Upgraded Bus Service for TV Highway

The TV Highway Transit & Safety Project will bring TriMet FX® – Frequent Express bus service to the corridor. Line 57, which runs along the TV Highway corridor, has the highest ridership in Washington County with around 6,440 daily trips on an average weekday. Communities along the corridor often express concerns about safety along this high crash corridor and the bus currently takes much longer than driving. The new bus service will provide faster travel times, improved waiting areas and access to transit while providing connections to essential jobs, health care facilities, shopping centers, places of worship and community services.

Example of a TriMet FX-2 Division bus and stop (Portland, OR)

Improved transit for the corridor

- Upgraded intersections at key locations to accommodate bus pullouts and create more space between the bus stop and railroad tracks.
- Access to local and regional destinations through connections to two MAX lines, 10 other TriMet bus lines, WES commuter rail, Ride Connection and other regional bus service.
- Faster travel times with buses arriving every 12 minutes every day of the week, most hours of the day.
- Bus stations near safer crossings, with shelters, seating, lighting and real-time bus arrival information.
- Longer, 60-foot, articulated buses with multiple doors for briefer stops and faster boarding.
- Next-generation transit signal priority that will help buses move efficiently and make the ride faster.

The TV Highway corridor is approximately 16.2 miles long and connects Beaverton Transit Center to Forest Grove while traveling through Aloha, Hillsboro and Cornelius.

Route, safety improvements and amenities

Between 2018 and 2022, the 16.2 mile project corridor accounted for 19% of all roadway fatalities in Washington County despite making up just 0.5% of the roadways in the county. This underscores the urgent need for safer, more accessible transportation options.

The FX line will address this need by serving many of the stops along today's Line 57, with stop consolidation to improve efficiency. It will improve transit access to 6,775 businesses and 1,349 family-supportive service sites, from schools and training centers to clinics and hospitals. The corridor is home to thousands of families and its population is expected to grow, making reliable transit more critical than ever.

Partnering to connect our community

The project is a collaboration between state and regional partners, including TriMet, Metro, Oregon Department of Transportation, the cities of Beaverton, Hillsboro, Cornelius and Forest Grove, as well as Washington County.

During project development, TriMet will work closely with a Community Advisory Committee and a Policy & Budget Committee, ensuring that community voices and jurisdictional perspectives help guide the project.
