Project: New North Transportation Center

Scope of Work to Include: Construct a new transportation center that will include administrative offices, vehicle maintenance bays, a fueling station, mechanic shop, parking for approximately 240 buses, childcare building, and maintenance warehouse.

Background & Justification: Katy ISD currently has three transportation centers serving the district: East Transportation which is north of Mayde Creek High School, West Transportation which is north of Hutsell Elementary, off of Franz Road in the City of Katy, and South Transportation which is south of Rylander Elementary.

The need for a fourth transportation center in the northwest sector of the District has been identified to address the growth needs of the District because of the time and distance required to service that area. The site under consideration is located west of the proposed elementary school #45, north of the proposed high school #10 and junior high #18, and east of the Katy Hockley Road and Longenbaugh Road intersection.

Establishing a transportation center presence in the northwest part of the District will provide routing efficiencies for this very high-growth area. It will also be of significant benefit to secondary coaches in the area who currently spend a great deal of time traveling to/from West Transportation to pickup/return an activity trip bus. It should also be noted that there is a lack of space to increase the operational capacity at West Transportation.
