizens. Influential individuals will be studied in depth. Students will also distinguish between the motives of different government administrations in the treatment of civil rights issues.

Themes and materials that may be covered:

How are your rights defined and protected under the Constitution?

- *Examine the rights and responsibilities of citizenship*
- *Examine the Bill of Rights and Supreme Court decisions to illustrate implementation*
- *Discuss the meaning and significance of each right secured by the Bill of Rights*
- *Debate landmark Supreme Court cases to explore when rights are denied or conflict*

Evaluate modern issues involving a conflict of rights to determine constitutionality:

Racial and Ethnic Minority Rights- students focus on the history of the African American civil rights movement and other social justice movements in the thirty-five years after World War II and on the broader social and political transformations that they inspired. One emphasis in this unit is on the application of the Constitution and the Bill of Rights in modern times in such a way that African American efforts to make the Fourteenth and Fifteenth Amendments a reality for themselves and others minority groups. A review of earlier content helps students grasp the enormous barriers ethnic and racial minorities have to overcome in their struggle for their rights as citizens.

- *The Civil Rights Act of 1964, the Voting Rights Act of 1965, and the Elementary and Secondary Education Act of 1965 indicated the federal government's commitment to provide for the rights of full citizenship to people of all races, ethnicities, religious groups, and sexes.*
- *police violence, prison industrial complex, Black Lives Matter movement*
- *affirmative action*
- *considerations of racial or gender restrictions on the right to marry*
- *inequality and inequity in education*

- *continued effects of segregation and Jim Crow laws across American society today*

Women's Rights- Students will explore the political and social progress of women's rights movements over time, as well as contemporary issues regarding women's rights within the American government and economy.

- *What motivations might the government and the economic market have in limiting the opportunities of a specific group?*
- *Glass ceiling*
- *How have women's rights and roles changed historically?*
- *What steps can be taken toward equality?*
- *social movements to outlaw or restrict abortion*
- *Title IX of the 1972 Educational Amendments, which mandated equal funding for women and men in educational institutions.*
- *#metoo movement*

LBGTQ Rights- Twentieth-century persecution of sexual and gender minorities and the related growth of the LGBT civil rights
movement

- *The medicalization of homosexuality and gender diversity as pathological and the subsequent struggle against this perspective*
- *Systematic attempts to eliminate gay men and lesbians from the military and the establishment of a regime of dishonorable discharge that denied many veterans their rights to benefits*
- *The Lavender Scare targeting gay men and lesbians, which developed in conjunction with the postwar Red Scare and exceeded its impact in both time and scope*
- *Homophile, gay liberation, and contemporary LGBT movements as part of the story of civil rights activism in the United States*
- *Anti-gay activism as part of the rise of the New Right*
- *AIDS as a medical, political, and social issue in U.S. history*
- *Court cases about same-sex sexuality and gender diversity demonstrating changes in policies and public opinion over time*

Unit Assignment(s):

Sample Assignments:

1. Have students apply what they have learned about the criminal justice system by writing a letter to the editor of a local newspaper taking a position on this question: *From doing the crime to doing time: How just is our criminal justice system?* The letter must contain:
• the name and address of the newspaper.
• a clear position statement.
• at least three arguments that incorporate examples, court cases, quotations, or statistics from the reading.
• references to two constitutional articles or amendments.
• a strong conclusion that reiterates your position statement.

2. Through a structured group project, students will create, write, and produce a Newscast video outlining a specific civil rights issue such as police brutality, education, job equality, social norms, and political activism. Students will focus on one state, city, or region to explore the role of propaganda and media pertaining to the issue they have chosen. Students will include a biography "interview" of an influential individual within that movement.

3. A research-based project analyzing a specific movement or topic regarding current inequality for women, recent political advancement for women, or a new law or court decision regarding women specifically in the United States. Literary Criticism will be used to analyze a primary source document using a Feminist perspective.

4. Bill of Rights Skits- Students will be in groups of 5 or 6 and will create short skits that would convey the rights garnered or denied by the amendments in the Bill of Rights. Students in other groups would have to decide which amendment the performing group was doing when they finish the skit. At the end of all the performances and review of notes for each amendment, a quiz would be taken that has 20 real-world examples where students would have to recognize which amendment was being used in the example and decide if the situation is constitutional or unconstitutional.

Government Unit 6: Federalism

Essential Questions- Why are powers divided among different levels of government? What level of government is the most important to me—local, state, tribal, or federal? What level of government is the most powerful—local, state, tribal, or federal?

Students will compare government involvement and structure at the Federal, State, and Local levels, and the concept of State autonomy. Students will analyze State and Federal law and their effects on local economies and populations. In this unit, students analyze the principles of federalism. They will identify key provisions of the U.S. Constitution that established the federal system including enumerated powers, Article I restrictions on states' powers, and the Ninth and Tenth Amendments. Students should understand that local governments are established by the states, and tribal governments are recognized by constitutional provisions and federal law.

Students will also identify typical responsibilities of state government, including education, infrastructure such as roads and bridges, criminal and civil law, and regulation of business. The state also oversees and regulates local governments and the services provided such as fire and police protection, sanitation, local public schools, public transportation, housing, and zoning and land use. Lastly, students will grapple with what happens when there is overlapping jurisdiction? Matters such as education, health care, transportation, and housing often have multiple government agencies regulating and funding them.

Themes and materials that may be covered:

How is public policy made at these various levels?

- *How do regulatory departments and agencies function?*
- *How do state and local regulatory agencies differ from those at the federal level?*
- *What happens when there are overlapping or contradictory jurisdictions and enforcement of laws?*

Temperance vs. Prohibition: Should certain social behaviors be mandated by the government?

- *What are the most universal and influential values that govern social behavior?*
- *How are American values different from other cultures?*
- *Students evaluate different evidence and perspectives regarding minority views and contributions to American values and the policies that support or deny these values.*
- *Analyze government influence on social behavior through law and policy, historically and in contemporary instances (Ex: vaping, e-cigarettes, driving ages, medicinal marijuana use, gun ownership, etc.) Various administrations' platforms regarding social behaviors will be examined and compared. The influence of media and government administration in the enacting of and reaction to policy by the public will also be emphasized.*

Unit Assignment(s):

Sample Assignments:

1. Students will plan, construct, and describe a 3-Dimensional creation that serves as a metaphor for an American value that is promoted through government policy. Students will use persuasive reasoning by taking a positive or negative approach in presenting the American value to the class. To demonstrate depth of knowledge on this American value, students will also write an analysis of the value in a 5 paragraph essay. This essay will show how the value is infused throughout modern American culture, law, and recent social or political movements.

2. Students will watch local news coverage video on the Supreme Court's decision in McGirt v. Oklahoma (2020). After ruling that about half of the land in Oklahoma is within a Native American reservation, students will have to work together and decide should past convictions be overturned or be upheld. A number of criminal defendants who have been convicted in the past will now have grounds to challenge their convictions, arguing that the state never had jurisdiction to try them. Students will conduct a philosophical wall collaborative debate to deliberate through the issue and explore the magnitude of this case for Native American rights.

Government Unit 7: The United States and the World

Essential Questions: How should the United States conduct foreign policy? How effectively do international organizations respond to global issues?

Students will conclude the first half of the course by looking at how American Democracy affects the World. This unit begins with a review of the major political and economic systems encountered by students during their previous years' studies: feudalism, mercantilism, socialism, fascism, communism, capitalism, monarchy, and parliamentary and constitutional liberal democracies in order to understand the historical context for both democratic and autocratic systems. Students can study the philosophies of these systems and the ways in which they influence economic policies, social welfare policies, and human rights practices through contemporary issues from the perspective of marginalized groups.

Finally, students should understand the range of actors beyond the nation-state that influence today's world including nongovernmental organizations, multinational corporations, and international and regional alliances, economic bodies, and associations. Contemporary problems such as the environment, economics, immigration, and terrorism crossing state borders demand a different kind of national and international community than the world of the twentieth century. Teachers may conduct case studies in which students deliberate on issues that might impact America's vision of civil society via foreign relations through topics such as globalization, international and internal migrations, environmental change, or technological innovation.

Possible Case Studies to Explore:

Wealth Distribution & Globalization

Essential Question- *How should wealth be distributed in society? What are the consequences of uneven wealth distribution? What is the connection between wealth and social class in Western cultures?*

This case study will allow students to research and apply ideas about wealth distribution and economic policy within American government and society. Students will discuss taxation and the involvement of government in individual economic decision. Students will analyze the role of labor and unions historically in American economics. The ideology of Egalitarianism will be explored. Students will examine the influence of United States policy on unemployment, poverty,

and the middle class. Students will use evidence to argue their opinion about government involvement in matters regarding economic wealth distribution and labor and how it has positively or negatively impacted the economic opportunities for ethnic and racial minorities in the United States.

Environmentalism/Pandemics

Essential Question- *To what extent should the government be tasked with preserving natural resources and environments? How can naturalist philosophies be used to influence individuals, nations, and global society? Should the U.S be involved in multi-national climate agreements like the Paris Climate Accords? To what extent should the government be involved in preventing and containing pandemics?*

This case study allows students to see the influence and effects of historical environmental movements, as well as effects of industrialization on the environment. Students will be able to make connections between environmental movements and economic consequences. Students will evaluate the significance of labels of environmentalist, conservationist, greenie, tree hugger, etc. Environmental policy of the United States will be compared to that of foreign countries. The concept of global warming will be explored and students will examine legislation that seeks to counter-balance this phenomenon. Students will examine the roles of international organizations (NAFTA, UN, etc.) and domestic organizations (Sierra Club, PETA, etc.) on policy regarding environmentalism. A focus will also be on contemporary issues like the EPA and regulations, Green New Deal, Paris Climate Agreement, and the shift to move to renewable sources of energy. Pandemic response and preparation would also be an issue to tie in as more and more humans come in contact with wild animals as habitats are destroyed to make room for human encroachment. Should the U.S. be a member of W.H.O. and should the government create a Pandemic response team?

Anti-War/Counter-Terrorism

Essential Question- *What political and economic issues divide a nation and why? How is social consciousness raised when opposition to policy is seen? What is the responsibility of the government to address opposition? How do individual countries combat terrorist organizations that do not recognize international norms or boundaries?*

This case study will allow students to examine anti-war protests and movements through a lens of social awareness. Ideologies of Communism, Militarism, and Imperialism will be explored. Historical and contemporary reactions of citizens to various wars, conflicts, or foreign involvements will be explored. The funding and involvement of military branches in domestic and foreign conflicts will be discussed and evaluated. Lastly, students will explore the effectiveness of America's war on terror and debate the challenges to combat non-state terrorist organizations and adhere to international humanitarian law? Themes of propaganda, censorship, and civil liberties will be apparent throughout reading materials and classroom discussion. The roles, powers, and limitations of the Executive branch will be discussed. Students will be able to evaluate legitimacy of government for the United States, as well as foreign nations. human rights violations

Human Rights/Immigration

Essential Question- *What are fundamental human rights that are widely recognized throughout the world community?*

Through this case study, students can examine international efforts to protect human rights (e.g., the Universal Declaration of Human Rights, jurisdiction of the World Court and International Criminal Court) and current relevant issues such as protection of civilian populations during wartime, oppression of minority groups, and forced removal or genocide. Students can read and analyze the 1948 Universal Declaration of Human Rights and compare it to the 1776 Bill of Rights, noting similarities and differences for additional discussion (e.g., group rights versus individual rights). After analyzing these rights students will evaluate if these rights are being honored or violated by looking at issues around the use of torture and how the U.S. enforces its immigration and immigration policies.

Unit Assignment(s):

Sample Assignments:

1. After reading the "Power, Politics, and You" section, students will look at the pros and cons of globalization. They will share their opinions by creating a human spectrum in the room ranging from “Strongly Agree” to “Strongly Disagree.” Read each of the following statements aloud then have volunteers arrange themselves along the spectrum according to their personal beliefs. Then hold a brief discussion in which each student (or choose a few if time is limited) defends his or her placement. Repeat the process with new volunteers for each statement.
• Globalization is turning the world into a consumer colony of the United States.
• Globalization will give us new ways not only to appreciate other cultures but also to look at our own culture with fresh wonder and surprise.
• Globalization is an unstoppable force.

2. Students can do an interactive one-pager on the following prompt: Should the U.S. government ban Tik Tok? Due to the fact it is a Chinese company whose authoritarian government could demand access to the personal data and facial recognition it has collected from users is Tik Tok a national security risk? Hold a class discussion sharing their group's response to the prompt?

3. Students will plan, organize and produce a political campaign that will include the creation of a campaign slogan, speech, and bumper sticker which embodies the message of a contemporary social or political movement or political platform regarding wealth distribution in America. (Ex: Medicare for all, trickle-down economics, wealth taxes, abolishing payroll taxes or inheritance tax)

4. Students can adopt an environmental cause, researching its origins, goals, and recent current events, and contribute to the cause through volunteerism, documenting their experience; or students can research and defend the deregulation of a specific environmental dispute or issue, using evidence-based inquiry and debate.

5. Students can conduct a philosophical wall on: Should torture be used on people or is it a violation of human rights? Students need to grapple with and decide if there are any instances where they would consent to the use of torture or do they agree it should be completely abolished.

Subject area:	History / Social Science (A) / World History / Cultures / Historical Geography
UC honors designation?	No
Prerequisites:	None
Co-requisites:	None
Integrated (Academics / CTE)?	No
Grade levels:	10th, 11th, 12th

ourse Description

urse overview:

Tenth-grade students typically are taught World History through a Eurocentric lens. Leaving most students to question where they see themselves in world history. In this World Cultures course, students will examine world history through a purposeful lens of the world cultures that helped shape the modern world.the major turning points that shaped the modern world. The time frame for this course will be from the late eighteenth century (1700s) to the present day (2000s). This includes the rise of democratic ideas and their influence on the development of government and the relationship between it and the individual. Students will trace the ideas and develop their understanding of the historical roots of current world issues. The essential historical question/year-long inquiry will pivot around the relationship between the individual and the state. Students will extrapolate from the global experience that democratic ideals are often achieved at a high price – bloody revolutions with a high human toll. They too can conclude that democracies are vulnerable, fragile, and at-risk. Likewise, the global perspective will demonstrate the absence of Western, political values in many places worldwide. Moreover, through an in-depth study of individual events and people, students can trace the development of even larger themes, such as the quest for liberty and justice, the influence and redefinition of national identity, and the rights and responsibilities of individual citizens.

urse content:

Unit 1: Revolutions Reshape the World

How were most societies organized in the 1700s?

Students explore the underlying commonalities that are found around the world, that is, that most societies function inside a hierarchy. The states and empires were ruled by one leader, called a king, tsar, sultan, emperor, shah, or prince. Under the leader were the elite groups who had political, military, or religious power, who owned wealth and land. These elite groups went by different names in each state or empire, such as nobles and scholars, but they had privileges—that is, special rights that ordinary people did not have. Elite status was often based on birth. Below the elite groups, there was a small middle class. But the majority of people in the world worked as farmers and had little wealth or material possessions, no education, and no political power. The dynasties and elite groups usually resisted giving power to lower social groups for fear that the nobles or other elites would lose their wealth and privileges. In all societies, customs of social order were hierarchical, meaning that people were unequal. Some people were higher and considered better than ordinary people.

How were enlightened ideas a break from the past?

The question will study the ideas that gave rise to these revolutions: Glorious, American, French, Haitian, and Latin American. Students will learn that the social contract, especially the notion of natural rights, gave rise to newer ideas about the purpose of government. In addition, students will learn how the dangers of tyranny led to a separation of powers and embracement of representative governments with limited power as the ideal form of government.

Why did civic reformers argue for representative governments?

With an understanding of revolutionary political ideas, students will begin to learn about realities that developed from them. Focusing on the political revolutions that erupted in North America, Europe, and Latin America in the eighteenth century that inspired reforms and revolutions across the globe. During this period, the middle-class challenged the power

of monarchs and in some instances resulting in the overthrow of monarchs, establishing representative governments whose purpose is to protect natural rights.

What were the consequences of trying to implement political revolutionary ideas in Europe, Latin America, and North America?

Their post-revolutionary constitutions were explicitly written to limit executive power and protect the rights of citizens. Many new leaders established constitutional governments that echoed principles from the Glorious Revolution, Enlightenment ideas embodied in the English Bill of Rights, the French Declaration of the Rights of Man and the Citizen and the United States Constitution. Liberal democratic principles replaced traditional aristocratic privileges. Enlightenment texts were used as a tool for disenfranchised groups, but these principles were applied differently after French, American, and Haitian Revolutions.

⮒ Unit Assignment(s):

Students will be learning about the divine monarch by focusing on one key speech that King James I delivered in 1610 to Parliament, “Speech to Parliament”. Students will read the selection starting with the phrase “The state of Monarchy is the supremest thing upon Earth…” and continue for the next three paragraphs. The King James I's speech illustrates the way in which kings were perceived to be divinely inspired, and thus their power was understood to be godlike. Furthermore, this speech clearly lays out the central claim and supporting details of why King James I felt this way.

The speech will be read aloud once and then students will be asked to read through the speech a second time and complete the graphic organizer. The graphic contains boxes in which students are directed to complete the following information: (1) the central claim made by King James I; (2) the reasons for his central claim; (3) the evidence he provides to illustrate his reasons; (4) the flaw in his reasons.

After students complete the graphic, table discussions will be facilitated, then whole-class discussions, to confirm that the students understand the way in which King James I constructs his argument.

Unit 2: The Industrial Revolution

Should this era of industrialization be called an Industrial Revolution?

Why or why not? From a broad global perspective, industrialization has arguably been one of the most dramatic transformations in human history, making available vast stores of underground coal, oil, and gas energy and altering patterns of work, settlement, international relations, consumption, family relations, and values.

What were the results of the industrial revolutions? How was technology, and the environment transformed by industrialization?

The Industrial Revolution was energized by coal and eventually by petroleum and natural gas. Fossil fuels that drive steam and electrical engines made possible a huge increase in the amount of productive energy available to humans. These new technologies and ways of understanding the world soon spread beyond Western Europe to the United States and Japan, so that knowledge was shared worldwide.

Why did socialist ideologies emerge?

What were their key tenets? Students may evaluate the costs and benefits of industrialization, as well as the rise of unions, often inspired by new ideologies of socialism, particularly Marxist concepts of inherent class conflict between the profit interests of capitalists and the concerns of laborers. As students will learn later in the course, these industrial revolutions facilitated the development of European imperialism in the late nineteenth century.

How did industrialization affect ordinary people, families, and work? At that time, European and American workers often protested the rigid time-discipline and poor conditions of factory work. In pre-industrial societies, family units working in or near the home produced most goods. Industrialization separated home from work in function and location. Middle-class families began to think of home as a separate sphere for women and children to be protected from the evils of the industrial environment. Women were discouraged from paid labor, and children were sent to school. In many poorer families, however, both women and children continued to work in the paid labor force. Although the mechanized production of goods and crops dramatically changed life in industrial nations, most of the world continued to engage in subsistence farming to meet basic needs.

⮒ Unit Assignment(s):

Students will utilize the DBQ Project's Mini-Q lesson, "Female Silk Workers in Japan: Did the costs outweigh the benefits?" In this four day lesson, students will learn about the working conditions of young female Japanese silk workers via seven primary source documents. They will analyze the documents, use a graphic organizer (T-charts), outline their answer to the prompt, and write a 5 paragraph essay explaining whether they believe the costs of industrialization outweighed the benefits.

Unit 3: Imperialism

Why did industrialized nations embark on imperial ventures?

In this unit students examine industrialized nation's imperial expansion, fueled by demand for natural resources and markets and aided by ideological motives of a "civilizing mission." The economic strength of industrialized nations came from their ability to manufacture goods at lower cost and an increased consumer demand from nations who still engaged in manual production of goods. The increase in demand for goods paved the imperialism race between Europeans, Japanese, and Americans to secure raw materials. Imperialization was justified to acquire natural resources, but also as way to uplift other societies and political systems. In some instances, some countries retained their independence, such as, China, Thailand, Iran, Ethiopia, and most Latin American countries.

How was imperialism similar and different between colonies in Africa, Asia, and Latin America?

Imperialist nations not only sought natural resources, but they also introduce new infrastructures, medicines, educational systems, and cultural norms. Print technology and more rapid transportation aided the growth of organized religion.

How did native people respond to colonization?

Students will also focus on the consequences of colonization. A result of colonization was the inequality between wealthy and poor states that was mirrored by growing divisions between "haves" and "have nots" in many of these societies. As a result, revolutions broke out in colonized nations to establish a new leader to deal with imperial powers. These revolutions were led by leaders inspired by the Enlightenment ideals who sought to challenge the injustices of Western and Japanese imperialism.

What were the causes and effects of the Mexican Revolution?

After teachers briefly review Spanish conquest, Mexican independence, and the decades-long leadership of Porfirio Diaz, with an emphasis on race and land ownership, students should learn about the high percentage of land and resources that were owned by foreign investors (mainly American) in the early twentieth century.

⮒ Unit Assignment(s):

Students will examine 16 “Casta” paintings. Casta is an Iberian word (existing in Spanish, Portuguese and other Iberian languages since the Middle Ages), meaning lineage, breed, or race, to describe as a whole, the mixed-race people which appeared in the post-Conquest period. These paintings are part of the 18th century artistic tradition of Colonial Mexico. These pictures generally appear in groups of sixteen portraits that trace the complex racial mixing or mestizaje of the people in New Spain. Each painting depicts a couple along with one or two children. An inscription describing the ethno-racial makeup of the mother, the father, and the child(ren) appears in each picture. Students will select 6 paintings to analyze and answer questions, assessing symbols, attitudes, and depictions of the mixed race families in the paintings. Students will build upon this knowledge as they investigate and learn about the impending Mexican and Latin American Revolutions, with a clearer understanding of the motivations behind the lower- and middle-class rebellions against colonialism.

Unit 4: World War I

How was World War I a total war?

The Great War, later called World War I, began in 1914 as a result of nationalist tensions in Europe and the subsequent militarization that resulted from clashes between these states over colonial resources and markets. Insecurity led these powers to form alliances, which embroiled the great powers of Europe in a multiyear conflict that included soldiers from many parts of the world. Students should learn about the complexity of why and how each state justified its entry into the war. To this end, European governments created propaganda aimed at encouraging the civilian population to support total war. Students will learn of the struggles faced by soldiers fighting in the trenches. The advent of total war meant mobilizing not only the soldiers, but also civilians on the home front and in colonial territories. Entire societies and economies were focused on war.

How did World War I end? What were the consequences of the postwar agreement?

The end of WWI came at great costs to all involved and set the stage for the upcoming global economic collapse as well as the next World War. Students will learn about the Treaty of Versailles as well as the new national boundaries that favored the Allied Powers, including Japan.

What were the consequences of World War I for nations and people?

Collateral damage during this WWI time period includes the Armenian genocide, perpetrated by the Turkish government, who slashed the population down to just 25% over the course of three years, seized historic Armenian lands, and either forced assimilation or drove into exile those who refused to surrender. Students may examine the Red Cross’s first international aid project, aimed at helping the Armenian Genocide survivors.

Lastly, the colonized peoples who had fought for the British and French soon realized that they would not be granted self-determination as Eastern Europeans were. Consequently, nationalist leaders, including Mahatma Gandhi of India, began organizing independence movements to resist the authority of colonial powers.

⮒ Unit Assignment(s):

Using our textbook, students will jigsaw Chapter 9, Lesson 2, titled “World War I,” which covers much of the course description above (paragraphs 1 & 2). In groups of 2 or 3, the students will read and reread their designated section, taking notes on key details. They’ll create a shared powerpoint that they will use to teach the class their topic. As they present their details, students will take notes on the presentations, covering all 12 topics of this section of the textbook. Each presentation will be expected to include visuals, 3-5 key bullet points, and each student will take a speaking role in their presentation. In order to help improve comprehension, and prevent gaps, the presenters will then read their section out loud with the class. Students in the class will provide feedback and what they learned to the presenters through video editing tools like Flipgrid.

Unit 5: The Rise of Totalitarianism

Why did the Russian Revolution develop, and how did it become popular? What were key ideas of communism? How were the ideas translated on the ground?

This unit will begin with a brief overview of the Russian Revolution, where the ineffectual Russian Czarist leadership was overthrown and the Communist Soviet Union was formed, under the leadership of the Bolsheviks and Lenin.

What was totalitarianism, and how was it implemented in similar and different ways in Japan, Germany, Italy, and the Soviet Union? How did Nazis come to power? Why did ordinary people support them?

With the collapse of the capitalist market system that caused the Great Depression, political alternatives to liberal democracies emerged, particularly communism and fascism. Students will learn of Joseph Stalin’s rise, his methods of leadership, industrialization and control, and continue on by comparing Stalin with Hitler, Mussolini, and Tojo. Fascism provided a nationalist and militaristic alternative to both the individual rights privileged in liberal democracies and to communism. The Fascists in Italy and the Nazis in Germany established state-directed economies, rearmed their militaries, and imposed gender, religious, and racial hierarchies in the name of an ultrapatriotic nationalism, while the militaristic control of Japan was beginning it’s quest of “Asia for Asians” by conquering Korea and looking towards China for future domination.

⮒ Unit Assignment(s):

Students will form groups of five or six and choose one of the totalitarian regimes discussed in the unit to create a One-Pager. This project will have multiple elements that will require a variety of responses from the students. Students will create a thesis statement and back it up with evidence that will take form of visuals, poems, and inquiry questions and answers that use Costa's levels of questioning. The prompt will center on the following: What people were most adversely affected by the rise of nationalistic and totalitarian governments? When completed the students will present their arguments and findings to the class.

Students will focus on developing skills on inquiry questioning, argumentative writing, document analysis, causation, collaboration skills and presentation skills.

Unit 6: Causes and Consequences of World War II

What were the key goals of the Axis and Allied powers? How was the war mobilized on different fronts?

The study of Nazism and Stalinism leads directly to an analysis of World War II and its causes and consequences. Students will continue to learn about German, Italian, and Japanese attempts to expand their empires in the 1930s. The expansionist goals of these nations led to instances of military aggression, first in China, then in Europe, and finally, in the United States, that drew it to the Allies into war with these Axis Powers.

How did technology affect World War II?

In Germany, Hitler began to expand his empire into neighboring nations. Britain and France responded by employing a policy of appeasement, while the United States Congress passed a series of “Neutrality Acts”. Appeasement of Hitler ended when Germany invaded Poland with their blitzkrieg style of warfare, it also marked the beginning of World War II. In the Pacific aircraft carriers replaced battleships and became the most important naval apparatus, along with submarines, to conduct warfare on a global scale. Students will see how military conflict today has been shaped by the technological and philosophical evolutions of warfare brought about by the equipment and technology used in WWII.

How was World War II a total war? How did World War II’s actors, goals, and strategies compare with those of World War I?

Students will be able to explain the impact that the United States involvement had in World War II. The Allied campaigns in North Africa, the Middle East, Italy, and occupied France all weakened the Axis Powers ultimately defeating them. The United States involvement in the Pacific forced the Japanese forces to retreat, culminating in a heavy bombing campaign against the Japanese islands. Defeating the Japanese forces after the United States dropped two atomic bombs in August 1945 in Hiroshima and Nagasaki. The focus will show how whole countries were mobilized in every aspect to help the nation win at war. These societal shifts help develop opportunities for women and minorities. It also had huge changes on countries' economies. The end of the war created a geopolitical ripple effect that we see as many of the problems that face the world today in conflicts around the globe.

How was the Holocaust carried out?

Finally, students will learn about the Nazi implementation of racial policies across the portions of Europe they controlled. Students will explore the magnitude, terror, and loss of life caused by Nazi policies. The Holocaust is a foundational piece of history for understanding hate and intolerance that leads to mass genocide.

⮒ Unit Assignment(s):

For students to have a better understanding of the Holocaust, they will be participating in an activity from TCI, Recounting Stories of Resistance from the Holocaust. First, students will be given an overview of the Holocaust through a power point presentation. After the overview, students will be divided into groups of 4-5. Each group will be assigned a different stage of the Holocaust and its corresponding act of resistance. After reading their assigned reading, students will then conduct their own research on the resistance at their assigned Holocaust stage. After, the students will write a journal entry recounting their own story of resistance, as if they were a victim of the Holocaust. Aside from the story, the group will also need to come up with a visual element that will help the class understand their Holocaust stage and its corresponding resistance movement.

After all the presentations, groups will submit proposals for a community engagement activity, to be conducted in their city that would focus on educating the community on a issue of hate that might be negatively affecting the community. This is a project that if done well could be submitted to local community agencies to be actually conducted in the city.

Unit 7: The Cold War

How did the Cold War develop?

One of the most significant effects of World War II was the emergence of the Cold War, which ultimately affected much of the world, including the developing world in Asia, Africa, the Middle East, and Latin America. Students should explore the differences between the capitalist-democratic United States and the communist-authoritarian Soviet Union. They will examine the two superpowers' different plans for Europe after the war and how the presence of communist China complicated the earlier bipolar Cold War world. Students should learn about the unrest and disorder in China during these years.

How was the Cold War waged all over the world?

Throughout the Cold War, the United States and the Soviet Union intervened politically, militarily, and economically in dozens of nations in Asia, Africa, Latin America, the Middle East, and the Caribbean in an effort to protect their strategic interests. Students should consider the varied perspectives of the people on the ground in each nation, as well as the American and Soviet interests. These "Third World" interventions intersected with movements for independence and nation-building, creating opportunities for nationalist leaders to improve their political position by playing superpowers against each other.

How and why did the Cold War end?

After nearly half a century of proxy wars and worldwide tensions related to the Cold War, the Soviet Union collapsed from both internal and external weaknesses. The end of the Cold War provides an opportunity to help students identify change over time and the cause-and-effect events that brought about the end of the Cold War, including themes such as détente, pressures on the Soviet Union such as the ongoing war in Afghanistan and dissidents, and political and cultural developments in the United States. These complex interconnected causes help students to navigate the web of worldwide relations through the late 1980s.

⮒ Unit Assignment(s):

A research project in which students, in pairs or groups of 4, will study in depth one "hot spot" in the Cold War, learning about the intense conflicts outside of the Soviet Union and the United States. The Cold War Blueprint lesson provides detailed instructions and sources for these ten hot spots: Algerian War of Independence 1954–1962), Afghanistan (1979–1989), Cambodia (specifically the Cambodian genocide), Angola, Nicaragua, Guatemala, the Congo, Iran, Hungary, and Cuba. The Blueprint is a curriculum developed by the California History–Social Science project and available for download free of charge (http://chssp.ucdavis.edu). Additional locations students may research could include nations of the Middle East--namely, the newly formed Israel and the subsequent tensions with the Palestinians; the newly independent nations of Syria, Lebanon, Jordan, Iraq and parts of Turkey; and/or Iran and the CIA-led coup d'etat in 1953. Students will fully research their topic in groups, focusing on following objectives: the lived experiences of the people on that land, the intentions of the political powers of that country, and the Superpowers' use of this place for their Cold War proxy war(s). Each student will create a "One-Pagers," an artistic representation of what they learned about their portion of their topic; they will then create a large poster, compiling each of their "one pagers" under a clear title. A gallery/museum walk will follow, students will take notes as they examine each group's project.

Unit 8: The Contemporary World (2000s)

What motivates political change? How can economic and social changes affect a country?

Newly independent nations faced many challenges in the postcolonial era. These new countries inherited colonial borders that artificially divided some ethnic groups into multiple states. The opposite process was equally destructive: new governments used coercive and authoritarian means in attempts to unify multiple ethnic groups within their inherited colonial borders into nation-states where loyalty centered on the state. In this unit, students can engage in a comparative analysis of postcolonial developments in at least three of the following regions: Africa, the Middle East, Latin America, or China.

How has globalization affected people, nations, and capital?

Students will explore the effects of globalization and the formation of international organizations such as the United Nations. Focusing on the United Nations and their development of the universal standards for human rights and the spread of scientific and medical breakthroughs has spread worldwide through international efforts to address problems of disease, natural disasters, and environmental degradation. Students will learn how economic globalization is a result of the formation of multinational corporations, international financial institutions, and the development of regional trading blocs and communications technology. In addition, students will also explore the positive and negative effects of globalization.

Unit Assignment(s):

To culminate this year long course, students will individually investigate a current event of their choosing (for example, Cuba's leadership changes; mass migration from Central America; Venezuela's struggles; AIDS epidemic; climate change's impacts on impoverished communities; exploitation of labor; Israel and Palestine conflict; present day territories of the USA; Russia's continued dominance in Eastern Europe; trade wars; borders; Hong Kong; etc.). Each student will prepare a 2:00-3:00 video via Adobe Spark or YouTube, where they will be the narrator, reporting their findings in their video, present the video to the class, and participate in follow up discussions will occur via Canvas.

Title:	Ethnic and Social Justice US History
Length of course:	Full Year
Subject area:	History / Social Science ("a") / U.S. History
UC honors designation?	No
Prerequisites:	World History (Recommended)
Co-requisites:	None
Integrated (Academics / CTE)?	No

Grade levels: 11th

Course Description

Course overview:

Conventional U.S. History courses are often taught from a purely political perspective. That is, they use the chronology of Presidents and major events in US History to serve as guide points for units. This approach can leave a student with a one-sided view of U.S. History. Students start to believe that there is only one perspective and they don't see themselves as a part of history.The purpose of this course is to teach U.S. History from the perspectives of ethnic, racial or marginalized groups,reflecting narratives and points of view rooted in that group's lived experiences and intellectual scholarship – one which emphasizes the roles of justice, power, race, and gender in American history.

Course content:

Unit 1: Nation's Beginnings

The course begins with a selective review of United States history, with an emphasis on two major topics —the nation's beginnings and the industrial transformation of the new nation. Special attention is given to the ideological origins of the American Revolution and its grounding in the democratic political tradition and the natural rights philosophy with an emphasis on ideas including liberty, equality, and individual pursuit of happiness. This framing of the Constitution provides a background for understanding the contemporary constitutional issues raised throughout this course. Highlights can include the emergence of a free democratic system of government alongside an entrenched system of chattel slavery that lasted for nearly a century. Students will grapple with the parallel, and seemingly paradoxical relationship. Other highlights will include the events leading up to the Civil War, the successes and failures of Reconstruction, and informal and formal segregation brought on by Jim Crow laws that provides context for understanding racial inequities in America then and now.

Key Assignment:

Preamble Collage- Students will produce a collage that will have the Preamble stated in the middle of the page and then twelve images surrounding the Preamble. The 12 images will be 2 pictures, per the 6 goals, that show what the students feel in America today represents the Preamble goals. On the back, students will argue if they feel the goals have been met or if the goals are still lacking

and what needs to be addressed to complete the goal. Students will learn that the Constitution is a living document that can and should be changed to reflect American society and values as it changes over time.

💻 Unit Assignment(s):

Preamble Collage- Students will produce a collage that will have the Preamble stated in the middle of the page and then twelve images surrounding the Preamble. The 12 images will be 2 pictures, per the 6 goals, that show what the students feel in America today represents the Preamble goals. On the back, students will argue if they feel the goals have been met or if the goals are still lacking and what needs to be addressed to complete the goal. Students will learn that the Constitution is a living document that can and should be changed to reflect American society and values as it changes over time.

Unit 2: Industrialization, Urbanization, Immigration

In the second unit, students concentrate on the nineteenth-century growth of the nation as an industrial power and its resulting societal changes. This question can frame students' initial investigation of this era: How did America's economy, industries, and population grow after the Civil War? Industrialization (an umbrella term that describes the major changes in technology, transportation, communication, the economy and political system that fostered the growth) allowed for ballooning prosperity at the turn of the century. Students examine emergence of industrial giants, "robber barons," anti-union tactics, and the gaudy excesses of the Gilded Age. Students will also learn about the people that fueled industrialization in the nation's expanding urban centers migrated there from more rural areas domestically and came from nations all over the world. Tens of millions of darker-skinned, non-English-speaking, non-Protestant migrants to American cities. Being pushed from their homelands for economic, political, and religious reasons, this diverse group was pulled to America with hope for economic opportunities and political freedom.

Key Assignment:

Family Tree and Immigration Story- Students will interview family members and create family tree going back at least three generations. On their trees they will mark themselves or their "first" family member to come to the United States. After identifying that family member they will write a journal entry retelling the events of the day coming to the United States. In their response, students will write about the causes for immigration and the outcomes their family member wanted from a new life in America. Students will learn that all immigration stories are unique but that the causes and hopes for most immigrants are universal. By doing so they can identify more with the United States as truly a nation of immigrants.

Unit Assignment(s):

Family Tree and Immigration Story- Students will interview family members and create family tree going back at least three generations. On their trees they will mark themselves or their "first" family member to come to the United States. After identifying that family member they will write a journal entry retelling the events of the day coming to the United States. In their response, students will write about the causes for immigration and the outcomes their family member wanted from a new life in America. Students will learn that all immigration stories are unique but that the causes and hopes for most immigrants are universal. By doing so they can identify more with the United States as truly a nation of immigrants.

Unit 3: Progressive Reform

A group of reformers – broadly termed progressives – emerged around the turn of the century and sought to remedy some of the problems that came from industrialization. Progressives aimed to identify urban problems, work closely with communities to solve them, and then lobby the government to institute broader reforms to prevent future suffering. Female reformers took advantage of new opportunities for education and employment previously reserved for men. Progressives particularly tried to address problems of immigrants, especially children, through advocacy. During these same years, progressive state legislation regulated child labor, the minimum wage, the eight-hour day, and mandatory public education, as well as supplied women in many states with the vote.During this time also the concepts of homosexuality and heterosexuality became defined as discrete categories of identity. This had consequences for the ways that people thought about intimate relationships between people of the same gender.

Key Assignment:

Salad Bowl vs. Melting Pot- Students will debate if the United States is a salad bowl or a melting pot. During the debate students will argue the merits of the Americanization movement, which sought to assimilate immigrants into becoming Americans through schooling, cultural and social practices, and at work. Versus today's standards that generally embrace having a plurality of experiences in the country which makes America more diverse and open. After the debate students will write a 3-5 paragraph essay that argues which side they think America currently reflects.

Unit Assignment(s):

Salad Bowl vs. Melting Pot- Students will debate if the United States is a salad bowl or a melting pot. During the debate students will argue the merits of the Americanization movement, which sought to assimilate immigrants into becoming Americans through schooling, cultural and social

practices, and at work. Versus today's standards that generally embrace having a plurality of experiences in the country which makes America more diverse and open. After the debate students will write a 3-5 paragraph essay that argues which side they think America currently reflects.

Unit 4: Imperialism/WWI

How did America's role in the world change between the 1870s and 1910s? The United States protected and promoted its economic and political interests overseas during this intense period of global competition for raw materials, markets, and colonial possessions. Students may consider the nation's objectives and attitudes about other nations and diverse people in analyzing its immigration policy, limitations and scrutiny placed on those already in the U.S., and exclusion of people considered disabled, as well as foreign policy, including the American Open Door policy, and expansion into the South Pacific and Caribbean following the Spanish-American and Philippine-American Wars as well as the United States' involvement in World War I.

Key Assignment:

Evaluate and analyze United States foreign policies including the Monroe Doctrine, The Roosevelt Corollary, The Open Door Policy or the Platt Amendment by working in groups of 4 to create a powerpoint presentation that summarizes one of these foreign policies. After groups present, groups will be given a case study to look at the annexation of Hawaii. Students must decide which American foreign policy plan was used in Hawaii's annexation. Then they need to decide if that plan was constitutional or not.

Unit Assignment(s):

Evaluate and analyze United States foreign policies including the Monroe Doctrine, The Roosevelt Corollary, The Open Door Policy or the Platt Amendment by working in groups of 4 to create a powerpoint presentation that summarizes one of these foreign policies. After groups present, groups will be given a case study to look at the annexation of Hawaii. Students must decide which American foreign policy plan was used in Hawaii's annexation. Then they need to decide if that plan was constitutional or not.

Unit 5: 1920s

As students learn about the prosperity and proliferation of consumer goods on the market in the 1920s, students learn that with these changes came both intended and unforeseeable consequences, many resulting in social effects on people and impacts on the environments in which they lived. Students should explore cultural and social elements of the “Jazz Age.” Women experienced new freedoms but also faced pressure to be attractive and sexual through the growing cosmetics and entertainment industries, and their related advertisements.
Speakeasies represented a challenge to Prohibition but established a vast social world that broke the law and challenged middle-class ideas of what should be allowed. Within those arenas, LGBT patrons and performers became part of what was tolerated and even sometimes acceptable as LGBT-oriented subcultures grew and became more visible. The continued flow of migrants and the practical restrictions of segregation in the 1920s helped to create the “Harlem Renaissance,” the literary and artistic flowering of black artists, poets, musicians, and scholars, such as Alain Locke, Langston Hughes, Countee Cullen, Gertrude “Ma” Rainey, and Zora Neale Hurston.

Key Assignment:

Students will examine Langston Hughes’ poem “I, Too” to study the intent of Harlem Renaissance artists. Students will discuss in triads why African American leaders would use art to express themselves, in terms of equality, rather than to work through political, legal, or economic avenues. After using critical reading strategies and marking the text, students will need to rewrite the "I, Too" poem to validate their own worth and value to the United States of America. Students will learn to empower themselves which hopefully translates into self advocacy.

💻 Unit Assignment(s):

Students will examine Langston Hughes’ poem “I, Too” to study the intent of Harlem Renaissance artists. Students will discuss in triads why African American leaders would use art to express themselves, in terms of equality, rather than to work through political, legal, or economic avenues. After using critical reading strategies and marking the text, students will need to rewrite the "I, Too" poem to validate their own worth and value to the United States of America. Students will learn to empower themselves which hopefully translates into self advocacy.

Unit 6: Great Depression & New Deal

The collapse of the national and international financial system in 1929 led to the crash of the American stock market in October, 1929. The stock market crash revealed broad underlying weaknesses in the economy, which resulted in the most intense and prolonged economic crisis in modern American history. the Great Depression resulted from four broad factors: 1) it resulted from over-saturated markets in the nation’s two leading industries: automobiles and construction; 2) it grew out of lack of regulations in the financial and banking industries 3) it stemmed from a

mal-distribution of income (The failure of businesses to share more equally the fruits of prosperity decreased demands for goods and services); 4) it grew out of the world-wide financial system created by World War I. In response Roosevelt created the New Deal, which was a series of programs, agencies, laws, and funds intended to provide relief, reform, and recovery to combat the economic crisis. Expansionary fiscal and monetary policies, job programs, and regulatory agencies are a few of the broad roles for government set in place by the New Deal.

Key Assignment:

Students will research information about government programs/organizations that were created by FDR during the New Deal. Afterwards we will spend two class days role playing by conducting a job fair. Half the class will present on one day with the others being Americans looking for work. Then the next day they will switch and the students who were looking for work will now be the ones representing the government looking for workers. Students will gain key insight on the different programs that helped America during the New Deal. They will also gain key experience learning how to interview for a job by collaborating, communicating, and critically thinking by answering questions on the spot.

Unit Assignment(s):

Students will research information about government programs/organizations that were created by FDR during the New Deal. Afterwards we will spend two class days role playing by conducting a job fair. Half the class will present on one day with the others being Americans looking for work. Then the next day they will switch and the students who were looking for work will now be the ones representing the government looking for workers. Students will gain key insight on the different programs that helped America during the New Deal. They will also gain key experience learning how to interview for a job by collaborating, communicating, and critically thinking by answering questions on the spot.

Unit 7: WW2

In this unit students examine the role of the United States in World War II. Students understand the debate between isolationists and interventionists in the United States. By reading contemporary accounts in newspapers and popular magazines, students understand the extent to which this war taught Americans to think in global terms. By studying wartime strategy and major military operations, students grasp the geopolitical implications of the war and its importance for postwar international relations. Students learn about the roles and sacrifices of American soldiers during the war, including the contributions of the Tuskegee Airmen, the 442nd Regimental Combat team, women and gay people in military service, the Navajo Code Talkers, and the important role played by Filipino soldiers in the war effort. When possible, this study can include oral or video histories of those who participated in the conflict. California played a huge role in America's

successful war effort - the number of military bases in the state increased from 16 to 41, more than those of the next 5 states combined. By the end of the war, California would be the nation's fastest growing state, and the experience of war would transform the state demographically, economically, socially, and politically.

At home, World War II had many long-lasting effects on the nation. Wartime factory work created new and higher-paying job opportunities for women, African Americans, and other minorities; the opening up of the wage-labor force to women and minorities helped them to raise their expectations for what they should be able to achieve. Meanwhile, immigration continued, especially to California, which depended upon agricultural labor provided by immigrants, particularly Mexicans, who came through the Bracero Program. In addition to having economic opportunities advanced by World War II, the ideology of the war effort, combined with the racial segregation of the armed forces, sparked multiple efforts at minority equality and for civil rights activism when the war ended. wartime racial discrimination went beyond military segregation. Los Angeles Mexicans and Mexican Americans found themselves under violent attack during the 1943 Zoot Suit Riots, when the police allowed white Angelenos and servicemen to rampage against them. In 1942, President Roosevelt signed Executive Order 9066, which authorized the relocation and internment of 110,000 Japanese Americans and "resident aliens" living within 60 miles of the west coast, and stretching inland into Arizona, on grounds of national security.

Key Assignment:

Divide the class up into groups of 9 to simulate the Supreme Court. The students will read the main arguments made in *Korematsu v. United States. After they debate the arguments the students must vote to intern or overturn. After that we would analyze the court's decision to see where the students ended up based on the court's final decision. To follow up I will have the students argue the pro and cons of President Trump's Travel Ban. Using the decision made in Korematsu v. United States the students would then vote again to determine if the travel ban is constitutional or not. From this students will learn how far America will go to defend itself when at war. The importance of this exercise is for students to take that knowledge and apply it to the current problems we face today in America's longest war , the war on terrorism and how to protect people's rights as we combat terror.*

Unit Assignment(s):

The importance of this exercise is for students to take that knowledge and apply it to the current problems we face today in America's longest war , the war on terrorism and how to protect people's rights as we combat terror.*

Unit 8: Cold War Struggles Abroad

- **How did American foreign policy shift after World War II?**

  Students can learn about change over time by deconstructing the intent of Containment; the goal of containing the threat of further Soviet influence in the world broke from earlier precedents that advocated spreading all over the world American ideals of open markets and self-determination. As part of their study of the policy of Containment, students examine the Soviet expansion into Eastern Europe, the Marshall Plan, the Truman Doctrine, and the creation of the North Atlantic Treaty Organization military alliance, and the competition for allies within the developing world. In the postwar Cold War context, students study the creation of the United Nations in 1945 and its role in global politics and economics, including the role of institutions such as the International Monetary Fund; the United Nations Education, Scientific and Cultural Organization; the United Nations Human Rights Commission; the World Health Organization; and the World Bank. They also learn about the Universal Declaration of Human Rights, adopted by the United Nations in 1948. Students understand the reasons for the continued U.S. support of the Geneva Conventions.
  Key Assignment:
  Students compare and contrast the American Bill of Rights with the United Nations Declaration of Human Rights. After discussing what is in both students will then create their own Universal Human Rights Declaration and argue why the world should adopt them.

Unit Assignment(s):

Students compare and contrast the American Bill of Rights with the United Nations Declaration of Human Rights. After discussing what is in both students will then create their own Universal Human Rights Declaration and argue why the world should adopt them.

Unit 9: Cold War Domestic

How did the Cold War affect ordinary Americans?

Institutions ranging from school districts and school boards, to the Screen Actors Guild in Hollywood, to civil rights organizations produced blacklists that contained the names of suspected Communists or Communist sympathizers, which meant that the groups would not affiliate with those people. Students can study the loyalty oaths (an important issue at the University of California in the 1950s) and legislative investigations of people's beliefs as part of this unit. Still, during this era, there were significant Supreme Court decisions that protected citizens' rights to dissent and freedom of speech.

Key demographic changes such as the Baby Boom, white migration to the newly developing suburbs, migration to the Sun Belt, and the decline of the family farm transformed where and how Americans lived. Within these broad demographic shifts televisions, home appliances, automobiles, the interstate highway system, and shopping malls fostered changes in American families' lifestyles.

While more Americans than ever before enjoyed the comforts of middle-class suburban affluence, not all people benefitted from it. Minorities were forbidden from owning property in these newly-constructed developments. While the white middle class grew in size and power, poverty concentrated among minority groups, the elderly, and single-parent families. Betty Friedan also coined the term "feminine mystique" to describe the ideology of domesticity and suburbanization, which left white middle-class college educated housewives yearning for something more than their responsibilities as wives and mothers.

Key assignment:

After studying some of the famous Blacklists from Hollywood in the 1950s. I would have the class do a philosophical walls debate on if they believe Colin Kapernick, former NFL quarter back is suffering from a 'blacklist" imposed by the NFL Owners. Students would get to apply knowledge obtained about the 1950s and argue if events today in current events are mirrors of the past.

Unit Assignment(s):

After studying some of the famous Blacklists from Hollywood in the 1950s. I would have the class do a philosophical walls debate on if they believe Colin Kapernick, former NFL quarter back is suffering from a 'blacklist" imposed by the NFL Owners. Students would get to apply knowledge obtained about the 1950s and argue if events today in current events are mirrors of the past.

Unit 10: Movements for Equality

Why was there a civil rights movement?

Although the 1950s have been characterized as a decade of relative social calm, the struggles of African Americans, Chicano/as, Native Americans, Asian Americans, as well as women and lesbian, gay, bisexual, and transgender people that emerged forcefully in the 1960s, have their roots in this

period. In this unit students focus on the history of the movements for equality, and on the broader social and political transformations that they inspired, beginning with the civil rights movement in the south and continuing for the thirty-five year period after World War II.

What does "equal rights" mean?

To interrogate this issue students should be encouraged to consider what "equality of rights" versus "equality of opportunity" might entail; this sort of discussion will lead students to employ the historical thinking skill of contingency, in other words, to see the civil rights movement not as a pre-ordained movement that turned out exactly as intended. Instead, teachers should encourage the class to develop a working definition of equal rights, as it will likely change or be challenged as the class surveys different forms of activism.

What were the goals and strategies of the civil rights movement?

Events in this history illuminate the process of change over time in terms of goals and strategies, and they highlight for students the challenges of participating in the movement: the Montgomery bus boycott, triggered by the arrest of Rosa Parks, led by the young Martin Luther King, Jr., and sustained by thousands of African-American women; the clash in Little Rock, Arkansas, between federal and state power; the student sit-in demonstrations that began in Greensboro, North Carolina; the "freedom rides"; the march on Washington, D.C., in 1963; the Mississippi Summer Project of 1964; and the march in Selma, Alabama, in 1965; and the Supreme Court's 1967 *Loving v. Virginia* decision to overturn state anti-miscegenation laws. Students should also learn about Dr. King's philosophical and religious dedication to nonviolence by reading selected excerpts from primary source documents such as "Letter from a Birmingham Jail" The Civil Rights Act of 1964, the Voting Rights Act of 1965, and the Elementary and Secondary Education Act of 1965 indicated the federal government's commitment to provide for the rights of full citizenship to people of all races, ethnicities, religious groups, and sexes.Students may study how Cesar Chavez, Dolores Huerta, and the United Farm Workers' movement used nonviolent tactics, educated the general public about the working conditions in agriculture, and worked to improve the lives of farmworkers. Students should understand the central role of immigrants, including Latino Americans and Filipino Americans, in the farm labor movement.American Indian Movement (AIM) activists took over the Bureau of Indian Affairs building in Washington, D.C. and held a stand-off at Wounded Knee, South Dakota. California activists like Harvey Milk and Cleve Jones were part of a broader movement that emerged in the aftermath of the Stonewall riots, which brought a new attention to the cause of equal rights for homosexual Americans.

Through the careful selection and analysis of the many primary sources available from the period, students come to understand both the extraordinary courage of ordinary black men, women, and children and the interracial character of the civil rights movement.

Key Assignment:

Have students research, using their one to one laptops, on the supreme court case *Mendez v. Westminster on the US Court website.*

http://www.uscourts.gov/educational-resources/educational-activities/background-mendez-v-westminster-re-enactment

Sections of the case would be divided amongst the groups in a jigsaw manner and each student would provide details on the material they learned to their group. After that we would have the kids create an opening argument for Brown vs. Board of Education Topeka using Mendez v. Westminster as a precedent for integrating schools.

💻 Unit Assignment(s):

Have students research, using their one to one laptops, on the supreme court case *Mendez v. Westminster on the US Court website.*

http://www.uscourts.gov/educational-resources/educational-activities/background-mendez-v-westminster-re-enactment

Sections of the case would be divided amongst the groups in a jigsaw manner and each student would provide details on the material they learned to their group. After that we would have the kids create an opening argument for Brown vs. Board of Education Topeka using Mendez v. Westminster as a precedent for integrating schools.

Unit 11: Vietnam

How was the war in Vietnam similar to and different from other Cold War struggles?

Hundreds of thousands of American service members volunteered for and were drafted to fight in the war, which government and military leaders portrayed as an extension of broader Cold War struggles. Over the course of the first year of the war American casualties started to mount, progress seemed elusive, and the ways of calculating success were muddled. Recording in the haze of war, American journalists reported on television what urban warfare and guerrilla fighting entailed; in this context Americans started to call into question the principles upon which the war was being fought. When it became clear that American minorities were fighting and dying disproportionate to their representation in the country, many radicalized rights groups loudly protested the war on the grounds that to them it represented one more form of oppression – oppression for minorities at home and abroad.

How did the war in Vietnam affect movements for equality at home?

From within the anti-war and rights protest movements, a “counterculture” emerged with its own distinctive style of music, dress, language, and films, which went on to influence mainstream social and cultural sensibilities. Those that participated in the counterculture believed that true equality could only be realized through a revolution of cultural values; thus hippies decided to “check out” from mainstream society as a way of rebelling against the mainstream middle-class American values and seeking true happiness. Counter-culturalists rebelled by calling into question Cold War values and even American principles.

Key Assignment:

According to Mario Savio, a pioneer of the Free Speech Movement at UC Berkeley in 1964: “There's a time when the operation of the machine becomes so odious—makes you so sick at heart—that you can't take part. You can't even passively take part. And you've got to put your bodies upon the gears and upon the wheels, upon the levers, upon all the apparatus, and you've got to make it stop. And you've got to indicate to the people who run it, to the people who own it that unless you're free, the machine will be prevented from working at all.”

After decoding the quote I would have the students create mini posters describing how they perceived what this quote meant for the struggles of marginalized groups from the 1960s. Then I would have them do a group poster on how they feel this poster would be represented in American society today. I want to see if the students can decipher the metaphor and see if they feel this quote is relevant in the struggles of American citizens today.

Unit Assignment(s):

According to Mario Savio, a pioneer of the Free Speech Movement at UC Berkeley in 1964: “There's a time when the operation of the machine becomes so odious—makes you so sick at heart—that you can't take part. You can't even passively take part. And you've got to put your bodies upon the gears and upon the wheels, upon the levers, upon all the apparatus, and you've got to make it stop. And you've got to indicate to the people who run it, to the people who own it that unless you're free, the machine will be prevented from working at all.”

After decoding the quote I would have the students create mini posters describing how they perceived what this quote meant for the struggles of marginalized groups from the 1960s. Then I would have them do a group poster on how they feel this poster would be represented in American society today. I want to see if the students can decipher the metaphor and see if they feel this quote is relevant in the struggles of American citizens today.

Unit 12: Contemporary American Society

- How has the role of the federal government (and especially the presidency) changed from the 1970s through more recent times? Students begin their studies of contemporary America by surveying American presidents that served during these decades. Presidents Richard Nixon, Jimmy Carter, Ronald Reagan, George H.W. Bush, Bill Clinton, George W. Bush, Barack Obama and Donald Trump all promised to alter the scope of the government – some to contract it and some to extend it.

- What does globalization mean and how has it affected the United States? Geographically, students can focus on American post-Cold War relations with Latin America. The strong

economic ties between the regions deepened throughout the 1980s, 1990s, and 2000s. *Maquiladoras,* export processing zones or free enterprise zones, between Mexico and the U.S. meant that from the 1980s through the 2000s goods flowed between countries at freer and faster rates. Similarly, the North American Free Trade Agreement (NAFTA) between Canada, the United States, and Mexico played a central role in fostering closer relationships between the three countries, but tensions remain on issues related to economic regulation, labor conditions, immigration, and damage to the environment.

- Why is the United States more diverse now than it was in the middle of the twentieth century? Students can examine census data to identify basic demographic changes; how has the composition of the U.S. shifted between 1950 -1980 and 1980 - today, for example? By exploring quantitative immigration information, students notice significant changes in the national origins of immigrants to the United States. As with their studies of immigration from the beginning of the twentieth century, students can analyze push and pull factors that contributed to shifting immigration patterns, but they should also learn about changes in immigration policy. In California Latino/as became the largest ethnic group in 2010, and Latino/a children comprised more than 51% of public schools. It was within this context that the Latino/a community became increasingly politically active. In addition, students analyze the impact and experience of refugees who fled Southeast Asia after the Vietnam War or Iranians after the Islamic Revolution.

- In what ways have issues such as education; civil rights for people of color, immigrants, and lesbian, gay, bisexual, and transgender Americans, and disabled Americans; economic policy; recognition of economic, social and cultural rights; the environment; and the status of women remained unchanged over time? In what ways have they changed? Students recognize that under our democratic political system the United States has achieved a level of freedom, political stability, and economic prosperity that has made it a model for other nations, the leader of the world's democratic societies, and a magnet for people all over the world who yearn for a life of freedom and opportunity. Students understand that Americans' rights and freedoms are the result of a carefully defined set of political principles that are embodied in the Constitution. Yet these freedoms are imperfect: for example, even though Americans elected the nation's first black president in 2008, poverty, incarceration, and lower life-expectancy rates continue to afflict communities of color at rates that are far higher than that of white communities. Nevertheless, students see that the enduring significance of the United States' lies its free political system, its pluralistic nature, and its promise of opportunity. The United States has demonstrated the strength and dynamism of a racially, religiously, and culturally diverse people. Students recognize that our democratic political system depends on them—as educated citizens—to survive and prosper.

Key Assignment:

After looking at the election results from the 2000 and the 2016 Presidential Elections, is the Electoral College now defunct? Students would need to argue why the Founding Fathers created the Electoral College in the first place. Then write an argumentative essay why America should have the Electoral College moving forward or switch to the popular vote.

Unit Assignment(s):

After looking at the election results from the 2000 and the 2016 Presidential Elections, is the Electoral College now defunct? Students would need to argue why the Founding Fathers created the Electoral College in the first place. Then write an argumentative essay why America should have the Electoral College moving forward or switch to the popular vote

Course Title

Ethnic Studies

Description of Target Group

This course is for 10th to 12th grade students.

Purpose

The purpose of Ethnic Studies is to acquaint the student with other's belief systems, learn respect for other's opinions, explore various minority groups and their contributions to America and the world, and teach students about our past. This is a one-semester course. It is an elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Discuss the contributions of different ethnic groups.
2. Describe cultural similarities and differences among several ethnic groups.
3. Discuss current problems facing different cultural groups.
4. Describe the influences of heredity and environment on personality.
5. Discuss the types of and reasons for the discrimination each ethnic group has had to face in the United States.
6. Identify the factors that can lead to cultural change.
7. Demonstrate a knowledge of the reasons for the arrival of each ethnic group to the United States.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary books Used in the Santa Maria Joint Union High School District

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

Course Title

European History A/B (AP)

Department / Description

This course is a Social Science Department offering intended to prepare students to pass the Advanced Placement examination in European History. Dealing primarily with the time period from the Renaissance to the Cold War Era, the course focuses on the European aspect of World History and as such, students completing the course will satisfy the Modern World History graduation requirement.

Target Group

This course is designed primarily for 10th grade students, however 11th and 12th grade students seeking Advanced Placement credit may enroll.

Purpose

The course will provide students with the comprehensive knowledge of European History as well as an opportunity to hone their critical reading, essay writing and test taking skills.

Prerequisites

None

Standards of Expected Student Achievement

Upon the completion of this course, students will

- be able to describe Medieval society
- explain the cultural achievements of the Renaissance
- Connect the religious, political and socio-economic forces which sparked the Protestant Reformation
- explain what impact the Old World have on the New, and vise-versa
- Compare constitutionalism with nationalism
- know the major contributors to the movement and what created the new world-view of the Scientific Revolution and Enlightenment
- describe the lives of “real people” in the 1700’s
- know what stages the French Revolution underwent and how it is interrelated to American Revolution
- know why the Industrial Revolution began and what impact it had
- describe the attempts of the Congress of Vienna Powers to establish a conservative international order

- describe the lives of Europeans after the Industrial Revolution
- explain “Age of Nationalism”
- show the affect of imperialism on the non-Europeans
- explain the factors causing World War I and the immensity of the war in Europe
- connect “New Science” with inter-war culture and the Great Depression with the political developments
- describe totalitarianism in its fascistic and communistic models during the interwar period
- know the causes, phases and results of World War II
- show the nature of the Cold War and explain what led to the collapse of the Iron Curtain

Assessment of Student Learning

Students will write quizzes and essays, take multiple choice examinations, participate in debates, and create projects.

Instructional Materials

Refer to: Secondary adopted Textbooks and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Students will write, make oral presentations, debate and create projects.

Comments:

Course Purpose: *What is the purpose of this course?*

This course, Food and Culture, attempts to describe and analyze a number of gastronomic domains from an anthropological perspective. We will be interested not only in what people eat, but how, when, where and why people eat some foods but not others.

Theoretically, the kitchen of any society (this would include a vending machine or fast food restaurant in our own) serves as an important source for cultural information We will consider methodologies that will enable us to examine food in its cultural context. Practically, any statement about the nutritional value of food should be seen in light of its cultural values. As we know from our own society, despite all our knowledge about nutrition, people continue to eat foods that are nutritionally lacking. The same happens in many societies, for one reason or another, and we should examine the reasons why it happens.

The course will begin with a consideration of the evolution of mankind's diet and the development of different food production systems, from both an evolutionary perspective and contemporary one. There will be examples from a variety of cultures including foraging (hunting and gathering), agricultural, pastoralism and industrialized societies, including the United States. In these cases, we will examine the foods people eat, the reasons they select these foods, the society's methods of food production, the relation of the food system to the ecosystem, and the cultural and social functions of foods. This is not a nutrition course - although we will be looking at some of the nutritional implications of various food practices as well as their social and cultural significance.

The course will also consider the manner in which food may be viewed in its cultural and social context and will include food classification systems, food and ethnic identity, and the symbolic use of food. How do people define food? What is "edible"? What is a meal? How do people manipulate food exchanges to build social status? What is the meaning of food taboos?

The final section of the course will look at some of the recent dietary changes both in the United States and in developing countries, global food issues, such as world hunger and famine, and the politics of food and nutrition policies.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

Course Content (units overlap, and are revisited quite often in a circular/reinforced curriculum)

Introduction & Overview; Anthropological Approaches to Food:
Diet & Evolution
Historical Perspective: Dietary Revolutions
Food Technologies: How People Get Their Food in non-industrialized Societies
Food Technologies: How People Get Their Food in Industrialized Societies
Eating to Live or Living to Eat? - Food and Social Organization
Worldview, Religion, and Health Beliefs: The Ideological Basis of Food Practices What is Edible?
What is a Meal
Hunger in Global Perspective
Addressing Global Food Issues
Changing Dietary Practices

Course Resources
Articles -
Gillespie -"A Wilderness in the Megalopolis..."
Douglas - "Abominations of Leviticus
Harris - "India's Sacred Cow"
Douglas - "Deciphering a Meal"
Goode, et al. - Italian-Americans

Content Standards
EEI Model Curriculum - increase environmental literacy for California's kindergarten through grade 12 (K-12) students by teaching science and history-social science academic content standards to mastery within an environmental context.

CA HSS Analysis Skills (9–12): Historical Research, Evidence, and Point of View 1; Historical Interpretation 3, 4, 5
CA HSS Analysis Skills (9–12): Chronological and Spatial Thinking 2, 3; Historical Interpretation 1
CA CCSS for ELA/Literacy: RH.9–10.6, 9, WHST.9–10.9, SL.9–10.1c, 2, 3, 4b
CA ELD Standards: ELD.PI.9–10.3, 5, 9. 11a; ELD.PII.9–10.1

Certificate: *(if applicable)*

Course Title

Geographic Information Systems (G.I.S.) Geography A (AP)

Description of Target Group

This 5-unit course is for higher education bound 11th and 12th grade students. Students who have an interest in cartography, city and urban planning, ecology and environment, engineering, historical / geographical analysis, international relations, marketing research, political analysis, public service and other related fields will benefit from the skills and the knowledge base available in this course.

Prerequisites may be one of the following high school courses: Geometry, IMP 2, Mechanical Drawing 1A/B, Modern World History or Survey of Drafting.

Purpose

GIS Geography A is a modern high technology study of geography. It ties the active hands-on use of computers, related instruments, and fieldwork to worldwide locations, cultures, historical events, and demographical data.

Course Content

- Understand and use the satellite system which has created the worldwide Global Positioning System (GPS)
- Understand and use a computer aided drafting design (CADD) program
- Create a simple GIS map (example: SMHS's football field located on a world map)
- Create a more complex GIS map assigning statistical data (example: a city block map with the exterior house colors indicated)
- Terms and definitions (example: topology, nodes, lines, and areas)
- Occupational and higher educational opportunities

Student Performance Skills

? Problem solving through posing or receiving queries, applying technology, using a diverse knowledge and drawing a conclusion

? Work co-operatively with others by sharing data and techniques

? Present ideas and conclusions to others by verbal and written presentations or communiqués

Geographic Information Systems (G.I.S.) Geography A (AP) (continued)

Assessment of Student Learning

- Students present evidence of learning by making group presentations based on student created GIS / GPS maps
- Students present evidence of learning by presenting ideas and conclusions to others by verbal and written presentations or communiqués
- Teacher observations
- Summative, formative teacher generated evaluations

Instructional Materials

Texts

? Main textbook and its usage to be determined

Supplementary Text and Software

? Geographic Informational Systems: A Guide to the Technology by John C Antnenucci 1991
? A Modern Dictionary of Geography by John Small 1993
? Autodesk Autocad CADD software version 11 or higher
? Micrstation CADD software version 95 or higher
? GIS Software (to be determined, possibly ARC VIEW)
? MS Windows 95 or NT or higher

Activities

This course will be presented by the selected methods and techniques of the instructors and will - utilize GPS equipment, CADD and database software, GIS software, lecture, demonstration, teamwork, field work, co-operative learning, verbal and written communication, student study, quizzes, and examinations.

Cross Curricular Credit and Presentation

This high level technology based course was designed by and will be offered and presented for Social Studies AP credit by the Industrial Arts Technology and Social Studies departments of Santa Maria High School (and R.H.S. if desired). AP credit agreements are with UC Riverside and UC Santa Barbara and Cal Poly, SLO (under application).

Course Title

Geographic Information Systems (G.I.S.) Geography B (AP)

Description of Target Group

This 5-unit course is for higher education bound 11th and 12th grade students. Students who have an interest in cartography, city and urban planning, ecology and environment, engineering, historical / geographical analysis, international relations, marketing research, political analysis, public service and other related fields will benefit from the skills and the knowledge base available in this course.

Prerequisite for this course is a passing grade in G.I.S. Geography A

Purpose

GIS Geography is a modern high technology study of geography. It ties the active hands-on use of computers, related instruments, and fieldwork to worldwide locations, cultures, historical events, and demographical data.

Course Content

- Understand the two primary database types of graphical (spatial) and tabular (relational)
- Understand existing and commercially available databases (example: TIGER* from the U.S. Census Bureau) *Topological /integrated Geographic Encoding and Referencing
- Create a thematic GIS map and synthesize conclusions from a suggested query (example: how many houses are painted white with a one car garage in a given city block?)
- Create charts, graphs and tables from a database
- Terms and definitions (example: topology, nodes, lines, and areas)
- Occupational and higher educational opportunities

Student Performance Skills

? Problem solving through posing or receiving queries, applying technology, using a diverse knowledge and drawing a conclusion

? Work co-operatively with others by sharing data and techniques .

Geographic Information Systems (G.I.S.) Geography B (AP) (continued)

? Present ideas and conclusions to others by verbal and written presentations or communiqués

Assessment of Student Learning

? Students will present evidence of learning by making group presentations based on student created GIS / GPS maps

? Students will present evidence of learning by establishing the GIS of world events past or present and major world landmarks and sites

? Students will present evidence of learning by presenting ideas and conclusions to others by verbal and written presentations or communiqués

? Teacher observations

? Summative, formative teacher generated evaluations

Instructional Materials

Textbooks

? Main textbook and its usage to be determined

Supplementary Text and Software

? Geographic Informational Systems: A Guide to the Technology by John C Antnenucci 1991
? A Modern Dictionary of Geography by John Small 1993
? Autodesk Autocad GADD software version 11 or higher
? Microstation CADD software version 95 or higher
? GIS Software (to be determined, possibly ARC VIEW)
? MS Windows 95 or NT or higher

Activities

This course will be presented by the selected methods and techniques of the instructors and will utilize GPS equipment, CADD and database software, GIS software, lecture, demonstration, teamwork, field work, co-operative learning, verbal and written communication, student study, quizzes, and examinations.

Cross Curricular Credit and Presentation

This high level technology based course was designed by and will be offered and presented for Social Studies AP credit by the Industrial Arts Technology and Social Studies departments of Santa Maria High School (and R.H.S. if desired). AP credit agreements are with UC Riverside and UC Santa Barbara and Cal Poly, SLO (under application).

Course Title

Government, United States (AP)

Description of Target Group

Advanced Placement U. S. Government is a one-semester course designed to allow highly motivated, intellectually advanced students to study the Constitution and the structure of American government, including the executive, legislative and judicial processes of our federal system. This course will better prepare students for their responsibilities as citizens.

Purpose

This course has as its primary objective the preparation of the student to assume the role as a responsible citizen at the state and national level. The student will also acquire an understanding of, and appreciation of, our living Constitution as it relates to the protection of our American liberties.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Discuss the evolution of Democracy.
2. List responsibilities to self, community, and nation.
3. Explain the functions of government at the local, state, and federal level.
4. Discuss the political, social, and legal aspects of our society.
5. Identify the function of and methods which interest groups use to influence political decisions.
6. Interpret the Judicial Systems as related to the civil and criminal rights under the Constitution.
7. Compare dictatorships, oligarchies, and democracies and demonstrate a knowledge of how they affect individuals.
8. Discuss how political parties allow the people to affect change in government.
9. Describe the process of primary elections, national conventions, and national elections.
10. Identify the structure and function of the Legislative branch of government.
11. List the powers and duties of the Executive branch of government.
12. Analyze and interpret current and/or controversial issues.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Films, field trips, guest speakers, term projects, filmstrips, group dynamics, oral presentations, panel discussions, debates, simulation activities.

Course Title

Government, United States

Description of Target Group

This course is for 12th grade students.

Purpose

The purpose of GOVERNMENT, UNITED STATES is to acquaint the student with the structure of city, county, state, and federal government. Additionally, this course will provide students with an introduction to the legal rights of individuals as guaranteed by the constitution. This is a one-semester course. It is a required course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Understand the concept of a "checks and balances" approach to government.
2. Understand the concept of a "living" constitution.
3. Be familiar with various aspects of local and state government.
4. Understand personal political responsibilities.
5. Discuss the meaning of charts, graphs, and cartoons relating to government.
6. Develop critical thinking skills by:
    a. Understanding cause and effect
    b. Differentiating between fact and opinion
    c. Identifying relevant information
    d. Categorizing
    e. Drawing conclusions

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Audio-visual materials: filmstrips, films, videocassettes, records, audiotapes

Course Outline

Great Decisions (P)

Description of Target Group

Great Decisions is a one-semester independent study course designed for GATE students.

Purpose

The students will gain an understanding of the complex issues behind the headlines in the area of international relations. The focus of the weekly seminars will be the text, Great Decisions, published by the American Foreign Policy Association. The text presents eight critical issues facing U.S. foreign policy and the semester will be divided as to deal with each issue in turn.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Students will gain a knowledge and an understanding of history as a crucial factor in understanding foreign affairs.

2. Students will gain a knowledge and understanding of critical issues facing U.S. foreign policy with special emphasis on U.S. and U.S.S.R relations.

3. Students will be able to read news articles and identify and explain some of the underlying complex issues.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Reading Great Decisions, reading and summarizing supplemental reading as assigned, researching the history of an issue as assigned, reporting to seminar group on assigned research area, participating in discussions, offering view and rationale for opinion, and meeting and talking with a specific speaker in an area of foreign affairs (optional).

Course Outline

History, California

Description of Target Group

This one-semester course is designed as an elective course in social studies for all students who have completed 15 or more units in social studies prior to enrollment.

Purpose

The student will acquire an appreciation and understanding of the rich history of the State of California, and an understanding of some problems of urban life for today and tomorrow as a result of the impact of science, population growth, prejudice, shortages of energy and resources, poverty, politics, etc.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Gain an understanding of the geography of California and its influence on the state's development.

2. Understand the cultural contributions of the Indians, Spaniards, and Mexicans to California history.

3. Understand the importance of the gold rush to California history and the westward expansion of the United States.

4. Understand the major political developments in the history of California.

5. Gain an understanding of the present social, political, and economic situation in California.

6. Develop insight into how the problems of cities today came about as a move from an agricultural society to an urban society.

7. Develop an active understanding and interest in the growth of suburban migration, population growth and congestion, transportation, utilities, fire dangers, crime, slums, welfare and poverty, housing, urban renewal, disease, and racial issues.

8. Obtain practice in the skill of interpreting charts, graphs, and various other forms of data, as well as analyzing and drawing conclusions from such information.

History, California (continued)

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School

Activities

Textbook material will be supplemented with lectures, slides, movies and filmstrips.

Course Title

Introduction to Social Studies

Description of Target Group

This one semester course is designed as an elective for 9th grade students who wish to survey various social science subjects.

Purpose

This course is designed to introduce students to the basic ideas and methods of psychology, sociology, political science, economics, and future studies.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to:

1. Define psychology as a behavioral science.
2. Demonstrate an understanding of the impact that heredity and environment have in the development of the human personality.
3. Identify the attributes of a healthy personality.
4. Describe the basic human needs.
5. Distinguish between the various forms of learning.
6. Define sociology as a behavioral science.
7. Explain why people live in-groups.
8. Describe the major agents of socialization.
9. Explain how institutions maintain the culture of a particular society.
10. Distinguish between the nuclear and extended families.
11. Understand the process and importance of values, norms, and sanctions.
12. Discuss the concepts of social stratification, the American social class structure and social mobility.
13. Describe the various forms of human communication.
14. Understand the meaning and purpose of government.
15. Distinguish between theories of world political systems.
16. Understand the characteristics of nations.
17. Understand the methods of international relations (diplomacy and making treaties).
18. Name and describe the basic functions of the various branches of American government.
19. Explain the process by which a person can be elected to public office.
20. Describe the role of special interest groups and the media in an election campaign.
21. Understand the meaning and scope of economics.
22. Distinguish between the types of economics.

Introduction to Social Studies (continued)

23. Explain the role of supply and demand in a Market Economy.
24. Describe the function of the Stock Market.
25. Explain the importance of advertising in a Market Economy.
26. Describe the general function and process of banks.
27. Explain the concept of economic interdependence.
28. Describe the role of labor and unions.
29. Explain how the methods available to us can help us predict the future.
30. Explain how future shock affects our lives.
31. Express their own visions of what the future will be.
32. Update their own four-year high school plan to include expanded career awareness.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Audiovisual materials: Filmstrips, films, videocassettes, records, audiotapes.

19. Brief Course Description

This course is designed to introduce the student to the American legal system and the role of the attorney in that system both in academic and real life settings. The means used to gain this understanding are varied and include discussions, research, seminars, writing, simulations, Mock Trials, field trips, film and documentary analysis, interviews, and many other activities.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

- The student will receive an in-depth education in the American Legal System, with special emphasis on the law and its relation to society and social issues. The student will understand the role of the attorney in the legal system, how that system operates, both in the criminal and civil realms, and the ethical issues confronting the system currently.
- The student will develop the ability to conduct herself as an attorney in the courtroom, practicing and perfecting the skills necessary to succeed in that real life setting (and the Mock Trial competition)
- The class will teach all types of public speaking skills, so that the student will be able to be comfortable with any situation in which they must articulate their thoughts.
- The class will teach the student critical thinking skills of logical reasoning so that the student will be able to employ those skills in any academic professional setting.

21. Course Objectives

- The student will receive an in-depth education in the American Legal System, with special emphasis on law and its relation to society and social issues. The student will understand the role of the attorney in the legal system, how that system operates both in the criminal and civil realms, and the ethical issues confronting the system currently.

- The student will develop the ability to conduct themselves as an attorney in the courtroom, practicing and perfecting the skills necessary to succeed in that real life setting (and the Mock Trial Competition).
- The class will teach all types of public speaking skills, so that the student will be comfortable with any situation

22. Course Outline

23. Texts & Supplemental Instructional Materials

- Crime and Punishment in America – Lawrence Friedman
- A History of American Law – Lawrence Friedman
- We the People – Commission on the Bicentennial of the Untied States Constitution
- Articles from the New York Times

24. Key Assignments

- Varies, based on currently legal issues in the area;

25. Instructional Methods and/or Strategies

- Teacher directed activities with use of Santa Maria Valley attorneys and court staff.

26. Assessment Methods and/or Tools

- Exams
- Journals
- Oral Presentations
- Reports
- Court Findings (Shepardizing)

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

Law and Society

Course Description and Areas of Emphasis:

The course is designed to introduce the student to the American Legal system and the role of the attorney within that system. The means used to gain this understanding are varied, and include discussion, research, seminars, writing, simulations, mock trials, field trips, film and documentary analysis, interviews and many other activities. The student will explore the American Legal System both in academic and real life settings. Finally, the student will become an attorney or witness in a simulated criminal trial that is the culminations of the work in Term Two. The combined academic and real life focus demands a great deal from the student, and provides the opportunity for a realistic understanding and preparation of the skills necessary for success as an attorney in the legal system. The course provides for the intellectual skills and practical experience needed to make participation both possible and successful for the student on the Santa Maria Mock Trial Team that competes each spring in the statewide Mock Trial Competition.

Basic Texts::

1. Crime and Punishment in America - Lawrence Friedman
2. A History of American Law – Lawrence Friedman
3. We the People – Commission on the Bicentennial of the United States Constitution

Supplementary Texts:

1. Articles from the New York Times
2. Articles from the Atlantic Monthly, The New Republic

General Objectives:

1. The student will receive an in-depth education in the American Legal System, with special emphasis on law and its relation to society and social issues. The student will understand the role of the attorney in the legal system, how that system operates both in the criminal and civil realms, and the ethical issues confronting the system currently.
2. The student will develop the ability to conduct themselves as an attorney in the courtroom, practicing and perfecting the skills necessary to succeed in that real life setting (and the Mock Trial Competition).
3. The class will teach all types of public speaking skills, so that the student will be able and comfortable with any situation in which they must articulate their thoughts.
4. The class will teach the student critical thinking skills of logical reasoning to that the student will be able to employ those skills in any academic or professional setting.

Supplementary Instructional Materials:

Video tape recording capability, VCR, access to the Internet and other online research materials.

College Preparatory Elective – Interdisciplinary / Other Subject Template

(Required Information needed to prepare for course submission)

Leadership ASB A/B

- **Course Guidance**

GENERAL COLLEGE PREP ELECTIVE GUIDANCE

The intent of the college preparatory elective requirement is to encourage prospective UC students to fill out their high school programs with courses that will meet one or more of a number of objectives:

- To strengthen general study skills, particularly analytical reading, expository writing, and oral communications
- To provide an opportunity to begin work that could lead directly into a major program of study at the University, and
- To experience, in some depth, new areas of academic disciplines that might form the basis for future major or minor studies at the University

Quality. All courses selected to meet the "g" elective requirement are expected to meet standards of quality similar to those required for the "a-f" requirements. Courses acceptable for the "g" elective area should be advanced courses designed for the 11th and 12th grade level and/or have appropriate prerequisites. Elective courses should present material at a sufficient depth to allow students to achieve mastery of fundamental knowledge that prepares them for University work or a future career path.

COLLEGE PREP ELECTIVE: INTERDISCIPLINARY/OTHER GUIDANCE

- Courses must be rigorous in terms of academic content and student expectations.

- **Course Content**

NOTE: The following questions are subject specific and ask for detailed information regarding the course curriculum. Since UC has developed their own criteria for the review of curricula, it is not necessary (and preferred) that the State Standards are not listed when submitting course descriptions to the University. When preparing the course submission, keep in mind that your audience is the UC High School Articulation unit and UC faculty. Include relevant information that would assist those reviewing the course and provide UC a better understanding and clarity about the intent of the curriculum. UC expects to see information that would show specific, detailed evidence of the course rigor and development of essential skills and habits of mind. Course template components need to be more expository and illustrative of the integration of each course component and how the overarching goals are being accomplished. The text boxes below will expand to accommodate additional text.

Course Purpose: *What is the purpose of this course? Please provide a brief description of the goals and expected outcomes. (How these will be accomplished should be reserved for the Course Outline, Key and Written assignments, Assessments, and/or Instructional Methods.)*

NOTE: More specificity than a simple recitation of the State Standards is needed.

This class is designed to teach leadership skills and governmental structure which ultimately enhances school pride, spirit and culture as well as the student's individual knowledge of a working government. The class will focus on standards designed by the California Association of Directors of Activities and Common Core State Standards, including public speaking, written communication, service learning, presentation skills, community service, government hierarchy, procedures and elections, personal and social development, goal setting, group dynamics, business marketing, finance accounting, advertising, business law and research while positively impacting the entire student body.

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. Show examples of how the text is incorporated into the topics covered. A mere listing of topics in outline form is not sufficient (i.e. textbook table of contents or California State Standards).*

The course includes five units that cover an instructional year. These units are: service learning, government,

personal and social development, business, communications, and leadership research paper/project.

Service learning includes presentation skills, community service, and citizenship. Presentation skills include the practice of organizing a presentation into a well thought-out submittal of ideas and designing a lesson that addresses the appropriate audience. During community service, students are given an opportunity to have an understanding of what it is like to serve other people for the benefit of another. Through citizenship, students have the experience of giving without receiving another in return, have compassion for other people's challenges, accepting people for who they are, and understanding differences.

The government unit includes government hierarchy, procedures, elections, organizations, and effective meetings. Through government hierarchy, students understand the importance of following chain of command, understand the importance of following procedures, take part in reviewing the student constitution, take part in committees and understand how the smaller group contributes to the good of the while, and are familiar with the formation of a government consisting of representatives. Through procedures, students understand the legal implications of not/following procedures and the important of rules and regulations and experience creating them. In elections, students recognize fair campaigning and marketing of one's self or a group one supports, understand the importance of positive salesmanship and voter persuasion, use an opportunity to make a speech or presentation, and understand the makings of a representative government and the workings of a democracy. Through organizations, students are introduced to various student, school, parent, and community groups and their importance to the work of the whole school, and will have an unde5randing of the financial restrictions and guidelines of such organizations. During effective meetings, students will understand group dynamics, experience and obtain a working knowledge of Parliamentary Procedure, and understand the importance of accurate agendas and minutes for meetings.

The unit on personal and social development includes group dynamics, goal setting, interpersonal skills, and self-esteem/self-awareness. Group dynamics includes understanding different personality types and how they contribute to a group setting, realizing the important of the diversity of others, having the opportunity to accept a leadership role in an activity and to serve as both leader and follower, enlist others in sharing a vision, celebrating accomplishments and contributions or others, and passing on authority when appropriate; goal setting includes the creation of goals and objectives, setting and meeting timelines with periodic review, and the importance of prioritizing events; interpersonal skills includes creating ways of grabbing attention and planning timely events suitable for a variety of audiences; self-esteem/self- awareness includes students improving the way they feel about themselves through various activities, group, and individual work.

The Business Unit includes sections of marketing, finance accounting, advertising, customer service, communication, and business law. Marketing includes practicing different advertising techniques, recognizing the correlations between price and unit sold, experimentation with different product displays to create optimal sales and selling a variety of items evaluating the better sellers; finance accounting includes creating and tracking a working budget, projection of income, understanding the concept of profit and loss, and ordering merchandise for sales and class use; advertising includes evaluating a target audience and how it affects sales, using a variety of ways to get their message out to the population, learning creative ways to make posters, making sure customers know all they need to know about the project or activity; customer service includes students recognizing customer satisfaction is in the best interest of the group, discussion and practice ways of controlling a crowd in an appropriate manner, practicing ways to communicate with others effectively, and discussing and practicing communicating with the public so they are aware of the goings-on of the group; communication includes the opportunity to utilize an assortment of written communications, and an opportunity to use various forms of oral communication, business law includes understanding school finance law when it pertains to the sale of goods, the receipt of money, and acceptable practices for fundraising and club funds and how this affects allowable fundraisers and income.

During the communications unit, students will focus on subtopics including, but not limited to: Written Communication, Interviewing Skills, Public Speaking, Crowd Control, Conflict Resolution,

Creative Thinking, Evaluation, and Interpersonal Skills. Critical thinking in Written Communication is evaluated by the creation of a journal and multimedia project regarding personal skills and talents, planning and organizing a meeting agenda using proper format, present reports for committee work and creating eye-catching, effective posters by evaluating the audience of the poster. During Interviewing Skills, students demonstrate confidence and attentiveness, understand the importance of appropriate and professional appearance, practice preparing and asking valuable questions, and know how to research the desired position. Public Speaking includes students practicing speaking clearly, holding a microphone at an appropriate distance while using a loud, clear voice, demonstration of style and enthusiasm, learning how to motivate an audience, demonstration of appropriate pacing and tempo, creating eye contact, and knowing the audience and purpose of whom they are speaking. Crowd control will include students understanding the importance of providing a safe location for the number in attendance, creation of appropriate comments to encourage cooperation, knowledge of when and who to talk to for questions and assistance, how to plan ahead for potential problems, and the preparation of location and manpower. Conflict Resolution includes students either solving the problem or leading those in conflict to the appropriate person, openly discussing problems and concerns being faced by the group or individuals, understanding the importance of coming to a solution in a variety of ways, and understanding the hierarchical nature of persons in charge. Creative Thinking includes students creating ways to grab an audience's attention by evaluating the audience, participating in brainstorming ideas, and planning timely events suitable for a particular audience. Through Evaluation, providing feedback in a constructive manner is essential, along with using appropriate positive and negative prompts to bring about constructive change. Interpersonal Skills include demonstration of teamwork and consensus building, showing knowledge of when to take each role, treating others the way they wish to be treated, listen to a variety of points of view, use constructive criticism, communicate using "I" statements, using appropriate body language, taking on a task without being asked, establish and practice guidelines and rules, accept constructive criticism and acknowledge the strengths and accomplishments of others.

The research paper/project unit focuses on the elements of argumentative writing based on research. It will involve the process of research, critical thinking, source evaluation, organization, and composition. Students will explore, interpret, and evaluate sources related to a specific topic (leadership), then outline, draft, revise, edit, and proofread their composition. This paper is designed for students to support their stand on an issue. The argumentative research paper analysis uses information as evidence to support its point. Objectives include: synthesizing a limited number of a variety of sources, evaluating sources, writing a thesis statement, citing sources properly, avoiding plagiarism, drawing a conclusion, producing a limited research paper.

Key Assignments: *Detailed descriptions of all Key Assignments which should incorporate activities and projects, as well as, short answers and essay questions. How do assignments incorporate topics? Include all assignments that students will be required to complete. Assignments should be linked to components mentioned in the course outline. It is not appropriate or necessary to include instructions given to students regarding the execution of assignments (formatting, timeliness, etc.). Do not include exams or assessments in this section.*

Service learning assignments:

1. "Speaking their Language" project - based on the quote by Nelson Mandela, "If you speak a language a man understands, you speak to his head. If you speak his language, you speak to his heart", this project involves learning about students represented in our school community in order to provide for their needs in activities and events. Student government members create a questionnaire that includes open- ended questions about interests, concerns, and ideas. Student government members, in groups of 2, walk around campus during lunch for two weeks. During their walks, they ask students to answer the questions, and the members write down

the answers. They get the names of students who would be interested in serving on a limited committee to discuss their ideas. Student government members then create a document that includes the questions and all of the answers they received. During the third week of the unit, the students go back and personally invite those students who said that they would join a committee to a lunch meeting. The meeting is led by the Executive Board of the Associated Student Body, and all attendees are encouraged to share their ideas for implementing the events proposed on the questionnaires. A second meeting is then planned, at which the attendees divide into sub-committees (3-4) that include at least one student government member. These sub-committees are tasked with choosing one of the event ideas, then planning, creating, and implementing the event. This includes the outline for the event, ordering and purchasing any supplies, publicity, volunteers, sound, script, and supervision. Evaluation will be by peer evaluation of committees, self-evaluation, and teacher evaluation by rubric.

2. Community Service projects - Students are required to complete four community service projects per year. Two of them must be student created - including the event outline, logistics, publicity, volunteers, space, and crowd control. Evaluation is through peer evaluation, self-evaluation and teacher evaluation. The other two can be community service projects through an outside organization. Students are graded for active participation in the community service project.

Government Assignments:

1. Student Government Business meetings - twice per week, student government representatives will hold business meetings in which they report on old and new business, approve expenditures and fundraisers for all Associated Student Body accounts, and give committee reports. Agendas for these meetings are created with input from all committees within the student government (four sets of class officers and six commissioners made up of 2-4 students), and all pertinent paperwork must be included. Each committee must submit a report for at least one meeting per week. They must include at least two agenda items per semester. Agendas are prepared and distributed, and the meetings are conducted by the President of the Associated Student Body using Parliamentary Procedure. Minutes are taken by the Secretary of the Associated Student Body, and are distributed the day after the meeting for approval by all student government members. During the first two weeks of school, students learn about Parliamentary Procedure and complete a quiz based on their study. Evaluation of the business meetings is based on the submission of the weekly report and the two agenda items per semester, plus the hands-on application of procedure.

2. Panther Senate - at least once per semester, two representatives from each homeroom will convene for a meeting to discuss concerns, brainstorm solutions, share ideas, and vote on agenda items. The agenda will be created by the student government class, and published by the Associated Student Body Secretary. The meeting will be presided over by the Associated Student Body Vice President, using Parliamentary Procedure. During the meeting, each of the student government committees will make a report to the representatives through one of the committee members, and will be prepared to answer questions or distribute information in written form. There will be one presentation by an outside group - whether it be a school employee (counselor, teacher, administrator), a district employee (superintendent, assistant superintendent), or community member (school board member, city official, business owner) - which will cover a topic of interest to the student representatives. This speaker will be chosen by the student government class. Evaluation will be through hands-on demonstration of proper procedure, and evaluation by the members of the Panther Senate of the effectiveness of the meeting.

Personal and Social Development Assignments:

1. Class reading assignments - Students will read one book per semester - two books during the year. These books will be chosen for their themes around student leadership, personal growth, collaboration and teamwork, and other topics relevant to the unit of personal and social development. Students will complete journal entries based on the readings, and will share insights

from readings within small groups. For each book, there will be a Socratic seminar (AVID concept) in which students will present ideas that are represented within other medium and their own experience synthesized through the theme of the book. Grading will be based on the notes taken during the Socratic seminar on a guided learning form, with a teacher generated grading rubric.

2. Using Don Lowry's True Colors Personality Profile, students will identify their personality type - "blue, orange, green, or gold", and will complete a self-study questionnaire analyzing how closely the profile fits their own personality. After completion of the self-study, students will compile their findings into a expository essay in which they explore the ways in which their personality guides their work within groups and individually. Students will meet in groups of like "colors", and in groups of 4-5 in which all four personality "colors" are represented, in order to explore their collaboration styles while completing group tasks, Grading will be based upon the essay (content and grammar), and the peer evaluation completed after the group discussion.

Business assignments:

1. Club fundraising approval - Student government must approve all Associated Student Body fundraisers before they are conducted. In order to do this, students must check the state law and education code to make certain that the fundraiser is legal, and that the procedures are in line with acceptable practice of the law, and the district guidelines. They must evaluate the fundraiser to certify that the profit potential will be in excess of the money spent. They must regulate fundraisers to make certain that target audiences are not overlapped within the time frame allowed. Finally, they must approve all publicity for the fundraiser, and make certain that it is appropriate. Twice per week, students evaluate fundraisers by examining the fundraising activity form, publicity, and attached paperwork.

2. Student Council fundraising project - Once per semester, students will brainstorm, research, prepare a proposal, make a presentation, and select a fundraiser for the semester. This part of the project will be completed in groups of 4-5, Once the fundraiser is chosen, the group with the chosen fundraiser will lead the class in conducting the fundraiser - setting the target audience, creating incentives and publicity, providing product information to sellers and buyers, tracking sales each day, ordering and distributing incentives, coordinating delivery with proper school officials, communicating with community on delivery, and evaluating the effectiveness of the fundraiser.

Communications assignments:

1. Rally project – Students will work in groups of 6-7 to plan all components of a rally: theme, logistics, crowd control, volunteers, games, sound, publicity, and script. Each member of the group will have a specific assignment, and will be graded through a teacher rubric to measure completion of responsibility, a peer evaluation, and a self-evaluation, each comprising 33% of student grade. Student groups will have the opportunity to complete two rally projects per year. This assignment will provide students with the experience of communication within a group, a class, and the entire school community, help them to increase their leadership skills, find their particular leadership strength, and serve their fellow students through a special event.
2. Reflection Journal – Each student will be responsible for 2 journal entries per week. One of these entries will be in consideration of a teacher-generated leadership question highlighted in the student reading assignment, and one of them will be in response to a student-generated event such as a rally or an assembly. The journal will be graded at the end of each term, according to a rubric that includes content, grammar, and relevance.

Leadership research paper/project assignment:

1. Research paper - Students will choose a book from a teacher-generated list of books on the

themes of leaders and leadership. Student will read the book, and will choose a research path from a list of guiding and reflective questions. Student will research the chosen topic, and will filter sources through the evaluation process, choosing at least 5 sources for citation in the paper. The argumentative paper will explore the answers to the questions through the theme of the book and the leadership experiences of the student. The paper will be at least 1500 words in length, written in ELA documentation style, and will be graded using the accepted English department rubric for research papers including content, citation, grammar, thesis, and strength of argument. Students will, after completing the research and the paper, present their findings to the student government class through a multimedia presentation. They will present facts and findings, and will answer questions about their chosen topic.

Instructional Methods and/or Strategies: *Indicate how the Instructional Methods and/or Strategies support the delivery of the curriculum. What portions of the Course Outline are supported by the methods and strategies?*

Students work in small groups during four of the five units – service learning, government, personal and social development, business and communications. During the small group discussions, they brainstorm either within a commission made up of 4-5 students with the same focus, or in varied groups including students from different commissions with different positions. This teacher's collaboration with special focus groups, and with groups with different positions and opinions.

Buzz groups are used during the personal and social development and the communications units. Students will evaluate specific problems within the space of 2-5 minutes, in order to promote problem solving and critical thinking skills.

Students work on committees for the business, government, and communications assignments. These committees represent a different aspect of student leadership responsibility: class officers, rallies, sound, entertainment, culture and community service, clubs and organizations, and publicity. The students collaborate, brainstorm, and plan specific events in order to gain skills in communication, collaboration, patience, and self-regulation.

Several simulations are used during all of the units. During the government unit, there is a simulation experience of a business meeting using Parliamentary Procedure, in order to model the correct procedure and response. For the "speaking their language" project in the service learning unit, students simulate the process of introducing them to students, engaging in small talk, and asking the questions on the questionnaire. For the personal and social development unit, there is a simulation of job interviews conducted by students, teachers and staff members.

Reflection and peer review is practiced throughout all of the units. Peer review is a part of the evaluation of several assignments, and all students conduct reflection and review after each event hosted by Student Council. This is conducted using the "+" or "++" method, and all students are encouraged to comment. The reflections are used in planning future events.

Most of the events hosted by Student Council are performed in a laboratory setting. Students plan and implement their ideas, including all preparation beforehand and clean up afterward. They are expected to take responsibility for all aspects of the event, and are allowed the opportunity to make mistakes. During the beginning of the year, they are given demonstrations of proper procedure and checklists, but are expected to make progress toward independence within a given time.

Assessments Including Methods and/or Tools: *Indicate the intent of each assessment and a brief description of how each relates to the Course Purpose and goals related to the development of critical thinking and other habits of mind skills.*

Service learning assignment assessments – Students are graded on the "speaking their language" project through peer review, self-reflection, and teacher evaluation. All three are based on a rubric that focuses on the student's participation in the project, their number of contacts, the follow-up, and the final report. The second assignment, the community service project, is graded based on the participation of the student through their reflective journal.

These two assessments allow students not only to review their peers' action in regards to the assignment, but also asks for reflection of their own leadership skills.

Government assignment assessments – Students will, within their committees, prepare a weekly report for the business meetings. Copies of these reports will be submitted for their grade, along with an explanation of the report. This asks students to examine the motivation of sharing information with a larger group, and with how their style of leadership causes them to react to certain motivations in different ways. The Panther Senate assignment uses a group evaluation for assessment, and gives student council members a lesson in accepting criticism without taking it personally.

Personal and social development assignment assessments – Students will participate in a Socratic seminar, which is a process for expanding critical thinking skills among students. By completing a reflection after the seminar, the student will personalize the information and use it to assess their own leadership skills.

Business assignment assessments - The student council fundraiser assignment is assessed according to the success of the fundraiser. The committee sets the parameters for success, and at the end, they will perform an evaluation that uses their own parameters to grade the project. This gives them a certain amount of control over their own rubric, and it also promotes critical thinking and planning.

Communications assignment assessments – The rally project allows for collaboration and critical thinking as the students work together to plan the rally, and to incorporate all ideas while collaborating and compromising. Through their reflection and evaluation, they learn more about their own leadership style as well as others. The reflective journal gives students a chance to learn more about themselves, but also gives them practice in using correct grammar and device when writing.

Research Paper and Project – This assignment measures the students' written communication abilities, as well as their processes of analysis and synthesis. Students are asked to read and apply knowledge and experience to their own experiences, and to answer questions that compare the experiences. They are then asked to write an essay that successfully describes their thoughts and opinions, using correct grammar, context, and "flow". From that paper, they are then tasked with preparing a presentation that brings together all that they have learned in a short presentation for their peers that gives all pertinent information succinctly but with comprehensible content.

Course Description

Course overview:

This class is designed to teach leadership skills and governmental structure which ultimately enhances school pride, spirit and culture as well as the student's individual knowledge of a working government. The class will focus on standards designed by the California Association of Directors of Activities and Common Core State Standards, including public speaking, written communication, service learning, presentation skills, community service, government hierarchy, procedures and elections, personal and social development, goal setting, group dynamics, business marketing, finance accounting, advertising, business law and research while positively impacting the entire student body.

Service Learning

Service learning includes presentation skills, community service, and citizenship. Presentation skills include the practice of organizing a presentation into a well thought-out submittal of ideas and designing a lesson that addresses the appropriate audience. During community service, students are given an opportunity to have an understanding of what it is like to serve other people for the benefit of another. Through citizenship, students have the experience of giving without receiving another in return, have compassion for other people's challenges, accepting people for who they are, and understanding differences.

Assignments-

1. "Speaking their Language" project - based on the quote by Nelson Mandela, "If you speak a language a man understands, you speak to his head. If you speak his language, you speak to his heart", this project involves learning about students represented in our school community in order to provide for their needs in activities and events. Student government members create a questionaire that includes open- ended questions about interests, concerns, and ideas. Student government members, in groups of 2, walk around campus during lunch for two weeks. During their walks, they ask students to answer the questions, and the members write down the answers. They get the names of students who would be interested in serving on a limited committee to discuss their ideas. Student government members then create a document that includes the questions and all of the answers they received. During the third week of the unit, the students go back and personally invite those students who said that they would join a committee to a lunch meeting. The meeting is led by the Executive Board of the Associated Student Body, and all attendees are encouraged to share their ideas for implementing the events proposed on the questionaires. second meeting is then planned, at which the attendees divide into sub-committees (3-4) that include at least one student government member. These sub-committees are tasked with choosing

one of the event ideas, then planning, creating, and implementing the event. This includes the outline for the event, ordering and purchasing any supplies, publicity, volunteers, sound, script, and supervision. Evaluation will be by peer evaluation of committees, self-evaluation, and teacher evaluation.

2. Community Service projects - Students are required to complete four community service projects per year. Two of them must be student created - including the event outline, logistics, publicity, volunteers, space, and crowd control. Evaluation is through peer evaluation, self- evaluation and teacher evaluation. The other two can be community service projects through an outside organization. Students are graded for active participation in the community service project.

Government

This unit includes government hierarchy, procedures, elections, organizations, and effective meetings. Through government hierarchy, students understand the importance of following chain of command, understand the importance of following procedures, take part in reviewing the student constitution, take part in committees and understand how the smaller group contributes to the good of the while, and are familiar with the formation of a government consisting of representatives. Through procedures, students understand the legal implications of not/following procedures and the important of rules and regulations and experience creating them. In elections, students recognize fair campaigning and marketing of one's self or a group one supports, understand the importance of positive salesmanship and voter persuasion, use an opportunity to make a speech or presentation, and understand the makings of a representative government and the workings of a democracy. Through organizations, students are introduced to various student, school, parent, and community groups and their importance to the work of the whole school, and will have an unde5randing of the financial restrictions and guidelines of such organizations. During effective meetings, students will understand group dynamics, experience and obtain a working knowledge of Parliamentary Procedure, and unde5rsatnd the importance of accurate agendas and minutes for meetings.

Assignments-

1. Student Government Business meetings - twice per week, student government representatives will hold business meetings in which they report on old and new business, approve expenditures and fundraisers for all Associated Student Body accounts, and give committee reports. Agendas for these meetings are created with input from all committees within the student government (four sets of class officers and six commissioners made up of 2-4 students), and all pertinent paperwork must be included. Each committee must submit a report for at least one meeting per week. They must include at least two agenda items per semester. Agendas are prepared and distributed, and the meetings are conducted by the President of the Associated Student Body using Parliamentary Procedure. Minutes are taken by the Secretary of the Associated Student Body, and are distributed the day after the meeting for approval by all student government members. During the first two weeks of school, students learn about Parliamentary Procedure and complete a quiz based on their study. Evaluation of the business meetings is based on the submission of the weekly report and the two agenda items per semester, plus the hands-on application of procedure.

2. Panther Senate - at least once per semester, two representatives from each homeroom will convene for a meeting to discuss concerns, brainstorm solutions, share ideas, and vote on agenda items. The agenda will be created by the student government class, and published by the Associated Student Body Secretary. The meeting will be presided over by the Associated Student Body Vice President, using Parliamentary Procedure. During the meeting, each of the student government committees will make a report to the representatives through one of the committee members, and will be prepared to answer questions or

distribute information in written form. There will be one presentation by an outside group - whether it be a school employee (counselor, teacher, administrator), a district employee (superintendent, assistant superintendent), or community member (school board member, city official, business owner) - which will cover a topic of interest to the student representatives. This speaker will be chosen by the student government class. Evaluation will be through hands-on demonstration of proper procedure, and evaluation by the members of the Panther Senate of the effectiveness of the meeting.

Personal and Social Development

The unit on personal and social development includes group dynamics, goal setting, interpersonal skills, and self-esteem/self-awareness. Group dynamics includes understanding different personality types and how they contribute to a group setting, realizing the important of the diversity of others, having the opportunity to accept a leadership role in an activity and to serve as both leader and follower, enlist others in sharing a vision, celebrating accomplishments and contributions or others, and passing on authority when appropriate; goal setting includes the creation of goals and objectives, setting and meeting timelines with periodic review, and the importance of prioritizing events; interpersonal skills includes creating ways of grabbing attention and planning timely events suitable for a variety of audiences; self-esteem/self awareness includes students improving the way they feel about themselves through various activities, group, and individual work.

Assignments-

1. Class reading assignments - Students will read one book per term - four books during the year. These books will be chosen for their themes around student leadership, personal growth, collaboration and teamwork, and other topics relevant to the unit of personal and social development. Students will complete journal entries based on the readings, and will share insights from readings within small groups. For each book, there will be a Socratic seminar (AVID concept) in which students will present ideas that are represented within other medium and their own experience synthesized through the theme of the book. Grading will be based on the notes taken during the Socratic seminar on a guided learning form, with a teacher generated grading rubric.

2. Using Don Lowry's True Colors Personality Profile, students will identify their personality type - "blue, orange, green, or gold", and will complete a self-study questionaire analyzing how closely the profile fits their own personality. After completion of the self-study, students will compile their findings into a expository essay in which they explore the ways in which their personality guides their work within groups and individually. Students will meet in groups of like "colors", and in groups of 4-5 in which all four personality "colors" are represented, in order to explore their collaboration styles while completing group tasks, Grading will be based upon the essay (content and grammar), and the peer evaluation completed after the group discussion.

Business

The Business Unit includes sections of marketing, finance accounting, advertising, customer service, communication, and business law. Marketing includes practicing different advertising techniques, recognizing the correlations between price and unit sold, experimentation with different product displays to create optimal sales and selling a variety of items evaluating the better sellers; finance accounting includes creating and tracking a working budget, projection of income, understanding the concept of profit and loss, and ordering merchandise

for sales and class use; advertising includes evaluating a target audience and how it affects sales, using a variety of ways to get their message out to the population, learning creative ways to make posters, making sure customers know all they need to know about the project or activity; customer service includes students recognizing customer satisfaction is in the best interest of the group, discussion and practice ways of controlling a crowd in an appropriate manner, practicing ways to communicate with others effectively, and discussing and practicing communicating with the public so they are aware of the goings-on of the group; communication includes the opportunity to utilize an assortment of written communications, and an opportunity to use various forms of oral communication, business law includes understanding school finance law when it pertains to the sale of goods, the receipt of money, and acceptable practices for fundraising and club funds and how this affects allowable fundraisers and income.

Assignments-

1. Club fundraising approval - Student government must approve all Associated Student Body fundraisers before they are conducted. In order to do this, students must check the state law and education code to make certain that the fundraiser is legal, and that the procedures are in line with acceptable practice of the law, and the district guidelines. They must evaluate the fundraiser to certify that the profit potential will be in excess of the money spent. They must regulate fundraisers to make certain that target audiences are not overlapped within the time frame allowed. Finally, they must approve all publicity for the fundraiser, and make certain that it is appropriate. Twice per week, students evaluate fundraisers by examining the fundraising activity form, publicity, and attached paperwork.

2. Student Government fundraising project - Once per semester, students will brainstorm, research, prepare a proposal, make a presentation, and select a fundraiser for the semester. This part of the project will be completed in groups of 4-5, Once the fundraiser is chosen, the group with the chosen fundraiser will lead the class in conducting the fundraiser - setting the target audience, creating incentives and publicity, providing product information to sellers and buyers, tracking sales each day, ordering and distributing incentives, coordinating delivery with proper school officials, communicating with community on delivery, and evaluating the effectiveness of the fundraiser.

Communications

Students will focus on subtopics including, but not limited to: Written Communication, Interviewing Skills, Public Speaking, Crowd Control, Conflict Resolution, Creative Thinking, Evaluation, and Interpersonal Skills. Critical thinking in Written Communication is evaluated by the creation of a journal and multimedia project regarding personal skills and talents, planning and organizing a meeting agenda using proper format, present reports for committee work and creating eye-catching, effective posters by evaluating the audience of the poster. During Interviewing Skills, students demonstrate confidence and attentiveness, understand the importance of appropriate and professional appearance, practice preparing and asking valuable questions, and know how to research the desired position. Public Speaking includes students practicing speaking clearly, holding a microphone at an appropriate distance while using a loud, clear voice, demonstration of style and enthusiasm, learning how to motivate an audience, demonstration of appropriate pacing and tempo, creating eye contact, and knowing the audience and purpose of whom they are speaking. Crowd control will include students understanding the importance of providing a safe location for the number in attendance, creation of appropriate comments to encourage cooperation, knowledge of when and who to talk to for questions and assistance, how to plan ahead for potential problems, and the preparation of location and manpower. Conflict Resolution includes students either solving the problem or leading those in conflict to the appropriate person, openly discussing problems and

concerns being faced by the group or individuals, understanding the importance of coming to a solution in a variety of ways, and understanding the hierarchical nature of persons in charge. Creative Thinking includes students creating ways to grab an audience's attention by evaluating the audience, participating in brainstorming ideas, and planning timely events suitable for a particular audience. Through Evaluation, providing feedback in a constructive manner is essential, along with using appropriate positive and negative prompts to bring about constructive change. Interpersonal Skills include demonstration of teamwork and consensus building, showing knowledge of when to take each role, treating others the way they wish to be treated, listen to a variety of points of view, use constructive criticism, communicate using "I" statements, using appropriate body language, taking on a task without being asked, establish and practice guidelines and rules, accept constructive criticism and acknowledge the strengths and accomplishments of others.

Assignments –

1. Rally project – Students will work in groups of 6-7 to plan all components of a rally: theme, logistics, crowd control, volunteers, games, sound, publicity, and script. Each member of the group will have a specific assignment, and will be graded through a teacher rubric to measure completion of responsibility, a peer evaluation, and a self-evaluation, each comprising 33% of student grade. Student groups will have the opportunity to complete two rally projects per year. This assignment will provide students with the experience of communication within a group, a class, and the entire school community, help them to increase their leadership skills, find their particular leadership strength, and serve their fellow students through a special event.
2. Reflection Journal – Each student will be responsible for 2 journal entries per week. One of these entries will be in consideration of a teacher-generated leadership question highlighted in the student reading assignment, and one of them will be in response to a student-generated event such as a rally or an assembly. The journal will be graded at the end of each term, according to a rubric that includes content, grammar, and relevance.

Leadership Research Paper/Project

The research paper/project unit focuses on the elements of argumentative writing based on research. It will involve the process of research, critical thinking, source evaluation, organization, and composition. Students will explore, interpret, and evaluate sources related to a specific topic (leadership), then outline, draft, revise, edit, and proofread their composition. This paper is designed for students to support their stand on an issue. The argumentative research paper analysis uses information as evidence to support its point. Objectives include: synthesizing a limited number of a variety of sources, evaluating sources, writing a thesis statement, citing sources properly, avoiding plagiarism, drawing a conclusion, producing a limited research paper.

Assignment -

1. Research paper - Students will choose a book from a teacher-generated list of books on the themes of leaders and leadership. Student will read the book, and will choose a research path from a list of guiding and reflective questions. Student will research the chosen topic, and will filter sources through the evaluation process, choosing at least 5 sources for citation in the paper. The argumentative paper will explore the answers to the questions through the theme of the book and the leadership experiences of the student. The paper will be at least 1500 words in length, written in ELA documentation style, and will be graded using the accepted English department rubric for research papers including content, citation,

grammar, thesis, and strength of argument. Students will, after completing the research and the paper, present their findings to the student government class through a multimedia presentation. They will present facts and findings, and will answer questions about their chosen topic.

ourse Description

urse overview:

This class is designed to teach leadership skills and governmental structure which ultimately enhances school pride, spirit and culture as well as the student's individual knowledge of a working government. The class will focus on standards designed by the California Association of Directors of Activities and Common Core State Standards, including public speaking, written communication, service learning, presentation skills, community service, government hierarchy, procedures and elections, personal and social development, goal setting, group dynamics, business marketing, finance accounting, advertising, business law and research while positively impacting the entr

urse content:

SERVICE LEARNING

Service learning includes presentation skills, community service, and citizenship. Presentation skills include the practice of organizing a presentation into a well thought-out submittal of ideas and designing a lesson that addresses the appropriate audience. During community service, students are given an opportunity to have an understanding of what it is like to serve other people for the benefit of another. Through citizenship, students have the experience of giving without receiving another in return, have compassion for other people's challenges, accepting people for who they are, and understanding differences.

Assignments-

1. "Speaking their Language" project - based on the quote by Nelson Mandela, "If you speak a language a man understands, you speak to his head. If you speak his language, you speak to his heart", this project involves learning about students represented in our school community in order to provide for their needs in activities and events. Student government members create a questionaire that includes open- ended questions about interests, concerns, and ideas. Student government members, in groups of 2, walk around campus during lunch for two weeks. During their walks, they ask students to answer the questions, and the members write down the answers. They get the names of students who would be interested in serving on a limited committee to discuss their ideas. Student government members then create a document that includes the questions and all of the answers they received. During the third week of the unit, the students go back and personally invite those students who said that they would join a committee to a lunch meeting. The meeting is led by the Executive Board of the Associated Student Body, and all attendees are encouraged to share their ideas for implementing the events proposed on the questionaires. second meeting is then planned, at which the attendees divide into sub-committees (3-4) that include at least one student government member. These sub-committees are tasked with choosing one of

the event ideas, then planning, creating, and implementing the event. This includes the outline for the event, ordering and purchasing any supplies, publicity, volunteers, sound, script, and supervision. Evaluation will be by peer evaluation of committees, self-evaluation, and teacher evaluation.

2. Community Service projects - Students are required to complete four community service projects per year. Two of them must be student created - including the event outline, logistics, publicity, volunteers, space, and crowd control. Evaluation is through peer evaluation, self- evaluation and teacher evaluation. The other two can be community service projects through an outside organization. Students are graded for active participation in the community service project.

GOVERNMENT

This unit includes government hierarchy, procedures, elections, organizations, and effective meetings. Through government hierarchy, students understand the importance of following chain of command, understand the importance of following procedures, take part in reviewing the student constitution, take part in committees and understand how the smaller group contributes to the good of the while, and are familiar with the formation of a government consisting of representatives. Through procedures, students understand the legal implications of not/following procedures and the important of rules and regulations and experience creating them. In elections, students recognize fair campaigning and marketing of one's self or a group one supports, understand the importance of positive salesmanship and voter persuasion, use an opportunity to make a speech or presentation, and understand the makings of a representative government and the workings of a democracy. Through organizations, students are introduced to various student, school, parent, and community groups and their importance to the work of the whole school, and will have an unde5randing of the financial restrictions and guidelines of such organizations. During effective meetings, students will understand group dynamics, experience and obtain a working knowledge of Parliamentary Procedure, and unde5rsatnd the importance of accurate agendas and minutes for meetings.

Assignments-

1. Student Government Business meetings - twice per week, student government representatives will hold business meetings in which they report on old and new business, approve expenditures and fundraisers for all Associated Student Body accounts, and give committee reports. Agendas for these meetings are created with input from all committees within the student government (four sets of class officers and six commissioners made up of 2-4 students), and all pertinent paperwork must be included. Each committee must submit a report for at least one meeting per week. They must include at least two agenda items per semester. Agendas are prepared and distributed, and the meetings are conducted by the President of the Associated Student Body using Parliamentary Procedure. Minutes are taken by the Secretary of the Associated Student Body, and are distributed the day after the meeting for approval by all student government members. During the first two weeks of school, students learn about Parliamentary Procedure and complete a quiz based on their study. Evaluation of the business meetings is based on the submission of the weekly report and the two agenda items per semester, plus the hands-on application of procedure.

2. Panther Senate - at least once per semester, two representatives from each homeroom will convene for a meeting to discuss concerns, brainstorm solutions, share ideas, and vote on agenda items. The agenda will be created by the student government class, and published by the Associated Student Body Secretary. The meeting will be presided over by the Associated Student Body Vice President, using Parliamentary Procedure. During the meeting, each of the student government committees will make a report to the representatives through one of the committee members, and will be prepared to answer questions or distribute information in written form. There will be one presentation by an outside group - whether it be a school employee (counselor, teacher, administrator), a

district employee (superintendent, assistant superintendent), or community member (school board member, city official, business owner) - which will cover a topic of interest to the student representatives. This speaker will be chosen by the student government class. Evaluation will be through hands-on demonstration of proper procedure, and evaluation by the members of the Panther Senate of the effectiveness of the meeting.

PERSONAL AND SOCIAL DEVELOPMENT

The unit on personal and social development includes group dynamics, goal setting, interpersonal skills, and self-esteem/self-awareness. Group dynamics includes understanding different personality types and how they contribute to a group setting, realizing the important of the diversity of others, having the opportunity to accept a leadership role in an activity and to serve as both leader and follower, enlist others in sharing a vision, celebrating accomplishments and contributions or others, and passing on authority when appropriate; goal setting includes the creation of goals and objectives, setting and meeting timelines with periodic review, and the importance of prioritizing events; interpersonal skills includes creating ways of grabbing attention and planning timely events suitable for a variety of audiences; self-esteem/self awareness includes students improving the way they feel about themselves through various activities, group, and individual work.

Assignments-

1. Class reading assignments - Students will read one book per term - four books during the year. These books will be chosen for their themes around student leadership, personal growth, collaboration and teamwork, and other topics relevant to the unit of personal and social development. Students will complete journal entries based on the readings, and will share insights from readings within small groups. For each book, there will be a Socratic seminar (AVID concept) in which students will present ideas that are represented within other medium and their own experience synthesized through the theme of the book. Grading will be based on the notes taken during the Socratic seminar on a guided learning form, with a teacher generated grading rubric.

2. Using Don Lowry's True Colors Personality Profile, students will identify their personality type - "blue, orange, green, or gold", and will complete a self-study questionaire analyzing how closely the profile fits their own personality. After completion of the self-study, students will compile their findings into a expository essay in which they explore the ways in which their personality guides their work within groups and individually. Students will meet in groups of like "colors", and in groups of 4-5 in which all four personality "colors" are represented, in order to explore their collaboration styles while completing group tasks, Grading will be based upon the essay (content and grammar), and the peer evaluation completed after the group discussion.

BUSINESS

The Business Unit includes sections of marketing, finance accounting, advertising, customer service, communication, and business law. Marketing includes practicing different advertising techniques, recognizing the correlations between price and unit sold, experimentation with different product displays to create optimal sales and selling a variety of items evaluating the better sellers; finance accounting includes creating and tracking a working budget, projection of income, understanding the concept of profit and loss, and ordering merchandise for sales and class use; advertising includes

evaluating a target audience and how it affects sales, using a variety of ways to get their message out to the population, learning creative ways to make posters, making sure customers know all they need to know about the project or activity; customer service includes students recognizing customer satisfaction is in the best interest of the group, discussion and practice ways of controlling a crowd in an appropriate manner, practicing ways to communicate with others effectively, and discussing and practicing communicating with the public so they are aware of the goings-on of the group; communication includes the opportunity to utilize an assortment of written communications, and an opportunity to use various forms of oral communication, business law includes understanding school finance law when it pertains to the sale of goods, the receipt of money, and acceptable practices for fundraising and club funds and how this affects allowable fundraisers and income.

Assignments-

1. Club fundraising approval - Student government must approve all Associated Student Body fundraisers before they are conducted. In order to do this, students must check the state law and education code to make certain that the fundraiser is legal, and that the procedures are in line with acceptable practice of the law, and the district guidelines. They must evaluate the fundraiser to certify that the profit potential will be in excess of the money spent. They must regulate fundraisers to make certain that target audiences are not overlapped within the time frame allowed. Finally, they must approve all publicity for the fundraiser, and make certain that it is appropriate. Twice per week, students evaluate fundraisers by examining the fundraising activity form, publicity, and attached paperwork.

2. Student Government fundraising project - Once per semester, students will brainstorm, research, prepare a proposal, make a presentation, and select a fundraiser for the semester. This part of the project will be completed in groups of 4-5, Once the fundraiser is chosen, the group with the chosen fundraiser will lead the class in conducting the fundraiser - setting the target audience, creating incentives and publicity, providing product information to sellers and buyers, tracking sales each day, ordering and distributing incentives, coordinating delivery with proper school officials, communicating with community on delivery, and evaluating the effectiveness of the fundraiser.

COMMUNICATIONS

Students will focus on subtopics including, but not limited to: Written Communication, Interviewing Skills, Public Speaking, Crowd Control, Conflict Resolution, Creative Thinking, Evaluation, and Interpersonal Skills. Critical thinking in Written Communication is evaluated by the creation of a journal and multimedia project regarding personal skills and talents, planning and organizing a meeting agenda using proper format, present reports for committee work and creating eye-catching, effective posters by evaluating the audience of the poster. During Interviewing Skills, students demonstrate confidence and attentiveness, understand the importance of appropriate and professional appearance, practice preparing and asking valuable questions, and know how to research the desired position. Public Speaking includes students practicing speaking clearly, holding a microphone at an appropriate distance while using a loud, clear voice, demonstration of style and enthusiasm, learning how to motivate an audience, demonstration of appropriate pacing and tempo, creating eye contact, and knowing the audience and purpose of whom they are speaking. Crowd control will include students understanding the importance of providing a safe location for the number in attendance, creation of appropriate comments to encourage cooperation, knowledge of when and who to talk to for questions and assistance, how to plan ahead for potential problems, and the preparation of location and manpower. Conflict Resolution includes students either solving the problem or leading those in conflict to the appropriate person, openly discussing problems and concerns being faced by the group or individuals, understanding the importance of coming to a solution in a variety of ways, and understanding the hierarchical nature of persons in charge. Creative Thinking includes students creating ways to grab an audience's attention by evaluating the audience, participating in brainstorming ideas, and planning timely events suitable

for a particular audience. Through Evaluation, providing feedback in a constructive manner is essential, along with using appropriate positive and negative prompts to bring about constructive change. Interpersonal Skills include demonstration of teamwork and consensus building, showing knowledge of when to take each role, treating others the way they wish to be treated, listen to a variety of points of view, use constructive criticism, communicate using "I" statements, using appropriate body language, taking on a task without being asked, establish and practice guidelines and rules, accept constructive criticism and acknowledge the strengths and accomplishments of others.

Assignments –

1. Rally project – Students will work in groups of 6-7 to plan all components of a rally: theme, logistics, crowd control, volunteers, games, sound, publicity, and script. Each member of the group will have a specific assignment, and will be graded through a teacher rubric to measure completion of responsibility, a peer evaluation, and a self-evaluation, each comprising 33% of student grade. Student groups will have the opportunity to complete two rally projects per year. This assignment will provide students with the experience of communication within a group, a class, and the entire school community, help them to increase their leadership skills, find their particular leadership strength, and serve their fellow students through a special event.

Course Outline

Leadership (ASB)

Description of Target Group

Open to students in grades 10, 11, and 12. Must hold an ASB Class Office and must have completed the Leadership (curriculum) course and have instructor's prior approval.

Purpose

This yearlong course emphasizes advanced leadership skills, which are implemented into everyday student government life.

Activities

Project planning, poster making, marquee set-up, and activity planning to mention a few. There will be a lot of class participation and hands-on participation.

Course Outline

Leadership (Curricular)

Description of Target Group

Open to all students, grades 9 through 12 (Course should not be repeated).

Purpose

This is a two-semester course emphasizing basic leadership skills, which will include: Self-esteem, stress management, time-management, value clarification, team building, communication skills, goal setting, and more. The skills that the students learn from this course will be most rewarding and can be put to real life situations in their future.

Course Title

Mexican/American Studies (CP) (Replacing Chicano Studies)

Description of Target Group

This course is for 10th, 11th, and 12th grade students. It is recommended that the student have completed 5 (five) unites in any course that deals with the history of the United States before enrolling in this course.

Purpose

The purpose of Mexican/American Studies (CP) is to create an awareness of the historical background of the Spanish speaking people and their cultural contributions to the United States. This is a one semester elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Explain the racial composition of present-day Mexican and Mexican-American people.
2. Relate the contributions of the Aztecs and other early ancestors of the Mexican/Americans.
3. Relate the historical sequence of events that led to the Spanish conquest of the Aztec Empire.
4. Explain the historical significance of “el 16 de septiembre.”
5. Explain the historical significance of “el 5 de mayo”.
6. Explain the historical significance of “el 20 de noviembre,” the start of the Mexican Revolution of 1910.
7. Recall persons associated with major events in Mexican history.
8. Describe the Mexican settlement of the southwest.
9. Identify major elements in the loss of “Aztlan.”
10. Explain the provisions of the “Treaty of Guadalupe Hidalgo.”
11. Understand the emergence of the Mexican/American movement of the early 1970’s.
12. Explain the beginnings of the farm labor movement and the people associated with this movement.
13. List the characteristics necessary in understanding racial prejudice: stereotyping, myth of the master race, scapegoating, etc.
14. Discuss current Mexican/American issues at the local, state, and national level.

Course Title

Modern World History A (AP)

Description

This course is a social science course intended to prepare students to pass the Advanced Placement examination in World History. Dealing with the time period 1000 AD to present, the course focuses on the impact of interactions among major societies, the relationship of change and continuity across the world during these time periods, the impact of technology and demography on people and environment, systems of social structure and gender structure, cultural and intellectual developments and interactions among and within societies, and changes in functions and structures of states and in attitudes toward states and political identities including the emergence of the nation state.

Target Group

This course is designed for 10th grade students seeking Advanced Placement credit.

Course Adoption: Submit for A-G requirements

Purpose

The course will provide students with the comprehensive knowledge of World History as well as an opportunity to hone their critical reading, essay writing and test-taking skills.

Prerequisites: None

Standards of Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify basic features of world geography (continents, oceans, key political units prior to 1000)
2. Explain the Crises of Late Antiquity (third to eighth centuries), including:
    a) Movements of people
    b) Collapse of empires
    c) Emergence of new empires and political systems
3. Identify and explain key cultural, social, and economic systems.
4. Analyze the basic features of major world belief systems prior to 1000 and where each belief system applied by 1000.
5. Describe the principal international connections that had developed between 700-1000.
6. Interpret and distinguish between the development and shifts in an interregional network of trade, technology, cultural exchange, and communications.
7. Describe the nature of philosophy and knowledge.
8. Explain and distinguish China's internal and external expansion.
9. Explain the role of Islam as a unifying cultural force in Eurasia and Africa.

10. Determine the impact of migrations and religious reform movements in expanding Islamic society.
11. Explain the restructuring of European society, including the growth of central monarchies in the West.
12. Identify the division of Christendom into Eastern and Western Christian cultures.
13. Identify demographic and environmental changes, including:
    a) The impact of the nomadic migrations on Afro-Eurasia.
    b) The migration of agricultural peoples.
    c) The consequences of plague pandemics in the fourteenth century.
14. In addition, all district approved state standards will be observed in this course.

Methods of Assessment of Student Learning

Students will write quizzes, take multiple-choice examinations, participate in debates and critical thinking exercises, and create projects.

Instructional Material

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Slide, lectures, simulated historical experiences, note taking, critical thinking analysis, create projects and presentations to demonstrate learning, maintain interactive notebooks and create a current events portfolio.

Modern World History B (AP)

Department:

ERHS Social Studies

Description:

This course is a social science course intended to prepare students to pass the Advanced Placement examination in World History. Dealing with the time period 1000 AD to present, the course focuses on the impact of interactions among major societies, and relationship of change and continuity across the world during these time periods, the impact of technology and demography on people and environment, systems of social structure and gender structure, cultural and intellectual developments and interactions among and within societies, and changes in functions and structure of states and in attitudes toward states and political identities including the emergence of the nation state.

Target Group:
This course is designed for 10th grade students seeking Advanced Placement credit.

Course Adoption:
Submit for A-G requirements

Purpose:
The course will provide students with the comprehensive knowledge of World History as well as an opportunity to hone their critical reading, essay writing and test-taking skills.

Prerequisites:
Completion of Modern World History A (AP)

Standards of Student Achievement:

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1) Identify the cultural and intellectual developments of:
   a) The Scientific Revolution
   b) The Enlightenment
   c) Neoconfucianism
2) Critically debate the timing and extent of European dominance in the world market.
3) Critically compare European monarchies with land-based Asian empires, general empire building, and Russia's interactions with the West.

Modern World History B (AP) (continued)

4) Describe global changes in commerce, communications and technology as they relate to patterns of world trade and the Industrial Revolution.

5) Explicate the social tensions that rose as a result of the emancipation of serfs/slaves and the changing social order accompanying industrialization.
6) Describe the revolutions, independence movements and new political ideas of:
   a) Latin America
   b) The major revolutions (United States, France, etc.)
   c) The rise of democracy and its limitations
   d) Overlaps between nations and empires
7) Explain and deliberate the rise of Western dominance of political, economic, and social and cultural ideas.
8) Explain the causes and outcomes of the World Wars, the Cold War, nuclear weaponry, international organizations and their impact on the global framework.
9) Perceive new patterns of nationalism, especially outside the West by investigating decolonization, genocide, the Holocaust, etc.
10) Explain the global impact of the Great Depression, technology, Pacific Rim, and multinational corporations.
11) Identify the demographic and environmental changes of:
   a) Migrations
   b) Changes in birth rates and death rates
   c) New forms of urbanization
   d) Deforestation
   e) Green/environmental movements

Methods of Assessment of Student Learning

Students will write quizzes, take multiple-choice examinations, participate in debates and critical thinking exercises, and create projects.

Instructional Material

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Slide lectures, simulated historical experiences, note taking, critical thinking analysis, create projects and presentations to demonstrate learning, maintain interactive notebooks and create a current events portfolio.

Course Title

Modern World History A (Honors)

Description of Target Group

This course is for 10th grade students.

Purpose

The purpose of Modern World History A is to acquaint the student with the major political, social, religious, and economic changes in world history during the late 18th, 19th, and 20th centuries. This is the first semester of a one-year course. It is a required course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Explain how the Scientific Revolution and the Age of Enlightenment of the 16th and 17th centuries contributed to the political revolutions of the 18th century (i.e. French).
2. 2.Explain how the Industrial Revolution transformed society and led to Empire Building and Imperialism.
3. Evaluate the role of militarism, nationalism, and imperialism as they affected Europe, Asia, Africa, and Latin America.

Instructional Materials

District approved textbooks, videos, historical slides, Teachers Curriculum Institute World History units, and California Model Framework units.

Activities

Slide lectures, simulated historical experiences, note taking, critical thinking analysis, authentic assessment, (brochures, simile posters, debates), interactive notebooks.

Modern World History B (Honors)

Description of Target Group

This course is for 10th grade students.

Purpose

The purpose of Modern World History B is to acquaint the student with the major political, social, religious, and economic changes in world history during the 20th century. This is the second semester of a one-year course. It is a required course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Understand the causes and effects of the Russian Revolution.
2. Discuss the causes and effects of World War I, including nationalism, the formation of the alliance system, the Treaty of Versailles and modern warfare.
3. Discuss the causes and effects of World War II, including totalitarianism, the alliance system, the war in Europe, the war in the Pacific, the Holocaust and the atomic bomb.
4. Evaluate the problems created by the rift in the United States and Soviet relations during the Cold War and its aftermath.
5. Evaluate the economic and political developments in developing nations during the later half of the 20th Century.

Instructional Materials

District approved textbooks, videos, historical slides, Teachers Curriculum Institute World History units, and California Model Framework units.

Activities

Slide lectures, simulated historical experiences, note taking, critical thinking analysis, authentic assessment, (brochures, simile posters, debates), interactive notebooks.

Course Title

Modern World History A (P)

Description of Target Group

This course is for 10th grade students.

Purpose

The purpose of Modern World History A is to acquaint the student with the major political, social, religious, and economic changes in world history during the late 18th, 19th, and 20th centuries. This is the first semester of a one year course. It is a required course.

Standard of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Explain how the Scientific Revolution and the Age of Enlightenment of the 16th and 17th centuries contributed to the political revolutions of the 18th century (i.e. French).

2. Explain how the forces of nationalism is Europe and America had their roots in the French Revolution.

3. Explain how the industrial revolution transformed society.

4. Evaluate the role of militarism, nationalism, and imperialism as they affected Europe, Asia, Africa and Latin America.

Instructional Materials

Videos, historical slides, Teachers Curriculum Institute World History Units, California Model Framework units.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Slide lectures, simulated historical experiences, note taking, critical thinking analysis, authentic assessment (brochures, simile posters, debates), interactive notebooks.

Course Title

Modern World History B (AP)

Department:

ERHS Social Studies

Description:

This course is a social science course intended to prepare students to pass the Advanced Placement examination in World History. Dealing with the time period 1000 AD to present, the course focuses on the impact of interactions among major societies, and relationship of change and continuity across the world during these time periods, the impact of technology and demography on people and environment, systems of social structure and gender structure, cultural and intellectual developments and interactions among and within societies, and changes in functions and structure of states and in attitudes toward states and political identities including the emergence of the nation state.

Target Group:
This course is designed for 10th grade students seeking Advanced Placement credit.

Course Adoption:
Submit for A-G requirements

Purpose:
The course will provide students with the comprehensive knowledge of World History as well as an opportunity to hone their critical reading, essay writing and test-taking skills.

Prerequisites:
Completion of Modern World History A (AP)

Standards of Student Achievement:

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1) Identify the cultural and intellectual developments of:
   a) The Scientific Revolution
   b) The Enlightenment
   c) Neoconfucianism
2) Critically debate the timing and extent of European dominance in the world market.
3) Critically compare European monarchies with land-based Asian empires, general empire building, and Russia's interactions with the West.

Modern World History B (AP) (continued)

4) Describe global changes in commerce, communications and technology as they relate to patterns of world trade and the Industrial Revolution.

5) Explicate the social tensions that rose as a result of the emancipation of serfs/slaves and the changing social order accompanying industrialization.
6) Describe the revolutions, independence movements and new political ideas of:
   a) Latin America
   b) The major revolutions (United States, France, etc.)
   c) The rise of democracy and its limitations
   d) Overlaps between nations and empires
7) Explain and deliberate the rise of Western dominance of political, economic, and social and cultural ideas.
8) Explain the causes and outcomes of the World Wars, the Cold War, nuclear weaponry, international organizations and their impact on the global framework.
9) Perceive new patterns of nationalism, especially outside the West by investigating decolonization, genocide, the Holocaust, etc.
10) Explain the global impact of the Great Depression, technology, Pacific Rim, and multinational corporations.
11) Identify the demographic and environmental changes of:
   a) Migrations
   b) Changes in birth rates and death rates
   c) New forms of urbanization
   d) Deforestation
   e) Green/environmental movements

Methods of Assessment of Student Learning

Students will write quizzes, take multiple-choice examinations, participate in debates and critical thinking exercises, and create projects.

Instructional Material

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Slide lectures, simulated historical experiences, note taking, critical thinking analysis, create projects and presentations to demonstrate learning, maintain interactive notebooks and create a current events portfolio.

Course Title

Psychology A

Description of Target Group

This course is for 11th and 12th grade students.

Purpose

The purpose of Psychology A is to acquaint the student with psychology as a scientific field of study and its principles and applications as applied to human behavior and interaction, with emphasis on learning and cognitive processes, how functions of the body affect the mind, and psychological development during the life span of an individual. This is the first semester of a one-year elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Define psychology as an empirical science.
2. Describe human learning mechanisms.
3. Discuss the influences of heredity and environment on human behavior.
4. Demonstrate knowledge of the effect of substance abuse on human behavior and current therapies utilized to correct the abuse.
5. Identify the different stages of psychological development during the life of a human being.
6. Demonstrate ability to apply material studied to student's personal life.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, audiovisual materials, small group activities, and outside resource people.

Course Title

Psychology B

Description of Target Group

This course is for 11th and 12th grade students.

Purpose

The purpose of Psychology B is to acquaint the student with psychology as a scientific field of study and its principles and applications as applied to human behavior and interaction, with emphasis on psychological testing, societal adjustment, categorizing, and diagnosing mental disorders, application and results of past and present "therapies", and the emotional states related to interpersonal relationships. This is the second semester of a one-year elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Discuss the various personality theories and identify their founders.
2. Describe the basic types of psychological testing, their reliability and methods of doing psychological research.
3. Discuss the causes and effects of stress, and useful copying strategies.
4. Demonstrate knowledge of types of abnormal behavior.
5. Identify the various types of psychotherapy; their uses and relative merits.
6. Describe human interaction as it relates to the need for other people in one's life.
7. Discuss the effect of attitudes and social influence on human relationships.
8. Demonstrate ability to apply material studied to student's personal life.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, audiovisual materials, small group activities, and outside resource people.

For Preparation Only

- **Previously Approved Courses**

NOTE: Complete outlines are not needed for courses previously approved by UC. Courses that are defined as "previously approved" are courses from programs (Advanced Placement, International Baccalaureate, ROP courses, etc.), courses from within the same district, courses that have been removed within a three-year window and are being reinstated, and courses from UC-approved online providers. Courses modeled after courses from outside the school district are also defined as "previously approved" but a complete course description will be required for submission. Each section below represents an individual page on the electronic submission site.

Was this course "Previously Approved" by UC? X Yes ____ No

If "No", proceed to the **Course Description** section.

If "Yes," please indicate which category applies:

Has this course been provided program status, is not an online course, and is it listed below?

____ Yes X No

If "Yes," select an option from the Program Status list:

_____ AVID Program

_____ Advanced Placement (AP)

_____ Advanced Placement (AP)

_____ California Partnership Academies (CPA)

_____ CDE Agricultural Education

_____ Center for Advanced Research and Technology (CART)

_____ CSU Early Assessment Program (EAP)

_____ International Baccalaureate (IB) Program

_____ National Academy Foundation (NAF)

_____ Project Lead the Way

_____ ROP/C Organization Name of ROP/C: NA

_____ University of California Curriculum Integration (UCCI) Institute

If "Advanced Placement", has it been authorized by the College Board through the AP Audit Process?

_____ Yes _____ In Progress

NOTE: UC will only allow Advanced Placement courses that have passed or are in the AP Audit process. UC requires all AP courses on your list, including those approved in prior years, to be verified via the College Board AP Audit process. UC will run quarterly reports based on AP Audit data. AP courses not listed on the AP Audit list will be removed.

If "In Progress," date submitted to AP: _____ (MM/DD/YY)

Exact Program Course Title: _____

Is this course provided by a UC-approved online course publisher listed below?

_____ Yes __X__ No

If "Yes", select an option from the Online Provider list:

_____ Academic Advantage Online

_____ Accelerate Education/Accelerate Online Academy

_____ Advanced Academics

_____ Apex Learning/Apex Learning Virtual School

_____ Alpha Omega Academy

_____ Aventa Learning

_____ Class.com

_____ CompassLearning/Odyssey

_____ Connections Academy

_____ Edgenuity, Inc. (formerly Education2020)

_____ Edmentum, Inc. (formerly PLATO Learning

_____ FlipSwitch

_____ Florida Virtual School (FVS)

_____ Jesuit Virtual Learning Academy

_____ K12, Inc.

_____ Middlebury Interactive Languages

_____ National University System

For Preparation Only

_____ OdysseyWare, Inc.

_____ Pamoja Education Unlimited

_____ Pearson Education (GradPoint)

_____ Scout from University of California

_____ Thesys International

_____ VHS, Inc. Virtual High School Global Consortium

Exact Course Title: _____

Is this course modeled after an identical course approved for the current year at another school in the same comprehensive school district?

__X__ Yes _____ No

If "Yes," which school? Santa Maria High School

Exact Course Title: Sociology A/B

Is this course being reinstated after removal within 3 years?

_____ Yes __X__ No

If "Yes," what year was the course removed from the list? _____

Exact Course Title: _____

Is this course modeled after a UC-approved course from another school outside your district?

_____ Yes __X__ No

NOTE: If "Yes," you will be required to submit a complete course description. UC will review the previous submission, if available, to assist in our review process.

If "Yes," which school and ATP code? _____

Exact Course Title: _____

- **Course Description**

Course Title: Sociology A/B

NOTE: Courses that are "previously approved" must use the same exact course title as the previously approved course.

Transcript Title(s)/Abbreviation(s): Sociology A/B

Course Code(s): ?

Seeking "Honors" Distinction

NOTE: To receive "honors" distinction, the course submission must satisfy certain requirements. For information about these requirements, please visit the a-g Guide: http://www.ucop.edu/agguide/a-g-requirements/honors/index.html. For "previously approved" courses (including AP and IB), the honors information will be pre-populated as applicable.

For Preparation Only

X No

_____ Yes, AP

_____ Yes, IB (Higher Level)

_____ Yes, IB (Standard Level)

_____ Yes, Other Honors

NOTE: Defined as a course specifically designed by the school with distinctive features which sets it apart from regular high school courses in the same discipline areas. Course should be seen as comparable in terms of workload and emphasis to AP, IB, or introductory college courses in the subject. Honors courses must be designed for the 11th and 12th grade level and require a comprehensive, year-long, written final exam. In addition to AP and IB higher level courses, high schools may certify as honors level courses *not more than one unit in each of the following subject areas only*: history, English, advanced mathematics, each laboratory science, each language other than English, and each of the four VPA disciplines. If there are no AP or IB higher level courses in a given subject area, the high school may certify up to, but not more than, two units at the honors level in that area.

Subject Area and Category

_____ "a" – History / Social Science

- _____ U.S. History
- _____ American Government / Civics
- _____ World History / Geography / Cultures

_____ "b" – English

- _____ English
- _____ English-ESL/ELD

_____ "c" – Mathematics

- _____ Algebra 1; Yr 1 of 2
- _____ Algebra 1; Yr 2 of 2
- _____ Algebra 1
- _____ Integrated Math 1
- _____ Geometry; Yr 1 of 2
- _____ Geometry; Yr 2 of 2
- _____ Geometry
- _____ Integrated Math 2
- _____ Algebra 2; Yr 1 of 2
- _____ Algebra 2; Yr 2 of 2
- _____ Algebra 2
- _____ Integrated Math 3
- _____ Algebra 2/Trigonometry
- _____ Advanced Mathematics
- _____ Statistics

_____ "d" – Laboratory Science

- _____ Biological Science
- _____ Chemistry
- _____ Physics
- _____ Integrated Science

NOTE: Students electing to enroll in an integrated-science program (ISP) are strongly advised to complete the entire three-year sequence. In most cases, the first year of an integrated-science sequence fulfills only the "g" elective requirement; the second and third years of the sequence then fulfill the two-year "d" laboratory science requirement. Accordingly, if only ISP I is successfully completed, then two courses

For Preparation Only

from the categories of Biology, Chemistry, or Physics in the "d" subject area must be completed. If ISP I and only one of ISP II or ISP III are completed, then one additional course from the categories of Biology, Chemistry, or Physics from the "d" subject area must be taken to fulfill the "d" requirement.

_____ Interdisciplinary Science

NOTE: This category demonstrates that the course is cross-disciplinary and is often used for advanced science courses such as AP Environmental Science or Biochemistry.

_____ "e" – Language Other than English

- _____ LOTE Year 1
- _____ LOTE Year 2
- _____ LOTE Year 3
- _____ LOTE Year 4+

Language:

- _____ ASL
- _____ Chinese
- _____ French
- _____ German

Final Preparation Only

- **Catalog Description**

Brief Course Description

NOTE: Briefly (in a short paragraph) describe the course, focusing on content, rather than instructional strategies, assessments, or rationale. If school has a catalog, enter the description that is in the catalog.

Sociology the purpose of sociology is to answer questions on how students and groups interact with one another. Through the study of institutions and social organizations of society the student will become aware of the complexities of human relations.

Pre-Requisites: none Required _____ Recommended _____

NOTE: Laboratory science and Advanced VPA courses require a pre-requisite. Submissions will not be allowed if this is not included. Some courses, particularly in the mathematics subject areas, require appropriate pre-requisites. For further explanation, refer either to the "Guide to a-g Requirements" document or the "a-g" Guide web site at www.ucop.edu/agGuide.

Co-Requisites: none Required _____ Recommended _____

- **Background Information**

NOTE: Do not include information that could identify your school or district.

Context for Course (optional) **REQUIRED FOR CTE COURSES**

NOTE: In order to understand the context for a new course, sometimes it is helpful for UC to understand the broader educational program and/or reform efforts of the school. How does this course fit into broader departmental and/or pathway structure? How does it fit into the overall school restructuring plans? Is the course intended to be a core course or supplemental? What are the student/school/community needs met by this course?

History of Course Development (optional) **REQUIRED FOR CTE COURSES**

NOTE: Likewise, it is sometimes helpful for UC to know the origins of a course and who was involved in its development. Did you consult with UC Admissions personnel or UC professors? If so, what was the nature of such consultation and what was the result? Was this course modeled after another course at another school? If so, is that course UC approved? How does the course being submitted differ from the course after which it was modeled? Has this course received any special recognitions, designations or awards? Has it been articulated to local community colleges or universities?

- **Textbooks**

NOTE: Include list of Primary and Secondary Texts. Make sure to note the books that will be read entirely and those that will be as excerpts. Textbook information is not necessary if your course is a Visual and Performing Arts, Advanced Placement or an International Baccalaureate course. Online texts or non-standard text materials should include a link to the online text.

World History, Cultures, and Historical Geography Subject Template

(Required Information needed to prepare for course submission)

Sociology

- **Course Guidance**

GENERAL HISTORY/SOCIAL SCIENCE: WORLD HISTORY, CULTURES, AND HISTORICAL GEOGRAPHY GUIDANCE

- World history courses do not need to cover every culture or period in the history of humankind. A suitable course could be an in-depth study of a single culture, such as a yearlong study of Chinese civilization. Alternatively, several cultures might be studied and compared, as in a more traditional world history, culture and historical geography course.
- An important element of appropriate courses is that the focus be outside the United States and, whenever possible, away from cultures very similar to our own, e.g. England and Canada.
- May be a single yearlong course or two one-semester courses.

HONORS HISTORY/SOCIAL SCIENCE GUIDANCE

- History/Social Science Honors courses are expected to provide both breadth and depth of exploration in the subject area, developing writing, research, and analytical skills. Specific detailed evidence must be included in the course outline.
- The courses must offer content and/or experience that are demonstrably more challenging than what is offered through the regular college preparatory courses in the same field.
- Factors considered for UC-approved honors courses that satisfy the "a" requirement include but are not limited to the assignment and evaluation of one long or numerous short, challenging, and properly-annotated research papers and a comprehensive final examination. Specific details of each of these assignments is required.
- The use of college-level textbooks is encouraged.
- Regular college preparatory courses in the subject areas should be offered. If regular non-honors courses are not offered, a strong justification for the lack of a regular course is required.
- In addition to AP and IB higher level courses, high schools may certify as honors level courses **not more than one unit** in history/social science.
- A single, written, comprehensive, full year final exam must be administered that encompasses all the material that has been covered for the entire year.

- **Course Content**

NOTE: The following questions are subject specific and ask for detailed information regarding the course curriculum. Since UC has developed their own criteria for the review of curricula, it is not necessary (and preferred) that the State Standards are not listed when submitting course descriptions to the University. When preparing the course submission, keep in mind that your audience is the UC High School Articulation unit and UC faculty. Include relevant information that would assist those reviewing the course and provide UC a better understanding and clarity about the intent of the curriculum. UC expects to see information that would show specific, detailed evidence of the course rigor and development of essential skills and habits of mind. Course template components need to be more expository and illustrative of the integration of each course component and how the overarching goals are being accomplished. The text boxes below will expand to accommodate additional text.

Course Purpose: *What is the purpose of this course? Please provide a brief description of the goals and expected outcomes. (How these will be accomplished should be reserved for the Course Outline, Key and Written assignments, Assessments, and/or Instructional Methods.)*

NOTE: More specificity than a simple recitation of the State Standards is needed.

Introductory Sociology course is designed to introduce students to the sociological study of society. Sociology focuses on the systematic understanding of social interaction, social organization, social institutions, and social change. Major themes in sociological thinking include the interplay between the individual and society, how society is both stable and changing, the causes and consequences of social inequality, and the social construction of human life. Understanding sociology helps discover and explain social patterns and see how such patterns change over time and in different settings. By making vivid the social basis of everyday life, sociology also develops critical thinking by revealing the social structures and processes that shape diverse forms of human life.

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. Show examples of how the text is incorporated into the topics covered. A mere listing of topics in outline form is not sufficient (i.e. textbook table of contents or California State Standards).*

The course introduces students to the sociological imagination, or "the quality of mind essential to grasp the interplay of individual and society, of biography and history, of self and the world," as C. Wright Mills described it. The enduring value of a sociological imagination is to help students situate peoples' lives and important events in broader social contexts by understanding how political, economic, and cultural forces constitute social life. Sociology explores minute aspects of social life (microsociology) as well as global social processes and structures (macrosociology). **Topics covered vary from semester to semester, but may include: socialization, suburbanization and housing, culture, race, ethnicity, gender, sexuality, class stratification, deviance and crime, economic and global inequality, families and intimate relationships, education, religion, and globalization.**

Writing Assignments: *Give examples of all Writing Assignments and the use of critical analysis within the writing assignments. Be sure to include the topics or focus of the assignments, the intent of the assignments, and the length of each assignment. It is not appropriate or necessary to include instructions given to students regarding the execution of assignments (formatting, timeliness, etc.)*

1. Visit the Dead Sociologists' Society and select one of the theorists discussed in Chapter 1. Gather material for a brief report on the sociologist's personal background, ideas, and writing. Present your findings in a brief written report.

2. Go to the Sociological Tour Through Cyberspace Page and look at some of the links. Based on these, write a brief essay describing the breadth of sociology and the possible uses to which it can be put. How do these perceptions of what sociology is differ from your perception of what sociology is, or what it should be?

Key Assignments: *Detailed descriptions of all Key Assignments which should incorporate activities and projects, as well as, short answers and essay questions. How do assignments incorporate topics? Include all assignments that students will be required to complete. Assignments should be linked to components mentioned in the course outline. It is not appropriate or necessary to include instructions given to students regarding the execution of assignments (formatting, timeliness, etc.). Do not include exams or assessments in this section.*

- Show the relevance and reality of structural factors in social life
- Place an issue in a larger context (identify systemic elements; identify stakeholders; list unintended consequences)
- Describe, explain, and predict aspects of social problems
- Debunk individualistic explanations of behavior and identify social patterns
- Recognize the difference between dispositional and sociological explanations
- Recognize the difference between empirical and normative statements
- Identify and offer explanations for social inequality
- Analyze labor force issues
- Perform a content analysis of texts or news to identify possible sources of bias
- Critique the media
- Transform a topic of interest into a researchable, sociological question
- Describe the elements of the scientific method in the social sciences

- Understand basic elements of an ethical code of conduct for social scientists
- Unpack the "causal nexus", e.g., correlation, time order, elimination of alternative explanations
- Interpret descriptive statistics
- Evaluate the methodological processes and limits of research (e.g., bias, generalizability)
- Critically assess web sites and electronic resources
- Set up a data table properly and read and interpret a table correctly
- Distinguish levels of analysis
- Posit intervening factors and spurious relationships in social life
- Show awareness of probabilities and contingencies
- Recognize that counterfactual anecdotes do not invalidate sociology
- Understand the intersection of biography and history
- Take the role of the other
- Describe various career trajectories for sociologists at different degree levels; where sociologists work and what they do
- Position personal life choices and chances in a demographic context
- Compare and contrast one's own context with those in other parts of the U.S. and the world
- Describe the tension between generalization and stereotyping; social forces and determinism
- Appreciate the role of human agency in social change

Instructional Methods and/or Strategies: *Indicate how the Instructional Methods and/or Strategies support the delivery of the curriculum. What portions of the Course Outline are supported by the methods and strategies?*

Class will consist of lecture, group discussion, and supplementary materials such as pertinent documentary films, and modern media representations. Exams are designed to be a motivating and learning experience for the student and they allow the instructor to assess the student's understanding of the material. The instructor will strive to make the course clear, interesting, and useful. The instructor will return performance evaluations and feedback in a timely manner.

Assessments Including Methods and/or Tools: *Indicate how the Instructional Methods and/or Strategies support the delivery of the curriculum. What portions of the Course Outline are supported by the methods and strategies?*

Evaluation Methods and Criteria: The final course grade will be determined by your performance on multiple exams, quiz's, six short assignments, and class participation. There is no comprehensive final exam in this course; exams will cover the material from lectures, select readings, case studies, side-by-side comparisons and any additional materials noted by the instructor. Exams will consist of multiple choice, true-false type and short answer questions and will cover the assigned readings, class lectures. Each exam is worth 100 points. Quiz's are worth 10 points and one will be given before the first exam so students will have an idea of the type of questions to expect on the exam. The six assignments are worth 15 points each for a total of 90 points. Class participation is worth 100 points for a grand total of 400 points.

NOTE: If "Yes" is selected for "Seeking 'Honors' Distinction" on the "Course Description" page of the "New Course" submission process, please complete the remaining 2 text boxes below.

Corresponding Non-Honors Course: *Indicate the name of the regular non-honors course corresponding to this proposed honors course.*

NA

Differences in Honors/Non-Honors Courses: *Describe in detail how this honors course differs from the regular course offered in the same subject area. Be specific. UC assumes Honors submissions will have increased level of reading and writing. Please be specific and descriptive regarding precisely how these increase the rigor of the course beyond merely increased amounts of work.*

NA

Course Title

Sociology

Description of Target Group

This course is for 10th to 12th grade students.

Purpose

The purpose of Sociology is to answer questions on how students and groups interact with one another. Through the study of institutions and social organizations of society, the student will become aware of the complexities of human relations. This is a one-semester course. It is an elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Define:
   a. culture traits
   b. hypothesis
   c. heredity
   d. assimilation
   e. propaganda
2. Describe the effect of geography, climate, and natural resources on the development of cultural variations (i.e. Social, economic, political).
3. Discuss various societal lifestyles in relationship to their effect on the earth's ecosystem.
4. Discuss probable causes and solutions for selected problems in various cultures today.
5. Discuss the factors that influence population growth and decline, and the ways that population density affects human behavior.
6. Trace how cultural norms have affected individual and group relationships as cultures develop and change.
7. Describe the differences between prejudice and discrimination.
8. Identify the differences in rural and urban communities in the United States, in our past and today.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Course Title

Study Skills

Description of Target Group

This course is for all grade levels.

Purpose

The purpose of Study Skills is to promote success in the curriculum. It is designed as a Social Studies elective. The primary focus is to assist students in skills, school orientation, motivation, and organization. This is a one-semester course.

Standards of Expected Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Establish academic and personal goals.
2. Prepare a calendar to monitor goals.
3. Utilize time management and organizational skills.
4. Develop and apply critical thinking skills through oral and written communication.
5. Develop note taking, outlining, paraphrasing, and summarizing skills.
6. Learn to prepare and interpret graphs.
7. Develop computer research skills.
8. Demonstrate knowledge of effective referencing skills: map reading, library research, and use of reference material.
9. Demonstrate effective preparation and test taking skills.
10. Identify and use school and community resources.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Integrated performance activities, lectures, class participation, demonstrations, audio visual materials, field trips, cooperative learning activities, and outside resource people.

16. Co-Requisites

None

17. Brief Course Description

This course allows students the opportunity to understand the principles of economics and of our economic system. Students will compare our system to those of other countries and make reasoned judgments about economic questions.

B. COURSE CONTENT

Please refer to instructions

18. Course Goals and/or Major Student Outcomes

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Fundamental economic concepts and terms.
2. The tools of analysis such as charts and graphs.
3. Economic indicators such as gross domestic products, inflation, and measures of Unemployment.
4. Understanding basic economic problems facing society such as scarcity of resources.
5. All societies have economic systems determining choice of production.
6. U.S. economy characterized by competition and market structure.
7. Individual should use economic concepts in making consumer decisions.
8. Role that labor, agriculture, and business organizations have played in U.S. Economy.
9. Role of government in market economy and establishing monetary policy.
10. Role of financial institutions.
11. Understanding business cycles with periods of inflation, deflation, and unemployment.
12. U.S. economic history.
13. Importance of international trade and migration across international borders.
14. How values influence monetary spending and opportunities for students to develop creative thinking skills.

19. Course Objectives

The purpose of this course is to allow students the opportunity to develop their ability to comprehend, apply and synthesize complex economic terms and concepts. Students will learn to apprehend and appreciate the economic structures which surround individuals on both the micro-economic and macro-economic levels. Also, students will be directed toward the recognition of

economic problems with the desire to construct creative, yet tenable, solutions to these problems. Students will be provided exposure to a dynamic and profitable career in economics or the related fields of business, accounting and marketing. Students will prepare for the Advanced Placement Examination.

20. Course Outline

21. Texts & Supplemental Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

22. Key Assignments

23. Instructional Methods and/or Strategies

Using a variety of mediums including, but not limited to, textbooks, periodicals, videos, debates, kinesthetic and collective projects students would proceed through aforementioned topics. These will be evidenced via frequent written examinations.

24. Assessment Methods and/or Tools

Student achievement will be measured using a combination of portfolios, peer-editing, and teacher-generated tests.

C. HONORS COURSES ONLY

Please refer to instructions

25. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

26. Context for Course (optional)

27. History of Course Development (optional)

Course Title

United States History A (AP)

Description of Target Group

United States History A (AP) is designed as the first semester of a two-semester course for 11th grade students who plan to attend a four-year college or university.

Purpose

This course is designed to present a survey of the emergencies of the federal republic-from attention to developments in colonial thinking through national expansion-Civil War and reunion. The aspirations, beliefs and basic values which guided early settlers and which are reflected in the Declaration of Independence and the Constitution are analyzed. Focus is on researching the growth of political freedom and the exercise of responsibility that must accompany liberty.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Analyze the reasons for the occurrence of the Age of Discovery.
2. Compare and contrast the settlements of the Spaniards, French, and English as to motives, methods, and successes.
3. Explain the implications of the political experiments that characterized the English settlements.
4. Analyze the American and British attitudes which lead to the American Revolution.
5. Analyze the Declaration of Independence and discuss its relevancy to future revolutionary movements.
6. List specific provisions of our Constitution that are necessary to the understanding of United States history.
7. Analyze and evaluate the importance of the traditions and customs that were initiated under the Federalists.
8. Evaluate the War of 1812 as the "Second War for Independence."
9. Compare and contrast sectionalism and nationalism.
10. Analyze and interpret the importance of Jackson's "New Democracy."
11. Present arguments in support of and in opposition to reform proposals of the 1830's, 40's, and 50's.
12. Analyze the reasons for our westward expansion.
13. Analyze the reasons and results of the Mexican-American War.
14. Differentiate between northern and southern viewpoints with relation to slavery issue as exemplified in the Missouri Compromise and the Compromise of 1850.

United States History A (AP)

15. Analyze realistic causes of the Civil War.
16. Discuss current matters – international, national, and local.
17. Develop bibliographical materials on subjects relating to United States history from 1492 through 1865.
18. Take notes and outline.
19. Read and interpret two books in United States history relating to the period from 1492 through 1865.
20. Present a research paper on topic relating to the course content in proper form with footnotes, bibliographical material, and correct grammatical construction.
21. Answer data based on questions successfully.

Activities

Lectures, discussions, films, filmstrips, field trips, and library periods.

Course Title

United States History A

Description of Target Group

This course is designed as the first semester of a two-semester course for 10th and 11th grade students who plan to attend college, community college, or technical school upon graduation from high school.

Purpose

This course is designed to give an overview of the events that gave rise to a spirit of exploration and expansion into an uncharted unknown. The course will trace the development of the United States into a nation through events such as its colonization period, its independence from England, and into the formation of a national identity. The course will include a study of the Civil War.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Recognize why movements such as the Renaissance, Crusades, and the Commercial Revolution gave rise to a spirit of exploration.
2. Analyze the main reasons why European explorers and discoverers were eager to sail.
3. Compare and contrast the differences in approach to colonization by the major European nations such as Spain, France, and England.
4. Analyze the events and causes leading to the American Revolution in 1776.
5. Analyze the Declaration of Independence as a revolutionary document delineating a course for independence and understand the impact of its ideals in the American mind.
6. Analyze the Constitution and i8ts framework and understand its historical and practical significance to the United States citizen.
7. Discuss the differences between the concepts of nationalism and sectionalism.
8. Understand the concept of "Manifest Destiny" as a rationale for territorial expansion by the United State and recognize how the concept for formulated.
9. Analyze the causes of the Mexican War by contrasting the points of view of the Mexican government and the United State government.
10. Differentiate between the northern and southern viewpoints regarding the Clay Compromise of 1850.
11. Analyze the causes and the results of the American Civil War.

Activities

Lectures, discussions, group projects, simulations, speakers, research, video-tape, films, filmstrips, and field trips.

Course Title

United States History B (AP)

Description of Target Group

United States History B (AP) is designed as the second semester of a two-semester course for 11th grade students who plan to attend a four-year college or university.

Purpose

This course is designed to present an overview of the Civil War with the main focus on researching the difficulties experienced by our political system during Reconstruction, continuing with an in-depth analysis and evaluation on the social, political, and industrial changes in the United States in the late 19th and early 20th centuries.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Analyze and interpret the conflicting roles of the presidency and the Congress as represented in the Reconstruction period.
2. Evaluate the role of big business and its impact on the economic and political life in the United States in the 19th century.
3. Analyze the major factors that led to the Progressive reforms of the late 19th and early 20th centuries.
4. Analyze the effectiveness of the reform movement on the economic and political life in the United States.
5. Evaluate and discuss our real purpose for going to war with Spain and interpret the results of the war on our international policy.
6. Discuss our political and economic relations with Latin America and understand the effects of such policies in such fields as economic penetration, political implication through the CIA and other agencies, and present role of the United States in such agencies as O.A.S.
7. Evaluate the reasons for entry into World War I and understand our failure to join the League and its consequences in world affairs.
8. Analyze why the “Golden Twenties” turned into or caused the “Tragic 30’s”.
9. Evaluate the Roosevelt era of the “New Deal” to include the results and present impact.
10. Compare and evaluate the events of the 1930’s that led to the United States entry into World War II.
11. Compare and contrast the role of the United States during World War II and the United Nations with that of World War I and the League.
12. Recognize and discuss the factors that led to the confrontation with the Russians in the Cold war period.

13. Compare our reasons for entering the Korean War with our involvement in Vietnam.
14. Make comparisons with the Eisenhower's Middle-of-the-Road policy with those of Kennedy and Johnson in the 1960's
15. Evaluate the civil rights movement from 1954 to the present.
16. Discuss and evaluate the role of Watergate in determining the role of the American presidency.
17. Analyze current events on the international, national, and local levels.
18. Develop bibliographical materials on United States historical subjects.
19. Take notes and outline.
20. Read and interpret two books on United States history relating to the period from 1865 to present.
21. Present a research paper on a topic relating to the course content in proper form with footnotes, bibliographical material, and correct grammatical construction.
22. Answer databased on questions successfully.

Lectures, discussions, films, filmstrips, records, field trips, and library periods.

Course Title

United States History B

Description of Target Group

This course is designed as the second semester of a two-semester course for 10th and 11th grade students who plan to attend college, community college, or technical school upon graduation from high school.

Purpose

This course is designed to give an overview of the post Civil War period with focus on difficulties experienced by the United States political system during Reconstruction and an overview of other historical events causing social, political, and industrial changes in the United States in the late 19th, and 20th centuries. The course will conclude with a study of the current social, political, and economic trends.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Analyze and interpret the conflicting roles of the presidency and the Congress during the Reconstruction period.
2. Evaluate the role of big business and its impact on the economic and political life in the United States in the 19th century.
3. Identify the major factors that led to the Progressive movements of the late 19th and early 20th centuries.
4. Evaluate the reasons behind the United States growing interest in overseas expansion starting at the time of the Spanish American War in 1898.
5. List the reasons for the failure of the United States to join the League of Nations and its consequences.
6. Evaluate the fundamental reasons for the United States entry into World War I and understand that those fundamental causes persist in international rivalry.
7. Explain how and why the “Golden Twenties” turned into or caused the “Tragic 30’s”
8. Evaluate the Roosevelt era of the “New Deal” to include the results and present impact.
9. Compare and evaluate the events of the 1930’s that led to the United States entry into World War II.
10. Recognize and explain the factors that lead to the confrontation with the Soviet Union in the “Cold War” period.
11. Trace the movement for civil rights from 1954 to the present.
12. Discuss current events on the local, national, and international levels.

The Student's Friend

WORLD HISTORY & GEOGRAPHY 2

since the French Revolution

HISTORY

What is history?
History is the story of humankind.

Why study history?
- History shows us how the world works.
- History shows us what it means to be human.
- History affects our lives directly or indirectly every day.
- History helps us make judgments about current and future events.
- History is a fascinating story of human treachery and achievement.

GEOGRAPHY

What is geography?
Geography is the study of our home, the surface of the planet Earth.

Why study geography?
- Geography is a major factor affecting human history and development.
- Humans are a major factor affecting the future of planet Earth.

Unit 1 - The 1700s: Age of Enlightenment and Revolution

MAP IDENTIFICATION: Russia, Moscow, Egypt, Belgium, Great Britain, Portugal, Austria, Brazil

Age of Enlightenment

The Scientific Revolution sparked a major change in the way people looked at the world. Back in the Middle Ages people often did not understand the causes of phenomena they experienced; events were often attributed to God, superstition, witchcraft or mysterious forces such as spontaneous generation. Because of the Scientific Revolution, people began to think that nature followed rules such as Isaac Newton's Laws of Motion. Ignorance and superstition came under attack as people tried to use reason to answer questions not only in science, but also in society, religion and politics. "Dare to know" became the slogan of the age.

Many educated middle class people rejected traditional religion, becoming **Deists** who believed in God and emphasized morality but did not accept church authority or rituals. Deists found God in nature and accepted only those religious beliefs that agreed with scientific knowledge.

During this "Age of Reason" writers and thinkers began to question why nations should be ruled by monarchs who came to power through an accident of birth. Philosophers including **John Locke** in England (late 1600s) and **Voltaire** in France (mid-1700s) wrote of "natural laws" and "self-evident truths" that required more democratic forms of government. Old ideas, such as serfdom and absolute monarchy, were considered to be part of the outdated **"Ancien Regime"** (Old Regime). Taken together, these new ideas about reason, freedom and democracy came to be known as the Enlightenment, an extremely powerful force in the 1700s which would provide the philosophical basis for the **Age of Revolution** to come.

American Revolution

One important Enlightenment idea was a concept called the **Social Contract** which proposed that people in society agree to live together by following rules that benefit everyone. If anyone violates these rules, that person should be outlawed. If a ruler violates the Social Contract, the people have a natural right to overthrow him.

Ideas such as this found fertile ground in the British colonies of America where influential leaders such as Benjamin Franklin, Thomas Jefferson, and George Washington were Enlightenment thinkers and Deists. Americans felt Britain had violated the Social Contract with America by passing unfair laws, so Americans were justified in throwing off British rule. The American Revolution in 1776 made a big impression on many people in Europe who saw it as a turning point in history; Americans had enforced the social contract, ended foreign rule and established the first national democracy since ancient times.

The Declaration of Independence, written largely by Thomas Jefferson, began with a restatement of the Enlightenment ideas of British philosopher John Locke, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness." By demonstrating that Enlightenment ideas could be used to govern a nation, the young democracy in America became the model for a better world.

British Parliament

In contrast to America, revolution against the monarchy in England was a long process that proceeded in stages over several centuries. In 1215, English nobles forced King John to sign the Magna Carta which gave important powers to the "Great Council," a group of nobles, government officials, and important land owners. The Magna Carta decreed that the king could not levy taxes unless the Great Council approved. Over the years, the Great Council evolved into the British Parliament which is a law-making body, or legislature, similar to Congress in the United States.

Parliament made large gains against the British monarchy in the 1600s. When the king abused his power in the middle of the century, Parliament raised an army which defeated and executed the king. Parliament's military leader during this **English Civil War** was Oliver Cromwell who served as a dictator until his death, when a new English king was crowned to lead the country.

In the late 1600s, Parliament removed the reigning king during the nearly bloodless **Glorious Revolution.** He was replaced with a king and queen who agreed to follow a new set of laws laid down by Parliament. Called the English Bill of Rights, these laws were influenced by John Locke's Enlightenment views on government. Although the British monarch remained as head of state, Parliament became the true power in Great Britain. Still, England was not yet a democracy because Parliament was controlled by the nobility, and few people had the right to vote.

Many aspects of the U.S. government had their origins in the British system such as the U.S. Constitution (Magna Carta), Bill Of Rights (English Bill of Rights), and Congress (Parliament).

Third Estate

In France of the late 1700s, there was no national parliament, but the nobility had gained enough power to prevent the king from raising taxes without their approval. French society was made up of three distinct classes or "estates." One estate was the nobility, another was the clergy, and the Third Estate was everybody else, the common people. Although the nobles and the clergy totaled only two percent of the population, they owned one-third of the land and they paid no taxes.

It was the commoners of the Third Estate who paid the taxes that ran France's government. The Third Estate included rural peasants who worked the land, other workers and craftsmen, the urban poor and the middle class which was called the **bourgeoisie** (burzh-wah-zee). The bourgeoisie were people such as large land owners, merchants, manufacturers, government officials, doctors, lawyers and scholars. These were successful and intelligent people who believed in Enlightenment ideas. They had wealth and economic power, but they had little political power in France. It was middle class people such as these who led the revolution in America.

In 1789, France's King Louis XVI (the Sun King's great, great, great grandson) called representatives from France's three estates to the palace at Versailles for a meeting of the Estates General, an old institution from medieval times that had met only once in the past three centuries. The king needed cash.

French Revolution

France had spent large sums of money supporting the Americans in their revolution against the British, and France was deeply in debt. King Louis XVI convened the Estates General because he wanted approval to raise taxes. Although the nobility and clergy were much smaller in number than the Third Estate, they combined their votes to deny a voice to the common people, the very people who would have to pay any new taxes.

Frustrated by this situation, the bourgeoisie declared that the Third Estate was the nation's parliament which they called the "National Assembly." They took an oath not to go home until France had a modern constitution. The king called out the army.

In 1789 France was ripe for revolution. Not only were the bourgeoisie angry, the peasants and the urban poor were hungry after two years of bad harvests. When mobs in Paris demanded cheaper bread, Queen Marie Antoinette is said to have replied, "Let them eat cake." (Cake wasn't dessert; it was the hard crusts left over from baking that were usually fed to livestock.) As the king's troops marched toward Paris, the enraged people of the city stormed and captured the **Bastille**, a prison that represented the Ancien Regime. (Today, July 14th is Bastille Day, the French independence day.)

The French Revolution was underway. The mayor of Paris was executed and his head was paraded through the streets on a pole. Hungry women marched to Versailles and forced the king to return to Paris where they could keep an eye on him. Throughout the countryside, peasants attacked the nobility and burned feudal documents. The National Assembly abolished feudalism in France, and in the streets the common people shouted, "Liberte', Egalite', Fraternite'!" (Liberty, Equality, Brotherhood). Inspired by the American Declaration of Independence, the French issued the "Declaration of the Rights of Man and of the Citizen." Feudalism and the Ancien Regime were gone, but what would replace them?

Reign of Terror

Many of France's nobles fled to other countries where they encouraged foreign kings to stop the French Revolution before it could spread. After Prussia and Austria made threats against France, the French raised an army of volunteers that went to war against the two countries in 1792. The following year, France declared war on Britain, Spain and the Netherlands.

France was now at war with most of Europe and being threatened with invasion on all fronts. France began to draft all able-bodied men into the military and soon had an army of nearly one million men. With French armies suffering defeats in battle, and food shortages and economic problems at home, a group of **radicals** took control of the revolution.

The radicals began to take extreme measures against their enemies, real or imagined. After the king and queen were caught attempting to flee from France, they were marched to the guillotine and beheaded. Members of the nobility and the clergy were beheaded. The radicals accused other revolutionaries of not being revolutionary enough and beheaded them. Some 17,000 people were beheaded, and another 23,000 were killed in other ways, during France's bloody "Reign of Terror."

Napoleon

After five years of struggle, the people of France realized that their revolution was spinning out of control. Rather than allowing France to return to the Ancien Regime, the army took over, and France's new leader became a young general and hero of the revolution, Napoleon Bonaparte, who became dictator of France. (A dictator is one who rules with absolute power, but was not born to the position like a king.) Because the French Revolution had swept away the nobility, the army chose its officers based on ability, not noble birth. Leading a capable, dedicated, and battle-hardened army, Napoleon easily conquered much of the European continent, eventually proclaiming himself emperor of Europe.

In **Egypt**, Napoleon's armies defeated the ruling Turks, and Napoleon sent scholars and artists to study Egyptian antiquity. Their reports caused an Egyptian sensation back in Europe. It was Napoleon's soldiers who discovered the Rosetta Stone, unlocking the secrets of Egyptian hieroglyphics. It is said that Napoleon sat in the shade of the great pyramid at Giza and calculated there was enough stone in the pyramid to build a wall around France one foot wide and ten feet tall.

In the lands conquered by Napoleon, feudalism and serfdom were abolished, freedom of religion was established, and a uniform legal system, the **Napoleonic Code**, was adopted. Based on Roman law, the Napoleonic Code was perhaps Napoleon's greatest legacy. He might have acquired his interest in law from his father who was a lawyer. The Napoleonic Code guaranteed liberty and legal equality for men. Equality was virtually unknown in history; it was a new, exciting and radical idea. Equality for women, however, would have to wait another century.

Battle of Trafalgar

England was one of the few countries in Europe not conquered by Napoleon, largely because of the British naval victory at Trafalgar. In 1805, a combined French and Spanish fleet of 33 warships set sail from Spain planning to attack England. In the way stood a British fleet of 27 warships under the command of **Admiral Horatio Nelson**.

Nelson was an extraordinary sailor. Wounded in a naval battle about ten years earlier, Nelson lost the use of his right eye. In another sea battle three years later, he lost his right arm. The following year, Nelson defeated a French fleet at "The Battle of the Nile," forcing Napoleon to withdraw from Egypt. Three years after that, he was in the midst of a battle against a Dutch fleet when he was informed that the British commander had given the signal to withdraw. Nelson put the telescope to his blind eye and said he could see no such signal. Nelson went on to destroy the Dutch fleet.

The Battle of Trafalgar would be Nelson's greatest victory and his last. Before the battle, he told his sailors "England expects that every man will do his duty." In one of the most celebrated naval engagements in history, Nelson's British fleet engaged the larger French and Spanish fleet at Trafalgar off the southwest coast of Spain. When the smoke cleared, 20 French and Spanish ships had been destroyed or captured without the loss of a single British vessel. Admiral Nelson, however, was shot by a French rifleman and died aboard his flagship, the *H.M.S. Victory*. Before he died, Nelson knew the British had won the battle, and he declared, "Thank God I have done my duty."

With the triumph at Trafalgar, Britain continued to rule the waves. The British victory wrecked Napoleon's plans to invade England and it gave Britain naval supremacy throughout the remainder of the 1800s. Today, the main square in the British capital of **London** is named Trafalgar Square, and it features a tall column topped by a statue of Lord Nelson.

Napoleon's invasion of Russia

Napoleon's downfall began with his biggest military mistake, an attempt to invade and conquer the vast empire of **Russia**. The Russians knew they couldn't defeat Napoleon's huge and powerful **Grand Army** of more than 600,000 soldiers, so they burned everything in his path to deny his army food and shelter.

Napoleon eventually took the Russian capital of **Moscow,** but it was empty. Knowing that his army could not survive the coming winter in Russia, Napoleon had to retreat. As the Grand Army made its way back to France, temperatures dropped to 30 degrees below zero during the bitter cold Russian winter of 1812. Between the cold, starvation, Russian attacks and desertion, only 30,000 of Napoleon's original soldiers returned to France. It was one of the worst disasters in military history.

Battle of Waterloo

Disgraced by the ruin of his Grand Army, then defeated in battles by an alliance of European nations, Napoleon was forced to give up power and go into exile on the small island of Elba off the coast of Italy. It wasn't long, however, until Napoleon escaped and returned to France where he raised another army. Napoleon met his final defeat at the hands of an allied army under the command of the British general **Wellington** near the town of Waterloo, **Belgium** in 1815. Napoleon's disaster at Waterloo was so complete that Waterloo has become a synonym for any crushing defeat. Again Napoleon was exiled, this time to St. Helena, a remote island in the South Atlantic, where he died of stomach cancer, or possibly arsenic poisoning, in 1821.

Napoleon remains one of history's most fascinating figures. He didn't care for fancy clothes or fine food, and he worked himself day and night. Beethoven said of Napoleon, "He understood art and science and despised ignorance." Most observers consider Napoleon to be a military genius and his defenders believe he was a champion of equality and the common man. Others, however, see Napoleon as an egotistical and power hungry tyrant. Napoleon himself said, "Power is my mistress." One thing is certain; after Napoleon ended feudalism and extended equality in the countries he conquered, the monarchies of Europe would never be the same. People had tasted liberty and equality, and they liked it.

Still, after twenty-five years of revolution, the Reign of Terror and the Napoleonic Wars, France was ready for a period of calm. France again looked to the monarchy for stability, and a new French king was made head of state...but the state had changed since the revolution. Unlike the Sun King, France's new king was controlled by a modern constitution, and he wore a business suit - not a curly wig and tights. France was now a **constitutional monarchy**.

Simon Bolivar

The revolutions in the United States and France inspired the people of **Latin America** to seek their independence from foreign control. The well-educated son of a wealthy family from Venezuela, Simon Bolivar, became "South America's George Washington." After studying Enlightenment ideas at home and in Europe, Bolivar returned to Venezuela and raised an army to fight for South American independence from Spain. After achieving victory in his native Venezuela, Bolivar went on to defeat the Spanish in what is now Columbia, Ecuador, Bolivia and Peru. But, Bolivar failed to bring South America together in a union, and he died a discouraged man. Nonetheless, today he is called "The Liberator," and the country of Bolivia is named in his honor.

At the same time Bolivar was fighting for South American independence, countries in Central America and Mexico were also fighting for their independence from Spain. Meanwhile, Brazil declared its independence from Portugal. In a period of just twenty years, the three-hundred-year European domination of Latin America came to an end. Unfortunately, since gaining independence many Latin American countries have been dominated by dictators and various strong men resulting in unstable governments and weak economies. These countries now rank among the world's poorest.

Unit 2 - The 1800s:
Industrial Revolution, nationalism, and imperialism

MAP IDENTIFICATION: Denmark, India, Cuba, Philippines, Latin America, Canada, Australia, Pakistan

conservative versus liberal

Europe had weathered another storm of history, and it was ready for a period of calm. After the monarchies of Europe finally defeated Napoleon, they wanted no more of revolution and war. Leaders representing the "Great Powers" of Europe met in Vienna, Austria, to hammer out an agreement meant to undo the changes brought about by the French Revolution, return kings to their thrones and maintain a lasting peace by restoring a **balance of power** among European nations.

Delegates to the **Congress of Vienna** were members of the **aristocracy** (upper class) who felt that the revolutionary ideas of the Enlightenment had nearly destroyed civilization. They wanted a return to the old order in which monarchs and the upper class controlled a stable society. People such as these, who resist change and try to preserve traditional ways, are called conservatives.

Although conservatives were in control in 1815, many common people still believed in the Enlightenment ideas of democracy, equality and personal freedom. People such as these, who want to adopt new methods for improving society, are often called liberals. Liberals are said to be on the political "left" while conservatives are on the political "right." (The political labels of conservative and liberal are very much with us today in American politics; the Democratic Party is generally considered to be more liberal than, and to the left of, the more conservative Republican Party.)

The conservative delegates to the Congress of Vienna were successful in preventing an outbreak of general war in Europe for a century. Nonetheless, liberal revolts erupted repeatedly in the Western world as people continued to seek the Enlightenment goals of freedom and equality.

Industrial Revolution

Civilization was made possible by agriculture, and in every civilization from Mesopotamia through the Middle Ages agriculture was the main source of wealth. This began to change as an economy based on agriculture was being replaced by an economy that used machines to produce goods in large quantities by big industries. This Industrial Revolution began in the late 1700s in Britain's textile (cloth) mills and it spread to other countries during the 1800s. It was given a huge boost by the invention of the steam engine which led to the invention of the train and steamship, both of which could move manufactured goods long distances more quickly and cheaper than ever before.

The Industrial Revolution was made possible by **technology** which is different from **science**. Science is the study of the basic principles of how the world works. Technologies are the tools that put scientific knowledge to use, tools such as the steam engine and electrical motors. Therefore, it was the Scientific Revolution that paved the way for the Industrial Revolution that followed.

The Industrial Revolution had both positive and negative consequences. Factories could produce goods more cheaply than hand labor which meant people could buy more goods, resulting in a higher **standard of living**. But, factories also put many craftsmen out of work. Factories required large numbers of workers which caused huge migrations of people from the countryside to the city where they often worked long hours for low wages while living in crowded and unsanitary conditions. Small children worked as much as sixteen hours a day becoming so tired that they fell into machinery and were crippled or killed. The Industrial Revolution was a huge technological, economic and social upheaval.

Impressionism

In addition to factories, the steam engine and new construction methods, the Industrial Revolution brought many other technological marvels such as antiseptics to kill bacteria in hospital operating rooms, vaccinations to prevent the spread of deadly diseases, the telegraph, telephone, electric light bulb, automobile, airplane and the camera. This last invention, the camera, had a profound affect on the world of art in the late 1800s.

Since the camera could now reproduce scenes from life much more accurately than any artist could, the artist needed to find a new mission in life. Artists began to paint their "impressions" of a scene rather than trying to accurately reproduce the scene itself. Art changed dramatically as artists became freer to put their own ideas and feelings into their work.

In order to capture the changing qualities of light, artists such as Monet and Renoir worked quickly using short, choppy brushstrokes to form vibrant mosaics of color. Later artists such as Cezanne and van Gogh experimented with distorted images. Many art lovers consider the paintings of this period to be among the finest and most beautiful art works ever produced.

Once again art had changed to reflect its own time. The Impressionist movement was the greatest artistic revolution since the Renaissance, and it was the beginning of modern art.

socialism

The Industrial Revolution had changed the world. In a period of seventy years, world population tripled, and each person's consumption of goods nearly doubled. People moved off the land and went to cities to work in factories.

In fifty years, the English manufacturing city of Liverpool grew from 82,000 to 376,000 people. Many cities could not cope with the huge influx of workers. A dozen people might be crowded together in one small room in a run-down apartment building called a tenement. Due to a lack of sewage facilities, filth was everywhere, and infectious disease killed one child in four before the age of five. In books such as *Oliver Twist*, Charles Dickens portrayed the difficult lives faced by the working poor of England. The Industrial Revolution was making a few people very rich creating a new nobility of wealth, but countless others were poor and living in squalid conditions.

Under these circumstances, many working-class people adopted the ideas of socialism, a philosophy that called for a more even distribution of wealth. Under socialism, important businesses would be owned by the public (or government), not by a few wealthy individuals. Some socialist thinkers even proposed creating a **utopia**, an ideal society where entire communities would be owned by the workers who lived and worked in them. Robert Owen, a English industrialist, set up a utopian community in the United States at New Harmony, Indiana. The experiment failed because the residents of New Harmony turned out to be not very harmonious, arguing among themselves and some refusing to work.

Despite setbacks such as this, socialist ideas encouraged numerous social reforms in the 1800s and 1900s which helped to improve the lives of working class people of many nations.

social reform

In 1776, a Scottish philosopher named **Adam Smith** published an influential book that is still studied and quoted today. In *The Wealth of Nations*, Smith said that society would work best if government did not interfere in business. According to Smith, the economy is best regulated by the "invisible hand" of supply and demand in a free market. This economic philosophy came to be known as **laissez faire** (LES-ay-fair), which is French for "leave it alone."

Workers who lost their jobs to machines didn't much agree with the idea of leaving business alone, and some took matters into their own hands. The **Luddites** were a group of masked workers who attacked textile mills smashing machinery to bits and striking fear in the hearts of every factory owner in England. Recognizing that there is strength in numbers, other workers began to form **labor unions** that called strikes shutting down factories until owners agreed to better pay and working conditions. (Strikes are are still used by labor unions today for very similar reasons.) Meanwhile, socialists were demanding that government take over ownership of major industries such as banking, railroads and factories.

Governments responded to these pressures unleashed by the Industrial Revolution not by adopting socialism, but by passing social reform laws to improve the lives of workers. Reforms were encouraged by **universal male suffrage** which granted all men (but not women yet) the right to vote in many western countries. Germany led the way in social reform legislation. In the mid-1880s Germany adopted laws that insured workers against accidents and sickness, limited working hours and provided old age benefits. France and Italy soon passed similar laws. The British Parliament passed the Factory Act which prohibited the employment of children under the age of nine, and four years later Britain required these children to attend free elementary schools. Britain was the first nation to adopt a work week of 5-1/2 days, which gave workers more leisure time to attend theaters, play sports and ride their newly-invented bicycles.

nationalism

Nationalism is a deep devotion to one's country. An early stage of nationalism is the desire to form a country free from foreign control. The first modern nations of England and France were formed during the Hundred Years' War in the late Middle Ages when people developed loyalties to their countries, rather than to local feudal lords. Nationalism came to the Americas in the late 1700s and early 1800s when European colonies threw off foreign control. In 1830, Greece gained its independence from the Ottoman Empire of Turkey. But, in the early 1800s, much of Europe was still divided into an assortment of small kingdoms, baronies, and dukedoms. Italy and Germany, for example, did not yet exist as nations.

Due to marriages between the royal families of Europe, people often found themselves ruled by foreigners who didn't even speak the same language as the people they governed. Inspired by Enlightenment ideas and hopes for democracy, people hungered for change. People wanted to belong to nations that reflected their own culture, history, language, religion, and traditions. Nationalism became the strongest political force of the 1800s. Much of the century's history is a story of people struggling to be free of foreign control.

Italy

In the mid-1800s, the Italian peninsula was a collection of kingdoms and city-states. Much of northern Italy was ruled by the Austrian royal family while much of southern Italy was ruled by the Spanish royal family. The people of Italy wanted their own nation. The writer, Mazinni, gave voice to these nationalistic yearnings by reminding Italians that their Roman ancestors had ruled the ancient world and that Italy was the birthplace of the Renaissance. There were bitter struggles as royal rulers crushed uprisings by Italian patriots.

In the entire Italian region there was only one native-born monarch, King Victor Emmanuel II of Sardinia, so it was natural that **unification** of the Italians would begin there. Victor Emmanuel had a clever **prime minister** named Cavour who helped to unite northern Italy. Meanwhile, a popular revolutionary general, Giuseppe Garibaldi, called for volunteers to fight in the south. He said, "I offer neither pay nor provisions; I offer hunger, thirst, forced marches, battles and death. Let him who loves his country in his heart follow me." Garibaldi sailed to the island of Sicily (the "football" being kicked by the Italian "boot") with his army of a thousand "red shirts" and they brought southern Italy into the Italian union. Victor Emmanuel was proclaimed king of Italy in 1861. A few years later, the states of central Italy voted to join the union and Italian unification was complete by 1870.

(A prime minister, such as Cavour, serves as the head of a country's government. In modern times, prime ministers have powers similar to American presidents. Unlike American presidents, however, prime ministers are not elected to their jobs. In England, and in other countries with parliaments, the leader of the strongest political party in parliament becomes the prime minister.)

Germany

In 1850, Germany was made up of 39 small countries. One of the largest and most powerful was the eastern kingdom of Prussia. Prussia's prime minister, **Otto von Bismark**, was one of the greatest political geniuses of all time. Bismark was a master of **realpolitik**, politics in which law and principles are less important than success. Bismark developed a machiavellian plan to unify all of Germany under the leadership of Prussia by any means necessary.

The Industrial Revolution had made Prussia wealthy, and Bismark set out to build Prussia's military strength; he believed German unification would be achieved only through war. He said, "Not by speeches and majority votes are the great questions of the day decided, but by blood and iron."

Using a step-by-step approach, Bismark started and won three separate wars against Denmark, Austria, and France, each war bringing him closer to his goal. By 1870, Germany was unified and Prussia's king was crowned as kaiser (emperor) over all of Germany. Germany's militaristic government was the strongest in the world, a situation which caused concern among the other Great Powers of Europe.

Social Darwinism

In the early part of the 1800s, nationalism was associated with positive ideas such as freedom and independence from foreign control. The last half of the century, however, saw the emergence of a darker side of nationalism which glorified war and military conquest. This extreme form of nationalism often encouraged **racism** which is a belief that one's own country or race is superior to all others. Racism was supported by the philosophy of Social Darwinism.

Charles Darwin was an English scientist who developed the Theory of Natural Selection which proposes that an animal species may change over time as the fittest members survive and the less successful members die out. Social Darwinists attempted to apply Darwin's theory to human societies claiming that the world's more technologically advanced races were intended by nature to dominate "lesser" races. Governments began to take a new interest in the health of their citizens, encouraging workers to get outside and play games to improve the nation's "fitness." Organized sports began to play a big role in Western culture; the Olympic Games were revived in 1896.

The philosophy of Social Darwinism and "survival of the fittest" was also adopted by rich industrialists who believed their wealth proved they were superior examples of the human species which meant it was perfectly acceptable for them to enjoy their vast riches while keeping their inferior workers living in poverty. The leaders of industry and banking by now had formed a new aristocracy of wealth and power to replace the nobility of earlier ages.

imperialism

After the Industrial Revolution gave Western nations wealth and technology that could be used to overpower less advanced societies, the Great Powers went on a binge of empire-building in Asia and Africa. When one country sets out to dominate and control another land, it is called imperialism. In 1800, Western powers controlled 35 percent of the world's land surface; by 1914 they controlled 84 percent. There were several factors that encouraged imperialism, but probably the most important was greed. The Industrial nations wanted overseas colonies to supply cheap raw materials for European factories, and they wanted new markets where they could sell finished goods produced by those factories.

Nationalism was another factor. Spurred on by intense feelings of patriotism, the countries of Europe tried to increase their power and prestige by adding new territories. To be a Great Power required overseas possessions. Nations competed with one another to grab territories before other powers could get them, provoking a series of international conflicts. Even the United States, which had fought for its own independence from colonial rule, joined the imperialist feeding frenzy.

Racism was another factor that promoted imperialism. With their advanced technology, and a belief in the theory of Social Darwinism, many people in the Western world felt they were superior to all others. They believed the white man had a natural right to dominate "backward" people and was actually doing them a favor by bringing them Western technology, religion and education. This attitude was expressed in a famous poem by Rudyard Kipling which encouraged Western man to "Take up the White Man's Burden." Imperialism served to place millions of black and brown people under the control of white people.

India

The country of India was a creation of British imperialism. Britain became involved with India on the last day of 1600 when Queen Elizabeth I chartered a joint-stock company, the English East India Company, to establish trade with India. At the time there was no country of India; only a number of kingdoms controlled by regional rulers. Before long, the English were importing millions of yards of calico cloth every year from India along with sugar, silk, and tea.

In the early days of capitalism, business competition could be even more brutal than today. It was not uncommon for trading companies from different countries to battle each other for control of trade in a region. Britain took control of India when the English trading company defeated France's trading company in a battle in the late 1700s.

During two centuries of British rule, relations between Indians and the British were often strained. The clash of cultures led to a rebellion in the mid-1800s by Indian soldiers serving in the British army. Although their Hindu religion taught Indians not to cross open water, Indian soldiers could be required to serve overseas. In addition, army riflemen at this time had to bite off the tops of greased cartridges to load their rifles. Indian soldiers believed the cartridges were sealed with beef fat although cows are sacred to Hindus. Angered by British indifference to their cultural beliefs, the Indian soldiers rebelled, and they were joined by other members of Indian society. After putting down the uprising, Britain tightened its control over India.

The British brought many advancements to India including a postal service, telegraph, good roads and a large railroad network. But British technology also harmed India. The spinning of cotton in Indian homes had long been a source of income for peasants until they were put out of work by inexpensive cotton cloth imported from England's textile mills.

The Scramble for Africa

Slavery came to an end in most of the world by the mid-1800s. Despite its encounter with the slave trade, African society remained largely intact. There were many successful and prosperous native kingdoms in Africa such as the Ashanti kingdom of western Africa and the powerful Zulu nation of southern Africa. This would soon change as the imperialist powers of Europe began to covet Africa for its raw materials and potential new markets. The scramble for Africa was on. To avoid serious conflicts in the competition for pieces of Africa, the major Western powers met at a conference in Berlin in 1884 where they drew lines on a map dividing the continent among themselves. The Africans were not invited to attend.

With that settled, the imperialist powers set about the task of defeating the local rulers in Africa, a chore made much easier with modern weapons. During a battle in 1898, for example, a British army using machine guns lost only 28 soldiers while slaughtering more than 10,000 African warriors. Still, conquering the Africans wasn't always easy, and sometimes it took years. In Ethiopia, an Italian army was confronted by African soldiers carrying modern weapons. The Africans defeated the Italians, and Ethiopia maintained its independence.

Eventually seven European powers carved Africa into a number of countries with artificial boundaries that bore little relationship to the cultural groups living there. The Europeans set up various types of colonial governments to extract rubber, copper, gold, diamonds, and crops such as cotton and peanuts. Some colonial governments were more harsh than others, but all had one thing in common: whites owned the land and blacks worked it. Men were often separated from their families and sent to work in distant locations, a practice that weakened African village and family life. The European domination of Africa stopped the development of Africa in its tracks, nearly destroying African culture in the process. Imperialism denied the people of Africa the opportunity to grow their own institutions to carry Africa into the twentieth century.

Spanish-American War

The United States was becoming a major world power and it, too, felt the need to join in the imperialist Monopoly game of collecting overseas possessions. America's chance came with the Spanish-American War. Many people in the U.S. were genuinely concerned about Spain's brutal treatment of Cuba following a revolt by Cubans against Spanish rule. During a visit to Cuba in 1898, the U.S. battleship *Maine* blew up in Havana harbor killing 266 American sailors. Although the explosion was probably an accident not involving the Spanish, extensive coverage by American newspapers inflamed public opinion until the U.S. declared war on Spain. "Remember the Maine," was America's war slogan.

In a war that lasted only four months, the American navy destroyed two decrepit Spanish fleets, one in the Philippines and one near Cuba. Theodore Roosevelt and his band of "Rough Riders" became heroes after newspapers reported their daring cavalry charge at San Juan Hill in Cuba. Spain's defeat meant that Spain could no longer be considered a major European power. The American victory in this "splendid little war" gave the United States its first overseas possessions, Puerto Rico, Guam, and the Philippines, although it was a very small empire by European standards.

Later in the same year, in a separate move, the United States took control of Hawaii. Now, the U.S. had a foothold in Asia where it joined other Western powers in pushing around China and Japan, forcing them to sign trade agreements favorable to the West. Five years later, the hero of San Juan Hill, Theodore Roosevelt, was president of the United States and he declared that the U.S. would take control of any Latin American country that didn't run its government the way the United States thought it should. This arrogant U.S. attitude toward its neighbors in Latin America created resentment that persists to this day.

Victorian Age

It was during the reign of Queen Victoria in the late 1800s that England rose to the height of its power, controlling a vast colonial empire that included Canada, Australia, India and large chunks of Africa. During the Victorian Age it was said, "The sun never sets on the British Empire."

During Victoria's reign, democracy was greatly expanded in Britain when the nation adopted the secret ballot and universal male suffrage. It was also during Victoria's reign that the British monarchy became little more than the powerless figurehead it is today. Although Queen Victoria was interested in political matters, she left the affairs of government to Parliament and able prime ministers similar to American presidents. She was careful not to show favoritism toward either of Britain's major political parties, the Conservatives and the Liberals.

The greatest writer of the Victorian Age was Charles Dickens whose novels portrayed the poverty and desperation of lower class urban life during the British Industrial Revolution. Because the reign of Queen Victoria was also a time of conservative morality in England, the term "Victorian" has come to mean repressed or prudish attitudes.

Unit 3 - 1900 to 1925: World War I and the rise of communism

MAP IDENTIFICATION: The Balkans, Hungary, Switzerland

entangling alliances

As the twentieth century arrived, the Western world was at peace and people were optimistic about the future. Americans were proud of their new Panama Canal which was dug across the **isthmus** of Panama to link the Atlantic and Pacific Oceans. Beneath the surface, however, an explosion was brewing in Europe, just waiting for a spark to ignite it. European nations were strengthening their armies and navies and forming alliances so they would have friends in case of war. As it turned out, these alliances would be the cause of the greatest war the world had ever seen.

The alliance system began because both France and Germany claimed the territory of Alsace-Lorraine which lay between them. Germany took control of the territory during the wars of German unification, and Bismark was afraid that France might try to get it back. To prevent this, Germany formed an alliance with Italy and Austria-Hungary. The three countries agreed that if one of them was attacked, the others would come to its aid.

Fearful of Germany's growing industrial and military power, France formed its own alliances with Great Britain and Russia. These entangling alliances meant that a war between any two nations could erupt into a much wider conflict involving many more countries. Meanwhile, nationalism and imperialism increased tensions and conflict in Europe as the Great Powers competed against one another for military strength, prestige, and colonial possessions.

World War I

The spark that ignited World War I came from the **Balkans**, a region of many cultures and ethnic groups located north of Greece which included the nation of Serbia. Members of a Serbian nationalist movement hoped that Serbs living in Austria-Hungary would break away and join Serbia. In 1914, a young Serbian nationalist, hoping to trigger a Serbian uprising against Austria, assassinated Archduke Francis Ferdinand, the heir to the throne of Austria-Hungary. Austria blamed Serbia for the shooting and declared war on Serbia.

Because Russia had close ties to Serbia, Russia started mobilizing its forces (getting them ready for war) against Austria-Hungary. This is when the system of entangling alliances kicked in, trapping the major powers of Europe in an unstoppable chain of events.

With Russia threatening war against Austria, Austria's ally, Germany, declared war on Russia and on Russia's ally, France. Britain then joined the war on the side of its allies, Russia and France. Less than six weeks after the shooting of Archduke Francis Ferdinand, most of the major powers of Europe and several smaller nations were embroiled in World War I. The alliance led by France, Britain, and Russia came to be known as the **Allies** while the alliance led by Germany, Austria-Hungary, and the Turkish Ottoman Empire came to be knows as the **Central Powers**. With enemies on both sides, the Central Powers had to fight a war on two fronts. The fighting in Belgium and France was the Western Front while the war with Russia was the Eastern Front. Many patriotic young men from both sides, bored with their quiet civilian lives, eagerly enlisted for the fight which they expected to be over by Christmas.

trench warfare

The American Civil War of the 1860s was one of the last major conflicts that was fought in the old style of battle that saw soldiers lining up in open fields to attack one another in individual combat. War had always been a battle of men, but now it was becoming a battle of machines. During World War I, five new technologies of the Industrial Revolution changed the nature of warfare; they were the airplane, the tank, the submarine, poison gas and the machine gun. Of these, the machine gun was the most devastating.

At the beginning of the war, generals familiar with the earlier style of combat hurled heroic cavalry and infantry charges against the enemy, but horses and human flesh offered little resistance to machine gun bullets. As the first winter of the war approached, soldiers on the Western Front began digging hundreds of miles of muddy, rat-infested trenches where they could temporarily hide from machine guns and exploding artillery shells. Between the trenches of the opposing armies lay a "**no man's land**" of barbed wire, shattered trees, shell craters and rotting corpses.

When ordered to attack, soldiers climbed out of their trenches, ran across no man's land toward the enemy trenches and were mowed down like fields of wheat by machine gun, rifle and artillery fire. In just one engagement, the Battle of the Somme in northern France, 1,100,000 soldiers died. For three long years, generals kept demanding more soldiers and ordering more massive ground assaults. Young men were dying by the hundreds of thousands, but neither side was gaining ground. It was a stalemate.

The *Lusitania*

The United States tried to keep out of the war, but it became increasingly difficult as the war dragged on. Britain and France spread **propaganda** portraying the war against the German kaiser as a battle for democracy. (Propaganda is information designed to influence the opinions of others.) American public opinion further turned against Germany due to unrestricted submarine warfare. The Germans were using their U-Boats (undersea boats) to sink ships carrying supplies to the Allies.

In 1915, without warning, a German U-Boat sank the British passenger liner, *Lusitania*, which was carrying weapons, as well as passengers, from the United States to England. Of the 1200 people killed in the attack, 128 were Americans, mostly women and children. Americans were outraged by the sinking, and there was a public outcry against the Germans. Economic interests also pushed America closer to war. American banks had made large loans to the Allies, and if the Allies lost the war, bankers knew their loans would never be repaid.

The United States declared war in 1917 "to make the world safe for democracy" in the words of President Woodrow Wilson. Germany responded by mounting a large offensive designed to win the war before American troops could be trained and sent to the front. The German attack pushed back French and British troops, and it looked as though Germany was about to achieve victory when a million American troops began arriving in France. The American reinforcements made the difference. The Allies launched a massive counterattack that soon defeated the Central Powers. When the fighting stopped, soldiers from both sides came out of their trenches and cheered. That day, November 11, is now observed as Veteran's Day in the United States.

During the war, women had gained political strength as they filled jobs of men who left for the front. Women soon had their own reason to cheer as they finally won the right to vote.

Treaty of Versailles

The peace treaty ending the war between the Allies and Germany was signed at the Palace of Versailles in June of 1919. The war had changed the political landscape of Europe. The decaying Ottoman Empire centered in Turkey was gone as was the empire of Austria-Hungary. Russia had lost its emperor, and Germany's Kaiser had been replaced by a newly formed German republic with its capital in the city of Weimar. The **Great War,** as it was called, nearly wiped-out an entire generation of young men in Europe. Almost 30 million people were killed or wounded, and over a million civilians died as a result of the fighting. The huge numbers of both military and civilian casualties made World War I the first **total war**.

France was especially bitter because much of the fighting took place on French soil and France suffered great loss of life. The Treaty of Versailles punished the Germans by giving Alsace-Lorraine back to France, taking away Germany's overseas territories and limiting the size of Germany's army and navy. Worse for the Germans, the Allies forced Germany to make large payments for war damages. Called **reparations**, these payments were resented by the German people who pointed out that Germany was not the only country to start the war. The Germans said the reparations were greater than they could afford to pay, and the payments would make it harder for Germany's new **Weimar Republic** to survive.

The Treaty of Versailles also established the **League of Nations**, an assembly of sixty countries which agreed to work together for world peace. The League was the idea of American President Woodrow Wilson who hoped the Great War would be "the war to end all wars." The United States Senate, however, refused to ratify the treaty because many people in America wanted no more foreign entanglements, an attitude called **isolationism**. Although the League of Nations was not successful in maintaining world peace, it became the forerunner of today's **United Nations**.

Soviet Union

Although Russia joined the Great War on the side of the Allies, Russia was not a democracy. Earlier Russian czars (emperors) such as Peter the Great and Catherine the Great had tried to modernize Russia, but at the time of World War I Russia remained a largely feudal society with rich landowners and poor peasants or serfs. Russia was ruled by a monarch, Czar Nicholas II.

World War I did not go well for the Russians. After early victories, the Russian army began to fall apart. The army was poorly fed and poorly equipped. Soldiers were sent into battle with no weapons and told to pick up the rifles of the dead. Because of hunger and shortages, poor leadership, and heavy battle losses, the morale (enthusiasm and confidence) of Russian soldiers was low.

Shortages hurt the civilian population as well. When soldiers were ordered to shoot women textile workers rioting for more food, the soldiers opened fire on their own officers instead. As the rioting spread, Czar Nicholas was forced to step down as Russian emperor in 1917. Into this power vacuum stepped a well-organized group of socialist revolutionaries known as Bolsheviks who promised land for the peasants and better working conditions for workers in the factories. After the **Bolshevik Revolution** succeeded in taking control of the Russian Empire, it was renamed the Union of Soviet Socialist Republics (USSR), or the Soviet Union for short.

communism

There are many varieties of socialism; the Bolsheviks based their political system on an extreme form of socialism called communism in which all property and all means of production (such as farms and industries) are owned by the community. In practice, this has meant ownership by the government. The concept of communism was developed by the German philosopher **Karl Marx** who was troubled by the working class poverty of the Industrial Revolution.

Borrowing Hegel's idea of the dialectic (conflict between opposites), Marx said all of history could be seen as a "class struggle" between the owners of production (whom he called the bourgeoisie) and the workers (whom he called the proletariat). Marx named his philosophy **dialectical materialism**, meaning that the dialectic in history has always been a struggle between people who possessed material wealth and those who did not, the "haves" versus the "have-nots." Only two generations had passed since liberal revolutions in Europe and the Americas had forced the nobility to turn over political power to the middle class, but now Marx was saying that the middle class, or bourgeoisie, had become the enemy of the people and should be overthrown.

Marx said religion was "the opiate of the masses," meaning that religion, by promising a better life in heaven, discouraged people from trying to improve their lives on Earth. Marx predicted that a working class revolution would eventually overthrow the capitalist system and replace it with communism. In the *Communist Manifesto,* published with Frederick Engels in 1848, Marx wrote, "The proletarians have nothing to lose but their chains...They have a world to win. Workers of the world, unite!" Although Marx's predictions have not come true, his ideas were adopted in many countries including the Soviet Union, China, and Cuba. Communist governments such as these have tended to limit personal freedoms and exert strong control over the lives of their people.

Lenin

The Bolshevik Revolution, also called the **Russian Revolution**, was led by Vladimir Ilyich Lenin. Lenin became a revolutionary at a young age after his older brother was killed in a plot against the czar. After studying the ideas of Karl Marx, Lenin dedicated his life to overthrowing the czar and setting up a socialist government in Russia. Lenin left Russia after spending five years in prison for his political activities, and he was living in the neutral country of Switzerland when the Russian czar was overthrown during World War I. Germany, hoping to further weaken its Russian enemy, provided transportation for Lenin to return to Russia. The German plan worked; after the Bolsheviks took power, Russia signed a peace treaty with Germany which ended the fighting on Germany's Eastern Front. The Russian negotiator was a Bolshevik leader named **Leon Trotsky.**

Lenin, Trotsky, and the Bolsheviks found that taking control of Russia was easier than keeping it. Several foreign governments supported a civil war that broke out against the Bolsheviks. Believing that harsh measures were needed to save the revolution, Lenin established a dictatorship and executed tens of thousands of Russians suspected of opposing communism. Among those killed were Czar Nicholas, his wife Alexandria, and their children. The Bolshevik "Red Army," under the capable but ruthless command of Trotsky, eventually won the civil war and preserved the revolution.

Lenin's next big challenge was saving the Russian economy. After his government banned all political parties except the Communists, Lenin took over the banks, major industries and communications. The strain of the revolution took its toll on Lenin's health, and he died in 1924. Although Lenin hoped Trotsky would succeed him, leadership of the Soviet Union passed to another of Lenin's followers, the son of a shoemaker, **Joseph Stalin**.

totalitarian government

A totalitarian government is one that takes nearly total control over the lives of its people. The Soviet Union became a totalitarian state under Stalin, a brutal dictator who ruled the USSR from the early 1920s to the early 1950s. His name means "man of steel." Announcing that his country must modernize because it was "50 or 100 years behind the advanced countries," Stalin set up a series of ambitious "Five-Year Plans" intended to quickly increase the Soviet Union's industrial and agricultural production. Stalin expected every citizen to sacrifice as if Russia were still at war.

Stalin's plans included combining individual farms into large units called "collective farms" owned by the Soviet government. Many farmers resisted giving up their land, often killing their livestock rather than turning it over to the state. In the 1920s and 1930s, some ten million peasants were tortured, killed, or sent to prison camps, and Soviet agricultural production plummeted.

Although his own people were starving, Stalin exported food to other countries to finance new steel factories and hydroelectric power plants. As millions of Russians died, even some Communist Party members thought Stalin had gone too far. Stalin responded by killing or imprisoning those who disagreed with him. Stalin exiled his chief rival, Leon Trotsky, and then had him murdered in Mexico. Anyone who spoke against the government could expect a knock on the door in the middle of the night from the Soviet secret police. The Soviet Union had become a totalitarian state. (**Authoritarian** government is similar, but the term implies less control by the state)

appeasement

Hitler promised Germans that he would destroy the Treaty of Versailles, and he began by rebuilding the German army in violation of the treaty. Although Britain and France condemned German rearmament, they did nothing to stop it. The following year, Hitler sent troops into the Rhineland, an area on the French border which was supposed to remain free of soldiers under terms of the treaty. It was a risky move, but Hitler calculated that nobody would stop him, and he was right. Encouraged by this success, Hitler brought Germany and Austria together in a political and military union although this, too, was forbidden by the treaty.

England and France were following a policy of appeasement, which means they were giving in to Hitler's demands to avoid conflict and the possibility of another terrible war. Meanwhile, Hitler's army was growing stronger and each success made Hitler bolder. Next, he threatened war on neighboring Czechoslovakia unless Germany were given the German-speaking Sudatenland region. When Hitler promised to seek no more territory, France and England agreed. Six months later, Hitler's armies invaded and conquered all of Czechoslovakia, and still there was no response from the rest of the world.

Six months after that, Hitler's armies invaded Poland. The invasion of Poland finally forced France and England to declare war on Germany. World War II began on September 3, 1939. The alliance of France and England (later joined by Russia and the United States) was called the **Allies** while Germany, Italy (and later Japan) were known as the **Axis** powers. Many historians consider World War II to be a continuation of World War I because the opposing sides in both wars were similar and because German discontent over the Treaty of Versailles set the stage for World War II.

blitzkrieg

To overcome the stalemate of trench warfare, Hitler's military planners developed a new kind of battle called blitzkrieg or "lightning war." Blitzkrieg meant attacking quickly with a strong force of concentrated troops supported by artillery, tanks and air power. The Blitzkrieg was highly effective. When World War II broke out, Hitler's powerful German military used the blitzkrieg to quickly conquer Poland, Denmark, Norway, Belgium, the Netherlands and Luxembourg. Next would be France.

The French had prepared for war against Germany by building a large army of their own and a physical barrier of strong forts along France's eastern border with Germany. The German army simply went around these defenses and attacked France through the forests of Belgium. The French army melted away before the German blitzkrieg. Soon, a large force of British, French, and Belgian soldiers were cut off and trapped at the French town of **Dunkirk** on the English Channel. Every available English boat sailed to Dunkirk to save the stranded soldiers. In one of the strangest events of World War II, an oddball armada of fishing boats, yachts, tugboats, merchant ships, and navy destroyers managed to rescue all 335,000 Allied soldiers just ahead of the invading German army. Dunkirk provided a tremendous boost to British morale. Nonetheless, Nazi troops rolled into Paris in June of 1940. It had taken the Germans only seven weeks to defeat the powerful nation of France.

Battle of Britain

With France defeated, Hitler turned his attention to Great Britain. Britain had a new prime minister, **Winston Churchill**, who refused to surrender to Germany. Hitler responded by ordering massive air attacks against Britain in preparation for a planned invasion. These were dark days for the British people, and Churchill told his countrymen, "I have nothing to offer but blood, toil, tears, and sweat." Nearly every day German bombers attacked British factories, seaports and airfields in what came to be known as "the Blitz."

Then Hitler threw the full power of his air force against the British capital of London. Although German bombs pounded London for 57 straight nights, the citizens of London refused to give in, and they kept their city functioning. Meanwhile, British Royal Air Force (RAF) *Spitfires* challenged the Luftwaffe in the skies over England. The RAF was aided by **radar**, a new technology that allowed the British military to spot German aircraft approaching the British coast.

Although the Luftwaffe succeeded in destroying large areas of British cities, German aircraft losses became so great that Hitler was forced to abandon his plan to invade England. Winston Churchill acknowledged the bravery of RAF pilots by declaring,"Never, in the field of human conflict, was so much owed by so many to so few." In winning the Battle of Britain, the British dealt Hitler his first major defeat of World War II. Britain's survival meant that British warships continued to control Atlantic shipping lanes despite deadly attacks from German U-boats. Although the U.S. was not in the war, America shipped large quantities of supplies across the Atlantic to aid Britain.

Pearl Harbor

Just as Hitler wanted to dominate Europe, Japan wanted to control Asia. Japan was a nation open to new ideas, and it had learned much from the West about modern industry, military power and imperialism. Before World War II began, Japan's strong military had already conquered Korea and large portions of China. With the European Allies busy fighting Hitler, Japan took advantage of the situation and snapped up European colonies in Asia. Only one barrier stood in the way of Japanese plans for complete domination of Asia, the U.S. Navy's Pacific fleet with its headquarters at Pearl Harbor, Hawaii.

After Japan joined the Axis powers and marched into Southeast Asia, the United States imposed an **embargo** which stopped most American trade with Japan. Furthermore, the U.S. insisted that Japan withdraw from China and Southeast Asia. Japanese leaders became convinced that war with the U.S. was inevitable, and American war planners suspected that the Japanese might try to attack American bases.

Just before 8:00 am on December 7, 1941, the quiet of a Sunday morning at Pearl Harbor was shattered when 350 Japanese warplanes suddenly appeared in the skies overhead raining bombs and cannon fire onto ships of the U.S. Pacific fleet. The attack, launched from Japanese aircraft carriers, came as a complete surprise. Neither side had declared war, and the U.S. naval base at Pearl Harbor was considered safe from a military strike. The attack destroyed or disabled 18 U.S. warships and killed 3,500 Americans. In just two hours, U.S. naval power in the Pacific was crippled. Despite the successful attack, the Japanese commander warned, "I fear we have awakened a sleeping giant."

The next day, President Franklin Roosevelt went before the American Congress and declared that December 7th would be a "date which will live in infamy." Both the United States and Britain declared war on Japan. A few days later, Germany and Italy declared war on the United States. Now, we were in it.

the arsenal of democracy

Even before the attack on Pearl Harbor, President Roosevelt had said that America must become "the great arsenal for democracy." After the attack, the U.S. immediately switched to a war footing. Factories began operating 24-hours a day, seven days a week. Chrysler stopped making cars and started making tanks. As American men were called away to fight, American women went to work in war plants making everything from socks to aircraft carriers. Within a year, U.S. war production equaled that of Japan, Italy and Germany combined. This "miracle" of production, as *Time* magazine called it, would have been impossible without "Rosie the Riveter," the nickname given to American women fighting the war on the home front.

The U.S. built enough ships to replace those sunk by German submarines, permitting American-made supplies to flow uninterrupted across the Atlantic to the Allies. In the Pacific, the U.S. fleet recovered sufficiently from the attack at Pearl Harbor to stop a Japanese advance toward Australia. The Battle of the Coral Sea was the first sea battle in history in which ships didn't fire a single shot; all the fighting was done by carrier-based aircraft. A month later, after breaking Japanese radio codes, the U.S. Pacific Fleet surprised a massive Japanese naval task force near Midway Island, not far from Hawaii. Aircraft from three U.S. carriers sunk four Japanese carriers and five other warships giving the United States naval supremacy in the Pacific for the remainder of the war. The giant was awake.

the Holocaust

At its high point, Hitler's empire stretched from Scandinavia to North Africa and from the Atlantic Ocean to Russia. People in lands conquered by the Nazis were expected to serve the German "master race." "Inferior" peoples such as Poles, Russians, gypsies, and Jews were to be enslaved or eliminated. Anyone considered a threat to the Nazis, such as political leaders or teachers, were also rounded-up and sent to **concentration camps**.

The Nazis reserved their harshest treatment for the Jews. Hitler's plan for the Jews was called the "Final Solution," which meant complete extermination of the Jewish people. All over Europe Jews were arrested and sent to concentration camps where they were forced to work or were systematically executed. Children, being too young to work, were killed immediately. About two million people died at Auschwitz (OSH-vitz) in Poland, the most notorious of the death camps. The commander of Auschwitz later said that, "Women would hide their children under their clothes, but of course when we found them, we sent the children to be exterminated." Hitler's Final Solution was effective; of Europe's eight million Jews, the Nazis succeeded in murdering six million, an event which came to be known as the Holocaust.

Late in the war, when Allied soldiers liberated Nazi concentration camps, the world became aware of the full extent of Hitler's criminal madness. A new word was invented to describe it, **genocide,** which means the intentional and systematic destruction of an entire racial or cultural group.

Hitler's invasion of Russia

Hitler was about to make his biggest mistake of the war, the very same mistake made by Napoleon more than a century earlier. When Hitler couldn't conquer England, he turned to the east. Despite a peace treaty between Germany and the Soviet Union, Hitler launched a three-pronged attack against the Soviets in June of 1941. Hitler wanted to acquire Soviet territory to provide growing room for Germany, a place where Germans could expand and build new settlements. Hitler also wanted Russia's wheat, oil and coal to supply his war machine.

Hitler's massive blitzkrieg caught Stalin and the Soviets by surprise. In little more than two weeks, the Germans captured 300,000 Soviet soldiers and destroyed 1,000 tanks and thousands of Soviet aircraft. As the Soviets retreated, they adopted the same **scorched-earth** policy used by the czar's soldiers against Napoleon; they burned everything in Hitler's path to deny his troops food and shelter. Britain and the United States began sending supplies to the Soviet Union.

The turning point in the Russian fighting – and in World War II – came at the **Battle of Stalingrad** (now Volgograd). After fierce house-to-house combat, the Germans captured Stalingrad, but outside the city the Soviets organized a successful counterattack in early 1943 that captured an entire German army. With a seemingly endless supply of troops and tanks, the Soviets began to push the Germans back. From then on, Germany and Italy started losing the war. The Russians, however, paid a terrible price in stopping Hitler, suffering an incredible 23 million dead.

Normandy Invasion

While fighting raged in Russia, the Pacific, and North Africa, **Resistance** movements sprung up in European countries under German occupation. Resistance fighters were ordinary men and women who lived dangerous secret lives spying on the Nazis, assassinating German officials, blowing up trains and sabotaging factories. In 1943, Allied forces advanced into Italy after winning hard-fought battles in North Africa. From airfields in England, British and American long range heavy bombers, such as the B-17 *Flying Fortress*, began pounding cities and factories inside Germany. Entire German cities, including Hamburg and Dresden, were wiped-out killing hundreds of thousands of civilians. Hitler was on the defensive but his military remained formidable.

After months of planning and preparation, the Allies launched a massive invasion of western Europe in June of 1944; it was meant to be the beginning of a final push toward Germany. On **D-Day**, the day the invasion began, an enormous fleet of Allied ships supported by thousands of aircraft crossed the English Channel carrying American, British, Canadian and Free French soldiers who stormed ashore at five beaches on the coast of Normandy in northern France. At Omaha Beach, German machine gun and artillery fire were so intense that countless American soldiers died in the water before reaching shore.

Nonetheless, the invasion of Normandy succeeded. The Germans were now trapped between Allied forces approaching from the west and Russian soldiers closing in from the east. Three months later, American troops were in Paris heading for the German border. On April 30, 1945, with Russian troops only a few blocks from his underground bunker in Berlin, Adolph Hitler committed suicide. The day Germany surrendered, one week later, was called V-E Day for victory in Europe.

Hiroshima

Meanwhile in the Pacific, fierce fighting continued. American troops fought and won savage battles against determined Japanese forces trying desperately to hold strategic islands including Saipan, the Philippines, Iwo Jima and Okinawa. The Americans succeeded in cutting Japan's vital supply lines, and American bombers began striking inside Japan. By the summer of 1945, many Japanese cities had been leveled, nearly half of the capital of Tokyo was destroyed, and Japan was on the verge of collapse; yet Japan refused to surrender.

While the U.S. military was readying plans for an invasion of Japan, a team of scientists in New Mexico perfected the atomic bomb. Hoping to avoid a costly invasion, President Harry Truman ordered the atomic bomb used against Japan. The first bomb destroyed the city of Hiroshima where 200,000 were killed immediately or died later. Three days later, a second bomb was dropped on the city of Nagasaki with similar results. The next day, Japan asked to end the war. Japanese officials surrendered aboard the U.S. battleship *Missouri* in Tokyo Bay on V-J Day, September 2, 1945. World War II was over; in cities across America strangers hugged and kissed each other in the streets.

Controversy still surrounds the decision to use atomic weapons against Japan. Critics point out that Japan was never told about the bomb before it was used. They say a demonstration of the awesome power of the weapon might have convinced Japan to surrender without the deaths of more innocent civilians.

World War II marked a fundamental shift in the nature of warfare. In modern times, most people killed in war had been combatants (military personnel). Of the fifty million people killed in World War II, however, more than two-thirds were civilians. The invention of the atomic bomb meant that any future world war might kill everyone.

Unit 4 - 1925-1945: The rise of fascism and World War II

MAP IDENTIFICATION: Poland, Luxembourg, Japan, Southeast Asia, Hawaii, Normandy, Norway

fascism

Russia was not the only country in Europe facing food shortages and economic problems following World War I. In Italy there wasn't enough to eat, prices were rising, unemployment was widespread, and people wanted a change. Membership in socialist political parties was growing which worried business and property owners who feared losing everything in a Russian-style revolution.

Amid this turmoil, a strong political leader emerged who promised to stop socialism and restore Italy's greatness. His name was **Benito Mussolini**, leader of the fascists which was an anti-communist political movement that emphasized patriotism, nationalism and obedience to the state. (Fascist leaders have generally been dictators who liked to wear showy military uniforms.) After taking power, Mussolini succeeded in modernizing agriculture and improving the economy. He proclaimed that Italy would become the new Roman Empire. To strengthen his control, Mussolini made himself dictator; he seized the news media and he set up his own secret police.

Germany, too, had economic problems following the Great War. The Kaiser had been replaced by the weak Weimar Republic which was not able to stop runaway **inflation** that made German currency nearly worthless. Inflation got so bad at one point that it took bushels of money to buy a loaf of bread. The life savings of many Germans were wiped out. Then, in 1929, Germany was hit hard by the **Great Depression**, a worldwide economic downturn that threw half of Germany's labor force out of work and caused the failure of banks and industries. As did the Italians, the Germans looked for a strong leader to fix their economic problems. As did the Italians, Germany chose a fascist, Adolph Hitler.

Hitler

Adolph Hitler was twice honored for bravery while fighting for Germany during World War I. Following the war he joined a fascist political party called the National Socialist German Worker's Party, or **Nazis**. Due to his talents as an organizer and inspiring public speaker, Hitler quickly became the leader of the Nazi Party.

With crowds of Germans wildly cheering Hitler in huge parades and rallies, the Nazi party grew in strength until the Nazis tried to overthrow the government of the German province of Bavaria. Hitler was arrested and sent to jail where he wrote his famous book, *Mein Kamph* ("My Struggle"), which described Hitler's views on nationalism and racism. He said Germans were a "master race" giving them the right to dominate "inferior" races such as Jews. Hitler blamed Jews for all of Germany's problems, from the defeat in World War I, to the Great Depression to the spread of communism. Hitler also told Germans that they must win back lands lost under the Treaty of Versailles and build a new German empire in Europe.

Hitler's flaming patriotism and nationalist ideas took hold in Germany which felt humiliated by the Treaty of Versailles. Germans were fed up with being told how big their army could be and with paying war reparations. With the backing of powerful anti-communist businessmen, Hitler was given absolute power by the Weimar parliament. He quickly moved to revive the German economy, and in just five years unemployment fell from six million to almost nothing, and the German standard of living rose. Hitler also used his absolute power to ban all political parties except the Nazis, set up a secret police called the Gestapo, kill and torture his enemies, and persecute Jews who were stripped of their German citizenship and their businesses. Hitler said, "Power creates justice."

Spanish Civil War

The years between World War I and World War II were a difficult time for democracies all over Europe as they faced economic problems and were challenged by socialism on the left and fascism on the right. Not only were republics overthrown in Italy and Germany, most of the democracies of eastern and central Europe also fell during this period. Shortly before the outbreak of World War II, fascists led by Francisco Franco tried to take control of Spain from the legally elected republican government. Volunteers from many countries, including the U.S., formed "International Brigades" which went to Spain to fight on the side of the Spanish Republic.

The fascists, however, were supported by Mussolini and Hitler. Hitler used the opportunity to test his modern German air force, the **Luftwaffe**, against human targets. A disturbing painting by Pablo Picasso portrays the bombing of the defenseless people of the Spanish town of **Guernica** where a thousand residents were killed by German bombers during one night of terror. This was the first time in history that a massive air attack was directed against a civilian population. It would not be the last. After three years of fighting, Franco's fascists succeeded in defeating the republicans. Franco remained dictator until his death in 1975 when King Juan Carlos reestablished democracy in Spain.

Unit 5 - 1945 to the present: Cold War and the Space Age

MAP IDENTIFICATION: Eastern Europe, Berlin, Pakistan, Taiwan, China, Korea, Vietnam

Cold War

Another of history's storms had swept the world. Following World War II, Japan, Germany and much of Europe were in ruins. After 500 years as the dominant region of the world, Western Europe had surrendered that position to the United States and the Soviet Union. Although the Soviets had suffered the greatest losses ever suffered by any country in any war, it was the only power left in Europe and Asia. The United States ended the war with the strongest economy in the world. These two "superpowers" represented a new international balance of power.

Russia was determined to prevent any future invasions from Europe after fighting off armies of Napoleon in the 19th century and Hitler in the 20th. To give itself a protective barrier, the Soviet Union took control of eight Eastern European countries on its western border. Stalin installed communist governments in these nations and cut off most contacts with the West. The Soviet Union and its "satellites" came to be known as the Eastern bloc or the Soviet bloc.

Although Britain and the U.S. had been allies of the Soviet Union during the war, they were never comfortable with the Soviet Union's communist form of government. When Stalin took control of Eastern Europe following the war, the Western capitalist countries became alarmed at the spread of communism and Soviet power toward the west. Britain's Winston Churchill declared that "an iron curtain has descended across the continent." The United States created a program called the **Marshall Plan** that sent billions of dollars in aid to Western Europe to rebuild economies crippled by the war and to strengthen them against communism.

This was the beginning of an intense 45-year political struggle between the Western capitalist democracies and the communist Soviet bloc. Capitalism and communism were seen as more than just competing economic theories; they became belief systems, or **ideologies**, that people were willing to kill and die for. Because the conflict remained largely a war of words and threats, rather than a shooting war between the superpowers, it was called the Cold War.

Berlin Wall

Nowhere was East-West tension greater than in the German capital of Berlin. Following World War II, Germany was divided into zones occupied by the four major Allied powers. Britain, France, and the U.S. soon agreed to combine their zones and return control to the Germans. The Soviet Union, fearing that a unified Germany might again threaten Russia, chose to keep its zone separate. The Soviet zone became the communist country of East Germany, while the other zones became capitalist West Germany. Although Berlin was located a hundred miles inside East Germany, it, too, was divided. West Berlin was a capitalist island in the midst of communist East Germany.

In 1948, the Soviets tried to force the Allies out of West Berlin by blocking all roads and railways into the city. Within two days, the **Berlin Airlift** began. For over a year, U.S. Air Force transport planes landed in Berlin every one to two minutes around the clock supplying the needs of the city of two million people. Realizing his plan had failed, Stalin ended the blockade in 1949. Prompted by the Berlin blockade and fear of Eastern bloc military power, the U.S. and Western Europe formed a military alliance called the North Atlantic Treaty Organization, or **NATO**.

By 1952, the Marshall Plan had helped restore prosperity to Western Europe. In the communist countries, however, economic conditions were not as good, and many East Germans began seeking a better life in the West. To prevent emigration, East German officials erected a wall in 1961 which separated East from West Berlin. The East German side was patrolled by soldiers with machine guns and attack dogs. The western side was covered with anti-communist graffiti. More than 170 people died trying to escape from East Germany by crossing over the 26-mile long concrete wall. The Berlin Wall became the most prominent symbol of the Cold War.

nuclear arms race

The United States was the only nation to possess atomic weapons at the end of World War II, but the Soviet Union managed to develop its own atomic bomb in only four years. Cold War competition soon turned into a race to see which nation could develop the most deadly weapons of mass destruction. In 1952, the United States detonated the first hydrogen bomb with 1000 times the power of the bomb dropped on Hiroshima. A year later, the Soviets had their own H-bomb.

Then, both countries developed long-range missiles that could fly across the Earth to rain nuclear destruction on one another. Missiles were placed on submarines that could escape detection, lie in wait and wipe-out large cities in minutes. The superpowers developed the capacity to destroy each other many times over and to turn the Earth into a dead wasteland. Weapons had finally become too terrible to use, a situation termed "mutual assured destruction" or MAD. Fear of a nuclear holocaust preyed on the mind of man, and that fear kept the peace.

People's Republic of China

During World War II Japan took control of much of China. Within China two groups resisted the Japanese occupiers, and when World War II ended with Japan's defeat, these two Chinese armies fought each other for control of China. The winners were the Chinese communists, led by **Mao Zedong**, who established the People's Republic of China in 1949. The losers fled to the island of **Taiwan,** off the coast of China, where they set up an anti-communist government that exists today and receives military support from the United States. Until 1979, the United States recognized the government on Taiwan, not the People's Republic, as the legitimate government of China. (The People's Republic still considers Taiwan to be part of China and expects to get it back.)

Communists were now in control of the world's largest country, the Soviet Union, and the world's most populous country, China. Many in the West feared the Chinese might try to take control of East Asia much as the Soviets had taken control of Eastern Europe. Meanwhile, a Soviet leader, Nakita Kruschev, placed Soviet missiles in Cuba only ninety miles of the coast of Florida, and he boasted to the West, "We will bury you." In America of the 1950s and 1960s, politics were driaven by a genuine fear of communist world domination.

containment

The United States set out to do everything in its power to stop the spread of communism, a policy called containment. Western leaders feared that if one country fell to communism, more countries might topple like a row of dominoes; this was called the "Domino Theory."

The containment policy got its first big test in 1950 when communist North Korea, backed by the Soviets, invaded South Korea, which was backed by the United States. This was also the first big test for the **United Nations,** which had been formed at the end of World War II to promote world peace and cooperation. With the Soviet Union absent during the vote, the United Nations approved a U.S. resolution to send troops (mostly American) to repel the North Korean invaders. China was reluctantly drawn into the war in support of North Korea. After three years of back-and-forth fighting in which both sides gained and lost much ground, the **Korean War** ended with North and South Korea occupying much the same territory they held when it began.

The Cold War turned hot again in Asia in the mid-1960s when the United States sent troops to prevent a communist takeover in South Vietnam. The U.S. had difficulty fighting the **Vietnam War** because it was a **guerrilla war** with no front lines and few large-scale battles; the enemy would attack and disappear into the mountains or jungle. Meanwhile, the U.S. was trying to prop-up a series of unstable and ineffective South Vietnamese governments. The United States saw Vietnam as a battle against communism, while the other side saw it as a nationalist struggle against an imperialist power trying to control half their country. As the fighting dragged on for eight years, and the American death toll mounted, public opinion in the United States turned against the war. With no end in sight, the U.S. finally withdrew and allowed the communists to take full control of Vietnam in 1975.

modern art

Modern art began with the Impressionists who were freed by the camera to portray their own impressions of reality rather than trying to copy it. Although the art world has split off in a hundred different directions since then, one thing remains consistent; modern art usually doesn't look much like the real world. Consequently, modern art can be difficult for people to understand and appreciate.

Modern art is divided into two major categories, expressive and abstract. Expressive art includes the work of the Impressionists and later artists such as Van Gogh and Picasso. The subject of the painting is recognizable, but it has been distorted to express the artist's personal feelings and point-of-view. Abstract art, on the other hand, makes no attempt to portray the real world at all. It tries to offer a more basic view of beauty, or reality, by reducing art to its primary elements of line, shape, and color.

Reflecting its own time in history, much modern art has been concerned with the anxiety of a century terrified by two world wars and the threat of nuclear annihilation. Edvard Munch's expressionist painting, "The Scream" has become a symbol of the horrors of the twentieth century. Pablo Picasso used a blend of expressive and abstract styles to convey his horror at the first bombing of a civilian population by the Nazis at Guernica during the Spanish Civil War. Picasso's broken and disturbing images suggest a chaotic world in which principles of morality and human decency have been shattered and civilization is reduced to a pile of rubble.

At the middle of the twentieth century, art moved toward the abstract and it was no longer limited to paintings and sculpture; it began to show up on TV screens and computer monitors. Art could be playful; Claus Oldenburg created giant vinyl hamburgers and baseball mitts, and Christo hung a huge orange curtain across Rifle Gap in the Colorado mountains and called it environmental art. Some scholars believe the most important art form of our age is motion pictures which combine visual images with elements of literature, music and the performing arts.

independence movements

Although the twentieth century saw history's worst instances of man's inhumanity toward man, humans also made great strides during the century. It has been said the amount of change that occurred during the twentieth century equaled that of the preceding nineteen centuries combined. Discoveries in the fields of health and medicine increased life expectancy, the standard of living rose for people in much of the world, and democracy triumphed as ever more people were living in societies where they could choose their own leaders.

The twentieth century also saw the end of imperialism. After World War II, it became unacceptable for one country to dominate another. Colonies in Asia and Africa, one after another, demanded an end to foreign control. **Mahandas Gandhi** won the respect of the world by using non-violent means to gain India's independence from Great Britain. Gandhi and his followers were willing to accept pain in their struggle for independence, but they were unwilling to inflict it. Adopting a tactic called **civil disobedience**, members of the Indian independence movement disobeyed British laws which they felt were unjust; they accepted arrest and they went to jail. When India achieved independence in 1947, it was divided into two countries, Hindu India and Muslim Pakistan. (Martin Luther King later adopted Gandhi's strategy of non-violent civil disobedience during the American Civil Rights movement of the 1960s.)

Most of the countries of Africa gained their independence from European control in the 1950s and 1960s, some by peaceful means and others after violent struggles. Portugal, the first European country to explore Africa, held its colonies into the 1970s. It wasn't until 1993 that white minority rule ended in South Africa when **Nelson Mandela** was elected as that country's first black president. Many of the countries freed from European colonial rule after World War II are among the world's poorest, a group of nations that are called "developing nations" or the **Third World**.

Space Age

The United States and the Soviet Union carried their Cold War rivalry into outer space competing in a space race that was closely related to the arms race because it was long-range missile technology that made space flight possible. The Space Age began in October of 1957 when the Soviets launched the first man-made satellite, **Sputnik,** into Earth orbit.

The Soviet achievement caught America off-guard, and the U.S. rushed to develop its own space program which, after a number of failures, succeeded in launching satellites into orbit. Then, in 1961, the Soviets launched the first man into space. The U.S. followed with its own manned space missions. The United States finally overtook Russia in the space race when an American astronaut, Neil Armstrong, became the first human to set foot on the moon in July of 1969, an event which future historians may view as one of the major turning points in history.

Something unexpected happened when humans stepped off the Earth and we got our first good look at our home planet. We had never seen anything like it before. In contrast to the dead moon and other lifeless worlds visible in the heavens, Earth appeared as a lovely blue sphere floating in space with white clouds swirling over pinkish continents. A water-covered world teeming with life appeared so extraordinary against the dark, lonely, vastness of space. We began to understand how unusual and precious our planet is. This new view of Earth may have been the most profound shift in human perspective since the Renaissance, and it came at a time when that beautiful blue sphere was being threatened with nuclear and environmental destruction by one of its own species.

collapse of the Soviet Union

In 1985, a younger communist leader with new ideas came to power in the Soviet Union. **Mikhail Gorbachev** believed that progress in his huge nation depended on making fundamental changes to the Soviet system. Although communism sounded great in theory, it wasn't working very well in practice because people had little incentive to work hard and improve their products. Gorbachev called for economic reforms that looked a lot like capitalism. Gorbachev also signed agreements with the United States to limit the spread of nuclear weapons, and he surprised the world by giving up Soviet control over the satellite countries of Eastern Europe.

In a wave of rebellion, most of the countries of Eastern Europe threw off their communist governments in 1989, and the Berlin Wall was joyously smashed to pieces. Germany was reunified the following year. Back in the Soviet Union, the forces unleashed by Gorbachev's reforms were spinning out of his control; regions of the Soviet Union itself were now breaking away and setting up independent republics. In 1991, the Soviet Union ceased to exist and was replaced by fifteen new nations, the largest of which is Russia. These new countries had little idea how to survive without their old communist economies, and for many people life grew even harder.

The collapse of the Soviet Union meant that the Cold War was over, and there was only one remaining superpower, the United States.

Unit 6 - Current Issues: toward a new world order

MAP IDENTIFICATION: Serbia, Israel, Egypt, Iran, Iraq.

the new world order

For nearly a half century, the world had been divided into pro-Soviet and pro-American camps. When the Cold War ended, there was no longer a balance of power between the countries of the world; one country was dominant, and the world had to find a new way to organize itself. American President George Bush, Senior. said there was a "new world order."

Although the threat of nuclear war between Russia and the U.S. has diminished, the world after the Cold War remains a dangerous place. One of the biggest threats facing the new world order is an ancient one, the hatred of one ethnic group for another often based on religious differences. History shows that difference can be deadly; it led to the Crusades in the Middle Ages and the Religious Wars of the Renaissance. Ethnic hatred triggered World War I and it fueled World War II. Since **ethnic violence** can have such grave consequences for the people of the world, how should the nations of the world deal with it?

In 1999, Serbia was accused of **ethnic cleansing** in the Serbian province of Kosovo. Reports from Kosovo indicated that Christian Serbs were brutally forcing Muslims out of Serbia, killing many Muslims in the process. The countries of NATO, led by the United States, went to war against Serbia to stop ethnic cleansing in Kosovo. Today, soldiers from several nations, including Russia and the U.S., are in Kosovo trying to maintain peace between Muslims and Serbs.

Was NATO justified in going to war against Serbia? Did NATO have the right to interfere in the internal affairs of Serbia? Does the world have a responsibility to stop atrocities such as ethnic cleansing? Who should enforce international morality? Does the United States, as the world's strongest nation, have a special responsibility? Is warfare acceptable under any circumstances and, if so, under what circumstances? Will humans ever be able to cure the plague of war as they have cured other deadly afflictions such as the Black Death and polio? These are some of the questions that the nations of the world are struggling to answer as they seek to understand the new world order at the beginning of the 21st century.

nuclear threats

Although the United States and Russia are no longer bitter enemies, the nuclear threat has not ended. Each country still has thousands of nuclear warheads which, if launched intentionally or by mistake, would likely result in the extinction of most life on Earth. Some observers believe the threat of accidental nuclear war is greater now than during the Cold War because the Russian military is in poor condition, and its nuclear control systems may not be as effective.

In addition to the U.S. and Russia, six other nations have officially joined the "nuclear club" and several more countries are suspected of developing nuclear weapons including North Korea, Libya and Iraq which are non-democratic nations with aggressive leaders. One of the most important issues left over from the Cold War is how to contain the spread of nuclear weapons (called nuclear proliferation).

South Asia is a region of special concern. Ethnic violence has flared between Muslims and Hindus since 1947 when Britain gave up control of India and the country was divided into two nations, Hindu India and Muslim Pakistan. This long-running ethnic struggle is now centered in the mountainous border region of Kashmir which is claimed by both sides. Although Indian and Pakistani armies have fought several sharp wars in Kashmir over the years, the situation turned more dangerous when both sides acquired nuclear weapons.

A different kind of nuclear threat is posed by the dismantling of nuclear weapons in countries which were part of the Soviet Union. As governments changed hands, controls over bomb-making materials weakened, and some nuclear materials were lost. Police in several countries have seized illegal shipments of nuclear materials from the former Soviet Union. There is concern that bomb-making materials might be acquired by leaders of unstable countries or by international terrorists.

terrorism

Terrorism is the systematic use of violence to achieve a goal. A terrorist usually does not work for a government, and the violence is often directed against civilians. Modern technology and communications have made it possible for terrorists to strike anywhere in the world including the United States where Islamic terrorists have twice attacked the World Trade Center in New York and where American anti-government terrorists destroyed the federal building in Oklahoma City.

Thus far, terrorists have not successfully used weapons of mass destruction (WMDs) such as nuclear, biological, or chemical weapons. There is growing concern, however, that terrorists - including religious or political groups, organized criminals or narcotics traffickers - might gain access to weapons of mass destruction in the future.

the Middle East

Because the world depends on the Middle East for oil, industrialized nations such as the United States are very interested in what happens there. The Middle East has been a trouble spot since the end of World War II when the Jewish nation of Israel was established in Palestine, an Arab region at the eastern end of the Mediterranean Sea. Neighboring Arab countries did not recognize Israel's right to exist, and they tried to destroy the new Jewish state in a series of wars that stretched from the 1940s to the 1970s. Israel managed to win the wars and expand its territory.

Israel's relations with its Arab neighbors began to improve in 1979 when Egypt became the first Arab country to recognize Israel and establish normal diplomatic relations. Other Arab countries followed, and Israel has also signed agreements with the Palestinian Liberation Organization (PLO), a group that represents the Palestinians left homeless by the creation of Israel. Implementing the agreements between Israel and the PLO has proved difficult, however, and the peace process has broken down. Terrible violence continues between Israelis and Palestinians .

Meanwhile, trouble broke out in other areas of the Middle East. A new Islamic government in Iran held a number of Americans hostage for over a year, then Iran fought an eight-year war with neighboring Iraq. After the Iran-Iraq war ended, Iraq invaded its neighbor, the oil-rich kingdom of Kuwait. In 1991, the U.S. led a United Nations military force that expelled Iraq from Kuwait during the **Gulf War**. In 2003, President George W. Bush ordered an invasion of Iraq to seize suspected weapons of mass destruction. American forces quickly toppled the government of Saddam Hussein and began an occupation of Iraq that continues to this day. The invasion was opposed by most nations of the world, and it became more controversial when no WMDs were found. The U.S. has installed a new government in Iraq, but American troops continue to battle nationalist fighters.

Governments in the Middle East tend to be authoritarian, limiting the freedoms of their people. Poverty and despair have fueled resentment against rich Western nations. Young men with little hope for the future have been willing to die in terrorist attacks in Israel, the U.S., and elsewhere.

Africa

In the 20th century, the arts of sub-Saharan Africa strongly influenced Western culture. African religious art inspired Modern Art, and African music formed the roots of the blues, jazz, and rock-and-roll. Although Africa has greatly enriched the West culturally, Africa is the poorest and most troubled region of the world.

During the Scramble for Africa of the late 1800s, the imperialist powers of Europe destroyed Africa's native governments. The Great Powers created artificial new countries which included people of various ethnic groups, customs and languages. When African countries gained their independence from colonial rule in the mid-1900s, they had little experience in self-government, but they had to deal with the difficult problem of ethnic divisions within their countries and between neighboring countries. Recurring violence and warfare between ethnic groups remains one of the biggest problems facing Africa today.

Many countries in Africa lack adequate farmland and natural resources, making them among the world's poorest countries. During times of drought or violence, farming and food distribution are disrupted which can lead to famine. International relief agencies try to help by bringing in emergency food supplies, but warfare can make it impossible to get food to the people who are starving. If these problems weren't enough, Africa has the world's most severe epidemic of AIDS. Faced with adverse circumstances such as these, many African nations have found it difficult to establish stable governments since gaining their independence.

China

Will the 21st century be China's century? China has the world's largest population and some observers believe that China's huge army, labor force, and consumer markets could make China the next great superpower. As with the Soviet Union, China under communism had a weak economy. After the death of Mao Zedong, Chinese leaders encouraged their people to start businesses and make money. China now has a mixed communist and free market economy that grows stronger yearly.

When the Chinese economy started to open up, many people in China hoped for greater political freedoms as well. In 1989, the year the Berlin Wall fell, thousands of students and workers gathered peacefully at Tienanmen Square in Beijing to call for democratic reforms. The Chinese government responded by sending in troops and tanks. The world was shocked as the army killed hundreds of demonstrators, and student leaders were arrested and executed. Chinese officials said they had to crack down so China would not fall apart like the Soviet Union.

Although relations appear to have improved recently between the People's Republic and the United States, the two countries have had a tense relationship over the years due in part to their differing political systems, friction over Taiwan, and perhaps because China still resents being treated badly by Western powers during the age of imperialism. The U.S. has urged China to extend greater human rights to its citizens, which has been another source of friction between the two countries.

globalism

International trade, communications and mass media (radio, TV, movies, the Internet) are drawing the world together in ways that we don't fully understand yet, a phenomenon called globalism. We can sit down at our computers and easily contact people anywhere around the globe. Is the so-called "Global Village" changing the way the world works? Surely it must be

Some people think globalism is good. The more we trade and communicate with one another around the world, the less likely we are to distrust people of different nations and ethnic groups and want to go to war with them. In Europe, countries that were enemies during World War II have joined together in an economic union that has adopted a common currency called the "Euro."

Other people have concerns about globalism. One concern is that countries will lose their distinct identities in a world dominated by Americanized Western culture. Will Paris and Tokyo come to resemble American cities complete with Wal-Marts and McDonalds? Another concern is that the rich industrialized nations of the world are controlling the global economy, consuming the world's resources, polluting the Earth and leaving little behind for the poorer Third World countries. It is another case of the "haves" versus the "have-nots."

One of the challenges of the 21st Century will be to achieve economic justice among the peoples of the world. James Wolfensohn, president of the World Bank has said, "There isn't a wall around the United States or any of the developed countries...If you have inequity on a global scale, if you have people who are dissatisfied and unhappy, these are the breeding grounds of discontent." Wolfensohn says reducing poverty is the best way to bring peace to the world.

the environment

The environment is the system of living things in which we live. Our environment is Earth. All things in the environment are connected; power plants in England cause acid rain that can kill fish in Norway and trees in Germany. The destruction of rain forests in Brazil affects the entire planet's supply of oxygen and carbon dioxide. Life is made possible by a complex system of interactions between the atmosphere, weather, temperature and chemical compounds. Concern is growing that humans are interfering with this balance, over-populating the Earth, polluting air and water and reducing the number of living species. Some people fear the Earth may be facing a great extinction..

One of today's greatest environmental concerns is **global warming**. The surface of the Earth is maintained at an average 59 degree temperature by gases in the atmosphere which trap the sun's heat much as the glass of a greenhouse holds in heat allowing plants to grow. Without this **greenhouse effect**, the average surface temperature of the Earth would be below freezing. When we burn gasoline in our cars and coal in our power plants, carbon monoxide and other pollutants are released into the atmosphere. It is feared the increase in greenhouse gasses is trapping too much heat causing the Earth to become warmer, melting polar ice caps, raising sea levels, disrupting agriculture and upsetting the environmental balance of the planet.

Scientists agree that the Earth's average temperature is rising, but it has not been proven that this rise is caused by burning **fossil fuels** (fuels formed in the Earth from plant or animal remains) such as gasoline and coal. Nonetheless, most of the major Western industrial nations – but not the United States – have signed agreements to reduce their emissions of greenhouse gasses.

biotechnology

Biotechnology is a term for technologies that can change how plant or animal life functions. We are familiar with biotechnologies that modify crops or cure diseases. Recent advancements in science are taking biotechnology into new and unfamiliar territory, which holds great promise for improving human life but also poses difficult questions about the future of human life.

Genetic engineering is the field of biotechnology that deals with genes, which are building blocks in the cells that determine what we are - for example, whether we are tall or short, have brown eyes or blue and whether we are likely to contract diseases such as Alzheimers.

Doctors have already begun to treat disease by using drugs to modify or repair human genes, and soon it may be possible to develop gene-based treatments for nearly every disease allowing people to live longer and healthier lives. But, the same technology will make it possible to modify genes such as those for skin color, muscle mass and intelligence. Will people be tempted to alter themselves or their children to make them more attractive and smarter? Might future humans choose to genetically alter themselves to the point where they are no longer human beings?

Since the Stone Age, technology has changed daily life more than any other factor. How will technology affect life during the twenty-first century? When your grandchildren are in history class, will they think kindly of power plants and genetic engineering as we think kindly of steam engines and the automobile? Or, will new technologies become menaces like machine guns and hydrogen bombs? As a citizen in a democracy, it will be your job to help make the right decisions about the uses of technology and other important issues that will affect the future of life on planet Earth.

Course Title

World Geography A

Description of Target Group

This course is for 9th to 12th grade students.

Purpose

The purpose of World Geography A is to acquaint the student with the basics of physical and cultural geography and specified world culture regions (North American, South America, Western Europe, Eastern Europe, and the Soviet Region). This is the first semester of a one-year course. It is an elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. A knowledge of the five (5) themes of geography:

    a. Location: Absolute location, longitude and latitude, and relative location.
    b. Place: Physical and cultural- characteristics, climate, landform, vegetation, and cultural and economic activities of an area.
    c. Human/Environment Interactions: Change and adaptation of people to the environment and consequences of interaction with the environment, ie. pollution.
    d. Movement: Migration, spread of information and ideas, transportation of goods and people, and reasons for movement.
    e. Region: Similarities, differences, and dividing and joining.

2. Utilize the information learned to identify:

    a. A specific geographic location.
    b. The twenty-four time zones.
    c. Major land masses and water bodies.
    d. Religion, language, political, and economic systems for specific geographic locations.

3. Describe:

    a. The causes of different seasons
    b. Natural resources in specific geographical locations and their affect on the area specified.
    c. The concept of a "developing" nation.

World Geography A (continued)

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary books Used in the Santa Maria Joint Union High School District.

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

Course Title

World Geography B

Description of Target Group

This course is for 9th to 12th grade students.

Purpose

The purpose of World Geography B is to acquaint the student with the basics of physical and cultural geography and specified world culture regions (North African/Southwest Asian, Asian, South Asian, Southeast Asian, East Asian, African, Australia/New Zealand, and the Pacific). This is the second semester of a one-year course. It s an elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. A knowledge of the five (5) themes of geography:

    a. Location: Absolute location, longitude and latitude, and relative location.
    b. Place: Physical and cultural characteristics, climate, landform, vegetation, and cultural and economic activities of an area.
    c. Human/Environment Interactions: Change and adaptation of people to the environment and consequences of interaction with the environment, ie. pollution.
    d. Movement: Migration, spread of information and ideas, transportation of goods and people, and reasons for movement.
    e. Region: Similarities, differences, and dividing and joining.

2. Utilize the information learned to identify:

    a. A specific geographic location.
    b. The twenty-four time zones.
    c. Major land masses and water bodies.
    d. Religion, language, political, and economic systems for specific geographic locations.

3. Describe:

    a. The causes of different seasons
    b. Natural resources in specific geographical locations and their affect on the area specified.

c. The concept of a "developing" nation.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary books Used in the Santa Maria Joint Union High School District.

Activities

1. Individual work
2. Lectures
3. Class participation
4. Demonstrations
5. Audio-visual materials
6. Field trips
7. Small group activities
8. Outside resource people

Course Title

Ancient World History: Ancient

Description of Target Group

This course is for 10th to 12th grade students.

Purpose

The purpose of World History, Ancient is to acquaint the student with the history of the world from prehistoric times to the Middle Ages. This is a one semester elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Understand how the past relates to the present.
2. Trace the development of civilization.
3. Understand the reasons behind the development of the Greek City states.
4. Trace the development of the Roman republic.
5. Examine the political, economic, and social philosophies developed/practiced during the Greek and Roman period.
6. Understand the factors causing the decline of the Roman Empire and identify significant people involved.
7. Trace the development of the Feudal System and its affect on Europe.
8. Discuss the spread of Christianity and its relationship to the political systems of the period.
9. Describe new styles of art developed during the period.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Textbook materials will be supplemented with lectures, slides, movies, and filmstrips.

Course Title

Ancient World History: Ancient

Description of Target Group

This course is for 10th to 12th grade students.

Purpose

The purpose of World History, Ancient is to acquaint the student with the history of the world from prehistoric times to the Middle Ages. This is a one semester elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Understand how the past relates to the present.
2. Trace the development of civilization.
3. Understand the reasons behind the development of the Greek City states.
4. Trace the development of the Roman republic.
5. Examine the political, economic, and social philosophies developed/practiced during the Greek and Roman period.
6. Understand the factors causing the decline of the Roman Empire and identify significant people involved.
7. Trace the development of the Feudal System and its affect on Europe.
8. Discuss the spread of Christianity and its relationship to the political systems of the period.
9. Describe new styles of art developed during the period.

Activities

Textbook materials will be supplemented with lectures, slides, movies, and filmstrips.

Course Title

World History: Medieval

Description of Target Group

This course is for 9th to 12th grade students.

Purpose

The purpose of World History, Medieval is to acquaint the student with the history of Europe during the Renaissance, with emphasis on the development of civilizations beyond Europe from prehistoric times to the Renaissance. This is a one semester elective course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Understand how the past relates to the present.
2. Trace the development of civilization in the Near East, Far East, and the Americas.
3. Discuss the political, economic, and social philosophies developed/practiced during 16th and 17th centuries throughout the world.
4. Trace European exploration in the Americas.
5. Understand the changes brought about by the Renaissance.
6. Understand the factors behind the growth of European States and significant people involved.
7. Trace the development of the Enlightenment and its affect on Europe.
8. Describe scientific developments of the 16 and 17th centuries.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Textbook materials will be supplemented with lectures, slides, movies, and filmstrips.

Course Outline

Youth and the Law

Description of Target Group

Youth and the Law is a one-semester course designed as an elective course in Social Studies. It is open to all students interested in developing an understanding of our laws and courts.

Purpose

This course is designed to assist students in developing an understanding of our laws and courts and familiarize students with their rights and responsibilities in a democratic society.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Discuss the court system of our country explaining the differences between juvenile hearings and the formal court procedures.
2. Trace the source of their civil and criminal rights through the Bill of Rights.
3. Explain the evolution of many civil rights that people enjoy today through a study of selected court cases.
4. Explain the evolution of many civil rights that people enjoy today through a study of selected court cases.
5. Discuss "student rights" as listed in the Education Code of California through written tests.
6. Develop and use vocabulary unique to the course.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Field trips to courts, sheriff's department, juvenile detention home, guest lectures by member of the bar and law enforcement agencies, class simulation of court cases, individual rights, and values.

SMJUHSD

SPECIAL EDUCATION

Course Title

Physical Education, Adaptive (X)

Description of Target Group

This course is designed for students, 9th through 12th grades who have a diagnosed physical disability of a long-term nature (permanent or longer than one semester) and who present a physician's request for minimal or limited participation for a specified period of time (physician's request must be renewed yearly). Such students must be placed by the School Assessment Team representing Special Education.

Purpose

Adaptive Physical Education is a service provided to all students meeting long term requirements and placement procedures. Adaptive Physical Education provides individualized plans designed to meet the needs of the individual student based upon the disability he/she possesses and the recommendations provided by his physician. The student's physical development and progress shall be evaluated by the instructor and reviewed by the School Assessment Team as needed, but not less than once per year.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Attend regularly.
2. Be on time.
3. Dress appropriately for the day's activities.
4. Show competency in the use and care of equipment.
5. Follow individualized instructions.
6. Actively participate in course activities assigned.
7. Exhibit good sportsmanship.
8. Accomplish needed correction for physical condition(s), which can be improved or removed.
9. Develop skill in several carry-over and recreational activities within the limits of the identified disability.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Activities are designed for each student based upon medical needs determined by a physician.

Course Title

Basic Math A/B (X)

Description of Target Group

This course is for 9th through 12th grade students.

Purpose

The purpose of Basic Math is to provide students with individualized opportunities to improve basic mathematic survival skills, with emphasis on practical application with use of a calculator. This is a one-year course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Ability to add whole numbers. *
2. Ability to subtract whole number. *
3. Ability to multiply whole numbers. *
4. Ability to divide whole numbers. *
5. Recognize operations and fractions such as +, -, ÷, %, √, ½, etc.
6. Ability to measure in inches, yards and dry, liquid measures.
7. Ability to calculate change.
8. Ability to calculate time.

*Optional use of calculator.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, class participation, demonstrations, audiovisual materials, field trips, small group activities and outside resource people

9. Subject Area

- ☐ History/Social Science
- ☒ English
- ☐ Mathematics
- ☐ Laboratory Science
- ☐ Visual & Performing Arts
  - ☐ Intro ☐ Advanced
- ☐ College Prep Elective

10. Grade Level(s) for which this course is designed

☒ 9 ☒ 10 ☒ 11 ☒ 12

11. Seeking "Honors" Distinction?

☐ Yes ☒ No

12. Unit Value

- ☐ 0.5 (half year or semester equivalent)
- ☒ 1.0 (one year equivalent)
- ☐ 2.0 (two year equivalent)
- ☐ Other: _____

13. Is this an Internet-based course? ☐ Yes ☒ No

If "yes", who is the provider? ☐ UCCP ☐ PASS/Cyber High ☐ Other _____

14. Complete outlines are not needed for courses that were previously approved by UC. If course was previously approved, indicate in which category it falls.

- ☐ A course reinstated after removal within 3 years. Year removed from list? _____
  - Same course title? ☐ Yes ☐ No
  - If no, previous course title? _____
- ☐ An identical course approved at another school in same district. Which school? _____
  - Same course title? ☐ Yes ☐ No
  - If no, course title at other school? _____
- ☐ Year-long VPA course replacing two approved successive semester courses in the same discipline
- ☐ Approved Advanced Placement (AP) OR International Baccalaureate (IB) course
- ☐ Approved UC College Prep (UCCP) Online course
- ☐ Approved CDE Agricultural Education course
- ☐ Approved P.A.S.S./Cyber High course
- ☐ Approved ROP/C Course. Name of ROP/C? _____
- ☐ Approved A.V.I.D. course
- ☐ Approved C.A.R.T. course
- ☐ Approved Project Lead the Way Course
- ☐ Other. Explain: _____

15. **Is this course modeled after an UC-approved course from another school outside your district?** ☐ Yes ☒ No

If so, which school(s)? _____

Course title at other school _____

16. **Pre-Requisites**

None

17. **Co-Requisites**

18. **Is this course a resubmission?** ☐ Yes ☒ No

If yes, date(s) of previous submission? _____

Title of previous submissions? _____

19. **Brief Course Description** Read to Achieve: Narrative bridges the gap between SRA Reach Reading and English 1. Program covers all the basic literary components necessary to be successful in Regular English. Character, Plot, Setting, Summarizing, Predicting.

B. COURSE CONTENT

Please refer to instructions

20. **Course Goals and/or Major Student Outcomes**
21. **Course Objectives**
22. **Course Outline**
23. **Texts & Supplemental Instructional Materials**
24. **Key Assignments**
25. **Instructional Methods and/or Strategies**
26. **Assessment Methods and/or Tools**

C. HONORS COURSES ONLY

Please refer to instructions

27. **Indicate how this honors course is different from the standard course.**

D. OPTIONAL BACKBROUND INFORMATION

Please refer to instructions

28. **Context for Course (optional)**
29. **History of Course Development (optional)**

20) Read to Achieve teaches real-world comprehension strategies relevant to English language art programs, such as how to identify and take notes about the main character. setting and plot as well as other story components such as theme and mood. Students will use PQCS (Predict, Question, Clarification and Summarization) strategies when reading stories. See attached "Major Comprehension Skills/Strategies"

21) The goal of Read to Achieve is generalization. Skills and strategies are taught and folded into more complex strategies for maximum use.

22) Course Outline: See attached copy of Scope and Sequence

23) Teacher edition, Professional Development Guide, Assessment Blackline Master, Transparencies, Teaching Tutor CD, e-Presentation CD, Student Anthology, Workbook, Hatchet (paperback novel).

24) Hot and Cold Fluency Checkouts, Prediction Charts, Question Charts, Clarification Charts, Summarization Charts, Think Pair Share, Character Development, Plot Development, Setting Analysis Charts

25) Read to Achieve has 3 levels of teacher support (strong, moderate, student independence) that are clearly defined within the program. When introducing new concepts there is a high level of direct instruction, as the students begin mastery material the level of instruction begins to fade. Also see attached "Instructional Sequence"

26) Formative assessment is conducted. Students complete Workbook, sticky-note-based, and notepaper-based activities, unit assessments, standardized-test practice, and fluency checks on a frequent basis to inform instructional practices. Fluency goal lines equivalent to the fiftieth, seventy-fifth, and ninetieth percentiles for middle school are used by Hasbrouck and Tindal's 2006 oral-reading fluency norm data.

SRA Read to Achieve

Address the skills required for comprehending academic and narrative text with two unique courses

Comprehending Content-Area Text	Comprehending Narrative Text
Number of Lessons • 25 units (125 lessons) • 45–55 minutes per lesson	**Number of Lessons** • 15 units (75 lessons) • 45–55 minutes per lesson
Lexile® Levels • Units 1–6: 700–900 • Units 7–12: 900–1000 • Units 13–20: 1000–1100	**Lexile® Levels** • Units 1–2: 700–900 • Units 3–4: 800–1000 • Units 5–6: 900–1100 • Units 7–8: 1000–1100 • Units 9–12 (*Hatchet*): 1020
What Students Read • Science: Living Things, Ecosystems, Atmosphere • Social Studies: Roman Empire, Panama Canal, American Revolution • Written to look like popular textbooks	**What Students Read** • Excerpts from: - *No End in Sight* - *Trial by Ice* - *Princess of the Press* - *Phineas Gage* • *Hatchet* (full novel)
Three Part Lesson • Vocabulary • Comprehension • Fluency	**Two Part Lesson** • Vocabulary/Comprehension • Fluency
Major Comprehension Skills/Strategies • Use text features • Identify lesson topics • Activate/use prior knowledge • Recognize text structure—cause/effect, order/sequence, compare/contrast, description/list • Use graphic organizers • Identify and retell new information • SQ3R—Survey, Question, Read, Reflect, Review • QHL—Questions I have, How I'll find the answers, What I've Learned	**Major Comprehension Skills/Strategies** • Survey beginning, middle, and end • Use text features • Activate/use prior knowledge • Recognize story structure/literary elements • Use mental imagery • Use graphic organizers • Summarize main idea • Recall important events and retell in sequence • PQCS—Prediction, Question Generation, Clarification, Summarization
Teacher Materials • Teacher's Edition • Professional Development Guide • Assessment Blackline Masters • Transparencies • Teaching Tutor CD-ROM • e-Presentation CD-ROM • eSuite with ePlanner (sold separately)	**Teacher Materials** • Teacher's Edition • Professional Development Guide • Assessment Blackline Masters • Transparencies • Teaching Tutor CD-ROM • e-Presentation CD-ROM • eSuite with ePlanner (sold separately)
Student Materials • Content Reader • Workbook	**Student Materials** • *Above and Beyond: A Nonfiction Anthology* • *Hatchet* (paperback novel) • Workbook
Concluding Activities • Units 21–25, students' own science and social studies textbook	**Concluding Activities** • Units 14 and 15, teacher selected book

Instructional Sequence

Instructional-Sequence Chart

The following chart illustrates how instruction is sequenced in ***Read to Achieve*** and how this sequence is labeled using teacher-support bars (Teacher's Edition) and Scope and Sequence symbols (Teacher's Edition and pages 16–19 of this guide). Teacher-support bars are found at the beginning of each activity in the Teacher's Edition; the appropriate level of teacher support is highlighted in red. The program provides strong teacher support when a skill or strategy is first taught. Over time, collaborative learning allows the level of support to fade until the student performs the skill or strategy with a partner or as a key part of a small group (as in reciprocal teaching).

Instructional-Sequence Chart

Level of Support	*Description*
Strong Teacher Support Teacher's Edition  Scope and Sequence 	Teacher provides an explanation, models a think-aloud, instructs students to copy what the teacher writes on the transparencies or what appears in the ePresentation, conducts instruction with the group, explains and answers questions or steps with students, and instructs students to say when they would use the skill or strategy and why they should use the skill or strategy. Strong teacher support is typically used across one unit.
Moderate Teacher Support Teacher's Edition  Scope and Sequence 	Teacher assigns student partners or small groups, reads aloud the questions or steps, instructs students to read aloud the questions or steps, instructs students to complete the parts or steps one at a time (followed by discussion), instructs students to complete all the parts or steps (followed by discussion), and writes the answers on the transparencies or types into the ePresentation. Beginning in Unit 14, moderate teacher support involves more intentional teacher supervision and careful guidance because students are performing all activities using a new teacher-selected fiction or nonfiction book. Moderate teacher support is typically used across one unit.
Student Independence Teacher's Edition  Scope and Sequence 	First level: Teacher assigns student partners or small groups, instructs students to discuss and to answer with their partners or group members all the questions or steps, monitors and guides students as needed, and writes the answers on the transparencies or types into the ePresentation. Second level: Teacher assigns student partners or small groups, monitors and guides students as needed, and writes the answers on the transparencies or types into the ePresentation as needed. Activities with student independence typically appear across one unit.

Instructional-Sequence Chart

Level of Support	Description
Review Teacher's Edition TEACHER SUPPORT: STRONG / MODERATE / STUDENT INDEPENDENCE Scope and Sequence	Teacher assigns student partners or small groups, instructs students to discuss and to answer all the parts or steps, monitors and guides students as needed, and writes the answers on the transparencies or types into the ePresentation as needed. Review activities typically appear every week until the skills are integrated into strategies.
Evaluation Scope and Sequence	Teacher instructs students to complete formative assessment activities.

Program Examples

The following lesson examples illustrate how teacher support is faded over time for all activities—in this case, for question generation as part of the PQCS strategy.

Strong Teacher Support

Teacher support is strong at the beginning of the program (Unit 4, Lessons 1–4), when students have not learned to generate questions.

Unit 4, Lesson 1, PQCS Strategy (question generation) has strong teacher support and explicit instruction.

Activity — TEACHER SUPPORT: STRONG / MODERATE / STUDENT INDEPENDENCE

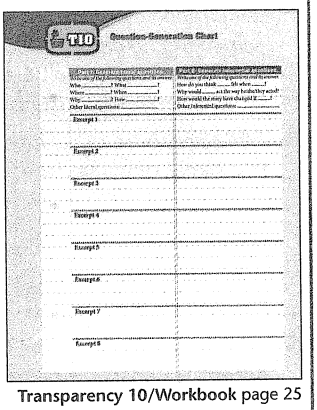
PQCS Strategy: Question Generation

1. **Show** T8. You've learned that each letter of the PQCS strategy stands for something. **Point** to each part of the strategy as you read. The *P* stands for "Prediction." The *Q* stands for "Question Generation." The *C* stands for "Clarification." And the *S* stands for "Summarization." Now you'll learn more about question generation.

2. When you generate questions, you make up your own questions and answers about the text. There are two types of questions you can generate. One type of question is literal; the answers to literal questions can be found in the text. When you ask details about characters, settings, and plot, you're most likely asking literal questions. These questions include who, what, where, when, why, or how questions such as "Who was the main character in *No End in Sight?*" or "Where did Shackleton hope to travel?" Why do you think generating literal questions and their answers helps improve your comprehension? **Accept** reasonable responses.

3. A second type of question is inferential; the answers to inferential questions are not found in the text. You must infer, or think of, the answers to these questions based on your opinion of what is happening. Your opinion is based on what you already know from reading the story. When you ask about the character, setting, and plot details that can't be found directly in the book, you're most likely asking inferential questions. These questions include "How would the story have changed if Rachael's vision could have been corrected with surgery?" or "How do you think Shackleton felt when he was knighted by King Edward VII?" These questions may be something you wondered about when you were reading. Why do you think generating inferential questions and their answers helps improve your comprehension? **Accept** reasonable responses.

4. WB **Direct** students to **Workbook** page 25. **Show** Transparency 10: Question-Generation Chart (T10). Today you'll use the Question-Generation Chart in your **Workbook**. This chart will help you keep track of questions you'll develop. You'll use this same Question-Generation Chart for the last four excerpts of *Trial by Ice.*



Transparency 10/Workbook page 25

Course Title

Career Prep A (X)

Description of Target Group

This course is designed for 9th and 10th grade students, but open to 9th through 12th grades.

Purpose

The purpose of Career Prep A is to introduce students to the world of work. It includes an assessment of their work skills, career search, and employability skills. This is a one-semester course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete an interest inventory.
2. Analyze their work skills and begin a self-directed career search.
3. Discuss values as related to work, family, career, and lifestyle.
4. List the variety of roles people play at work and at home.
5. Describe how success at school and work are related.
6. Complete a resume.
7. Accurately complete forms commonly used by employers.
8. Describe examples of skilled and unskilled jobs.
9. List five possible training routes.
10. Discuss negative and positive attitudes towards school, work and leisure.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, class discussions, demonstrations, audio visual materials, role playing, field trips, outside speakers, and use of the Career Center.

Course Title

Career Prep B (X)

Description of Target Group

This course is designed for 9th and 10th grade students, but open to 9th through 12th grades.

Purpose

The purpose of Career Prep B is to improve employability skills. This is a one-semester course.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Describe the importance of personal hygiene and good grooming at work.
2. Demonstrate appropriate interpersonal work skills.
3. Demonstrate interviewing skills.
4. Complete an informal interview.
5. Describe job benefits and their importance.
6. Demonstrate how to terminate a job appropriately.
7. List qualities an employee needs to keep a job.
8. Discuss labor laws affecting youth.
9. Discuss the purpose and importance of unions.
10. List community jobs that are available for their age group.
11. Develop behavior traits that could lead to a promotion.
12. List community resources that could assist in a job search/placement.
13. Complete a checking account unit, which includes writing checks, filling out deposit slips, maintain a check register, and reconciling bank statements.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, class discussions, demonstrations, audio visual materials, role playing, field trips, outside speakers, and use of the Career Center.

Course Title

Communication Skills (X)

Description of Target Group

This course is designed for 10th through 12th grade students.

Purpose

The purpose of Communication Skills is to develop proficiency in the student's speaking and listening skills through group discussions, individualized work, and the study of current events. This is a one-semester course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Ability to listen and follow oral directions.
2. Paraphrase, from discussion, what a previous speaker has said.
3. Ability to show understanding and acknowledgement through body language.
4. Listen attentively and offer constructive criticism.
5. Be familiar with, and be able to discuss current events.
6. Ability to use proper work usage and grammar in everyday verbal communication.
7. Ability to complement others in an appropriate manner.
8. Dealing effectively with being left out.
9. Ability to express anger appropriately.
10. Expression of ability to cope with aggression from others skillfully.
11. Understanding of when to offer assistance when a situation calls for it.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class discussions, demonstrations, role playing, small group work, reports, and interviews.

If so, which school(s)? _____

Course title at other school _____

16. Pre-Requisites

Take Corrective Reading placement test

17. Co-Requisites

Daily regular attendance is required.

18. Is this course a resubmission? ☐ Yes ☒ No

If yes, date(s) of previous submission? _____

Title of previous submission? _____

19. Brief Course Description

The purpose of this course is to provide students with an opportunity to improve their comprehension skills through a research based Direct Instruction reading program. Lessons are designed to maximize instructional time, so that all students have an opportunity to learn and apply concepts. Students are homogenously grouped to facilitate efficient and effective instruction.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Comprehension level A teaches basic reasoning skills that form a framework for learning information. It also fills in crucial gaps in students' background knowledge. Students are taught thinking operation they can use to solve problems in any content area. They practice organizing groups of related facts and develop basic logic skills such as making inferences.

21. Course Objectives

Students will be bale to complete simple analogies, identify synonyms, recite poems, and follow instructions. The will have mastered some higher order thinking skills mad established a foundation on which to build.

22. Course Outline

See Teachers guide pages 74-84

23. Texts & Supplemental Instructional Materials

Corrective Reading Comprehension level A Teacher Guide

Corrective Reading Comprehension level A Teacher Presentation Book

Corrective Reading Comprehension level A Student Workbook

Corrective Reading Comprehension level A Student Book

24. Key Assignments

Students will complete Daily lessons, independent work and mastery tests.

25. Instructional Methods and/or Strategies

Direct Instruction, guided practice, independent work, small group work, power point presentations

26. Assessment Methods and/or Tools

Teachers will use the following informal in class assessments to monitor student mastery;

- Choral response
- Independent work

- Vocabulary tests

Teachers use a formal in program Mastery test to measure student mastery. When mastery is not met, the teacher re-teaches concepts until students obtain mastery.

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

All Direct Instruction courses are field tested before publication to insure 85% mastery on each lesson. This insures that all students enrolled in the course and attending daily will have the opportunity to achieve mastery and in turn improve their reading achievement skills.

Lessons are designed to maximize instructional time, so that all students have an opportunity to learn and apply concepts. Students are homogenously grouped to facilitate efficient and effective instruction.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Comprehension level B1 teaches many separate skills necessary to read content area textbooks, learn new information, and respond to written questions that involve deductions and rules applications. Upon completion of Level B1 students have learned basic strategies that allow them to read for information in academic subjects and learn new facts and vocabulary.

21. Course Objectives

Lessons focus on developing the background knowledge, vocabulary and thinking skills needed to construct meaning from written text. Reasoning and analysis strategies are taught in content rich contexts, enabling students to transfer these strategies to many subject areas.

22. Course Outline

See Teachers guide pages 56-67

23. Texts & Supplemental Instructional Materials

Corrective Reading Comprehension level B1 Teacher Guide

Corrective Reading Comprehension level B1 Teacher Presentation Book

15. Is this course modeled after an UC-approved course from another school outside your district? ☐ Yes ☒ No

If so, which school(s)? _____

Course title at other school _____

16. Pre-Requisites

Take Corrective Reading placement test or successfully pass comprehension B1 mastery test

17. Co-Requisites

Daily regular attendance is required.

18. Is this course a resubmission? ☐ Yes ☒ No

If yes, date(s) of previous submission? _____

Title of previous submission? _____

19. Brief Course Description

The purpose of this course is to provide students with an opportunity to improve their comprehension skills through a research based Direct Instruction reading program. Lessons are designed to maximize instructional time, so that all students have an opportunity to learn and apply concepts. Students are homogenously grouped to facilitate efficient and effective instruction.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Comprehension level B2 teaches many separate skills necessary to read content area textbooks, learn new information, and respond to written questions that involve deductions and rules applications. Upon completion of Level B2 students have learned basic strategies that allow them to read for information in academic subjects and learn new facts and vocabulary.

21. Course Objectives

Lessons focus on developing the background knowledge, vocabulary and thinking skills needed to construct meaning from written text. Reasoning and analysis strategies are taught in content rich contexts, enabling students to transfer these strategies to many subject areas.

22. Course Outline

See Teachers guide pages 54-63

23. Texts & Supplemental Instructional Materials

Corrective Reading Comprehension level B2 Teacher Guide

Corrective Reading Comprehension level B2 Teacher Presentation Book

Corrective Reading Comprehension level B2 Student Workbook

Corrective Reading Comprehension level B2 Student Book

24. Key Assignments

Students will complete Daily lessons, independent work and mastery tests.

25. Instructional Methods and/or Strategies

Direct Instruction, guided practice, independent work, small group work, power point presentations

26. Assessment Methods and/or Tools

Teachers will use the following informal in class assessments to monitor student mastery;

- Choral response
- Independent work

- Vocabulary tests

Teachers use a formal in program Mastery test to measure student mastery. When mastery is not met, the teacher re-teaches concepts until students obtain mastery.

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

All Direct Instruction courses are field tested before publication to insure 85% mastery on each lesson. This insures that all students enrolled in the course and attending daily will have the opportunity to achieve mastery and in turn improve their reading achievement skills.

20. Course Goals and/or Major Student Outcomes

Comprehension level C teaches students to use thinking skills independently. Students move from basic reasoning skills to higher order thinking skills. Students will be able to apply analytical skills to real life situations and answer literal and inferential questions based on passage read.

21. Course Objectives

Students learn to infer definitions from context, read for basic information, write precise directions, recognize the main idea of a passage, draw conclusions from basic evidence and identify contradictions and faulty logic.

22. Course Outline

See Teachers guide pages 70-81

Course Title

Connecting Math Concepts (Special Education Pilot Course)

Replacing an Existing Course

Basic Math and Math A (depending on the level)

Target Group

Students who demonstrate deficiencies in their basic math skills and those students who need course preparation for a basic pre-algebra course. Level F provides a more complete mathematical foundation including decimal operations, the coordinate system, multi-step problems, volume, signed numbers and exponents.

Purpose

a. Length of course: Levels A - E are 120 lessons, Bridging is 70 lessons and Level F is 100 lessons. Each lesson takes approximately 30 to 35 minutes plus the independent work.

b. Units: 5

The purpose of this course is to provide students with an opportunity to develop their math skills under the Direct Instruction method. Lessons are organized around a number of topics rather than a single topic. Connections are made between important concepts. Lessons are designed to maximize instructional time, so that all students have an opportunity to learn and apply concepts. Concepts are introduced at a reasonable rate with guided and independent practice. Students are also homogeneously grouped to facilitate efficient and effective instruction.

Prerequisites

Students need to pass the placement test associated with each level. In the case of Level F, students will need to have successfully completed level E or Bridging. Another option would be to have the student take the level F post-test. If they fail the level F post-test and pass the Bridging Placement test, the student will then be put in the Bridging section

Connecting Math Concepts (continued)

Standards of Expected Student Achievement

Students are expected to meet the specified criterion for each test, which is given after every tenth lesson. If more than one quarter of the students miss a particular part of a test then previous exercises are presented. If only a few students regularly fail to meet the criterion listed, then a closer examination needs to take place to make sure the student was placed in the proper level. Most of the time the listed criterion is 90 to 100% accuracy.

Methods of Assessment of Student Learning

During structured activities, the teacher will firm the students and make sure that students can run each activity quickly and accurately (if not on the first trial, then after the firming has been provided). Students' independent work will also be monitored. Specifically, no more than 30 percent of the students should make mistakes on any independent activity. Additionally, after every tenth lesson a criterion-referenced test is given.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Each lesson has an extension activity that the teacher may choose to present. They include the following: Addition, collecting and analyzing data from tables, communication, cooperative learning, coordinate system, estimation, division, fractions, geometry, greater than / less than, measurement, mental math, money, method of calculation, number relationships, place value, problem solving, patterns, subtraction, and time.

Course Title

Consumer Math A/B (X)

Description of Target Group

This course is for 9th through 12th grade students.

Purpose

The purpose of Consumer Math A/B (X) is to develop proficiency in consumer problem solving such as: wage, income, and deductions; sales tax; buy problems; making change; figuring unit price and buying fractions of a unit. This is a one-year course that can be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Ability to add and subtract decimals, as it applies to money. *
2. Ability to multiply and divide decimals, as it applies to money. *
3. Ability to compute percentages, as it pertains to everyday life. *
4. Ability to compare and evaluate various advertising materials.
5. Ability to identify and calculate gross and net pay.
6. Ability to write checks and keep a running balance.
7. Calculate total cost of five (5) to ten (10) items with sales tax.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, demonstrations, audio visual materials, field trips, small group activities, and outside resource people.

19. Brief Course Description

The purpose of this course is to provide students with an opportunity to develop their reading skills through a research based Direct Instruction reading program. Lessons are designed to maximize instructional time, so that all students have an opportunity to learn and apply concepts. Students are homogenously grouped to facilitate efficient and effective instruction.

B. COURSE CONTENT

Please refer to instructions

20. Course Goals and/or Major Student Outcomes

Upon completion of Decoding A, students should be able to do the following activities;

- Read sentences such as *She was a master at planning trees*.
- Read short selections
- Read common irregular words such *as, what, was, do, said, to, of, you*
- Read words that begin with difficult letter combinations such as *st, bl, sl, fl, pl, sw, cl, tr, dr*
- Read words that end with difficult letter combination such as *nt, nd, st, ts, mp, ps, cks, ls, ms, th, er, ing, ers, y*
- Pronounce commonly confused word parts such as the *k* sound in *trick*, the *e* sound in *set*, and the *s* ending sound in *mats, runs*, and *munches*
- Spell simple words that have a clear sound-symbol relationship
- Independently perform various simple activities, such as matching sounds and completing words with missing letters

21. Course Objectives

Students will learn to;

- Identify the sounds of letters
- Sound out words that are presented orally and then say them fast
- Sound out and identify written words that are spelled regularly
- Decode irregularly spelled words
- Reading words “the fast way”
- Reading sentences
- Reading short selections
- Spelling

22. Course Outline

See Teachers guide pages 58-59

23. Texts & Supplemental Instructional Materials

Corrective Reading Decoding level A Teacher Guide

Corrective Reading Decoding level A Teacher Presentation Book

Corrective Reading Decoding level A Student Workbook

24. Key Assignments

Students will complete Daily lessons, independent work and mastery tests.

25. Instructional Methods and/or Strategies

Direct Instruction, guided practice, independent work, small group work, power point presentations

26. Assessment Methods and/or Tools

Teachers will use the following informal in class assessments to monitor student mastery;

- Choral response
- Fluency chart
- Independent work

Teachers use a formal in program Mastery test to measure student mastery. When mastery is not met, the teacher re-teaches concepts until students obtain mastery.

C. HONORS COURSES ONLY

Please refer to instructions

27. Indicate how this honors course is different from the standard course.

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

All Direct Instruction courses are field tested before publication to insure 85% mastery on each lesson. This insures that all students enrolled in the course and attending daily will have the opportunity to achieve mastery and in turn improve their reading achievement skills.

Course Title

Driver's Education (X)

Description of Target Group

This course is for 10th through 12th grade students.

Purpose

The purpose of Driver's Education is to concentrate on the student's responsibilities toward driving, and an understanding of the legal and natural forces related to driving. Bicycle safety will also be stressed. This is a one-semester course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Pass a standardized test with a grade of 70%, showing an understanding of the natural forces affecting driving.
2. Pass a test with a grade of 70%, showing an understanding of the theory of starting and maneuvering a car.
3. Pass a test with a score of 70% or better, showing an understanding of the principles of defensive driving.
4. Pass a test with a score of 70%, showing an understanding of the principle of how a car operates, buying, insuring, and maintaining an automobile.
5. Pass a test with a score of 70%, showing an understanding of the principles of motorcycle riding.
6. Achieve a grade of 80% or better on the California Student Driver Examination of the California Vehicle Code.
7. Pass a test with a score of 70%, showing an understanding of the principles of bicycle safety.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class discussions, audio visual materials, role playing, and field trips to the Department of Motor Vehicles.

Course Title

Ecology (X)

Description of Target Group

This course is for 9th through 12th grade students.

Purpose

The purpose of Ecology is to introduce students to the Earth, as a planet with limited resources and escalating needs. Individual responsibilities will be emphasized in conservation, recycling, environmental hazards, and energy needs. This is a one-semester course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Recognize that Earth is part of a solar system.
2. Recognize alternative energy sources.
3. Identify reasons for space exploration.
4. Discuss weather as an influencing factor in everyday life.
5. Develop a personal plan for the reduction of pollution by recycling, conserving energy, and avoiding environmental hazards.
6. Discuss current energy and natural resource needs, such as water and floor, in light of our limited resources.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, class participation, demonstrations, audiovisual materials, field trips, small group activities, and outside resource people.

Course Title

History A/B

Description of Target Group

This course is for 11th and 12th graders, but open to 9th through 12th.

Purpose

The purpose of this one-year course, History A/B, is to relate American History to the present by studying the major historical events and literature of each period.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Discuss other types of governments.
2. Describe what type of people came to the New World and why.
3. Discuss what happened and why in World Wars II and I.
4. Discuss the possibilities of World War III.
5. Describe the basic concept of a revolution and the causes of the American Revolution.
6. List different people in history and what they contributed including: various presidents, ethnic, and religious figureheads, and living presidents.
7. Identify their own nationality and ancestry.
8. Understand the concept of supply and demand in a capitalistic society.
9. Discuss the cause and results of the Civil War.
10. Describe Manifest Destiny.
11. Describe how literature reflects its period in time.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, demonstrations, audiovisual materials, and role-playing.

Course Title

Individualized Critical Skills Model (X)

Description of Target Group

This course is for students with moderate to severe disabilities.

Purpose

The purpose of Individualized Critical Skills is to develop skills to prepare an individual with disabilities to function independently in post high school environments. Curriculum content is determined by a home interview with the student's parents or car provider. High priorities are targeted and brought to the Individual Education Plan (I.E.P.) meeting. Main domains of curriculum content are:

1. Community Skills (Community Based Instruction) C.B.I.
2. Independent Living Skills
3. Vocational Academics
4. Functional Academics
5. Self Advocacy Skills across environments

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills to the best of their ability:

1. COMMUNITY SKILLS
    a. Mobilize in the community safely using the Santa Maria Area Transit (SMAT) system, walk, or ride a bike.
    b. Utilize a public phone booth properly and relay messages or where-abouts in a clear concise manner.
    c. Select and purchase needed items independently in a grocery, retail, or department store.
    d. Utilize the public library appropriately.
    e. Utilize recreational/leisure environments appropriately.
    f. Utilize problem solving and emergency skills when needed.
2. INDEPENDENT LIVING SKILLS
    a. Be able to prepare a nutritionally balanced meal independently, utilizing all kitchen facilities safely.
    b. Be able to clean dishes and a kitchen environment to maintain proper health standards.
    c. Be able to take care of self-grooming skills, including personal hygiene.
    d. Utilize problem solving and emergency skills when needed.

Individualized Critical Skills Model (X) (continued)

3. VOCATIONAL SKILLS
    a. Develop work and job related skills, which will lead to paid employment.
    b. Develop work etiquette.
    c. Independently get to and from work.
    d. Develop work experience resume to create a broad base of skills.
    e. Utilize problem solving and emergency skills when needed.
4. FUNCTIONAL ACADEMIC SKILLS
    a. Develop ability to use minimal academics in a wide variety of environments (reading, math, writing, etc).
    b. Utilize adaptive devices to enable independence when academic skills are needed.
    c. Utilize problem-solving skills when needed.
5. SELF ADVOCACY SKILLS
    a. Identify safe people to confide in when needed.
    b. Utilize problem-solving skills when encountering new situations and new people across environments.
    c. Identify safe people to accept rides with when in the community.
    d. Identify acceptable touching in one's and other's bodies and personal belongings.
    e. Utilize emergency skills when needed.
    f. Identify main support people in life.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

1. Teacher Developed Individualized Curriculum
2. Instruction for Independent Living, publ., Que.

Activities

1. Community based instruction
2. Classroom functional academic activities
    a. computer
    b. worksheets
    c. class discussion
    d. personal counseling
3. Audio visual materials
4. Field trips
5. Role playing
6. Work experience in the community
7. Self advocacy mock situations
8. Demonstrations

9. Outside speakers
10. Situational assessments

Classroom Expectations

1. Every student in their seat and quiet by 8:00 a.m. bell.
2. Every student has their home/school communication notebook in the tray by 8:00 a.m. bell.
3. Every student has their homework completed and in the tray by the 8:00 a.m. bell.
4. Students are to dress appropriately for class/community activities.
5. Students are to come to school clean and groomed.
6. Students are to raise their hand when needing assistance.
7. Students are to be polite and well mannered with all staff and other students.
8. Students are to behave appropriately.
9. Students are to keep hands, feet, and other objects off of other people and property and to respect all individuals in the classroom.
10. When returning from Community Based Instruction, students are to enter room quietly.
11. Students are to maintain picture identification and SMAT card in an appropriate way and to bring to school daily.

Grading Procedures

1. Point system for Classroom Expectations 1,2, and 3 will be maintained. Students will be graded on a points accumulated/points possible basis, straight percentage scale. The grade will account for the First Period grade.
2. Point system for Classroom Expectations 3 and 8 will be maintained. Students will be graded on a points accumulated/points possible basis, straight percentage scale. This will account for the Sixth Period grade.
3. Second through Fourth Period grades will be given on a Credit/No Credit basis, depending on achievement of Individualized Education Plan Goals.

Course Title

Introduction to Home Living (X)

Description of Target Group

This course is designed for those Special Education students who want to participate in activities related to Home Living Skills

Purpose

The purpose of Introduction to Home Living is to develop a basic understanding of individual and interpersonal relationships, decision making concepts for the efficient use of personal and family resources, and to develop skill in the use of the small and large equipment and tools customarily used in food preparation.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Identify and give proper use of the kitchen equipment.
2. The rules needed for safety and sanitation when working in a food preparation situation.
3. Proper techniques for measuring food ingredients.
4. Plan a balanced menu based on the four basic food groups.
5. Plan and prepare a breakfast, lunch, and dinner and/or guest entertainment.
6. Identify the basic human needs, which affect personal relationships.
7. Gain an economic understanding and consumer competency to make wise decisions in the use of their resources as related to home living skills.
8. Grooming:
    a. Select suitable hairstyles for different face shapes.
    b. Select garments suitable for different figure shapes.
    c. Designate which garment colors will be suitable for different hair colors and complexions.
9. Improve house-cleaning skills.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, class participation, demonstrations, audio visual materials, field trips, small books and magazines, miscellaneous equipment, laboratory work, and outside resource people.

Course Title

Introduction to Social Studies A/B (X)

Description of Target Group

This course is for 9th through 12th grade students.

Purpose

The purpose of Introduction to Social Studies is to teach civic literacy by examining juvenile laws, school rules, and regulations, individual rights and responsibilities, basic geography skills, and the functions of local, state, and federal governments. This is a one-year course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Discuss the school's rules and regulations and the consequences involved for the infraction thereof.
2. Students will be able to find all-important locations on the campus by using a school map.
3. Demonstrate the order of things numerically, chronologically, and alphabetically.
4. Demonstrate directionality: left, right, up, down, Northwest, Southeast.
5. Develop an awareness of majority rule in a democracy.
6. Understand and discuss the functions and laws of local, state, and federal government.
7. Discuss their individual responsibilities and participants in our society.
8. Describe what crimes warrant a juvenile record and how juvenile records are sealed.
9. List laws concerning marriage and divorce in California.
10. Describe the Bill of Rights and how it affects the lives of the American citizen.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, demonstrations, audio visual materials, field trips, small group activities, role playing, and outside resource people.

Course Title

Life Science A/B (X)

Description of Target Group

This course is designed for students in 9th through 12th grades.

Purpose

The purpose of Life Science is to introduce students to the biological, emotional, and social aspects of the following stages: infancy, childhood, adolescence, adulthood, and old age. This is a one-year course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Name several physical and emotional needs of an infant.
2. Discuss the major physical and mental stages of development from childhood to adulthood.
3. Demonstrate a number of decision-making methods that will be applicable to real life decisions.
4. Describe the responsibilities of the marriage relationship.
5. Discuss alternative life styles such as being single, married, divorced, in a group home, etc.
6. Describe the physical, emotional, and mental efforts of aging.
7. Develop an awareness of death and prepare a tentative plan in the event that a family member dies.
8. Develop an awareness of sexually transmitted diseases including AIDS.

Instructional Materials

Text and Supplementary Materials.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Individual work, lectures, class participation, demonstrations, audio visual materials, field trips, experiments, role playing, and outside speakers on aging and child development.

Course Title: Pre-Algebra A
Replacing and existing course? No

To be submitted for A-G? No

Department: Math

Career Path: None

Description of Target Group: This course is designed for students that need a review of basic concepts of math and an introduction to algebra concepts. This course will prepare students to enter Algebra 1 and/or provide an introduction to using basic algebra concepts in real life and the world of work. The first semester of this course will cover Algebra and whole numbers, using decimals, number theory, rational numbers and fractions, basic operations and rational expressions, and ratios, proportions, and percents.

Purpose:

- This is the first semester of a one year course.
- This course will provide five units of elective credit.

Prerequisites: None

Standards of Expected Student Achievement:

Students will be able to

1. Add, subtract, multiply and divide whole numbers.
2. Estimate sums, differences, products, and quotients.
3. Recognize and evaluate algebraic and numerical expressions.
4. Identify place values of decimals and to add, subtract, multiply and divide decimals.
5. Change decimals to fractions and rename percents a decimals.
6. Evaluate algebraic expressions with decimals.
7. Identify and use divisible numbers, prime numbers, and composite numbers.
8. Use the distributive property to multiply or factor expressions.
9. Use scientific notation for large and small numbers.
10. Identify proper and improper fractions and mixed numbers.
11. Write equivalent fractions, express fractions in their simplest form and compare and order fraction.
12. Add, subtract, multiply, and divide fractions and mixed numbers.
13. Use the order of operations to solve problems correctly.
14. Evaluate and solve algebraic equations
15. Solve algebraic equations through substitution and by adding and subtracting.
16. Multiply rational expressions.
17. Express rations in different forms

18. Solve problems using proportions
19. Change fractions and decimals to percents and solve problems using percents.

Methods of Assessment of Student Learning: Students will be assessed through assignments, projects, quizzes, tests, and classroom participation.

Instructional Materials:
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities:

- Classroom Instruction
- Guided Practice
- Homework Assignments
- Use of everyday materials to apply the knowledge and skills
- Utilization of the library and reference materials
- Quizzes and Tests
- Projects

Course Title: Pre-Algebra B
Replacing and existing course? No

To be submitted for A-G? No

Department: Math

Career Path: None

Description of Target Group: This course is designed for students that need a review of basic concepts of math and an introduction to algebra concepts. This course will prepare students to enter Algebra 1 and/or provide an introduction to using basic algebra concepts in real life and the world of work. This semester will deal with Integers, exponents, square roots, and the Pythagorean Theorem, equations from Geometry, Graphing, Geometry, and Data, statistics, and Probability.

Purpose:

- This is the second semester of a one year course.
- This course will provide five units of elective credit.

Prerequisites: None

Standards of Expected Student Achievement:

Students will be able to

1. Identify the absolute vale of integers and compare the values of negative and positive whole numbers.
2. Add, subtract, multiply, and divide integers.
3. Find the value of numbers raised to a certain power.
4. Multiply and divide terms with exponents, and find the area and volume using number with exponents.
5. Find the square roots of numbers.
6. Use the Pythagorean Theorem to solve problems.
7. Find the perimeters and calculate the areas of regular and irregular polygons.
8. Use formulas to find the volumes of cubes, rectangular prisms, and square pyramids.
9. Determine the circumferences and areas of circles.
10. Use formulas to find the volumes of cylinders and spheres.
11. Graph solutions to equalities and inequalities on number lines.
12. Identify and graph ordered pairs of values.
13. Determine and graph points of a linear equation.
14. Identify the slope of a line and determine values of slope, the y-intercept, and the x-intercept.
15. Measure and classify angles and triangles.

16. Find the measures of angles in triangles.
17. Identify quadrilaterals.
18. Determine the number of degrees in polygons.
19. Construct graphs and interpret information illustrate by them.
20. Record and understand data in a frequency table.
21. Solve problems involving probability and the fundamental principle of counting.

Methods of Assessment of Student Learning: Students will be assessed through assignments, projects, quizzes, tests, and classroom participation.

Instructional Materials:
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities:

- Classroom Instruction
- Guided Practice
- Homework Assignments
- Use of everyday materials to apply the knowledge and skills
- Utilization of the library and reference materials
- Quizzes and Tests
- Projects

Course Title

Social Psychology A/B (X)

Description of Target Group

This is designed for 9th through 12th grade students.

Purpose

The purpose of Social Psychology is to answer questions involving why humans behave as they do including: what is happening inside of themselves; how to change undesirable habits; how to improve themselves and be successful; how to get along with other people; how to cope with frustrations and how to make decisions. This is a one-year course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Recognize and verbalize their own "true" feelings in a group setting.
2. Describe steps in conflict resolutions.
3. Identify several defense mechanisms commonly used to hide hurt, disappointment, and failure.
4. Identify several of their own undesirable habits and make a plan for changing them.
5. List behaviors that would increase the student's chances of making and keeping friends, being successful at school, at home, and at work.
6. Describe appropriate ways a person can handle frustrations and anger.
7. Demonstrate decision-making skills in situations at home, school, and work.
8. List positive traits about themselves and others.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, class participation, demonstrations, audiovisual materials, field trips, small group activities, outside resource people, and role-playing.

Course Purpose: *What is the purpose of this course?*

The Study Skills course is a support service class designed to provide students with an Individual Education Plan (IEP) access to the general education curriculum by addressing specific goals and objectives identified in the student's IEP. The Study Skills course will support the students current level of knowledge and reinforce concepts and/or assignments presented in the general curriculum. Students have the opportunity to develop and strengthen good study habits and learning strategies through a variety of instructional methods and strategies.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

In collaboration with the general education teachers, the special education teacher will develop appropriate study strategies that best meet students academic needs.

Content skills that will be taught in the Study Skills course that align with common core standards and instruction in general education core courses:

1. Communciation Skills (e.g., speaking, listening and messaging)
2. Problem-solving Skills (e.g., analyzing information, evaluating solutions)
3. Reasoning Skills (e.g., critical thinking, forming arguments, using logic)
4. Teamwork/Collaboration (e.g., working in groups, goal setting)
5. Research skills (e.g., gathering and analyzing information and sources)
6. Time management skills (e.g., developing goals, prioritizing tasks)

Additional support : Organization skills, note-taking strategies, test taking strategies, and self advocacy.

Course Title

Vocational Writing Skills (X)

Description of Target Group

This course is for 9th through 12th grade students.

Purpose

The purpose of Vocational Writing Skills is to develop the student's proficiency in the following skills: capitalization, abbreviation, punctuation, corrects spelling, proper grammar, dictionary use, and practical writing tasks. This is a one-year course and may be repeated.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Ability to capitalize words beginning a sentence and proper nouns.
2. Ability to use end punctuation, abbreviations, punctuation, and apostrophes in simple contractions (i.e. won't, isn't, can't, etc).
3. Demonstrate proper word usage and grammar in everyday written communication.
4. Improve spelling, alphabetizing, and dictionary skills.
5. Improve letter/note writing skills in the composition of:
    a. telephone messages
    b. letter of application
    c. placing catalog/mail orders
    d. friendly letter
    e. business letter
    f. response to an advertisement in the paper

18. Is this course a resubmission? Yes

If yes, date(s) of previous submission? February 28, 2006

Title of previous submission? 3 Dimensional Design A/B

19. Brief Course Description

This one-year course will give the 3-Dimensional Design student the opportunity to develop their design, sculpture, and construction skills. The student will understand the principles and elements of design as they apply to three-dimensional forms. They will explore three-dimensional design as a means of personal expression and communication.

This course will promote an appreciation of sculpture, theatrical sets and props, architectural forms, interior design, landscape design, and the work of the master sculptors, as well as the influence of culture on the production of three-dimensional art. Students will become aware of the historical impact of Western European art history on current trends in three-dimensional art, as well as the influence of other cultures, including China, Japan, India, Africa, and Mesoamerica.

This course will enable students to understand and appreciate artistic expression and, where appropriate, to talk and write with discrimination about the artistic material studied.

B. COURSE CONTENT

20. Course Goals and Major Student Outcomes

Upon the completion of this course, students should be able to successfully demonstrate the following skills:

- Acquire a working knowledge of a variety of traditional and contemporary sculpture styles as it applies to the art history of various cultures.
- Obtain a basic knowledge of various techniques, methods, and observational processes as they apply to different sculptural problems.
- Gain a basic understanding of artistic values and critical criteria that apply to three-dimensional forms.
- Increase vocabulary and ability to analyze, understand, and articulate responses to various sculptural forms.
- Demonstrate knowledge of care of equipment, tools, and working environment.
- Demonstrate an appreciation and understanding of three-dimensional artistic expression through oral and written critiques.

21. Course Objectives

Objective	California State Standard for the Visual Arts, Grades Nine Through Twelve Proficient and Advanced
▪ Students will demonstrate an understanding of the artistic process through the creation of their own original three-dimensional works of art.	**2.1 Solve a visual arts problem that involves the effective use of the elements of art and the principles of design.**
▪ Students will participate in regular in-class critiques of their own artwork and that of their peers, focusing on content and technique, and using art vocabulary.	**4.4 Apply various art-related theoretical perspectives to their own works of art and the work of others in classroom critiques.**
▪ Students will demonstrate proficiency is the use of the following media, applying specific techniques applicable to the creation of three-dimensional art, including: wood, clay, metal, plaster, fiber, new media, and found objects.	**2.1 Create original works of art of increasing complexity and skill in a variety of media that reflect their feelings and points of view.**
▪ Students will visit a fine art galley and assist with the planning, set up, display, and break down of a visual arts exhibition, either at school or within the community.	**2.3 Assemble and display objects or works of art as a part of a public exhibition.**
▪ Students will write a research paper about a historically significant artist of their choice including: a short biography, the style and content of the artist's work, a critical analysis of the artist's work and their impact on the history of art.	**3.3 Identify and describe trends in the visual arts and discuss how the issues of time, place, and cultural influence are reflected in selected works of art.**

22. Course Outline

3-Dimensional Design is a comprehensive design and sculpture class, with a specific goal of giving students a broad exposure to all aspects of three-dimensional art making and it's applications to a variety of other art forms. Initially, it will begin with the more simple forms and move into increasing levels of complexity, allowing students' increasing skill to facilitate more complex forms of expression. Following is a roughly chronological list of skills to be taught and areas on which this course will focus over the school year.

- Basic Three-Dimensional Forms: introduction to the construction of the five basic three-dimensional forms- sphere, cone, cylinder, cube, and pyramid. Students build a sculpture

using these forms and discuss the variety of views possible and start thinking about the idea that sculptures are seen from multiple perspectives.

- Minimalism: a project focusing on shape, clean minimal forms, and the use of positive and negative space.
- Mold Making (clay, wax, plaster, rubber): broad unit covering a variety of mold making techniques including making plaster positives from clay negative low relief molds, plaster and rubber release molds from clay positives, lost wax molds, and the use of repetitious forms in three-dimensional art.
- Wire Sculpture: basic wire working techniques are initially focused on as students build skill. The idea of wire as three-dimensional line is applied in thumbnail drawings and in gestural wire sculptures of animals and people, using the work of Calder for examples.
- Architectural Design: a broad overview of architectural history used as a starting point for an architectural sculpture. Issues of location and function are key factors in the design of the structures.
- Found Objects: a discussion of the found objects used by Duchamp and Ernst is the starting point for a unit on the art in daily life. Sculptures will be made from found objects, as well as discussing the beauty in common objects.
- Collaborative Sculpture: creation of a collaborative sculpture that is the result of teams of students working together from the conceptual stage through the final stages of construction.
- Sculpture in other cultures: an overview of traditional forms of sculpture in non-Western cultures, as well as the impact of certain cultures on Western art history.
- Contemporary Sculpture: review of current trends on sculpture and construction of a sculpture in the style of a contemporary three-dimensional artist from *Art News* or *Sculpture* magazine.
- Digital Media & Sculpture: the use of programs such as Photoshop, iMovie, and PowerPoint to turn environments into artwork. The viewer as an active participant in environmental art is reviewed. Students will identify and describe the role and influence of new technologies on contemporary works of art.
- Kinetic Art: an evaluation of the incorporation of movement into sculpture and the use of a variety of forces to create motion including gravity, wind, water, and electricity.
- Paper Mache: the use of wire mesh armatures as supports for Paper Mache forms. Applications of the Paper Mache medium in 3D art forms.
- Installation Art: analysis of this contemporary art form and construction of mini-installations. Discussion of the sculpture as an environment for the viewer and the impact of new technologies on installation art.
- Theater Set Design: design and construct a small scale set for a specific performance. Focus on functionality and aesthetics.
- Texture: the use of texture in three-dimensional work and its visual and tactile impact on the viewer.
- Figure Sculpture: complete review and construction of all steps in figure sculpture. Focus on building armatures, bone and muscle structure in the human body, proportion and handling surface textures such as skin and hair.
- Conceptual Art: focus on the importance of the artist's concept to the overall perceived meaning of a work of art.
- Fiber Arts: use of natural materials to create works of art. Discussion of the Arts and Crafts movement and its impact on art history.
- Portfolio Shooting and Construction: basic techniques of portfolio construction, shooting, and arrangement for maximum viewer impact.
- Three-dimensional design as applied to performance art: creation and impact of environments for performance art of all forms.

- On-going art history units including the use of video, the Internet, lectures, and *Scholastic Art Magazine*.
- Artist Research Paper: Students will write a research paper about a historically significant artist of their choice including: a short biography, the style and content of the artist's work, a critical analysis of the artist's work and their impact on the history of art. One research paper required for each semester for a total of two per academic year.

23. Texts & Supplemental Instructional Materials

Living With Art
Scholastic Art Magazine
Sculpture Magazine

Instructional materials to be assigned accordingly to students as needed. This would include such materials as pencils, papers, X-Acto knives, adhesives, clay, plaster, wood, wax, various hand tools, wire, string, natural fibers, pigments, and Internet access.

24. Key Assignments

Focus	Assignment
▪ Mold construction ▪ Positive vs. Negative forms ▪ Mold making materials ▪ Mold casting materials ▪ Historical use of molds and casting in art ▪ Use of high and low (bas) relief ▪ Function of repetition in art	Mold Making (clay, wax, plaster, rubber): broad unit covering a variety of mold making techniques including making plaster positives from clay negative low relief molds, plaster and rubber release molds from clay positives, lost wax molds, and the use of repetitious forms in 3 dimensional art.
▪ Human anatomy ▪ Accurate proportion ▪ Bone structure ▪ Muscle attachment ▪ Visual vs. actual balance ▪ Texture and its impact on realistic sculpture ▪ Working from life ▪ Capturing natural poses	Figure Sculpture: complete review and construction of all steps in figure sculpture. Focus on building armatures, bone and muscle structure in the human body, proportion and handling surface textures such as skin and hair. Students work from live models to create accurate, proportional, expressive sculptures of the human form.
▪ Review of historically significant artists ▪ Impact of cultural perceptions ▪ Perceived artistic value of given artist to art history ▪ Impact on the work of other artists ▪ Visual appeal vs. content of a work	Students will write a research paper about a historically significant artist of their choice including: a short biography, the style and content of the artist's work, a critical analysis of the artist's work and their impact on the history of art. One research paper required for each semester for a total of two per academic year.

25. Instructional Methods and Strategies

Students will receive direct instruction via lectures, participation in class discussions, videos, and field trips. Demonstration of every required skill, followed by activities in the form of lessons designed to develop the student's ability to construct three-dimensional forms that are realistic and from their imagination. The successful completion of a portfolio and participation in critiques to further develop oral vocabulary and analytical skills.

Students will utilize all current technology to access information pertaining to all areas within the course.

26. Assessment Methods and Tools

- The completion of all assigned work.
- The organization and presentation to class of a portfolio of class assignments for each grading period.
- Students will select and present two pieces of work from scheduled art showings: school and community.
- Oral and written tests from Scholastic Art Magazine articles, class art videos and other visual arts materials.
- Evaluation of research project produced with PowerPoint and/or Hyper studio as it relates to three-dimensional form.
- Participation in class wide and/or individual critiques of both in-progress and completed assigned work.

C. HONORS COURSES ONLY

Not Applicable

D. OPTIONAL BACKGROUND INFORMATION

None

Course Title

Video Production/Filmmaking, ROP (Advanced)

Description of Target Group

Advanced Video Production/Filmmaking is a two hour, year long (10 unit) Fine Arts elective open to students in grade levels 10 – 12 who have had at least one year of Video Production/Filmmaking A/B. The class is also an ROP course.

Prerequisites: Video Production/Filmmaking A/B or permission of instructor

Purpose

The class provides a continuation of the filmmaking/broadcasting class started in Video Production/Filmmaking A/B. The class is intended for the student who is interested in pursuing the field of filmmaking or broadcasting at an institution of higher learning. The class is also intended for those students who have decided to pursue filmmaking or broadcasting as a career.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully:

1. Have knowledge of the position of film director
2. Have knowledge of the position of television director
3. Have knowledge of the position of film producer and broadcasting producer
4. Produce a video or film project from conception to completion
5. Write a treatment
6. Write a script
7. Storyboard the script
8. Produce a shooting log
9. Produce an editing log
10. Videograph a script
11. Successfully edit a film/video project using the nonlinear method
12. Have a working knowledge of special effects software such as Adobe Premier, Adobe PhotoShop and Adobe Aftereffects
13. Discuss the history of film
14. Have a working knowledge of broadcast production

15. Produce television commercials
16. Work well within a film/broadcasting crew environment
17. Have the necessary entry level skills to enter the market in the field of filmmaking or television broadcasting
18. Demonstrate an awareness of career opportunities in both the television and film industry
19. Have the necessary classroom experience/knowledge to continue the study of filmmaking/television broadcasting at an institution of higher learning such as the UC or CSU system

Assessment

The student's film project will be reviewed and judged as to the student's ability to demonstrate knowledge of the techniques and theories discussed and demonstrated in class. The student's script will be reviewed and an assessment will be made as to the student's grasp of the theories and practical knowledge needed to produce work of high quality, which have been discussed and demonstrated.

Instructional Materials

Textbooks: Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities

Demonstrations, lectures, guest speakers, produce a daily news broadcast program to be shown to the entire campus.

18. Brief Course Description

Art 1 A/B is a year-long introductory course for students who would like to learn the basics of visual art. Students will learn how to analyze and appreciate art from different cultures as a means of self expression through the creation of their own original art works through in-class discussion, critiques, written responses, and a series of "hands-on" projects that will enable the student to explore his own visual creativity, and also develop the ability to discuss, analyze, and understand historical and contemporary works of art.

B. COURSE CONTENT

Please refer to instructions

19. Course Goals and/or Major Student Outcomes

- Demonstrate the ability to analyze and evaluate, both written and verbal, their own artwork and the work of others based on a knowledge of the elements and principles of design.
- Students will gain an understanding of the goals and objectives of a variety of artists from different cultures through reading and class critiques that will include written and verbal responses.
- Students will produce artwork that demonstrates an ability to solve problems creatively and critically, and examine more than one solution to a visual problem.
- Students will explore how the visual arts connect to other areas in the curriculum.
- Through the use of reproductions, videos, slides and texts, students will study periods of art history.

20. Course Objectives

- Students will produce their own works of art based on an understanding of the elements and principles of design.
- Student will be able to discuss their work, and the work of others based on an understanding of a basic art vocabulary, verbal, written, and analytical skills are emphasized.
- Students will create a sketchbook, which will include written assignments as well as homework and daily art work, this collection will demonstrate their understanding of the class content.
- Students will have the opportunity to work in a variety of art materials and techniques which will include: pencil, watercolor, collage, oil pastel, ink and charcoal.

21. Course Outline – See Appendix "A"

See attached course outline based on: State Standards: Artistic Perception, Creative Expression**,** Historical and Cultural Content Aesthetic Valuing, and Connections, Relationships, Application.

23. Key Assignments

Topics/Units/Themes	Key Activities/Assignments
▪ Self-Portrait (colored pencil)	• Self Portrait using only symbols
▪ Doodle into Art (drawing)	• Images from squiggles
▪ Elements & Principles of Design	• Sketchbook interpretations
▪ Pattern Cover	• Element of pattern-ink on sketchbook
▪ Abstract word	• Word communication/elements only
▪ Analysis of "Old Master" work	• Written critique based on elements
▪ Alter "Old Master" work	• Original art – based on old
▪ Color Harmonies	• Student examples in sketchbook
▪ Pointillism Tondo	• Watercolor – George Seurat technique
▪ Imaginary Machine	• Combine several elements in one work
▪ Template Drawing	• Value study – getting rid of lines
▪ Drawing series – Still Life	• Learning to draw 3 D objects
▪ Hands of Emotion	• Contour drawing – emotional subject
▪ Objects in Space	• Realistic drawing – hand held objects
▪ Shell Triptych	• Contour Ink – organic subject
▪ Perspective series	• Drawing dimensional scene
▪ Abstract Drawing	• Change, alter, simplify realistic objects
▪ Self Portrait	• Realistic rendering
▪ Fantasy Self Portrait	• Change, alter, add to image
▪ Montage Drawing	• Combination of image techniques

24. Instructional Methods and/or Strategies

- Lectures and demonstrations
- Class discussions and critiques
- Projects
- Homework assignments
- SSR in-class readings and written responses
- Peer Critiques
- Sketchbook
- Pair and small group work

25. Assessment Methods and/or Tools

- Projects
- Homework assignments
- Critiques (oral and written)
- Class participation
- Sketchbook
- Student/teacher critique

Students point scale:

10 Superior: High quality
9 Excellent: High competence
8 Strong: Good solution
7 Successful: Good work
6 Above Average
5 Average: Fulfills assignment
4 Below average: complete, problem
3 Weak: Incomplete
2 Inadequate: Incomplete
1 Poor: Lesson not understood

100-90=A
89-80=B
79-70=C
69-60=D
59-50=F

C. HONORS COURSES ONLY

Please refer to instructions

26. Indicate how this honors course is different from the standard course.

Not applicable

D. OPTIONAL BACKGROUND INFORMATION

Please refer to instructions

27. Context for Course (optional)

The class is recommended for all students interested in studying the fine arts including those planning to take Photography 1, Jewelry, and Craft courses. It is also suggested if students plan to take Commercial Art, or a Technical Drawing course this class would be advised.

28. History of Course Development (optional)

Art 1 has been designed as an introduction to the visual arts. This course is often the only art course many Juniors and Seniors will take therefore it has been designed to first study of the structure of art and design. Through the making of original art that emphasizes the individual artist, students study the context of art through a comprehensive examination of design, drawing, and history by discussing, reading, writing, and completing projects that focus on artists and periods of art history.

Project Sequence:	*Visual Art Standard 1: Artistic Perception*	*Visual Art Standard 2: Creative Expression*	*Visual Art Standard 3: Historical and Cultural*	*Visual Art Standard 4: Aesthetic Valuing*	*Visual Art Standard 5: Connections. Relations Applications*
Self Portrait: Students drawing combines their name with images that represent their interests.	Students create a center of interest in the composition by placing their name in the center of the images.	Students choose pictures and objects from their experiences that illustrate their individuality.	Discussion of pictures and symbols as a universal visual language is discussed. Artist Keith Haring is featured.	The nature of art: Through a verbal critique students share their work--can they share something about themselves through art?	Students are asked to write in their sketchbook reaction to the question: Can Ideas and emotions be expressed through pictures?
Doodle into Art Students evolve simple line doodles into recognizable pictures.	From simple lines and shapes students draw small pictures and cartoons that the doodle lines suggest.	Objects are created that reflect the individual interests of the student.	Artists and cultures that use symbols in their work: Salvadore Dali, Native American Indian pictographs are shared and discussed	Written response: Sketchbook: What makes pictures art?	Discussion: Art as a universal language that can communicate philosophies of many cultures. Shared human experiences.
Elements and Principles of Art First of a series of exercises in personal sketchbook	After a film on the basics of art structure students draw examples of each element and principle in their sketchbook.	Students demonstrate their understanding of the elements and principles of art by use of drawing and collage in their sketchbooks.	Discuss with class a link to contemporary art and design.. How artists use art structure to control how an artwork is perceived.	Students share their understanding of art structure by explaining one element or principle to the class. Is the art successful?	Students connect what they have learned about successful design to the evaluation of the design of ordinary objects.
Pattern cover for class sketchbook	Reclaim a discarded book to serve as a class sketchbook, which will include Individual daily and homework class assignments.	The nature of pattern. Repetition is explored and positive and negative space is created in spontaneous ink study.	Students see examples of contemporary and historical sketchbooks from many artists, cultures and historical periods.	How variety and imagination can help the artist create a successful cover design. Compare covers.	Sketchbook is added to as the student progresses through the course. The book becomes a record of his/her artistic work in the class, both visual and written entries.
Abstract Word Design is based on communication of a word with only colors and shapes to work with	Students choose a word to communicate to the class --using only colors shapes and composition to describe it.	Discussion: Can feelings be expressed with only color and shape--could this be the basis for a universal language?	The works of the Abstract Expressionists are discussed: Steuart Davis, Joseph Albers, Hans Hoffman, and Jacson Pollock,	Critique: Students try to guess the word in each artwork--can a feeling or emotion be communicated visually?	Sketchbook response: Could there be a universal language that communicates with color and shape, and does not depend on ethnic or cultural differences?

Project Sequence:	*Visual Art Standard 1: Artistic Perception*	*Visual Art Standard 2: Creative Expression*	*Visual Art Standard 3: Historical and Cultural Context*	*Visual Art Standard 4: Aesthetic Valuing*	*Visual Art Standard 5: Connections. Relations Applications*
Analysis of an 'old master' painting	Students apply their knowledge of the structure of art and design to the structure and meaning of an artists work from another time.	Students analyze the creative expression of an another artist. The student will then complete a series of written questions in their sketchbook.	While examining a work from the past--students look for clues about the culture and time in which the art was created.	In their opinion is this a 'good' work of art? Critique response: How did the artist communicate his individual ideas in the artwork?	Discussion of how artists are able to control how we perceive their work--based on the elements and principles of design --how can we 'read' a work of art produced in our own time?
Alter an old master'work Students change original work of art into a new painting.	Students create a new work, but through re-drawing, painting and changing the original they gain a new appreciation of that artwork.	How slight alterations of the subject matter of a historical artwork can dramatically affect the perception of that work.	Written response: When art is taken out of original context--changing setting, clothing, time, how does the original objective of the art change?	Students share through critique of their work to class. How does the new work compete with the old as a work of art?	Students share the old and new versions of the artwork to the class--students observe many artists and time periods of the history of art through these presentations.
Color Harmonies Kaleidoscopic design and color wheel in sketchbook	Color vocabulary study- emphasis on learning the language of color by completion of colorwheel sample in sketchbook.	Students mix their own colors from the primaries then cut-out and mount color samples to create a color wheel and color harmony study.	In sketchbook students examine how the Impressionists and Fauves used color to express emotion.	After completing a Kaleidoscope design using a specific color harmony--students evaluate the works success to the class.	Discussion of the science of color (Seurat), and the emotional use of color in art (Vincent Van Gogh).
Pointillism Tondo A celebration of the work of George Seurat	Students explore the technique of pointillism--the optical mix of pure colors--that mix when viewed from a distance.	Students choose a view of the art class that interests them as the basis of their round pointillist painting.	The paintings of Post-Impressionist George Seurat are studied and emulated in an original interpretation of his unique style.	Written response: How does this unusual painting technique affect the viewers perception of the image?	Critique: Students share their reaction to the painting technique, and their individual painting of a room view to the class.
Imaginary Machine Drawing Objects go through a metamorphosis as the move through machine	Students design and draw a machine using their knowledge of the elements of design to imagine a machine that transforms one object into another.	The nature of machinery as interpreted by the student. The ability of machines to change, modify, and alter existing objects and materials.	Historical examination of man made objects: functions, types, and individual parts that compose 'machinery'.	Critique: Students describe the journey an object would take to change into something else. Compare finished artworks.	Sketchbook response: Students write how they used their knowledge of the elements of design to create an interesting drawing. They evaluate their success.

Project Sequence:	*Visual Art Standard 1: Artistic Perception*	*Visual Art Standard 2 Creative Expression*	*Visual Art Standard 3: Historical and Cultural Context*	Visual Art *Standard 4: Aesthetic Valuing*	*Visual Art Standard 5: Connections. Relations Applications*
Object Template Drawing Students trace a variety of objects on division page in their sketchbook	Emphasis on black and white value study in a flat drawing. Students assign a variety of values to overlapping shapes-- lines will disappear.	Objects that are traced are personal: keys, toys, jewelry, combs etc. In drawing them they are overlapped to create new shapes.	Students examine the work of artists who use the element of line as a major part of their work: Haring, Miro, and Matisse.	Written response: What objects are still recognizable when the drawing is complete? What do they say about the artist?	Critique: Students share and compare the objects depicted in the works-- what do the choices of objects say about the individual artist?
Drawing series still life A series of several works that explore visual drawing.	Students explore a variety of media and drawing techniques to accurately depict what they see.	By choosing a particular composition and media--students can express a point of view with the objects they have drawn.	By choosing a particular composition and media--students can express a point of view with the objects they have drawn.	Written response: Is it necessary for objects in the drawings to look exactly like the 'real' objects they are modeled on to be successful?	Critique: Which works clearly represent the objects in the still life--and do they communicate something unique about the culture that they come from?
Hands of Emotion Students draw three hands in contour- line.	Using oil pastel students draw three views of their own hand--showing a variety of emotions-- Happiness, hate, support, etc.	The hands are then cut out and arranged on another piece of paper so they will communicate an emotional state: Helping, love, fear, solidarity, etc.	Students examine the work of Albrect Durer, and other Renaissance masters who used hands in their work to convey emotion.	Written response: Students write in sketchbook— describe what emotional state the three hands communicate.	Discussion: How hands can be a universal symbol--accusing, welcoming, condemning. Is it important that the drawn hands be 'realistic' to communicate human emotion?
Objects In Space Pencil drawing	Students render at least 7 personal objects floating in space. They choose a composition that is directional, radial, or centered.	Objects that belong to the student are chosen--their most revered are worked into the composition.	Students create the illusion of deep space and a feeling of action by the placement of the objects on their paper. The works of Church, and Duchamp are shared.	Discussion: Are the objects that mean the most to the artist drawn with more care and attention?	Written response: Is there a difference between just naming the objects (identification) or learning visually about them by drawing them?
Shell Triptych Ink Drawing 3 views of one object	Students choose a seashell to draw using ink contour line. The views are whole shell, half of shell, and a micro view of same shell.	Using contour ink line students describe the outside surface of the shell in black ink line.	The triptych examined from different historical periods. Artwork can show three different views of a scene--or three views of the same scene	Discussion: Did the amount of time spent drawing affect the final artwork? Or is time a factor in producing good art?	Sketchbook response: If you where to use the contour ink technique to draw any object of your choice--what would it be and why?

Project Sequence:	*Visual Art Standard 1:*	*Visual Art Standard 2:*	*Visual Art Standard 3:*	*Visual Art Standard 4:*	*Visual Art Standard 5:*
Perspective Series One and two-point perspective views of the school and classroom	Class is shown video: Masters of Illusion then completes a series of drawn perspective studies based on what they learned.	Students explore one and two point perspective by drawing from actual locations both interior and exterior views.	Discussion of artists who have used linear perspective in their work to create the illusion of deep space: Dali, Di Venci, and Church	Critique: Based on the theory of linear perspective students evaluate their work and accuracy of their observations.	Discuss how artists, including photographers and architects through history, have used linear perspective to convey space and depth in their works.
Abstract Drawing Organic and man made diptych	Students discuss works by abstract artists, and try to define the nature of reality in art.	Students express and explore the similarities and differences between organic and mechanical objects in an abstract painting.	Class will view the works of artists that have explored abstraction by focusing on organic or mechanical subjects: O'Keefe, and Sheeler.	Sketchbook: Students describe their two paintings-differences and similarities of the two panels.	Critique: Students compare each artwork--how do the versions of nature and man-made objects vary between works?
Self Portrait Visual Drawing: Ourselves	Using a mirror the student observes his/herself in a drawing that focuses on visual accuracy.	How artists can communicate more than surface information by relating differences in facial expression and emotion in their self-portrait.	Students are shown and discuss portraits and self portraits through art history as records of individuals and of specific periods of time.	Written response: Is it possible to show something about you that is beyond the visual representation of your face?	Discussion: Compare the similarities and differences of self-portraits from different artists: Rembrandt. Van Gogh, and contemporary artist Chick Close.
Fantasy Self Portrait Alter and change your face in a second work	Students work from tracing of original portrait, but change and alter original into a new work with ol pastels.	Students change portrait by deletion, addition, and use of fantasy elements to express new ideas and meanings in their portrait.	Students see examples of contemporary and historical portraits from many artists, cultures and historical periods. The portraits of the German Expressionists will be featured.	Written response: Does this drawing communicate something about the person that could not be done in a photograph?	Discussion: Can a fantasy portrait portray a world of the past or future? Can art be humorous and still be considered art? Share examples.
Montage Drawing In the form of a fantasy landscape--or a collection of individual drawings.	Final class drawing based on a selection of many sketchbook images to be organized into a Surreal landscape of montage.	Students create one work out of a collection of many drawings and collages. Images not usually seen together.	The works of the Surrealists are shared: Dali, Magritte, Miro, Gorky, and kahlo are discussed with the class.	Critique: Does this collection of unrelated objects work as one artwork? What does the selection of the images say about the artist?	Sketchbook response: Challenge reality--How do we feel about these changes in what we know as reality in our world? What is reality?

Course Title

Art D (Independent Study)

Description of Target Group

This course is designed for any student who has successfully completed one year of Drawing and Painting Workshop A/B and has the instructor's permission.

Purpose

This one-semester course is designed to give advanced students the opportunity to work independently in developing their personal art skills. Work to be assigned by instructor according to student's needs and abilities.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Personal discipline and responsibility will be demonstrated through:
   A. Regular attendance
   B. Planning and execution of projects within specific time frames
   C. High quality of finished product

2. Students will be expected to complete one well-researched and well-written topical term paper.

3. Students will be expected to attend local events and to watch assigned TV specials and to report to instructor.

Instructional Materials

To be assigned according to individual need.

Activities

Individual work, lectures, participation in class discussions, demonstrations, experiments, films, filmstrips, and field trips.

Course Title

Art Studio (AP)

Description of Target Group

This course is recommended for 11th and 12th grade students who have successfully completed courses such as Art A, B, and C, Photography 1A, and 1B, Ceramics A and B, Video, Beginning and Video, Advanced.

Purpose

The purpose of Art Studio (AP) is to prepare students who anticipate going to the University of California or California State University system, or other four-year schools, which require one year of art. This is a one-year course. It emphasizes the development of a portfolio, which will satisfy the requirements of the UC system and the AP examination. There shall be a strong emphasis on quality throughout the year-the quantity will accumulate over the ensuing nine months. Activities shall include: the keeping of a journal reflecting the research of various style in one's field, the developing of one's style, and the finalization of a portfolio for Advanced Placement testing in the spring. Credit will constitute the A-F college entrance requirements.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Understanding of the various styles in one's field.
2. Progressive development of one's style.
3. Completion of a portfolio for Advanced Placement testing.

Instructional Materials

Materials shall be determined ultimately by the enrollees. They would include such materials as paints, brushes, photo papers, mount and overmat boards, glazes, ceramic tools, video tapes, etc.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District, Fieldman, Edmund Burke Varieties of Visual Experience Art as Image and Idea, Prentice Hall, N.J. Harry N. Abrams. Library of Congress # 71-174223

Art Studio (AP) (continued)

Activities

1. Visit local artists, art shows and museums for interviews and empirical research for their journals.
2. Individual work
3. Field trip to Los Angeles County for visits to the Huntington Library, Norton Simon Museum, Contemporary Art Museum of LA, LA County Museum of Art, and the Getty Museum of Art for the examination of major art and themes of world class art.
4. Research, examine and critique data, which will help the individual in the preparation of his/her portfolio for the AP portfolio examination in the spring.
5. Guest speakers and resource people shall complete the student's exposure to resources in preparation for work on their portfolios.

Course Title

Art 1A (Design)

Description of Target Group

Beginning students grades 10 through 12. (This course may be repeated once.)

Purpose

This one term/semester course is designed to give the student an understanding of the various techniques and applications of good design.

Prerequisite: None

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Make aesthetic judgements.
2. Demonstrate self-reliance and independent initiative.
3. Understand and use specialized art vocabulary in both verbal and written work.
4. Demonstrate knowledge and application of color theory.
5. Demonstrate knowledge and application of design theory, including perspective.
6. Understand the scope of career opportunities as it relates to design.
7. Increase awareness of good design in advertising and utilitarian objects.
8. Understand the use, care and appreciation of artists' tools, supplies, and the work environment.
9. Develop ability to enlarge or reduce a subject by using a grid technique.

Assessment of Student Learning

1. Students will complete all course work.
2. Students will present examples of acquired skills in a portfolio.
3. Students will complete a written self-evaluation of his/her work.
4. Student will complete homework assignments for above 'C' grades.
5. Assessment through teacher observations of work in class, and handout sheets.
6. Student will be graded based on check off of weekly assignments.

Text and Supplementary Materials:

Historical and contemporary design in the form of printed matter, video tapes, class discussion, and computer hardware.

Activities

Individual class work, lectures, group presentations, visiting artists, demonstrations, experiments, videos, and field trips.

Course Title

Art 1B (Drawing)

Description of Target Group

Beginning students grades 10 through 12.
(This course may be repeated once.)

Purpose

This one term/semester course is designed to provide the student the necessary skills that will enable him/her to draw basic objects realistically, and create fantasy drawing based on imaginative sources.

Prerequisite: None

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate an improved ability to see and record observations through drawing.
2. Demonstrate the use of basic drawing techniques in a variety of media.
3. Demonstrate the ability to draw objectively objects from 'life'.
4. Demonstrate the ability to draw from the imagination.
5. Demonstrate the ability to enlarge or reduce a subject by the use of a grid technique.
6. Demonstrate the ability to organize space (composition) on a picture plane.
7. Demonstrate knowledge of the care of tools and equipment.
8. Demonstrate an appropriate written and oral art vocabulary.
9. Demonstrate personal responsibility toward care and maintenance of the work environment.

Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of class assignments.
3. Students will complete a written portfolio evaluation of term progress.
4. The completion of homework assignments for above 'C' grades.
5. Teacher observation of improvement during course.
6. Assessment based on checkoff of weekly assignments.

Text and Supplementary Materials

Historical and contemporary of excellent drawing in the form of student work, reproductions, instructional videotapes, class discussion, and interactive computer hardware.

Activities

Daily drawing activities in form of lessons designed to develop the students ability to record what he/she observes. The organization of an individual portfolio for presentation to the class and a variety of field trips.

Subject area:	Visual & Performing Arts (F) / Dance
UC honors designation?	No
Prerequisites:	Ballet Folklórico I (Required)
Co-requisites:	None
Integrated (Academics / CTE)?	Yes: Performing Arts
Grade levels:	10th, 11th, 12th

ourse Description

urse overview:

Ballet Folklórico 2 (CTE Capstone) A/B is a yearlong, advanced performing dance class which serves as a Capstone Class in the CTE Career Pathway for Arts, Media & Entertainment - Performing Arts: Dance. Students study the historical background of a variety of regional Mexican dance styles, refine their footwork and stage presence, apply choreographic skills, learn production elements and business/managerial skills, and develop a professional career plan.

This course provides the opportunity for students from all backgrounds to experience and understand dance as a component of Mexican heritage, giving Mexican-American students, in particular, a special opportunity to learn about, identify with, and express pride in their culture. A central purpose of this course is to prepare a quality performing arts group to present for local schools, civic organizations and community events, exposing our audiences to the rich and vibrant world of traditional Mexican folk dance, thereby fostering the appreciation and pride in Mexican tradition and culture.

urse content:

Dance Repertoire & Development of Stage Presence

Classroom Hours: 110 **Lab/Work Based Learning:** 220

A central purpose of this class is to prepare a quality performing arts group to present for local schools, civic organizations and community events, exposing our audiences to the rich and vibrant world of traditional Mexican folk dance, thereby fostering the appreciation and pride in Mexican tradition and culture. This class often does 25-40 performances a year both on and off campus including two big shows, one in winter and the other in spring, in which professional lighting and sound are employed.

As each year's performing group's repertoire is prepared for performance students will learn to identify and apply basic music principles such as rhythm, meter, and tempo. Students have the opportunity to learn works from several choreographers and are charged with performing these dances communicating the original intent of the work while employing personal artistic intent and interpretation. Students create and teach choreographies that utilize an established dance style or genre and employ choreographic principles and aesthetics. As most folklórico dances are couple-dances, the development of partner skills is paramount.

Each year students will learn 6-10 suites (three to four dances) from a variety of Mexico's 31 states or their sub-regions. Students are expected to learn all presented dances to a high degree of proficiency including steps, rhythm, posture, hand/arm position, skirt work, choreography, style, etc.

Frequent choices include, but are not limited to Jalisco, Veracruz, Chihuahua, Tamaulipas, Nuevo León, Baja California, Oaxaca, Chiapas, Guerrero, Sinaloa, Yucatán, and Nayarit.

Several of the dance genres/styles studied will include:

- Norte: polca, redova, chotís,
- Este: huapangos, son jarocho

- Sur: gusto, son, jarabe
- Oeste: son, banda, jarabe

Students will also work on developing stage presence through consistent desired facial expression (e.g. smiling, eye contact), poise, posture, grace, partner interaction, ánimo, gritos, and costume/hair appearance.

Common Core Academic Standards

CCSS.ELA-Literacy.L.11-12.6

CCSS.ELA-Literacy.RST.11-12.2, 11-12.3, 11-12.4, 11-12.5, 11-12.6, 11-12.7, 11-12.9, 11-12.10

California State Academic Content Standards for Visual and Performing Arts

Artistic Perception – 1.1, 1.2, 1.3, 1.4, 1.5

Creative Expression – 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 2.7

Aesthetic Valuing – 4.1, 4.2, 4.3, 4.4, 4.5

Connections, Relationships, Applications – 5.3

CTE Arts, Media & Entertainment Knowledge and Performance Anchor Standards

Problem Solving and Critical Thinking – 5.1, 5.2

Health and Safety – 6.2, 6.3, 6.4

Responsibility and Flexibility – 7.1, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7

Ethics and Legal Responsibilities – 8.3, 8.4, 8.5, 8.6

Leadership and Teamwork – 9.1, 9.2, 9.3, 9.4, 9.5, 9.6, 9.7

Technical Knowledge and Skills – 10.1, 10.2, 10.3, 10.4

Demonstration and Application – 11.1, 11.2

CTE Performing Arts: Dance/ Choreography Pathway Standards

Artistic Response – B1.0, B1.1, B1.2, B1.3, B1.4, B1.5, B1.6, B1.7

Application of Artistic Skills – B4.0, B4.1, B4.2, B4.3, B4.4, B4.5, B4.6, B4.7

Aesthetic Values – B8.1, B8.2, B8.3, B8.4

⮒ Unit Assignment(s):

- Learn Dances and Regional Styles
- Dance Quizzes
- Performances (School, Civic Organizations, Community Events)
- Critique of our “Celebration of Mexican Culture” and “Big Show” Performances
    - Written 2-3 page essay using modified Feldman Model for Art Criticism
- Critique of other Marimba Band/Mariachi Performance

    - Written 1-2 page essays utilizing appropriate vocabulary & terms
- Response to Critique of “Me”
- Collaborative-Learning Choreography Project

Students will be evaluated using rubrics on the degree to which they meet expectations for (1) learning the repertoire of dance including steps, rhythm, posture, hand/arm position, skirt work, choreography, style, etc., (2) demonstrating good stage presence through consistent desired facial expression (e.g. smiling, eye-contact), poise, posture, grace, partner interaction, *ánimo*, *gritos*, and costume/hair appearance, (3) attending performances, practices, and rehearsals as well as being responsible for costumes and group property.

Dance Vocabulary and Historical/Cultural Understanding

Classroom Hours: 40 **Lab/Work Based Learning:** 0

Historical perspectives and cultural context of folklórico dance are focused on in a variety of readings and discussions on topics such as:

- How/Why El Jarabe Tapatío became the National Folk Dance par excellence?
- The Dilemma of Authenticity v. Artistic License. García, Dancing Across Borders, pp. 230-231.
- “The Ballet Folklórico de Mexico and the Construction of Mexican Nation Through Dance” by Sydney Hutchinson, Dancing Across Borders pp. 206-225.
- “Staging Authenticity: Theorizing the Development of Mexican Folklórico Dance” by Olga Nájera-Ramírez, Dancing Across Borders, pp. 277-292.
- “Folklorico in the United States: Cultural Preservation and Disillusion” by Russel Rodríguez, Dancing Across Borders, pp. 335-358.
- History of Folk Dance, Ballet, and Romantic Nationalism

In addition, the following assignments will challenge students to demonstrate their understanding of the historical and cultural context of folklórico dance.

- Historical & Cultural Quizzes/Tests
    - Students are tested on historical and cultural components from readings, discussions and lectures on each of the dance regions learned.
- Reflection of How This Affects “My” Performance
    - Students will write a reflection of how new historical and cultural learnings affect how they perform.

Course Title

Ballet Folklorico, Advanced

Description of Target Group

This course is designed for all 9th, 10th, 11th, and 12th grade students.

Purpose

The purpose of this class is to produce a performing arts group (The Righetti High School Ballet Folklorico) which will conduct performances for local schools, civic organizations, and community events and celebrations.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Participate regularly in assigned activities (performances).
2. Demonstrate the ability to be on time.
3. Demonstrate the ability to work effectively with others and in small and large groups.
4. Learn the geography associated with each dance region.
5. Learn the history related to each dance.
6. Learn the cultural origins and influences of each dance and region.
7. Learn the cultural dance steps, choreography, and hand or shirt movements for assigned dances.
8. Learn the quality of proper stage performance.
9. Demonstrate concern and competency in the use and care of dance costumes.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Class lectures, discussion, demonstration, video tapes, and performance related to dance.

Course Title

Ballet Folklorico, Beginning & Intermediate

Description of Target Group

This course is designed for all 9th, 10th, 11th, and 12th grade students.

Purpose

The purpose of this class is to teach students the fundamentals of Mexican folk dance and to allow interested students the opportunity to prepare and audition for the Righetti Ballet Folklorico.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Participate regularly in assigned activities.
2. Demonstrate the ability to work effectively with others and in small and large groups.
3. Learn the geography associated with each dance region.
4. Learn the history related to each dance.
5. Learn the cultural origins and influences of each dance and region.
6. Learn the cultural dance steps, choreography, and hand or shirt movements for assigned dances.
7. Learn the quality of proper stage performance.
8. Demonstrate the ability to dance.
9. Learn the proper care for dance costumes, props and sound equipment.

Instructional Materials

Text and Supplementary Materials

Brief Course Description

This class is designed for students in grades 9 through 12 who have had previous musical experience. Students must have had two to three years of grade school music training Can be placed in this group.

Pre-Requisites: Junior High Band Required _____ Recommended ✓

Co-Requisites: _____ Required _____ Recommended _____

COURSE CONTENT

Course Goals and/or Major Student Outcomes

This course will provide students with an opportunity to further individual and group musical competencies.

Course Objectives

The objective for this class is for students to have enough musicianship skills for Marching Band, Concert Band, and Jazz Ensemble.

Course Outline

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1.Follow a musical part.
2.Develop the technique of performing on a musical instrument.
3. Develop an awareness that each person will contribute to the group performance (teamwork and pride).
4. Perform Major and Minor (Melodic and Harmonic) scales, scales in different intervals and rhythm patterns.
5. Develop and experience the aesthetic response in listening and performing music
6.Value music as an artistic and creative endeavor and appreciate the role of the musician in society.
7.Learning to read and recognize musical terms.
8. Above course standards require individual practice outside the classroom daily.

Title: **Essential Elements 2000 Book 12, and 3**,by Tim Lautzenheiser, Hal Leonard Corporation, 1999
Exercises for Ensemble Drill arranged for Band by Raymond C. Fussell
Sheet Music

Course Title

Band, Intermediate

Description of Target Group

This class is designed for students in grades 9 through 12 who have had previous musical experience. Ninth grades with two to three years of grade school music training are placed in this group.

Purpose

This course will provide students with an opportunity to further individual and group musical competencies.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Follow a musical part.
2. Develop the technique of performing on a musical instrument.
3. Develop awareness that each person ahs a contribution to the group performance (teamwork and pride).
4. Perform scales and rhythm patterns.
5. Develop and experience the aesthetic response in listening and performing music

7. Learning to read and recognize musical terms.
8. Above course standards require individual practice outside the classroom.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Classroom participation in preparation for more advanced musical groups.

Course Title

Band, Beginning

Description of Target Group

This course is designed as an elective for students of any grade level. No prior music study is necessary.

Purpose

This class provides an opportunity for students to begin instrumental study even at this late stage. It is especially valuable to those who, for some reason, have not had a previous opportunity. Very often it provides an opportunity for students of piano or voice to begin the study of a band or orchestral instrument. Promotion to intermediate band after one year is possible if the student has sufficient talent, studies, and practices with average or better industry.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Preparatory tones, tones in unison, proper attack, duration concept
2. Note (whole through sixteenth, including rests), counting rhythms
3. Phrases
4. Harmony in parts
5. Signatures (key and time) and elementary theory pertaining to the same
6. Pick-up notes, repetitions, sequence, form
7. Articulations
8. Dynamics, nuance, tone expression

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

In instrumental music, the criterion presented is not ordinarily presented in "units" except for a very small portion of the course at the very beginning. The criteria or phrases in the study of applied instrumental music are usually taught and presented simultaneously but from the elementary to advanced. A great deal of the work at the beginning is necessarily individual. In instrumental music, there is no one stage of development more important than another. The very beginning requires just as correct and meticulous endeavor on the part of the teacher as the most advanced.

Course Title

Band, Concert

Description of Target Group

This course is designed as an elective for students of grades 10 through 12 who have successfully auditioned prior to enrollment in the course.

Purpose

This one-semester course is designed for students who will further their competence as individual players, broaden their appreciation of music and experience music as an art. They will also reap the many benefits, musical and otherwise, from participating as a member of a successful orchestra.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Developing their individual showmanship ability
2. Developing their ability to work in a group for a common goal
3. Broadening their musical experience
4. Heightening their personal musical performance level

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

The student will study some of the most famous compositions in musical literature. The student will participate in many musical performances contributing to the good of the band, the school and the community. During the year, the group will march in various parades and perform in football halftime and shows.

Course Title

Band, Intermediate

Description of Target Group

This class is designed for students in grades 9 through 12 who have had previous musical experience. Ninth grades with two to three years of grade school music training are placed in this group.

Purpose

This course will provide students with an opportunity to further individual and group musical competencies.

Standards of Expected Student Achievement

Activities

Classroom participation in preparation for more advanced musical groups.

Course Title

Band, Jazz

Description of Target Group

This class is designed for students in grades 9 through 12 who have successfully completed an audition of minimum basic skills.

Purpose

This one-semester course will provide the students with the opportunity to further individual and group competencies.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Follow a musical part.
2. Develop and expand instrumental music skills.
3. Perform scales, solos, and rhythm patterns.
4. Demonstrate an understanding of the language of stage band music.
5. Learn to read and recognize musical terms.
6. Demonstrate poise and self-confidence by participation in performance.
7. Above course standards require individual practice outside the classroom.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Participate in concerts, festivals and any other performances or trips that are scheduled for the class.

Course Title

Band, Marching

Description of Target Group

This course is designed as an elective for all 10th, 11th, and 12th grade students.

Purpose

This course is designed to provide physical education credit for students participating during the fall semester only. Students are provided this time to prepare and practice special activities planned for fall sporting events. Stress will be placed on the creative development of activities, which lead to the individual student's gain of confidence, poise and self-satisfaction through the development of school spirit.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Attend regularly and on time.
2. Participate in course activities.
3. Adhere to all School Board student behavior policies.
4. March the equivalent of at least 30 minutes a day.
5. Demonstrate knowledge of specific routines.
6. Participate in performances.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Learning new routines, participation in all required games and participation in all parades and competitions.

Course Title

Band, Marimba

Description of Target Group

This course is designed for students of any grade level or cultural background who have successfully completed an audition of basic minimum skills.

Purpose

The purpose of this course is to develop a performing arts group, which will reflect Mexican/Latin culture and which will instill in the participants a positive self-image of their cultural heritage.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop the technique of performing on a musical instrument native to Mexican/Latin music.
2. Participate in celebrations, festivals, concerts, etc that are scheduled for the group.
3. Recognize major types of rhythms used in Mexican/Latin music.
4. Demonstrate an understanding of elementary musical theory.
5. Develop a sense of responsibility to the group and a desire to contribute to its improvement.
6. Demonstrate an understanding of the history of Mexican/Latin music and how each different type developed.
7. Develop a positive attitude toward self and others, a sense of self-worth and identity, and motivation to accomplish personal goals.
8. Develop a desire to perform quality music and a desire to continue learning more about this art, especially the point of developing an orientation towards a career as a professional musician.
9. Demonstrate qualities of good citizenship and responsibility in the care of musical instruments, costumes and materials.
10. Demonstrate poise and self-confidence by participation in performances.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Small group seminars, individualized learning, field trips, performances.

Course Title

Basic Brass Performance

Description of Target Group

This course is designed as an elective for students at any grade level with an interest in playing a brass instrument. No experience is necessary.

Purpose

This class provides an opportunity for students to begin instrumental study even at this late stage. It is especially valuable to those who, for some reason, have not had a previous opportunity. It also can be valuable for students who may have started instrumental study in the lower grades, and dropped out for a few years. This course will also provide an instrumental opportunity for students who presently sing or play the piano.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Basic Brass instrument facility
1. Tone production
2. Use of air
3. Embouchure
4. Fingering
5. Basic Range

Basic musical ability
1. Ability to read music
2. Proficiency in listening to surrounding musicians
3. Familiarity with basic conducting signals, rehearsal techniques

Instructional Materials

Brass Instrument

Some of these may be provided by the school, some will have to be rented by the student, depending on the instrument chosen and availability.

Text and Supplementary Materials provided by instrumental music department.

Activities

In the beginning, a great deal of individual work will be done, to enable each student to acquire good basic skills. The emphasis in this course will be on kinesthetic learning. As the course progresses, students will be brought together more as a group, toe experience ensemble rehearsal and performance techniques. It is expected that by the end of this course, students will be able to join the concert band (see course description for *Band, Intermediate*).

Course Title

Basic Percussion Performance

Description of Target Group

This course is designed as an elective for students at any grade level with an interest in playing percussion instruments. No experience is necessary.

Purpose

This class provides an opportunity for students to begin instrumental study even at this late stage. It is especially valuable to those who, for some reason, have not had a previous opportunity. It also can be valuable for students who may have started instrumental study in the lower grades, and dropped out for a few years. This course will also provide an instrumental opportunity for students who presently sign or play the piano.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Basic Percussion Instrument Facility

1. Knowledge of instrument
2. Hand position
3. Posture
4. Sticking

Basic Musical Ability

1. Ability to read music
2. Proficiency in listening to surrounding musicians
3. Familiarity with basic conducting signals, rehearsal techniques

Instructional Materials

Percussion Instrument

Some of these may be provided by the school, some will have to be rented by the student, depending on instrument chosen and availability.

Text and Supplementary Materials provided by instrumental music department.

In the beginning, a great deal of individual work will be done, to enable each student to acquire good basic skills. The emphasis in this course will be on kinesthetic learning. As the course progresses, students will be brought together more as a group, to experience ensemble rehearsal and performance techniques. It is expected that by the end of this course, students will be able to join the concert band (see course description for "*Band, Intermediate*").

Course Title

Basic Woodwind Performance

Description of Target Group

This course is designed as an elective for students at any grade level with an interest in playing a woodwind instrument. No experience is necessary.

Purpose

This class provides an opportunity for students to begin instrumental study even at this late stage. It is especially valuable to those who, for some reason, have not had a previous opportunity. It also can be valuable for students who may have started instrumental study in the lower grades, and dropped out for a few years. This course will also provide an instrumental opportunity for students who presently sing or play the piano.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Basic Woodwind Instrument Facility

1. Tone production
2. Use of air
3. Embouchure
4. Fingering
5. Basic range

Basic Musical Ability

1. Ability to read music
2. Proficiency in listening to surrounding musicians
3. Familiarity with basic conduction signals, rehearsal techniques

Instructional Materials

Woodwind Instrument

Some of these may be provided by the school, some will have to be rented by the student, depending on instrument chosen and availability.

Texts and Supplementary Materials provided by instrumental music department.

Activities

In the beginning, a great deal of individual work will be done, to enable each student to acquire good basic skills. The emphasis in this course will be on kinesthetic learning. As the course progresses, students will be brought together more as a group, to experience ensemble rehearsal and performance techniques. It is expected that by the end of this course, students will be able to join the concert band (see course description for "*Band, Intermediate*").

Course Title

Cartooning and Illustration

Description of Target Group

This one term/semester course is designed for student's grades 10 through 12, who would like to learn the basics of cartoon drawing and illustration.

Purpose

This one-semester course is designed to give the student an understanding of the various techniques and applications of good design.

Prerequisite: Art 1A (Design), or Art 1B (Drawing), or Advanced Drawing A/B

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate a basic knowledge of the history of the cartoon used as both entertainment and as political satire.
2. Demonstrate an ability to draw and design original cartoon characters and illustrations in a variety of media.
3. Demonstrate the ability to incorporate a variety of inking techniques to original illustrations and cartoons.
4. Demonstrate the ability to construct a simple storyboard.
5. Demonstrate the ability to critique and discuss their drawings with others.
6. Demonstrate the ability to write simple captions and short descriptions.
7. Demonstrate basic ink lettering techniques with a speedball pen.
8. Create a portfolio of illustrations and cartoon projects that show a variety of techniques.

Assessment of Student Learning

1. Students will present evidence of learning by presenting a portfolio of class work.
2. Students will share portfolios with class and prepare a written self-critique of their work.
3. Teacher observations.
4. Students will present evidence of learning by the completion of all class assignments that demonstrate basic knowledge of cartooning techniques.
5. Student's progress will be evaluated weekly-by means of a 1-10 maximum point system.

Cartooning and Illustration (continued)

Instructional Materials

Historical and contemporary caricature and illustration in the form of printed matter, video tapes, class discussion, and computer hardware.

Activities

Individual class work, group projects, visiting artists, demonstrations, experiments, videos, and design competitions.

Course Title

Ceramics 1A

Description of Target Group

This one-semester course in ceramics is designed for 10th, 11th, and 12th grade students who have an interest in developing skills related to ceramics.

Purpose

To acquaint the student to the handling of clay as a means to make useful objects.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Construct slab sculpture with surface decoration, 6 inches high.
2. Construct thrown pots, 6 inches high.
3. Construct coil pots, 8 inches high.
4. Construct self-designed pot.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, participation in class discussions, demonstrations, experiments, films, individualized learning and small group seminars.

Course Title

Ceramics 1B

Description of Target Group

This one-semester course in ceramics is designed for 10th, 11th, and 12th grade students who have completed Ceramics 1A and have an interest in developing skills related to ceramics.

Purpose

To acquaint the student to the handling of clay as a means to make useful objects.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Construct slab sculpture, 10 inches high.
2. Construct thrown pots, 8 inches high.
3. Construct coil pots, 10 inches high.
4. Construct a pot with a lid.
5. Construct self-designed pot.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, participation in class discussions, demonstrations, experiments, films, individualized learning and small group seminars.

Course Title

Ceramics 2A

Description of Target Group

This one-semester course in ceramics is designed for 11th, and 12th grade students who have completed Ceramics 1A/B and have an interest in developing skills related to ceramics.

Purpose

To acquaint the student to the handling of clay as a means to make useful objects.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Construct slab sculpture, 12 inches high.
2. Construct thrown pots, 10 inches high.
3. Construct coil pots, 12 inches high.
4. Construct a teapot.
5. Construct self-designed pot.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, participation in class discussions, demonstrations, experiments, films, individualized learning and small group seminars.

Course Title

Ceramics 2B

Description of Target Group

This one-semester course in ceramics is designed for 11th and 12th grade students who have completed Ceramics 2A and have an interest in developing skills related to ceramics.

Purpose

To acquaint the student to the handling of clay as a means to make useful objects.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Construct slab sculpture, 12 inches high.
2. Construct thrown pots, 12 inches high.
3. Construct tea set (pot and six matching cups).
4. Construct self-designed pot.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, participation in class discussions, demonstrations, experiments, films, individualized learning and small group seminars.

Course Title

Chorale (Vocal)

Description of Target Group

This course is designed for students of the 10th through 12th grade levels who have had previous vocal training and successfully completed an audition of minimum basic skills.

Purpose

The student will develop a continuing interest in good music through the singing of good choral literature. The student will experience the pleasures and enjoyments of self-expression through music. Students will give public service through performance. The class will provide the opportunity for public performance and participation and adjudication in festivals with similar groups.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop vocal technique (posture, tone, diction, breath control, balance & blend of voices), sight reading and ensemble through songs.
2. Develop skills necessary for the continued enjoyment and participation in a profitable leisure time activity.
3. Develop skills necessary for the continued enjoyment and participation in a profitable leisure time activity.
4. Follow a vocal music score, understand and use basic music fundamentals of notation, vocabulary, terminology, and symbols.
5. Demonstrate an understanding of rhythm, harmonic and melodic movement.
6. Memorize most materials to be programmed.
7. Demonstrate poise and self-confidence by participation in performance.
8. Demonstrate the qualities of good citizenship and responsibility in the care of music materials, equipment and costume.
9. Develop a basic understanding and appreciation for various forms and styles of quality choral music.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

The student will review the basic techniques of voice production and sight-reading. Students will prepare and perform a large number of songs, which may be used in public performance. They will participate in music festivals with other choirs.

Course Title

Chorus (Vocal)

Description of Target Group

This course is designed as an elective for students of any grade level, and the student need not have prior music training.

Purpose

The student will develop an understanding of an appreciation for music and the role music plays in our lives. He will develop his interest in music and experience the pleasures and enjoyments of self-expression through music.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop vocal technique (posture, tone, diction, breath control, balance and blend of voices), sight reading and ensemble singing through songs.
2. Develop a spirit of teamwork and cooperation through signing together.
3. Develop a basic musical vocabulary.

Instructional Materials

Text: None

Supplementary Materials: a variety of final vocal music

Activities

Students will prepare and present programs and concerts, festivals and vocal competitions.

Course Title

Commercial Art and Design

Purpose

This two-semester course is designed for student's grades 10-12 who would like to learn the basic techniques of graphic design and advertising.

Prerequisite: None, suggested for students who have had Drawing, but not required.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate knowledge of the elements and principals of design.
2. Demonstrate an ability to use design to organize and connect many visual elements together in a variety of practical graphic solutions.
3. Demonstrate the ability to work with the client to produce practical design solutions.
4. Demonstrate the ability to connect many ideas into one visual statement.
5. Demonstrate the ability to critique and discuss their designs with others.
6. Develop a vocabulary of design and graphic terms and techniques that verbally describe the elements of a poster, CD cover, brochure, etc.
7. Develop the skill of working with a variety of commercial art media.
8. Create a graphic portfolio of projects that show a variety of technique and solutions to design problems.

Instructional Materials

Historical and contemporary graphic design in the form of printed matter, video presentations, and class discussions, and work on a MAC computer.

Activities

Individual class work, projects in groups, class critiques, visiting artists, and design contests.

Course Title

Crafts, Advanced

Description of Target Group

Advanced Crafts is designed for 10th, 11th, and 12th grade students who have completed the Crafts class with a passing grade.

Purpose

This one-semester course is designed to offer experience in crafts and may be repeated with teacher permission.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop skill in one or more media the instructor finds is of current interest.
2. Demonstrate originality and craftsmanship.
3. Demonstrate ability to work with a variety of projects.
4. Demonstrate the safe use of tools and equipment.
5. Express knowledge of terms and vocabulary associated with individual craft areas.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Lectures, participation in class discussion, demonstrations, experiments, films, individualized learning, small group seminars.

Course Title

Crafts

Description of Target Group

This course is designed for 10th through 12th grade students who are interested in developing a variety of craft skills. No prerequisite is required.

Purpose

This one-semester course is designed to offer experience in crafts and provide a basic understanding of design principles.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Develop basic craft skills in two or more of the following media: sketching, ceramics, weaving, printmaking, mosaics, leather, sculpture or any other media the instructor finds is of current interest.

1. Demonstrate originality and craftsmanship.
2. Demonstrate ability to work with a variety of media.
3. Demonstrate the safe use of tools and equipment.
4. Express knowledge of terms and vocabulary associated with individual craft areas, design principles, and color theory.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Lectures, participation in class discussions, demonstrations, experiments, films, field trips, individualized learning, small group seminars.

Course Title

Design A (Beginning)

Description of Target Group

Beginning students grades 9 through 12.

Purpose

This one-semester course is designed to give the student an understanding of the various techniques and applications of good design.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Make aesthetic judgements.
2. Demonstrate self-reliance and independent initiative.
3. Understand and use specialized art vocabulary in both verbal and written work.
4. Demonstrate knowledge and application of color theory.
5. Demonstrate knowledge and application of design theory, including perspective.
6. Understand the scope of career opportunities as it relates to design.
7. Increase awareness of good design as a consumer.
8. Understand the use, care, and application of artist tools, supplies, and environment.
9. Develop ability to enlarge or reduce a subject by using a grid technique.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, participation in class discussions, demonstrations, experiments, videos, CD-ROMs, and field trips.

Course Title

Design B (Intermediate)

Description of Target Group

Design A must be completed with a grade 'C' or better to take Design B.

Purpose

Students will apply the knowledge gained from Design A and apply it to problems of Graphic Art design, collage work, commercial design problems, and use the principles and elements of design to produce fine art.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Make aesthetic judgements.
2. Demonstrate self reliance and independent initiative
3. Understand and use specialized art vocabulary in both verbal and written work.
4. Demonstrate knowledge and application of color theory.
5. Demonstrate knowledge and application of design theory, including perspective.
6. Understand the scope of career opportunities as it relates to design.
7. Increase awareness of good design as a consumer.
8. Understand the use, care, and appreciation of the artist tools, supplies, and environment.
9. Develop ability to enlarge or reduce a subject by using a grid technique.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, participation in class discussions, demonstrations, experiments, videos, CD-ROMs, and field trips.

4. CATALOG DESCRIPTION

Brief Course Description (If school has a catalog, the description that is in the catalog. If not, a brief description of the course) (NOTE: DO NOT INCLUDE INFORMATION THAT COULD IDENTIFY YOUR SCHOOL OR DISTRICT.)

Digital Art (10-12) For students who have shown interest in the field of fine arts and the use of digital imaging technology. Learn a variety of method s of expression by means of electronic (digital) equipment.

This course is designed for all students interested in fine arts and in exploring and/or developing their experience, knowledge, and skills in this area by means of digital equipment and media. Students will use a variety of current digital technology to create individual expressive artwork. Students will employ universal elements and principals of art in their creation of original work utilizing a wide variety of digital hardware and software.

==========

8. COURSE CONTENT – COLLEGE PREP ELECTIVE: VISUAL AND PERFORMING ARTS

[If g-College Prep Elective: Visual and Performing Arts" is selected]

GENERAL COLLEGE PREP ELECTIVE GUIDANCE
The intent of the college preparatory elective requirement is to encourage prospective UC students to fill out their high school programs with courses that will meet one or more of a number of objectives:

- To strengthen general study skills, particularly analytical reading, expository writing, and oral communications
- To provide an opportunity to begin work that could lead directly into a major program of study at the University, and
- To experience, in some depth, new areas of academic disciplines that might form the basis for future major or minor studies at the University

Quality. All courses selected to meet the "g" elective requirement are expected to meet standards of quality similar to those required for the "a-f" requirements. Courses acceptable for the "g" elective area should be advanced courses designed for the 11th and 12th grade level and/or have appropriate prerequisites. Elective courses should present material at a sufficient depth to allow students to achieve mastery of fundamental knowledge that prepares them for University work or a future career path.

COLLEGE PREP ELECTIVE: VISUAL AND PERFORMING ARTS GUIDANCE
- Advanced courses in the Visual & Performing Arts can be considered to meet the "g" elective requirement but must still address the five component strands of the state VPA standards.
- Advanced courses should enable students to understand and appreciate artistic expression and, where appropriate, to talk and write with discrimination about the artistic material studied.
- Courses devoted to artistic performance and developing creative artistic ability should have prerequisites (either one year of introductory coursework or experience approved by the instructor) and should assume proficiency beyond the introductory level.
- Courses must require on the average the equivalent of a five-period class per week.
- Work outside of the class must be required (e.g., portfolio/performance preparation, reading, writing, research projects, and critical listening/viewing).
- Advanced VPA courses that are a semester in length, will only be considered for the "g" elective area, not the "f" VPA area, which must be satisfied by completing an appropriate, sequential, year-long course.

GENERAL VISUAL AND PERFORMING ARTS GUIDANCE
Courses in the following categories are acceptable: dance, drama/theater, music, or visual art.
- The intention is to provide a meaningful experience and breadth of knowledge of the arts so that students may apply their knowledge and experience to the creation of art and are better able to understand and appreciate artistic expression on the basis of that experience and knowledge.
- The intent of approved VPA courses must be directed at acquiring concepts, knowledge, and skills in the arts disciplines, rather than to utilize artistic activities to fulfill non-artistic course objectives.

For Preparation Only

- Acceptable Introductory courses need NOT have any prerequisite courses.
- Co-Curricular Work outside of class must be required, for example, portfolio/performance preparation, reading, writing, research projects, and/or critical listening/viewing.
- Courses should provide students with an experience in the arts that implements the intent of the California State Board of Education approved Visual and Performing Arts (VPA) Content Standards. Curriculum must be designed to include the VPA Content Standards at, at least, the proficiency level in each of the five component strands. Each VPA course shall sufficiently address the state content standards under all five component strands, listed below.

  California State Board of Education approved Visual and Performing Arts (VPA) Content Standards.
  1. ***Artistic Perception***: Processing, analyzing, and responding to sensory information through the language and skills unique to a given art.
  2. ***Creative Expression***: Creating, performing, and participating in a given art.
  3. ***Historical and Cultural Context***: Understanding historical contributions and cultural dimensions of a given art.
  4. ***Aesthetic Valuing***: Responding to, analyzing, and making critical assessments about works of a given art form.
  5. ***Connections, Relationships, and Applications***: Connecting and applying what is learned in a given art form to learning in other art forms, subject areas, and careers.

  For a more detailed description of the VPA Standards, go to www.cde.ca.gov/shsd/arts/standards.htm .
- Courses which are primarily recreational, athletic or body conditioning, or for social entertainment, are NOT acceptable visual or performing arts courses. Commercial courses or courses specifically designed for training for a profession in these areas are not acceptable. See specific examples below.
- **Dance.** *Examples of acceptable courses include* ballet, modern dance, jazz, and ethnic dance, choreography and improvisation, dance history, dance production/performance. *Examples of unacceptable courses include* aerobics, drill team, cheerleading, recreational dance, and ballroom dance.
- **Drama / Theater.** *Examples of acceptable courses include* acting, directing, oral interpretation, dramatic production, dramaturgy/history/theory, and stage/lighting/costume design. *Examples of unacceptable courses include* speech, debate, or courses in other disciplines that require students to perform occasional skits.
- **Music.** *Examples of acceptable courses include* band (concert, symphonic, jazz), orchestra, choir (e.g., concert, jazz, soul, madrigal), music history/appreciation, and music theory/composition. *Examples of unacceptable courses include* a musical group, which performs primarily for sporting events, parades, competitive field events, and/or community/civic activities.
- **Visual Art.** *Examples of acceptable courses include* painting, drawing, sculpture, art photography, printmaking, video/film production as an art form, contemporary media, ceramics, and art history. *Examples of unacceptable courses include* craft courses, mechanical drafting, web page development, yearbook, and photography offered as photojournalism (i.e., as a component of yearbook or school newspaper publication).
- **Performance, Production, and Studio Courses.** Courses emphasizing performance and/or production (e.g., drama, dance, music, visual arts, and video production) must include appropriate critical/theoretical and historical/cultural content, as referenced in the state VPA Content Standards. Such courses should emphasize creative expression, not rote memorization and/or technical skills.
- **Appreciation, History, and Theory Courses.** Appreciation, history, and theory courses should focus on the ability to make aesthetic judgments about art works and performances and must include all component strands of the state VPA content standards, including creative expression.

For information only

- **Design Courses.** Visual and performing arts courses in design are expected to provide substantial time for students to understand, learn, and experience the elements of art and principles of design that underlie the medium/media addressed. Design courses must also include standards from all five component strands of the VPA content standards. (Refer to the Design Course Resources available on the a-g Guide web site.)
- **Technology Courses.** Visual and performing arts courses that utilize technology must focus primarily on arts content. If the technology (i.e., software, equipment) is used as a tool of artistic expression, as a paintbrush would be used in a painting course, and all other component strands are adequately met, then such courses are acceptable. If the technology/software is so complex that the primary concern becomes learning the technology, then the course will not be approved to meet the VPA requirement.

COURSE CONTENT

A. Course Purpose. What is the purpose of this course? Please provide a brief description of the goals and expected outcomes. Note: More specificity than a simple recitation of the State Standards is needed.

Digital Art encourages students to reevaluate traditional and consider alternative, innovative solutions to creating art. As digital formats and methods become more commonplace, and indeed in some cases, the norm or standard, students learn contemporary techniques and processes for accomplishing their artistic goals.
This course provides student exposure to various contemporary methods and media, all electronic, including but not limited to digital versions of illustration (drawing and painting), photography, two-dimensional & three-dimensional animation, three-dimensional modeling, storage, and presentation.

B. Course Outline. Detailed description of topics covered.

COURSE OUTLINE

Course Title
Digital Art 1A/B

Department
Visual and Performing Arts

Description of Target Group
This year long course is designed for 10th through 12th grade students who have shown an interest in the field of fine arts and the use of digital imaging technology.

Purpose
The purpose of this class is to provide students interested in two-dimensional fine art an opportunity to learn a variety of methods of expression by means of electronic (digital) equipment and media. The course will introduce students to, or allow for expansive experience in, fine arts.

Prerequisites
Students in 10th, 11th, or 12th grade qualify for this class, or may be admitted with pre-approval of instructor.

Standards of Expected Student Achievement

Upon successful completion of this course, students will be able to demonstrate the following knowledge/skills:

For preparation only

1. Demonstrate knowledge of the elements and principles of art.
2. Employ elements and principles of art in the creation of individual works.
3. Utilize a variety of digital equipment and media to create expressive, individual, original works of art.
4. Demonstrate appreciation for and ability to understand and critique current and historical artwork, as well as peer (student) work.
5. Demonstrate knowledge and application of appropriate art vocabulary.
6. Demonstrate appropriate use and care of equipment/resources and respect for the work environment.

Speaking Skills

--Give oral reports to the class in the form of explanatory dissertations of student's individual work as well as of peers' work (critique)
--Participate in class discussions, critiques, and interactive lectures

Listening Skills

--Listen to and follow oral directions
--Take notes from lectures and demonstrations
--Listen attentively to lectures and student presentations

Reading Skills

--Read printed instructions for lessons, techniques, and procedures
--Read related publications (i.e. magazines, periodicals, newspaper, etc), both in print and online
--Read critique summaries written by peers

Writing Skills

--Write at least one process paper per class specifying the details of student's individual work

Methods of Student Assessment

Teacher assessment through rubric
Participation in class critiques
Portfolio of work produced in class
School-wide writing rubric will be used to assess writing

Instructional Materials

Text: None

Supplementary Materials: art and design-specific software, example and instructional images and videos, digital hardware (computers, digital cameras, scanners, printers), LCD-projected material and lessons (PowerPoint, etc.), art & design publications (magazines/periodicals), internet sources, class discussion, guest speakers, oral and written instructions.

Activities

Brainstorming, developing, and execution of individual interpretations of assigned conceptual tasks.

The aforementioned goals to be accomplished by use of:

- Personal computers
- Digital cameras and related hardware and software
- Scanners and related hardware and software
- Specialized art and design software
- Book, magazine, and internet sources

Investigation of historical and current works as they relate to specific class assignments
Refinement of individual student's work

For preparation Only

Presentation of individual student's work to instructor and class
Critique (oral exercise investigating the validity of individual work and the work of peers)
Writing projects related to in-class work and current and historical work outside of class
Reading of related publications (magazines, periodicals, and news articles)
Vocabulary development activities related to the subject of fine art

C. Key Assignments: Detailed descriptions of the Key Assignments including tests, and quizzes, which should incorporate writing responses. How do assignments incorporate topics? Include all assignments that students will be required to complete.

Students will engage in sequential activities and assignments designed to develop students' abilities to successfully execute individual expressionistic work. Students will present individual work to class for peer critique, and will assemble collective work into an individual portfolio and present to class for further critique and for teacher assessment.

Vocabulary- Subject-specific vocabulary tests on weekly basis.

(see also F – J)

Digital Signature - Students create a logo-like digital signature mimicking pencil, pen or brush to be placed on all of student's subsequent class artwork *(basic drawing & painting software).* Students create the effect of traditional art materials using line, shape, & texture. Students exercise principles of proportion and emphasis to mimic hand lettering and compose individual signatures. Proportion & emphasis are examined. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Signatures of well-known artists and other famous persons are examined. Visual and emotional impact of handwriting is discussed. The finished signature serves as a consistent representation of the student. Students utilize creative process by developing from several designs through brainstorming and revision. Students select from a variety of options, eventually refining work into a final product. Digital signature appears on all subsequent artwork that is viewed, discussed, and critiqued by class. Signature serves as a unique artistic and graphic label representing student's self and identifying a creative object.

Brain Map - Students create an original composition as a representational image (map) of their brain *(basic drawing & painting software).* Students create a composition revealing individual thoughts, concerns, and interests. Composition relies on proportions revealing significance of issues by size, color, etc. Diagram of brain is designed using line, shape, color, texture, and attention to balance and emphasis. Freehand drawing with stylus and/or mouse. Students learn/improve digital drawing skills. Historical & contemporary cartooning styles are examined. Encouragement is given to emphasizing humor. Students' individual social and personal issues are expressed. Proportion, size, color, etc. express importance and create emphasis. Students prewrite personal issues, interests, preoccupations, and concerns to influence design of map.

Sequencing - Students create a visual interpretation of a written story *(photographs, slideshow software).* Students create a story within parameters of numbered events, first by writing, then by illustrating with photographic imagery. Slideshow method is used for visual expression. Students create, appropriate, edit, and apply imagery in slideshow program. Emphasis on composition within picture plane. Sufficient information must occur within each frame. Comparisons are made between written literature, illustration, comics, and video methods of storytelling. Students personally interpret from ambiguous prompts. Story develops through selection of particular elements. Photographic proximity & angles are considered. Students pre-write story with set (given) number of elements to be illustrated. Graphic novels, comic strips, & editorial cartoons are examined.

Vector Practice - Overlay tracing of appropriated photo *(vector drawing software).* Students

Information Only

draw over a photo with vector lines & shapes to isolate shape & color to improve or modify composition. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Historical illustrative styles are examined. Students completed works are compared to original underlay for effect. Post-work discussion of comparison between original image and vector style illustration. Illustration-related occupations are examined and discussed.

Vector Illustration - Original freehand using vector program *(vector drawing software).* Idiosyncrasies of vector illustration are discussed and observed. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Illustrative styles are examined. Students completed works are compared to original underlay for effect. Post-work discussion of comparison between original image and vector style illustration. How does symmetry and lack of such affect self-perception? Illustration-related occupations are examined and discussed.

Self Symmetry - A self portrait of left sides and right sides *(photography, photo editing software).* Using original photography, students create self-study in symmetry by assembling 2 left and 2 right side faces of themselves. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Contemporary software and tools allow for accurate investigation of symmetry. Students display and share their finished work with class for discussion and criticism. Students write post-work description of creation process.

Layer Illusion - Students place themselves in unusual places and/or in unusual scale *(photography, photo editing software).* Using original photography, students create illusions that subvert normal scale and placement of people and objects. Focus is given to compositional issues of dominance and subordination. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Contemporary software and tools allow for extreme range of possible illusions. Discussion of traditional methods of photo retouching. Surrealist painters are examined. Students express meaning through placement, scale gesture, & setting. Factors of lighting & angle are examined, as are techniques of layering & blending so as to affect successful illusion. Students pre-write 2 descriptions of their proposed illusions and write post-work description of creation process. Evolution of student's design is affected by imaginative use of available imagery.

Chimera - Students create an creature made from a combination of 3 different animals *(photography, photo editing software).* Students research images of mythical creatures (paintings, sculpture, pottery) and create individual creature from photography, using at least 4 separate images (3 animals and environment). Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Traditional creature myths are examined (i.e. chimera, griffin, minotaur) . Contemporary imagery is compared and contrasted with ancient. Discussion of the reason & purpose of mythical creatures in past and present culture. Emphasis on imaginative invention. Focus on texture, color, lighting, & form to create successful illusion (blending of animals). Students pre-write description of their creature and write post-work description of creation process.

Morph - illustrating relation of concepts through multiple images *(photography, morphing software).* Examples of traditionally illustrated works are examined. Students plan multiple images that morph through eight stages into each other. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Contemporary software is used to create student-controlled effect. Existing examples of morphing are examined. Morph examples may include real-to-fantasy, human-to-animal, young-to-old. Designs are developed from storyboard "sketches" to final imagery. Students pre-write description of their morph elements and write post-work description of creation process. Class discussion: contrasting changes incurred between images.

For Preview Only

The Ring - Students design jewelry (a ring) *(3-D modeling software).* Students research historical ring designs. Student designs use materials to express meaning/concepts through (virtual) 3-dimensional symbolism (sculpture). Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Contemporary software is used to create a "virtual" three-dimensional ring. Ring must express meaning through use of form (without text) as "finger sculpture". Issues of symbolism, fashion, and precious value are related to students' designs. Students pre-write description of their ring and its symbolic significance, and write post-work description of creation process. Connections are made to jewelry design as occupation.

Action Figures - (stop action animation) Toys move and interact as if alive *(photography, video software).* Students create a script and storyboard. Camera composition and shot technique examples are examined. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Traditional methods of animation are examined and contemporary methods are employed. Designs are developed from individual storyboard "sketches" to final imagery. Students pre-write script, create digital storyboard, and write post-work description of creation process. Professional examples of stop action animation are examined.

2-D Animation - A simple object (i.e. ball, stick) is animated in a scene to move and evoke emotion *(2-D animating software).* Students are given a script and use a simple object (ball, stick) to express particular emotional concepts using only visuals (no sound). Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Traditional methods of animation are examined and contemporary methods are employed. Students express imagination through given, abstract concepts (moods, etc.) by creating virtual physical movement of object. Attention is given to sequencing, POV, camera angles, and effective animation speed. Students pre-write script, create digital storyboard, and write post-work description of creation process. Professional examples of 2-D animation are examined.

3-D Animation - A scene is built where object and camera move throughout *(3-D animating software).* Students create a script and storyboard. Camera composition and shot technique examples are examined. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Traditional methods of animation are viewed and contemporary methods are employed to create an original video. Designs are developed from individual written description to final imagery. Students pre-write script, create digital storyboard, and write post-work description of creation process. Professional examples of stop action animation are examined.

Fictional Building - Create illusion of imaginary structure located within school site *(3-D modeling & photo editing software, photography).* Students write descriptions of proposed building prior to visual/physical work. Architectural styles and architects are studied and site-specific issues are addressed. Building site is given to students. Structure is conceptualized to suit particular purpose and location (what kind of building does this school need?). Students use original photography and software to digitally manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. The advantages of creating a "virtual building" are acknowledged. 3-D modeling is used to create a building "armature" to which photos are applied. Form follows function; emphasis is given to appropriate architecture for application. Students present their work by LCD projection for class critique. Class votes for one building that could become part of campus. Winner's imagery is distributed electronically campus-wide. Students pre-write description of their building and write post-work description of creation process. Architectural career options are examined & discussed.

Portfolio - Collection of all finished work from class is assembled and presented to class *(slideshow software).* Comparisons are made between traditional and electronic portfolios. What is an art portfolio? What does it tell us? Students create and present electronic portfolio of

For preparation only

classwork. Students use software to digitally manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Practical purposes and applications for portfolios are discussed. Issues of choosing appropriate selections for portfolios are discussed. Examples of portfolios are examined. Students present their work by LCD projection for class critique. Students complete peer-evaluations focusing on strengths & weaknesses of portfolios. The importance of portfolio's role in promotion and employment are discussed.

D. Instructional Methods and/or Strategies

Students will be challenged by assignments that demand individual, unique solutions to be accomplished by creative method. Students will learn by creating, critiquing, and refining beyond initial implementation to ensure thorough exercise and involvement.

- Direct instruction - Examples of student and professional artists, methods, processes, and demonstrations shown by instructor.
- Assignment outlines – Students are provided with written instructions containing adequate instructional information allowing for independent progress through assignments. Instructor “checks” are required to allow students’ progress through stages of each assignment.
- Guided practice – Students work with cameras and computer software with instructor’s guidance.
- Computer-Assisted – Specific tutorials for software use.
- Posted progress – Whiteboard notes and instruction, information on progress, and reminders regarding current assignments.
- Brainstorming – (sketching) Students work through several possible solutions to realize completed concept.
- Abstracting – students create artwork from original concepts and from teacher prompts.
- Effort is made for active learning assignments (culture-related, age-related or personally-related)
- Competition – Finished work is submitted for adjudicated response.
- Group critiques – Both verbal and written responses.
- Group discussions – Involving introductions to concepts, development stages, and evaluation of completed projects

E. Assessment Methods and/or Tools

- Grading by assignment-specific rubrics

- Students are required to create:
  - Pre-written concepts and desired outcomes
  - Written narratives (pre or post),
  - Post-completion summaries
  - Written critique responses
- Students are required to participate in:
  - Class discussions
  - Verbal critique responses

F. Artistic Perception. Courses must include processing, analyzing, and responding to sensory information through the language and skills unique to a given art. Describe in detail how the class satisfies the Artistic Perception requirement.

For preparation Only

CP VISUAL & PERFORMING ARTS COURSE DESCRIPTION TEMPLATE

Project Sequence:	***Visual Standard 1: Artistic Perception***
Digital Signature - Students create a logo-like digital signature mimicking pencil, pen or brush to be placed on all of student's subsequent class artwork. *(basic drawing & painting software)*	1.4, 1.6 - Students create the effect of traditional art materials using line, shape, & texture. Students exercise principles of proportion and emphasis to mimic hand lettering and compose individual signatures. Proportion & emphasis are examined.
Brain Map - Students create an original image as a representational image (map) of their brain. *(basic drawing & painting software)*	2.1 - Students create a composition revealing individual thoughts, concerns, and interests. Composition relies on proportions revealing significance of issues by size, color, etc.
Sequencing - Students create a visual interpretation of a written story. *(photographs, slideshow software)*	1.5 - Students create a story within parameters of numbered events, first by writing, then by illustrating with photographic imagery
Vector Practice - overlay tracing of appropriated photo. *(vector drawing software)*	1.1, 1.2, 1.4, 1.6 - Students draw over a photo with vector lines & shapes to isolate shape & color to improve or modify composition.
Vector Illustration - original freehand using vector program. *(vector drawing software)*	1.1, 1.2, 1.4, 1.6 - Idiosyncrasies of vector illustration are discussed and observed.
Self Symmetry - A self portrait of left sides and right sides. *(photography, photo editing software)*	1.4 - Using original photography, students create self study in symmetry by assembling 2 left and 2 right side faces of themselves.
Layer Illusion - Students place themselves in unusual places and/or in unusual scale. *(photography, photo editing software)*	1.1, 1.2, 1.4, 1.6 - Using original photography, students create illusions that subvert normal scale and placement of people and objects. Focus is given to compositional issues of dominance and subordination.
Chimera - Students create an creature made from a combination of 3 different animals. *(photography, photo editing software)*	1.6 - Students research images of mythical creatures (paintings, sculpture, pottery) and create individual creature from photography, using at least 4 separate images (3 animals and environment).
Morph - illustrating relation of concepts through multiple images. *(photography, morphing software)*	1.1, 1.2, 1.4, 1.6 - Examples of traditionally illustrated works are examined. Students plan multiple images that morph through eight stages into each other.

ation Only

Action Figures - (stop action animation) Toys move and interact as if alive. (photography, video software)	1.1, 1.2, 1.4 - Students create a script and storyboard. Camera composition and shot technique examples are examined.
2-D Animation - A simple object (i.e. ball, stick) is animated in a scene to move and evoke emotion . (2-D animating software)	1.1, 1.2, 1.4 - Students are given a script and use a simple object (ball, stick) to express particular emotional concepts using only visuals (no sound).
3-D Animation - A scene is built where object and camera move throughout. (3-D animating software)	1.1, 1.2, 1.4 - Students create a script and storyboard. Camera composition and shot technique examples are examined.
Fictional Building - Create illusion of imaginary structure located within school site. *(3-D modeling & photo editing software, photography)*	1.1, 1.3, 1.6 - Students write descriptions of proposed building prior to visual/physical work. Architectural styles and architects are studied and site-specific issues are addressed.
Portfolio - Collection of all finished work from class is assembled and presented to class. *(slideshow software)*	1.6 - Comparisons are made between traditional and electronic portfolios. What is an art portfolio? What does it tell us?

For preparation Only

G. Creative Expression. Courses must include creating, performing, and participating in a given art. Describe in detail how the class satisfies the Creative Expression requirement.

Project Sequence:	***Visual Standard 2: Creative Expression***
Digital Signature - Students create a logo-like digital signature mimicking pencil, pen or brush to be placed on all of student's subsequent class artwork. *(basic drawing & painting software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Brain Map - Students create an original image as a representational image (map) of their brain. *(basic drawing & painting software)*	2.1, 2.3, 2.4, 2.5, 2.6 - Diagram of brain is designed using line, shape, color, texture, and attention to balance and emphasis. Freehand drawing with stylus and/or mouse.
Sequencing - Students create a visual interpretation of a written story. *(photographs, slideshow software)*	2.1, 2.3 - Slideshow method is used for visual expression. Students create, appropriate, edit, and apply imagery in slideshow program. Emphasis on composition within picture plane. Sufficient information must occur within each frame.
Vector Practice - overlay tracing of appropriated photo. *(vector drawing software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Vector Illustration - original freehand using vector program. *(vector drawing software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Self Symmetry - A self portrait of left sides and right sides. *(photography, photo editing software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Layer Illusion - Students place themselves in unusual places and/or in unusual scale. *(photography, photo editing software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Chimera - Students create an creature made from a combination of 3 different animals. *(photography, photo editing software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Morph - illustrating relation of concepts through multiple images. *(photography, morphing software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
The Ring - Students design jewelry (a ring). *(3-D modeling software)*	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Action Figures - (stop action animation) Toys move and interact as if alive. (photography, video software)	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
2-D Animation - A simple object (i.e. ball, stick) is animated in a scene to move and evoke emotion . (2-D animating software)	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.

Sample Only

3-D Animation - A scene is built where object and camera move throughout. (3-D animating software)	2.3, 2.4 - Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Fictional Building - Create illusion of imaginary structure located within school site. *(3-D modeling & photo editing software, photography)*	2.1, 2.2, 2.3, 2.4, 2.6 - Building site is given to students. Structure is conceptualized to suit particular purpose and location (what kind of building does this school need?). Students use original photography and software to digitally manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.
Portfolio - Collection of all finished work from class is assembled and presented to class. *(slideshow software)*	2.2, 2.3, 2.4 - Students create and present electronic portfolio of classwork. Students use software to digitally manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools.

H. Historical and Cultural Context. Courses must include understanding historical contributions and cultural dimensions of a given art. Describe in detail how the class satisfies the Historical and Cultural Context requirement.

Project Sequence:	***Visual Standard 3: Historical & Cultural Context***
Digital Signature - Students create a logo-like digital signature mimicking pencil, pen or brush to be placed on all of student's subsequent class artwork. *(basic drawing & painting software)*	3.2 - Signatures of well-known artists and other famous persons are examined. Visual and emotional impact of handwriting is discussed. The finished signature serves as a consistent representation of the student.
Brain Map - Students create an original image as a representational image (map) of their brain. *(basic drawing & painting software)*	3.2 - Students learn/improve digital drawing skills. Historical & contemporary cartooning styles are examined. Encouragement is given to emphasizing humor.
Sequencing - Students create a visual interpretation of a written story. *(photographs, slideshow software)*	3.2 - Comparisons are made between written literature, illustration, comics, and video methods of storytelling.
Vector Practice - overlay tracing of appropriated photo. *(vector drawing software)*	3.2, 3.3, 3.4 - Historical illustrative styles are examined. Students completed works are compared to original underlay for effect.
Vector Illustration - original freehand using vector program. *(vector drawing software)*	3.2, 3.3, 3.4 - Illustrative styles are examined. Students completed works are compared to original underlay for effect.
Self Symmetry - A self portrait of left sides and right sides. *(photography, photo editing software)*	3.2 - Contemporary software and tools allow for accurate investigation of symmetry.
Layer Illusion - Students place themselves in unusual places and/or in unusual scale. *(photography, photo editing software)*	3.2 - Contemporary software and tools allow for extreme range of possible illusions. Discussion of traditional methods of photo retouching. Surrealist painters are examined.
Chimera - Students create an creature made from a combination of 3 different animals. *(photography, photo editing software)*	3.2, 3.4 - Traditional creature myths are examined (chimera, griffin, minotaur) . Contemporary imagery is compared and contrasted with ancient.

Sample Version Only

Morph - illustrating relation of concepts through multiple images. *(photography, morphing software)*	3.2, 3.3 - Contemporary software is used to create student-controlled effect. Existing examples of morphing are examined. Morph examples may include real-to-fantasy, human-to-animal, young-to-old.
The Ring - Students design jewelry (a ring). *(3-D modeling software)*	3.2 - Contemporary software is used to create a "virtual" three-dimensional ring. Ring must express meaning through use of form (without text) as "finger sculpture".
Action Figures - (stop action animation) Toys move and interact as if alive. (photography, video software)	3.2 - Traditional methods of animation are examined and contemporary methods are employed.
2-D Animation - A simple object (i.e. ball, stick) is animated in a scene to move and evoke emotion . (2-D animating software)	3.2 - Traditional methods of animation are examined and contemporary methods are employed.
3-D Animation - A scene is built where object and camera move throughout. (3-D animating software)	3.2 - Traditional methods of animation are viewed and contemporary methods are employed to create an original video.
Fictional Building - Create illusion of imaginary structure located within school site. *(3-D modeling & photo editing software, photography)*	3.2 - The advantages of creating a "virtual building" are acknowledged. 3-D modeling is used to create a building "armature" to which photos are applied. Form follows function; emphasis is given to appropriate architecture for application.
Portfolio - Collection of all finished work from class is assembled and presented to class. *(slideshow software)*	3.4 - Practical purposes and applications for portfolios are discussed. Issues of choosing appropriate selections for portfolios are discussed. Examples of portfolios are examined.

I. Aesthetic Valuing. Courses must include responding to, analyzing, and making critical assessments about works of a given art form. Describe in detail how the class satisfies the Aesthetic Valuing requirement.

Project Sequence:	***Visual Standard 4: Aesthetic Valuing***
Digital Signature - Students create a logo-like digital signature mimicking pencil, pen or brush to be placed on all of student's subsequent class artwork. *(basic drawing & painting software)*	4.4 - Students utilize creative process by developing from several designs through brainstorming and revision. Students select from a variety of options, eventually refining work into a final product.
Brain Map - Students create an original image as a representational image (map) of their brain. *(basic drawing & painting software)*	4.1 - Students' individual social and personal issues are expressed. Proportion, size, color, etc. express importance and create emphasis.
Sequencing - Students create a visual interpretation of a written story. *(photographs, slideshow software)*	4.1 - Students personally interpret from ambiguous prompts. Story develops through selection of particular elements. Photographic proximity & angles are considered.
Vector Practice - overlay tracing of appropriated photo. *(vector drawing software)*	4.3, 4.5 - Post-work discussion of comparison between original image and vector style illustration.

Preparation Only

Vector Illustration - original freehand using vector program. *(vector drawing software)*	4.3, 4.5 - Post-work discussion of comparison between original image and vector style illustration. How does symmetry and lack of such affect self-perception?
Self Symmetry - A self portrait of left sides and right sides. *(photography, photo editing software)*	4.3, 4.5 - Students display and share their finished work with class for discussion and criticism.
Layer Illusion - Students place themselves in unusual places and/or in unusual scale. *(photography, photo editing software)*	4.1 - Students express meaning through placement, scale gesture, & setting. Factors of lighting & angle are examined as are techniques of layering & blending so as to affect successful illusion.
Chimera - Students create an creature made from a combination of 3 different animals. *(photography, photo editing software)*	4.1, 4.2 - Discussion of the reason & purpose of mythical creatures in past and present culture. Emphasis on imaginative invention. Focus on texture, color, lighting, & form to create successful illusion (blending of animals).
Morph - illustrating relation of concepts through multiple images. *(photography, morphing software)*	4.4 - designs are developed from storyboard "sketches" to final imagery.
The Ring - Students design jewelry (a ring). *(3-D modeling software)*	4.1, 4.2 - Issues of symbolism, fashion, and precious value are related to students' designs.
Action Figures - (stop action animation) Toys move and interact as if alive. (photography, video software)	4.4 - designs are developed from individual storyboard "sketches" to final imagery.
2-D Animation - A simple object (i.e. ball, stick) is animated in a scene to move and evoke emotion . (2-D animating software)	4.1 - Students express imagination through given, abstract concepts (moods, etc.) by creating virtual physical movement of object. Attention is given to sequencing, POV, camera angles, and effective animation speed.
3-D Animation - A scene is built where object and camera move throughout. (3-D animating software)	4.4 - designs are developed from individual written description to final imagery.
Fictional Building - Create illusion of imaginary structure located within school site. *(3-D modeling & photo editing software, photography)*	4.3, 4.5 - Students present their work by LCD projection for class critique. Class votes for one building that could become part of campus. Winner's imagery is distributed electronically campus-wide.
Portfolio - Collection of all finished work from class is assembled and presented to class. *(slideshow software)*	4.3, 4.5 - Students present their work by LCD projection for class critique. Students complete peer-evaluations focusing on strengths & weaknesses of portfolio.

tion only

J. Connections, Relationships, and Applications. Courses must include connecting and applying what is learned in a given art form to learning in other art forms, subject areas, and careers. Describe in detail how the class satisfies the Connections, Relationships, and Applications requirement.

Project Sequence:	***Visual Standard 5: Connections, Relations, Applications***
Digital Signature - Students create a logo-like digital signature mimicking pencil, pen or brush to be placed on all of student's subsequent class artwork. *(basic drawing & painting software)*	Digital signature appears on all subsequent artwork which is viewed, discussed, and critiqued by class. Signature serves as a unique artistic and graphic label representing student's self and identifying a creative object.
Brain Map - Students create an original image as a representational image (map) of their brain. *(basic drawing & painting software)*	Students prewrite personal issues, interests, preoccupations, and concerns to influence design of map.
Sequencing - Students create a visual interpretation of a written story. *(photographs, slideshow software)*	Students pre-write story with set (given) number of elements to be illustrated. Graphic novels, comic strips, & editorial cartoons are examined.
Vector Practice - overlay tracing of appropriated photo. *(vector drawing software)*	Illustration-related occupations are examined and discussed.
Vector Illustration - original freehand using vector program. *(vector drawing software)*	Illustration-related occupations are examined and discussed.
Self Symmetry - A self portrait of left sides and right sides. *(photography, photo editing software)*	Students write post-work description of creation process.
Layer Illusion - Students place themselves in unusual places and/or in unusual scale. *(photography, photo editing software)*	Students pre-write 2 descriptions of their proposed illusions and write post-work description of creation process. Evolution of student's design is affected by imaginative use of available imagery.
Chimera - Students create an creature made from a combination of 3 different animals. *(photography, photo editing software)*	Students pre-write description of their creature and write post-work description of creation process.
Morph - illustrating relation of concepts through multiple images. *(photography, morphing software)*	Students pre-write description of their morph elements and write post-work description of creation process. Class discussion: contrasting changes incurred between images.
The Ring - Students design jewelry (a ring). *(3-D modeling software)*	Students pre-write description of their ring and it's symbolic significance, and write post-work description of creation process. Connections are made to jewelry design as occupation.
Action Figures - (stop action animation) Toys move and interact as if alive. (photography, video software)	Students pre-write script, create digital storyboard, and write post-work description of creation process. Professional examples of stop action animation are examined.

Sample Only

2-D Animation - A simple object (i.e. ball, stick) is animated in a scene to move and evoke emotion . (2-D animating software)	Students pre-write script, create digital storyboard, and write post-work description of creation process. Professional examples of 2-D animation are examined.
3-D Animation - A scene is built where object and camera move throughout. (3-D animating software)	Students pre-write script, create digital storyboard, and write post-work description of creation process. Professional examples of stop action animation are examined.
Fictional Building - Create illusion of imaginary structure located within school site. *(3-D modeling & photo editing software, photography)*	Students pre-write description of their building and write post-work description of creation process. Architectural career options are examined & discussed.
Portfolio - Collection of all finished work from class is assembled and presented to class. *(slideshow software)*	Importance of portfolio's role in promotion and employment are discussed.

K. Corresponding Non-Honors Course. Indicate the name of the regular non-honors course corresponding to this proposed honors course.

L. Differences in Honors/Non-Honors Courses. Describe in detail how this honors course differs from the regular course offered in the same subject area. Be specific.

For preparation Only

1. SCHOOL INFORMATION

School Information
School: Santa Maria High School
District: Santa Maria Joint Union High School District
City: Santa Maria, CA 93455

School / District Web Site: http://www.smjuhsd.k12.ca.us

School Course List Contact
Name: John Davis
Title/Position: Assistant Superintendent, Curriculum & Instruction
Phone: 805-922-4573 Ext.: 4211
E-mail: jdavis@smjuhsd.org

Teacher Contact:
Name: Eric G. Farnsworth
Title/Position: Visual & Performing Arts Instructor
Phone: 805-922-2567 Ext.: 3231
E-mail: efarnsworth@smjuhsd.org

2. PREVIOUSLY APPROVED COURSES

Complete outlines are not needed for courses that were previously approved by UC. Was this course previously approved? ___Yes X No

If yes, indicate category which applies.

A course reinstated after removal within 3 years.
Year removed from list? _____
Same course title? ___Yes ___No
If no, previous course title? _____

___An identical course approved at another school in same district.
Which school? _____
Same course title? ___Yes ___No
If no, course title at other school? _____

___Approved International Baccalaureate (IB) course

___Approved CDE Agricultural Education course

___Approved P.A.S.S./Cyber High course

___Approved ROP/C course. Name of ROP/C? _____

___Approved A.V.I.D. course

___Approved C.A.R.T. course

___Approved Project Lead the Way course

___CSU Expository Reading and Writing course

___Other. Explain: _____

___Advanced Placement Course
If Advanced Placement, has it been authorized by the College Board through the AP Audit process?
___Yes ___No If not, please explain why._____

Is this course a resubmission?
___Yes X No
If yes, date(s) of previous submission? _____
Title of previous submission? _____

Is this an Internet-based course?
___Yes X No
If "Yes", who is the provider?
___PASS/Cyber High ___Other_____

Is this course modeled after an UC-approved course from another school outside your district?
___Yes X No
If yes, which school(s)? _____

Course title at other school _____

Is this course classified as a Career Technical Education? Yes ____ No X
If Yes:
Name of Industry Sector _____
Name of Career Pathway_____

3. COURSE DESCRIPTION

Course Title: Digital Arts 2AB

Transcript Title(s) / Abbreviation(s): **Digital Arts 2A** & **Digital Arts 2B**

4. CATALOG DESCRIPTION

Brief Course Description (If school has a catalog, the description that is in the catalog. If not, a brief description of the course) (NOTE: DO NOT INCLUDE INFORMATION THAT COULD IDENTIFY YOUR SCHOOL OR DISTRICT.)

Digital Art 2AB (10-12) For students who have shown continued interest in the field of fine arts and the use of digital imaging technology, learn a variety of methods of expression by means of electronic (digital) equipment, and especially for students who desire to pursue art or art-related careers.

This course is designed for all students interested in fine arts and in exploring, developing, and furthering their experience, knowledge, and skills beyond the introductory course of Digital Arts 1AB. Students will enhance their abilities and awareness in this area by means of digital equipment and media. It is especially suited for students with an interest in pursuing a college major or career in the arts, and especially digital arts. Students will use a variety of current digital technology to create individual expressive artwork. Students will employ universal elements and principals of art in their creation of original work utilizing a wide variety of digital hardware and software. Students will create portfolios of their individual, original artwork and prepare them for submission to post-secondary learning institutions.

Pre-Requisites

Digital Art 1AB	X_ Required ___Recommended
Basic computer and keyboard usage	___ Required X Recommended

Co-Requisites

Reading/research	X Required ___ Recommended
Writing assignments	X Required ___ Recommended

5. OPTIONAL BACKGROUND INFORMATION

Context for Course (optional). (NOTE: DO NOT INCLUDE INFORMATION THAT COULD IDENTIFY YOUR SCHOOL OR DISTRICT.)

History of Course Development (optional) (NOTE: DO NOT INCLUDE INFORMATION THAT COULD IDENTIFY YOUR SCHOOL OR DISTRICT.)

Digital Arts 2AB was developed over a 2-year period to address a continuation of the curriculum initiated with *Digital Arts 1AB*. *Digital Arts 1AB* was developed by three active teachers in Fine Arts (drawing and painting), Photography, and Technology. It served to succeed a long-standing, traditional (film developing and printing) photography class, which fulfilled the Fine Arts requirement for high school graduation and A-G. The previous photography class, though relevant and extremely popular, became difficult to facilitate and required inordinate effort of continued purchasing and maintaining of film-based lab and equipment. The decision was made to transform the facility and curriculum to a wider spectrum, expanding from exclusively photography, and in a digital format. A grant was procured and with it a digital lab was established to enable the change, and during this process a curriculum was designed. *Digital Arts 2AB* intends to fulfill the need for students interested in furthering their interest, knowledge, and skills in art, especially through electronic media, and to facilitate student interest in post-

secondary education and careers in art and art-relate fields.

6. **Texts and Supplemental Instructional Materials**: Include list of Primary and Secondary Texts. Make sure to note the books that will be read entirely and those that will be as excerpts. For the Visual and Performing Arts subject area (f), textbooks are not required, but if textbooks are used, please complete the information below.

Textbook(s)

TEXTBOOK 1.
Title_____
Edition_____
Publication Date_____
Publisher_____
Author(s)_____

Usage:
__Primary Text __Supplementary or Secondary Text

__Read in entirety or near entirety __Excerpts (approximate number of pages_____)

TEXTBOOK 2 (etc)

Supplemental Instructional Materials (please describe)

Supplementary Materials: *Supplementary Materials: art and design-specific software, example and instructional images and videos (tutorials), digital hardware (computers, digital cameras, scanners, printers), LCD-projected material and lessons (PowerPoint, video, etc.), art & design publications (magazines/periodicals), internet sources, class discussion, student presentations, field trips, guest speakers, and oral and written instructions.*

7. Please indicate the subject and discipline proposed for this course.

Seeking "Honors" Distinction?
___Yes X No

8. If Not Seeking Honors Distinction:

__ a-History/Social Science
__ b-English
__ c-Mathematics
__ d-Laboratory Science
__ e-Language Other Than English
X f-Visual and Performing Arts

__ g-College Prep Elective – History/Social Science
__ g-College Prep Elective – English
__ g-College Prep Elective – Mathematics
__ g-College Prep Elective – Science
X g-College Prep Elective – Visual and Performing Arts
__ g-College Prep Elective – Interdisciplinary
__ g-College Prep Elective – Other

9. If Seeking Honors Distinction:
__ a-History/Social Science Honors
__ b-English Honors
__ c-Mathematics Honors
__ d-Laboratory Science Honors
__ e-Language Other Than English Honors
__ f-Visual and Performing Arts Honors

==========

8. COURSE CONTENT – COLLEGE PREP ELECTIVE: VISUAL AND PERFORMING ARTS

[If g-College Prep Elective: Visual and Performing Arts" is selected]

See "A-G Digital Arts 2AB" attached excel worksheet file

GENERAL COLLEGE PREP ELECTIVE GUIDANCE
The intent of the college preparatory elective requirement is to encourage prospective UC students to fill out their high school programs with courses that will meet one or more of a number of objectives:

- To strengthen general study skills, particularly analytical reading, expository writing, and oral communications
- To provide an opportunity to begin work that could lead directly into a major program of study at the University, and
- To experience, in some depth, new areas of academic disciplines that might form the basis for future major or minor studies at the University

Quality. All courses selected to meet the "g" elective requirement are expected to meet standards of quality similar to those required for the "a-f" requirements. Courses acceptable for the "g" elective area should be advanced courses designed for the 11th and 12th grade level and/or have appropriate prerequisites. Elective courses should present material at a sufficient depth to allow students to achieve mastery of fundamental knowledge that prepares them for University work or a future career path.

COLLEGE PREP ELECTIVE: VISUAL AND PERFORMING ARTS GUIDANCE
- Advanced courses in the Visual & Performing Arts can be considered to meet the "g" elective requirement but must still address the five component strands of the state VPA standards.
- Advanced courses should enable students to understand and appreciate artistic expression and, where appropriate, to talk and write with discrimination about the artistic material studied.
- Courses devoted to artistic performance and developing creative artistic ability should have prerequisites (either one year of introductory coursework or experience approved by the instructor) and should assume proficiency beyond the introductory level.

- Courses must require on the average the equivalent of a five-period class per week.
- Work outside of the class must be required (e.g., portfolio/performance preparation, reading, writing, research projects, and critical listening/viewing).
- Advanced VPA courses that are a semester in length, will only be considered for the "g" elective area, not the "f" VPA area, which must be satisfied by completing an appropriate, sequential, year-long course.

GENERAL VISUAL AND PERFORMING ARTS GUIDANCE

Courses in the following categories are acceptable: dance, drama/theater, music, or visual art.

- The intention is to provide a meaningful experience and breadth of knowledge of the arts so that students may apply their knowledge and experience to the creation of art and are better able to understand and appreciate artistic expression on the basis of that experience and knowledge.
- The intent of approved VPA courses must be directed at acquiring concepts, knowledge, and skills in the arts disciplines, rather than to utilize artistic activities to fulfill non-artistic course objectives.
- Acceptable Introductory courses need NOT have any prerequisite courses.
- Co-Curricular Work outside of class must be required, for example, portfolio/performance preparation, reading, writing, research projects, and/or critical listening/viewing.
- Courses should provide students with an experience in the arts that implements the intent of the California State Board of Education approved Visual and Performing Arts (VPA) Content Standards. Curriculum must be designed to include the VPA Content Standards at, at least, the proficiency level in each of the five component strands. Each VPA course shall sufficiently address the state content standards under all five component strands, listed below.

  California State Board of Education approved Visual and Performing Arts (VPA) Content Standards.

  1. ***Artistic Perception***: Processing, analyzing, and responding to sensory information through the language and skills unique to a given art.
  2. ***Creative Expression***: Creating, performing, and participating in a given art.
  3. ***Historical and Cultural Context***: Understanding historical contributions and cultural dimensions of a given art.
  4. ***Aesthetic Valuing***: Responding to, analyzing, and making critical assessments about works of a given art form.
  5. ***Connections, Relationships, and Applications***: Connecting and applying what is learned in a given art form to learning in other art forms, subject areas, and careers.

  For a more detailed description of the VPA Standards, go to www.cde.ca.gov/shsd/arts/standards.htm .
- Courses which are primarily recreational, athletic or body conditioning, or for social entertainment, are NOT acceptable visual or performing arts courses. Commercial courses or courses specifically designed for training for a profession in these areas are not acceptable. See specific examples below.
- **Dance.** *Examples of acceptable courses include* ballet, modern dance, jazz, and ethnic dance, choreography and improvisation, dance history, dance production/performance. *Examples of unacceptable courses include* aerobics, drill team, cheerleading, recreational dance, and ballroom dance.
- **Drama / Theater.** *Examples of acceptable courses include* acting, directing, oral interpretation, dramatic production, dramaturgy/history/theory, and stage/lighting/costume design. *Examples of unacceptable courses include* speech, debate, or courses in other disciplines that require students to perform occasional skits.
- **Music.** *Examples of acceptable courses include* band (concert, symphonic, jazz), orchestra, choir (e.g., concert, jazz, soul, madrigal), music history/appreciation, and music theory/composition. *Examples of unacceptable courses include* a musical group, which

performs primarily for sporting events, parades, competitive field events, and/or community/civic activities.

- **Visual Art.** *Examples of acceptable courses include* painting, drawing, sculpture, art photography, printmaking, video/film production as an art form, contemporary media, ceramics, and art history. *Examples of unacceptable courses include* craft courses, mechanical drafting, web page development, yearbook, and photography offered as photojournalism (i.e., as a component of yearbook or school newspaper publication).
- **Performance, Production, and Studio Courses.** Courses emphasizing performance and/or production (e.g., drama, dance, music, visual arts, and video production) must include appropriate critical/theoretical and historical/cultural content, as referenced in the state VPA Content Standards. Such courses should emphasize creative expression, not rote memorization and/or technical skills.
- **Appreciation, History, and Theory Courses.** Appreciation, history, and theory courses should focus on the ability to make aesthetic judgments about art works and performances and must include all component strands of the state VPA content standards, including creative expression.
- **Design Courses.** Visual and performing arts courses in design are expected to provide substantial time for students to understand, learn, and experience the elements of art and principles of design that underlie the medium/media addressed. Design courses must also include standards from all five component strands of the VPA content standards. (Refer to the Design Course Resources available on the a-g Guide web site.)
- **Technology Courses.** Visual and performing arts courses that utilize technology must focus primarily on arts content. If the technology (i.e., software, equipment) is used as a tool of artistic expression, as a paintbrush would be used in a painting course, and all other component strands are adequately met, then such courses are acceptable. If the technology/software is so complex that the primary concern becomes learning the technology, then the course will not be approved to meet the VPA requirement.

COURSE CONTENT

A. Course Purpose. What is the purpose of this course? Please provide a brief description of the goals and expected outcomes. Note: More specificity than a simple recitation of the State Standards is needed.

Purpose

The purpose of *Digital Arts 2AB*, a one-year (two-semester,10 unit) course, is to allow students to further their knowledge and skills from a more expansive experience in fine arts and through the continued utilization of digital equipment and media. *Digital Arts 2AB* continues from *Digital Arts 1AB* curriculum to provide further exposure to the world of art, practice and experience creating art, and to allow enhanced preparation for careers in art, including readiness for pursuing post-secondary education through creation and assembly of a personal portfolio.

This class provides for students interested in two-dimensional fine art and offers opportunity to learn a variety of methods of creation, awareness, and expression by means of electronic (digital) equipment and media.

Digital Art 2AB encourages students to reevaluate traditional methods and consider alternative, innovative solutions to creating art. As digital formats and methods become more commonplace, and indeed in some cases, the norm or standard, students learn new and contemporary techniques and processes for accomplishing their artistic goals.

This course provides student exposure to various contemporary methods and media, all electronic, including, but not limited to, digital versions of illustration (drawing and painting), photography, two-dimensional & three-dimensional animation, three-dimensional modeling, storage, and online presentation and publishing. The curriculum also provides experience in the

exhibiting of artwork, curating of exhibits, and viewing of exhibits both in and outside of the school setting.

Goals and Expected Outcomes

Upon successful completion of this course, students will be able to demonstrate the following knowledge/skills:

1. Demonstrate knowledge and understanding and properly apply the elements and principles of art.
2. Employ elements and principles of art in the creation of individual works.
3. Utilize a variety of digital equipment and media to create expressive, individual, original works of art.
4. Demonstrate appropriate use and care of equipment/resources and respect for the work environment.
5. Demonstrate appreciation for and ability to understand and critique current and historical artwork, as well as peer (student) work.
6. Demonstrate proficiency in formal and conceptual understanding and demonstrate knowledge and application of appropriate art vocabulary in writing and by presenting individual works.
7. Create a portfolio appropriate for career or college application.

Speaking Skills

--Give oral reports to the class in the form of explanatory dissertations of student's individual work as well as of peers' work (critique)
--Participate in class discussions, critiques, and interactive lectures
--Address inquiries made to displayed artwork as facilitating art exhibits

Listening Skills

--Listen to and follow oral directions
--Take notes from lectures and demonstrations
--Listen attentively to lectures and student presentations

Reading Skills

--Read printed instructions for lessons, techniques, and procedures
--Read related publications (i.e. magazines, periodicals, newspaper, etc), both in print and online
--Read critique summaries written by peers

Writing Skills

--Write at least one process paper per class specifying the details of student's individual work

B. Course Outline. Detailed description of topics covered.

Introduction

Classroom Guidelines and Procedures

- Seating
- Class Rules
- Behavior
- Attendance
- Grading

Lecture – *Art History*; Comparative overview of artistic media from ancient to contemporary. Tribal & hula dance to modern interpretive, ancient mudras to sign language, petroglyphs & cave paintings to murals, ancient rock carving to contemporary monuments, native American sand painting to contemporary sand works, ancient tombstone carving to contemporary styles, pottery, monumental carving, etc. Review history of computers as they have evolved to contemporary "personal" tools that can now create art. Electronically-created art, including drawing, painting, photography, animation, video, and music which are affected by the differences inherent within such media.

Vocabulary – Weekly tests; one word per day, five words per test. Students must record words and definitions during lecture, then later recall and write words from instructor's oral prompt, then match scrambled definition.

- Examples include, but not limited to:

Art, Digital, Picture Plane, Composition, Relief, Intaglio, Value, Facture, Texture, Bas Relief, Depth, Atmospheric, Transparent, Balance, Opaque, Concept, Pixel, Fill, Weight, Resolution, Clipboard, Unity, Proximity, Impressionism, Expressionism, Aesthetic, Conceptual, NURBS, Virtual, Keystroke, Path, Retrieve, Critique, Crop, Contrast, P.O.V., Rhythm, Duplicate, Layer, Diminuation, Color, Constrain, Background, Symbolism, Layer, Content, Context, Milieu, Merge, Static, Candid, Composite, Manipulate, Gesture, Proportion, Dynamic, Pan, Lead Room, Mask, Invert, Stamp, Texture, Emphasis, Default, Saturation, Narrative, Recede, Advance, Symmetry, Asymmetry, Form, Format, Integrate, Animate, Tolerance, Select, ppi, BMP, JPEG, GIF, PDF, Convert, Compatible, CMYK, RGB, TIFF, Precision, Mise en scene, Establish, Pan, Zoom, Wide angle, Telephoto, Close-up, Oblique, Appropriate, Assemble, Raster, Scan

Unit 1. Digital Seal

Lecture/Discussion – *Artist identity*; signing your work; personal identity; the use of personal identity; expressive lettering/signatures and marks (of illiteracy); potters' marks, stamps and seals as a tradition; historical use; compare and contrast traditional and digital media; observe examples of traditionally used seals (e.g., China, Japan). *Elements: line, shape, texture. Principles: contrast, movement, rhythm, unity.*

Demonstration – projected example of process shown below using specific software. Example of creative process (concept, brainstorm, refine, commit); Introduce rubric.

Assignment - Students create a logo-like digital "stamp"; a "potter's mark" or Asian-style "seal", only using western text & stylized imagery mimicking carving. The finished seal serves as a consistent representation of the student's identity, and is to be placed on all of student's subsequent class artwork. *(basic drawing & painting software)*

- Brainstorm; use mouse and electronic stylus; create multiple possible designs, exploring varieties of styles; use initials and symbolic image; modify and enhance line quality to create effect of tool movement, surface quality, gouges, nicks, etc.
- Choose favorite seal design from multiple possibilities
- Edit for effect; attempt to achieve appearance of tooling and facture.
- Proper archiving for later application
- Submit for assessment

Unit 2. Hemispheres

Lecture/Discussion – *Brain function;* how does your brain function? What specific functions do parts of the brain serve? How do we know? Scientific brain research and brain scan images, including serious, pseudo, and humorous, of brain activity. Right brain vs. Left brain tendencies. Visualizing a brain as tendencies manifest in abstract or non-representational imagery. *Elements: line, shape, color, value, texture. Principles: balance, rhythm, contrast, unity, harmony.*

Demonstration – projected example of process shown below using specific software. Introduce rubric.

Assignment - Students create an original image as a representational image (map) of their brain. *(word processing & basic drawing & painting software).*

- Take online analytical self-test to determine individual right brain/left brain tendencies. Submit writing for assessment before next step

- Students identify any results from test that seem accurate.
- Create list of possible symbolic imagery to represent tendencies.
- Students create multiple electronic "sketches" with stylus of possible compositions
- Create final image; use line, color, shape, texture to attempt unique, creative solution
- Place *Digital Seal* onto finished piece
- Exercise proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 3. Right Brain Re-res
Lecture/Discussion – *Shape, proportion, and value identification;* "seeing shape and value in two-dimensional space, and assigning proportion accurately to create realistic illusion. Students attempt to duplicate their perceptions as they observe a projected, but out-of-focus, upside-down image which becomes increasingly, but incrementally sharper until recognizable and completely resolved. Students duplicate blurry areas and shapes as seen on projection, incrementally resolving as image becomes more in focus. Students are unaware of eventually identifiable image until late in the process, so rational brain function does not allow for "presumptive" drawing (students see only shape, contrast, and value). Image is black and white photograph, from socially-conscious photographer *(Lewis Hine, Dorothea Lang, Gordon Parks)*; careers involving photo repair and restoration. *Principles: contrast, emphasis, proportion. Elements: shape, value, form*
Demonstration – projected blurry image. Set up grid. Duplicate blurry grey areas as seen. As image sharpens, reevaluate and react to changes in areas and shapes. Introduce rubric.
Assignment – Students duplicate image shown with projection, attempting to accurately recreate shape, value, and proportion as seen on projection screen. *(digital stylus and painting software).*

- Students set-up appropriate picture plane (size, proportion, and resolution)
- Use grid method for accurate two-dimensional proportioning
- "Paint" shapes and areas to duplicate projected image
- Adjust painting tools as necessary to create appropriate effect
- Adjust painted area as it incrementally resolves
- When completed rotate image 180 to correct orientation
- Place *Digital Seal*
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 4. Tablet Life
Lecture/Discussion – *Representation of landscape;* evolution of landscape painting; sentimental and romanticist bucolic painters *(JMW Turner, John Constable)*, Impressionism *(Monet, Pissarro),* Fauvism *(Matisse, Derain),* and more recent/contemporary landscapes and cityscapes *(Robert Beck, Richard Diebenkorn, Wayne Theibaud)*; realistic color vs. impressionistic vs. expressive; composition; chosen subject views (rural to urban - changing norm). Introduce use of viewfinder/grid method. *Elements: line, shape, color, value, form, texture. Principles: balance, contrast, unity, harmony, proportion.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students create landscape painting using tablet and stylus and/or fingers. Paintings are done plein air, Students choose view from available on campus (their known environment). *(tablet, stylus, painting software).*

- Students determine view for their composition on campus (their known

environment)
- Use viewfinder/grid for accuracy
- Use tablet, stylus and/or fingers to create composition with painting software
- Re-work if necessary
- Multiple versions if necessary
- Place *Digital Seal*
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 5. Personality Composite
Lecture/Discussion – *Multiple photographic images composited for single effect;* personality traits and tendencies; causes – inherited vs. influenced vs. contrived; how much can be revealed in a photograph? Examples of psychologically revealing photographs are shown and discussed *(Diane Arbus, Irving Penn)*; careers involving photo repair, restoration, and compositing. *Elements: color, value. Principles: balance, contrast, unity, harmony, proportion.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students create a composite image assembled from parts of multiple photographs taken of classmates. *(word processing, digital camera, & photo editing software).*
- Interview classmates regarding psychological tendencies
- Pre-write personality statements which inspire imagery
- Photograph (facial close-ups) of subject classmates
- Transfer photo files to computer
- Create composite image by separating, layering, and assembling chosen facial features to represent "composite person"
- Place *Digital Seal*
- Students present "composite person" by projecting image to class while reading personality statement (description of "composite person")
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 6. Dreamtime
Lecture/Discussion – *Surrealism and Photomontage; representation and interpretation of dreams;* dreams vs. reality; psychology of dreams; representation of dreams in drawing, painting, film and TV; surrealistic photography work is examined and discussed *(Man Ray, Maurice Tabard, Erik Johansson)*; journaling practices are discussed; *Elements: shape, color, value, form. Principles: balance, contrast, unity, proportion.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students maintain dream journal for extended period of time, then create surrealistic image reflecting dream content. *(photography, photo editing software).*
- Students initiate dream journal (kept for extended time)
- Write narrative of significant dream or series of dreams
- Pre-write description of surrealistic dream image to be created
- Use digital cameras to capture images for use in composite image
- Transfer photo files to computer
- Use photo editing software to create composite image as described by separating, layering, and assembling
- Place *Digital Seal*
- Students present dream image by projecting image to class while reading

narrative description statement
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 7. Vector 1-Point
Lecture/Discussion – *Depth and environment;* history and evolution of perspective - linear and preceding; medieval through renaissance techniques; one-point perspective technique; atmospheric effects; fantasy environments; movie *(Avatar)*, cartoon, and video game environmental design; specific video game designers are examined and discussed *(Blizzard Entertainment , Mojang)*; occupations related to game design. *Elements: line, shape, form, color, value, texture. Principles: balance, contrast, unity, harmony, proportion, emphasis.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students use vector drawing program to create an original fantasy view image with effective depth using one-point perspective technique. *(word processing software, vector drawing software).*
- Students pre-write a narrative description of fantasy environment, including topography, weather, and structures
- Vector drawing software is used to create a view of their fantasy environment
- Software tools are used to create accurate shape, distortion, fill (value and texture), and atmospheric effects
- Edit, layer, and adjust for desired effect
- Place *Digital Seal*
- Students present fantasy image by projecting image to class while reading narrative description statement
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 8. Vector 2-Point
Lecture/Discussion – *Continuation of Unit 7 - Depth and environment;* history and evolution of perspective - linear and preceding; Illustrations using isometric and one-point perspective are examined and discussed (Escher); two-point perspective technique; atmospheric effects; fantasy environments; movie, cartoon, and video game environmental design; specific video game designers are examined and discussed *(Blizzard Entertainment, Mojang)*; occupations related to game design. *Elements: line, shape, form, color, value, texture. Principles: balance, contrast, unity, harmony, proportion, emphasis.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students use vector drawing program to create an original fantasy view image with effective depth using one-point perspective technique. *(word processing software, vector drawing software).*
- Students refer to previous narrative description of fantasy environment, including topography, weather, and structures
- Vector drawing software is used to create a view of their fantasy environment
- Software tools are used to create accurate shape, distortion, fill (value and texture), and atmospheric effects
- Edit, layer, and adjust for desired effect
- Place *Digital Seal*
- Students present fantasy image by projecting image to class while reading narrative description statement

- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 9. Bling
Lecture/Discussion – *Jewelry design;* past and current practices and traditions of wearing pendants and medals; message, meaning, and symbolism; historical and contemporary styles *(low & bas relief)* of pendant imagery are examined and discussed *(Egyptian, Roman, Catholic, Masonic, Olympic, military)*; occupations related to jewelry design. *Elements: line, shape, color, value, form. Principles: balance, unity, harmony, proportion.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students create an original design for a virtual pendant or medal from their original concept *(word processing software, illustration software, 3-D modeling software).*

- Students pre-write narrative describing an original ideal
- Develop ideas for imagery using symbolism
- Brainstorm several visual solutions for ideal
- Create 2-D image with illustration software
- Import 2-D image to 3-D modeling software
- Edit and adjust for desired relief surface effect
- Create chain with 3-D modeling software (repeated array on path)
- Place *Digital Seal*
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 10. Monumental
Lecture/Discussion – *Monument design/public art;* purposes and incentives for creating monuments are discussed; monuments, past through present, are examined and discussed *(Pyramids of Giza, Buddhas of Bamiyan, Taj Mahal, Viet Nam Memorial, Washington, DC, Soviet era, Ground Zero, NYC)*; occupations related to architecture and environmental design. *Elements: value & form. Principles: balance, emphasis, unity, harmony, proportion.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students design and create virtual monument, from their individual identification of a need, and specific to an actual site. *(word processing software, Google Maps, 3-D modeling software, Google SketchUp).*

- Students pre-write proposal for desired concept for memorialization
- Develop appropriate imagery using symbolism
- Determine specific, actual location appropriate for concept *(Google Maps)*
- Brainstorm several visual solutions for ideal
- Create 3-D model expressing concept
- Edit and adjust for desired effect
- Place *Digital Seal* onto surface of monument
- Use 3-D model to create site (monument location)
- Place 3-D model into site
- Create animated “tour”, showing visual effect on and implications of site (immediate environment)
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 11. Animated GIF
Lecture/Discussion – *Visual interpretation – limited time;* quick messaging (billboards, bumper stickers, memes, animated GIFs); how much time is necessary/how much time is available for transmission of message? Effective body language, gesture, and facial expressions; animated GIF examples are examined and discussed; successful messaging; occupations related to animation. *Elements: shape, color, value. Principles: emphasis, balance, contrast, unity, harmony, proportion.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students create a short, animated GIF image expressing assigned concept(s). *(digital cameras, photo editing software, video editing software).*

- Students are assigned one or more specific concepts to illustrate (based on humor, frustration, sadness, etc.)
- Storyboard is created to plan for shot(s)
- Digital camera is used to capture imagery
- Imagery is transferred to computer
- Photo editing software is used for desired effects
- Video editing software is used to edit and create loop
- Text is used (if necessary or assigned)
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute posting of GIFs on class webpage/school website

Unit 12. Green Screen
Lecture/Discussion – *Storytelling;* oral tradition; engagement of audience; contemporary storyline structure; dramatic arc (Freytag's Pyramid); evolution of special effects and visual effects in film and video; examples of techniques - forced perspective, green screen, and digital compositing *(King Kong, Vertigo by Hitchcock, Star Wars)*; occupations in scriptwriting, editing, videography, special & visual effects, and cinematography. *Elements: shape, color, value, form. Principles: movement, balance, unity, harmony, emphasis.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Students create a storytelling video. *(word processing software, drawing software, digital camera, video editing software).*

- Students work in teams to write script of an original short story
- Teams create storyboard with drawing software (team will jigsaw for efficiency)
- Shot list is created
- Teams; use digital cameras and tripods to photograph scenes
- Transfer files to computer
- Students use video editing software to accomplish desired outcome
- Edit and adjust for desired effect
- Place *Digital Seal* for each team member into credits
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 13. Soundtrack
Lecture/Discussion – *Music and sound application – continuation of previous (Green Screen) assignment;* effect of sound on environment and concentration (loud vs. quiet places); effect of music and sound with video (same video with and without); emotional content of music; instrumentation; examples of sound and music (or absence of) in film *(Kubric, Bay)*; occupations in music, sound editing, and foley are discussed. *Elements: shape, color, value, form. Principles: movement, balance, unity, harmony, emphasis.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Create an appropriately expressive soundtrack for previous *(Green Screen)* assignment by sampling, recording, composing, and editing tracks for final product. *Music composing and editing software).*

- Teams from previous *Green Screen* assignment analyze emotional content of pre-produced video
- Write linear plan for soundtrack (music & effects)
- Record foley sounds and create aligned soundtrack for existing video
- Use music editing software to compose music/sounds for desired effects (from plan) and apply to soundtrack
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.
Exhibition – Students organize and execute exhibit in school gallery

Unit 14. Gallery Visitation
Outside of classroom, off-campus activity – *Observance and critique*
Lecture/Discussion – *Environmental design & exhibit design;* Galleries worldwide and their interior environments and displaying techniques are examined and discussed *(SFMOMA, NY Metropolitan, Louvre, Tate Modern)*. Discussion of effective/successful and ineffective/less successful viewing venues; occupations in gallery design and curation are discussed. *Elements: color, value, texture, form. Principles: balance, contrast, unity, harmony, proportion.*
Demonstration – projected example of process shown below using specific software. Introduce rubric.
Assignment – Visit a gallery or museum and write a critique about the effectiveness of the exhibit. *(word processing software, digital camera).*

- Students prepare an evaluation form outlining features (lighting, viewing space, ambient sound, surfaces, temperature, etc)
- Students visit a museum or gallery and complete their evaluation form on site
- Photograph exhibit *(if possible)*
- Submit evaluation form for assessment
- Orally present to class opinion of exhibit and project photographs of exhibit *(if photographs are allowed)*
- Proper archiving of evaluation and photographs
- Submit for assessment

Unit 15. Curator
Lecture/Discussion – *Gallery Exhibit Design;* continuation of previous lesson *(Gallery Visitation)*; group discussion and brainstorming; evaluation of school gallery space; past exhibits in school gallery space; applying observations from previous visitations at local galleries/museums; occupations in gallery design and curation are discussed. *Elements: color, value, texture, form. Principles: balance, contrast, unity, harmony, proportion.*
Demonstration – projected examples of previous school gallery exhibits are examined and discussed. Introduce rubric.

Assignment – Plan, design, and execute an exhibition in school gallery (several exhibits completed by teams over entire school year). *(word processing software, digital photography).*

- Students develop a written proposal (plan) for exhibit including:
  - theme based on exhibited work
  - amount of work to be exhibited
  - audience
  - gallery space
  - promotion of exhibit
  - timetable for student docents
  - register for exhibit visitors (commentary)
- Proper archiving
- Submit for assessment

Critique – Class meets in gallery to critique complete and current exhibit. Written and oral responses are required by remainder of students (those not involved with exhibit). Commentary from visitors is reviewed and considered.

Unit 16. Portfolio

Lecture/Discussion – Examine and discuss trends and changes in portfolio presentation, from actual, tactile objects, to electronic, virtual images. Comparisons are made between traditional and electronic portfolios.

Demonstration – projected examples of portfolios are examined and discussed; quality of presentation; "good" vs. "bad" presentation; consideration of portfolio audience. Introduce rubric.

Assignment – Collection of all finished work from class is electronically organized, assembled, archived, and otherwise prepared for exposure to class and for submittal to post-secondary education establishments and/or career opportunities*.*
(word processing software, digital photography, slideshow software).

- Students convert files to variety of formats to ensure compatibility
- Organize files into folders by category/assignment
- Create slideshow for class presentation and for institutional/occupational viewing
- Proper archiving
- Submit for assessment

Critique – Student works are projected for class response; written and oral responses are required.

Student Viewing – in addition to class critiques and class-wide projections, students have universal viewing accessibility to classmates' projects on classroom server. School art gallery is curated by teams of students as overseen by instructor. Artwork from Digital Arts classes and other on-campus art classes are also organized and displayed by Digital Arts 2 student for school-wide and community-wide viewing.

C. Key Assignments: Detailed descriptions of the Key Assignments including tests, and quizzes, which should incorporate writing responses. How do assignments incorporate topics? Include all assignments that students will be required to complete.

Students will engage in sequential activities and assignments designed to develop students' abilities to successfully execute individual expressionistic work. Students will present individual work to class for peer critique, will participate in schoolwide exhibitions, and will assemble collective work into an individual portfolio and present to class for further critique and for teacher assessment.

Vocabulary- Subject-specific vocabulary tests on weekly basis.

Digital Seal - Students create a logo-like, "Asian-inspired" personal seal, but using western text & stylized imagery, mimicking a carved stamp, to be placed on all of student's subsequent class artwork *(drawing & painting software).* Students create the effect of traditional art materials using line, shape, & texture. Students exercise principles of proportion and emphasis to mimic hand carving and stamping, and compose individual identifications. Proportion & emphasis are examined. Students use software to digitally create and manipulate images working two-dimensionally with mouse/stylus-drawn and edited with tools. Seals from antiquity are examined and discussed. The finished seal serves as a consistent representation of the student. Students utilize creative process by developing from several designs through brainstorming and revision. Students select from a variety of options, eventually refining work into a final product. Digital seal appears on all subsequent artwork that is viewed, discussed, and critiqued by class. Seal serves as a unique artistic and graphic label representing student's self and identifying a creative object. Student works are projected for class response (critique). Written and oral responses are required. Careers in graphic design are discussed.

Hemispheres - Students create an original composition as a representational image of their brain *(word processing software, digital stylus, & painting software).* Right/Left Brain tendencies are examined; students take online analytical self-exam to determine their individual tendencies, and respond in writing to test results. Students create diptych images based on test results and their written responses, visually expressing the brain's tendencies as well as their individual strengths and tendencies. Students create a composition revealing individual right/left brain tendencies. Composition relies on emphasis and movement to reveal significance of issues by size, color, etc. Image of brain is designed using line, shape, color, texture, and attention to balance and emphasis. Freehand drawing with stylus and/or mouse. Students improve digital painting skills. Both representational and abstract imagery express concept, importance, and create emphasis. Student works are projected for class response (critique). Written and oral responses are required. Careers in painting and related fields are discussed.

Right Brain Re-res - Students attempt to duplicate their perceptions as they observe an out-of-focus, upside-down image which becomes increasingly, but incrementally sharper until recognizable and completely resolved. *(digital stylus & painting software)*. Students observe areas and shapes of varying value, which are initially shown extremely out of focus and upside-down. Image is slowly, incrementally brought into focus, eventually revealing a completely resolved photograph. Students constantly address the changing image, relying on analytical skills and tendencies to objectively duplicate what is displayed at any particular moment of the exercise. Students respond to changing value, shape, and form. Resolved photograph has cultural significance and is discussed in class. Student works are projected for class response (critique). Written and oral responses are required. Careers in photo repair are discussed.

Tablet Life - Students create an original image/series of landscape images from life (location outside of classroom) directly onto electronic tablet with a stylus and/or fingers. *(digital illustration/painting software on tablet)*. Styles of landscape painting are examined, and class has discussion of composition, color use, and painting style. Desired effects of software are emphasized to create desired outcome (smudging, bleeding, etc.). Students work plein air, on school site. Re-working of images and multiple versions of same scene is encouraged. Student works are projected for class response (critique). Written and oral responses are required. Careers in painting and related fields are discussed.

Personality Composite – Photo composite image *(photography, photo editing software).* Students begin by interviewing classmates to learn personalities. Students pre-write personality statements about their classmates, which inspire an image. Photographic ability to reveal personality (emotion, attitude, etc.) is examined and discussed. Image is a composite photograph, created from multiple original photographs, that combines facial features of several classmates. Students then write a "composite personality" statement about the composite "person" they have created. Student works are projected for class response (critique). Written

and oral responses are required. Photo compositing and related careers are discussed.

Dreamtime – (surrealism) Students keep a dream journal from (beginning of course). Original image is created to reflect actual dream content from journal, preferably unusual places, occurrences, and/or in unusual scale. Photo compositing techniques are learned. *(photography, photo editing software)*. Surrealism and German expressionism (painting and film), and Works of surrealist photographers *Man Ray, Maurice Tabard, & Erik Johansson* are examined. Ability to express emotion and unreal environment in a single image is examined and discussed. Possible societal concerns and influences for student dreams will be investigated. Students will use their aesthetic judgement to create their work, deciding composition, imagery, and symbols to be used for conceptual meaning. Student works are projected for class response (critique). Written and oral responses are required. Photo compositing, illustration, and related careers are discussed.

Vector 1-Point – Students create a one-point perspective image. View of image is created from students' imagination (a fantasy view) *(vector drawing software)*. Students create, in their work, emotional content through their image. Through pre-writing, students create a fantasy locale and create the virtual physical environment with their perspective image. Form, color, atmosphere, and lighting are used to create mood. Historical context of the evolution of perspective styles, and references of current popular game designs are identified. Students will consider the effectiveness of the illusion of linear perspective, and how the illusion can be effective for conveying increased or decreased emphasis. The use of depth as a tool for the illusion of three-dimensional space will be discussed. The creation of a virtual "place" and its effect on the viewer will be examined and discussed. Student works are projected for class response (critique). Written and oral responses are required. Illustration and related careers are discussed.

Vector 2-Point – *(continuation of previous assignment – Vector 1-Point)* Students create a two-point perspective image of fantasy environment *(vector drawing software)*. Examples of two-point vs. isometric perspective are examined and discussed *(Escher)*. Enhancement of atmospheric effects is encouraged. Students further develop fantasy space. The creation of a virtual "place", its effect on the viewer, and its utility in storytelling will be examined and discussed. Student works are projected for class response (critique). Written and oral responses are required. Illustration and related careers are discussed.

Bling - Students design symbolic jewelry, specifically, a pendant on a chain *(illustration & 3-D modeling software)*. Students research historical jewelry and pendant/medal designs. The class explores, examines, and discusses past and current practices and traditions, from varying cultures around the world, of pendants and medals, including membership, religion, etc. Class investigates and discusses messages and symbolism of jewelry (medals and pendants) and use in society. Olympic, religious, and military medals are researched and compared, specifically low-relief and bas-relief styles. Student designs use particular materials, shape, and form to express content and concepts through virtual 3-dimensional symbolism, as small-scale sculpture. Students create emotional content through their image. Through pre-writing, students create a concept representing an original ideal. Shape & form are used to create an image which represents their ideal. Student works are projected for class response (critique). Written and oral responses are required. Jewelry design and related careers are discussed.

Monumental - Students will identify a particular need for memorializing, then design a structure to memorialize the concept and, after completion, animate a virtual "tour". *(Google Earth, 3-D modeling software).* Students pre-write descriptions in the form of an artist's statement (a proposal) of a structure prior to visual/physical work. Designs of extant monuments *(Great Pyramids, Taj Mahal, Giant Buddhas, Viet Nam Memorial, etc.)* and their designers are studied. Expressive content is created assigning specific concept for memorializing. A variety of known and possible construction materials are examined. Building site is researched and chosen by students. The structure, its form, location, and materials are chosen to suit the student's stated concept purpose and location. Site-specific issues (integration into a specific site) are addressed. Student works are projected for class response (critique). Written and oral responses are

required. Architecture, environmental design, and related careers are discussed.

Animated GIF – Students create a series of short loop animations expressing assigned concepts *(digital camera, photo and video editing software)*. Expressive content is created using photographic (video) imagery. Several concepts (frustration, joy, boredom, panic, etc.) are assigned, which students illustrate through original video photography (short, animated GIF loops). Class explores, examines, and discusses current trends of memes and animated GIF productions, and their prevalence and effect on recent culture. Class discusses effectiveness of animated GIFs for entertainment, social messaging, political content, etc., and discusses the effectiveness in communicating a universal vs. specific concept with limited means (a short time). Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions. Written and oral responses are required. Film and video editing and related careers are discussed.

Green Screen – (composite video) Team project - Students create a story-telling video. A simple story line is developed using the "dramatic arc" (Freytag's pyramid), and students act-out, record, and edit parts before a green screen background *(digital photography & video software)*. Class explores, examines, and discusses past and current trends of storyline and cinemagraphic techniques *(King Kong, Vertigo by Hitchcock, Star Wars)*. Examine and discuss the dramatic arc *(Freytag's Pyramid)*. Class discusses the effectiveness of video and visual/special effects for entertainment, social messaging, political content, etc. Students create emotional and expressive content through composition and editing. Pre-written concepts are developed by teams in the form of a script. Teams develop storyboards, create a shot list (plan), record scenes, and edit for a final product. Students through original, multiple, images with video. Original student concepts are developed which students illustrate using imagery from their point of view. Early (older) examples of green screen video are compared with contemporary to show advancement and advantages of the technique. Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions. Written and oral responses are required. Film and video editing and related careers are discussed.

Soundtrack – Students compose and/or sample and mix musical and effects soundtrack. Students create a soundtrack for their green screen video which is inspired by their video project. *(music composing and editing software)*. Rhythm, tempo, and instrumentation are investigated for their effect on mood. Use of classical music *(John Williams)* in vintage films versus contemporary use of heavy metal *(i.e. Tom Holkenborg)* is examined. Use of evocative music and effectiveness of silence are discussed and examined, from classic and contemporary examples*. Kubric, Bay*, and other filmmakers are examined and discussed for their application of soundtracks, including silence, ambient, punctuating, etc. Silent film (early film) sound treatments are compared to contemporary techniques. Students create emotional content through original music and/or with assembled sampled music and/or sound effects. Prompted and inspired by their completed Green Screen assignment, students (working in same pairs or teams) develop a soundtrack for their Green Screen video. Utilizing ques from the dramatic arc *(exposition, rising action, climax, falling action, resolution)* and resulting action shown in their video, students express, with sound, the concepts visualized in their video. Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions. Written and oral responses are required. Film and video editing and related careers are discussed.

Gallery Visitation – *Outside of class activity.* Students visit a gallery or exhibit within the timeframe of this course, and report on their experience *(word processing software, digital photography)*. Galleries worldwide, their interior environments, and displaying techniques are examined and discussed *(SFMOMA, NY Metropolitan, Louvre, Tate Modern*). Class investigates and discusses the effectiveness of gallery viewing space, and how differing environments can affect the viewing experience. Students write a critique (review) of the exhibited artist and of the exhibit's effectiveness. Students proffer opinions on successes or improvements for exhibit, based on an existing evaluation form, which considers viewing space, lighting, noise, etc.

Students respond to exhibition with analytical writing which expresses their impressions and opinions of both the artwork on display and the effectiveness execution of the exhibition. Class critique (discussion) requires students to present opinions, explaining and justifying their aesthetic and conceptual judgments. Written and oral responses are required. Gallery curation, management, and environmental design as careers are discussed.

Curator – Gallery exhibition activity where students organize and execute (curate) an exhibit in the school gallery. Students will assemble, display, and facilitate, one or more exhibits during the course of the class *(word processing software, digital photography)*. Exhibits will be themed according to assignments, and will be designed specifically to best show the content of student work. Students, working in teams, will plan an exhibition for school gallery. Students will use pre-writing to express their proposals for an effective exhibition. Proposals will include promotion of the exhibition, display plans, and reception plans. Students will create and store a written proposal and record resulting exhibition records with written material (notes, sign-in log) and photos. Local galleries and museums and their environments and displaying techniques are examined and discussed. Observations are applied while considering school gallery exhibitions. Students will refer to previous discussion and examination of the effectiveness of gallery viewing space *(Gallery Visitation lesson)*, and how differing environments can affect the viewing experience. Students apply what has been observed and deduced to school site gallery space. Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions. Gallery curation, management, and environmental design as careers are discussed.

Portfolio – Students assemble a collection of all finished work from class. Work is both printed (when appropriate) and/or stored as digital files. Files are duplicated into a variety of formats for assured compatibility. Students' portfolios are presented to class using slideshow software. Students are encouraged to submit portfolios to universities and/or colleges, and/or career opportunities, and are allowed to do so during class. Students write a personal statement regarding the collection of their work contained in the portfolio. Statements will declare, using appropriate artistic language, personal agenda, style, and goals. Class examines and discusses trends and changes in portfolio presentation, from actual, tactile objects, to electronic, virtual images. Comparisons are made between traditional and electronic portfolios. Students complete peer-evaluations (critiques) focusing on strengths & weaknesses of portfolios. Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions, justifying each piece's validity for its place in their portfolio (based on post-secondary institutions' criteria for acceptance).

D. Instructional Methods and/or Strategies

Students will be challenged by assignments that demand individual, unique solutions to be accomplished by creative method. Students will learn by creating, critiquing, and refining beyond initial implementation to ensure thorough exercise and involvement. Students will organize, execute, and participate in schoolwide exhibitions.

- Direct instruction - Examples of student and professional artists, methods, processes, and demonstrations shown by instructor.
- Assignment outlines – Students are provided with written instructions containing adequate instructional information allowing for independent progress through assignments. Instructor “checks” are required to allow students’ progress through stages of each assignment.
- Guided practice – Students work with styli, cameras, tablets, and computer software with instructor’s guidance.
- Computer-Assisted – Specific tutorials for software use.
- Posted progress – Whiteboard notes and instruction, information on progress, and reminders regarding current assignments. Students are made aware of, and required

to check on, online grade status.
- Brainstorming – (sketching) Students work through several possible solutions to realize completed concept.
- Abstracting – students create artwork from original concepts and from teacher prompts.
- Effort is made for active learning assignments (culture-related, age-related or personally-related)
- Competition – Finished work is submitted for adjudicated response.
- Group critiques – Both verbal and written responses.
- Group discussions – Involving introductions to concepts, development stages, and evaluation of completed projects
- Exhibitions – Students organize, execute, and participate in schoolwide exhibits

Activities:
- Brainstorming, developing, and execution of individual interpretations of assigned conceptual tasks.
  The aforementioned goals to be accomplished by use of:
  - ✓ Personal computers
  - ✓ Digital cameras and related hardware and software
  - ✓ Scanners and related hardware and software
  - ✓ Specialized art and design software
  - ✓ Book, magazine, and internet sources
- Investigation of historical and current works as they relate to specific class assignments
- Refinement of individual student's work
- Presentation of individual student's work to instructor, class, and school (through exhibit)
- Critique (oral exercise investigating the validity of individual work and the work of peers)
- Writing projects related to in-class work and current and historical work outside of class
- Reading of related publications (blogs, magazines, periodicals, and news articles)
- Vocabulary development activities related to the subject of fine art

E. Assessment Methods and/or Tools

Teacher assessment through assignment-specific rubrics

**Class review of rubric criteria occurs at initiation of assignments in order to alert students to expected outcomes prior to any creative effort*

Assessment criteria for all assignments will include:
- Imagination & Creativity
- Individual interpretation/response
- Effort & Perseverance
- Mastery of skills
- Adherence to assignment requirements & concept(s)
- Presentation of work

School-wide writing rubric will be applied to assess writing

Students are required to create:
- *Pre-written concepts and/or desired outcomes*
- *Written narratives (pre or post),*
- *Written critique responses*

Students are required to participate in:
- Class discussions
- Verbal critique responses
- Class exhibits

Final portfolio of work produced in class by each student

F. Artistic Perception. Courses must include processing, analyzing, and responding to sensory information through the language and skills unique to a given art. Describe in detail how the class satisfies the Artistic Perception requirement.

Digital Seal: 1.1 & 1.3 - Expressive imagery is created through style and symbols chosen by students to represent individual identity. 1.4 - Asian stamp seals are compared to western style signatures and potters' marks. 1.6 - Students create the effect of traditional art materials using line, shape, & texture. Students exercise principles of proportion and emphasis to mimic hand carving (of a stamp) and compose individual seals. Proportion & emphasis are examined.

Hemispheres: 1.1 & 1.3 - Expressive imagery is created through color, style, and symbols chosen by students to represent individual identity through right or left brain tendencies. 1.5 - Students exercise principle of proportion and use distortion to create emphasis for individual, particular right or left brain tendencies. 1.6 - Students create imagery using line, shape, color, value, and texture.

Right Brain Re-res: 1.3 - Within the range of possible duplication, discuss the appearance of individual drawing style as it manifests in student work. 1.6 - Observe and discuss how shape, value, and texture combine and can be duplicated with illustration to create a photographic illusion.

Tablet Life: 1.1 - Emphasis on color use; local color; color achieved through mixing; RGB vs CMYK. Discuss use of color, shape, and texture to evoke differing effects of a landscape image. 1.4 - Styles of landscape painting are examined (realism, impressionists, fauvism).

Personality Composite: 1.1 - Expressive/interpretive content is created using manipulated photographic imagery. Psychological impressions are expressed based on input from peers. 1.5 - Assembled composite faces, from several different people, are combined to create a "new" visual identity, exercising the principle of proportion and using distortion to create emphasis and effect.

Dreamtime: 1.1 - Expressive/interpretive content is created using manipulated photographic imagery. Surrealism is employed to create accurate dream recollections (per journals). 1.4 - Surrealism and German expressionism (painting and film) are investigated. 1.5 - Students exercise principle of proportion and use distortion to create emphasis and effect. 1.6 - Use of black-and-white vs color is examined to create and control mood.

Vector 1-Point: 1.1 - Emphasis on aspects of convergence, stacked space, and diminuation involved with graphical, geometric-based perspective. Discuss and examine atmospheric effects in perspective. 1.4 - Examine changes in representation during medieval through renaissance. 1.5 - Distortion of shape necessary to achieve one-point perspective illusions are examined and practiced.

Vector 2-Point: 1.1 - Emphasis on aspects of convergence, stacked space, and diminuation involved with graphical, geometric-based perspective. Discuss and examine atmospheric effects in perspective. 1.4 - Examine changes in representation during medieval through renaissance. 1.5 - Distortion of shape necessary to achieve one-point perspective illusions are examined and practiced.

Bling: 1.1 - Advantages of virtual imagery are discussed and investigated. 1.4 - Students research historical jewelry and pendant/medal designs. Olympic, religious, and military medals are researched and compared, specifically low-relief and bas-relief styles. 1.6 - Student designs

use particular materials, shape, and form to express content and concepts through (virtual) 3-dimensional symbolism (sculpture).

Monumental: 1.1 - Advantages of virtual imagery vs real modeling are discussed and investigated. Expressive content is created assigning specific concept for memorializing (students' choice). 1.4 - Monuments use of form and material from Soviet era are compared with U.S. works. 1.8 - Works of Maya Lin are examined for formal material use and conceptual content.

Animated GIF: 1.1 - Expressive content is created using photographic (video) imagery. Several concepts (frustration, joy, boredom, panic, etc.) are assigned, which students illustrate through original video photography (short, animated GIF loops). 1.2 - Students' works are critiqued to discover successful aspects of each GIF. 1.3 - During critique, original vs cliché solutions are examined.

Green Screen: 1.1 - Expressive content is created using photographic (video) imagery. Pre-written concepts are illustrated through original video photography. 1.2 - Students' works are viewed and critiqued to discover successful aspects of each video. 1.3 - During critique, original vs cliché solutions are examined. 1.4 - Early (older) examples of green screen video are compared with contemporary to show advancement and advantages of the technique.

Soundtrack: 1.1 - Rhythm, tempo, and instrumentation are investigated for their effect on mood. 1.4 - Use of classical music in vintage films versus contemporary use of heavy metal (i.e. Tom Holkenborg) is examined. 1.8 - John Williams' compositions for Star Wars movies are examined for effect of mood.

Gallery Visitation: 1.8 - Students write a critique (review) of the exhibited artist and of the exhibit's effectiveness. Students will proffer opinions on successes or improvements for exhibit.

Curator: 1.1 - Exhibits will be themed according to assignments. Exhibits will be designed specifically to best show content of student work in exhibit.

Portfolio: 1.2 & 1.3 & 1.7 - Students shall write a personal statement regarding the collection of their work contained in the portfolio. Statements will declare, using appropriate artistic language, personal agenda, style, and goals.

G. Creative Expression. Courses must include creating, performing, and participating in a given art. Describe in detail how the class satisfies the Creative Expression requirement.

Digital Seal: 2.2 & 2.4 - Students will use their aesthetic judgement to design their image, deciding the arrangement of letters (initials) and choosing symbol(s) to use for conceptual meaning. 2.6 - Students use computer software to digitally create and manipulate images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use illustration software to create the composite image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Hemispheres: 2.2 & 2.4 - Students will use their aesthetic judgement to design their image, deciding color, shape, texture, etc. and symbols to be used for conceptual meaning. 2.6 - Students use computer software to digitally create and manipulate images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use illustration software to create the image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Right Brain Re-res: 2.6 - Students use computer software to digitally create and manipulate an image, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use painting software to create the image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Tablet Life: 2.2 - Students shall attempt, in their work, color theory as shown in examples (realism, impressionism, fauvism) for the purpose of expressing emotional content through their image. 2.6 - Students shall create a landscape from life using an electronic tablet and stylus and/or fingers. Students use computer software to digitally create and manipulate images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use painting software to create the image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Personality Composite: 2.1 & .2 - Students shall create a photographic composite that expresses their impression of the personalities of several classmates. 2.4 - Students will use their aesthetic judgement to assemble the composite image, deciding between facial features arrangement and emphasis. 2.6 - Students use computer software to digitally create and manipulate images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use digital cameras and photo editing software to create the composite image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Dreamtime: 2.1 & 2.2 - Students will interpret their dream image and use original digital photography and photo software, accompanied with illustration and/or painting software to create an image that illustrates the interpretation. 2.2 & 2.4 - Students will use their aesthetic judgement to create their work, deciding composition, imagery, and symbols to be used for conceptual meaning. 2.6 - Students use computer software to digitally create and manipulate images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use illustration software to create the image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Vector 1-Point: 2.2, 2.4 & 2.5 - Students shall create, in their work, emotional content through their image. Through pre-writing, students create a fantasy locale and create the virtual physical environment with their perspective image. Form, color, atmosphere, and lighting are used to create mood. 2.6 - Students shall create an environment from fantasy using vector computer software. Students use computer software to digitally create and manipulate images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use vector software to create the

image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Vector 2-Point: 2.2, 2.4 & 2.5 - Students shall create, in their work, emotional content through their image. Through pre-writing, students create a fantasy locale and create the virtual physical enviroment with their perspective image. Form, color, and lighting are used to create mood. 2.6 - Students shall create an environment from fantasy using vector computer software. Students use computer software to digitally create and manipulate images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use vector software to create the image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Bling: 2.2, 2.4 & 2.5 - Students shall create, in their work, emotional content through their image. Through pre-writing, students create a concept representing an original ideal. Shape & form are used to create an image which represents their ideal. 2.6 - Students shall create a symbolic image using vector computer software. Completed vector image is imported into 3-D software and is converted into a low or bas relief form. Students use computer software to digitally create and manipulate images, working two-dimensionally (and virtually three dimensionally) with a mouse and/or stylus to draw and edited electronically with tools. Students will use vector and 3-D software to create the image, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Monumental: 2.1, 2.2, 2.4 & 2.5 - Students shall create, in their work, emotional content through their image. Through pre-writing, students create a concept representing a cultural ideal of their choosing. Form is used to create a virtual three-dimensional structure (a monument) which represents their ideal. Building site is researched and chosen by students. The structure, its form, location, and materials are chosen to suit the student's stated concept purpose and location. Students use three-dimensional software and digital photography to create and manipulate virtual images. Students work two-dimensionally (and virtually three dimensionally) with mouse/stylus-drawn and edit with program tools. 2.6 - Students shall create a symbolic form using 3-D computer software. Students use computer software to digitally create and manipulate images, working two-dimensionally (and virtually three dimensionally) with a mouse and/or stylus to draw and edited electronically with tools. Students will use 3-D software to create the form, and store image onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Animated GIF: 2.1, 2.2, 2.4 & 2.5 - Students shall create, in their work, emotional content through original, multiple, images with video. Several concepts (frustration, joy, boredom, panic, etc.) are assigned which students illustrate using imagery from their point of view. Students use video editing software and digital photography to create and manipulate video images. Students work two-dimensionally with mouse/stylus-drawn and edit with program tools. 2.6 - Students shall create a symbolic images (video) using video editing computer software. Students use computer software to digitally create and manipulate (video) images, working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use digital cameras and video editing software to create the imagery, and store imagery onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Green Screen: 2.1, 2.2, 2.4 & 2.5 - Students shall create, in their work, emotional content through original, multiple, images with video. Original student concepts are developed which students illustrate using imagery from their point of view. Students use video editing software and digital photography to create and manipulate video images. Students work two-dimensionally with mouse/stylus-drawn and edit with program tools. 2.6 -Early (older) examples of green screen video are compared with contemporary to show advancement and advantages of the technique., working two-dimensionally with a mouse and/or stylus to draw and edited electronically with tools. Students will use digital cameras and video editing software to create the imagery, and store imagery onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell

phone.

Soundtrack: 2.1, 2.2, 2.4 & 2.5 - Students shall create, in their work, emotional content through original music and/or with assembled sampled music and/or sound effects. Prompted and inspired by their completed Green Screen assignment, students (working in same pairs or teams) develop a soundtrack for their Green Screen video. Utilizing ques from the dramatic arc (exposition, rising action, climax, falling action, resolution) and resulting action shown in their video, students express, with sound, the concepts visualized in their video. Students use music creating and editing software to create and manipulate soundtrack. Students work with mouse to edit with program tools. 2.6 - Students shall create an expressive/symbolic soundtrack using music composing and editing computer software. Students use music composing/editing software to create soundtrack, working with a mouse to edit electronically with tools. Students will store soundtrack onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Gallery Visitation: 2.3 - Students respond to exhibition with analytical writing which expresses their impressions and opinions of both the artwork on display and the effectiveness execution of the exhibition. 2.6 - Students will create and store written product onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Curator: 2.3 - Students, working in teams, will plan an exhibition for school gallery. Students will use pre-writing to express their proposals for an effective exhibition. Proposals will include promotion of the exhibition, display plans, and reception plans. 2.6 - Students will create and store written proposal and record resulting exhibition records with written material (notes, sign-in log) and photos onto personal classroom computer and classroom server. If desired, students may transmit to personal home computer or to personal tablet and/or cell phone.

Portfolio: 2.1 - Students create and present electronic portfolio of their own, original work. 2.2, 2.4 & 2.5 - Portfolios must include work from Digital Arts 2AB. 2.6 - Students use software to digitally record (scan if necessary) and assemble images. Portfolio images (files) are archived in a variety of file formats to ensure compatibility and options across a variety of viewing formats.

H. Historical and Cultural Context. Courses must include understanding historical contributions and cultural dimensions of a given art. Describe in detail how the class satisfies the Historical and Cultural Context requirement.

Digital Seal: 3.1 & 3.3 - History of identity through various methods through history are examined, including royalty heralds, roman coins, military units, and automobile manufacturers. Signatures of well-known artists and other famous persons are examined. Traditional seals from Europe and Asia are compared. Symbolism used in examples is interpreted.

Hemispheres: 3.2 - The work of several well-known, contemporary artists is examined. Using information regarding left/right brain tendencies, students shall use writing to surmise left/right brain tendencies of these artists.

Right Brain Re-res: 3.2 & 3.3 - Photography of socially-conscious artists is examined (Lewis Hine, Dorothea Lang, Gordon Parks). Methods of capturing meaningful moments are examined and discussed.

Tablet Life: 3.2 - Imagery in the work of recent and contemporary landscape artists (Robert Beck, Richard Diebenkorn, Wayne Theibaud) is examined and compared older work (Pieter Brueghel, J.M.W. Turner, John Constable). Change in actual landscape (urbanization) is examined through images and data (population, environmental encroachment). 3.3 - Purpose of landscape painting is discussed (sentimentality & bucolic portrayal vs realistic & contemporary)

Personality Composite: 3.1 & 3.2 - Works of photographers Diane Arbus and Irving Penn are examined. Ability to capture attitude and personality in a single image is examined and discussed.

Dreamtime: 3.1 & 3.2 - Works of surrealist photographers Man Ray, Maurice Tabard, & Erik Johansson are examined. Ability to express emotion and unreal environment in a single image is examined and discussed.

Vector 1-Point: 3.2 - Video game virtual environments by current designers are examined (Blizzard Entertainment, Mojang). Societal and ethical investigations of themes and imagery use in popular video games are also analyzed. 3.4 - Historical context and references of current popular game designs are identified.

Vector 2-Point: 3.2 - Illustrations using isometric and 2-point perspective are examined and discussed (Escher). Video game virtual environments by current designers are examined (Blizzard Entertainment, Mojang). Societal and ethical investigations of themes and imagery use in popular video games are also analyzed. 3.4 - Historical context and references of current popular game designs are identified.

Bling: 3.1 & 3.3 - Explore, examine, and discuss past and current practices and traditions, from varying cultures around the world, of pendants and medals; membership, religion, etc.

Monumental: 3.2 - The advantages of creating a "virtual" structure are acknowledged. 3-D modeling is used to create a virtual structure and site model to which plug-in surfaces (textures) are applied. Students create (or recreate actual) virtual "site" location to allow for exposing impact on visual environment. A virtual "tour" is created by students using 3-D animation to move around and through site exposing all angled views in context of proposed site.

Animated GIF: 3.1 - Explore, examine, and discuss current trends of memes and animated GIF productions. 3.3 - Discuss effectiveness for entertainment, social messaging, political content, etc.

Green Screen: 3.1 - Explore, examine, and discuss past and current trends of storyline and cinemagraphic techniques (King Kong, Vertigo by Hitchcock, Star Wars). Examine and discuss the dramatic arc (Freytag's Pyramid). 3.3 - Discuss effectiveness for entertainment, social messaging, political content, etc.

Soundtrack: 3.1 - Use of evocative music and effectiveness of silence are discussed and examined, from classic and contemporary examples. 3.2 - Kubric, Bay, and other filmmakers are examined and discussed for their application of soundtracks, including silence, ambient, punctuating, etc. 3.4 - Silent film (early film) sound treatments are compared to contemporary techniques.

Gallery Visitation: 3.1 & 3.2 - Galleries worldwide and their interior environments and displaying techniques are examined and discussed (SFMOMA, NY Metropolitan, Louvre, Tate Modern).

Curator: 3.1 & 3.2 - Local galleries and museums and their environments and displaying techniques are examined and discussed. Observations are applied while considering school gallery exhibitions.

Portfolio: 3.1 & 3.2 - Local galleries and museums and their environments and displaying techniques are examined and discussed. Observations are applied while considering school gallery exhibitions.

I. Aesthetic Valuing. Courses must include responding to, analyzing, and making critical assessments about works of a given art form. Describe in detail how the class satisfies the Aesthetic Valuing requirement.

Digital Seal: 4.1 - Traditional techniques of carving and stamping are compared to digital techniques. Students attempt to affect "hand-made", antique appearance by mimicking toolmarks, facture of printed surface, etc. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Hemispheres: 4.2 - Effectiveness of symbolism is examined and discussed. Students are encouraged to control exposition of their work; a level between obvious and obscure. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Right Brain Re-res: 4.3 - Discuss how the exposure of socially expository photography can change narrative over time. 4.4 - Class critique requires students to present their work, explaining their technique and justifying their aesthetic and formal decisions.

Tablet Life: 4.1 - Techniques of brushwork (synthesized with stylus/finger), and use of color are discussed as to how the finished work is received by the viewer; how mood and emotion can be communicated with both or either. 4.3 - Observe how the effect of interpretation of landscape can vary by portraying a range from bucolic to urban. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Personality Composite: 4.1 - Students make subjective decisions about which features to choose, referring to their subject's personality statement. Students subjectively decide emphasis and the effect of their judgment on the viewer. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Dreamtime: 4.1 - Students exercise judgement when deciding content specifics and composition of their work. Students must speculate on how the image will be received by the viewer. 4.3 - Possible societal concerns and influences for student dreams will be investigated. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Vector 1-Point: 4.1 - Students will consider the effectiveness of the illusion of linear perspective, and how the illusion can be effective for conveying increased or decreased emphasis. 4.2 - The use of depth as a tool for the illusion of three-dimensional space will be discussed. The creation of a virtual "place" and its effect on the viewer will be examined and discussed. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Vector 2-Point: 4.1 - Students will consider the effectiveness of the illusion of linear perspective, and how the illusion can be effective for conveying increased or decreased emphasis. 4.2 - The use of depth as a tool for the illusion of three-dimensional space will be discussed. The creation of a virtual "place" and its effect on the viewer will be examined and discussed. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Bling: 4.3 - Investigate and discuss message and symbolism of jewelry (medals and pendants) design and use in society. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Monumental: 4.1, 4.2 & 4.3 - Investigate and discuss symbolism in public art and monuments and the successes or failures thereof (examples: Pyramids of Giza, Buddhas of Bamiyan, Taj Mahal, Viet Nam War Memorial, Washington, DC, Ground Zero, NYC). 4.4 - Class critique

requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Animated GIF: 4.1 - Discuss effectiveness in communicating a universal vs. specific concept with limited means (short time). 4.3 - Investigate and discuss the advent of animated GIFs and memes, their prevalence and effect on recent culture. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Green Screen: 4.1 - Discuss effectiveness in communication; pacing, intensity, etc. 4.3 - Investigate and discuss most recent trends in film. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Soundtrack: 4.1 - Examine and discuss how sound effects the viewer by experiencing video with no sound and then with sound. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Gallery Visitation: 4.1 - Investigate and discuss the effectiveness of gallery viewing space; how differing environments can affect the viewing experience. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Curator: 4.1 - Refer to previous discussion and examination of the effectiveness of gallery viewing space (Gallery Visitation); how differing environments can affect the viewing experience. Apply what has been observed and deduced to site gallery space. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions.

Portfolio: 4.1 - Students present their work by LCD projection for class critique. Students complete peer-evaluations focusing on strengths & weaknesses of portfolios. 4.4 - Class critique requires students to present their work, explaining their narrative and justifying their aesthetic and conceptual decisions. 4.6 - Students assemble work for their portfolio, collected from work produced in this class, justifying each piece's validity for its place in their portfolio. Based on post-secondary institutions' criteria for acceptance.

J. Connections, Relationships, and Applications. Courses must include connecting and applying what is learned in a given art form to learning in other art forms, subject areas, and careers. Describe in detail how the class satisfies the Connections, Relationships, and Applications requirement.

Digital Seal: 5.1 - Examine and discuss how archaic methods (i.e. carved seal) are no longer state of the art, and how electronically-generated artwork has changed the appearance of "hand-generated" work. 5.2 - Compare and contrast ancient seal designs and their meanings with those of the class. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Examine and discuss the difference in tools, materials, and techniques between traditional methods of carving and stamping (printing), and the possible implications thereof.

Hemispheres: 5.1 - Discuss how technology used in art has caused shifts toward different modalities of artists; how right/left brain tendencies have affected artists, their work, and the promotion and exposure of their work. 5.2 - In a critique, compare and discuss symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Examine and discuss the difference in tools, materials, and techniques between traditional drawing and painting, and the possible implications thereof.

Right Brain Re-res: 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Examine and discuss the difference in tools, materials, and techniques between traditional drawing and painting, and the possible implications thereof.

Tablet Life: 5.1 - Examine and discuss how traditional methods (i.e. brush and canvas) can be substituted, and how electronically-generated artwork has changed the appearance of "hand-generated" work. 5.2 - Compare and contrast earlier landscape images, their meanings in context with contemporary work and with those of the class. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Examine and discuss the difference in tools, materials, and techniques between traditional landscape painting and tablet capabilities, and possible implications thereof.

Personality Composite: 5.1 - Examine and discuss how traditional methods*, and how electronically-generated artwork has changed the appearance of "hand-generated" work. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent personality traits and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class (see "Portfolio" assignment). 5.4 - Examine and discuss the difference in tools, materials, and techniques between traditional photo-compositing*, and digital compositing, and the possible implications thereof. *i.e. cut-and-paste, frisket film, airbrush retouching.

Dreamtime: 5.1 - Examine and discuss how traditional methods (i.e. cut-and-paste, frisket film, airbrush retouching) are no longer state of the art, and how electronically-generated artwork has changed/improved the appearance of "hand-generated" work. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Discuss how technological advances (voice recorders/voice recognition) have facilitated journaling, and thereby accuracy. Examine and discuss the difference in tools, materials, and techniques between traditional photo-compositing (cut, paste,

frisket masks, airbrush retouching), and digital compositing, and the possible implications thereof.

Vector 1-Point: 5.1 - Examine and discuss how traditional methods (i.e. paper, pencil, straightedge) are no longer state of the art, and how electronically-generated artwork has changed/improved the capabilities and appearance of "hand-generated" work. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities*. 5.4 - Discuss how technological advances (computer-aided illustration and modeling) have facilitated illustration ease and accuracy. Examine and discuss the difference in tools, materials, and techniques between traditional drawing and painting, and digital illustration and modeling, and the possible implications thereof. *see "Portfolio" assignment.

Vector 2-Point: 5.1 - Examine and discuss how traditional methods (i.e. paper, pencil, straightedge) are no longer state of the art, and how electronically-generated artwork has changed/improved the capabilities and appearance of "hand-generated" work. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Discuss how technological advances (computer-aided modeling) have facilitated design and production ease and accuracy. Examine and discuss the difference in tools, materials, equipment, and techniques between traditional drawing and painting, and digital modeling and production (NURBS, CNC, etc.), and the possible implications thereof.

Bling: 5.1 - Examine and discuss how traditional methods of pre-production designing (i.e. paper drawing and drafting) are no longer state of the art, and how electronically-generated planning has changed/improved capabilities and accuracy. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Discuss how technological advances (computer-aided illustration and modeling) have facilitated illustration ease and accuracy. Examine and discuss the difference in tools, materials, equipment, and techniques between traditional and digital drawing, painting, and modeling, and the possible implications thereof.

Monumental: 5.1 - Examine and discuss how traditional methods of pre-production designing (i.e. paper drawing and drafting) are no longer state of the art, and how electronically-generated planning has changed/improved capabilities and accuracy. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Discuss how technological advances (computer-aided illustration and modeling) have facilitated illustration ease and accuracy. Examine and discuss the difference in tools, materials, equipment, and techniques between traditional and digital filming (video recording) and editing, and the possible implications thereof.

Animated GIF: 5.1 - Examine and discuss how traditional methods of animation (i.e. paper & cell drawing & painting, rotoscoping) are no longer state of the art, and how electronically-generated animation has changed/improved capabilities and accuracy. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in

student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Discuss how technological advances (digital animation and editing) have facilitated illustration ease and accuracy. Examine and discuss the difference in tools, materials, equipment, and techniques between traditional and digital filming (video recording) and editing, and the possible implications thereof.

Green Screen: 5.1 - Examine and discuss how earlier methods of film compositing have improved through technological advances, and how electronically-generated animation has changed/improved capabilities, accuracy, and improved illusion. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Discuss how technological advances (digital video recording, editing, & compositing) have facilitated illustration ease and accuracy. Examine and discuss the difference in tools, materials, equipment, and techniques between traditional and digital recording and editing, and the possible implications thereof.

Soundtrack: 5.1 - Examine and discuss how traditional methods of sound reproduction (i.e. analog recording, magnetic tape, manual splicing, etc.) are no longer state of the art, and how digital recording and editing has changed/improved capabilities and accuracy. 5.2 - Compare and contrast work from traditional methods with those of contemporary methods and with those done in class. 5.2 - In a critique, compare and discuss apparent and possible meanings and symbolism used in student work. 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment). 5.4 - Discuss how technological advances (digital audio recording, editing) have facilitated illustration ease and accuracy. Examine and discuss the difference in tools, materials, equipment, and techniques between traditional and digital recording and editing, and the possible implications thereof.

Gallery Visitation: 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment).

Curator: 5.3 - Student artwork will be part of portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities (see "Portfolio" assignment).

Portfolio: 5.3 - Student artwork will be assembled into a portfolio at conclusion of class, designed to be used for application to post-secondary educational institutions and/or career possibilities. 5.4 - Discuss how technological advances (digital imaging and archiving) have facilitated illustration ease and accuracy. Examine and discuss the difference in tools, materials, and techniques between traditional portfolio design and presentation, and the possible implications thereof.

K. Corresponding Non-Honors Course. Indicate the name of the regular non-honors course corresponding to this proposed honors course.

L. Differences in Honors/Non-Honors Courses. Describe in detail how this honors course differs from the regular course offered in the same subject area. Be specific.

9. Subject Area

- [ ] History/Social Science
- [ ] English
- [ ] Mathematics
- [ ] Laboratory Science
- [ ] Language other than English
- [x] Visual & Performing Arts
- [ ] College Prep Elective

10. Grade Level(s)

[ ] 9 [ ] 10 [x] 11 [x] 12

11. Seeking "Honors" Distinction?

[ ] Yes [x] No

12. Unit Value

- [ ] 0.5 (half year or semester equivalent)
- [x] 1.0 (one year equivalent)
- [ ] 2.0 (two year equivalent)
- [ ] Other: _____

15. Is this course modeled after an UC-approved course from another school? [ ] Yes [x] No

If so, which school(s)? _____

16. Pre-Requisites

This course is designed for 11th & 12th grade students who have completed Digital Arts 1 AB with a letter grade of B or better

17. Co-Requisites

18. Is this course a resubmission? [ ] **Yes** [X] **No**

19. Brief Course Description

This course is designed for all students interested in fine arts and in exploring, developing, and furthering their experience, knowledge, and skills in this area by means of digital equipment and media. It is especially suited for students with an interest in pursuing a college major or career in the arts, and especially digital arts. Students will use a variety of current digital technology to create individual expressive artwork. Students will employ universal elements and principals of art in their creation of original work utilizing a wide variety of digital hardware and software.

B. COURSE CONTENT

20. Course Goals and/or Major Student Outcomes

Purpose
The purpose of Digital Art 2 AB, a one-year (two-term, 10 unit) course, is to allow students a more expansive experience in fine arts through the continued utilization digital equipment and media.

Standards of Expected Student Achievement
Upon successful completion of this course, students will be able to demonstrate the following knowledge/skills:

1. *Demonstrate knowledge and understanding of properly apply the elements and principles of art.*
2. *Employ elements and principles of art in the creation of individual works.*
3. *Utilize a variety of digital equipment and media to create expressive, individual, original works of art.*
4. *Demonstrate appropriate use and care of equipment/resources and respect for the work environment.*
5. *Demonstrate appreciation for the ability to understand and critique current and historical artwork, as well as peer (student) work.*
6. *Demonstrate proficiency in formal and conceptual understanding and demonstrate knowledge and appreciation of appropriate art vocabulary by presenting individual works.*
7. *Create a portfolio appropriate for career or college application.*

21. Course Objectives

22. Course Outline

23. Text & Supplemental Instructional Materials

Text: None

Supplementary Materials: art and design-specific software, example and instructional images and videos, digital hardware (computers, digital cameras, scanners, printers), LCD projected material and lessons (PowerPoint, etc.), art & design publications (magazines/periodicals), internet sources, class discussion, student presentations, guest speakers, oral and written instructions.

24. Key Assignments
Sequential activities and assignments designed to develop students' abilities to successfully execute individual expressionistic work. Students will present individual work to class for peer critique. Students will assemble collective work into an individual portfolio and present to class for further critique and for teacher assessment.

25. Instructional Methods and/or Strategies
Students will be challenged by assignments that demand individual, unique solutions to be accomplished by "creative method". Students will learn by creating, critiquing, and refining beyond initial implementation to esure through exercise and involvement.

26. Assessment Method and/or Tools

1. *Students will present evidence of learning by cooperating with group or individual assignments and presentations based on individual works.*
2. *Students will present evidence of learning by presenting ideas, solutions and conclusions assigned concepts.*
3. *Students will present evidence of learning through teacher observations.*
4. *Students will present evidence of learning through quizzes, tests and homework.*
5. *Students will present evidence of learning through instructor evaluations.*
6. *Students will present evidence of learning through student presentations.*
7. *Students will present evidence of learning through class critique as evidenced by peer feedback.*

COURSE OUTLINE

Course Title
Digital Art 2 A/B

Department
Visual and Performing Arts

Description of Target Group
This year long course is designed for 11th and 12th grade students who have shown interest and ability in the field of fine arts and the continuing use of digital imaging technology.

Purpose
The purpose of this class is to provide students interested in tow-dimensional fine art and an opportunity to continue learning through a variety of methods of expression by means of electronic (digital) equipment and media. The course, as a continuation of Digital Arts1 AB, will allow for a more expansive experience in fine arts, and is designed for all students interested in fine arts and in exploring, developing, and furthering their experience, knowledge, and skills in this area by means of digital equipment and media. It is especially suited for students with an interest in pursuing a college major or career in the arts, and especially digital arts. Students will use a variety of current digital technology to create individual expressive artwork. Students will employ universal elements and principals of art in their creation of original work utilizing a wide variety of digital hardware and software.

Prerequisites
Students in 11th, or 12th grade who have completed Digital Arts 1 AB with a B or better grade qualify for this class, or may be admitted with pre-approval of instructor.

Standards of Expected Student Achievement
Upon successful completion of this course, students will be able to demonstrate the following knowledge/skills:

1. Demonstrate knowledge and understanding of properly apply the elements and principles of art.
2. Employ elements and principles of art in the creation of individual works.
3. Utilize a variety of digital equipment and media to create expressive, individual, original works of art.
4. Demonstrate appropriate use and care of equipment/resources and respect of the work environment.
5. Demonstrate appreciation for the ability to understand and critique current and historical artwork, as well as peer (student) work.
6. Demonstrate proficiency in formal and conceptual understanding and demonstrate knowledge and application of appropriate for career or college application.

Speaking Skills
- Give oral reports to the class in the form of explanatory dissertations of student's individual work as well as peers' work (critique)
- Participate in class discussions and interactive lectures.

Listening Skills

- Listen to and follow oral directions
- Take notes from lectures and demonstrations
- Listen attentively to lectures and student presentations

Reading Skills

- Read related publications (i.e. magazines, periodicals, newspaper, etc), both in print and online
- Read critique summaries written by peers

Writing Skills

- Write at least one process paper per class specifying the details of student's individual work

Methods of Student Assessment

Teacher assessment through rubric
Participation in class critiques
Portfolio of work produced in class
School-wide writing rubric will be used in assess writing

Instructional Materials

Text: None

Supplementary Materials: art and design-specific software, example and instructional images and videos, digital hardware (computers, digital cameras, scanners, printers), LCD-projected material and lessons (PowerPoint, etc.), art & design publications (magazines/periodicals), internet sources, class discussions, guest speakers, oral and written instructions.

Activities

Brainstorming, developing, and executing of individual interpretations of assigned conceptual tasks.

The aforementioned goals to be accomplished by use of:

- Personal computers
- Digital cameras and related hardware and software
- Scanners and related hardware and software
- Specialized art and design software
- Book, magazine, and internet source

Investigation of historical and current works as they relate to specific class assignments
Refinement of individual student's work
Presentation of individual student's work to instructor and class
Critique (oral exercise investigating the validity of individual work and the work of peers)
Writing projects related to in-class work and current and historical work outside of class
Reading of related publications (magazines, periodicals and news articles)
Vocabulary development activities related to the subject of fine art
Assembly of comprehensive portfolio of individual works

Course Title

Drama 1A

Description of Target Group

This course is designed as an elective for any student of any grade level.

Purpose

This one-semester course will enable students to develop an appreciation for the theater arts.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop individual confidence, personality, and poise.
2. Make honest artistic commitments in physicalizing and expressing feelings and emotions.
3. Develop awareness of the body as a means of expression.
4. Develop vocal skills.
5. Participate in exercises to develop (1) quick responses, (2) problem solving, (3) group cooperation, and (4) emotional interaction.
6. Experience and understand basic acting skills.
7. Develop an understanding of story structure, plot, and conflict through improvisation, story dramatization and play writing.
8. Write scripts for story dramatizations.
9. Perform scenes from scripts.
10. View theatrical productions.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Pantomimes, improvisations, voice exercise, play writing, scene design, creative movement, dance, and memorization of acting scenes.

Course Title

Drama 1B

Description of Target Group

This course is designed as an elective for any student of any grade level.

Purpose

This one-semester course will enable students to develop an appreciation for the theater arts.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop individual confidence, personality, and poise.
2. Make honest artistic commitments in physicalizing and expressing feelings and emotions.
3. Develop awareness of the body as a means of expression.
4. Develop vocal skills.
5. Participate in exercises to develop (1) quick responses, (2) problem solving, (3) group cooperation, and (4) emotional interaction.
6. Experience and understand basic acting skills.
7. Develop an understanding of story structure, plot, and conflict through improvisation, story dramatization and play writing.
8. Write scripts for story dramatizations.
9. Perform scenes from scripts.
10. View theatrical productions.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Pantomimes, improvisations, voice exercise, play writing, scene design, creative movement, dance, and memorization of acting scenes.

Course Title

Drama 2A

Description of Target Group

This course is recommended as an elective for students of the 10th through 12th grade levels who have completed Drama 1B.

Purpose

This course is designed to provide the student with theatrical abilities through practical application of theater techniques.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop more professional theater knowledge and skills.
2. Develop his/her own personality and poise.
3. Develop his/her own theatrical and physical awareness more fully.
4. Intensity and further develop all standards of expected achievement for the Drama 1 course.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Pantomimes, improvisations, voice exercise, play writing, scene designing, creative movement, dance, acting of scenes, and visiting theater productions.

Course Title

Drama 2B

Description of Target Group

This course is recommended as an elective for students of the 10th through 12th grade levels who have completed Drama 2A.

Purpose

This course is designed to provide the student with theatrical abilities through practical application of theater techniques.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop more professional theater knowledge and skills.
2. Develop his/her own personality and poise.
3. Develop his/her own theatrical and physical awareness more fully.
4. Intensity and further develop all standards of expected achievement for the Drama 1 course.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Pantomimes, improvisations, voice exercise, play writing, scene designing, creative movement, dance, acting scenes, and visiting outside theater productions.

Course Title

Drawing 2A/B (replacing Experimental Drawing)

Purpose

This two-semester course is designed for students in grades 10-12 who would like to explore drawing as a means of communication. Use of journals, mural projects, and multimedia drawing will be explored.

Prerequisite: Drawing course (1 semester)

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate knowledge in the three basic areas of drawing: Contour, Gesture, and Modeled.
2. Demonstrate an ability to use drawing to comment on personal and topical themes.
3. Demonstrate the ability to draw both realistic subjects and those from the imagination.
4. Demonstrate the ability to develop many visual ideas into one original visual statement.
5. Demonstrate the ability to critique and discuss their artwork with others.
6. Develop a vocabulary of art terms and techniques that verbally describe the student's artwork.
7. Develop an individual confidence about the ability to use images from a variety of sources to communicate ideas.
8. Develop a portfolio of several drawings that show a selected variety of drawing media and the communication of ideas.

Instructional Materials

Video programs of contemporary artwork, slides, posters, and examples of past student work.

Activities

Individual class work, in-groups, mural drawings, lectures, class critiques, demonstrations, and field trips (Santa Maria Museum Art Center).

Course Title

Drawing A (Beginning)

Description of Target Group

This course is designed for 9th through 12th grade students.

Purpose

This one-semester course is designed to provide the student in depth work with various drawing tools, styles, and techniques and will promote an appreciation of the work of master artists.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate an improved ability to see.
2. Demonstrate the use of basic drawing techniques in all media.
3. Demonstrate the ability to draw objectively.
4. Demonstrate the ability to draw subjectively and imaginatively.
5. Demonstrate the ability to enlarge or reduce a subject by using a grid technique.
6. Demonstrate the ability to organize on a two-dimensional plane.
7. Demonstrate knowledge of and care of basic tools.
8. Demonstrate an appropriate written and oral vocabulary.
9. Demonstrate receptiveness to and ability to take part in constructive criticism of student work.
10. Demonstrate personal responsibility toward care and maintenance of the work environment.

Instructional Materials

Text and Supplementary Materials.

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, participation in class discussions, demonstrations, experiments, videos, CD-ROMs, and field trips.

Course Title

Drawing A/B (Advanced)

Purpose

This one term/semester course is designed for student's grades 10-12 who would like to explore drawing as a means of communication. Use of journals, mural projects, and multimedia drawing will be explored.

Prerequisite: Art 1B (Drawing) or Drawing.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate knowledge in the three basic areas of drawing: Contour, Gesture, and Modeled.
2. Demonstrate an ability to use drawing to comment on personal and topical themes.
3. Demonstrate the ability to draw both realistic subjects and those from the imagination.
4. Demonstrate the ability to develop many visual ideas into one original visual statement.
5. Demonstrate the ability to critique and discuss their artwork with others.
6. Develop a vocabulary of art terms and techniques that verbally describe the students work.
7. Develop an individual confidence about the ability to use images from a variety of sources to communicate ideas.
8. Develop a portfolio of several drawings that show a selected variety of drawing media and the communication of ideas.

Assessment of Student Learning

1. Students will present evidence of learning by presenting a portfolio of term work to the class.
2. Students will select and present five pieces of art to display in the gallery.
3. Students will prepare a written self-evaluation of term work.
4. Students will create and present an individual project of their choice.
5. Students will be checked off for weekly assignments.
6. Grades of 'B' or better will require some out of schoolwork.

Instructional Materials

Video programs of contemporary artwork, slides, posters, and examples of past student work.

Activities

Individual class work, in-groups, mural drawings, lectures, class critiques, demonstrations, and field trips.

Course Title

Drawing Workshop A

Description of Target Group

This course is designed for 10th through 12th grade students who have taken both Design A/B and Drawing A/B and earned a grade of 'B' or better. Entry is also determined by student portfolio and instructor's permission.

Purpose

This one-semester course is designed as an advanced drawing class for students to further develop their drawing techniques in a variety of drawing mediums.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Make aesthetic judgements.
2. Demonstrate self-reliance and independent initiative.
3. Understand and use specialized art vocabulary in both verbal and written work.
4. Understand the use, care and appreciation of the art tools, supplies, and equipment.
5. Understand the scope of career opportunities as it relates to drawing.
6. Demonstrate the knowledge and application of design and color theory.
7. Become aware of the different drawing techniques and their relationship to style.
8. Demonstrate craftsmanship in preparing drawing surfaces.
9. Demonstrate the ability to successfully participate in a classroom critique and to produce a student portfolio of their drawings.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, participation in class discussions, demonstrations, experiments, videos, CD-ROMs, and field trips.

Course Title

Drawing Workshop B

Description of Target Group

This course is designed for 10th through 12th grade students who have taken both Design A/B and Drawing A/B and earned a grade of 'B' or better. Entry is also determined by student portfolio and instructor's permission.

Purpose

This one-semester course is designed to further develop the student's skills in a variety of painting techniques and mediums.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Make aesthetic judgements.
2. Demonstrate self-reliance and independent initiative.
3. Understand and use specialized art vocabulary in both verbal and written work.
4. Understand the use, care and appreciation of the art tools, supplies, and equipment.
5. Understand the scope of career opportunities as it relates to painting.
6. Demonstrate the knowledge and application of design and color theory.
7. Become aware of the different drawing techniques and their relationship to style.
8. Demonstrate craftsmanship in preparing drawing surfaces.
9. Demonstrate the ability to successfully participate in a classroom critique and to produce a student portfolio of their drawings.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Individual work, lectures, participation in class discussions, demonstrations, experiments, videos, CD-ROMs, and field trips.

Course Title

Drawing

Purpose

This one-semester course is designed for all students' grades 10-12 who would like to learn the art of drawing what they see.

Prerequisite: None, designed for grades 10-12.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate basic drawing techniques in a variety of media.
2. Demonstrate an increase in the student's visual perception skills by drawing realistic subject matter.
3. Demonstrate the ability to draw using the imagination as a point of departure.
4. Demonstrate knowledge of the basic elements and principles of design by their successful incorporation into the student's artwork.
5. Demonstrate the ability to talk and write about their artwork and the work of others.
6. Critique and evaluate drawings from the history of art. Analyze technique, and examine differences and similarities between artists and periods.
7. Develop an appropriate art vocabulary as it pertains to the language of drawing.
8. Create a portfolio of several drawings that demonstrate the student's knowledge of basic techniques, representational work, and drawings from the imaginations.

Instructional Materials

Films, prints, video programs, and examples of past student work.

Activities

Individual work, lectures, class critiques, demonstrations, field trips (Museum Art Center).

Course Title

Graphic Arts Production A

Description of Target Group

This is the first term of a two term (one year) course for 10th through 12th grade students wanting to learn advanced levels of Graphic Design. A lab fee may be required.

Prerequisite: none

Purpose

This course is designed to allow students to apply knowledge from previous Graphics and related courses (if taken). Progressively more advanced levels of visual design and an expanded scope of applications will be experienced. Projects will involve students in more challenging, problem-solving situations through extensive, personal collaboration with High School staff and/or community organizations. This is a 5-unit course.

Standards of Expected Student Achievement

Upon successful completion of this course, each student will be able to demonstrate competency in the following:

1. Making critical aesthetic judgments
2. Self-reliance and independent thinking
3. Solving problems individually and/or in small teams
4. Understand and use specialized Graphic Arts production terms and vocabulary both verbally and in written work
5. Demonstrate a working knowledge of the safe and correct applications and operations of Graphic Arts production equipment
6. Demonstrate a working knowledge of various styles, compositions and layouts of Graphic Arts

Methods of Assessment of Student Learning

1. Class participation
2. Quizzes covering each main module.
3. Teacher evaluation.

Graphic Arts Production A (continued)

4. Independent projects.
5. Final examination.
6. Cooperative work with other students.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

1. Software Instructional Materials (printed/multimedia interactive)
2. Supplementary Video
3. Trade Publications

Activities

1. Individual Work (projects)
2. Service Learning Projects
3. Lectures
4. Class laboratory shop work
5. Teacher & Student Demonstrations
6. Student Presentations
7. Small group activities
8. Class Critiques
9. Outside resource people
10. Field Trips

Course Title

Graphic Arts Production B

Description of Target Group

This is the second term of a two term (one year) course for 10th through 12th grade students wanting to learn advanced levels of Graphic Design. A lab fee may be required.

Prerequisite: Graphic Arts Production A

Purpose

This course is designed to allow students to continue and expand on applied knowledge from Graphic Arts Production A. Progressively more advanced levels of visual design and an expanded scope of applications will be experienced. Projects will involve students in more challenging, problem-solving situations through extensive, personal collaboration with High School staff and/or community organizations. This is a 5-unit course.

Standards of Expected Student Achievement

Upon successful completion of this course, each student will be able to demonstrate competency in the following:

1. Work with the high schools staff and/or community business Graphic Arts production needs
2. Work with computers and current software as it is related to Graphic Arts production
3. Understand the safe use, care, and maintenance of equipment and supplies used in Graphic Arts production.
4. Expanded use of specialized Graphic Arts production terms and vocabulary both verbally and in written work
5. Demonstrate a working knowledge of the safe and correct applications and operations of Graphic Arts production equipment
6. Organization and execution of Graphic Design projects from inception to completion
7. Understanding the career opportunities in Graphic Arts production

Graphic Arts Production B (continued)

Methods of Assessment of Student Learning

1. Class participation
2. Quizzes covering each main module.
3. Teacher evaluation.
4. Independent projects.
5. Final examination.
6. Cooperative work with other students.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

1. Software Instructional Materials (printed/multimedia interactive)
2. Supplementary Video
3. Trade Publications

Activities

1. Individual Work (projects)
2. Service Learning Projects
3. Lectures
4. Class laboratory shop work
5. Teacher & Student Demonstrations
6. Student Presentations
7. Small group activities
8. Class Critiques
9. Outside resource people
10. Field Trips

18. Brief Course Description
This course is open to all students interested in learning to play the guitar or to improve their existing skills. Individuals as well as groups will work on learning the fundamentals of playing the guitar, music fundamentals including music reading, and basic music theory. Students will also work on learning advanced chords, finger picking, and working with different musical styles. In addition, students will learn the history of the guitar and related instruments.

[redacted]

B. Course Content

19. Course Goals and/or Major Student Outcomes

1. Students will learn the fundamentals of playing the guitar.
2. Students will be able to execute and perform basic chords and pick patterns on the guitar.
3. Students will learn music-reading skills through performance on their guitar.
4. Students will learn about the historical development of the guitar as well as instruments that are related to the guitar.
5. Student will learn about different styles of guitar performance and their relationships to different styles of music.

20. Course Objectives

1. Students will be able to play accompaniment patterns on their guitars to various types of song styles using chords and pick patterns.
2. Students will demonstrate their ability to read music through performance on their guitars.
3. Students will learn to perform both as individuals and as members of small ensembles.
4. Students will demonstrate knowledge of the historical development of the guitar and related instruments through research papers and/or Power Point presentations.
5. Students will demonstrate knowledge of different music styles and their relationship to the guitar through performance and research presentations.

21. Course Outline

	CALIFORNIA DEPARTMENT OF EDUCATION MUSIC STANDARDS GRADES 9-12 PROFFICIENT		CONTENT/SKILLS/ACTIVITIES
			Performing and Creating
			a. Demonstrate various guitar techniques: strumming, picking, and chording.
	2.4, 2.8, 3.3, 3.4, 4.1, 4.2		b. Perform a varied repertoire of instrumental literature with expression and technical accuracy.
	2.5		c. Perform alone and in ensembles with one or more students on a part.
	1.2		d. Improvise stylistically appropriate harmonic, melodic, and rhythmic variations.
	2.6, 2.7		e. Compose and arrange music in specified styles, demonstrating creativity in using the elements of music.
	1.3		f. Demonstrate ability to read tablature and standard notation for guitar.
	5.1		g. Explain characteristics of two or more arts, detailing their similarities and differences.
	3.2, 5.1, 5.2,		h. Investigate careers in music fields.
	3.1, 3.4		History and Culture a. Study guitar literature and methods representative of various musical styles.
	3.1, 3.3, 3.4, 3.5		b. Classify by style and by historical period or culture unfamiliar but representative examples of guitar music and explain their classifications.
	3.1, 3.2		c. Identify sources of specific American genres, trace their evolution, and cite musicians associated with them.
			Evaluation and Analysis
			a. Understand guitar styles and terminology.
	1.3, 1.5, 1.6, 2.9, 2.10		b. Demonstrate proper care and maintenance of the guitar. b. Understand basic theory necessary to play the guitar: I, IV, V, and V 7 chords in various major and minor keys.
			c. Develop technique in a variety of major and minor scales and modes.
	4.1, 4.2		d. Analyze aural examples of a varied repertoire of guitar music representing diverse genres and cultures, by describing the uses of elements of music.

	4.1, 4.2		e. Develop specific criteria for making informed, critical evaluations of the quality of performances, compositions, arrangements, and improvisations, and apply the criteria in personal participation.
	4.1, 4.2		f. Evaluate a performance or composition by comparing it to similar or exemplary models.

			Aesthetic Appreciation a. Develop and maintain individual practice discipline for self-enrichment.
	4.3		b. Explain how elements, processes, and organizational principles are used in similar and distinctive ways in the various arts.
	4.1		c. Prepare self-chosen musical selection for performance.

22. Texts & Supplemental Instructional Materials – Text books will be chosen that will meet the curriculum outlined above.

23. Key Assignments

Students will:

1. Learn proper techniques for holding and playing the guitar.
2. Learn proper position for left hand and fingers on the fingerboard.
3. Learn the names of the six strings on a guitar and where those notes are located on a
4. music staff (treble clef).
5. Learn basic theory and gain an understanding of how chords are built.
6. Learn how to read music and melodies on a guitar.
7. Research and learn about the history of the guitar and related instruments.
8. Research and learn about the history of guitar performance.

24. Instructional Methods and/or Strategies

Primary instructional methods will include group and individual instruction on the guitar as well as working in small groups. Other methods will include demonstrations on different playing techniques, listening to recorded examples of guitar performances, internet and library research, videos, and listening assignments.

25. ASSESSMENTS

1. Proficiency exams, playing tests
2. Progress reports
3. Self-evaluation
4. Research reports

C. OPTIONAL BACKGROUND INFORMATION

26. History of Course Development

This course is currently offered at Arroyo Grande High School and San Luis Obispo High School. I would like to see students at Righetti have the same opportunity to learn and enjoy the guitar as well as develop a deeper appreciation of music. In addition, this course will give students an opportunity to learn to play instruments that have had no previous music experience.

Course Title

Hands on Art History A/B (P)

Description of Target Group

This course is designed for students who are interested in the study of art history through written, verbal, and performance activities in drawing, painting, and three-dimensional artwork. Hands on Art History is designed for 10th, 11th, and 12th grade, college preparatory students.

Purpose

The purpose of this course is to have both an art lecture and activity format that will allow the student to respond to the study of the history of art through written, verbal, and artistic projects. Both groups and individual activities will be assigned.

Standards of Expected Student Achievement

Upon completion of this course, students will demonstrate the following skills:

ARTISTIC

A variety of art projects will be produced that will demonstrate the student's understanding of various art media as they pertain to the development of art history.

- Identify elements and principals of design in painting, drawing, and sculptures.
- Identify the specific art media used in historic works of art.
- Demonstrate practical knowledge of basic drawing, painting, and 3-D techniques found in the history of western art.
- Recognize the different painting styles of various historical periods, and be able to paint an original work in one of those styles.
- Participate in an exhibit of individual work from the class to be shown in the gallery.
- Discuss how subject matter has been a reflection of the time and culture it originates from.
- List the major movements of twentieth century art.
- Recognize differences and similarities in the art of many cultures.
- Demonstrate an ability to analyze and critique works of art based on established criteria.
- Identify and discuss major works of art from specific periods of art history.
- Recognize the role of the artist in our society, and comment on current trends in art today.

WRITING

Students will be expected to demonstrate the following skills:

- Present an idea clearly and persuasively
- Use logic and relevant illustrations to support ideas
- Use conventions of good writing
- Use research information to validate points
- State and develop an argument

Students will demonstrate the ability to write the following types of discourse:

- Analysis
- Comparison and Contrast
- Report
- Evaluation

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Students will have a variety of written and artistic experiences to better understand the history of art, which will include lectures, discussions, art projects, written papers, and attending exhibits at the Museum Art Center. Examinations will be written and will also include the creation of art objects.

Comments:

Course Purpose: *What is the purpose of this course?*

Music is intertwined with our culture in innumerable ways – it reflects us, our struggle, or economics, our politics; music permeates every aspect of our media-dominated environment. Understanding music, learning to read music, interpret it, and ultimately, to play it, is akin to learning a language that you always found lovely to listen to, but you didn ' t quite understand. Education in music can open avenues for expression in students, enabling them to put a world of emotions into the notes that they play, and to interpret a world of emotion by learning the language of the musician. Interpreting a piece is, in this a way, like cracking a history book.

The purpose of the SMHS Intermediate Guitar course is to introduce and foster more advanced study of music using the guitar. It will provide expert level knowledge of the general framework requirements and to hone student musical abilities in ensembles and classical genres. As the guitar is an instrument with a rich history that also acted as the crux of much of modern music, study will include jazz, blues, world music and newer forms of progressive music from the 20th and 21st centuries.

This will provide a foundation for their post-high school education, appreciation and enjoyment of music. Students will develop skills in reading, writing, and performing guitar music – which will provide them with a new language – a new means of communicating with the world around

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

Intermediate Guitar is a performing arts class where the emphasis is on learning how to play the guitar. Students will further their study of the many styles and techniques that are found in guitar playing. Students will continue to read music notation, guitar tablature, play chords, accompany other musicians, play in orchestration, as well as improvise. Students will also learn applicable music theory that accompanies being a successful guitarist at a more advanced level. The course will also continue to present the history of the guitar, its significance in the music world, and how the instrument is featured in many of the music cultures around the world. There will also be a strong song writing and recording component. Students will be able to further grow and explore through the guitar curriculum by performing in small and large ensembles that are relevant to the guitar player. Emphasis in performance will center around multiple styles of music: Classical guitar, pop, blues, jazz, and rock techniques.

GENERAL GOALS AND OBJECTIVES:

Students will read about, write about, talk about, and reflect upon topics pertaining to the guitar.
Students will learn more about the history of the guitar, the musicians, bands, and artists who have made an impact on the guitar world.
Students will work as a class, independently and collaboratively in learning about the guitar.
Students will learn how to play chords, note-reading, tablature, and the technical skills that are needed in playing the guitar.
Students will learn more advanced music theory that pertains to successful guitar playing, improvisation, creating melodies, and composing.
Students will learn basic song-writing skills.
Students will analyze and compare the different styles of guitar playing found in our music world.
Students will learn about career possibilities related to the guitar.
Students will develop creative skills in problem solving, communication and time management.
Students will learn the music concepts and vocabulary of guitar playing in order to write about, read about, and discuss with fellow students.
Students will use many of today ' s music technology in aiding them to become successful guitar players and musicians. (Pro-Tools studio, MIDI, guitar pods, amplifiers, notation/tablature software, internet sites) Students will acquire the discipline of regular individual practice.

STUDENT READING COMPONENT:

Students will be assigned readings from an array of sources including method books, guitar-related magazines/publications, and internet sites/articles.
Students will be required to follow written instructions on assignments and projects.

STUDENT WRITING COMPONENT:

Students will describe, analyze, critique and write about music selections that will be heard during class through " active listening " assignments.
Students will compare and contrast the different styles found in many of the significant guitar players in the music world.
Students will write an essay/research paper on a musician that is significant in the guitar-world.

STUDENT ORAL COMPONENT:

Students will perform for each other the pieces of music that will be studied in class. Students will express and present the concepts being learned.
Students will often work in groups- performing and presenting to the class an explanation of the process involved.
Students will orally respond to musical pieces, examples, demonstrations, performances, etc. using vocabulary, concepts, and terms appropriate to guitar.
Regular in-class discussions will be conducted in order to assess the student ' s understanding of new concepts that have been introduced.

Course Title

Intermediate Drawing A

Description of Target Group

10 - 12
An appropriate lab fee will be charged for drawing equipment.
The student will keep the equipment and may be required to provide basic personal materials.

Length of Course: 1 semester- 5 units

Purpose

After the successful completion of Introduction to Art, students will continue learning more about the drawing process will have the opportunity to further learn technique, successful usage of a variety of medium which will enhance individual creativity while developing individual skills.

Students will learn how to produce drawings, which will rely heavily upon sight and object drawing as well as creating work based upon imagination.

Emphasis will continue to refine traditional style and methods of drawing as well as creating work in abstract form such as cubism and surrealism.

Students will explore drawing as a means of communication and visual thinking. This course will promote an understanding and appreciation of the work of master artists, and the influence of culture on art. The course will enable students to understand and appreciate diverse forms of artistic expression and, where appropriate, exhibit skills of visual analysis and critical perception in written, oral, and individual work. Students will utilize all current technology to access information pertaining to all areas within the course.

Prerequisites: Successful completion of Introduction to Art A and B, or recommendation of the instructor based upon the student's portfolio.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the ability to:

1. See and record observations through freehand drawing.
2. Use basic drawing techniques with a variety of mediums.

Intermediate Drawing A (continued)

3. Draw objectively objects from “sight” as well as from imagination.
4. Enlarge or reduce a subject using grid technique.
5. Organize space (composition) on a picture plane.
6. Develop an appropriate written and oral art vocabulary.
7. Appreciate and understand various forms of artistic expression.
8. Exhibit skills in oral, written, and visual expression.
9. To discuss various master artists and periods of Art History.

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of class assignments for each grading period.
3. Students will select and present two pieces of work for scheduled art showings: school and community.
4. Oral and written Tests from the Scholastic Art magazine and other sources.
5. Articles, and class art videos and other visual art materials.

Instructional Materials

To be assigned according to individual project. This would include such materials as pencils, erasers, colored pencils, paints, paper, glue, scholastic magazine, art videos, access to the internet for art research, reports, and a portfolio.

Refer to: Secondary Adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District.

Activities

Individual work, lectures, participation in class discussions, videos, and field trips. Daily drawing activities in form of lessons designed to develop the student’s ability to draw realistic and from their imagination continuing to learn new technique and medium. Students will also be responsible for producing all required work to the best of their ability and to properly present assignments in portfolio form.

Type of course adoption requested: **Required** for graduation

Major purpose for adding this course to curriculum: To meet the state criteria for standards articulation and to also meet the fall semester of the A - G University of California requirements and the California State University freshmen entrance requirements.

Course Title

Drawing B (Intermediate)

Description of Target Group

10 -1 2

An appropriate lab fee will be charged for drawing equipment. The student will keep the Equipment. Students may be required to provide basic personal materials.

Length of Course: 1 semester - 5 units

Course Objectives

After the successful completion of Intermediate Drawing A, students will continue learning more about the drawing process to further learn technique, successful usage of a variety of medium which will enhance individual creativity while continuing to develop and refine individual skills.

Students will learn how to produce drawings that will rely heavily upon sight and object drawing as well as creating work based upon imagination.

Emphasis will continue to refine style and methods of drawing as well as creating work in abstract form such as cubism and surrealism.

Students will explore drawing as a means of communication and visual thinking. This course will promote an understanding and appreciation of the work of master artists, and the influence of culture on art. The course will enable students to understand and appreciate diverse forms of artistic expression and, where appropriate, exhibit skills of visual analysis and critical perception in written, oral, and individual work. Students will utilize all current technology to access information pertaining to all areas within the course.

Prerequisites

Successful completion of Introduction to Art A and B, Intermediate Drawing A, or recommendation of the instructor based upon the student's portfolio. Intermediate Drawing A and B must be completed in order to be eligible for CSU / UC freshmen entrance requirements.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the ability to:

Intermediate Drawing B (continued)

1. See and record observations through freehand drawing.
2. Use basic drawing techniques with a variety of mediums.
3. Draw objectively objects from "sight" as well as from imagination.
4. Enlarge or reduce a subject using grid technique.
5. Organize space (composition) on a picture plane.
6. Develop an appropriate written and oral art vocabulary.
7. Appreciate and understand various forms of artistic expression.
8. Exhibit skills in oral, written, and visual expression.
9. To discuss various master artists and periods of Art History.

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of class assignments for each grading period.
3. Students will select and present two pieces of work for scheduled art showings: school and community.
4. Oral and written Tests from the Scholastic Art magazine and other sources. articles, and class art videos and other visual art materials.

Instructional Materials

To be assigned according to individual project. This would include such materials as pencils, erasers, colored pencils, pencils, paper, glue, scholastic magazine, art videos, access to the internet for art research, reports, and a portfolio.

Refer to: Secondary Adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District.

Activities

Individual work, lecture participation in class discussions, videos, and field trips. Daily drawing activities in form of lessons designed to develop the students ability-to-draw-realistic and from their imagination continuing to learn new technique and medium. Students will also be responsible for producing all required work to the best of their ability and to properly present assignments in portfolio form.

Type of course adoption requested: Required for graduation

Major purpose for adding this course to curriculum

To meet the state criteria for standards articulation and to also meet the spring semester of the A - G University of California requirements and the California State University freshmen entrance requirements in conjunction with intermediate Drawing A (fall semester).

17. Brief Course Description

This course allows students to explore the fundamentals of drawing and design, with an emphasis on art appreciation and art history of various cultures. Students will be expected to learn the process of oral and written communication and refine their skills. Students will utilize all current technology to access information pertaining to all areas within the course.

B. COURSE CONTENT

Please refer to instructions

18. Course Goals and/or Major Student Outcomes

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Knowledge of elements and principles of drawing and design.
2. Understand and apply basic drawing and design.
3. Choose and evaluate a range of subject matter, symbols, and ideas as it applies to individual work.
4. Understand visual arts in relation to history and culture.
5. Evaluate individual work and works of others.
6. Understand how the visual arts connect to other disciplines.
7. Cooperative learning in small group settings on projects.

19. Course Objectives

This purpose of this course is to allow students to explore the fundamentals of drawing and design, with an emphasis on art appreciation and art history of various cultures. Students will be expected to learn the process of oral and written communication and refine their skills. Students will utilize all current technology to access information pertaining to all areas within the course.

20. Course Outline

21. Texts & Supplemental Instructional Materials

To be assigned according to individual project. This would include such materials as pencils, erasers, colored pencils, paints, paper, glue, Scholastic Arts Magazine, art videos, access to the

Internet for art research and reports, portfolio, articles, and class art videos and other visual art materials.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

22. Key Assignments

23. Instructional Methods and/or Strategies

Understanding the process of visualization
Learning to "see" and interpret visually what is seen and what is known

- Sight drawing
- Creating competition

Understanding Basic shape, form, volume

- Successfully create the 2 and 3 dimensional basic shapes in a variety of techniques, with a variety of mediums.

Learning about color

- Primary, secondary, tertiary knowledge
- Complementary, analogous, etc.
- Hue, value, saturation of color

Shading in various techniques and mediums:

- Smooth value, line, stipple, hatching, crosshatching, high contrast, texture
- Pencil, charcoal, colored pencil, pen, ink wash, pastel, watercolor

Proportion, depth, and scale and point of view

- Sight measurement, enlargement with projection and also traditional grid
- Perspective 1,2,3 point
- Proportions pertaining to human figure

Understanding the elements of design

- Series of assignments
  - Structure
  - Pattern
  - Progression
  - Color theory
  - Dominance

Understanding the process of sketching

- Combining basic shapes to create objects
- Stick figures, gesture drawings
- Animals
- Cartooning
- Landscape
- Architecture

Exploring the medium of collage

Exploring 3 dimensional art forms

- Hands on sculpture project

24. Assessment Methods and/or Tools

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of assignments for each grading period.
3. Students will select and present two pieces of work for scheduled art showings: school and community.
4. Oral and written quizzes from the Scholastic Art magazine and other sources.
5. Oral and written critiques of work, in progress and final evaluation.

C. HONORS COURSES ONLY

COURSE DESCRIPTION:

The Introduction to Video Production/Filmmaking 1A/1B course is intended for the student who wishes to learn about the process of video production/filmmaking and learn about the history of Cinema. This hands-on course will introduce the students to the computer and its use and relationship to cinema. It will emphasize the changes that have taken place in film and special effects throughout the years. Students will be taught the elements and principles of art and how to apply them to their film and video projects. Students will be able to critique their work with appropriate art vocabulary and sensory images. Students will be able discus their films with the appropriate cinematic terms and aesthetics. Students will work with Adobe Premiere, Adobe PhotoShop, Adobe Audition, a music/sound program, and Scriptwriting software as well as ACID Music programs. Students will produce Films and a Television news program from concept to viewing. Students will also learn to exchange files between the programs; create special effects, graphics; add audio tracks to video projects and create QuickTime movies. Students will learn the history of cinema and its relation to world

events. Students that intend to go to college; this course will allow the students to succeed in several courses that require graphics, artistic skill and basic computer skills.

STUDENT OUTCOMES:

- Students will be introduced to the vocabulary of cinema and television including genre, period, style mood and pacing. The student's appreciation of the cinema, television, art and aesthetic movements in drama and everyday life will broaden. Students will learn to make the connections between film and computer technology throughout the last 50 years and its importance to our history. This will be done through lecture, example such films and television programming and through textbooks**. (Standard 1.0, Artistic Expression and 4.0, Aesthetic Valuing)**
- Students will read, write, and discuss the history of the Cinema, its reflection of society and its impact on society and world culture. This will be done by viewing films directed/produced by the masters of Filmmaking such as DW Griffith, Charlie Chaplain, Orson Welles, Scorcese, Coppola, etc. **(Standard 3.0, Historical and cultural Context)**
- Students will learn elements of dramatic structure by analyzing plots and plot devices used in films, looking at linear and non-linear time lines, genres, etc. **(Standard 4.0, Aesthetic Valuing)**
- Students will create and present individual projects from what was learned by class critiques with an emphasis on artistic expression. This will be done through the use of various editing programs such as Adobe Premiere, PhotoShop, Aftereffects, etc. Through research and instruction, students will compare and contrast various designs, compositional, cinematic and art techniques and apply these in their own work. These will be comprised of Documentaries, Film autobiographies, and narrative films. **(Standard 2.0, Creative Expression)**
- Students will gain a better understanding of the importance of graphics in advertising, animation, and computer art. Students will learn to recognize and use the creative color palettes and toolbox in PhotoShop, Premiere, and AfterEffects**. (Standard 5.0, Connections, Relationships, Applications.)**
- Students will learn to work with structure and lens design. Gain knowledge on how to use a video camera with appropriate lighting, audio and camera viewpoints. Exchange information between various applications. Edit, view and save a created video project. Compile a video project into a movie. Add transitions between video

clips in movie projects. Work with various filters that can be applied to video clips. Adding audio and being able to modify it in the movie projects. Creating artistic titles and credits in a movie project. Superimpose video clips in a video project. Add text and graphics into a video project and applying motion to them. Work with advanced editing techniques like virtual clips, trimming and multitracking. Create sound files using single and multiple tracks and learn to distinguish between various sound file formats. **(Standard 2.0, Creative Expression)**

- Students will develop potentials and realize true abilities through academic counseling both with the teacher and other students. Students will learn to utilize their time by working on organizational skills, through communication, teacher observation, and time management. Students will learn respect for themselves and for others around them by making them accountable for their own work. **(Standard 5.0, Connections, Relationships, Applications)**

STUDENT ASSESSMENT:

The student will be evaluated on his progress and enthusiasm through artistic perception, overall work and evaluation. The student's grade will be influenced heavily by the essays, film scripts, and video/film projects and presentations that are due throughout the course. Students will present assigned video taped projects, which require several techniques and tools that have been learned. Students, using appropriate artistic vocabulary must present their projects to the class. Students have quizzes and tests as well as oral exams that assess their knowledge of film history, film vocabulary, art vocabulary and computer technology. The teacher will assess students on "in" and "out of class" participation with daily observations.

COURSE CONTENT:

The course is designed to introduce the student to the use of the computer as a creative tool in the creation and presentation of graphic images. Through aesthetic values, such as composition, analysis and interpretation, students will learn to identify the elements and principles of art and sensory images in previous artwork, and films as their own creations. Students will learn the history of film and computer technology. Students will learn the importance of cast and crew, camera function and operation, the function of video recorder, camera structure, and the process of video editing. Students will learn design, composition and will produce film projects such commercials, documentaries,

and narrative films. Several programs such as Adobe Photoshop, Illustrator, Premiere and After Effects will be introduced and used to create the computer projects. Projects will be critiqued and presented to assess student's knowledge and creativity in video production and filmmaking.

TEACHING STRATEGIES:

The teacher will act as a mentor and supervisor. Teacher will lecture, hand out quizzes and check daily to make sure students are on task and progressing satisfactorily. The teacher will show clips from the history of filmmaking and students will be assessed on the changes due to computers in film today. The student will work independently in the chosen area of study. Students must write evaluations to explain their process in the films/video projects they have produced; additionally they must explain what it represents and why it translates the appropriate feeling. The evaluation will explain their motives for producing the film or video project.

CLASS ASSIGNMENTS:

The assignments are intended to familiarize the student with the use of the camera as tool in storytelling. The student will also use software such as Adobe Premiere Pro, Adobe PhotoShop, Final Draft, and various other software as tools to tell a visual story. The assignments are also intended to give the student the experience of working within a group environment and to teach the student the importance of co-operation.

First assignment: Students will form groups of four and produce a written story using prompts supplied by the instructor, with each student contributing. Upon completion the group will then choose a spokesperson to read the story to the class. **(Standard 5.0, Connections, Relationships, Applications)**

- **Second assignment: The Twelve Shot Assignment.** The purpose of the assignment is to familiarize the student will the basic angles, i.e. wide shot, full shot, and close up. The students will also learn the camera moves such as zooms, pans, and tilts. The students will each write a short story that uses the aforementioned. **(Standard 2.0, Creative Expression)**

Students will draw slips of different colored papers, the film crews will be formed of students that have drawn similar colors. The crews will then choose a director, cinematographer, talent, and production assistant. The crew will the then choose who will be the first to produce their film. Each crew will produce four short, 60 seconds, films

with crewmembers rotating positions so that each student will produce a film. **(Standard 5.0, Connections, Relationships, Applications)**

Third Assignment: Numbers video: The assignment is intended to give the students experience in editing to music. The assignment is also intended to expose the student to the idea of a beginning, middle and end. The assignment will also give the student the opportunity to work with the camera and the editing program.

This is an individual assignment. The student will record numbers or any facsimile of a number. They are to record the numbers as a static, do a zoom, pan and a tilt on each number. The student will then choose music and use 90 seconds of the song and edit the numbers to the beat of the music.

Fourth Assignment: The music video: This is an assignment intended to give the student further experience in the art of editing and editing to music. The experience will also expose the student to use of music in films.

The student will rip scenes from sources such as movies, television or any other source to use for the video clip. Music will be provided for the student, this gives the students the experience of working with material that is not of their choosing which is what happens often in the business of cinema.

Fifth Assignment: 2nd Semester, The Basic Sequence: the purpose of the assignment is to familiarize the student with the technique of recording and editing the concept of the basic sequence. The student will work with a crew composed of students chosen at random. Each student will write a story and then turn that story into a script. They will then storyboard the script, plan out a shot plot, scout the location, shoot the story and edit the source material into a visual representation of their script. . The film will then be turned in for critique and discussion. **(Standard 5.0, Connections, Relationships, Applications)**

Sixth assignment: The cutting on the action film: The assignment is intended to give the student experience in the production of a film that demonstrates the technique of cutting on the action and clean exit and clean entrance.

The student will stay with the same crew of the previous assignment.

Each student will write a story, turn it into a script, storyboard the script, do a shot plot, then shoot and edit the source material into a visual representation of their script. The student will then submit the finished film for critique and discussion. **(Standard 5.0, Connections, Relationships, Applications)**

Seventh assignment: The final project: the student will continue with same crew from previous assignments.

Each student will write a story, then a script, storyboard of the script, shot plot, then shoot and edit the source material. The film with utilize all the techniques studied throughout the year. **(Standard 5.0, Connections, Relationships, Applications) (Standard 2.0, Creative Expression) (Standard 4.0, Aesthetic Valuing)**

This will be the final project of the year and will count for their final evaluation.

- **Film Essays:** there will be at least five films viewed throughout the year. The students will then write an essay discussing the film's place in film history as well as the significance of the film. The student will also discuss the various techniques used in the film as they relate to the material discussed in class. . **(Standard 3.0, Historical and cultural Context) (Standard 4.0, Aesthetic Valuing)**

Please refer to instructions

28. Context for Course (optional)

29. History of Course Development (optional)

Course Description

Course Title:	Introduction to Filmmaking/Video Production 1A/1B
Transcript Title:	Filmmaking/Video production
Transcript Course Code:	VP6792 VP6793
School:	Ernest Righetti High School
District:	Santa Maria Joint Union High School
City:	Santa Maria, California
School Contact:	Steve Molina, Vice Principal
	Ph. 805-937-2051 ext. 2705
Subject Area:	Visual & Performing Arts
Grade Level:	9-12
Unit Value:	10 units – One year
Date of School Approval:	June 2001
Pre-requisites:	None/Teacher approval

Course Description:

The Introduction to Video Production/Filmmaking 1A/1B course is intended for the student who wishes to learn about the process of video production/filmmaking and learn about the history of Cinema.

This hands-on course will introduce the students to the computer and its use and relationship to cinema. It will emphasize the changes that have taken place in film and special effects throughout the years. Students will be taught the elements and principles of art and how to apply them to their film and video projects. Students will be able to critique their work with appropriate art vocabulary and sensory images. Students will be able discus their films with the appropriate cinematic terms and aesthetics. Students will work with Adobe Premiere, Adobe PhotoShop, Adobe Audition, a music/sound program, and Scriptwriting software as well as ACID Music programs. Students will produce Films and a Television news program from concept to viewing. Students will also learn to exchange files between the programs; create special effects, graphics; add audio tracks to video projects and create QuickTime movies. Students will learn the history of cinema and its relation to world events. Students that intend to go to college; this course will allow the students to succeed in several courses that require graphics, artistic skill and basic computer skills.

Student Outcomes:

- Students will be introduced to the vocabulary of cinema and television including genre, period, style mood and pacing. The student's appreciation of the cinema, television, art and aesthetic movements in drama and everyday life will broaden. Students will learn to make the connections between film and computer technology throughout the last 50 years and its importance to our history. This will be done through lecture, example such films and television programming and through textbooks**. (Standard 1.0, Artistic Expression and 4.0, Aesthetic Valuing)**
- Students will read, write, and discuss the history of the Cinema, its reflection of society and its impact on society and world culture. This will be done by viewing films directed/produced by the masters of Filmmaking such as DW Griffith, Charlie Chaplain, Orson Welles, Scorcese, Coppola, etc. **(Standard 3.0, Historical and cultural Context)**
- Students will learn elements of dramatic structure by analyzing plots and plot devices used in films, looking at linear and non-linear time lines, genres, etc. **(Standard 4.0, Aesthetic Valuing)**
- Students will create and present individual projects from what was learned by class critiques with an emphasis on artistic expression. This will be done through the use of various editing programs such as Adobe Premiere, PhotoShop, Aftereffects, etc. Through research and instruction, students will compare and contrast various designs, compositional, cinematic and art techniques and apply these in their own work. These will be comprised of Documentaries, Film autobiographies, and narrative films. **(Standard 2.0, Creative Expression)**
- Students will gain a better understanding of the importance of graphics in advertising, animation, and computer art. Students will learn to recognize and use the creative color palettes and toolbox in PhotoShop, Premiere, and AfterEffects**. (Standard 5.0, Connections, Relationships, Applications.)**

- Students will learn to work with structure and lens design. Gain knowledge on how to use a video camera with appropriate lighting, audio and camera viewpoints. Exchange information between various applications. Edit, view and save a created video project. Compile a video project into a movie. Add transitions between video clips in movie projects. Work with various filters that can be applied to video clips. Adding audio and being able to modify it in the movie projects. Creating artistic titles and credits in a movie project. Superimpose video clips in a video project. Add text and graphics into a video project and applying motion to them. Work with advanced editing techniques like virtual clips, trimming and multitracking. Create sound files using single and multiple tracks and learn to distinguish between various sound file formats. **(Standard 2.0, Creative Expression)**
- Students will develop potentials and realize true abilities through academic counseling both with the teacher and other students. Students will learn to utilize their time by working on organizational skills, through communication, teacher observation, and time management. Students will learn respect for themselves and for others around them by making them accountable for their own work. **(Standard 5.0, Connections, Relationships, Applications)**

STUDENT ASSESSMENT:

The student will be evaluated on his progress and enthusiasm through artistic perception, overall work and evaluation. The student's grade will be influenced heavily by the essays, film scripts, and video/film projects and presentations that are due throughout the course. Students will present assigned video taped projects, which require several techniques and tools that have been learned. Students, using appropriate artistic vocabulary must present their projects to the class. Students have quizzes and tests as well as oral exams that assess their knowledge of film history, film vocabulary, art vocabulary and computer technology. The teacher will assess students on "in" and "out of class" participation with daily observations.

COURSE CONTENT:

The course is designed to introduce the student to the use of the computer as a creative tool in the creation and presentation of graphic images. Through aesthetic values, such as composition, analysis and interpretation, students will learn to identify the elements and principles of art and sensory images in previous artwork, and films as their own creations. Students will learn the history of film and computer technology. Students will learn the importance of cast and crew, camera function and operation, the function of video recorder, camera structure, and the process of video editing. Students will learn design, composition and will produce film projects such commercials, documentaries, and narrative films. Several programs such as Adobe Photoshop, Illustrator, Premiere and After Effects will be introduced and used to create the computer projects. Projects will be critiqued and presented to assess student's knowledge and creativity in video production and filmmaking.

TEACHING STRATEGIES:

The teacher will act as a mentor and supervisor. Teacher will lecture, hand out quizzes and check daily to make sure students are on task and progressing satisfactorily. The teacher will show clips from the history of filmmaking and students will be assessed on the changes due to computers in film today. The student will work independently in the chosen area of study. Students must write evaluations to explain their process in the films/video projects they have produced; additionally they must explain what it represents and why it translates the appropriate feeling. The evaluation will explain their motives for producing the film or video project.

CLASS ASSIGNMENTS:

The assignments are intended to familiarize the student with the use of the camera as tool in storytelling. The student will also use software such as Adobe Premiere Pro, Adobe PhotoShop, Final Draft, and various other software as tools to tell a visual story. The assignments are also intended to give the student the experience of working within a group environment and to teach the student the importance of co-operation.

First assignment: Students will form groups of four and produce a written story using prompts supplied by the instructor, with each student contributing. Upon completion the group will then choose a spokesperson to read the story to the class.

Second assignment: The Twelve Shot Assignment. The purpose of the assignment is to familiarize the student will the basic angles, i.e. wide shot, full shot, and close up. The students will also learn the camera moves such as zooms, pans, and tilts. The students will each write a short story that uses the aforementioned.

Students will draw slips of different colored papers, the film crews will be formed of students that have drawn similar colors. The crews will then choose a director, cinematographer, talent, and production assistant. The crew will the then choose who will be the first to produce their film. Each crew will produce four short, 60 seconds, films with crewmembers rotating positions so that each student will produce a film.

Third Assignment: Numbers video: The assignment is intended to give the students experience in editing to music. The assignment is also intended to expose the student to the idea of a beginning, middle and end. The assignment will also give the student the opportunity to work with the camera and the editing program.

This is an individual assignment. The student will record numbers or any facsimile of a number. They are to record the numbers as a static, do a zoom, pan and a tilt on each number. The student will then choose music and use 90 seconds of the song and edit the numbers to the beat of the music.

Fourth Assignment: The music video: This is an assignment intended to give the student further experience in the art of editing and editing to music. The experience will also expose the student to use of music in films.

The student will rip scenes from sources such as movies, television or any other source to use for the video clip. Music will be provided for the student, this gives the students the experience of working with material that is not of their choosing which is what happens often in the business of cinema.

Fifth Assignment: 2nd Semester, The Basic Sequence: the purpose of the assignment is to familiarize the student with the technique of recording and editing the concept of the basic sequence. The student will work with a crew composed of students chosen at random. Each student will write a story and then turn that story into a script. They will then storyboard the script, plan out a shot plot, scout the location, shoot the story and edit the source material into a visual representation of their script. . The film will then be turned in for critique and
discussion.

Sixth assignment: The cutting on the action film: The assignment is intended to give the student experience in the production of a film that demonstrates the technique of cutting on the action and clean exit and clean entrance.

The student will stay with the same crew of the previous assignment.

Each student will write a story, turn it into a script, storyboard the script, do a shot plot, then shoot and edit the source material into a visual representation of their script. The student will then submit the finished film for critique and discussion.

Seventh assignment: The final project: the student will continue with same crew from previous assignments.

Each student will write a story, then a script, storyboard of the script, shot plot, then shoot and edit the source material. The film with utilize all the techniques studied throughout the year.

This will be the final project of the year and will count for their final evaluation.

Film Essays: there will be at least five films viewed throughout the year. The students will then write an essay discussing the film's place in film history as well as the significance of the film. The student will also discuss the various techniques used in the film as they relate to the material discussed in class.

MATERIALS OF INSTRUCTION:

Adobe Premiere Pro Classroom in a book by Adobe

Adobe Aftereffects 5.0 Classroom in a book by Adobe

Adobe Photoshop 7.0 Classroom in a book by Adobe

Textbooks:

The Bare Bones Camera Course for Film and Video

Flashback, a brief history of film

Supplemental textbooks:

Film Directing, Cinematic Motion, a workshop for staging scenes by Steven d. Katz 1992

Film Directing, Shot by Shot, visualizing from concept to screen by Steven d. Katz 1991

You stand there, Making Music Video, by David Kleiler & Robert Moses 1997

Introduction to Video/Film Production

Ernest Righetti High School, Santa Maria, California

Course Description

Course Overview:

This course is an introduction to the art of filmmaking. This course focuses on the necessary skills to provide the student with a perceptual bas leading to comprehension of visual artistic communications, creative expression, historical and cultural context; aesthetic valuing and connections, relations, and applications of the Motion Pictures arts. Students will learn the equipment, techniques, technology and potential application in other subject areas and in careers. The elements, techniques, and styles serve as a foundation for each unit covered. Selected historical or cultural contexts will be applied with attention to analysis, interpretation, and relationship to student work as well as appreciation of motion picture works from other cultures and times. This filmmaking course will meet the SMJUHSD VPA graduation requirements as well as the VPA requirements for admission at CSU system.

The course is meant to expose students to the art of filmmaking. It focuses on the necessary skills to provide the student with a perceptual base leading to comprehension of visual artistic communication, creative expression, historical and cultural context; aesthetic valuing and connections, relations, and applications of the Motion Picture arts. Students will learn the equipment, techniques, and styles serve as a foundation for each unit covered. Selected historical or cultural contexts will be applied with attention to analysis, interpretation, and relationship to student work as well as appreciation of motion picture works from other cultures and times.

Prerequisites:

None

Co-requisite:

None

Course content:

- Technical ability and improvement 10%
- Class participation 10%
- Group Project 60%
- Three Shooting Exercises: 10%
- Homework, Narrative creation, storyboarding, inspiration project, class presentations 10%

Course Outline

A. Non-fiction Filmmaking and Digital Video Production

Unit 1 Introduction-Course Overview

- Seminal Documentary Filmmakers

- The history of Documentary Films
- Discuss different methods in theory and practice

Unit II The art of capturing Reality, Who, What, Where, When

- Documentary Interview Techniques, styles and form

Unit III Media Literacy

- Learning how to decode media messaging, propaganda styles and marketing techniques
- Connotative vs. denotative meaning
- The responsibility of the filmmaker
- Civic engagement and the role of media in effecting social change
- Identifying market, ideals, cultures-pop, sub & counter

Unit IV Autobiographies

- The line between fiction and non-fiction
- Exploring the personal story as a form of inspiration
- Finding the universal meaning in the personal story

Unit V Listening & creating soundtracks

- Three modes & sounds Physical properties, casual, semantic & reduced
- The power of sound as an element in story-telling
- Creating a soundtrack, gathering Foley sound and composing original music

Unit VI Pre-Production procedures

- Treatments, script formats & formulas, storyboarding, shot list, shooting schedules, roles & responsibilities

Unit VII Post Production, software programs

- Adobe Premier Pro, Adobe Audition, Adobe Encore, Adobe Photo Shop, Final Draft
- Post-Production procedures – importing, editing, saving, rendering, exporting, etc.

Unit VII Production, use of hardware

- Cameras, computers, microphones, digital converters, cables, and eternal peripherals
- Techniques of production – camera shots, camera angles, lighting, sound, etc.

Unit IX fiction Storytelling

- Discuss creating a compelling story and the history of how stories shape culture and our value system
- Four categories of film and they intersect
- Discuss genres & formulas
- Story structure – plot, inciting incident, time/space continuum, story events, scene shifts/beats
- Inventing characters that resonate with an audience, characterization vs character revelation

- Story values – discuss morals, change and conflict as essential elements to creating an interesting and worthwhile movie
- Production value – working with a Rodriquez list i.e. working with what we have. Discuss using pooled resources to create compelling sets costumes and props

Unit X Acting for the camera

- Introduction to methods; Sense memory, act as if, physicality

Unit XI Visual language of storytelling through editing

- Rhythm and timing
- Transitions, cutaways, inserts, split screens
- Small group and private instruction
- Teacher student editing meetings
- Lectures, group, and individual camera/editing time
- Hands-on learning with camera's and editing
- Peer mentoring and critiques of individual projects and ideas
- Independent discovery in the film making process
- We create a safe environment for learning and experimentation
- As teaching mentors we aim to provide our students with hands-on experiences and guidance in developing our greatest gift – the imagination. Instructors facilitate the learning experience through visual aids, various creative workshops, and helping students explore their ability to create a world through the technical manipulation of images. We aim to inspire each student to become a critical thinker of the media they are present with and to learn to enjoy communicating through a visual medium. Ultimately, we will focus on providing new skills in communicating, group cooperation, improvisation, and problem solving skills.

Standard I Artistic Perception: Language and skills unique to a given art.

Motion Descriptor: Students discover how to watch and respond to motion picture media by looking at elemental parts used to create the final product. They learn the purpose, effect, and terms for different elemental tools in motion picture production.

Processing, analyzing, and responding to sensory information through the *Develop Perceptual Skills and develop motion picture vocabulary.*

1.1 Recognize, analyze, and discuss story elements of a sample motion picture such as character, plot, catalytic action, twists, and climax.
1.2 Recognize, analyze and discuss elemental methods used to illustrate the story such as the cinematography, camera work, pacing, sound, and soundtrack.
1.3 Research the mis-en-scene of a Director and ow his stylistic use of specific elements change the mood of a film.
1.4 Research different directors who use similar methods to obtain different results.

Standard II Creative Expression:

Motion Picture Descriptor: The students develop the technical skills and knowledge to realize their potential in filmmaking. With these tools they bring an original story to life effectively using every element to creatively and artistically illustrate the story.

Creating, performing, and participating in a given art.

Expression, Story Development and Creative use of the Medium.

2.1Develop a coherent story and script with a catalytic action, climax and resolution.

2.2 Design a storyboard or shot list that uses shots appropriate to the desired tone of each scene.

Skills, Process, Scheduling, and Equipment Control.

2.3 Plan and organize logistics of shooting each scene including, location, character, props, costumes, etc.

2.4 Creatively and efficiently use the camera, lighting, locations, costumes, props and other elements to soot the raw footage.

2.5 Edit together footage, apply sound effects and a sound track so that the final product clearly communicates to the audience all of the subtle aspects of the story.

Sample Evidence of meeting standards:

- Culminating Narrative Film project applies to 2.1,-2.5
- The seminal style project applies to 2.2-2.4
- The editing projects applies to 2.5

Standard III Historical and cultural context: Dimensions of a given art.

Motion Picture descriptor: The students look into the role the motion picture has played in our culture since its invention and the ways in which it has evolved into the present da. They also look at the shapes and styles it has taken in different cultures around the world today.

Understanding historical contributions and cultural.

Themes Form, and Effects of Motion Pictures Throughout History

3.1 Examine the stories behind and the significance of the same of the first films ever made, by the Lumiere Brothers.

3.2 Identify the different forms motion pictures have taken throughout history and how they have each affected the culture of the times.

3.4 Look at the film styles of Europe, Latin America, India, and East Asia noting style and subject matter differences form culture to culture.

Sample evidence of meeting standard:

- Students will do presentations on key historical players or in film history and the effect they had on the society of the time. Applies to 3.2

- Students will make their own short films in the same style of the Lumiere brothers. Applies to 3.1
- Students will watch, analyze, and compare and contrast different motion pictures form American modern culture to films of the past. Applies to 3.2, 3.3
- Students will watch, analyze and discuss the styles and themes of Motion Pictures of other cultures. Applies to 3.4
- The class will examine the presence of motion picture media in today's culture specifically noting its use for advertising. Applies to 3.3

Standard IV Aesthetic Valuing: of a given art form.

Motion Picture descriptor: Students critically and analytically watch a motion picture, including their own, and asses it relevancy, meaning, and the effectiveness of the piece.

Responding to analyzing, and making critical assessments about works.

Derive meaning and relevancy

1.1 Watch a motion picture and assess a meaning and relevancy based on personal experience.
1.2 Examine and articulate how the meaning and relevancy might change considering the personal experience and socio-economic status of the filmmaker at the time of production.
1.3 Compare how historical films were received originally to how they are today, noting how current events, values, and modern culture effect point of view.

Judge Effectiveness and Artistic Merit.

1.4 Judge a motion picture by looking at the elements used and articulate effectiveness using the vocabulary learned in class.
1.5 Watch their own films and make the same judgments.

Sample evidence of meeting standards:

- Students will at their own films with the instructor, scrutinize every element, and judge their effectiveness within the context of the scene and within the works as a whole. They will also consider the meaning relevancy their work has, and consider interpretations other viewers might have. Applies to 1.2, 1.3, 1.5
- Student swill critically analyze films and TV episodes deriving meaning from the work and judging its effectiveness in according to its use of motion picture elements. Applies to 1.1, 1.4.
- The class will watch classic films and compare the meaning, relevancy they personally derive and compare it to the significance it original held. Applies to 1.3.

Standard V Connections, Relationships, and Applications: Learned in a given art for to learning in other art forms, subject areas and careers.

Motion Picture Descriptor Students develop a variety of skills such as communicating with peers and with the pubic, time and resource management, storytelling, group cooperation, task delegation, and creative problem solving. They also gain an insight into how to create a project with a third party audience in mind.

Connecting and applying what is.

Applications and Life Skills.

5.1 Collaborate in a creative and logistically complicated group endeavor.

5.2 Communicate their ideas clearly and with sensitivity to other members of their group.

5.3 communicate professionally and politely with the public.

5.4 Objectively distance themselves from their work, in order to look at it as an audience might.

Career Related Applications.

5.5 Pitch an original short film to the class.

5.6 Design an advertising campaign for a school event or club.

5.7 Demonstrate an understanding of the duties of each job on a set.

Sample evidence of meeting standards:

- Students will successfully collaborate with a group of their peers to co-create a narrative film that incorporates both storytelling and filming techniques. Applies to 5.1, 5.5, 5.7.
- Students will need to communicate and cooperate with people when filming in a public space. Applies 5.3.
  Students will present a three commercial advertising campaign that includes storyboards and treatments. Applies to 5.6.

- Seminal Style Video: Students choose from the styles of various directors and use similar language and sensory elements to produce a sort experimental video. Students choose their own topic based on their interest. (1.4, 1.5, 1.6, 2.3, 2.5)
- Documentary Interviews: This video requires in camera edit with timely B-Roll and scripted Voiceover. Students learn how to develop questions, listen actively and respond to interviewees in a manner that makes them comfortable and speak openly and honestly. They learn to use setting and other props to present a coherent story. (2.3, 2.6)
- Adbuster Commercials: Students produce an advertisement that challenges societal norms, popular culture, and media, dissecting the market and its ideals. Student watch films that use convincing and persuasive language, and then apply that vocabulary to their own commercial. (1.3, 2.3, 2.6, 3.1, 4.1, 4.4)
- Propaganda Video: Based on models from historical examples of propaganda including speeches from current politicians and historical figures (aka Communist leaders, Hitler), advertisements and short films, etc. students produce a video that addresses a social issue, incorporating at least two rhetorical devices commonly used to promote propaganda. (2.3, 2.6, 4.1, 4.4)
- Public Service Announcement: Students choose a topic they believe the public needs to be informed and educated. They research the information that they need to communicate, as well

as develop strategies for communicating that information effectively. They integrate the information and strategy in a two minute PSA. (2.6, 4.1, 4.4)

- Autobiography: Students produce a one-minute video that tells their personal story in a compelling way. Through extensive peer editing, the videos focus on the most inspiring points in students' lives, and highlight themes that may be applicable to their peers. (2.3, 4.1, 4.4)
- Hollywood Formula: Students learn to identify which common Hollywood "formulas" are used in a variety of films. They critically analyze why those formulas are so effective. Based on their analysis, they produce a one-minute video that mocks but also leverages those techniques. (3.3, 4.1, 4.2, 4.5)
- Character Vide: Students produce a short video that reveals a character's true nature. They will use techniques to uncover the character's objective, motivation, and desire, such that the audience feels they understand who the character really is. (2.3)
- Story Value Video: Students create s short video in which there is an obvious conflict caused by a significant change. They will explore the morals and values that are the heart of the conflict, use these to create a compelling story.
- Acting Skill Development: Students form small groups and read through example scripts, block and stage each one, and then rehearse. Groups perform for the whole class, and use peer feedback as means of developing acting skills (4.2)
- Video Editing: Students se stock/lesson footage to create a short montage that conveys a particular emotion and is set to music. (4.2, 3.3, 1.5)
- Time/Space Continuum: students produce a video that requires moving back and forth in time to properly tell a story or set context for the story. They use transitions, cutaways, inserts, split screens, and flashbacks to create suspense, and challenge assumptions. (2.2)
- Narrative Film: This is the culminating assignment which incorporates all theory and practice learned throughout the course. Students may choose a true story that they want to tell or create their own fictional script. They will integrate both storytelling techniques as well as filming techniques to fully convey the mood, characters, and themes of the film. (2.2)
- Short Documentary: Using the elements of a good story and visual media techniques, students will use a storyboard to plan and produce a short documentary (no longer than 5 minutes). Students collaborate as a group to develop a documentary that is important and engage to each of them, and to which they contribute equitably. (2.6, 4.1, 4.2. 4.3)

Course Materials

Supplement Materials A: Handouts

- Documentary Interviewing Techniques
- Media Literacy Worksheet & Terms
- Propaganda Methods
- Seminal Styles of Documentary Filmmaking
- Cinema Verite & Direct Cinema – Things to Know
- What is listening?
- Story Structure – Key Elements

- The Physical Properties of Sound
- Adobe Premier Pro Handbook
- Example Treatments, Scripts & Storyboards

B. Screenings & Films

- The Art of Capturing Reality – HBO
- Lumiere Brothers – Collected Works
- Kino Pravda & Man with a Movie Camera – Dziga Vertov
- Nanook of the North – Flaherty
- Triumph of the Will – Leni Riefenstahl
- Monterey Pop Festival Documentary
- Propaganda Examples
- Collection of Short Public Service Announcements
- Emmy Award Winning Commercials
- Montage of Great Movie Moments
- Academy Award Winning Movie Trailer – spoof on Hollywood Formulas
- Clips from Avatar, Terminator, Little Shop of Horrors
- Sunset Boulevard
- Montage of Characters Revealing their True Nature

Course Title

Introduction to Art A

Description of Target Group

9-12
Length of Course: 1 semester (fall)-5 units

Purpose

Designed as a hands-on course for the fall semester, which would allow students to explore the fundamentals of drawing and design, with an emphasis on art appreciation and art history of various cultures. Students will be expected to learn the process of oral and written communication and refine their skills. Students will utilize all current technology to access information pertaining to all areas within the course.

Prerequisites**:** None

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

1. Knowledge of elements and principles of drawing and design
2. Understand and apply basic drawing and design techniques and processes
3. Choose and evaluate a range of subject matter, symbols, ideas as it applies to individual work
4. Understand visual arts in relation to history and culture
5. Evaluate individual work and works of others
6. Understand how the visual arts connect to other disciplines
7. Cooperative learning in small group settings on projects

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of assignments for each grading period.
4. Students will select and present two pieces of work for scheduled art showings: school and community.
5. Oral and written quizzes from the Scholastic Art magazine and other sources.
6. Oral and written critiques of work, in progress and final evaluation.

Instructional Materials

To be assigned according to individual project. This would include such materials as pencils, erasers, colored pencils, paints, paper, glue, Scholastic Arts Magazine, art videos, access to the internet for art research and reports, portfolio, articles, and class art videos and other visual art materials.

Refer to: Secondary Adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District.

Activities

Understanding the process of visualization
Learning to "see" and interpret visually what is seen and what is known

- Sight drawing
- Creating composition

Understanding Basic shape, form, volume

- Successfully create the 2 and 3 dimensional basic shapes in a variety of technique, with a variety of mediums

Learning about color

- Primary, secondary, tertiary knowledge
- Complementary, analogous, etc.
- Hue, value, saturation of color

Shading in various techniques and mediums:

- Smooth value, line, stipple, hatching, crosshatching, high contrast, texture
- Pencil, charcoal, colored pencil, pen, ink wash, pastel, watercolor

Proportion, depth, and scale and point of view

- Sight measurement, enlargement with projection and also traditional grid
- Perspective 1, 2, 3 point
- Proportions pertaining to human figure

Understanding the elements of design

- Series of assignments
  - structure
  - pattern
  - progression
  - color theory
  - dominance

Introduction to Art A

Understanding the process of sketching

- Combining basic shapes to create objects
- Stick figures, gesture drawings
- Animals
- Cartooning
- Landscape
- Architecture

Exploring the medium of collage

Exploring 3 dimensional art forms

- Hands on sculpture project

All major sections would have a strong art history, art appreciation unit in conjunction with actual hands on projects.

Type of course adoption requested: Required for graduation

Major purpose for adding this course to curriculum: To meet the state criteria for standards articulation and to also meet the fall semester of the A - G University of California requirements and the California State University freshmen entrance requirements in conjunction with Intro to Art B.

Course Title

Introduction to Art B

Description of Target Group

9-12
Length of Course: 1 semester (spring)-5 units

Purpose

Designed as a hands-on course for the spring semester which would allow students to continue to explore the fundamentals of drawing and design, with an emphasis on art appreciation and art history of various cultures. Students will be expected to learn the process of oral and written communication and refine their skills. Students will utilize all current technology to access information pertaining to all areas within the course.

Prerequisites**:** None

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate:

1. Knowledge of elements and principles of drawing and design
2. Understand and apply basic drawing and design techniques and processes
3. Choose and evaluate a range of subject matter, symbols, ideas as it applies to individual work
4. Understand visual arts in relation to history and culture
5. Evaluate individual work and works of others
6. Understand how the visual arts connect to other disciplines
7. Cooperative learning in small group settings on projects

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of assignments for each grading period.
3. Students will select and present two pieces of work for scheduled art showings: school and community.
4. Oral and written quizzes from the Scholastic Art magazine and other sources.
3. Oral and written critiques of work, in progress and final evaluation.

Introduction to Art B (continued)

Instructional Materials

To be assigned according to individual project. This would include such materials as pencils, erasers, colored pencils, paints, paper, glue, Scholastic Arts Magazine, art videos, access to the internet for art research and reports, portfolio, articles, and class art videos and other visual art materials.

Refer to: Secondary Adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District.

Activities

Understanding the process of visualization
Learning to "see" and intrepret visually what is seen and what is known
- Sight drawing
- Creating composition

Understanding Basic shape, form, volume
- Successfully create the 2 and 3 dimensional basic shapes in a variety of technique, with a variety of mediums

Learning about color
- Primary, secondary, tertiary knowledge
- Complementary, analogous, etc.
- Hue, value, saturation of color

Shading in various techniques and mediums:
- Smooth value, line, stipple, hatching, crosshatching, high contrast, texture
- Pencil, charcoal, colored pencil, pen, ink wash, pastel, watercolor

- Proportions pertaining to human figure

Understanding the elements of design
- Series of assignments
  - structure
  - pattern
  - progression
  - color theory
  - dominance

Introduction to Art B (continued)

Understanding the process of sketching

- Combining basic shapes to create objects
- Stick figures, gesture drawings
- Animals
- Cartooning
- Landscape
- Architecture

Exploring the medium of collage

Exploring 3 dimensional art forms

- Hands on sculpture project

All major sections would have a strong art history, art appreciation unit in conjunction with actual hands on projects.

Type of course adoption requested: Required for graduation

Major purpose for adding this course to curriculum: To meet the state criteria for standards articulation and to also meet the spring semester of the A - G University of California requirements and the California State University freshmen entrance requirements in conjunction with Intro to Art A.

Course Title

Jazz Choir A (Vocal Ensemble)

Description of Target Group

This 5-unit course is designed for students of the 10th through 12th grade level with advanced musical background and/or training and exceptional vocal talent. Students will be responsible for covering any fees necessary for their individual concert attire.

Purpose

The first semester of a one-year course. It is proposed that this advanced level performance group fits the F-G requirements for UC and CSU Freshmen eligibility. Course will be based upon creative expression and will include the historical and cultural context of jazz as a unique American genre with roots in African and European musical heritage. Aesthetic valuing will occur through festival competition performances. Students receive adjudicator ratings and consider, watch, and listen to performances by other student choirs, as well as by professional jazz groups.

The student will develop a knowledge and appreciation of vocal jazz as a unique musical genre. The student will continue to develop his/her existing musical talent within this challenging genre. The student will expand his/her awareness of the world of jazz performance, which demands exceptional talent, musical creativity and innovation, and a high level of musicianship. The course will provide a challenging and stimulating outlet for the outstanding vocal students. The course will feature public performances and festival competitions.

The addition of this course will expand the current music program. This ensemble of advanced vocal students can inspire less musically experienced or skilled students to participate in other school choral groups as well as to aspire to be part of this jazz choir.

Prerequisites: Students must audition to be a part of this ensemble and have instructor's consent to enroll. It is highly desirable that students have at least one semester of previous experience in a choral performance group.

Standards of Expected Student Achievement

Upon completion of this course, students will be successful in their demonstration of the following skills:

1. Demonstrate effective vocal technique (posture, tone, diction, breath control, balance, blend of voices) through singing of jazz arrangements.
2. Demonstrate the ability to sight sing and to read rhythmic notation (including syncopation) and to follow vocal music scores with comprehension of notation, terminology, various musical symbols, and other indications.
3. Demonstrate ability to improvise and scat sing on a given section of a song.
4. Demonstrate an appreciation and (developed) knowledge of various jazz styles.

5. Recognize important jazz musicians (vocal and instrumental) who have made significant contributions to the genre (i.e. John Coltrane, Ella Fitzgerald, etc.)
6. Memorize most materials to be performed.
7. Demonstrate a high level of responsibility and dependability in meeting rehearsal and performance requirements and in caring for music equipment, materials and performance attire.
8. Demonstrate poise and self-confidence and appropriate stage presence through participation in performances.
9. Demonstrate knowledge of microphone technique and basic running of vocal sound system.
10. Demonstrate good citizenship by serving the community through public performance.

Methods of Assessment of Student Learning

1. Students will perform jazz style vocal music in several parts with correct rhythm, pitch, blend, and vocal style.
2. Each student will perform individually demonstrating vocal improvisation and scat-singing skills.
3. Students will be videotaped and write as well as discuss assessment of their own performance.
4. Students will listen to professional jazz recordings and respond with observations in writing as well as orally.
5. Students will clap and count notated rhythms.
6. Students will sight sing given vocal lines.
7. Students will watch videos on particular jazz artists and/or styles and respond in writing by taking notes, completing worksheets, and writing paragraphs.
8. Students will be adjudicated in jazz festival competitions by professional jazz artists and educators.
9. Students will be tested on music fundamentals and knowledge of basic jazz harmonies.
10. Students will use microphones in rehearsal and performance, adjusting volume as they hear themselves on a monitor.

Instructional Materials

Text and Supplementary Materials

Includes: Jamey Aebersold improvisation accompaniments. Music from UNC Jazz Press and A Cappella Catalog and Jazz Times Magazine

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Possible use of video "Bird" ("R" rated)

Activities

1. Rehearsals in preparation for performances include vocal jazz warm-ups, learning of music with piano accompaniment, practice of individual vocal lines and part-singing.
2. Listening to examples of jazz styles by professional jazz artists
3. Instruction and practice in reading and performing syncopated rhythms
4. Instruction and practice in vocal improvisation and scat-singing
5. Instruction and practice in ear-training, with emphasis on jazz chords
6. Instruction and practice in microphone techniques and use of sound system
7. Participation in public performances and festival competitions and clinics
8. Attendance at jazz performances and workshops
9. Writing responses to listening examples and other information given
10. Watching videos covering jazz artists and styles
11. Reading materials, discussing jazz styles and artists and other musically relevant information
12. Instruction in and use of musical and jazz terminology

Course Title

Jazz Choir B (Vocal Ensemble)

Description of Target Group

This 5-unit course is designed for students of the 10th through 12th grade level with advanced musical background and/or training and exceptional vocal talent. Students will be responsible for covering any fees necessary for their individual concert attire.

Purpose

This is the second semester of a one-year course. It is proposed that this advanced level performance group fits the F-G requirements for UC and CSU Freshmen eligibility. Course will be based upon creative expression and will include the historical and cultural context of jazz as a unique American genre with roots in African and European musical heritage. Aesthetic valuing will occur through festival competition performances, as students receive adjudicator ratings and consider, watch, and listen to performances by other student choirs, as well as by professional jazz groups.

The student will develop a knowledge and appreciation of vocal jazz as a unique musical genre. The student will continue to develop his/her existing musical talent within this challenging genre. The student will expand his/her awareness of the world of jazz performance, which demands exceptional talent, musical creativity and innovation, and a high level of musicianship. The course will provide a challenging and stimulating outlet for the outstanding vocal students. The course will feature public performances
and festival competitions.

The addition of this course will expand the current music program. This ensemble of advanced vocal students can inspire less musically experienced or skilled students to participate in other school choral groups as well as to aspire to be part of this jazz choir.

Prerequisites: JAZZ CHOIR A or audition and instructor's consent.

Standards of Expected Student Achievement

Upon completion of this course, students will be successful in their demonstration of the following skills:

1. Demonstrate effective vocal technique (posture, tone, diction, breath control, balance, blend of voices) through singing of jazz arrangements.
2. Demonstrate the ability to sightsing and to read rhythmic notation (including syncopation) and to follow vocal music scores with comprehension of notation, terminology and various musical symbols and other indications.
3. Demonstrate ability to improvise and scat sing on a given section of a song.
4. Demonstrate an appreciation and (developed) knowledge of various jazz styles.
5. Recognize important jazz musicians (vocal and instrumental) who have made significant contributions to the genre (ie. John Coltrane, Ella Fitzgerald, etc.)

Jazz Choir B (continued)

6. Memorize most materials to be performed.
7. Demonstrate poise and self-confidence and appropriate stage presence through participation in performances.
8. Demonstrate a high level of responsibility and dependability in meeting rehearsal and performance requirements and in caring for music equipment, materials and performance attire.
9. Demonstrate knowledge of microphone technique and basic running of vocal sound system.
10. Demonstrate good citizenship by serving the community through public performance.

Methods of Assessment of Student Learning

1. Students will perform jazz style vocal music in several parts with correct rhythm, pitch, blend, and vocal style.
2. Each student will perform individually demonstrating vocal improvisation and scat-singing skills.
3. Students will be videotaped and write as well as discuss assessment of their own performance.
4. Students will listen to professional jazz recordings and respond with observations in writing as well as orally.
5. Students will clap and count notated rhythms.
6. Students will sightsing given vocal lines.
7. Students will watch videos on particular jazz artists and/or styles and respond in writing by taking notes, completing worksheets, and writing paragraphs.
8. Students will be adjudicated in jazz festival competitions by professional jazz artists and educators.
9. Students will be tested on music fundamentals and knowledge of basic jazz harmonies.
10. Students will use microphones in rehearsal and performance, adjusting volume as they hear themselves on a monitor.

Instructional Materials

Text and Supplementary Materials

Includes:

Jamey Aebersold improvisation accompaniments

Music from UNC Jazz Press and A Cappella Catalog and Jazz Times Magazine

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Possible use of video "Bird" ("R" rated)

Activities

1. Rehearsals in preparation for performances include vocal jazz warm-ups, learning of music with piano accompaniment, practice of individual vocal lines and part-singing
2. Listening to examples of jazz styles by professional jazz artists
3. Instruction and practice in reading and performing syncopated rhythms
4. Instruction and practice in vocal improvisation and scat-singing
5. Instruction and practice in ear-training, with emphasis on jazz chords
6. Instruction and practice in microphone techniques and use of sound system
7. Participation in public performances and festival competitions and clinics
8. Attendance at jazz performances and workshops
9. Writing responses to listening examples and other information given
10. Watching videos covering jazz artists and styles
11. Reading materials discussing jazz styles and artists and other musically relevant information
12. Instruction in and use of musical and jazz terminology.

If so, which school(s)? _____

16. Pre-Requisites
Audition and Teacher recommendation

17. Co-Requisites
Concurrent enrollment in Advanced Band preferred but not required.

18. Brief Course Description
Jazz Ensemble is for the most advanced instrumental musicians. The Jazz Ensemble performs intermediate to advanced level literature from various selected eras of musical histories including ragtime, Dixieland, swing, big band, boogie-woogie, Latin jazz, modern jazz and rock. In addition to the techniques of rehearsal and performance, the students learn the theory and history of the music performed. The director schedules required performances. The course may be repeated for additional credit.

COURSE TITLE: Jazz Ensemble A/B

LENGTH OF COURSE: One year (10 credits)

GRADE LEVEL: 9 - 12

PREREQUISITES: Audition and Teacher recommendation. Concurrent enrollment in Advanced Band is preferred but not required.

TEXTBOOK: None

SUPPLEMENTARY MATERIALS: None

INSTRUCTIONAL MATERIALS: A wide variety of Jazz sheet music and method books. Recordings of a wide variety of Jazz performances

COURSE DESCRIPTION

Jazz Ensemble is for the most advanced instrumental musicians. The Jazz Ensemble performs intermediate to advanced level literature from various selected eras of musical histories including ragtime, Dixieland, swing, big band, boogie-woogie, Latin jazz, modern jazz and rock. In addition to the techniques of rehearsal and performance, the students learn the theory and history of the music performed. The director schedules required performances. The course may be repeated for additional credit.

UNIT SEQUENCE

Unit I - Technical Mechanics of Sound production and Related Music Theory

A. Sound
    1. Sound generation of instruments and related physics
    2. Sound modifications of advanced level
B. Musical Elements
    1. Pitch
    2. Rhythm
    3. Harmony
    4. Form
    5. Texture
    6. Tempo and dynamics
    7. Timber

C. Notation symbols
    1. Reading and writing, transposition, multi-part
D. Creating
    1. Improvisations, composing
E. Listening
    1. Compare, contrast, analyze

Unit II - Historical and Multi Cultural: Social and historical influences of selected music

A. Multicultural musical contributions
    1. Analyzing distinctive cultural musical idioms
B. Personal heritage
    1. Comparing individual heritages in music

Unit III - Performance

A. Selection of music
B. Rehearsal techniques
    1. Set-up
    2. Warm-up
    3. Interpret and perform
    4. Closure - clean up
C. Evaluation of performance
    1. Analyze and rationalize group performance
    2. Self analyzation of performances

METHODS OF EVALUATION

1. Written and playing tests
2. Audio portfolio
3. Required practices and performances
4. Recording and video observations of performances and practices
5. Observation of instructor

Standard I - Artistic Perception: Processing, analyzing and responding to sensory information through the language and skills unique to arts.

Music Descriptor: Students listen to, analyze and describe music using music terminology. They read and notate music.

9-12 Benchmarks

9-12.1 The student demonstrates an understanding of music by analyzing and interpreting specific musical works using the vocabulary of music.

9-12.2 The students will read jazz band sheet music and describe how the elements of music and the standard notation symbols are used.

Bench-mark	The student will be able to:	Sample tasks providing some evidence of meeting standards:
1	Demonstrate an understanding of music by analyzing and interpreting specific musical works using the vocabulary of music.	Students analyze standard musical elements of pieces they are performing using very basic music terminology.
1	Comprehend and relate human factors in jazz literature.	Students describe and analyze the emotional nuances and feeling of the music they are performing.
1	Compare and contrast music using historical and geographic descriptors.	Each student will analyze the musical elements of the music they are performing in a basic cultural context.
2	Read jazz sheet music and describe how the elements of music and the standard notation symbols are used.	Each student will demonstrate the ability to read his own jazz sheet music and describe how all the musical elements are used, as well as interrelate to other parts.

Standard II - Creative Expression: Creating, performing, and participating in the arts.

Music Descriptor: Students develop performance skills in order to perform a varied repertoire. They compose and arrange music and improvise melodies and variations.

9-12 Benchmarks

9-12.1 The student performs with expression and technical accuracy, a varied repertoire of jazz literature, including music performed from memory.

9-12.2 the student composes and arranges music for instrumentalists.

9-12.3 The student demonstrates an understanding of the forms and elements of music used to express ideas, feelings, and interpretations of the musician/performer and composer/arranger.

Bench-mark	**The student will be able to:**	**Sample tasks providing some evidence of meeting standards:**
1	Perform with expression and technical accuracy, a varied repertoire of jazz literature, including music performed from memory.	Students demonstrate instrumental skills and perform music graded within their ability.
1	Perform small jazz combo music.	Students perform simple solos or in small ensembles.
1	Understand scales, harmonization, and ornamentation relative to jazz performance.	Students improvise melodies to all levels of music.
2	Compose and arrange music instruments.	Students compose melodies and harmonies for their instrumental jazz parts.
2	Demonstrate compositional idioms through performance.	Students will improvise various style changes to written music.
3	Demonstrate an understanding of the forms and elements of music used to express ideas, feelings, and interpretations of the musician/performer and composer/arranger.	Each student will be able to demonstrate simple unwritten musical nuance and expression on melody and harmony lines of written music.

Standard III - Historical and Cultural Context: Understanding historical and cultural dimensions of the arts.

Music Descriptor: Students develop knowledge and skills necessary to understand and perform jazz music from all parts of the world. They investigate the relationship of music to history and culture.

9-12 Benchmarks

9-12.1 The students compares and contrasts examples of music and singing styles from a variety of cultures, times and places.

9-12.2 The students understand that music reflects, plays a role in, and influences culture.

Bench-mark	The student will be able to:	Sample tasks providing some evidence of meeting standards:
1	Compare and contrast examples of music and jazz styles from a variety of cultures, times, and places.	Students play with expression and technical accuracy a varied repertoire of jazz literature from diverse cultures, times, or places.
2	Understand that music and musicians reflect, play a role in, and influence culture.	Students will perform “landmarks” of jazz literature, in their original form and original level of difficulty, that had a significant impact on the history and culture of that particular era.

Standard IV - Aesthetic Valuing: Responding to, analyzing and making judgments about works in the arts.

Music Descriptor: Students describe, analyze, interpret, and derive meaning from musical works. They develop criteria, then make critical judgments about and determine the quality of musical experiences and performances based on elements and principles of music.

9-12 Benchmarks

9-12.1 The student evaluates a performance, composition, or arrangement by comparing it to exemplary models, using criteria developed prior to the experience.

9-12.2 The student develops specific criteria for making informed, critical judgments about the quality and effectiveness of performances, compositions, arrangements, and improvisations.

9-12.3 The student musician compares formal classical criteria for evaluation with the criteria he/she developed for the evaluation of a variety of musical works.

Bench-mark	**The student will be able to:**	**Sample tasks providing some evidence of meeting standards:**
1	Evaluate a performance, composition, or arrangement by comparing it to exemplary models, using criteria developed prior to the experience.	Students compare a recording of a judged performance by their ensemble to a recording of a professional ensemble performing the same work.
2	Develop specific criteria for making informed, critical judgments about the quality and effectiveness of performances, compositions, arrangements, and improvisations.	Students write a criterion for evaluating the music they or other groups are performing.
3	Compare formal classical criteria for evaluation with the criteria he/she developed for the evaluation of a variety of musical works.	Students compare their performances using their criteria to those evaluations done by musical professionals.

Standard V - Connections, Relations, Applications: Connecting and applying what is learned in each art form to learning in other art forms, subject areas, and careers.

Music Descriptor: Students apply what is learned in music to learning in other subject areas. They develop competencies in problem solving, communications skills, working with others, and management of the time and resources, all of which contribute to lifelong learning and career skills.

9-12 Benchmarks

9-12.1 Students will study the commonalties in all areas of the arts; Artistic Perception, Creative Expression, Historical and Cultural Context and Aesthetic Valuing.

9-12.2 Students study foreign languages as they learn musical terms in French, German and Italian.

9-12.3 Students will practice mathematics as they study rhythms, counting phrases, time signatures and meters.

9-12.4 Students will study Physics as they learn about sound produce, sound waves and intonation.

9-12.5 Students will study History and Social Studies as they explore not only the history of the composer but also how music reflexes the cultural and social atmosphere of the time in which it was composed.

9-12.6 Students will study Anatomy as they learn proper body alignment for posture as well as muscular support needed for proper tone production.

9-12.7 Students research traditional and emerging career opportunities in music.

Bench-mark	**The student will be able to:**	**Sample tasks providing some evidence of meeting standards:**
1	Explain ways in which the principles and subject matter of various disciplines are interrelated with those of music.	Students learn leadership skills using the motivation skill, practice habits, work ethics, and responsibility factors they have learned through music.
2	Research traditional and emerging career opportunities in music.	Students investigate and prepare the necessary performance requirements for an audition for a musical, opera, or like professional jazz performance group.

Course Title

Madrigals (Vocal Ensemble)

Description of Target Group

This course is designed for students of the 10th through 12th grade levels. The number of students is limited and selection of students is made by audition.

Purpose

This course is designed for students with advanced music training and exceptional talent. The course will provide further musical outlets for the outstanding vocal students. It will provide the opportunity for frequent performance.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Develop vocal technique (posture, tone, diction, breath control, balance, and blend of voices), sight reading and ensemble through songs.
2. Develop a spirit of teamwork and cooperation through singing together.
3. Develop skills necessary for the continued enjoyment and participation in a profitable leisure time activity.
4. Follow a vocal music score, understand and use basic music fundamentals of notation, vocabulary, terminology, and symbols.
5. Demonstrate an understanding of rhythm, harmonic and melodic movement.
6. Memorize most materials to be programmed.
7. Demonstrate poise and self-confidence by participation in performance.
8. Demonstrate the qualities of good citizenship and responsibility in the care of music materials, equipment and costume.
9. Develop a basic understanding and appreciation for various forms and styles of quality choral music.
10. Develop citizenship by service to the community through public performance.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

The student will prepare for and present various school programs, festivals, and vocal competitions, and local, concerts and programs.

Grade levels: 10th, 11th, 12th

ourse Description

urse overview:

Magazine Journalism, Editing, and Design is a two semester course, combining the high level critical thinking, reading and writing skills of print journalism with artistic, creative and aesthetic skills of the visual and graphic arts. Students master the writing and editing of the most common forms of journalism stories; read and analyze relevant literature through expository writing; learn and practice the basics of design and layout; analyze and evaluate images based on a set of given values; learn communication, management, and evaluation skills for individuals and small teams; use of state of the art word processing and design software including the Adobe creative Suite (InDesign, Photo shop, illustrator and/or other software used by the professional graphic design community; and demonstrate knowledge and understanding of ethical responsibilities and communications law. This course will sharpen students' thinking and expression, widen their experience with people and communication, provide an environment for self-directed learning and give them confidence in their ability to see their creative ideas to completion.

urse content:

Unit 1 - What is Journalism?

Introduce basic terminology and concepts as related to journalism

Introduce and analyze new values

Introduce and discuss various aspects of print and broadcast journalism

Introduce and discuss editorial positions and job duties

Publication organization

Introduce AP style through Goldstein, Norm's "AP Stylebook and Briefing on Media Law"

Use AP style quizzes to monitor progress as well as areas of need

Unit II - Sales and Management

Advertising sales: how and why?

Unit III - Gathering Data

Primary Sources: how to conduct an interview

Secondary Sources: how to research and develop topics

Conducting a survey

Organizing and maintaining information

Unit IV - Journalistic Writing

Introduce Associated Press (AP) style and its usage

Introduce and analyze a variety of articles including several Bobby Hawthorne's "The Radical What" "The St. Petersburg Times," and sources from the supplemental reading lists.

Introduce and practice structural elements of journalistic writing

Caption writing

The importance of editing

Unit V - Photojournalism

Camera usage and maintenance

Elements of photo composition

Ethics in photojournalism

Unit VI - Graphic Design

Elements of graphic art and design

Refer to David Carter's "The Little Book of Layouts: Good Designs and Why They Work" to show examples of good design

Study the work of David Carson and other contemporary artists

Watch Gary Hustwit's documentary film "Helvetica" t study the culture an impact of graphic design

Introduce and analyze different graphic elements

The function of design

How to create Layouts and design

InDesign and Photoshop training

Unit VII - Laws of the Student Press

The First Amendment

The rights and responsibilities of student journalist

Ethics in the student press

Copyright and fair use laws

Plagiarism

Unit VIII - Critical Media Literacy

Analysis of the impact of media on "norming" society by over portraying certain demographics in media and under portrayal

Analysis of ethos, pathos, logos in advertising and how it affects credibility

Analysis of these of subliminals in print and through graphic design elements

Teacher observation

Practice and production assignments

Research and interview assignments

Rubrics (assignments and portfolio, Grading Policy (assignments and deadlines)

AP style quizzes and tests

The Standards by which work samples will be evaluated shall include:

1. Gather, analyze and organize back ground and foundational information from primary and secondary sources using a variety of methods.

2. Use information gathered through primary and secondary sources to write articles for publication
3. Edit and revise writing for the purpose and adherence to AP format
4. Critique and apply beginning and advanced layout and graphic design techniques
5. Work cooperatively and collaborative within an established editorial leadership structure to produce a high quality, generated publication.

Rubric for Evaluation:

Advanced

Work samples:

- There are at least two sets of samples for each standard
- Each Sample demonstrates mastery of each standard
- Each set comes with a reflection explaining how student worked through the writing and design process, achieving mastery of each step

Reflection:

- Specifically describes the assignment and the role the student played in its production.
- Describes how the assignment helped the student learn to meet the standard.
- Specifically explains how the work sample demonstrates mastery of the standards
- Written with proper grammar and spelling.

Proficiency

Work Samples:

- There is at least one set of samples for each standard.
- Each sample demonstrates mastery of each standard.
- Each set comes with a reflection explaining how student worked through the writing and design process.

Reflection:

- Describes the assignment and the role the student played in its production.
- Explains how the work sample demonstrates mastery of the standards.
- Mostly written with proper grammar and spelling.

Not Proficient

Work Samples:

- There is not a t least one set of sample of each standard of each standard.
- Samples does not demonstrate master of each standard
- Reflection is missing at least one standard/sample.

Reflection:

- Does not describe the assignment and the role the student played in its production
- Does not explain how the work sample demonstrates master of the standards.
- Many mistakes in grammar and spelling.

Students will compile a portfolio of projects (Minimum of two per semester) they have created for publication. Each work sample will include research notes, drafts and edited copies, as well as the final page as submitted for publication. For each sample, students will attach a reflection, which describes the assignment and its contribution to the finished publication. The student will explain the process they followed in creating the sample, as explanation of how the sample demonstrates mastery of the standards and how the work helped the student meet the standards.

AP style quizzes and tests will be used to define areas of need and to reinforce student's grasp of journalistic style.

All writing assignments will go through at least four drafts before publication. Principles of scholastic journalism, ethics, and Associated Press style editing will be emphasized in all written assignments which include:

- Feature writing: in depth reporting and coverage of selected issues will include a wide range of challenges, struggles, accomplishments, pain, failures, successes and joy.
- Profile stores: students will accomplish story-telling through the eyes of another individual incorporating intense interviewing as well as detailed observation. Students will develop investigative as well as listening skills.
- Sports stories: Students will capture the essence of athletic events both on and off the court, including highlights of individual games as well as feature-style reporting on individual athletes, coaches, support staff, and fans. Students will be encouraged to attend multiple practices as well as homes and away games to see the team in action in a variety of venues.
- Academic Writing: Beat-style reporting will be used to follow the activities and events integral to the learning process in every academic domain. Students will also focus on various learning and teaching styles in covering academics fully from all angles.
- Fine arts stories: Coverage of fine arts classes and events will include activities in and out of the classroom, major events, art shows, drama and music performances, and feature reports on individual performers. Students will cover such events for a variety of angels in order to find the best way to tell their stories.
- Along with the information gathering, interviewing, editing, and cop writing (including headlines, subheads and captions) involved in scholastic journalism, students will also tell their stories through visuals via photojournalism and graphic design. The resulting presentations of content through a marriage of elements will create a single, unified concept to tell a story fully both verbally and visually.
- Know and understand terminology and concepts related to all aspects of journalism and publication production.
- Read and understand a variety newspaper, magazine and journal articles to analyze content and structure similarities and differences.
- Read and understand longer works of nonfiction, comparing and contrasting the events and ideas to other articles and factual documents.
- Prepare and analysis of a work for nonfiction focusing on similarities and differences in information obtained from primary and secondary and secondary sources and their relationship tot he overall topic.
- Writing captions according to acceptable style that are an extension of the photograph and stand on their own as mini stories.
- Write attractive and suitable headlines and subheads.
- Prepare interview questions that will elicit responses sufficient to write a comprehensive story, and conduct interviews.
- Gather, analyze and organize background and foundational information from primary and secondary sources using a variety of methods.
- Use information gathered through primary and secondary sources to write articles for publication.
- Edit and revise writing for purpose and adherence to AP format.
- Understand and apply the legal and ethical considerations for journalism when selecting topics and writing.
- Critique and apply beginning and advanced layout and graphic design techniques.
- Develop interpersonal and communication skills through spoken and written communication.
- Apply conventions of typography as a dynamic design element for readability, legibility and aesthetic appeal.
- Work cooperatively within an established editorial leadership structure to produce a high quality, student generated publication.
- Delegate responsibility with an awareness of job specifications.
- Use backwards planning techniques to structure deadlines for successful completion of publication.
- Schedule and balance personal and academic demands for effective time management.
- Establish, communicate and follow a collective editorial vision for the publication.
- Know and fulfill the business related responsibilities of a successful and financially sound publication.
- Students know and understand terminology and concepts related to all aspects of journalism and publication

Title:	Marching Band
Length of course:	Half Year
Subject area:	Visual & Performing Arts ("f") / Music
UC honors designation?	No
Prerequisites:	None

Co-requisites:	**None**
Integrated (Academics / CTE)?	**No**
Grade levels:	**9th, 10th, 11th, 12th**

Course Description

Course overview:

Marching Band is a participation based class involving performances at football games, local parades, community events, and state-wide competitions. Students will achieve an advanced level of performance skills on their instruments. Individual instrumental technique growth, group dynamics and introduction to leadership skills will be emphasized. May be repeated for credit.

Through standards based instruction, the goals of the marching band include proficiency in musical concepts and ideas and an understanding of musical aesthetics by performing varied styles of music and repertoire. The students will be able to perform and analyze music through various competitions throughout the season. Goals of the class include the ability to perform in a public setting with good musical quality and professionalism.

Course objectives include ability to perform and analyze music. Ability to perform music with expression and technical accuracy. Perform on their instrument with each other and solo. Ability to critically analyze their own performance using musical terms and ideas including blend, balance, intonation and ensemble playing.

Course content:

Introduction to Musical Performance
Introduction to Musical Performance Students develop the following technical skills: posture, breath support, tone quality, articulation, lip and finger flexibility and dexterity. Aural skills: listening to one self and others, audition, intonation, recognizing chord and interval function. Rhythmic skills: feeling pulse accurately, learning about meters and subdivision. Literacy skills: music notation, ability to read music, music terms and symbols. Structural elements: interval and chord knowledge, harmony, counterpoint, form, phrase structure. Expressive skills: dynamics, tension/release patterns (melodically, harmonically, rhythmically).

Standards Covered within this unit:

1.0 ARTISTIC PERCEPTION

- **Processing, Analyzing, and Responding to Sensory Information Through the Language and Skills Unique to Music**
- **Students read, notate, listen to, analyze, and describe music and other aural information, using the terminology of music.**
- **1.1 Read an instrumental or vocal score of up to four staves and explain how the elements of music are used**
- **1.3 Sight-read music accurately and expressively (level of difficulty: 3 on a scale of 1-6).**

2.0 CREATIVE EXPRESSION

- **Creating, Performing, and Participating in Music**
- **Students apply vocal and instrumental musical skills in performing a varied repertoire of music. They compose and arrange music and improvise melodies, variations, and accompaniments, using digital/electronic technology when appropriate.**
- **Apply Vocal and Instrumental Skills**
  - **2.2 Sing music written in three or four parts with and without accompaniment.**
  - **2.4 Perform on an instrument a repertoire of instrumental literature representing various genres, styles, and cultures with expression, technical accuracy, tone quality, and articulation, by oneself and in ensembles (level of difficulty: 4 on a scale of 1-6).**
  - **2.5 Perform on an instrument in small ensembles, with one performer for each part.**

3.0 HISTORICAL AND CULTURAL CONTEXT

- **Understanding the Historical Contributions and Cultural Dimensions of Music**
- **Students analyze the role of music in past and present cultures throughout the world, noting cultural diversity as it relates to music, musicians, and composers.**
  - **Role of Music**
  - **3.1 Identify the sources of musical genres of the United States, trace the evolution of those genres, and cite well-known musicians associated with them.**

4.0 AESTHETIC VALUING

- **Responding to, Analyzing, and Making Judgments About Works of Music**
- **Students critically assess and derive meaning from works of music and the performance of musicians according to the elements of music, aesthetic qualities, and human responses.**
  - **Analyze and Critically Assess**
  - **4.1 Develop specific criteria for making informed critical evaluations of the quality and effectiveness of performances, compositions, arrangements, and improvisations and apply those criteria in personal participation in music.**
  - **4.2 Evaluate a performance, composition, arrangement, or improvisation by comparing each with an exemplary model.**

- Derive Meaning
  - 4.4 Describe the means used to create images or evoke feelings and emotions in musical works from various cultures.

💻 Unit Assignment(s):

1) Sight-read music accurately and expressively (level of difficulty: 3 on a scale of 1-6) during a selected time after class. Student will learn about sight-reading on an individual/solo level as opposed to a group level.

2) In small groups during class, students critique each other on posture, breath support, tone quality,
and articulation. Students will learn about proper technique and how to notice mistakes.

3) Analyze a piece of music during class by notating on the music itself, chord function, phrase structure, and form. Students will learn about the form of the music without having played it while following the phrase structure.

tudent Focused Practice Strategy

Introduction to Student Led Focused Practice Strategies to develop the following technical skills: lip and finger flexibility and dexterity, identifying trouble spots, proper warm ups, tone quality, and repetition. Aural Skills: listening to one self, recognizing interval function, and tuning capabilities. Rhythmic Skills: feeling pulse accurately, subconscious subdivision, and internal pulse. Literacy Skills: ability to read music, music terms and symbols, and music notation. Structural elements: interval and chord knowledge, harmony, counterpoint, form, phrase structure. Expressive skills: dynamics, tension/release patterns (melodically, harmonically, rhythmically).

💻 Unit Assignment(s):

1) Students will produce a home practice evaluation sheet completed outside of class time. Students will learn the proper skills needed for a positive practice time.

2) Students will perform memorize selected major and chromatic scales outside of class. Students will learn skills needed for memorization of music.

3) Students will record practice sessions outside of class to write a reflection on. Students will learn to critique orally and carry discussions about improvements to be made.

ourse Description

urse overview:

Marimba Band 2 (CTE Capstone) A/B is a yearlong, performing music ensemble class. Traditional and contemporary music from Latin America with an emphasis on Mexican music genres are explored. Students study the historical background of the music genres, develop playing and singing skills and performance skills, apply musical arranging skills, learn production elements and business/managerial skills, and develop a professional career plan. It also provides instruction on the aesthetic, cultural and historical dimensions of Latin American music.

This class allows students from all backgrounds to experience and understand music as a component of Mexican/Latino culture. The central purpose of this class is to prepare a quality performing arts group to present for local schools, civic organizations and community events, exposing our audiences to the rich and vibrant world of traditional and contemporary Latin American music, thereby fostering the appreciation and pride in Latino/Mexican tradition and culture.

urse content:

Music Repertoire and Performance Technique & Stage Presence

Classroom Hours: 110 **Lab/Work Based Learning:** 120

A central purpose of this class is to prepare a quality performing arts group to present for local schools, civic organizations, and community events, exposing our audiences to the rich and vibrant world of traditional and contemporary Latin American and Mexican music, thereby fostering the appreciation and pride in Latino tradition and culture. This class often does 25-40 performances a year both on and off campus including two big shows, one in winter and the other in spring, in which professional lighting and sound are employed.

As each year's performing group's repertoire is prepared for performance, students develop technical accuracy, tone quality, and articulation in vocal and instrumental performance, and learn to identify and apply basic music principles such as rhythm, meter, tempo, and timbre. Students have the opportunity to learn works from several composers and are charged with performing these compositions communicating the original intent of the work while employing personal artistic intent and interpretation. Students are also given the opportunity to transcribe music, transpose music, arrange music for voice and acoustic as well as digital instruments, and improvise solos over given chord progressions.

Each year students learn 6-10 suites (three to four songs) from a variety of Latin American and Mexican music genres. Students are expected to learn all selections to a high degree of proficiency including notes, chords, rhythm, style, etc.

Frequent choices include, but are not limited to *música ranchera*, *polca ranchera*, *mariachi*, *cumbia*, *tropical*, *chachachá*, *mambo*, *balada*, *bolero*, *corrido*, and *rock en español*.

Students also work on developing stage presence through consistent desired facial expression (e.g. smiling, eye contact), poise, posture, and costume/hair appearance.

Common Core Academic Standards

CCSS.ELA-Literacy.L.11-12.6

CCSS.ELA-Literacy.RST.11-12.4, 11-12.5, 11-12.6

California State Academic Content Standards for Visual and Performing Arts, Music

Artistic Perception – 1.1, 1.2, 1.3, 1.4, 1.6

Creative Expression – 2.1, 2.2, 2.3, 2.4, 2.6, 2.7, 2.8, 2.9

Aesthetic Valuing – 4.1, 4.2, 4.3, 4.4

CTE Arts, Media & Entertainment Knowledge and Performance Anchor Standards

Problem Solving and Critical Thinking – 5.1, 5.2

Health and Safety – 6.2, 6.3, 6.4, 6.5, 6.6

Responsibility and Flexibility – 7.1, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7

Ethics and Legal Responsibilities – 8.3, 8.4, 8.5, 8.6

Leadership and Teamwork – 9.1, 9.2, 9.3, 9.4, 9.5, 9.6, 9.7

Technical Knowledge and Skills – 10.1, 10.2, 10.3, 10.4

Demonstration and Application – 11.1, 11.2

CTE Performing Arts: Dance/ Choreography Pathway Standards

Artistic Response – B2.0, B2.1, B2.2, B2.3, B2.4, B2.5, B2.7

Application of Artistic Skills – B5.0, B5.1, B5.2, B5.4, B5.5, B5.6, B5.7

Aesthetic Values – B8.1, B8.2, B8.3, B8.4

Unit Assignment(s):

- Learn Songs and Genres
- Music Quizzes
- Performances (School, Civic Organizations, Community Events)
- Critique of our “Celebration of Mexican Culture” and “Big Show” Performances
    - Written 2-3 page essay using modified Feldman Model for Art Criticism
- Critique of other Marimba Band/Mariachi Performance
    - Written 1-2 page essays utilizing appropriate vocabulary & terms
- Response to Critique of “Me”

Students will be evaluated using rubrics on the degree to which they meet expectations for (1) learning the repertoire of music including stenotes/chords, rhythm, style, etc., (2) demonstrating good stage presence through consistent desired facial expression (e.g. smiling, eye-contact), posture, and costume/hair appearance, (3) attending performances, practices, and rehearsals as well as being responsible for costumes and group property.

Historical/Cultural Understanding

Classroom Hours: 40 **Lab/Work Based Learning:** 0

Students learn about and discuss how culture, ethnicity, identity, migration and media influences have played a role in the development of the contemporary music practices in Latin America. Students explore how each music genre both reflects and influences gender roles, cultural identity, and a variety of social concerns that transcend borders.

Common Core Academic Standards

CCSS.ELA-Literacy.L.11-12.1, 11-12.2, 11-12.3, 11-12. 4, 11-12.6

California State Academic Content Standards for Visual and Performing Arts, Music

Historical & Cultural Context – 3.1, 3.2, 3.3, 3.4

Aesthetic Valuing – 4.4

CTE Arts, Media & Entertainment Knowledge and Performance Anchor Standards

Technology – 4.1, 4.3, 4.5

CTE Performing Arts: Dance/ Choreography Pathway Standards

Historical and Cultural Perspective – B7.3

⮒ Unit Assignment(s):

Historical perspectives and cultural context of Mexican & Latin-American music are focused on in a variety of readings and discussions on topics such as:

- The History of Mariachi Music and Culture
- The Modern Mariachi
- The Value of Tradition
- Women in Mariachi
- Mariachi as a Product and a Profession
- Aesthetic Principles in Mariachi Performance
- The Role and Function of Music in Radio, Television, and Advertising

In addition, the following assignments challenge students to demonstrate their understanding of the historical and cultural context of Mexican & Latin-American music.

- Historical & Cultural Quizzes/Tests

    - Students are tested on historical and cultural components from readings, discussions and lectures on each of the music genres studied.
- Reflection of How This Affects “My” Performance
    - Students write a reflection of how new historical and cultural learnings affect their interpretation of the music and their performance.

Professional/Career Development

Classroom Hours: 30 **Lab/Work Based Learning:** 0

Students learn production elements including staging, lighting, and sound and business/managerial skills. Guest speakers in the professional music field are brought in. Students complete a career plan in the arts field. Students develop their professional skills and demonstrate proficiency in an artistic career pathway through the following projects:

- Collaborative-Learning Choreography Project
- Professional Career Plan Project
- Audition/Choreographic Portfolio

Common Core Academic Standards

CCSS.ELA-Literacy.L.11-12.1, 11-12.2, 11-12.3, 11-12.6

Course Title

Music Appreciation

Replacing an existing course? No

To be submitted for A-G? This class is being submitted as an A-G approved course and will be part of the Visual and Performing Arts Department.

Description of Target Group

This course is targeting students who are not currently enrolled in our Band and Choral classes. Those students can enroll in this course and would benefit from taking the course, but it is geared towards non-music students. There are no lab fees though students may be given the option to purchase certain books or materials if they choose to do so.

Prerequisites: There are no prerequisites.

Purpose

This is a one-semester course. This course is designed to help students understand how to listen to a musical selection. Using the book What to Listen for in Music by Aaron Copland, students will learn clues to listen for in a music selection to help them understand possible motives that the composers had for creating the music and why the music has an effect on us.

Standards of Student Achievement

Students will listen to examples of music literature from the list in the text as well as other examples selected by the instructor. Students will respond to the music in both aural responses and written responses. Students will analyze the use of musical elements and expressive devices and understand how they help the music have more effect on the listener.

Instructional Methods and/or Strategies

Instructional methods will include reading from the book and other handouts along with lecture/discussion with the instructor prior to listening to musical works. Follow up methods after listening to the musical selection may include class discussion, study guides/questions related to the musical work, and quizzes at the end of chapters or sections of the class. Internet research on composers, musical styles, and related materials will be utilized along with other research methods.

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Assessment Methods and/or Tools

The students will be assessed based on their ability to listen and analyze musical selections using appropriate terminology and musical terms. These assessments will be in the form of written reports and oral responses/reports given in class. Assessments will also be compiled based on students' scores on quizzes and related research projects.

Assessment criteria – The instructor will evaluate if student responses and written work successfully describe the musical selections using appropriate musical terms and analytical methodologies.

California Content Standards for Music
Associated with Music Appreciation

***Music*— GRADES NINE THROUGH TWELVE—PROFICIENT**
ARTISTIC PERCEPTION
1.0 Processing, Analyzing, and Responding to Sensory Information Through the Language and Skills Unique to Music

Listen to, Analyze, and Describe Music
1.4 Analyze and describe the use of music elements and expressive devices (e.g., articulation,dynamic markings) in aural examples in a varied repertoire of music representing
diverse genres, styles, and cultures.
1.5 Identify and explain a variety of compositional devises and techniques used to provide
unity, variety, tension, and release in aural examples.

HISTORICAL AND CULTURAL CONTEXT
3.0 Understanding the Historical Contributions and Cultural Dimensions of Music
3.1 Identify sources of music genres of the United States, trace the evolution of those genres,
and cite well-known musicians associated with them.
3.2 Explain the various roles that musicians perform, identify representative individuals who have functioned in each role, and explain their activities and achievements.

AESTHETIC VALUING
4.0 Responding to, Analyzing, and Making Judgments About Works of Music
Students critically assess and derive meaning from works of music and the performance of musicians in a cultural context according to the elements of music and aesthetic qualities.
Analyze and Critically Assess
4.1 Develop specific criteria for making informed critical evaluations of the quality and effectiveness of performances, compositions, arrangements, and improvisations and apply those criteria in personal participation in music.
4.2 Evaluate a performance, composition, arrangement, or improvisation by comparing it to
exemplary models.

CONNECTIONS, RELATIONSHIPS, APPLICATIONS
5.0 Connecting and Applying What Is Learned in Music to Learning in Other Art Forms and Subject Areas and to Careers
Connections and Applications
5.2 Analyze the role and function of music in radio, television, and advertising.
Careers and Career-Related Skills

:

Music Appreciation Standards
Utah Department of Education
(Also used for Music Appreciation Course at Righetti High School)

Core Standards of the Course

TOPIC: Music

STANDARD: 1700 - 01

The students will identify elements and styles of music and characteristics of instruments and voices. (Observer/Listener, Critic)

PURPOSE:

OBJECTIVES:

1700-0101

Identify the basic characteristics of rhythm; e.g., pulse, meter, and pattern.

1700-0102

Describe the various properties of sound; e.g., pitch, duration, and timbre.

1700-0103

Identify the basic characteristics of melody; e.g., register, contour, and point of climax.

1700-0104

Listen to various types and styles of music such as rock, folk, jazz, oratorio, electronic, mass, symphonic, opera, and avant-garde.

1700-0105

Recognize that harmony consists of two or more pitches that produce tension and release, dissonance and consonance.

1700-0106

Identify the unique characteristics of individual instruments and voices and understand their function in an ensemble.

1700-0107

Recognize the historical background of various types and styles of music.

1700-0108

Identify such elements as contrast, balance, unity, variety, and repetition in musical form.

SKILLS AND STRATEGIES:

TOPIC: Music

STANDARD: 1700 - 02

The students will evaluate recordings, and electronic equipment and identify skills used in a music career. (Observer/Listener, Critic)

PURPOSE:

OBJECTIVES:

1700-0201

Evaluate various products such as electronic equipment, recordings, tape decks, etc., for personal use.

1700-0202

Identify the skills necessary for a musical career.

SKILLS AND STRATEGIES:

TOPIC: Music

STANDARD: 1700 - 03

The students will learn to evaluate musical experiences by demonstrating appropriate behavior and by verbalizing ideas and feelings that music can communicate. (Observer/Listener, Critic)

PURPOSE:

OBJECTIVES:

1700-0301

Describe why certain musical experiences and activities may be preferred to others.

1700-0302

Describe ways various types of music have influence society and how society has influenced music; e.g., jazz, rock, folk, country-western, and classical.

1700-0303

Demonstrate responsibility as a musician by:

- Coming prepared to class.
- Caring for music department physical facilities and equipment.
- Reacting appropriately to various music activities.

1700-0304

Describe the contributions of composers, performers, technicians, craftsmen, and others in developing and promoting music.

1700-0305

Describe the different ideas and feelings that music can communicate.

SKILLS AND STRATEGIES:

Course Title

Music History A (P)

Description of Target Group

This course is the first semester of a two-semester course designed for students interested in studying and experiencing the history of classical music from ancient times through the Classicism of the later 1700's. Music History A is designed for 10th, 11th, and 12th grade, college-preparatory students.

Purpose

The purpose of Music History A is to develop a sense of the historical role of music, the function of ancient and modern instruments, the forms of classical music, and the characteristics of a classical composer. Students will also develop music listening skills.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Recognize the various brass, percussion, stringed, keyboard, and woodwind instruments.
2. Recognize the various instruments by their sounds.
3. Recognize the forms of music including Gregorian, chamber, orchestral, choral, operatic, oratorial, symphonic, sonata, canon, and fugue.
4. Demonstrate the contributions to music from Greek, Roman, Egyptian, Palestinian, Chinese, and Indian cultures.
5. Demonstrate knowledge of the roles of church, and secular music in the Middle Ages.
6. Participate once in a performing instrumental group.
7. Participate once in a performing vocal group-specifically a madrigal
8. List the contributions of the following composers: Palestrina, Tallis, Byrd, Monteverdi, Lully, Schultz, Scarlatti, Corelli, Vivaldo, Couperin, Rameau, Purcell, Bach, Handel, Haydn, Bluck, and Mozart.
9. Recognize form, title, composer, and/or time of a composition when a recording of it is played.
10. Discuss the difference between the movements of the sonata form.
11. List the characteristics of the symphonic form.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Text and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Students will be provided with a variety of experiences: lectures, discussions, listening to recordings, using the library for research, writing papers, hearing speakers and performers. Students will also make an instrument and perform once. Students will sing once both acapella and accompanied. Students will attend local performances. Examinations will be in essay form and will incorporate listening skills.

Course Title

Music History B (P)

Description of Target Group

This course is the second semester of a two-semester course designed for students interested in studying and experiencing the history of classical music from the Romanticism of the early 1800's to present. Music History B is designed for 10th, 11th, and 12th grade, college-preparatory students.

Purpose

The purpose of Music History B is to develop a sense of the historical role of music, the function of the various instruments, the forms of classical music, and the characteristics of a classic composer. Students will also develop music listening skills.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Recognize the various brass, percussion, stringed, keyboard, and woodwind instruments.
2. Recognize the various instruments by their sounds.
3. Recognize the forms of music including orchestral, choral, operatic, symphonic, sonata, concerto, suite, free form, and tone poem.
4. Demonstrate knowledge of the contributions of the Romantic and Nationalist composers to modern music.
5. Demonstrate knowledge of the characteristic of polyphonic music.
6. Demonstrate knowledge of the characteristics of atonal music.
7. Participate once in a performing instrumental group.
8. Participate once in a performing vocal group.
9. List the contributions of at least twenty of the modern composers.
10. Recognize form, title, composer, and/or time of a composition when a recording of it is played.
11. Discuss the differences between operatic compositions and orchestral compositions.
12. List the characteristics of a tone poem.

Instructional Materials

Text and Supplementary Materials
Refer to: Secondary Adopted Text and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Students will be provided with a variety of experiences: lectures, discussions, listening to recordings, using the library for research, writing papers, hearing speakers and performers. Students will also learn the basics of one instrument and perform once. Students will sing one solo and one duet. Students will attend local performances. Examinations will be in essay form and will incorporate listening skills.

Course Title

Painting A

Description of Target Group

11 - 12
An appropriate lab fee will be charged for materials and equipment.
The student will keep the equipment. Students may be required to provide basic personal materials.

Length of Course: 1 semester (fall) 5 units

Purpose

This 1 semester course will give the serious art student the opportunity to learn how to develop their knowledge and application of fundamental painting skills. Students should be able to understand the color wheel and color theory, have a basic knowledge of mixing colors, to understand color relationships, such as analogous hues and triad prior to taking the course. Students will learn to use basic painting mediums and learn the fundamental techniques necessary to work with a fluid medium. Students will explore and understand painting as a means of visual communication.

This course will promote an appreciation of the work of master artists, and the influence of culture on art. The course should enable students to understand and appreciate artistic expression and, where appropriate, to exhibit skills of visual analysis and critical perception in written, oral, and individual work. Students will utilize all current technology to access information pertaining to all areas within the course.

Students will refine and prepare for presentation a quality portfolio of their work to show for admission to collegiate art programs.

Prerequisites: Successful completion of Introduction to Art, Intermediate Drawing A and B, or recommendation of the instructor based upon the student's portfolio.

Standards of Expected Student Achievement

Upon completion of this course, students should be able to successfully demonstrate the following skills:

1. Demonstrate an improved ability to understand color theory and it's application to Drawing and Painting.
2. Demonstrate the use of basic painting techniques.
3. Demonstrate the ability to paint objectively objects from "life."
4. Demonstrate the ability to enlarge or reduce a subject by use of a grid technique in order to paint on a larger scale.

Painting A (continued)

5. Demonstrate the ability to organize space (composition) on a picture plane.
6. Demonstrate knowledge of the care of tools and equipment, and the work environment.
7. Demonstrate an appropriate written and oral art vocabulary.
8. Demonstrate an appreciation and understanding of artistic expression. Also to be able to discuss various master artists and periods of Art History.

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of class assignments for each grading period.
3. Students will select and present at least one finished piece of work for scheduled art showings: school and community.
4. Oral and written critique on all work, in progress and at completion.
5. Final presentation of completed work in a portfolio, which shows continuity in presentation and a successful knowledge of material taught.

Instructional Materials

To be assigned according to the individual need. This would include such materials as pencils, erasers, brushes, pallets, paints, paper, and glue, Scholastic Magazine, art videos, access to the Internet for art research and reports and a portfolio.

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District.

Activities

Individual work, lectures, participation in class discussions, videos, field trips. Activities in form of projects designed to develop the students ability to create a strong emphasis and knowledge of the elements associated with painting. Students will also be responsible for producing all required work to the best of their ability and to properly present assignments in portfolio form.

Type of course adoption requested: Required for graduation

Major purpose for adding this course to curriculum: To meet the state criteria for standards articulation and to also meet the fall semester of the A-G University of California requirements and the California State University freshmen entrance requirements.

Successful completion of this course could result in receiving additional units through articulation with the art curriculum at Allan Hancock College.

Course Title

Painting B

Description of Target Group

11 - 12
An appropriate lab fee will be charged for materials and equipment.
The student will keep the equipment. Students may be required to provide basic personal materials.

Length of Course: 1 semester (spring) 5 units

Purpose

This is a one-semester course, which will give the serious art student the opportunity to develop and refine their painting skills. Students should be able to understand the color wheel and color theory, have a basic knowledge of mixing colors, to understand color relationships, such as analogous hues and triad prior to taking the course. Students will learn to use more advanced painting mediums and technique. Students will explore and understand painting as a means of visual communication.

This course will promote an appreciation of the work of master artists, and the influence of culture on art. The course should enable students to understand and appreciate artistic expression and, where appropriate, to exhibit skills of visual analysis and critical perception in written, oral, and individual work. Students will utilize all current technology to access information pertaining to all areas within the course.

Students will refine and prepare for presentation a quality portfolio of their work to show for admission to collegiate art programs.

Prerequisites: Successful completion of Introduction to Art, Intermediate Drawing, or recommendation of the instructor based upon the student's portfolio.

Standards of Expected Student Achievement

Upon completion of this course, students should be able to successfully demonstrate the following skills:

1. Demonstrate an improved ability to understand color theory and it's application to Drawing and Painting.
2. Demonstrate the use of basic painting techniques in a variety of media.
3. Demonstrate the ability to paint objectively objects from "life."
4. Demonstrate the ability to paint from imagination.
5. Demonstrate the ability to enlarge or reduce a subject by use of a grid technique in order to paint on a larger scale.

6. Demonstrate the ability to organize space (composition) on a picture plane.
7. Demonstrate knowledge of the care of tools and equipment, and the work environment.
8. Demonstrate an appropriate written and oral art vocabulary.
9. Demonstrate an appreciation and understanding of artistic expression. Also to be able to discuss various master artists and periods of Art History.

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of class assignments for each grading period.
3. Students will select and present at least one finished piece of work for scheduled art showings: school and community.

5. Final presentation of completed work in a portfolio, which shows continuity in presentation and a successful knowledge of material taught.

Instructional Materials

To be assigned according to the individual need. This would include such materials as
Pencils, erasers, brushes, pallets, paints, paper, glue, Scholastic Magazine, art
Videos, access to the Internet for art research and reports and a portfolio.

Refer to: Secondary Adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District.

Activities

Individual work, lectures, participation in class discussions, videos, field trips. Activities inform of projects designed to develop the student's ability to create a strong emphasis and knowledge of the elements associated with painting. Students will also be responsible for producing all required work to the best of their ability and to properly present assignments in portfolio form.

Type of course adoption requested: Required for graduation

Major purpose for adding this course to curriculum: To meet the state criteria for standards articulation and to also meet the spring semester of the A - G University of California requirements and the California State University freshmen entrance requirements in conjunction with Painting A fall semester.)

Course Title

Photography 1A

Prerequisites : None

Course Adoption: Required for district graduation, Submit for UC / CSU “a-g” inclusion

Lab Fee: Yes

Instructional Materials

- (Refer to the *Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District*)

Purpose/Course Description

Course Length is one semester targeting students in grades 9-12. This is the first semester of a year-long, “hands-on”, introductory course in photography. Students will study photographs from the entire range and history of the medium to use as starting points for their own creative work. A variety of photographic assignments will provide training and experience in the basic technical and artistic elements of black-and-white photography. Students will see how their own intuitive ideas are linked to the universal principals of art from different cultures and time periods; developing their ability to discuss, produce, and enjoy art. Total of 5 units of credit.

Standards of Expected Student Achievement / Course Goals and Objectives

Upon completion of this course, students will be able to successfully:

1. Demonstrate a knowledge of the elements of visual art and the principals of design.
2. Integrate the use of photographic equipment, materials, and methods with the elements of art and principals of design to create a portfolio of original works of art.
3. Illustrate the interrelationship between the visual arts and historical and cultural trends and developments.
4. Appreciate, analyze, and critique masterworks of photography, as well as original student work.
5. Relate the broader lessons of the visual arts to other subjects and fields of endeavor.

Course Outline/Activities

(Standard #s refer to the Calif. Dept. of Educ.VPA Standards for Visual Arts Grades 9 - 12 Proficient)

Photography 1A (continued)

Units / Topic	Standards/Objectives
Introduction to Photography	
• Functions of Photography	3.5
• History of Photography	3.4, 3.1, 3.2
• Recent Developments in Photography	3.2
• Types of Cameras	1.4
• Photography and "Imaging"	1.4, 1.5
Single Lens Reflex and Its Use	
• Parts and Their Functions	2.1 - 2.3
• Basic Camera Care	2.1 - 2.3
• Camera Handling	2.1 - 2.3
• Focusing Systems	2.1 - 2.3
• Exposure	
• Four Factors That Influence Exposure	2.1 - 2.3
• Using a Built-in Light Meter	2.1 - 2.3
Film and Film Processing	
• Film and Imaging Media	2.1 - 2.3
• 'Seeing' in Black-and-White	2.1 - 2.3
• How Does Film Work?	2.1 - 2.3
• Film Speed	2.1 - 2.3
• B & W Film Chemistry and Processing	2.1 - 2.3
• Evaluating Your Negatives	2.1 - 2.3
Basic Printmaking	
• The Enlarger - Parts and Functions	2.1 - 2.3
• Print Chemistry and Processing	2.1 - 2.3
• Contact Prints and Proof Sheets	2.1 - 2.3
• Enlargements	2.1 - 2.3
• Test Strips & Test Prints	2.1 - 2.3
• Cropping	2.1 - 2.3
• Print Processing Standards	2.1 - 2.3
Working with Natural Light	
• Outdoor Light Conditions	2.1 - 2.3
• Qualities of Light & Shadow	2.1 - 2.3
- intensity	
- direction	
- specular vs. diffused Light	
- color	
- spotlighting	
Composition	
• Perception	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6

- Composition

Photography 1A (continued)

- Snapshot vs. Art - Making Decisions
- Horizontal & Vertical Framing 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
  - dominant & subordinant elements
  - shape & form - 2 & 3-dimensional objects
  - line
- Simplicity 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
  - space / "negative space"
  - dominant & subordinant elements
    - Visual Weight
  - Contrast
  - Unity
- The Rule of Thirds 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
  - balance
    - symmetry
    - asymmetry
  - movement
- Lines & Designs 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
  - abstraction
  - line & implied line
  - repetition
    - pattern
    - theme & variation
    - rhythm
      - regular
      - irregular
  - texture
- Unusual Viewpoint 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
  - point of view / camera angle
  - emphasis

Equivalent Exposure

- Reciprocity Law 2.1 - 2.3
- Movement 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
  - varying shutter speed to express movement in a still photograph
- Depth of Field 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
  - varying aperture size to increase or decrease the zone of focus
  - perspective
  - directing the viewer's eye
  - isolating elements vs. showing relationships between elements

Analysis & Critique

- What Makes a Photograph Good? 1.2, 1.3, 3.1, 4.1 - 4.4
- Content - "Telling a 'Story'" 1.3, 4.1 - 4.3, 4.5

• Visual Language	1.1
- A Glossary of the Elements of Art and Principals of Design	
• Reading a Photograph	1.1 - 1.3, 3.1 - 3.5, 4.1 - 4.5, 5.1, 5.2
• 1A Self-Evaluation Assignment Sheet	1.1, 1.3, 4.5
• Group/Class Critiques	
- Master Photographers and Their Photographs	1.1 - 1.4, 3.1 - 3.5, 4.1 - 4.5, 5.1, 5.2
- Student Photographs	1.1, 1.3, 4.1 - 4.5
• Classroom Display of Student Work	1.1, 1.3, 4.1 - 4.5
• Art Shows of Student Work	1.1, 1.3, 4.1 - 4.5

Instructional Strategies

The following instructional methods and strategies are used:

- Lecture with student note-taking, employing photographic or video examples
- Computer presentation software, such as Microsoft PowerPoint
- Teacher demonstration
- Student-led demonstration or presentation
- Lab work
- Class exercises / guided practice
- Class discussion
- Critiques
- Question-and-Answer
- Reading textbook passages or chapters, articles from periodicals
- Class begins with a written Daily Warm-Up activity, which can be used for review or to activate prior knowledge or to respond to photographs or quotations or ideas
- Expository writing
- Research in classroom resources, library, Internet
- Individual work
- Pair or small group work
- Test and quizzes

Methods and Criteria of Assessment

1. Photographic assignments are assessed first by the student, then by the teacher using an itemized rubric on artistry (35%), technical excellence (35%), presentation (15%), and written analysis (10%). Attributed and unattributed student work is regularly critiqued in class and small group sessions.
2. Notebook / Portfolio are assessed with a itemized rubric on content (50%), organization (25%), and presentation (25%).
3. Written assignments and oral presentations are assessed on quality and accuracy of ideas (50%), organizational clarity (25%), expression and grammar (15%), and presentation (10%).
4. Initial and intermediate assessments of student understanding are conducted through discussion and question-and-answer with individual students, small groups, and the entire class.
5. Tests and Quizzes are constructed with a variety of question types, including multiple-choice, true or false, short answer, fill-in-the-blank

Course Title

Photography 1B

Prerequisites: Photography 1A

Course Adoption: Required for district graduation. Submit for UC / CSU "a-g" inclusion

Major Purpose for Course Adoption
Inclusion on the UC / CSU "a -g Approved List.
(This has been a district approved course of long-standing.)

Lab Fee: Yes

Instructional Materials

- (Refer to the *Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District*)

Purpose/Course Description

This "hands-on", intermediate-level class in photography constitutes the second semester of the full-year course. Students will continue their study of photographs from the entire range and history of the medium, using them as starting points for their own creative work. A variety of photographic assignments in traditional and digital photography will expand from the compositional and technical foundations established in the previous semester. Students will see how their own intuitive ideas are linked to the universal principles of art from different cultures and time periods; developing their ability to discuss, produce, and enjoy art.

Standards of Expected Student Achievement / Course Goals and Objectives

Upon completion of this course, students will be able to successfully:

1. Demonstrate knowledge of the elements of visual art and the principles of design.
2. Integrate the use of photographic equipment, materials, and methods with the elements of art and principles of design to create a portfolio of original works of art.
3. Illustrate the interrelationship between the visual arts and historical and cultural trends and developments.
4. Appreciate, analyze, and critique masterworks of photography, as well as original student work.
5. Relate the broader lessons of the visual arts to other subjects and fields of endeavor.

Course Outline/Activities

(Standard #s refer to the Calif. Dept. of Educ.VPA Standards for Visual Arts Grades 9 - 12 Proficient)

Units / Topic	Standards/Objectives
Lighting	
• Spotmetering	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
- spotlighting	
- backlighting	
• Artificial Lighting - Flash	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
- Manual Mode	
- Automatic Mode	
- Bounce Head	
Portraiture	
• Head Shot	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
• Hands 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6	
• Abstract Portrait	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
• Enhanced Portrait	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
• Environmental Portrait	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
Fine Art Presentation	
• Spotting	2.2, 2.3
• Dry mounting	2.2, 2.3
• Burning and Dodging	2.2, 2.3
Specialized Photographic Equipment	
• Special Lenses	1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
- Wide-angle, telephoto, & macro lenses	
- perspective	
• Digital Imaging 1	1.1 - 1.3, 2.1 - 2.8
- Introduction to Operating Systems	
- Mac OS	
-	
- Windows	
- Introduction to Adobe Photoshop	
- Using a Digital Camera	
- Using Scanners	
- Create an Original Digital Image	

Multiple Photograph Projects

- Photo Essay — 1.1 - 1.3, 2.1 - 2.8
  - Real World Examples
  - Organization and Layouts
  - Five Successful Approaches

Natural Forms

- Landscape — 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6
- Still life — 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6

Inspiration from Other Art Forms

- Photograph to accompany a poem or piece of music — 1.1 - 1.3, 2.1 - 2.3, 2.5, 2.6

Analysis & Critique

- Content - "Telling a 'Story'" (cont. from Photo 1A) — 1.3, 4.1 - 4.3, 4.5
- Visual Language (cont. from Photo 1A) — 1.1
  - A Glossary of the Elements of Art and Principals of Design
- Reading a Photograph (cont. from Photo 1A) — 1.1 - 1.3, 3.1 - 3.5, 4.1 - 4.5, 5.1, 5.2
- 1B Self-Evaluation Assignment Sheet — 1.1, 1.3, 4.5
- Group/Class Critiques
  - Master Photographers and Their Photographs — 1.1 - 1.4, 3.1 - 3.5, 4.1 - 4.5, 5.1, 5.2
  - Student Photographs — 1.1, 1.3, 4.1 - 4.5
- Classroom Display of Student Work — 1.1, 1.3, 4.1 - 4.5
- Art Shows of Student Work — 1.1, 1.3, 4.1 - 4.5

5. Tests and Quizzes are constructed with a variety of question types, including multiple-choice, true or false, short answer, fill-in-the-blank

Course Outline

Photography 2A

Description of Target Group

This course is designed for the student of photography in grades 11 and 11 who have completed Photography 1.

Purpose

This course is the first of a two-semester course designed to assist students in developing an appreciation of photographic equipment and increasing their understanding of photographic processes.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Review basic photography skills.
2. Learn correct use of advanced equipment.
3. Learn zone system and chemical manipulation.
4. Complete assigned projects.

Instructional Materials

Texts and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, laboratory work, field trips, project presentation and audio/visual presentation.

Course Outline

Photography 2B

Description of Target Group

This course is designed for the student of photography in grades 11 and 11 who have completed Photography 2A.

Purpose

This course is the second-semester of a one-year course designed to assist students in acquiring technical skills of photography and to increase students' talents in sensitometry, optics, mechanics, and vision.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Complete photo journalism and photo essays.
2. Learn color study techniques.
3. Learn movie study techniques.
4. Complete major projects.

Instructional Materials

Texts and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

Lectures, laboratory work, field trips, project presentation and audio/visual presentation.

Course Outline

Photography Independent Study

Description of Target Group

This course is designed for students who have completed Photography 1A/B and Photography 2A/B.

Purpose

To complete a personal exploration of a particular photography project.

(One to five units of credit can be earned for this course.)

Standards of Expected Student Achievement

The student and teacher shall enter into a personal contract, which shall be signed, and approved by the student, the teacher, a counselor, and a school site administrator. This contract shall state the length of the course, goals, and objectives, details of the project(s) to be completed, and the number of units to be earned.

Course Title

Play Writing

Description of Target Group

This two term or semester long course is designed for students from grades 9-12 who have an interest in writing. Students interested in this course must have had a grade of C or better in their previous English class and a teacher recommendation.

Purpose

This course is designed to strengthen student-writing skills through play writing. The course will develop skills in research, reading and analyzing literature, and oral presentation skills. Listening and speaking will be exercised in group and individual projects. Students will participate in playwriting exploration, and have a greater awareness of playwrights in recent centuries.

Standards of Expected Student Achievement

A variety of mediums will be used. Students will be expected to demonstrate the following skills:

-Understand the styles of playwrights throughout history
-Write monologues
-Write short scenes
-Write and direct a one act play
-Understand the process of writing a research paper

Listening Skills:

-Listen to and follow oral directions
-Take notes from lectures
-Listen attentively to lectures, student presentations, and performances

Speaking Skills:

-Participate in class discussions.
-Give oral reports to the class.
-Perform in plays for the class.

Reading Skills:

-Read about famous playwrights
-Read several plays
-Read plays written by other students in the class
-Identify elements of plays and playwrights

Play Writing (continued)

Writing Skills:

-Develop writing skills, which involve stages: brainstorming, drafting, clarifying, developing, revising, and finally editing
-Journal writing
-Write plays for the theater as well as screenplays
-Research projects
-Evaluate and edit their work as well as that of others

Activities

Term A
Students will write in their journals. They will research the lives of famous playwrights and their plays. Students will read, analyze, and discuss different styles of plays.

Term B
Students will write in their journals. They will write several short plays and at least one one-act play. Each student will choose one of their original plays to be performed by students in the advanced drama class.

Instructional Materials:

Text and Supplementary Materials

Assessment

-Journal entries
-Oral presentations individually and in group
-Written tests and quizzes
-Creative writing ability
-Portfolios of written plays with multiple drafts showing improvement

Course Outline

Publications A

Description of Target Group

This course is designed as the first semester of a two-semester course for all students interested in various phases of publication.

Purpose

Publications A is designed to facilitate the production of a high school yearbook.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate understanding of specialized graphic art vocabulary.
2. Demonstrate ability to work cooperatively with other students.
3. Demonstrate ability to distinguish between superior and inferior page design.
4. Ability to crop and proportion photographs into existing formats.
5. Ability to write descriptive headlines and copy.
6. Recognize the role of advertising in publications.
7. Understand the importance of quality photography in publications.
8. For photographer, ability to photograph on assignment, develop, print, and submit finished photographs.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Lectures, demonstrations, workshops, laboratory work, individualized learning, field trips.

Course Outline

Publications B

Description of Target Group

Publications B is designed as the second semester of a two-semester course for all students interested in various phases of publication.

Purpose

Publications B is designed to facilitate the production of a high school yearbook.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

1. Demonstrate understanding of specialized graphic art vocabulary.
2. Demonstrate ability to work cooperatively with other students.
3. Demonstrate ability to distinguish between superior and inferior page design.
4. Ability to crop and proportion photographs into existing formats.
5. Ability to write descriptive headlines and copy.
6. Recognize the role of advertising in publications.
7. Understand the importance of quality photography in publications.
8. For photographer, ability to photograph on assignment, develop, print, and submit finished photographs.

Instructional Materials

Text and Supplementary Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District

Activities

Lectures, demonstrations, workshops, laboratory work, individualized learning, field trips.

Course Title

Studio Art A

Description of Target Group

11 - 12
An appropriate lab fee will be charged for materials and equipment.
The student will keep the equipment. Students may be required to provide basic personal materials.

Length of Course: 1 semester (fall)-5 units

Purpose

This semester length course will allow students to continue exploring and developing their individual styles of drawing and painting using a variety of media, with an emphasis on two and three-dimensional composition.

Students will learn how to produce accurate drawings and paintings based upon sight rendering as well as creating work from imagination. Emphasis will continue to teach refinement of traditional style and methods of drawing and painting, composition, as well as allowing individuals to experiment with different techniques.

Students will explore drawing and painting as a means of communication and visual thinking. They will exhibit skills of visual analysis and critical perception in written, oral, and individual work. This course will promote an appreciation of the work of master artists, and the influence of culture on art. The course will enable students to understand and appreciate various forms of artistic expression.

Students will prepare for presentation a quality portfolio of their work to show for admission to collegiate art programs.

* Studio Art A will replace Advanced Studies Art.

Prerequisites: Successful completion of Introduction to Art, Intermediate Drawing A and B, Painting or recommendation of the instructor based upon the student's portfolio.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the ability to:

1. See and record observations through drawing and painting.
2. Use advanced drawing and painting techniques.
3. Draw objectively objects from "sight" as well as from imagination.
4. Use appropriate technology for successful project completion.
5. Organize composition on a picture plane.

Studio Art A (continued)

6. Develop an appropriate written and oral art vocabulary.
7. Appreciate and understand various forms of artistic expression.
8. Exhibit skills in oral, written, and visual expression.
9. To discuss various master artists and periods of Art History.

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of class assignments for each grading period.
3. Students will select and present several pieces of work for scheduled art showings: school and community.
4. Oral and written critique on all work, in progress and at completion.
5. Final presentation of completed work in a portfolio.

Instructional Materials

To be assigned according to individual project. This would include such materials as pencils, erasers, colored pencils, paints, paper, art videos, access to the Internet for art research and reports and a portfolio.

Refer to: Secondary Adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District.

Activities

Individual work, lecture participation in class discussions, videos, and field trips. Activities in form of projects designed to develop the students ability to create realistic and from their imagination while continuing to learn new technique and medium. Students will also be responsible for producing all required work to the best of their ability and to properly present assignments in portfolio form.

Type of course adoption requested: Required for graduation

Major purpose for adding this course to curriculum: To meet the state criteria for standards articulation and to also meet the fall semester of the A - G University of California requirements and the California State University freshmen entrance requirements.

Successful completion of this course could result in receiving additional units through articulation with the art curriculum at Allan Hancock College.

Course Title

Studio Art B

Description of Target Group

11 - 12
An appropriate lab fee will be charged for materials and equipment.
The student will keep the equipment. Students may be required to provide basic personal materials.

Length of Course: 1 semester (spring)-5 units

Purpose

This second semester course will allow students to continue exploring and developing their individual styles of drawing and / or painting using a variety of media, with an emphasis on two and three-dimensional composition.

Students will learn how to produce quality drawings and paintings based upon sight rendering as well as creating work from imagination. Emphasis will continue to refine traditional style and methods of drawing and painting, composition, as well as allowing individuals to experiment with different techniques while continuing to develop their own personal means of artistic expression.

Students will explore drawing and painting as a means of communication and visual thinking. They will exhibit skills of visual analysis and critical perception in written, oral, and individual work. This course will promote an appreciation of the work of master artists, and the influence of culture on art. The course will enable students to understand and appreciate various forms of art.

Students will refine and prepare for presentation a quality portfolio of their work to show for admission to collegiate art programs.

* Studio Art will replace Advanced Studies Art.

Prerequisites: Successful completion of Introduction to Art, Intermediate Drawing A and B, Painting or recommendation of the instructor based upon the student's portfolio.

Students using this course to meet University of California requirements and the California State University freshmen entrance requirements must also successfully complete Studio Art A with a grade of B or better.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the ability to:

1. See and record observations through drawing and painting.
2. Use advanced drawing and painting techniques.
3. Draw objectively objects from "sight" as well as from imagination.
4. Use appropriate technology for successful project completion.

5. Organize composition on a picture plane.
6. Develop an appropriate written and oral art vocabulary.
7. Appreciate and understand various forms of artistic expression.
8. Exhibit skills in oral, written, and visual expression.
9. To discuss various master artists and periods of Art History.

Methods of Assessment of Student Learning

1. The completion of all assigned work.
2. The organization and presentation to class of a portfolio of class assignments for each grading period.
3. Students will select and present several pieces of work for scheduled art showings: school and community.
4. Oral and written critique on all work, in progress and at completion.
5. Final presentation of completed work in a portfolio.

Instructional Materials

To be assigned according to individual project. This would include such materials as pencils, erasers, colored pencils, paints, paper, art videos, and access to the Internet for art research and reports and a portfolio.

Refer to: Secondary Adopted texts and approved supplementary books used in the Santa Maria Joint Union High School District.

Activities

Individual work, lectures, participation in class discussions, videos, and field trips. Activities in form of projects designed to further develop the students ability to create realistic and from their imagination while continuing to experiment with new techniques and medium. Students will also be responsible for producing all required work to the best of their ability, properly present assignments in portfolio form, and be able to provide oral and written critiques of their work as well as critiquing others.

Type of course adoption requested: Required for graduation

Major purpose for adding this course to curriculum: To meet the state criteria for standards articulation and to also meet the spring semester of the A - G University of California requirements and the California State University freshmen entrance requirements in conjunction with Studio Art A (fall semester).

Successful completion of this course could result in receiving additional units through articulation with the art curriculum at Allan Hancock College.

Course Title

Theater History

Description of Target Group

This two term or semester long course is designed for students from grades 10-12 who have an interest in theater and history.

Purpose

This course is designed to teach students about the history of theater. Through general research about theater, students will become aware and exposed to many facts of history in general such as the economics of European countries including politics, style of clothing, traditions and customs.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

-Understanding of important events related to theater throughout history
-Understanding of the styles of important plays/playwrights throughout history

Listening Skills:
-Listen to and follow oral directions
-Take notes from lectures
-Listen attentively to lectures and student presentations

Speaking Skills:
-Participate in class discussions
-Give oral reports to the class

Reading Skills:
-Read about the different stages theater has gone through throughout history
-Read plays from different time periods
-Read about famous actors and playwrights

Writing Skills:
-Develop writing skills, which involve stages: listening, finding ideas, drafting, clarifying, developing, revising, and finally editing.
-Research projects.
-Evaluate their own work as well as that of others.

Theater History (continued)

Activities

Students will research the history of theater, create detailed time lines and recognize the differences between past and present theatre. Students will also research the lives of famous actors and playwrights throughout history, and present these in a variety of ways.

Instructional Materials

Text and Supplementary Materials

Assessment

- -Note taking
- -Time lines
- -Oral presentations individually and in group
- -Written quizzes and tests
- -Portfolio of collected research and writing throughout term
- -Projects

Course Title

Video A

Description of Target Group

Video A is a one-semester humanities elective open to students in grade levels 10-12 with instructor approval

Purpose

This course is designed to present students with hands-on training in the field of Video Production. Technical and creative aspects of video production will be covered. Students will explore career opportunities in the video field.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to:

1. Communicate more effectively.
2. Work co-operatively in groups.
3. Correctly set-up and takedown video equipment.
4. Correctly operate a video camera, recorder, etc.
5. Make a story board
6. Perform a pre-production checkout
7. Gather and check items/equipment
8. Rehearse programs
9. Tape productions
10. Review tape
11. Log tapes
12. Make an editing script
13. Edit tape
14. Compose pictures for a variety of productions
15. Conduct a 2-5 minute interview
16. Product a 2 minute card show
17. Produce a 30 second commercial
18. Demonstrate awareness of career opportunities in video production

Instructional Materials

Text and Supplementary Materials:

Sony Field Production Handbook

Supplementary Texts include: Peterson's Guide to Video Taping, The Videotape Book, Video Users Handbook, The Video Guide, The Video Primer, Television Production Handbook, TV Production-A Vocational Approach

Activities

Demonstrations, lectures, guest speakers, field trips, viewing taped productions, brainstorming, practice productions, critiquing final tapes, written examinations.

Course Title

Video B

Description of Target Group

Video B is a one-semester humanities course open to students in grade levels 10-12 with instructor approval.

Purpose

This course allows students to improve and practice skills learned in Video A. Students produce a variety of program formats - music videos, interviews, documentary and narrative long form projects.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to:

1. Have improved communication skills.
2. Work co-operatively as a production crew.
3. Improve skills learned in Video A
4. Product a music video.
5. Produce a 3-5 documentary
6. Product clips for video yearbook
7. Produce programs for teachers as requested

Instructional Material

Text and Supplementary Materials:

Sony Field Production Handbook

Supplementary Texts include: Peterson's Guide to Video Taping, The Video Tape Book, Video User Handbook, The Video Guide, The Video Primer, Television Production Handbook, TV Production-A Vocational Approach

Activities

Demonstrations, lectures, guest speakers, field trips, viewing taped productions, brainstorming, practice productions, critiquing final tapes, written examinations.

Course Title

Video Production/Filmmaking A/B

Description of Target Group

Video Production/Filmmaking A/B is a year long (10-unit) Fine Arts elective open to students in grade levels 9 -12.

Purpose

The class is an introductory course, which presents the students with the opportunity for the student to explore the field of video production and filmmaking. The student will also explore the opportunities available to them in the field of video production and filmmaking.

Prerequisites: There are no prerequisites; incoming 9th graders need permission from instructor.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to successfully:

1. Produce a video or film project from conception to completion
2. Write a treatment
3. Write a script
4. Draw a storyboard
5. Produce a shooting log
6. Produce an editing log
7. Videograph a script
8. Successfully edit a film/video project using the nonlinear method
9. Have a working knowledge of special effects software such as Adobe Premier, Adobe PhotoShop and Adobe Aftereffects
10. Discuss the history of film
11. Have a working knowledge of broadcast production
12. Produce television commercials
13. Work well within a film crew environment
14. Demonstrate an awareness of career opportunities in both the television and film industry

Instructional Materials

Textbooks: Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities

Demonstrations, lectures, guest speakers, produce short films.

Course Title

Video Production

Description of Target Group

Video Production is a one-semester humanities elective open to students in grade levels 10-12 with instructor approval.

Purpose

This course is designed to present students with hands on training in the field of Video Production. Technical and creative aspects of video production will be covered. Students will explore career opportunities in the video field.

Standards of Expected Student Achievement

Upon completion of this course, students will be able to:

1. Correctly set-up and takedown video equipment.
2. Correctly operate a video camera, recorder, etc.
3. Make a storyboard.
4. Prepare a shooting script.
5. Perform a pre-production checkout.
6. Gather and check items/equipment.
7. Rehearse programs.
8. Tape productions.
9. Review tape.
10. Log tapes.
11. Make an editing script.
12. Edit tape.
13. Dub tape.
14. Conduct a 3-5 minute interview.
15. Produce a 3-5 minute news program.
16. Produce a commercial.
17. Demonstrate awareness of career opportunities in Video Production.

Instructional Materials

Text and Supplementary Materials:

Sony Field Production Handbook

Supplemental Texts include: Petersen's Guide to Video Taping, The VideoTape Book, Video User's Handbook, The Video Guide, The Video Primer, Television Production Handbook, TV Production-A Vocational Approach.

Activities

Demonstrations, lectures, guest speakers, field trips, viewing taped productions, brainstorming, practice productions, critiquing final tapes, written examinations.

[ ] **Concentrator** [ ] **Completer**

Pre-Requisites: Students must be English learners and have been enrolled in US schools 25 - 36 months.

Co-Requesites: English 1 A/B

Course Purpose: What is the purpose of this course?

The purpose of this Designated English Language Development (ELD) course is to continue developing the fundamentals of English and to practice more advanced skills in reading, writing, speaking, and listening, with an emphasis on reading. This course provides students with support in their Core English Language Arts (ELA) course and helps students be more prepared, build on prior knowledge, and make connections with core ELA course materials.

This course will focus on the California ELD Standards and will provide preparation using the skills and task types necessary to be successful on the English Language Proficiency Assessments for California (ELPAC); and to score an overall of a 4 on the ELPAC to qualify for reclassification.

Students will be enrolled in English 1 concurrently (grades 9 – 12 inclusive).

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

California English Language Development Standards:

Expanding: Students at this level are challenged to increase their English skills in more contexts and learn a greater variety of vocabulary and linguistic structures, applying their growing language skills in more sophisticated ways that are appropriate to their age and grade level.

Written Language Standards (Reading and Writing)

- **Interacting via written English**: Interacting with others in written English in various communicative forms (print, communicative technology and multimedia)
- **Reading/viewing closely:** Reading closely literary and informational texts and viewing multimedia to determine how meaning is conveyed explicitly and implicitly through language.
- **Analyzing language choices**: Analyzing how writers and speakers use vocabulary and other language resources for specific purposes (to explain, persuade, entertain, etc.) depending on modality, text type, purpose, audience, topic, and content area.
- **Justifying/arguing:** Justifying own arguments and evaluating others' arguments in writing
- **Using verb and verb phrases** to create precision and clarity in different text

Oral Language Standards (Listening and Speaking)

- **Exchanging Information/Ideas**: Exchanging information and ideas with others through oral collaborative discussions on a range of social and academic topics
- **Supporting opinions and persuading others:** Offering and justifying opinions, negotiating with and persuading others in communicative exchanges
- **Writing** literary and informational texts to present, describe, and explain ideas and information, using appropriate technology.
- **Understanding text structure** and organization based on purpose, text type, and discipline.

Foundational Literacy Skills (Continue developing according to student need)

Literacy in an Alphabetic Writing System

- **Phonological awareness:** Demonstrate understanding of spoken words, syllables, and sounds (phonemes)
- **Print concepts**: Demonstrate understanding of the organization and basic features of print

Foundational Reading Skills

- **Phonics and word recognition**: Know and apply grade-level phonics and word analysis in decoding words both in isolation and in text
- **Fluency**: Read with sufficient accuracy and fluency to support comprehension

Year-long ELPAC Preparation Focus

Teachers will have an initial one-on-one ELPAC chat with each student to review their ELPAC scores from the previous year and to set learning goals. Midyear, in a teacher-student conference, both parties will review data from various district-selected assessments, areas for growth will be identified, and new goals will be set. Based on student progress data reviewed, the teacher will enhance or adjust curriculum to meet the needs of the students by continuing to scaffold and differentiate lessons.

Additionally, teacher-developed lessons and or materials to support all ELPAC language domains will be used.

Instructional Methods and/or Strategies:

ELD teaching strategies

- Provide a welcoming and supportive learning environment for all students.
- Specially Designed Academic Instruction in English (SDAIE)
- Guided Language Acquisition Design (GLAD)
- Sheltered Instruction Observation Protocol (SIOP)
- *English Learner Toolkit of Strategies,* California County Superintendents' Educational Services Association, Curriculum and Instruction Steering Committee

Teacher Collaboration

- Work with Core English teachers to align supports.
- Communicate with ELD teachers at other campuses.

Oral language skills improvement

- Viewing model texts
- Listening to model speakers
- Practicing conversations with a partner
- Writing short responses to oral presentations

Assessment Methods and/or Tools:

- Pre-assessment, Quarterly Assessments, and End of Year Assessment of reading comprehension, silent reading rate, and vocabulary level
- ELPAC Vocabulary practice through Quizlet
- Evaluate growth in ELPAC domains based on ELPAC writing rubrics and speaking rubrics.
- Teacher collaboration in creating performance assessments.

Activities: *(If applicable)*

- ELPAC Chat
- Effective use of a planner or an online calendar
- Organization of a binder and/or electronic files
- Practice listening for comprehension and recall.
- Practice notetaking and use of Cornell notes.
- SQ3R reading strategy for expository texts.

- Navigating AERIES Portal, Canvas, school email, password reset, shared cloud-based drive.
- How to create Word documents and Power Point presentations
- Conduct ELPAC chats
- Daily practice of listening, speaking, reading, and writing to develop English fluency.
- Typing skills
- *Future 3* Workbook
- Practice speaking English using ELPAC speaking exercises, reading aloud in class, discussing topics with the teacher, doing sight word warm-ups, engaging in conversation with teacher and peers, and writing a weekly journal to read aloud to one another.

Certificate: *(If applicable)*

Date Submitted: 5/18/2021

Course Outline
Advanced ELD Lab A/B (levels 1, 2, 3 and 4)

Department - English

Career Path - All

Description of Target Group
The target group would be comprised of Long-Term English Learners who have not yet been reclassified. Students will take an English course concurrently with Core ELD Lab.

For example:
English 1 + Advanced ELD Lab 1
English 2 + Advanced ELD Lab 2
English 3 + Advanced ELD Lab 3
English 4 + Advanced ELD Lab 4

Lab Fees - None

Purpose
1. To support LTEL students who are struggling in language arts through intensive reading, writing, and critical thinking
2. To emphasize the process approach to writing and reading complex texts
3. To provide a course in sentence and paragraph construction, grammar usage, vocabulary development, and essay structure
4. To prepare for the ELPAC exam

Students will be enrolled in this course concurrently with English CP. This course focuses on overall skills and concepts--not English Content/Curriculum. Curriculum will include online reading instruction and ELPAC Prep materials. Teachers will also provide support for English Curriculum by providing opportunities for students to receive extra help on assignments or reviewing for tests. Teachers will monitor grades in English course and provide incentives for students to be successful in English. Students will receive 5 elective credits per semester.

Length of Course - One Year

Units – Five per semester (elective credit)

Prerequisites - None

Standards of Expected Student Achievement
1. demonstrate knowledge of writing as a process, including prewriting, drafting, and revising
2. demonstrate ability to narrow topic and construct effective topic sentences and theses
3. demonstrate knowledge of paragraph organization
4. demonstrate basic knowledge of essay structure
5. recognize and write clear, coherent sentences

6. Demonstrate proofreading and editing techniques
7. Demonstrate skills in correct grammar and punctuation, including recognizing and correcting fragments, comma splices, run-ons, comma errors, and apostrophe errors
8. Demonstrate skills in subject/verb agreements, capitalization, and pronoun reference
9. Recognize independent and dependent clauses
10. Demonstrate ability to learn and use grade level vocabulary in speech and written exercises
11. Demonstrate effective reading skills
12. Dncrease ELPAC exam awareness and achievement levels

Methods of Assessment of Student Learning

1. One-on-one instruction
2. Written exams
3. In-class writings
4. Timed writings
5. Essay writings (students are trained and assessed with a rubric)
6. Grammar tests
7. Vocabulary tests
8. Tests on word derivation and etymology
9. Portfolios
10. Parent participation sheet
11. Reading tests
12. ELPAC practice assessments

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Activities

1. Sentence combining
2. Writing and revising sentences and paragraphs
3. Punctuation team games (bingo, board games, etc.)
4. DOL-type exercises
5. Using a style manual to revise
6. Grammar exercises
7. Revising for sentence variation (teach types of sentences with examples from literature)
8. Computer-generated grammar and punctuation exercises
9. Using a dictionary and thesaurus
10. Imitate the styles of various authors
11. Peer edit with rubric
12. Timed writing
13. Non-timed essays which use the writing process
14. Responding to a prompt
15. Online reading programs
16. Independent reading
17. ELPAC Preparation

Unit Value

- [ ] Semester (5 units)
- [x] Year A/B (5 units per semester)
- [ ] Year A/B (two-period course, 10 units per semester)

Pre-Requisites: This course is for Long Term English Learners (LTELs) and LTELs with Individualized Educational Plans (IEPs) who have been in US schools for 5 years or more and have 9th grade status.

Co-Requisites: English 1 A/B

Course Purpose: What is the purpose of this course?

The purpose of this Designated English Language Development (ELD) course is to continue expanding students' English language proficiency, and to practice more advanced skills in reading, writing, speaking, and listening, with an emphasis on reading comprehension. This course provides students with support in their Core English Language Arts (ELA) course and gives scaffolded support to improve reading comprehension.

This course is guided by the California ELD Standards to provide preparation necessary to demonstrate English language proficiency on the English Language Proficiency Assessments for California (ELPAC). An additional course purpose is to prepare students to earn an Overall 4 on the ELPAC, thus meeting one of four criteria for reclassification as Fluent English Proficient (FEP). To achieve these goals students will read narrative and expository texts and apply rhetorical devices to increase reading proficiency of academic texts.

Students will be enrolled in English 1 A/B concurrently.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

California English Language Development Standards

Bridging: Students at this level continue to learn and apply a range of high-level English language skills in a wide variety of contexts, including comprehension and production of highly technical texts. The "bridge" alluded to is the transition to full engagement in grade-level academic tasks and activities in a variety of content areas without the need for specialized ELD instruction. However, ELs at all levels of English language proficiency fully participate in grade-level tasks in all content areas with varying degrees of scaffolding in order to develop both content knowledge and English. This course strongly emphasizes writing development.

Written Language Standards (Reading and Writing)

- **Interacting via written English**: Interacting with others in written English in various communicative forms (print, communicative technology and multimedia)
- **Reading/viewing closely:** Reading closely literary and informational texts and viewing multimedia to determine how meaning is conveyed explicitly and implicitly through language.
- **Analyzing language choices**: Analyzing how writers and speakers use vocabulary and other language resources for specific purposes (to explain, persuade, entertain, etc.) depending on modality, text type, purpose, audience, topic, and content area.
- **Justifying/arguing:** Justifying own arguments and evaluating others' arguments in writing
- **Using verb and verb phrases** to create precision and clarity in different text

Oral Language Standards (Listening and Speaking)

- **Exchanging Information/Ideas**: Exchanging information and ideas with others through oral collaborative discussions on a range of social and academic topics
- **Supporting opinions and persuading others:** Offering and justifying opinions, negotiating with and persuading others in communicative exchanges
- **Writing** literary and informational texts to present, describe, and explain ideas and information, using appropriate technology.
- **Understanding text structure** and organization based on purpose, text type, and discipline.

Year-long ELPAC Preparation Focus

Teachers will have an initial one-on-one ELPAC chat with each student to review their ELPAC scores from the previous year and to set learning goals. Midyear, in a teacher-student conference, both parties will review data from various district-selected assessments, areas for growth will be identified, and new goals will be set. Based on student progress data reviewed, the teacher will enhance or adjust curriculum to meet the needs of the students by continuing to scaffold and differentiate lessons.

Year-long ELPAC Preparation Focus

Teachers will have an initial one-on-one ELPAC chat with each student to review their ELPAC scores from the previous year and to set learning goals. Midyear, in a teacher-student conference, both parties will review data from various district-selected assessments, areas for growth will be identified, and new goals will be set. Based on student progress data reviewed, the teacher will enhance or adjust curriculum to meet the needs of the students by continuing to scaffold and differentiate lessons.

Inside the Text-

Inside the Text helps improve students' reading comprehension, language abilities, and written composition. Thus, supporting students' preparation for the ELPAC. The

textbook explores issues of national and international significance and builds background knowledge, expands students' views and aids in building critical thinking skills and habits.

Unit Value

- ☐ Semester (5 units)
- ☒ Year A/B (5 units per semester)
- ☐ Year A/B (two-period course, 10 units per semester)

Pre-Requisites: This course is for Long Term English Learners (LTELs) and LTELs with Individualized Educational Plans (IEPs) who have been in US schools for 5 years or more and have 10th grade status.

Co-Requisites:
English 2 A/B

Course Purpose: What is the purpose of this course?

The purpose of this Designated English Language Development (ELD) course is to continue expanding students' English language proficiency, and to practice more advanced skills in reading, writing, speaking, and listening, with an emphasis on writing. This course is guided by the California ELD Standards to provide preparation necessary to demonstrate English language proficiency on the English Language Proficiency Assessments for California (ELPAC). This course will prepare students to earn an Overall 4 on the ELPAC, thus meeting one of four criteria for reclassification as Fluent English Proficient (FEP). This course also provides students with support in their Core English Language Arts (ELA) course and gives scaffolded support to improve reading comprehension. To achieve this goal students will read narrative and expository texts and apply rhetorical devices to their academic writing.

Students will be enrolled in English 2 A/B concurrently.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

California English Language Development Standards

Bridging: Students at this level continue to learn and apply a range of high-level English language skills in a wide variety of contexts, including comprehension and production of highly technical texts. The "bridge" alluded to is the transition to full engagement in grade-level academic tasks and activities in a variety of content areas without the need for specialized ELD instruction. However, ELs at all levels of English language proficiency fully participate in grade-level tasks in all content areas with varying degrees of scaffolding in order to develop both content knowledge and English. This course strongly emphasizes writing development.

Written Language Standards (Reading and Writing)

- **Interacting via written English**: Interacting with others in written English in various communicative forms (print, communicative technology and multimedia)
- **Reading/viewing closely:** Reading closely literary and informational texts and viewing multimedia to determine how meaning is conveyed explicitly and implicitly through language.
- **Analyzing language choices**: Analyzing how writers and speakers use vocabulary and other language resources for specific purposes (to explain, persuade, entertain, etc.) depending on modality, text type, purpose, audience, topic, and content area.
- **Justifying/arguing:** Justifying own arguments and evaluating others' arguments in writing
- **Using verb and verb phrases** to create precision and clarity in different text

Oral Language Standards (Listening and Speaking)

- **Exchanging Information/Ideas**: Exchanging information and ideas with others through oral collaborative discussions on a range of social and academic topics
- **Supporting opinions and persuading others:** Offering and justifying opinions, negotiating with and persuading others in communicative exchanges
- **Writing** literary and informational texts to present, describe, and explain ideas and information, using appropriate technology.
- **Understanding text structure** and organization based on purpose, text type, and discipline.

Year-long ELPAC Preparation Focus

Teachers will have an initial one-on-one ELPAC chat with each student to review their ELPAC scores from the previous year and to set learning goals. Midyear, in a teacher-student conference, both parties will review data from various district-selected assessments, areas for growth will be identified, and new goals will be set. Based on student progress data reviewed, the teacher will enhance or adjust curriculum to meet the needs of the students by continuing to scaffold and differentiate lessons.

Expository Reading & Writing Curriculum (ERWC) Module(s) with Integrated and Designated ELD

ERWC ELA - ELD 10th Grade Modules: Teacher choice from this list

- Book: *Things Fall Apart* (ELA-ELD)
- Issue: Age of Responsibility (ELA-ELD)
- Issue: Citizen Youth (ELA-ELD)
- Issue: Free Speech (ELA-ELD)
- Issue: We Should All Be Feminists (ELA-ELD)

Supplemental Instructional Material: Please describe. If using online text or non-standard material, please provide the title of the material or webpage and the URL link.

- *Collections' Performance Assessment* 10 (consumable)
- Quizlet
- Vocaroo
- Randall's ESL Cyber Listening Lab
- Newsela Premium
- No Red Ink Premium
- Vocabulary.com
- Typing.com
- Duolingo for Schools
- Kahoot Plus

Instructional Methods and/or Strategies:

Instructional methods:

- Provide a welcoming and supportive learning environment for all students.
- Daily practice of listening, speaking, reading, and writing to develop English fluency.
- Conduct ELPAC chats to review previous ELPAC scores and to set individual learning goals.
- Use of ELPAC task types
- Continued application of high-utility academic vocabulary/phrasing.

ELD teaching strategy resources:

- Specially Designed Academic Instruction in English (SDAIE)
- Guided Language Acquisition Design (GLAD)
- Sheltered Instruction Observation Protocol (SIOP)
- *English Learner Toolkit of Strategies,* California County Superintendents' Educational Services Association, Curriculum and Instruction Steering Committee

Teacher collaboration

- Collaboration with core English teachers at site
- Collaboration with teachers at other campuses

Assessment Methods and/or Tools:

- Common Formative Assessments (CFA)
- No Red Ink:
  - The Planning Diagnostic: Highlights areas for Improvement
  - Grammar Post-Test on No Red Ink
- ELPAC writing rubrics and speaking rubrics
- Teacher collaboration creating performance assessments.

Activities & Projects:

- Step Up to Writing: Masterpiece Sentences
- UCI Writing Project: Memory Snapshot
- Compare and Contrast Literary Passages
- Chain Poem
- Career Unit and Presentation
- Novel, short story, or ERWC ELA-ELD Unit
- Argumentative Essay, Narrative Essay, or writing within ERWC ELA-ELD Unit
- Me Portfolio of one's personal narrative and academic writing.
- ELPAC Vocabulary

- ELPAC Chat

Co-Requisites:

English 3 A/B

Course Purpose: What is the purpose of this course?

The purpose of this Designated English Language Development (ELD) course is to continue expanding students' English language proficiency, and to practice more advanced skills in reading, writing, speaking, and listening with an emphasis on an Oral History Project. This course provides scaffolding for selected skills applicable to the Core English Language Arts (ELA) course. Students will interact with narrative, expository, and rhetorical texts in various ways to demonstrate their abilities with the English language.

This course emphasizes the California English Language Development (ELD) Standards to provide preparation for the English Language Proficiency Assessments for California (ELPAC) and uses the ELPAC task types to improve academic skills. An additional course purpose is to prepare students to earn an Overall 4 on the ELPAC, thus meeting one of four criteria for reclassification as Fluent English Proficient (FEP).

This course also incorporates the Common Core State Standards for English language arts/literacy to prepare students for the grade 11 California Assessment of Student Performance and Progress (CAASPP) Smarter Balanced Summative Assessments.

Students will be enrolled concurrently in English 3A/B.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

California English Language Development Standards

Bridging: Students at this level continue to learn and apply a range of high-level English language skills in a wide variety of contexts, including comprehension and production of highly technical texts. The "bridge" alluded to is the transition to full engagement in grade-level academic tasks and activities in a variety of content areas without the need for specialized ELD instruction. However, ELs at all levels of English language proficiency fully participate in grade-level tasks in all content areas with varying degrees of scaffolding in order to develop both content knowledge and English.

Written Language Standards (Reading and Writing)

- **Reading/viewing closely:** Reading closely literary and informational texts and viewing multimedia to determine how meaning is conveyed explicitly and implicitly through language.
- **Writing:** Writing literary and informational texts to present, describe, and explain ideas and information, using appropriate technology.
- **Justifying/arguing:** Justifying own arguments and evaluating others' arguments in writing.
- **Understanding cohesion** and how language resources across a text contribute to the way a text unfolds and flows.
- **Understanding text structure** and organization based on purpose, text type, and discipline.
- **Analyzing language choices:** Analyzing how writers and speakers use vocabulary and other language resources for specific purposes (to explain, persuade, entertain, etc.) depending on modality, text type, purpose, audience, topic, and content area.

Oral Language Standards (Listening and Speaking)

- **Listening actively** to spoken English in a range of social and academic contexts. Understanding text structure and organization based on purpose, text type, and discipline.
- **Exchanging Information/Ideas:** Exchanging information and ideas with others through oral collaborative discussions on a range of social and academic topics.

- **Analyzing language choices:** Analyzing how writers and speakers use vocabulary and other language resources for specific purposes (to explain, persuade, entertain, etc.) depending on modality, text type, purpose, audience, topic, and content area.
- **Selecting Language Resources:** Selecting and applying varied and precise vocabulary and language structures to effectively convey ideas.

Year-long ELPAC Preparation Focus

Teachers will have an initial one-on-one ELPAC chat with each student to review their ELPAC scores from the previous year and to set learning goals. Midyear, in a teacher-student conference, both parties will review data from various district-selected assessments, areas for growth will be identified, and new goals will be set. Based on student progress data reviewed, the teacher will enhance or adjust curriculum to meet the needs of the students by continuing to scaffold and differentiate lessons.

Curriculum

- Oral History Project (year-long Special Project)
  - Students will be introduced to the methods, ethics, practices, and preservation of oral history
- Focus on ELPAC Prep
  - ELPAC Chat in August or early Sept., again in Nov, Dec., or January prior to ELPAC
  - ELPAC Practice Tests
  - ELPAC Task Types
- Academic Units
  - Argumentative Unit: Articles
  - Literary Analysis Unit: Short Stories & poems
  - Informative Unit: Articles
- Grade level academic vocabulary
  - Quizlet sets
  - CAASPP/SBAS/ELPAC/DOK terminology throughout the year

Course Purpose: What is the purpose of this course?

The purpose of this Designated English Language Development (ELD) course is to continue expanding students' English language proficiency, and to practice more advanced skills in reading, writing, speaking, and listening. This course supports students in their Core English Language Arts (ELA) course by providing scaffolds for reading and writing and reinforcing academic language. Students will use rhetoric-based activities designed to develop their academic literacy in rhetorical and analytical reading, writing, and thinking.

This course is guided by the California ELD Standards to provide preparation necessary to demonstrate English language proficiency on the English Language Proficiency Assessments for California (ELPAC). An additional course purpose is to prepare students to earn an Overall 4 on the ELPAC, thus meeting one of four criteria for reclassification as Fluent English Proficient (FEP) and assisting grade 12 students in earning the California State Seal of Biliteracy (SSB). The SSB is highly valued by the California State University and the University of California as evidence of College and Career Readiness.

Students will be enrolled concurrently in English 4 A/B and/or a course that meets the English 4 graduation requirement.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

California English Language Development Standards:

Bridging: Students at this level continue to learn and apply a range of high-level English language skills in a wide variety of contexts, including comprehension and production of highly technical texts. The "bridge" alluded to is the transition to full engagement in grade-level academic tasks and activities in a variety of content areas without the need for specialized ELD instruction. However, ELs at all levels of English language proficiency fully participate in grade-level tasks in all content areas with varying degrees of scaffolding to develop both content knowledge and English.

Written Language Standards (Reading and Writing)

- **Interacting via written English**: Interacting with others in written English in various communicative forms (print, communicative technology and multimedia)
- **Reading/viewing closely**: Reading closely literary and informational texts and viewing multimedia to determine how meaning is conveyed explicitly and implicitly through language
- **Adapting language choices** to various contexts (based on task, purpose, audience, and text type)
- **Selecting language resources:** Selecting and applying varied and precise vocabulary and other language resources to effectively convey ideas
- **Evaluating language choices:** Evaluating how well writers and speakers use language to support ideas and arguments with details or evidence depending on modality, text type, purpose, audience, topic, and content area
- **Analyzing language choices:** Analyzing how writers and speakers use vocabulary and other language resources for specific purposes (to explain, persuade, entertain, etc.) depending on modality, text type, purpose, audience, topic, and content area
- **Writing** literary and informational texts to present, describe, and explain ideas and information, using appropriate technology
- **Justifying/arguing:** Justifying own arguments and evaluating others' arguments in writing

Oral Language Standards (Listening and Speaking)

- **Exchanging Information/Ideas:** Exchanging information and ideas with others through oral collaborative discussions on a range of social and academic topics
- **Supporting opinions and persuading others:** Offering and justifying opinions, negotiating with and persuading others in communicative exchanges
- **Listening actively** to spoken English in a range of social and academic contexts
- **Adapting language choices:** Adapting language choices to various contexts (based on task, purpose, audience, and text type)
- **Analyzing language choices:** Analyzing how writers and speakers use vocabulary and other language resources for specific purposes (to explain, persuade, entertain, etc.) depending on modality, text type, purpose, audience, topic, and content area
- **Evaluating language choices:** Evaluating how well writers and speakers use language to support ideas and arguments with details or evidence depending on modality, text type, purpose, audience, topic, and content area
- **Presenting:** Expressing information and ideas in formal oral presentations on academic topics

Year-long ELPAC Preparation Focus:

Teachers will have an initial one-on-one ELPAC chat with each student to review their ELPAC scores from the previous year and to set learning goals. Midyear, in a teacher-student conference, both parties will review data from various district-selected assessments, areas for growth will be identified, and new goals will be set. Based on student progress data reviewed, the teacher will enhance or adjust curriculum to meet the needs of the students by continuing to scaffold and differentiate lessons.

Units of Study (teacher-developed and at teacher discretion)**:**

Getting Started--Doing school: Canvas, AERIES, software/app logins, student planner; course purpose, course routines, etc.

TED Talk Unit--Focus on listening skills, note-taking, speaking, debate

College and Career Unit--Research, career exploration software, business letters, mock interviews, job applications, budget

Genius Hour Unit-- Research, writing for audience, tech skills, presentation, listening and speaking

Expository Reading and Writing Curriculum (ERWC)--ELA-ELD Module(s) for 12th grade

Creative Writing Unit--Students will use both sides of their brain to create poetry and prose, culminating in an anthology.

Video journalism Unit-- Students will learn to responsibly create and distribute news articles.

Supplemental Instructional Material: Please describe. If using online text or non-standard material, please provide the title of the material or webpage and the URL link.

- *Collections' Performance Assessment* 12 (consumable)
- ELPAC.org Practice and Training Tests
- Online software/apps/materials:
  - Newsela or AVID Weekly Quizlet
  - Vocabulary.com
  - Vocaroo
  - Randall's ESL Cyber listening lab
  - NoRedInk
  - Vocabulary.com
  - Newsela
  - Listenwise

Methods and/or Strategies:

Instructional methods

- Provide a welcoming and supportive learning environment for all students.
- Daily practice of listening, speaking, reading, and writing to develop English fluency.
- Conduct ELPAC chats to review previous ELPAC scores and to set individual learning goals.
- Use of ELPAC task types, writing rubrics, and academic vocabulary.

Instructional Strategies

- Daily practice of listening, speaking, reading, and writing
- ELPAC chats to review scores and set individual learning goals
- Use of ELPAC task types, rubrics, and test prep vocabulary
- Use of *English Learner Toolkit of Strategies*
- Annotating the text
- Previewing vocabulary
- graphic organizers
- audio / visual aids
- sentence frames / paragraph frames
- Color coding: on instructions and highlighting while note-taking.
- Reduced syntax
- Frequent small assessments and feedback
- Games and community building activities to increase buy-in and engagement.
- One on one conferencing/coaching with students

Teacher Collaboration

- Work with Core English teachers to align supports.
- Communicate with ELD teachers at other campuses.

Assessment Methods and/or Tools:

- Teacher collaboration in creating performance assessments.
- ELPAC practice assessments and task types
- Quizzes/tests

- CFAs/benchmarks
- Portfolios
- Research Project and Oral presentations
- ELPAC Writing and Speaking Rubrics
- Exit tickets

Activities: *(if applicable)*

- **ELPAC chat**
- **Core Understading and Core Tasks:**

Listening

Core understandings: note-taking is a skill that is developed with practice and approached strategically.

Core tasks: students will listen to complex audio passages (such as TED talks), taking notes and outlining the core claims of a text, as well as the speaker's line of reasoning.

Speaking:

Core understanding: a speaker adjusts his/her register to suit the rhetorical situation.

Core tasks: Through presentations and video projects, students will develop and solidify their academic register, adjusting diction as appropriate.

Reading:

Core understandings: 1) a toolkit of strategies is available when attacking difficult texts. (2) Reading for gist and reading for detail are discrete and essential skills (3) A unique set of reading strategies applies to nonfiction texts.

Core tasks: reading grade-level fiction and nonfiction texts; annotating using the CATCH strategy.

Writing:

Core understandings: 1) writing is a vital means of self-expression (2) there are many forms of writing that vary in their degree of structure (3) writing is an iterative process. (4) a writer's diction must be adjusted to suit the rhetorical situation – academic language is expected for academic tasks.

Core Tasks: students will write summaries of texts read, as well as critical analyses of these texts. Students will also journal regularly, with the goal of developing students' comfort with the practice of writing and their understanding that writing can be informal.

Academic skills:

Core understanding: being a good student is not 'magic,' being strategic matters. Strong academic skills – such as organization and practice focusing - translate into strong skills in other areas of life.

Core Tasks / Expectations: take notes regularly, review them systematically. Record due dates in one reliable location. Learn HOW to record tasks in a way that enables students to complete work on time. Eliminate distractions (i.e., no cell phones).

Industrial Sector:

[ ] **Concentrator** [ ] **Completer**

Pre-Requisites: English Learner with 13 – 24 months in U.S. schools.

Co-Requisites: None

Course Purpose: What is the purpose of this course?

Intermediate English Language Development (ELD) is a two-semester, double-period intermediate, designated ELD course. It is designed to develop the foundational skills of language acquisition and the basic English language skills of listening, speaking, reading, and writing, for the English Learner (EL). Intermediate ELD is guided by the California English Language Development (ELD) Standards to provide preparation for the English Language Proficiency Assessments for California (ELPAC). A goal of the course is for students to improve their Overall ELPAC Score at least one English language proficiency level. To support this goal, this course will familiarize students with the terminology, skills, and strategies applicable to the ELPAC.

Another goal for this course is to continue developing the fundamentals of English language and to introduce more advanced skills in reading, writing, speaking, and listening by expanding academic vocabulary. Students will increase their listening comprehension, reading fluency and comprehension, and continue developing their speaking skills by improving pronunciation, fluency, and intonation. Students will practice correct sentence structure and paragraph writing with an emphasis on appropriate grammar, language functions, and word choice.

Through intensive English language instruction students will progress from Emerging English proficiency toward Expanding English proficiency in preparation for enrollment in classes with native English speakers.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

California English Language Development Standards

Students in Intermediate ELD and Intermediate ELD Lab will be either at the Emerging or Expanding stage of English language acquisition.

Emerging: Students at this level typically progress very quickly, learning to use English for immediate needs as well as beginning to understand and use academic vocabulary and other features of academic language.

Expanding: Students at this level are challenged to increase their English skills in more contexts and learn a greater variety of vocabulary and linguistic structures, applying their growing language skills in more sophisticated ways that are appropriate to their age and grade level.

Written Language Standards (Reading and Writing)

- **Interacting via written English**: Interacting with others in written English in various communicative forms (print, communicative technology, and multimedia)
- **Reading/viewing closely:** Reading closely literary and informational texts and viewing multimedia to determine how meaning is conveyed explicitly and implicitly through language.
- **Justifying/arguing:** Justifying own arguments and evaluating others' arguments in writing
- **Using verb and verb phrases** to create precision and clarity in different text
- **Modifying to add details** to provide more information and create precision
- **Connecting ideas** within sentences by combining clauses

- **Selecting language resources:** Selecting and applying varied and precise vocabulary and other language resources to effectively convey ideas

Oral Language Standards (Listening and Speaking)

- **Exchanging Information/Ideas**: Exchanging information and ideas with others through oral collaborative discussions on a range of social and academic topics
- **Writing** literary and informational texts to present, describe, and explain ideas and information, using appropriate technology.
- **Selecting language resources:** Selecting and applying varied and precise vocabulary and other language resources to effectively convey ideas
- **Understanding text structure** and organization based on purpose, text type, and discipline.
- **Listening actively** to spoken English in a range of social and academic contexts
- **Presenting:** Expressing information and ideas in formal oral presentations on academic topics

Foundational Literacy Skills (Continue developing according to student need)

Literacy in an Alphabetic Writing System

- **Phonological awareness:** Demonstrate understanding of spoken words, syllables, and sounds (phonemes)
- **Print concepts**: Demonstrate understanding of the organization and basic features of print

Foundational Reading Skills

- **Phonics and word recognition**: Know and apply grade-level phonics and word analysis in decoding words both in isolation and in text
- **Fluency**: Read with sufficient accuracy and fluency to support comprehension

Year-long ELPAC Preparation Focus

Teachers will have an initial one-on-one ELPAC chat with each student to review their ELPAC scores from the previous year and to set learning goals. Midyear, in a teacher-student conference, both parties will review data from various district-selected assessments, areas for growth will be identified, and new goals will be set. Based on student progress data reviewed, the teacher will enhance or adjust curriculum to meet the needs of the students by continuing to scaffold and differentiate lessons.

Learning Objectives

Social & Life Skills

- Exchange common greetings.
- Introduce self and others.
- Make requests and suggestions.
- Ask for and offer things.
- Ask for and give directions
- Ask questions for clarification.
- Role-play purchasing things in stores, markets.
- Say and spell in order the days of the week, seasons, and months of the year.
- Compliment, praise, and congratulate someone.
- Express emotions.
- Express likes and dislikes, agreement, disagreement, and indifference.
- Recognize words for people and family relationships.
- Distinguish people according to physical and psychological descriptions (sick, happy, sad, tall, etc.).

- Distinguish items according to color, shape, size, and other characteristics.
- Identify orally and in writing the parts of the body.
- Discuss and explain cultural traditions, food, hobbies, music, etc. to classmates and learn about the cultural practices and norms of classmates' home country as well as school culture.

School Skills

- Act out common school activities.
- Give classroom commands to peers.
- Follow classroom directions and learn common classroom items.
- Use basic classroom sentences.
- Understand and follow basic routines and activities associated with school.
- Engage in oral conversations with peers.
- Engage in listening activities.
- Say and spell the cardinal and ordinal numbers 1-100.
- Use time expressions correctly.
- Identify and spell United States money denominations.
- Name, recognize, and reproduce the 26 letters of the English alphabet, in alphabetical order, uppercase and lowercase, with approximate English speaker pronunciation and be able to spell words by using English alphabet.
- Learn the English vowels and pronounce them appropriately; recognize the difference between vowels and consonants.

Academic Skills

- School grading policy, schedules
- How to study vocabulary
- How to use an Agenda or calendar for planning
- Asking teachers questions
- Note-taking skills
- Goal setting – Organization
- Practice descriptive and narrative writing
- Write complete sentences & short formatted paragraphs
- Read for information & for pleasure
- Grammar and language functions as appropriate
- Identifying roots, prefixes and suffixes
- Reading for information and understanding (context)
- Taking standardized tests (ELPAC prep)
- Editing/proofreading
- Online research
- Supplemental study skills
- Study skills for finals
- Identify topic sentences and supporting details
- Use academic vocabulary in speaking and writing
- Engage in academic and social conversations

Technology Skills

- Basic computer use
- Using System 44, READ 180U, Reading Plus
- School website
- Using Aeries/Canvas
- Passwords
- Typing practice
- Accessing and sending emails
- Laptop upkeep, troubleshooting
- Complete and submit a Word Document
- Making videos (Flip grid)
- PowerPoint advanced skills
- Collaborative project using Office 365 Teams or Google Docs
- Online research
- Supplemental tech skills, or mixed media project
- Online ELPAC platform practice
- Career exploration with online platform and visit to campus Career Center

- Use Microsoft Word, PowerPoint, Google tools

Supplemental Instructional Material: *Please Describe. If using online text or non-standard material, please provide the title of the material or webpage and the URL link.*

- *System 44 Resources for Differentiated Instruction (RDI)* Phonics & Word Study Lessons
- *RDI* Sight Word List
- *Read 180 Universal*
- *Reading Plus*
- ELPAC Vocabulary List
- Quizlet
- Vocaroo
- Randall's ESL Cyber Listening Lab
- Typing.com
- Duolingo
- Listenwise

Instructional Methods and/or Strategies:

Culturally Responsive Teaching

- Provide a welcoming and supportive learning environment for all students.
- Daily practice of listening, speaking, reading, and writing to develop English fluency.
- Conduct ELPAC chats to set individual learning goals.
- Use of ELPAC task types, writing rubrics, and academic vocabulary.
- Empowering student to share thoughts
- Integrating diverse works and study practices
- Understanding student learning needs and styles
- Emulating culturally-significant instruction styles, such as oral storytelling

ELD Teaching Strategies

- Specially Designed Academic Instruction in English (SDAIE)
- Guided Language Acquisition Design (GLAD)
- Sheltered Instruction Observation Protocol (SIOP)
- *English Learner Toolkit of Strategies*, California County Superintendents' Educational Services Association, Curriculum and Instruction Steering Committee
- Total Physical Response (TPR)
- Class and small group discussion with sentence frame support
- Leveled Instructional Software use for independent learning

Teacher Collaboration

- Work with Core English teachers to align supports.
- Communicate with ELD teachers at other campuses.

Assessment Methods and/or Tools:

- Placement Test for *Future 2* MyEnglishLab.com
- Common Formative Assessments (CFAs)
- District-selected Reading Diagnostic
- District-selected Primary Language and Skills Assessment
- District-selected Phonics Diagnostic
- Teacher observation of student's use of English
- Speaking demonstrations and assessments, including oral presentations
- Student depictions of concepts via drawings, markings, posters, collages, and video projects
- Teacher or student-generated role-play of real-life situations.
- Written student work including, but not limited to, exercises, compositions, portfolios, notebooks, and projects
- Teacher-generated formative and summative written and oral tests/quizzes
- Student generated logs and journals
- Listening comprehension quizzes
- Teacher collaboration in creating performance assessments.

Activities: *(If applicable)*

- ELPAC Chat
- Students will use the Practice and Training Tests for ELPAC to become familiar with the ELPAC task types and the online testing platform.
- Students will work with phonics software and reading software
- Students will be taught to take and use Cornell Notes
- Students will practice listening for comprehension in a weekly basis
- Students will practice speaking activities each week

Certificate: *(If applicable)*

CONSTRUCTION I

INDUSTRY SECTOR: Building and Construction Trades Sector

PATHWAY: Residential and Commercial Construction

CALPADS TITLE: Intermediate Residential and Commercial Construction (Concentrator)

CALPADS CODE: 7341

HOURS:

Total	Classroom	Laboratory/CC/CVE
155	50	105

JOB TITLE	O*NET CODE	JOB TITLE	O*NET CODE
Carpenters	47-2031.00	Construction Managers	11-9021.00
Operating Engineers and Other Construction Equipment Operators	47-2073.00	Civil Engineers	17-2051.00
Helpers, Construction Trades, All Other	47-3019.00	Construction Laborers	47-2061.00

COURSE DESCRIPTION:

Construction I is a concentrator course in the Residential and Commercial Construction Pathway leading to, 2 of 3 required certificates of completion for direct admittance into the Carpenters International Training Fund (CITF) pre-apprenticeship program. The course integrates academic skills with practical application allowing students to explore career options in the Building and Construction Industry while developing a foundation of industry-specific skills and concepts. Through inquiry-based learning and highly engaging hands-on activities, students enrolled in Construction I, will engage in an overview of the importance of safety on the job site, while gaining practical experience in measuring and marking, blueprint reading, estimating construction cost, as well as, the use of layout, framing, and common hand and power tools. Students will explore and further develop these skills through projects such as building a sawhorse, picnic table, skateboard ramp, and shed. Students will develop a foundational understanding of the technical and soft skills required for the world of work all while focusing on effective communication, critical thinking, creativity, and collaboration.

DUAL ENROLLMENT: None

PREREQUISITES:

Prerequisite
None

METHODS OF INSTRUCTION

- Direct instruction
- Group and individual applied projects
- Multimedia
- Demonstration
- Field trips
- Guest speakers

STUDENT EVALUATION:

- Student projects
- Written work
- Exams
- Observation record of student performance
- Completion of assignment

INDUSTRY CERTIFICATION:

- OSHA 10

RECOMMENDED TEXTS:

- One Trade Many Careers
- Project Book 1/2/3
- Math For The Trades

PROGRAM OF STUDY

Grade	Fall	Spring	Year	Course Type	Course Name
9, 10, 11, 12				Concentrator	Construction I
9, 10, 11, 12				Concentrator	Construction II

I.	COURSE CONTENT	CR	Lab/ CC	Standards
	Course content: **Unit Title:** Career Exploration **Unit Summary:** Students will examine and recognize the impact of financial, technical, environmental, and labor trends on the past and future of the construction industry. Using the Career Connections, *One Trade, Many Careers* textbook and other supplemental material such as O-Net Online, California Career Zone, and Career Cafe, students will investigate and, compare and contrast the different career opportunities in the Building and Construction Industry. Students will participate in a self-evaluation wherein they will identify their interests, strengths, and aptitudes and use the results of the evaluation to determine what careers in the industry may be of most interest to them. Equally important, students will identify, articulate, and reframe key employability skills that will continue to be expanded upon in each of the following units. **Unit Assignment:** After investigating the various career opportunities in the Building and Construction Industry, students will gather and identify key components such as salary range, job demand, required experience, region of demand, ect. for a minimum of 10 different careers within the industry, recording their findings in a dialectical journal. Students will be divided into small groups where they will verbally share and analyze their findings while taking notes on the findings of their peers. Each group will identify an individual to participate in a whole class share out summarizing the findings of the group. Students will then begin developing their career portfolio by identifying one career in the Building and Construction Industry they are most interested in, evaluate the requirements to apply for the job, create a one-page letter of application, and a resume to apply for the position. At the completion of this assignment students will compare and contrast their resume to the requirements to apply for the desired position and develop an education and career plan that prioritizes necessary next steps and skills that need to be obtained to qualify for the position. **Unit Title:** Safety **Unit Summary:** This unit reviews the basic safety of construction job sites, building on prior knowledge students will identify and be able to recognize safe practices for avoiding injury. Students will understand the necessity for a "safety first" mindset. Characteristics of a professional in the Building and Construction Industry, an overview of Cal OSHA, Environmental Protection Agency (EPA), Hazard Communication (HazCom), Material Safety Data Sheets (MSDS), and procedures for job site safety training will be covered. Students will understand and demonstrate safe handling of a variety of construction tools, electrical and non-electrical; hand and power tools – both stationary and portable and explain proper maintenance and care procedures. Students are required to demonstrate safety and maintenance procedures for all tools necessary for job specifications as well as to demonstrate proper use, including steps for turning on and off electric power tools, and safe storage. **Unit Assignment(s):** Students will evaluate a minimum of 3 industry recognized sources of safety protocol including but not limited to CITF's Career Connections Project Book 1 and 2, and the US Department of Labor's Occupational Safety and Health Administration's (OSHA) Field Safety and Health Manual, to investigate the	50	105	**Academic:** LS: 11-12.6 RSIT : 11-12.7 WS : 11-12.2 WHSST : 11-12.6, 11-12.9 G-MG: 1, 3 N-Q: 1, 2, 3 SEP: 1, 3, 4, 5, 6, 8 CC: 3, 6, 7 ETS: ETS1, ETS2 **CTE Anchor:** Communications: 2.2, 2.3, 2.6 Career Planning and Management: 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.8, 3.9 Technology: 4.1, 4.2, 4.3, 4.4, 4.5, 4.6 Problem Solving and Critical Thinking: 5.1, 5.2, 5.3, 5.4 Health and Safety: 6.1, 6.1, 6.2, 6.3, 6.4, 6.5, 6.6, 6.7, 6.8, 6.9, 6.11, 6.12 Responsibility and Flexibility: 7.2, 7.3, 7.4, 7.5, 7.6, 7.7, 7.8 Ethics and Legal Responsibilities: 8.1, 8.3, 8.4, 8.5, 8.6, 8.7 Leadership and Teamwork: 9.1, 9.2, 9.3, 9.4, 9.5, 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.2, 10.3, 10.4, 10.5 Demonstration and Application: 11.1, 11.2, 11.3, 11.4 **CTE Pathway:** D1.2, D2.1, D2.3, D2.4, D3.1, D3.2, D3.3, D3.4, D3.5, D3.6, D3.7, D4.1, D4.2, D4.3, D4.4, D4.5, D4.6, D4.7,

	importance of safety, common hazards, accidents, and injuries as well as how to prevent accidents and promote safety on the job site. Using the findings from this investigative process students will develop a 2-page cause and effect expository essay using facts and statistics to explain the importance of safety on the job site and how to prevent accidents from occurring. Using information from both the investigative process and the essay, each student will develop a 2-3-minute oral classroom presentation explaining a component of one of the following safety components: OSHA standards, Personal Protective Equipment (PPE), Promoting Safety, Types of Hazards, safe work habits and attitudes, proper communication, what to do in case of an accident. Each student will be assigned a different component of one of the aforementioned topics and present the information to the class with a technology based visual aid such as a PowerPoint presentation or short video. Students in the audience will take Cornell notes during the presentations and are encouraged to ask the presenting student clarifying questions. **Unit Title:** Tools **Unit Summary:** Students will identify, compare and contrast, classify, and engage in practical application of common hand and power tools to include, but not limited to: block plane, chalk box, chisel, c-clamp, bar and pipe clamps, hand screw clamp, claw hammer, nail set, combination square, compass, framing square, speed square, straightedge, retractable tape measure, protractor, sliding T-Bevel, adjustable wrench, socket wrench, open end and box end wrenches, wood rasp, sanding block, utility knife, belt sander, portable circular saw, miter saw, electric drill, random orbital sander, pneumatic staple gun, pneumatic nail gun, router, saber saw, and screw gun. With the introduction and overview of each of the aforementioned tools there will be special emphasis to the purpose and safe application of the tool. **Unit Assignment(s):** Students will be paired and asked to choose three out of five proposed building projects (sawhorse, picnic table, skateboard ramp, shed, or play house) to analyze and determine what tools are needed and why they are necessary for completing the proposed project. Students will be instructed to engaged in deliberate thought and analysis by weighing evidence, comparing alternative tools based on their probability of success, reconsidering initial ideas, all before developing a one-page expository memo / email requesting the necessary tools for each project. The memo will be written from the perspective of a foreman on a job site who is requesting tools for a job and providing logical reason for each tool. Students will than trade their memos with a different pair of students and begin a critical analysis review of the memo identifying any issues or problems with the requested tools and or purpose of the tool, ask questions to guide the analysis, and make a final determination if the request is valid. Each pair will then share their finding and possible recommendations with the class. **Unit Title:** Materials and Measuring **Unit Summary:** Students will identify, compare and contrast, classify, and engage in practical application of materials frequently used by professional carpenters to include, but not limited to types of wood such as cedar, douglas fir,oak, pine, plywood, oriented strand board, and pressboard, as well as, fasteners such as nails, brads, screws, wood glue, and more. Students will identify and describe permissible uses of construction materials as well as defend code restrictions related to the materials while demonstrating safe cutting and application techniques for these materials. Career Connections' *Math for the Trades* textbook will be used to guide the fundamental understanding and practical application of general math, fractions, and decimals in the context of real-life technical work tasks in the industry. Measurements and measurement tools,		D5.1, D5.2, D5.3, D5.8, D5.9, D5.10, D6.2, D6.3, D6.4, D6.5, D6.6, D6.7, D6.8, D6.9, D6.10, D6.11, D6.12, D6.13, D6.14, D6.15, D6.16, D7.1, D7.2, D7.3, D7.4, D7.5, D7.6, D7.7, D7.8, D8.1, D8.3, D8.4, D8.5, D8.6, D8.7, D8.8, D8.9, D8.10, D8.11, D9.1, D9.2, D10.1, D10.2, D10.4, D10.5, D10.6, D10.7, D10.8, D10.9, D10.10, D10.11, D10.12, D11.1, D11.2, D11.3, D11.4, D11.10, D11.12, D11.13

layout, area measure, and volume will be explained in detail with students participating in exercises for practice and remediation of these technical skills.

Unit Assignment(s):

In groups of two to four, students will demonstrate their understanding of materials, measuring, layout, cutting and assembly through the creation of a Notched-Top Sawhorse. Students will be assessed by an analysis of the horse, assembly, and overall process. The criteria of the horse will include the length, angle, bevel of the legs; the length, notch location, angle notches and depth notches of the gussets; and the cut length and angle cut of the spreaders. The criteria of the assembly will include the overall height, spread of sawhorse legs at base on sides and end; fastener location; and edges and joints. The criteria for the overall process will include students handling of the tools, ability to follow directions, clean up, and safe work practices will be analyzed. Students will present the final project to the instructor providing an oral overview of the process, tools, fasteners, and steps required to complete the project. The team will also inform the instructor of areas of difficult and ease in the process as well as steps to improve the process in the future.

Unit Title: Blueprint Reading & Estimating Construction Costs

Unit Summary:

Students will examine the varying components of a blueprint and learn to interpret and apply information from technical drawings, schedules, and specifications used in the construction trades. Students will identify the elements used in technical drawings, including types of lines, symbols,

details, and views as well as interpret the elements of technical drawings, including plan, elevation, section, and detail views. Students will be introduced to technical drawings specifications and how to interpret and scale dimensions from a set of plans using an architect's scale. Students will be tasked with interpreting sectional and detail drawings to determine construction details such as corners, rough openings, stairs, and roof systems as well as the materials and overall costs associated with the specification.

Unit Assignment(s):

In groups of four to five, students will demonstrate their understanding of blueprint reading by building a curved picnic table using a blueprint to guide the project. Students will be assessed by an analysis of the picnic table, the picnic bench seats, the overall presentation as compared to the blueprints, and the general process. The criteria of the picnic table and bench seats will include finished length and height, curvature, spacing of top boars, fastening, location of supports and leg assembly, location and spread of legs, tabletop angle braces, and carriage bolts. The criteria for the overall process will include students ability to collect the appropriate materials and tools, handling of the tools, ability to follow blueprint directions, clean up, and safe work practices. Students will then engage in a formative assessment of their own work and that of a neighboring team. Critical thinking will be a key component of the formative assessment process where students will be instructed to think and discuss the quality or lack of their work and that of their neighboring teams, identifying how the process can be improved upon in the future.

Unit Title: Foundations and Framing

Unit Summary:

Students will learn and demonstrate knowledge of foundation layout techniques as specified in blueprints or construction plans. Using the pythagorean theorem students will integrate survey tools and technique to set property lines, setbacks, foundation layout and to finish floor elevations. Students will be able to differentiate between applications for wood and concrete foundations, identify the steps and terms for both wood and concrete foundations and create a wood foundation. With special attention to stand-alone structures students will measure, cut, and assemble wall

	components using appropriate tools and fasteners developing a frame and fastening sheathing over the frame according to code. **Unit Assignment(s):** In groups of five to six, students will demonstrate their understanding of layout, floor framing, wall framing, and roof framing by building a shed with a gable roof. Students will be assessed by an analysis of the floor system, wall system, roof system, and overall dimensions, and general process. The criteria of the floor system will include the joist layout, rim joists attachment, plywood installation, parallel sides equal, floor length, width and system square, as well as fastener installation. The criteria for the wall system will include stud lay out, door opening and frame, window opening and frame, header location, wall square, wall corners, double plate installation, fastener installation. The criteria for the overall dimensions will include length, width, and height. The criteria for the overall process will include, communication, collaboration, critical thinking, blueprint reading, proper tool handling, ability to follow direction, clean up, and jobsite safety. This project will have a special emphasis on leadership and working together as a team with team and individual decision making, conflict resolution, identification of responsibilities, cooperation, collaboration, and effective decision-making. The team will also inform the instructor of areas of difficult and ease in both the technical and collaborative process as well as steps to improve the process in the future

AVID Senior Seminar Course Outline

Department: English & Social Science

Grades: 11 & 12

Prerequisite: Previous enrollment in AVID elective class prior to grade 11 for at least one year.

Corequisite: Enrollment in at least one Honors, Advanced Placement, or International Baccalaureate course or in a college transferable course accepted by UC/CSU in both the 11th and 12th grade years.

Context for the Course

AVID elective courses at all grade levels are designed to prepare students for entrance into four-year colleges and universities. The courses emphasize rhetorical reading, analytical writing, collaborative discussion strategies, tutorial inquiry study groups, preparation for college entrance and placement exams, college study skills and test taking strategies, note taking and research. AVID students, generally, come from groups underrepresented at our four-year colleges and universities. They are enrolled in a rigorous academic program while being given a support system in the AVID classes through tutorials, coaching in note taking, organization and study skills, analytical writing, collaborative work and college counseling. All AVID seniors are required to develop and present a portfolio representing their years of work in the AVID program as well as complete the requirements for the Seminar course.

Course Description

The AVID Senior Seminar is a two-year interdisciplinary course for AVID juniors and seniors. The course is designed for those students who elect to take a course that prepares them for the rigor required for college work. Students will engage in higher levels of WIC-R (writing, inquiry, collaboration and reading) strategies than experienced in prior years of AVID. These higher level thinking, reading, writing and oral language skills are needed to prepare students for the level of work required to produce a culminating research project at the end of the senior year.

This course is organized around the theme of "Leadership as a Catalyst for Change in Society." Students study, in depth, exceptional leaders in contemporary society, and examine the effect these individuals have had on culture, politics, education, history, science, and the arts. The course requires that students read essays, speeches, articles and letters by these leaders, as well as at least one full-length work by the leader or about the leader. In addition, each student is required to conduct a research project that is presented in the senior year. The project requires that students examine a particular leader's life and accomplishments in relation to the student's own possible career goals and aspirations. Among the leaders included in the course for in-depth study include: Leonard Bernstein, Dr. Jane Goodall, Dr. Stephen J. Gould, Dr. Martin Luther King, Jr., Pablo Neruda, Eleanor Roosevelt, Dr David Suzuki and John Wooden. Students may select other leaders of equal stature with the approval of the AVID teacher.

The focus of the junior year is the survey of 8–10 recognized leaders from a variety of fields of study. Individually and in study teams, students will explore the historical period in which the leader lived, the social issues they addressed, and their contributions to society. Students will be expected to read and write extensively throughout the process, including participation in a variety of collaborative discussion and response groups. This

preliminary research survey will culminate in an end-of-year essay in which students explain and provide evidence for choosing a particular leader to study in greater depth.

The level of reading, writing, inquiry, discussion and analysis experienced in the junior year will serve as the foundation for in depth research to be introduced and completed as a final project in the senior year.

In the senior year, students will select a leader to study in depth, read extensively about the leader, write a number of analytical essays, develop critical questions based on their reading and writings, participate in collaborative discussion groups such as Socratic Seminar, and complete a final research essay project.

In addition to the academic focus of the AVID Senior Seminar, there are college bound activities, methodologies and tasks that should be achieved during the junior and senior year. Support materials are in development and will be divided into four semesters surrounding the topics of Testing, Preparation, Exploration and Fit and Finances. For an overview and timeline related to each semester for both the junior and senior years, and for directions for reviewing and downloading pilot materials, see Appendix A.

Course Content

Goals

1. Students will learn to analyze the features and rhetorical devices used in different types of non-fiction: essays, speeches, editorials, scientific reports and historical documents.
2. Students will demonstrate a comprehensive understanding of significant ideas expressed in a variety of written works by identifying important ideas, recognizing inferences and drawing conclusions.
3. Students will develop various strategies to respond to a text including, annotating a text, writing learning logs, and developing double entry journals and summaries.
4. Students will develop their ability to relate prior knowledge to new information and make connections to related topics of information.
5. Students will demonstrate an ability to articulate a clear thesis on a topic, and identify, evaluate and use evidence to support their thesis.
6. Students will develop their ability to write well-organized essays that are consistently coherent and logically developed.
7. Students will continue to learn to effectively summarize ideas contained in a text.
8. Students will develop skill in writing short answer response essays, including, timed essays.
9. Students will participate in research projects that extend their knowledge of a particular topic and develop and support their own ideas and opinions.
10. Students will participate in discussions, presenting their ideas in a clear and articulate manner.
11. Students will listen to and respond to the ideas of others.
12. Students will develop a leadership role in Socratic Seminars.
13. Student will develop their skills in research techniques.

14. Students will productively participate in both individual and group projects and discussions.
15. Students will improve their oral communication skills through a variety of means, including presentation, debate, and Socratic Seminar.
16. Students will learn to evaluate their own and others' writing, using rubrics and scoring guides modeled on UC and CSU entrance exams.
17. Students will learn specific strategies to navigate the college admission process by engaging in a variety of activities and tasks.

Course Outline

Junior Year

I. Course Introduction

A. Introduce the theme of "Leadership as a Catalyst for Change in Society."

1. Examine students' perceptions about what constitutes a leader, including the qualities that characterize a leader. Using a variety of readings and collaborative group strategies, students analyze and discuss how "leadership" is defined and what roles leaders play in our society.
2. Discuss the role of students as leaders in their school and community

B. Following the discussion and exploration of the course theme, have students write a short essay in which each student analyzes, from his/her point of view, what is meant by "leadership as a catalyst for change in society."

1. Revisit this essay as the semester progresses so students can modify, reexamine and redefine their original definition.
2. As students study different leaders, have them develop graphic organizers, which outline the characteristics of a leader.

C. Utilizing a "philosophical chair" or other collaborative group discussion formats, ask students to analyze, discuss, and debate the following question, "Does history make a leader, or does a leader make history?"

II. Organization of Study

A. Develop a process and criteria to assign students to "study" team groups.

B. Each group will be assigned a specific leader to study in-depth.

1. Each study team will spend (4) weeks reading, analyzing, raising questions, discussing findings and exploring the life and role of the selected "leader."
2. At the end of the 4 weeks, students, as a group, will rotate to another leader to study.

C. As a group, students will discuss and examine the historical, social and cultural period in which the leader lived and worked.

1. They will create a historical timeline.

2. The will create a graphic organizer, a T Chart, in which they outline the characteristics of that period and juxtapose them to the response of their leader to those characteristics.

D. Reading—Critical analysis Assignments

1. Students will be required to read one major work about the leader in each group.
2. Students will be required to read at least two essays by the leader.
3. Students will read at least three essays written about the leader by other authors.
4. Students will read at least two sources that specifically discuss the historical, social, cultural and scientific issues of that period, there by placing the leader in historical context.
5. Throughout the time in each study team, students will engage in a variety of writing, inquiry, collaboration and reading (WIC-R) activities.

E. Writing Assignments

1. Students will be required to do the following on an ongoing basis: Take Cornell notes, write summaries, develop dialectical journals, and write at least two critical essays. In the essays students will analyze various historical, social, cultural issues.
2. Students will write an analytical essay of no less than three pages in which they examine, in detail, the major trends, conflicts and issues of the historical period in which the leader lived and worked.
3. Students will participate in individual and collaborative reader response groups to reflect and provide feedback for revisions.
4. Students will use a writing rubric designed specifically for the type of essay assigned and will be expected to score at least a 4 on a 6-point rubric.

F. Discussion and Oral Presentations

1. Students will be involved in ongoing discussions in each group based on questions the students generate from their readings.
2. Students will participate in Socratic Seminars on themes that link the various leaders they have studied. The students will use the texts they have read to support different points of view.
3. Students will prepare oral presentations for each group outlining and discussing the major issues and questions that evolved about the leader they studied.

III. Final Paper

A. At the end of the spring semester each student will select a leader he/she wants to study in depth in the senior year.

B. The student will write a paper in which he/she explains why they have chosen a particular leader based on their readings and discussion. Student will also address the questions that were developed in the groups and select particular questions for in depth exploration.

Senior Year

I. The senior year will begin with a review of what was studied in the junior year.

A. Review, examine and discuss (in historical context) the contributions made by the leaders in the course of study.

B. Discuss what has made their contributions significant on both a personal and universal level.

C. Explore and develop possible research questions, topics and themes as a result of the discussion.

D. All discussions should be continually linked back to the theme of the course "Leadership as a Catalyst for Change in Society."

II. Research Project

A. Students will review/revise the paper in which they explain and defend their choice of leader for research.

B. Students prepare a preliminary research question.

C. Students develop a plan and timeline for their project with input from their academic advisor. The plan must also include a reading schedule.

III. Reading Assignments

A. Students will read at least two long works (books) by their leader.

B. Students will read at least four essays, including speeches, by their leader.

C. Students will read at least four other sources—articles, books, essays, etc.—written about their leader.

D. Students must read four sources about the historical period in which their leader lived (lives) and worked.

IV. Writing Assignments

A. On an ongoing basis students will take Cornell notes, keep a dialectical journal, and write summaries, short essays and develop graphic organizers.

B. Every four weeks students will be required to write a well-developed critical essay in which they discuss their findings and the significance of these findings to their overall question.

C. Students will generate higher level thinking questions that evolve from their research. These questions will help to propel their research forward.

V. Outside Sources

A. Students will collect information from individual contacts who are in the same field of study as the leader being researched.

B. Students will form a mentorship with a scholar who has a special interest in the field of the leader being studied. This mentor will act as an advisor to the students' project.

VI. Research Group

A. Students will form research groups/teams based on the leader they are researching.

B. The team will be a forum in which to exchange ideas, generate questions for discussion, and develop possible themes and topics.

C. The team will also be a forum to discuss and clarify issues regarding the historical context in which the leader worked.

D. The team will also act as a peer editing group

VII. Socratic Seminars

A. The Socratic Seminar should be an ongoing activity that helps the students see their leader in a global context.

B. The Socratic seminar should explore some of the following topics:

1. How does a leader affect society and how does society affect the leader?
2. What are the pros and cons of the changes that have taken place because of a leader's work?
3. What are the individual characteristics of a leader and are their commonalities amongst leaders?
4. What makes a leader a catalyst for change? What would such leadership look like in a school, business, community, and nation?

VIII. Review Research Plan and Timeline

A. By the end of the first semester the students should submit their preliminary notes.

B. The students should finalize the thesis for their project.

C. Students should revise their timeline.

IX. Oral Presentations from Each Team

A. Each team will present a consensus about their findings.

B. Each team will discuss the research questions of their individual members.

C. Each team will present and defend the topics for each individual project.

X. Writing the Research Paper

A. Students will use MLA Style form, bibliography, etc. for their project essay.

B. Students will submit a schedule for submitting drafts of their project to their team and teacher.

C. Students will state the thesis of their project.

D. Students will present a preliminary bibliography.

E. Students will present an outline of their research paper.

F. Students will present drafts and revisions of their research paper in a timely fashion.

XI. Submission of the Final Research Project

A. Students utilize the writing-research process in submitting their final paper.

B. Students follow all established and recorded timelines.

C. Students conference with their teacher and academic mentor about the results of their research.

XII. Individual Reflections—Essay

A. Conclusions drawn from the research.

B. The relationship of the leaders studied—his/her contributions, characteristics, accomplishments, education, goals—and the goals and aspirations of the AVID student.

NOTE: Support activities for writing assignments may be referenced in the revised (2005) *AVID High School Writing Teacher Guide,* especially those sections for advanced writing—argumentation, persuasion, exposition, and critical analysis.

Reading and writing assignments are referenced to the California State Standards in English Language Arts for the 11th and 12th grade.

3.0 Literary Response and Analysis
3.2
3.5
3.8
3.9
1.0 Writing Strategies
1.1
1.2
1.3
1.4
1.5
Writing—Research
1.7
Writing—Evaluation and Revision
1.9
2.0 Writing Application
2.2 a, b, c
2.4 a, d, e

Key Assignments And Activities

- Reciprocal Teaching
- Literature Circles for Non-fiction
- Annotating the text
- Working with graphic organizers
- Quickwrites and freewrites
- Learning logs
- Double-entry journals

- Summary writing
- Analytical essays—short and long
- Timed essays—45 minute limit
- Preparing a bibliography
- Research project
- Discussion activities
- Group discussions
- Philosophical chairs
- Socratic seminars
- Oral reports

Instructional Methods And Strategies

- Lecture
- Collaborative group work
- Readings
- Library and Internet research
- Seminars
- Collaboration with Advisors

Assessment Methods And Tools

- Papers, essays, writing and oral language rubrics
- Journals
- Learning logs
- Exams, quizzes
- Participation
- Observation
- Conferencing
- Final project
- Reflection

AVID students will also be assessed on rudimentary AVID "basics" such as a well-organized notebook, participation in tutorials, notetaking and participation and leadership in Socratic seminars

Appendix A

NOTE: After June 1, 2005, you can review/download a course description and resources including a pilot Teacher Guide that includes a number of college preparation/exploration activities by going to www.avidonline.org, log into MyAVID Account, then go to File Sharing and click on Jr./Sr. Seminar Resources. Overviews of each of the units from the pilot teacher guide are described below.

Unit 1

Overview

It is during the first semester of the junior year that students learn about the two college admission tests (ACT and SAT) and the differences between them. One way for students to become familiar with these materials is to take both practice tests (the PLAN and the PSAT) and use the results to prepare for ACT and SAT testing in the spring.

Students also begin to prepare for college admission by gathering materials and organizing them into "crates" and by reviewing what they have accomplished in their first two years of high school. This will prepare them for writing a résumé, a good resource when completing college applications. This is also a time to look at college entrance requirements and to access a valuable research tool: the Internet.

AVID students may want to consider applying to both public and private schools. One way to explore the various elements of the college admission process is to visit a variety of Web sites. For example, at the California Colleges site (www.californiacolleges.edu), students can find answers to their questions about entrance requirements, financial aid, career planning, and much more. College admissions representatives who come to the school can provide additional information.

Financing their college education is a concern for many students. In this semester, some key concepts are introduced, but little can be done in this area until the senior year. Students can also begin self-exploration to help them determine which college(s) will be a good "fit" for them.

Timeline

1. **Testing**
   September: Review previous PLAN and PSAT scores.
   September–October: Prepare for PSAT test. Take PSAT test.
   December: Interpretation of score results (counselor presentation).
2. **Preparation**
   September: Prepare student "crates."
   September–October: Do preparation activities.
   October–January: Data sheets, "a–g" requirements, résumé, "Family Firsts."
3. **Exploration**
   September–November: Presentations by college representatives.
   October–December: College exploration on the Web (UC Pathway, California Colleges, CSU Mentor sites).
   January: AVID graduate panel.
4. **"Fit" and Finances**
   September–June: Explore types and varieties of financial aid.

December–June: Financial aid calendar; ongoing review.

Unit 2

Overview

During the second semester of the junior year, students are encouraged to take both college admissions tests. They can then prepare for retaking their highest scored test in the fall semester of their senior year. This is also the time to explain strategies that will help students when they take SAT Subject tests. Since many students will also be taking AP tests for the first time, these can be coordinated with the SAT Subject tests.

Students can prepare for the college application process by beginning a first draft of their college essay and also by considering whom they will ask to write letters of recommendation. The "GPA Game" demonstrates what counts most when college admissions officers decide which applications to accept. It's a valuable tool for both students and parents.

Students will also need to determine priorities for their higher education so they can focus on researching colleges that "fit" these priorities. Once a list of colleges is created, students will want to consider visiting these campuses before the first semester of their senior year. Finally, students need to plan a productive summer to ensure they are prepared for the application process in the fall.

This is also the time to research the costs involved in attending college and to determine how to pay these costs. (It's important to include parents in this discussion.) Students can begin the search for financial aid by applying for a PIN. Visiting college fairs in the spring to check for "fit" and continuing the search for scholarships are also a part of the second semester of junior year.

Timeline

1. Testing

January–June: Register for March through June admission tests, including ACT, SAT, and SAT Subject tests. (SAT Subject tests are needed for UC or highly selective schools.)

March–June: Take SAT, ACT, and SAT Subject tests.

May: Take appropriate AP tests.

2. Preparation

February: Review first-semester grades and compute "a–g" GPA.
February–June: Update data sheets and résumé.
March–June: UC essay prompts and Common Applications should be started and refined.
May–June: Letter of recommendation procedures and teacher/counselor selection.

3. Exploration

February: College selection and priorities activities.
March–June: College/major research, using a variety of resources including Web sites, printed materials, speakers, and visits.
March–June: Create potential college lists. Use comparison worksheets. Finalize summer plans.

4. "Fit" and Finances

February: Register for FAFSA PIN.

February–June: Continue searches and applications on FASTWEB.
March: Use family financial aid predictor Web sites (www.act.org or www.collegeboard.com).
March–April: Visit College fairs.

Unit 3

Overview

The first semester of the senior year is a critical time for the college- bound student for this is when all the elements of college admission come together and the application is completed and submitted. Students will have one final chance in the early fall of their senior year to retake college admission tests (ACT, SAT, and/or SAT subject tests). Test results should then be sent to all schools to which students intend to apply.

Students will need to finalize their choice(s) of colleges, and, ideally, visit college campuses. (If visiting is not possible, they should plan to meet with college representatives.) This is the time for computing the final "a–g" GPA (from grades 10–11) and requesting letters of recommendation. College admission essays will need to be finalized, résumés updated, and materials gathered for college applications.

The preferred method for completing and submitting a college application is online, although students may want to prepare for this by using a paper application as a worksheet. All required materials should be gathered together, and, if possible, taken to the school's computer lab. The application deadline for most California public colleges and universities is November 30, so AVID students should plan to submit their application prior to Thanksgiving. Private college applications are usually due in December or January. Fee waivers are available.

This is also the time for financial aid arrangements to be made, beginning with completing the Free Application for Federal Student Aid (FAFSA). This form, which is key to nearly all types of financial assistance, should be submitted as soon as possible after January 1 (the earliest date for submission). In some cases, the CSS PROFILE form will be required as well. Application materials are available, at no cost, to teachers, students, and parents to assist them in learning about this process.

Timeline

1. Testing

August–December: Register for ACT, SAT, and/or SAT Subject tests, as appropriate. Send scores to colleges of interest. File test results in the testing folder in the student's "crate."

2. Preparation

September: Update résumés and compute the final "a–g" GPA to be submitted with applications.

September–October: Complete college research; review guidelines for applying to college online; visit colleges of interest; request applications.

October: Ask selected teachers/counselors/others to write letters of recommendation and provide each with a packet of information. Revise essays and finalize for submission.

3. Exploration

October–November: Submit public college applications online (with final draft essays).

November–December: Submit private college and university applications (with final draft essays). Schedule interviews.

4. "Fit" and Finances

September–January: Continue to apply for scholarships.

October: Verify FAFSA PIN and register for PROFILE, if needed.

October–January: Attend financial aid events.

December–January: Submit Cal Grant GPA verification.

January: Complete FAFSA application worksheet.

Unit 4

Overview

If students are applying to private colleges or schools outside of California, they may still have time to take college admission tests (ACT or SAT) in January Once students have been accepted, there may be additional enrollment requirements. For example, CSUs require that students show proficiency in writing and math, and some students may have to take placement tests for these subjects. UC schools require that students meet an entry-level writing requirement. Advanced Placement students will also be taking AP subject tests in May.

As students begin receiving acceptance letters, they should prepare "College Comparison Grids." Celebrate acceptances by creating a "Hurrah Board" that honors the student and university. Sending thank-you notes to teachers and counselors who have helped with the admission process is highly recommended. It is also time to begin preparing students for the transition from high school to college.

Invite AVID graduates to visit the class and share their college experiences. Encourage students to visit the schools to which they have been accepted and to attend freshman orientation or "Accepted Students" events. Once they have decided where they will attend, students must notify the school and send in any required deposits by May 1. They should also notify other colleges that have accepted them that they will not be attending there.

Filing for FAFSA as early as possible (after January 1, but before the March 2 deadline) is the financial priority for this semester. Applying online is the preferred method. The process is complex, but there are many resources to help students and their parents. As graduation nears and students prepare for the transition to college, academic, personal, and social success in college are important topics to discuss with class.

Timeline

1. Testing

January–February: Make sure all test scores have been submitted to colleges, especially if tests were taken in January for admission to private or out-of-state colleges.

February–April: For students applying to a CSU: If not exempt, register for and take the ELM and/or EPT.

April–May: For students applying to a UC campus: If not exempt, register for and take the Entry Level Writing Requirement Exam.

May: Take Advanced Placement (AP) Tests; be sure to indicate to which college the scores should be sent.

2. Preparation

February–April: Complete comparison grids for colleges from which acceptance letters have been received. Post acceptances on the "Hurrah Board."

February–March: Submit mid-year transcripts, if requested.

April–May: Begin transition activities (from high school to college).

June: Write thank-you notes to teachers and counselors who helped during the application process.

3. Exploration

February to Mid-April: Visit/Revisit campuses (where students have been accepted), if needed. Attend "Accepted Students" events.

Mid-April: MAKE A DECISION; inform college and send deposit. Notify other colleges.

June: Request that a final transcript be sent to ONE college

4. "Fit" and Finances

January–February: Submit FAFSA and GPA verification forms (if the school does not submit electronically).

January–June: Continue to apply for scholarships.

January–June: MAKE COPIES OF EVERYTHING

January–February: Make sure financial forms for all colleges are completed.

February–April: Carefully review and file in "crate" all financial aid offers; complete financial aid comparison sheets.

March: If necessary, appeal financial aid award of first choice college. This must be done in writing with additional information.

Mid-April: MAKE A DECISION; sign all appropriate documents for the college of choice. Send in tax forms as soon as prepared.

ADVANCEMENT VIA INDIVIDUAL DETERMINATION AVID SENIOR SEMINAR (P)

Department: English

Target Group AVID Seniors

Prerequisites Previous enrollment in AVID lower-level course for a minimum of two years and enrollment in at least one honors or Advanced Placement course.

Purpose AVID Senior Seminar is for seniors in their third or fourth year of AVID and is the culmination of the students' years in the AVID Program.

a) One year college-prep course
b) 10 units
c) Meets "f" requirement

AVID elective courses at all grade levels are designed to prepare, in an academic context, students for entrance into four year colleges, with emphasis on analytical writing, preparation for college entrance and placement exams, college study skills and test taking, oral language development, note taking, and research.

As with all AVID courses, the Senior Seminar features tutors, college students, who lead discussions and analysis of the academic subjects in which the students are enrolled. Students enrolled in the Senior Seminar are required to complete weekly timed writings and analytical discourses in all subjects. In addition, students are required to make oral presentations to the class on topics related to career searches, college entrance, contemporary issues, and social concerns all the while focusing on a culminating senior paper, portfolio, and/or project. Seminar students, working with the tutors, are expected to participate in and eventually act as moderators for Socratic Seminars. These discussions move beyond didactic instruction and assist students in gaining multiple perspectives on texts, supporting arguments with clear reasoning and evidence, and developing their critical thinking skills to the extent necessary for success in college.

AVID Seminar Instructor

Up to the time that the AVID student enters the Senior Seminar, ninth through eleventh grade students have received coaching in note taking, organization, and study skills, along with instruction in writing domains such as the autobiographical incident, comparison-contrast, and cause and effect. They are also introduced to in-depth textual analysis, and writing for the various disciplines plays a unique role for all students in the AVID classroom.

The instructor for the AVID Seminar provides a segue from high school to college. Though the class maintains the same structure as in the preceding years, the students will gradually realize that they are expected to take a much more active part in their own learning. Dedication to the preparation for their rigorous classes will show dividends, giving students confidence for their transition to college.

The instructor encourages the students to experience more analytical writing, literary analysis, and college entrance preparation for the SAT I and II, the ACT, and AP examinations, in addition to college placement exams. Seminar students engage in more times essays, perfecting and analyzing their writing and that of others according to rubrics. They are required to produce an extended, reflective paper focusing on one of their areas of interest or study such as mathematics, science, history, English, or world language, which may interrelate to the study of careers emanating from individual fields of study.

AVID Senior Seminar (continued)

Throughout the senior year, the Seminar Instructor serves as a conduit to colleges and universities as well as to academic departments on campus and at colleges. The instructor assists AVID students in applying for college, researching financial aid and housing, registering for entrance and placement exams, and in preparing for external examinations in the spring. AVID college tutors also assist in these processes by providing actual information and giving feedback to the seniors regarding their applications and essays.

The AVID Senior Seminar is divided into four areas of emphasis, leading to the student's acceptance at a four-year college or university.

1. Reading, Writing and Speaking at the College Level
2. College Entrance Exams and Rigorous Academic Practices
3. College Application and Essay, Financial Aid, and Placement Exams
4. Culminating Activities for Academic Major Specialization and Career Exploration

Standards of Expected Student Achievement (Course Objectives)

1. Students will complete the four-year course requirements for entrance to the most competitive public universities in the state.
2. Students will successfully complete college applications and financial aid packages.
3. Students will demonstrate analytical writing at the college level in a variety of discourse modes.
4. Students will improve their oral communication skills through a variety of means, including presentation, debate, and Socratic Seminar.
5. Students will learn to evaluate their own and others' writing, using rubrics and scoring guides modeled on university entrance exams.
6. Students will prepare for college entrance and placement exams, using the AVID College and Careers library, and other materials.
7. Students will prepare for an external exam such as Advanced Placement.
8. Students will complete and present a senior project as a culmination of their portfolio work, and junior-senior research, and career exploration.

Methods of Assessment of Student Learning

AVID students will be evaluated using a variety of performance-based assessments. While they will be judged on rudimentary AVID "basics" such as a well-organized notebook, participation in tutorials, and note taking, they will also be assessed according to their performance on timed writings, practice placement examinations, participation in scoring of practice examinations, leadership in Socratic Seminars, and external exam preparations. In addition, AVID Seminar students will be required to complete a critical essay or research paper exploring issues emanating from Honors or AP classes. This paper will also be presented to the class as part of the Senior Presentation, which also includes additional selections from their portfolio and/or their senior project.

Portfolio Contents

Portfolio contents will include but not be limited to the following:

- College Admissions essay
- Final Extended Essay or Research Paper (which may be based on a career related to a field of study)
- Transcript

AVID Senior Seminar (continued)

- Timed writings
- Expository essays
- Notes taken in content areas
- Dialectical journal from core literature work

RESOURCES

Course Textbooks: AVID Library Selections
Writing Curriculum
College and Careers
Subject Area Guides

Instructional Materials:
Refer to: Secondary Adopted Texts and Approved Supplementary Books used in the Santa Maria Joint Union High School District.

Activities/Course Outline

General Yearlong Activities

1. Ongoing tutorials with focus on support for Honors & AP classes
2. Collaborative group study with focus on Honors & AP classes
3. Peer Tutoring
4. Socratic Seminar training
5. Ongoing timed writings and analytical discourse

Terms 1 & 2 (Semester 1)

1. SAT I and II preparation, calendaring, and registration
2. Introduction and planning for Honors/AP Research Paper
3. Career and College exploration and request for fall college applications
4. A Dialectical Journal based on Honors & AP Core Literature Work
5. Consider applying to take college level classes at community colleges, four year colleges and universities, or distance learning sites in addition to AP courses
6. The College Application
7. Writing the Personal Statement

Terms 3 & 4 (Semester 2)

1. Applying for Financial Aid (FAFSA & Cal Grant & Scholarships)
2. Introduction to and practice for College Placement Exams
3. Lead Socratic Seminars for AVID Classmates
4. Extended Essay or Research Paper
5. Portfolio/Senior Project preparation and presentations
6. Follow-up on the SAR for FAFSA, grants, loans, and scholarships
7. AVID students/parents receive support in making college choices
8. Students mail Intent to Enroll cards and apply for academic orientation, summer programs, open houses, etc.

Course Title

AVID (Advancement Via Individual Determination)

Description of Target Group

AVID is a program designed to prepare high school students, who are underrepresented at the university level, to meet the requirements for admission to four-year colleges and universities. Students enroll in and are given academic support to be successful in CP, Honors and AP, English, history, science, and math classes. AVID is a yearlong elective class, taught during the regular school day. Students are expected to remain in the AVID Program all four years of high school.

Purpose

In the AVID class, students are tutored by college students and taught skills needed to be successful in college preparatory classes. In particular, students are taught study skills, notetaking, time management, writing, and research skills. Students also learn about colleges and universities (especially the application and financial aid processes) and prepare for college admission tests such as the PSAT, SAT and ACT. Students take field trips to various college campuses and cultural events. Guest speakers from the community speak in the AVID class about their experiences and career options; AVID curriculum reserves Fridays for these motivational speakers.

Prerequisites

Completion of selection process includes percentile rank on reading and math, 2.00 or above G.P.A., student composition and student and parent interviews.

Standards of Expected Student Achievement

Upon successful completion of this course:

- Students will meet the entrance requirements to a four-year college or university.
- Students will have college level entry skills in writing, math, science, and history.
- Students will have developed "coping" skills needed for college success (note taking, time management, writing/research skills, oral expression, study skills).
- Students will have an increased awareness of college choices (in and out of state) and career options.
- Parents will be involved in and supportive of their child's education.
- Students will have an established mindset to attend a four-year university.

AVID (continued)

Activities

- Writing across the curriculum; AVID curriculum is based on the writing process.
- Developing critical reading and thinking skills (Socratic Seminar).
- Learning with college tutors; group activities.
- Preparing for college entry examinations.
- Developing academic success strategies and skills.
- Visiting college campuses.
- Interacting with guest speakers.
- Developing speech, composition, and oral expression skills.
- Participating in extra-curricular and community activities.
- Participating in the tri-county AVID Write Off
- Independent research.
- Applying for college.

The following represents a typical week in an AVID classroom:
Monday: Students learn how to take notes from textbooks used in academic classes
Tuesday: Tutoring. College tutors work with students in student groups assisting them in all academic areas.
Wednesday: Instruction in writing skills using the AVID curriculum
Thursday: Tutoring.
Friday: Motivational activity, speaker, or field trip.

Assessment of Student Learning

Upon successful completion of the course, AVID students will be able to demonstrate proficiency in the following areas:

- Student binders. All students must keep AVID binders which are graded weekly.
- Successful completion of college preparatory coursework as evidenced by meeting the CSU/UC admission requirements.
- Cooperation with groups or by individual assignments in the AVID classroom.
- Effective writing skills through response to a given, unknown prompt, research papers, and participation in the AVID write-off competition.
- Effective critical thinking skills through participation in Socratic seminars.
- Successful completion of PSAT, SAT, and/or ACT.
- Completion of community service activity/hours.
- Knowledge of college admission requirements, career options, and college choices through teacher evaluations and observations and student participation in college study trips.
- Acceptance to a four-year university.

Instructional Materials
AVID Curriculum Library
Supplementary materials/readings to support curriculum
PSAT/SAT/ACT testing materials and software

CONSTRUCTION I

INDUSTRY SECTOR: Building and Construction Trades Sector

PATHWAY: Residential and Commercial Construction

CALPADS TITLE: Intermediate Residential and Commercial Construction (Concentrator)

CALPADS CODE: 7341

HOURS:

Total	Classroom	Laboratory/CC/CVE
155	50	105

JOB TITLE	O*NET CODE	JOB TITLE	O*NET CODE
Carpenters	47-2031.00	Construction Managers	11-9021.00
Operating Engineers and Other Construction Equipment Operators	47-2073.00	Civil Engineers	17-2051.00
Helpers, Construction Trades, All Other	47-3019.00	Construction Laborers	47-2061.00

COURSE DESCRIPTION:

Construction I is a concentrator course in the Residential and Commercial Construction Pathway leading to, 2 of 3 required certificates of completion for direct admittance into the Carpenters International Training Fund (CITF) pre-apprenticeship program. The course integrates academic skills with practical application allowing students to explore career options in the Building and Construction Industry while developing a foundation of industry-specific skills and concepts. Through inquiry-based learning and highly engaging hands-on activities, students enrolled in Construction I, will engage in an overview of the importance of safety on the job site, while gaining practical experience in measuring and marking, blueprint reading, estimating construction cost, as well as, the use of layout, framing, and common hand and power tools. Students will explore and further develop these skills through projects such as building a sawhorse, picnic table, skateboard ramp, and shed. Students will develop a foundational understanding of the technical and soft skills required for the world of work all while focusing on effective communication, critical thinking, creativity, and collaboration.

A-G APPROVAL: G

ARTICULATION: None

DUAL ENROLLMENT: None

PREREQUISITES:

Prerequisite
None

METHODS OF INSTRUCTION

- Direct instruction
- Group and individual applied projects
- Multimedia
- Demonstration
- Field trips
- Guest speakers

STUDENT EVALUATION:

- Student projects
- Written work
- Exams
- Observation record of student performance
- Completion of assignment

INDUSTRY CERTIFICATION:

- OSHA 10

RECOMMENDED TEXTS:

- One Trade Many Careers
- Project Book 1/2/3
- Math For The Trades

PROGRAM OF STUDY

Grade	Fall	Spring	Year	Course Type	Course Name
9, 10, 11, 12				Concentrator	Construction I
9, 10, 11, 12				Concentrator	Construction II

I.	COURSE CONTENT	CR	Lab/ CC	Standards
	Course content: **Unit Title:** Career Exploration **Unit Summary:** Students will examine and recognize the impact of financial, technical, environmental, and labor trends on the past and future of the construction industry. Using the Career Connections, ***One Trade, Many Careers*** textbook and other supplemental material such as O-Net Online, California Career Zone, and Career Cafe, students will investigate and, compare and contrast the different career opportunities in the Building and Construction Industry. Students will participate in a self-evaluation wherein they will identify their interests, strengths, and aptitudes and use the results of the evaluation to determine what careers in the industry may be of most interest to them. Equally important, students will identify, articulate, and reframe key employability skills that will continue to be expanded upon in each of the following units. **Unit Assignment:** After investigating the various career opportunities in the Building and Construction Industry, students will gather and identify key components such as salary range, job demand, required experience, region of demand, ect. for a minimum of 10 different careers within the industry, recording their findings in a dialectical journal. Students will be divided into small groups where they will verbally share and analyze their findings while taking notes on the findings of their peers. Each group will identify an individual to participate in a whole class share out summarizing the findings of the group. Students will then begin developing their career portfolio by identifying one career in the Building and Construction Industry they are most interested in, evaluate the requirements to apply for the job, create a one-page letter of application, and a resume to apply for the position. At the completion of this assignment students will compare and contrast their resume to the requirements to apply for the desired position and develop an education and career plan that prioritizes necessary next steps and skills that need to be obtained to qualify for the position. **Unit Title:** Safety **Unit Summary:** This unit reviews the basic safety of construction job sites, building on prior knowledge students will identify and be able to recognize safe practices for avoiding injury. Students will understand the necessity for a "safety first" mindset. Characteristics of a professional in the Building and Construction Industry, an overview of Cal OSHA, Environmental Protection Agency (EPA), Hazard Communication (HazCom), Material Safety Data Sheets (MSDS), and procedures for job site safety training will be covered. Students will understand and demonstrate safe handling of a variety of construction tools, electrical and non-electrical; hand and power tools – both stationary and portable and explain proper maintenance and care procedures. Students are required to demonstrate safety and maintenance procedures for all tools necessary for job specifications as well as to demonstrate proper use, including steps for turning on and off electric power tools, and safe storage. **Unit Assignment(s):** Students will evaluate a minimum of 3 industry recognized sources of safety protocol including but not limited to CITF's Career Connections Project Book 1 and 2, and the US Department of Labor's Occupational Safety and Health Administration's (OSHA) Field Safety and Health Manual, to investigate the	50	105	**Academic:** LS: 11-12.6 RSIT : 11-12.7 WS : 11-12.2 WHSST : 11-12.6, 11-12.9 G-MG: 1, 3 N-Q: 1, 2, 3 SEP: 1, 3, 4, 5, 6, 8 CC: 3, 6, 7 ETS: ETS1, ETS2 **CTE Anchor:** Communications: 2.2, 2.3, 2.6 Career Planning and Management: 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.8, 3.9 Technology: 4.1, 4.2, 4.3, 4.4, 4.5, 4.6 Problem Solving and Critical Thinking: 5.1, 5.2, 5.3, 5.4 Health and Safety: 6.1, 6.1, 6.2, 6.3, 6.4, 6.5, 6.6, 6.7, 6.8, 6.9, 6.11, 6.12 Responsibility and Flexibility: 7.2, 7.3, 7.4, 7.5, 7.6, 7.7, 7.8 Ethics and Legal Responsibilities: 8.1, 8.3, 8.4, 8.5, 8.6, 8.7 Leadership and Teamwork: 9.1, 9.2, 9.3, 9.4, 9.5, 9.6, 9.7 Technical Knowledge and Skills: 10.1, 10.2, 10.3, 10.4, 10.5 Demonstration and Application: 11.1, 11.2, 11.3, 11.4 **CTE Pathway:** D1.2, D2.1, D2.3, D2.4, D3.1, D3.2, D3.3, D3.4, D3.5, D3.6, D3.7, D4.1, D4.2, D4.3, D4.4, D4.5, D4.6, D4.7,

	importance of safety, common hazards, accidents, and injuries as well as how to prevent accidents and promote safety on the job site. Using the findings from this investigative process students will develop a 2-page cause and effect expository essay using facts and statistics to explain the importance of safety on the job site and how to prevent accidents from occurring. Using information from both the investigative process and the essay, each student will develop a 2-3-minute oral classroom presentation explaining a component of one of the following safety components: OSHA standards, Personal Protective Equipment (PPE), Promoting Safety, Types of Hazards, safe work habits and attitudes, proper communication, what to do in case of an accident. Each student will be assigned a different component of one of the aforementioned topics and present the information to the class with a technology based visual aid such as a PowerPoint presentation or short video. Students in the audience will take Cornell notes during the presentations and are encouraged to ask the presenting student clarifying questions. **Unit Title:** Tools **Unit Summary:** Students will identify, compare and contrast, classify, and engage in practical application of common hand and power tools to include, but not limited to: block plane, chalk box, chisel, c-clamp, bar and pipe clamps, hand screw clamp, claw hammer, nail set, combination square, compass, framing square, speed square, straightedge, retractable tape measure, protractor, sliding T-Bevel, adjustable wrench, socket wrench, open end and box end wrenches, wood rasp, sanding block, utility knife, belt sander, portable circular saw, miter saw, electric drill, random orbital sander, pneumatic staple gun, pneumatic nail gun, router, saber saw, and screw gun. With the introduction and overview of each of the aforementioned tools there will be special emphasis to the purpose and safe application of the tool. **Unit Assignment(s):** Students will be paired and asked to choose three out of five proposed building projects (sawhorse, picnic table, skateboard ramp, shed, or play house) to analyze and determine what tools are needed and why they are necessary for completing the proposed project. Students will be instructed to engaged in deliberate thought and analysis by weighing evidence, comparing alternative tools based on their probability of success, reconsidering initial ideas, all before developing a one-page expository memo / email requesting the necessary tools for each project. The memo will be written from the perspective of a foreman on a job site who is requesting tools for a job and providing logical reason for each tool. Students will than trade their memos with a different pair of students and begin a critical analysis review of the memo identifying any issues or problems with the requested tools and or purpose of the tool, ask questions to guide the analysis, and make a final determination if the request is valid. Each pair will then share their finding and possible recommendations with the class. **Unit Title:** Materials and Measuring **Unit Summary:** Students will identify, compare and contrast, classify, and engage in practical application of materials frequently used by professional carpenters to include, but not limited to types of wood such as cedar, douglas fir,oak, pine, plywood, oriented strand board, and pressboard, as well as, fasteners such as nails, brads, screws, wood glue, and more. Students will identify and describe permissible uses of construction materials as well as defend code restrictions related to the materials while demonstrating safe cutting and application techniques for these materials. Career Connections' *Math for the Trades* textbook will be used to guide the fundamental understanding and practical application of general math, fractions, and decimals in the context of real-life technical work tasks in the industry. Measurements and measurement tools,	D5.1, D5.2, D5.3, D5.8, D5.9, D5.10, D6.2, D6.3, D6.4, D6.5, D6.6, D6.7, D6.8, D6.9, D6.10, D6.11, D6.12, D6.13, D6.14, D6.15, D6.16, D7.1, D7.2, D7.3, D7.4, D7.5, D7.6, D7.7, D7.8, D8.1, D8.3, D8.4, D8.5, D8.6, D8.7, D8.8, D8.9, D8.10, D8.11, D9.1, D9.2, D10.1, D10.2, D10.4, D10.5, D10.6, D10.7, D10.8, D10.9, D10.10, D10.11, D10.12, D11.1, D11.2, D11.3, D11.4, D11.10, D11.12, D11.13

layout, area measure, and volume will be explained in detail with students participating in exercises for practice and remediation of these technical skills.

Unit Assignment(s):

In groups of two to four, students will demonstrate their understanding of materials, measuring, layout, cutting and assembly through the creation of a Notched-Top Sawhorse. Students will be assessed by an analysis of the horse, assembly, and overall process. The criteria of the horse will include the length, angle, bevel of the legs; the length, notch location, angle notches and depth notches of the gussets; and the cut length and angle cut of the spreaders. The criteria of the assembly will include the overall height, spread of sawhorse legs at base on sides and end; fastener location; and edges and joints. The criteria for the overall process will include students handling of the tools, ability to follow directions, clean up, and safe work practices will be analyzed. Students will present the final project to the instructor providing an oral overview of the process, tools, fasteners, and steps required to complete the project. The team will also inform the instructor of areas of difficult and ease in the process as well as steps to improve the process in the future.

Unit Title: Blueprint Reading & Estimating Construction Costs

Unit Summary:

Students will examine the varying components of a blueprint and learn to interpret and apply information from technical drawings, schedules, and specifications used in the construction trades. Students will identify the elements used in technical drawings, including types of lines, symbols,

details, and views as well as interpret the elements of technical drawings, including plan, elevation, section, and detail views. Students will be introduced to technical drawings specifications and how to interpret and scale dimensions from a set of plans using an architect's scale. Students will be tasked with interpreting sectional and detail drawings to determine construction details such as corners, rough openings, stairs, and roof systems as well as the materials and overall costs associated with the specification.

Unit Assignment(s):

In groups of four to five, students will demonstrate their understanding of blueprint reading by building a curved picnic table using a blueprint to guide the project. Students will be assessed by an analysis of the picnic table, the picnic bench seats, the overall presentation as compared to the blueprints, and the general process. The criteria of the picnic table and bench seats will include finished length and height, curvature, spacing of top boars, fastening, location of supports and leg assembly, location and spread of legs, tabletop angle braces, and carriage bolts. The criteria for the overall process will include students ability to collect the appropriate materials and tools, handling of the tools, ability to follow blueprint directions, clean up, and safe work practices. Students will then engage in a formative assessment of their own work and that of a neighboring team. Critical thinking will be a key component of the formative assessment process where students will be instructed to think and discuss the quality or lack of their work and that of their neighboring teams, identifying how the process can be improved upon in the future.

Unit Title: Foundations and Framing

Unit Summary:

Students will learn and demonstrate knowledge of foundation layout techniques as specified in blueprints or construction plans. Using the pythagorean theorem students will integrate survey tools and technique to set property lines, setbacks, foundation layout and to finish floor elevations. Students will be able to differentiate between applications for wood and concrete foundations, identify the steps and terms for both wood and concrete foundations and create a wood foundation. With special attention to stand-alone structures students will measure, cut, and assemble wall

	components using appropriate tools and fasteners developing a frame and fastening sheathing over the frame according to code. **Unit Assignment(s):** In groups of five to six, students will demonstrate their understanding of layout, floor framing, wall framing, and roof framing by building a shed with a gable roof. Students will be assessed by an analysis of the floor system, wall system, roof system, and overall dimensions, and general process. The criteria of the floor system will include the joist layout, rim joists attachment, plywood installation, parallel sides equal, floor length, width and system square, as well as fastener installation. The criteria for the wall system will include stud lay out, door opening and frame, window opening and frame, header location, wall square, wall corners, double plate installation, fastener installation. The criteria for the overall dimensions will include length, width, and height. The criteria for the overall process will include, communication, collaboration, critical thinking, blueprint reading, proper tool handling, ability to follow direction, clean up, and jobsite safety. This project will have a special emphasis on leadership and working together as a team with team and individual decision making, conflict resolution, identification of responsibilities, cooperation, collaboration, and effective decision-making. The team will also inform the instructor of areas of difficult and ease in both the technical and collaborative process as well as steps to improve the process in the future

ourse Description

urse overview:

CTE Media, Marketing and Publications 1 applies the technical skills within a real-world small business atmosphere in order to market a product within the professional journalistic publications industry. Students will understand a foundational, comprehensive approach to news writing for the web, broadcast, and photo journalism basics, the foundations of social media news production, digital citizenship, ethics, and media law. The classroom is run like a fast-paced newsroom and students are treated like media marketing managers. Student work will be published in the Panther Tales and the Panther Tales Annual. Students will understand the role of visual art and design, and its impact on society and culture, particularly in publication mediums. The course will focus on students understanding a designer's target audience (customer) and stimulating creativity through a variety of two-dimensional media. The assignments in the course will demonstrate a student's ability to apply the principles of design and effectively communicate their message. Assignments will also have students process, respond to, and judge design works using their knowledge of the elements of art and the principles of design.

The marketing principles, as communicated in CTE Pathway 244, will be both taught and practiced in every unit of Media, Marketing and Publications 1. Students will quickly recognize that this class not only teaches marketing through industry terminology and technical understanding, but requires applying Marketing, Sales and Services techniques in a real-world business: The Panther Tales and The Panther Tales Annual. Students will develop, promote, advertise, identify trends and sell this published product while serving their customers: the readers.

urse content:

Unit 1: The Media Market, Journalism

The Media Market, Journalism

Introduce basic terminology and concepts as related to journalism. Introduce and discuss various aspects of print journalism. Introduce and discuss staff roles and responsibilities, including editorial positions, create goals, and organize a publication.

Unit Assignment(s):

Assignment: Read and understand a variety of newspaper, magazine, and internet articles to analyze content and structure similarities and differences. Students will also use backwards planning techniques to structure deadlines for successful completion of publication.

Unit 2: The Principles of Design

Students will demonstrate an understanding, both written and verbal, of the principles of design.

Students will learn the principles of design including the following: balance, unity, emphasis, contrast, variety, proportion, movement, rhythm, and pattern/repetition through direct instruction, note-taking, and reading. Throughout the unit, students will compare and contrast the use of these elements in real world examples: yearbooks, advertising, publications, etc. They will conduct a study of how these design principles appear in our society, using magazines, websites, and advertising mediums. The study will include opportunities for students to identify the principles, and also for students to explain how the principles of design help to emphasize purpose. Additionally, students will be required to explain how the design reaches a particular audience through its strategic use of design principles.

⮒ Unit Assignment(s):

Assignment: Research an advertising campaign and identify the company's use of design in order to persuade its customers. You will need to use the Internet, television, and magazines to identify several principles of design, then write explanations for how the element achieves purpose in the design. You will present your explanation in an oral presentation that assesses your ability to explain how the company uses the principles of design in two different mediums to persuade customers to buy their product.

Unit 3: Marketing a Product and Typography

Marketing a Product

Establishing purpose of publication and set goals. Discuss publication production and cost. Plan advertising sales and sell space in the publication.

Typography

Students will identify and define terminology related to typography. Students will explain the use of typography in design to achieve purpose.

⮒ Unit Assignment(s):

Marketing a Product

Assignment: Students will calculate the cost per book and plan the number of pages to sell for advertising. They will calculate the price to charge for various ad sizes. Students will also use social media and the yearbook website to promote sales of yearbooks.

Typography

Students will learn terminology and elements of typography through use of examples, both teacher and student-selected: legibility, justification, typefaces, weights, leading, etc. Students will be asked to evaluate how typography affects the look of a product, creates emotion, and conveys a message based on its qualities: size, color, position, style. Students will need to demonstrate their understanding of the principles of typography by creating a timeline using Adobe InDesign. Finally, students will use typography in yearbook layouts to add emphasis and create purpose in the yearbook spreads.

Unit 4: Developing and Marketing a Theme

Discuss visual and verbal theme development. Discuss theme spin-offs. Students will learn how to expand visual and verbal themes throughout a publication.

⮒ Unit Assignment(s):

Assignment: Students will look at magazines and analyze visual and verbal themes and how they are carried out throughout the publication. Students will then develop a visual and verbal theme for their publication and develop spin-offs to use on content pages.

During this unit, students will develop a comprehensive theme package for the yearbook. They will be responsible for including all of the following elements: title, graphics, typography, side bar design, and key elements of layout design. The students will create a multi-media presentation that identifies design elements and explains how each element helps to convey the theme's purpose. In addition, students will present the multi-media presentation to the yearbook students, explaining how each design element helps to convey purpose and branding for the current school year. Then, students will assess each others' presentations based upon its design elements. The teacher will facilitate a process for selecting one of the theme packages for the current publication, and then the students will edit and refine the multi-media presentation to address audience concerns: consistency, visual impact, cohesion. Finally, the students will formally present the revised theme package to the school's administration, counseling, and support staff, displaying their knowledge of design and intent upon creating a publication to convey a particular idea and brand for the school year.

In addition to the summative presentation, as students present theme packages, the remaining students will assess the integrity of the design elements using a rubric. Additionally, for at least two design elements in the presentation, students will write suggestions for the group, detailing their understanding of design, as well as providing feedback for the group's revision process.

Unit 5: Marketing, Photojournalism and Layout

Students will learn camera usage and maintenance. Discuss elements of photo composition (rule of thirds, framing, depth of field, etc). Students will also discuss the ethics in photojournalism.creating promotional tools for yearbook, students will also focus on how the yearbook can be a promotional marketing tool for local businesses.

Students will design layouts for the yearbook publication using knowledge from the textbook, previous units, and Adobe InDesign.

⮒ Unit Assignment(s):

Assignment: Using a camera, students will take photos of students and events on campus. Students will then compile a portfolio of their original photos that demonstrate different elements of photojournalism.

In addition to this text, students will use publication models (provided by the teacher), and the internet to establish successful traits of layout design: visual impact, levels of space, balance, unity, proportion, contrast, consistency, and variety. Using previous years' publications, students will assess the integrity of layouts, explaining how the design elements were/were not successful. Then, students will apply knowledge from previous units to create layouts that exemplify successful strategies of design: balance, unity, emphasis, contrast, variety, proportion, movement, rhythm, and pattern/repetition**.** The layouts will differ in purpose according to which section they appear in the publication; therefore, students must adjust the layout and its contents in order to reflect the audience: sports, student life, clubs, academics, theme pages, portraits.

Unit 6: Gathering Marketable Data and Assessment of Design

Gathering Marketable Data

Students will learn how to conduct an interview including developing interview questions. Students will research and develop topics. Students will learn how to conduct a survey. Students will also learn to organize and maintain information.

Assessment of Design

Students will use the principles of design to solve a series of design problems on layouts.

Unit Assignment(s):

Assignment: Prepare interview questions that will elicit responses sufficient to write a comprehensive story and conduct interviews. Also, create surveys that will give additional information for writing a story.

Throughout this unit, students will assess yearbook spreads, maintaining the integrity of the original design, yet simultaneously making necessary changes to improve content coverage, cohesion, and delivery. Students will use rubrics in order to assess the usage of design in the yearbook spreads, assessing the spreads' use of the following: photography, color, graphic elements, and typography. For each spread, students will communicate their feedback to the other students, in small groups, explaining what changes need to be made based upon the principles of design. Additionally, students will identify and communicate successful implementation of design elements. Similarly, they will communicate this feedback in small groups, explaining why the design helps to improve the spread's delivery of content.

Unit 7: Writing for the Market Audience and Promotional Tools

Writing for the Market Audience

Introduce Associated Press (AP) Style and usage. Introduce and analyze a variety of articles. Learn to use additional information to help write captions. Learn skills for copy editing.

Promotional Tools

Students will create promotional tools for the yearbook publication using elements of design, Adobe InDesign, and social media.

Unit Assignment(s):

Assignment: Students will write articles and captions using information that they have gathered from interviews and surveys. They will use AP Style to write articles covering activities and programs on campus. They will also work to select students who are not high profile students on campus and tell their stories in an feature or profile story format.

Throughout the year, the yearbook staff promotes events and sales for the publication.

Students will create and use social media including, but not limited to: Facebook, Instagram, Twitter, Schoolloop, SmugMug, and the school's webpage to promote yearbook awareness, student participation, marketing, and sales. A Public Relations specialist from Luxury Brand Group (with potential of adding additional companies in the future) will guest lecture students, discussing how these tools are used in marketing today and how these skills can be directly applied in the workforce. Students will actively track the effectiveness of their social media marketing tactics through follows, likes, views, outreach, and sales.

Students will use SmugMug, a photo sharing and sales website as a promotional tool to increase interest in yearbook and promote sales. Students can tend to be hesitant to purchase a yearbook, wondering what quality their money will buy and whether or not their sport, elective, or interest will be covered in the book. Through the use of SmugMug students are able to see a sample of photos taken by the staff. The yearbook staff then has the ability to access information on what albums are getting the most views, what pictures are the most popular, etc. This information can then be used when making decisions on what photos make the cut for the yearbook and can be used as promotional marketing devices for advertising campaigns and sale ads.

In addition to creating promotional tools for yearbook, students will also focus on how the yearbook can be a promotional marketing tool for local businesses.

ourse Description

urse overview:

In CTE Media, Marketing and Publications 2 students have already developed an introductory understanding of concepts and skills within Media Marketing. Now, within the capstone class, as second year veterans, students will take on leadership roles, carry responsibility for major project deadlines and work as Editing Managers, setting a professional example for students within the concentrator. A capstone student works on the same projects as the concentrator, yet with greater rigour and expertise. CTE Media, Marketing and Publications 2 applies the technical skills within a real-world small business atmosphere in order to market a product within the professional journalistic publications industry. Students will understand a foundational, comprehensive approach to news writing for the web, broadcast, and photo journalism basics, the foundations of social media news production, digital citizenship, ethics, and media law. The classroom is run like a fast-paced newsroom and students are treated like media marketing managers. Student work will be published in the Panther Tales and the Panther Tales Annual. Students will understand the role of visual art and design, and its impact on society and culture, particularly in publication mediums. The course will focus on students understanding a designer's target audience (customer) and stimulating creativity through a variety of two-dimensional media. The assignments in the course will demonstrate a student's ability to apply the principles of design and effectively communicate their message. Assignments will also have students process, respond to, and judge design works using their knowledge of the elements of art and the principles of design.

The marketing principles, as communicated in CTE Pathway 244, will be both taught and practiced in every unit of Media, Marketing and Publications 1. Students will quickly recognise that this class not only teaches marketing through industry terminology and technical understanding, but requires applying Marketing, Sales and Services techniques in a real-world business: The Panther Tales and The Panther Tales Annual. Students will develop, promote, advertise, identify trends and sell this published product while serving their customers: the readers.

urse content:

Unit 1: The Media Market, Journalism

The Media Market, Journalism

Introduce basic terminology and concepts as related to journalism. Introduce and discuss various aspects of print journalism. Introduce and discuss staff roles and responsibilities, including editorial positions, create goals, and organize a publication.

⊒ Unit Assignment(s):

Assignment: Read and understand a variety of newspaper, magazine, and internet articles to analyze content and structure similarities and differences. Students will also use backwards planning techniques to structure deadlines for successful completion of publication.

Unit 2: The Principles of Design

Students will demonstrate an understanding, both written and verbal, of the principles of design.

Students will learn the principles of design including the following: balance, unity, emphasis, contrast, variety, proportion, movement, rhythm, and pattern/repetition through direct instruction, note-taking, and reading. Throughout the unit, students will compare and contrast the use of these elements in real world examples: yearbooks, advertising, publications, etc. They will conduct a study of how these design principles appear in our society, using magazines, websites, and advertising mediums. The study will include opportunities for students to identify the principles, and also for students to explain how the principles of design help to emphasize purpose. Additionally, students will be required to explain how the design reaches a particular audience through its strategic use of design principles.

⮒ Unit Assignment(s):

Assignment: Research an advertising campaign and identify the company's use of design in order to persuade its customers. You will need to use the Internet, television, and magazines to identify several principles of design, then write explanations for how the element achieves purpose in the design. You will present your explanation in an oral presentation that assesses your ability to explain how the company uses the principles of design in two different mediums to persuade customers to buy their product.

Unit 3: Marketing a Product and Typography

Marketing a Product

Establishing purpose of publication and set goals. Discuss publication production and cost. Plan advertising sales and sell space in the publication.

Typography

Students will identify and define terminology related to typography. Students will explain the use of typography in design to achieve purpose.

⮒ Unit Assignment(s):

Marketing a Product

Assignment: Students will calculate the cost per book and plan the number of pages to sell for advertising. They will calculate the price to charge for various ad sizes. Students will also use social media and the yearbook website to promote sales of yearbooks.

Typography

Students will learn terminology and elements of typography through use of examples, both teacher and student-selected: legibility, justification, typefaces, weights, leading, etc. Students will be asked to evaluate how typography affects the look of a product, creates emotion, and conveys a message based on its qualities: size, color, position, style. Students will need

to demonstrate their understanding of the principles of typography by creating a timeline using Adobe InDesign. Finally, students will use typography in yearbook layouts to add emphasis and create purpose in the yearbook spreads.

Unit 4: Developing and Marketing a Theme

Discuss visual and verbal theme development. Discuss theme spin-offs. Students will learn how to expand visual and verbal themes throughout a publication.

⮒ Unit Assignment(s):

Assignment: Students will look at magazines and analyze visual and verbal themes and how they are carried out throughout the publication. Students will then develop a visual and verbal theme for their publication and develop spin-offs to use on content pages.

During this unit, students will develop a comprehensive theme package for the yearbook. They will be responsible for including all of the following elements: title, graphics, typography, side bar design, and key elements of layout design. The students will create a multi-media presentation that identifies design elements and explains how each element helps to convey the theme's purpose. In addition, students will present the multi-media presentation to the yearbook students, explaining how each design element helps to convey purpose and branding for the current school year. Then, students will assess each others' presentations based upon its design elements. The teacher will facilitate a process for selecting one of the theme packages for the current publication, and then the students will edit and refine the multi-media presentation to address audience concerns: consistency, visual impact, cohesion. Finally, the students will formally present the revised theme package to the school's administration, counseling, and support staff, displaying their knowledge of design and intent upon creating a publication to convey a particular idea and brand for the school year.

In addition to the summative presentation, as students present theme packages, the remaining students will assess the integrity of the design elements using a rubric. Additionally, for at least two design elements in the presentation, students will write suggestions for the group, detailing their understanding of design, as well as providing feedback for the group's revision process.

Unit 5: Marketing, Photojournalism and Layout

Students will learn camera usage and maintenance. Discuss elements of photo composition (rule of thirds, framing, depth of field, etc). Students will also discuss the ethics in photojournalism.creating promotional tools for yearbook, students will also focus on how the yearbook can be a promotional marketing tool for local businesses.

Students will design layouts for the yearbook publication using knowledge from the textbook, previous units, and Adobe InDesign.

⮒ Unit Assignment(s):

Assignment: Using a camera, students will take photos of students and events on campus. Students will then compile a portfolio of their original photos that demonstrate different elements of photojournalism.

In addition to this text, students will use publication models (provided by the teacher), and the internet to establish successful traits of layout design: visual impact, levels of space, balance, unity, proportion, contrast, consistency, and variety. Using previous years' publications, students will assess the integrity of layouts, explaining how the design elements were/were not successful. Then, students will apply knowledge from previous units to create layouts that exemplify successful strategies of design: balance, unity, emphasis, contrast, variety, proportion, movement, rhythm, and pattern/repetition. The layouts will differ in purpose according to which section they appear in the publication; therefore, students must adjust the layout and its contents in order to reflect the audience: sports, student life, clubs, academics, theme pages, portraits.

Unit 6: Gathering Marketable Data and Assessment of Design

Gathering Marketable Data

Students will learn how to conduct an interview including developing interview questions. Students will research and develop topics. Students will learn how to conduct a survey. Students will also learn to organize and maintain information.

Assessment of Design

Students will use the principles of design to solve a series of design problems on layouts.

⮒ Unit Assignment(s):

Assignment: Prepare interview questions that will elicit responses sufficient to write a comprehensive story and conduct interviews. Also, create surveys that will give additional information for writing a story.

Throughout this unit, students will assess yearbook spreads, maintaining the integrity of the original design, yet simultaneously making necessary changes to improve content coverage, cohesion, and delivery. Students will use rubrics in order to assess the usage of design in the yearbook spreads, assessing the spreads' use of the following: photography, color, graphic elements, and typography. For each spread, students will communicate their feedback to the other students, in small groups, explaining what changes need to be made based upon the principles of design. Additionally, students will identify and communicate successful implementation of design elements. Similarly, they will communicate this feedback in small groups, explaining why the design helps to improve the spread's delivery of content.

Unit 7: Writing for the Market Audience and Promotional Tools

Writing for the Market Audience

Introduce Associated Press (AP) Style and usage. Introduce and analyze a variety of articles. Learn to use additional information to help write captions. Learn skills for copy editing.

Promotional Tools

Students will create promotional tools for the yearbook publication using elements of design, Adobe InDesign, and social media.

Unit Assignment(s):

Assignment: Students will write articles and captions using information that they have gathered from interviews and surveys. They will use AP Style to write articles covering activities and programs on campus. They will also work to select students who are not high profile students on campus and tell their stories in an feature or profile story format.

Throughout the year, the yearbook staff promotes events and sales for the publication.

Students will create and use social media including, but not limited to: Facebook, Instagram, Twitter, Schoolloop, SmugMug, and the school's webpage to promote yearbook awareness, student participation, marketing, and sales. A Public Relations specialist from Luxury Brand Group (with potential of adding additional companies in the future) will guest lecture students, discussing how these tools are used in marketing today and how these skills can be directly applied in the workforce. Students will actively track the effectiveness of their social media marketing tactics through follows, likes, views, outreach, and sales.

Students will use SmugMug, a photo sharing and sales website as a promotional tool to increase interest in yearbook and promote sales. Students can tend to be hesitant to purchase a yearbook, wondering what quality their money will buy and whether or not their sport, elective, or interest will be covered in the book. Through the use of SmugMug students are able to see a sample of photos taken by the staff. The yearbook staff then has the ability to access information on what albums are getting the most views, what pictures are the most popular, etc. This information can then be used when making decisions on what photos make the cut for the yearbook and can be used as promotional marketing devices for advertising campaigns and sale ads.

In addition to creating promotional tools for yearbook, students will also focus on how the yearbook can be a promotional marketing tool for local businesses.

Course Title

HEALTH EDUCATION (5 Units)

Description of Target Group

Ninth through Twelfth Grade Students

Prerequisites

None

Purpose

This one semester course (5 units) is a combination of Health 9/10 and Health 11/12. It will satisfy the District 4-unit Health requirement for graduation. It is designed to stress the skills which enables students to make healthy decisions throughout their lives. The curriculum stresses a holistic approach to health. The emphasis is on social, physical and mental health to create a strong foundation and enable students to make healthy decisions regarding the following: stress, nutrition, physical fitness, substance abuse, STD's, family planning issues, personal mission statements, decision making, core values, personal safety, mental illness, diet and diseases, and parenting.

Standards of Expected Students Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Health Education

1. Use basic rules of general hygiene, good nutrition, proper exercise, and mental health.

2. Recognize and practice positive family health habits.

3. Recognize and avoid the harmful effects of alcohol, narcotics, tobacco, and restricted, dangerous drugs.

4. Recognize the physical, psychological, and behavioral effects of the most abused drugs in our society.

5. Describe the major STD's (including HIV/AIDS) and the necessary factors for the successful prevention and control of these diseases.

HEALTH EDUCATION (5 Units) continued

6. Understand reproductive health and the proper use of family planning methods.

7. Recognize the benefits of abstinence to the individual, family and society.

8. Understand the life cycle and crisis management techniques as it relates to an individual's health.

9. Decision making skills will be stressed throughout the curriculum.

10. Have developed a personal mission statement and understand the steps involved in successful decision making.

11. Ability to communicate the affects of alcohol on the human body and judgment.

12. The students will also have a basic understanding of first aid and be familiar with CPR and the Heimleich Maneuver.

13. Will study a variety of mental illnesses and be able to describe their symptoms and treatments.

14. Will study diet and disease specifically in the areas of: nutrition and fitness, breast and testicular cancer, osteoporosis, heart, diabetes, alcoholism.

Instructional Materials

Textbook and supplementary materials
Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in Santa Maria Joint Union High School District.

Activities

Health Education activities will include use of county and district films, lectures, discussions, demonstrations, student reports and committee work, guest speaker, role playing, quizzes, and test.

Assessment

Journal, demonstrations, group presentations/discussion, role playing, tests, quizzes, and authentic assessment.

Course Title

HEALTH EDUCATION

Description of target Group

Ninth or tenth grade students

Purpose

This six-week course is designed to stress the skills which will enable students to make healthy decisions throughout their lives. The curriculum stresses a holistic approach to health, where the emphasis of social, physical and mental health create a strong foundation to enable students to make healthy decisions regarding stress, nutrition, physical fitness, substance abuse, STD's, and family planning issues

Standards of Expected Students Achievement

Upon completion of this course, students will be able to successfully demonstrate the following skills:

Health Education

1. Use basic rules of general hygiene, good nutrition, proper exercise, and mental health.

2. Recognize and practice positive family health habits.

3. Recognize and avoid the harmful effects of alcohol, narcotics, tobacco, and restricted, dangerous drugs.

4. Recognize the physical, psychological, and behavioral effects of the most abused drugs in our society.

5. Describe the major STD's (including HIV/AIDS) and the necessary factors for the successful prevention and control of these diseases.

6. Understand reproductive health and the proper use of family planning methods.

7. Recognize the benefits of abstinence to the individual, family and society.

8. Understand the life cycle and crisis management techniques as it relates to an individual's health.

HEALTH EDUCATION (continued)

9. Decision making skills will be stressed throughout the curriculum.

Comments:

Course Purpose: *What is the purpose of this course?*

Interpersonal Skills is designed to increase understanding and implementation of effective interpersonal communication behaviors and skills that will prepare students for a more professional career and college minded future. The class will examine basic verbal and nonverbal concepts affecting the communication process between individuals in various interpersonal contexts. Students will participate in written and verbal activities designed to develop and improve interpersonal skills and will actually improve the quality of their relationships in professional settings. Topics will include: an introduction to interpersonal communication theory, relationship and conversation management, effective listening, conflict management, ethics in communicating, communication climate, and cultural/gender differences in interpersonal communication.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

Competencies and Objectives
Interpersonal Skills introduces students to the complex interaction of social skills neccessary to succeed in professional setting. The course is designed with a dual approach consisting of both personal assessment and real-life application practice that allows students opportunities to critically evaluate the intricacies of interpersonal relationships and their effect on future success.

At the conclusion of the course it is expected that students will demonstrate knowledge and skills in several core areas. Specifically, students should demonstrate an increased understanding of:
1. The options and alternatives for action in a wide variety of interpersonal situations.
2. Individual preferences and an increased appreciation for the differences of others.
3. The dialectical tensions that arise as students use communication to satisfy conflicting personal needs.
4. How the process of perception affects communication behavior.
5. The ethical dimensions of interpersonal communication.
6. The importance of nonverbal communication in successful interpersonal interactions.
7. Competence and an ability to assess the appropriateness and effectiveness of interpersonal strategies used in various interpersonal relationships.
8. Conflict in interpersonal communication and the application of conflict management principles.
9. Competencies related to communication with individuals from other cultures and co-cultures.

In addition, ISCCR addresses the following Caliornia State Competencies:
1. Writing: To communicate effectively using standard written English.
2. Reading: To understand, analyze, summarize and interpret a variety of reading materials.
3. Integrated Learning: To think critically and make connections in learning across the disciplines.
4. Creative Thinking: To elaborate upon knowledge to create thoughts, processes, and/or products that are new to the students.
5. Ethics/Values: To demonstrate an awareness of ethical considerations in making value choices.

19. Brief Course Description

Introduction to Education: An Interdisciplinary and Applied Discipline, is a year-long, academically focused course designed to introduce interested college prep junior and senior students to the theory behind learning and teaching. Students use several texts to provide them with the interdisciplinary background needed in a theory course. Students study the history of education in the United States, sociological factors influencing educational systems, education, policy and politics, the psychology behind learning and teaching, curriculum design and educational standards, and assessment and evaluation in education. A multi-disciplinary approach requires students to produce essays, oral presentations, projects and to pass exams from a number of academic areas. Academic work is reinforced by 60 required lab hours with K-9 students in public school community classrooms. Lab work relates directly to the educational theory understudy.

Course Proposal

Introduction to Education: An Interdisciplinary and Applied Discipline

"Introduction to Education: An Interdisciplinary and Applied Discipline" is an academically focused course with units designed to cover the History of American Education, the Sociology of Education, Education Policy and Politics, the Psychology of Teaching and Learning, Core Curriculum and Education Standards, and Assessment and Evaluation in Education. The assignments arising from these units will require students to demonstrate conceptual understanding of education theories and structures. The academic content is assessed through essays, oral presentations, projects, and exams. The laboratory component of the course relates directly to the educational theory under study, allowing students to observe and analyze theory in practice.

Unit 1: History of American Education (text: *Schools That Learn*, Senge, Peter)
California Teaching Standard for Understanding and Organizing Subject Matter for Student Learning; California Standard for Developing as a Professional Educator
(footnote: all units meet specific California Teaching Standards)

I. Organization of American Schools
II. Evolution of Education from the Colonial Period through the Nineteenth Century
III. European influences of Rousseau and Pestalozzi Industrialism's Affect on Schools
IV. John Dewey and the Reform Movement

Unit 2: Sociology of Education (text: *Schools That Learn*, Senge, Peter, *The First Days of School*, Wong)
California Teaching Standard for Engaging and Supporting All Students in Learning

I. Organization and Design of Educational Systems
II. Cultural Diversity in the Classroom
III. Economic Diversity in the Classroom
IV. Gender Issues in the Classroom

Unit 3: Education Policy and Politics (text: *Conflicts of Interest: The Politics of American Education*, Spring, Joel)
California Teaching Standard for Creating and Maintaining Effective Environments for Student Learning

I. Governing Bodies
II. Federal Mandates (NCLB) and State Mandates
III. Public Funding
IV. Political Issues Affecting Education

Unit 4: Psychology of Teaching and Learning (texts: *Developmental Psychology*, McIlveen & Gross; *Brain Matters*, Wolfe; *Teaching with the Brain in Mind*, Jensen, *The First Days of School*, Wong)

California Standard for Engaging and Supporting All Students in Learning

I. Cognitive Psychology
   Brain Research and Classroom Practice
II. Methodologies
   A. Socratic seminars
   B. large group/small group
   C. learning styles (multiple intelligences)
   D. cross-curricular
   E. assignments (projects, tests, quizzes, debates, simulations)
   F. writing and reading strategies (SCWRiP)
III. Dealing with Special Populations

Unit 5: The Core Curriculum and Education Standards (texts: *Schools That Learn*, Senge; *The First Days of School*, Wong)

California Standard for Understanding and Organizing Subject Matter for Student Learning

I. Standards Based Curriculum
II. Designing Curriculum and Lesson Plans

Unit 6: Assessment and Evaluation in Education

California Standard for Assessing Student Learning

I. Assessment
   A. Standards based assessment
   B. S.T.A.R., G.S.E., exit exams, A.P.

Course Title

Preparing for the SAT

Department

Non-departmental

Description of Target Group

Preparing for the SAT (Scholastic Aptitude Test) is a one-term college preparatory course designed for junior and senior students.

Purpose

The purpose of this course is for students to develop test-taking confidence and to learn effective test-taking skills through the study of strategies and tutorial materials as presented in Preparing for the SAT.

Prerequisites

(1) Term 1 will be designated for seniors who will take the SAT in Fall; Terms 2, 3 and 4 will be for juniors in preparation for Spring or Fall SAT testing. (2) Students with reading level of 60 percentile and higher (Normal Curve Equivalent on Stanford Achievement Test).

Standards of Expected Student Achievement

Upon completion of this course, student will be able to demonstrate the following skills:

1. Proficiency in achieving SAT scores equivalent to individual academic range (as per grade point average) and reading level (as per previous tests taken).
2. Critical awareness of types of information presented in SAT examinations which include eight test areas (verbal analogies, sentence completions, critical reading, and vocabulary problems; arithmetic, algebra, geometry, and special math problems).
3. Knowledge of test scoring procedures as per types of questions (i.e. four-option response versus five-option response versus grid-ins) and point values employed.
4. Knowledge of test-taking techniques for varied types of questions in each of eight test areas.

5. Strong awareness of SAT test score ranges for admittance into 250 various colleges in U.S. by comparing individual sample SAT test scores with actual previous scores of entering freshmen.

Assessment of Student Learning

A variety of methods of assessment will include some of the following:

1. Student self-assessment and peer-assessment
2. Teacher observation and evaluation; practice tests; quizzes.
3. Individual and/or small group projects

Instructional Materials

Refer to: Secondary Adopted Texts and Approved Supplementary Books Used in the Santa Maria Joint Union High School District

Personal Trainer for the SAT (computer software: pre-approved District Office, 1992 Site License)
Personal Trainer for the SAT, 2.0 (computer software: revised, Site License 1996)

Activities

Workbook activities, sample worksheets, lecture, practice tests, outside research, individual and/or small group projects.

Robotics

Grades: 9,10,11,12

Length: Full Year

Environment: Classroom-based

Honors: None

Subject: College-Preparatory Elective (G)

Discipline: Mathematics - Computer Science

Institution: Ernest Righetti High School

Course Overview

Students will work in engineering teams to design, build and test increasingly complex robots. The course will illustrate the engineering design process, the importance of integrating sensors, complex machine control (programming), and multi-robot systems in a robot design. Students will be expected to solve challenges using physical robots with custom code. Students will work in teams to complete four design projects that will serve as assessments during the year and will also participate in in-house and regional competitions. Special attention will be paid to the design process and its communication through both presentation and documentation. The course will include a final exam, which will incorporate a design challenge, documentation and presentation of design.

Unit 1: Engineering Design

The engineering projects for this course will utilize tools, software, infrastructure, and conventions found in engineering. Students will be familiarized with the basic tools, themes, and strategies regularly used in the fields of engineering. As this course progresses over the year students will draw from this “toolbox” of skills as they encounter each new learning experience. Students will, in turn, master these tools, themes, and strategies by applying them when necessary rather than by practicing them in abstraction. Students will learn about the steps of the design process including topics such as prototyping, production, testing, and manufacturing.

Assignments

Students will be learning basic programming skills via Robot C, C++, or Python. For this assignment, students will be downloading software onto their laptops, and creating basic code to exercise a VEX testbot. The students will produce/build a VEX testbot, including sensors. They will learn how to control the basic sensors on the testbed through their chosen programming language and include instruction on version control along with commenting.

Unit 2: Wireless Control

Students will experience cutting edge technology when they interface their robots with wireless game controllers. Students will be introduced to and begin to master the basics of programming via their chosen programming language. The robots will need to be able to move in straight lines, reverse and rotate. In this unit, students will learn how to operate their robot using radio control in both Arcade and Tank style. Students will have multiple opportunities to test and refine their designs.

Assignments

Students will be building a robot that will be controlled solely through a wireless game controller. They will be given a task for the

robot to do, and will program the game controller to meet the robot's requirements. They will use their VEX building skills as well as their programming skills to produce a robot controlled by a wireless game controller. The students will Learn the variables to be considered with programming with a game controller, and the effective use of the game controller in moving their robots.

Unit 3: Construction

In this unit, students will begin to apply engineering principles to the design and construction of robots. Students will study the fundamental design of VEX robots. While students are learning how to fabricate their robots, they will also be required to draw upon physics concepts such as speed, velocity, and angular momentum. Further, a significant amount of math is necessary to fabricate the complex geometries of the parts that are required for robotics. Students will create a robotic platform capable of two-dimensional motion at a variety of speeds. This platform must also be capable of supporting a variety of sensors and electrical systems for remote access. Through this project students will be introduced to the various industry fastening and joining methods typically used in product development. These include, but are not limited to, screws, bolts, nuts, rivets, etc. Students will be introduced to specification sheets for materials used in engineering and also start to learn about concepts related to materials such as stress, and strain, fracture toughness, elasticity, electrical and thermal conductivity, etc. As the student progresses through the unit, they will be constructing their first Vex robot. They will learn how to use basic assembly tools as well as how to identify available Vex robotic components from the classroom inventory system. The robot construction is broken down into subsystems like chassis, drive train, wiring and radio control. After the robot is constructed, the students test and troubleshoot their creation. Best engineering practices require extensive testing, followed by reflection and re-engineering. The students will recognize that multiple solutions are possible. All designs will be annotated in an ongoing, cumulative Engineering Notebook, following prescribed standards for documentation.

Assignments

Students will be selecting a project from multiple ideas. The students will brainstorm, sketch, design and build their concept for the robot. They will produce a prototype, and program the Robot for capturing, lifting, intake, launching, and pushing various objects. Through the process, the students will learn about the design and redesign cycle of the engineering design process to document their versions in the engineering notebook as rarely do designs work the first time as envisioned. Students will produce a working machine/robot that accomplishes a specific function.

Unit 4: Sensors

Unit 3 introduces the student to open and closed loop robotic navigation using sensors. This unit builds on the dead reckoning programs constructed previously. Digital bumper switches are added to the robot so that it can interpret its environment autonomously. An ultrasonic range-finding sensor is introduced to allow the robot to sense its environment without touching it. A set of advanced drive functions is taught in order to simplify the autonomous control of the speed and direction of the robot. These drive functions are used in conjunction with a line-following sensor to have the robot follow a line on the playing field autonomously

Assignments

For this assignment, students will be building an autonomous robot utilizing sensors to achieve a specific, given task. The students will brainstorm, sketch and build the robot in teams. They will produce a robot, along with corresponding code to run the robot. The students will learn to utilize sensors to provide a closed loop system.

Unit 5: Arms and Lift Systems

Unit 5 combines the elements introduced in unit 2-4. The arm is added to the robot and a basic physics analysis is done on how the addition of the arm affects the overall robot design. Center of gravity, and its importance to robotic design, is introduced. Stall torque is examined on the arm as well as the speed and gear ratio. The student is challenged to incorporate two limit switches into the design of the arm to control the movement of the arm. This requires the student to create a program to map the input from one of the channels on the transmitter to the motor on the robot controlling the arm. An end effector is added to the end of the arm on the robot using a servo-motor to control the gripping range of the end effector. In the final activity, the student must program the robot to drive on the playing field and retrieve a ball while being controlled with the radio control. More advanced students may adapt the arm to create a more versatile lift system.

Assignments

The students will be given requirements to build a robot that will be lifting objects that are heavier in comparison to the robot. They will be learning how to apply building techniques with a changing center of gravity. They will work in teams to sketch, design, build and redesign their robot. They will produce a robot capable of lifting a 5 lb load (ball type object) and move it to a specific second location. The students will learn how to construct a robot that does not tip over when lifting and moving a load.

Unit 6: Capstone: VEX Competition

Students will adapt their design to compete in an in-house competition based upon VEX Robotics game, or an actual VEX Robotics Competition (VRC) at the local level. Students will finalize both Autonomous and User-Controlled programs using sensor input to compete. Students will prepare presentations to demonstrate their design process and how their robot accomplished the design task. Students will also use their programming skills to complete challenges within RobotC Virtual worlds. In addition, they will program an autonomous portion of the game onto their completed robot. Students will also use their newly acquired skills to perform outreach events to display their work and design to local school and community partners, and provide VexIQ support for elementary and middle schools.

Assignments

Students will receive a set of rules for a robotics game, and then work in groups to design from scratch a suitable robot to accomplish the task of playing the game. Students will produce a robot that will be controlled by a game controller to achieve a specific task. Students will learn the various trade offs of speed vs. accuracy, lifting objects and delivery methods, as well as autonomous mode programming. The students will compete with their robots in an in-class competition to showcase skills.

12. Brief Course Description

Student Academic Achievement Seminar (SAAS) 11-12 is designed as a behavioral and academic support system for Long Term English Learners (LTELs)--students who have been enrolled in U.S Schools for 6 or more years-- and is centered on personalized academic guidance that involves teachers, administrators, counselors and student advocates who regularly monitor student academic progress related to graduation requirements and preparation for career and postsecondary education. SAAS is intended to provide a safe, culturally and linguistically responsive environment that nurtures strong teacher/student/parent relationships. Through explicit instruction in the advantages of a "growth mindset" and its relationship to success, students learn to persist and persevere in challenging situations while developing self-efficacy strategies and academic mindsets necessary for long-term success. A focus on literacy, language, note taking, writing, and research skills assists students in preparing for high school exit exam (CAHSEE) or current state adopted equivalent as well as college admission tests such as the SAT, ACT, and START. Students also learn about colleges and careers with growth potential through cultural events, college campus field trips, and community guest speakers that motivate students to think about future career options.

B. COURSE CONTENT

13. Course Goals and/or Major Student Outcomes

Upon successful completion of this course:

- Students will be prepared to meet high school graduation requirements and be on track to attend college.
- Students will develop skills needed for high school success (note taking, time management, writing/research skills, oral expression, study skills and self-efficacy strategies).
- Students will have an increased awareness of college choices and career options.
- Parents will be provided with information about college and career readiness in respectful and engaging ways that will equip them with the necessary tools to be supportive of their child's education.

14. Course Objectives

- start high school on track, stay on track to graduate, and be college and career ready
- read, analyze, interpret, and create a variety of literary and informational text types
- develop an understanding of how content is organized in a variety of different text types and across disciplines using text structure, language features, and vocabulary depending on purpose and audience
- be provided with intensive support through tutorials, advising, CAHSEE preparation, and opportunities to recover failed course credits

- use self-efficacy strategies to build academic mindsets, instill perseverance, and increase motivation to complete high school, become college–ready and pursue independent life-long learning

15. Course Outline

Students will spend the equivalent of two class periods a week engaged in a critical reading and writing using Common Core aligned AVID Weekly Reader lessons, other AVID Curriculum Library resources that utilize the WICOR (Writing, Inquiry, Collaboration, Organization, and Reading) Strategy, or CAHSEE preparation.

Students will spend the equivalent of two class periods a week engaged in Academic Tutoring using a Socratic-style collaborative study group, or "Growth Mindset" lessons, self-assessment/reflection, and developing academic skills needed for high school success.

Students will spend the equivalent of one class period a week engaged in College and Career Exploration, planning and SAT, ACT, START preparation to include College Visits and Motivational guest speakers.

16. Texts & Supplemental Instructional Materials

A. Basic Text: AVID Curriculum Library and AVID Weekly Reader

B. Supplemental Materials: Nonfiction readings/materials to support curriculum, Growth Mindset lessons, Credit Recovery/CAHSEE preparation/Career Exploration Software and materials

17. Key Assignments

- Reciprocal Teaching
- Literature Circles for Non-fiction
- Annotating text
- Working with graphic organizers
- Quickwrites and freewrites
- Double-entry journals
- Summary writing and oral paraphrasing
- Analytical essays—short and long
- Timed essays—45 minute limit
- Preparing a bibliography
- Research project
- Discussion activities
- Socratic seminars
- Oral reports
- Credit Recovery Opportunity and Contract
- Analysis of personal skills and talents
- Goal-setting skills
- Career Exploration
- Resume Writing
- Mock-Job Interviews

18. Instructional Methods and/or Strategies

- Lecture
- Small group instruction for grade specific tasks
- Instructional Software
- English learner instructional scaffolds
- Collaborative group work
- Library and Internet research
- Student/Teacher Conferencing
- *WICOR Strategies – Writing, Inquiry, Collaboration, Organization and Reading*
  o Writing – Cornell note-taking, Learning logs, Quickwrites and reflections, Process writing, Peer evaluation, Authentic writing
  o Inquiry – Skilled questioning techniques, Costa's Levels of Thinking, Socratic Seminars, Tutorials, Investigations, Questions that guide research
  o Collaboration – Socratic Seminars, Tutorials, Philosophical Chairs, Group activities and projects, Peer editing groups, Service learning projects
- o Organization – Managing materials and practicing methodical study habits, Planning & prioritizing school, work and social tasks, engaging in mental preparation and goal setting
  o Reading – Deep reading strategies, Note-taking, Graphic organizers, Vocabulary building, Summarizing, Reciprocal teaching

19. Assessment Methods and/or Tools (Evaluating and Grading of Student Work

- In-class papers, essays, writing and oral language rubrics
- Journals
- Learning logs
- Weekly record of academic performance in each class attended throughout the year
- Exams, quizzes
- Participation
- Observation
- Conferencing
- Reflection
- Final project
- Student Academic Achievement Seminar students will also be assessed and graded on a well-organized notebook, participation in tutorials, note taking and participation class discussions.

Comments:

Course Purpose: *What is the purpose of this course?*

Strategies for Student Success is a comprehensive course designed to enhance student success and retention as well as help create greater success in academics, college, career and in life. In this course, students will learn many proven strategies for creating greater academic, professional, and personal success. They will use guided journal writings to explore these strategies, and as a bonus, you learn to express themselves more effectively in writing. In addition, they will explore skills, values and interests through the use of career interest inventories and create and manage academic and personal goals that are aimed at a college/career path.

Students will discuss and develop personalized learning plans which will enable them to make their high school experience relevant and meaningful. Students will create short-term and long-term academic plans. Students will develop a portfolio to chronicle and document their personal high school story. Portfolios samples will include essays, research papers, projects, reflections, and other pieces of evidence that showcase student interests, talents, and personal growth.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

Learning Objective: Students will learn how to make their personalized learning journey meaningful, relevant, and useful by taking ownership of their education.

F Framework: Students will construct a personalized learning plan, which provide the framework for their high school learning objectives and goals. (Short-term & Long-term Goal Planning)

O Organization: Students will develop organization skills in self-directed learning and time management to create a genuine learning experience. Students will review high school graduation requirements and create personalized learning plans that challenge and inspire educational and personal growth.

C Create: Students will explore post high school options and create course study, work study, and community learning opportunities to get hands-on experience in fields of interest. Student will develop a learning portfolio of work that provides concrete documentation of their personal journey through high school.

A Align: Students will align course study with their high school learning plan. Students will align their interests and talents to activities and events, which allow them to highlight and develop those skills.
S Support: Students will receive support through studio sessions, field trips, and a guest lecture series. Students will plan with EF, Parent-Teacher, Academic Counselor, and Mentor Teacher to identify, locate, and assess community-based learning opportunities.

Students Will:
explore meaningful ways to complete the high school course descriptions.
identify real-world learning situations.
learn how to conduct valid research.
reach out to their community.
track their graduation requirements.

Course Outline
Unit 1: Alternative Learning Styles
Unit 2: Personalized Learning
Unit 3: Portfolios & The Digital World
Unit 4: Academic Writing
Unit 5: Academic Planning

Guiding Course Assignments
Four-Year High School Graduation Plan - SLO Portfolio
Student-Created Learning Objectives & Grading Scales
Student Designed Project utilizing Learning Style
Autobiographical Essay demonstrating understanding of Learning Styles
Personal Narrative: Artist Statement, Cover Letter, or Personal Statement
High School Writing Samples (Variety of Genres)
College/Career WebQuest
Hancock Field Trip/Testing
Real-World Project: College/Trade School/Work
Community College Course Wish List
Time Management 101 Packet
High School Portfolio

Course Purpose: *What is the purpose of this course?*
This is a college concurrent course that will provide students the opportunity to earn college credit and to fulfill high school graduation requirements through the study of college level algebra for majors in science ,technology, engineering, and mathematics: polynomials, rational, radical, exponential, absolute value, and logarithmic functions; systems of equations; theory of polynomial equations; analytic geometry.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*
College level course in algebra for majors in science, technology, engineering, and mathematics: polynomials, rational, radical, exponential, absolute values, and logarithmic functions; systems of equations; theory of polynomial equations; analytic geometry.

1. Functions including linear, polynomial, rational, radical exponential, absolute value, logarithmic: definitions, evaluation, domain and range.
2. Inverses of functions
3. Algebra of functions
4. Graphs of functions including asymptotic behavior, intercepts, vertices
5. Transformations of quadratic, absolute value, radical, rational, logarithmic, exponential functions
6. Equations including rational, linear, polynomial, radical, exponential, absolute value, logarithmic
7. Linear, nonlinear, and absolute value inequalities
8. Systems of equations and inequalities
9. Characterization of the zeros of polynomials
10. Properties and applications of complex numbers
11. Properties of conic sections and
12. Sequences and series

Course Purpose: What is the purpose of this course?

Introduction to English Language Development (Intro to ELD) is a two-semester, double-period introductory, designated ELD course. It is designed to develop the foundational skills of language acquisition and the basic English language skills of listening, speaking, reading, and writing, for the English Learner (EL). Emphasis is placed on listening comprehension, oral pronunciation, vocabulary development, language structure, language functions, reading fluency and comprehension, writing, and study skills. Through intensive English language instruction students will progress from limited English proficiency toward fluent English proficiency in preparation for enrollment in classes with native English speakers.

Intro to ELD introduces initial communication strategies and develops daily and academic vocabulary. This course is guided by the California English Language Development (ELD) Standards to provide preparation for the English Language Proficiency Assessments for California (ELPAC). This course will familiarize students with the terminology, skills, and strategies necessary for the ELPAC.

Additionally, students will develop skills to be successful in school, including the development of study skills and basic technology skills, the ability to share about and develop pride in one's own culture and learn about the cultures of classmates. Upon completion of the course, students will be familiar with the fundamentals of reading and writing from learned material, as well as have an understanding of and an ability to communicate orally.

B. COURSE CONTENT

Course Outline: A *detailed descriptive summary of all topics covered. All historical knowledge is expected to be empirically based, give examples. (i.e. California State Standards).*

California English Language Development Standards

Emerging: Students at this level typically progress very quickly, learning to use English for immediate needs as well as beginning to understand and use academic vocabulary and other features of academic language.

Written Language Standards (Reading and Writing)

- **Interacting via written English**: Interacting with others in written English in various communicative forms (print, communicative technology and multimedia)
- **Reading/viewing closely:** Reading closely literary and informational texts and viewing multimedia to determine how meaning is conveyed explicitly and implicitly through language.
- **Using verb and verb phrases** to create precision and clarity in different text
- **Adapting language choices** to various contexts (based on task, purpose, audience, and text type)
- **Selecting language resources:** Selecting and applying varied and precise vocabulary and other language resources to effectively convey ideas
- **Using nouns and noun phrases** to expand ideas an provide more detail.
- **Modifying to add details** to provide more information an create precision
- **Connecting ideas** within sentences by combining clauses

Oral Language Standards (Listening and Speaking)

- **Exchanging Information/Ideas**: Exchanging information and ideas with others through oral collaborative discussions on a range of social and academic topics

- **Understanding text structure** and organization based on purpose, text type, and discipline.
- **Selecting language resources:** Selecting and applying varied and precise vocabulary and other language resources to effectively convey ideas
- **Adapting language choices** to various contexts (based on task, purpose, audience, and text type)
- **Listening actively** to spoken English in a range of social and academic contexts
- **Presenting:** Expressing information and ideas in formal oral presentations on academic topics

Foundational Literacy Skills

Literacy in an Alphabetic Writing System

- **Phonological awareness:** Demonstrate understanding of spoken words, syllables, and sounds (phonemes)
- **Print concepts**: Demonstrate understanding of the organization and basic features of print

Foundational Reading Skills

- **Phonics and word recognition**: Know and apply grade-level phonics and word analysis in decoding words both in isolation and in text
- **Fluency**: Read with sufficient accuracy and fluency to support comprehension

Learning Objectives

Social & Life Skills

- Exchange common greetings.
- Introduce self and others.
- Make requests and suggestions.
- Ask for and offer things.
- Ask for and give directions
- Ask questions for clarification.
- Role-play purchasing things in stores, markets.
- Say and spell in order the days of the week, seasons, and months of the year.
- Distinguish items according to color, shape, size, and other characteristics.
- Compliment, praise, and congratulate someone.
- Express emotions.
- Express likes and dislikes, agreement, disagreement, and indifference.
- Recognize words for people and family relationships.
- Distinguish people according to physical and psychological descriptions (sick, happy, sad, tall, etc.).
- Identify orally and in writing the parts of the body.
- Discuss and explain cultural traditions, food, hobbies, music, etc. to classmates and learn about the cultural practices and norms of classmates' home country as well as school culture.

School Skills

- Act out common school activities.
- Give classroom commands to peers.
- Follow classroom directions and learn common classroom items.
- Use basic classroom sentences.
- Use time expressions correctly.
- Identify and spell United States money denominations.
- Name, recognize, and reproduce the 26 letters of the English alphabet, in

- Understand and follow basic routines and activities associated with school.
- Engage in oral conversations with peers.
- Engage in listening activities.
- Say and spell the cardinal and ordinal numbers 1-100.

alphabetical order, uppercase and lowercase, with approximate English speaker pronunciation and be able to spell words by using English alphabet.
- Learn the English vowels and pronounce them appropriately; recognize the difference between vowels and consonants.

Academic Skills

- School grading policy, schedules
- How to study vocabulary
- How to use an Agenda or calendar for planning
- Asking teachers questions
- Note-taking skills
- Goal setting – Organization
- Practice descriptive and narrative writing
- Write complete sentences & short formatted paragraphs
- Read for information
- Grammar and language functions as appropriate

- Reading for information and understanding (context)
- Taking standardized tests (ELPAC prep)
- Editing/proofreading
- Online research
- Supplemental study skills
- Study skills for finals
- Identify topic sentences and supporting details
- Use academic vocabulary in speaking and writing
- Engage in academic and social conversations

Technology Skills

- Basic computer use
- Using System 44
- School website
- Using Aeries/Canvas
- Typing practice
- Accessing and sending emails
- Laptop upkeep, troubleshooting
- Use Microsoft Word, PowerPoint, Google tools

- Complete and submit a Word Document
