FIRM HISTORY

Tecton Architects is a Hartford-based architecture, interior design and master planning firm with a 40+ year history of serving communities throughout New England. With a total staff of 50 employees, 17 registered architects and 8 interior designers, Tecton is one of the largest design firms in Connecticut.

K-12 DESIGN

Tecton's depth and breadth of team is balanced by a small-team, hands on approach to projects. Jeff Wyszynski, AIA, Principal, has personally led each of Tecton's academic projects over the last decade, with a portfolio that includes public K-12, magnet, charter and independent school projects. In recent years, Tecton has developed a reputation for leading thorough, actionable district-wide master plans for communities like Brookfield, Simsbury, Suffield and Sherman. This work has led to a successful referendum and State grant application for projects like Brookfield's new $78M Candlewood Lake Elementary School and the "Renovate as New" of Simsbury's Latimer Lane School. The firm also has extensive experience working with the State's Office of School Construction Grants & Review, with close to 15 projects and nearly $200M in construction coordinated over the last 3 years.

PROJECT APPROACH

Tecton's approach to the design of K-12 environments is grounded in the interrelationship between the built environment and the user experience, uniting strategies for:

- *21st Century Learning Environments*, with built-in flexibility to support changes in teaching methodology and enrollment.
- *Sustainability & Resiliency*, weighing environmental impact, initial investment and operating costs, while providing long-term value to the community that the school will serve.
- *WELL Buildings*, to advance the physical, mental, social and emotional health and wellness of children and educators.

This approach is bolstered by a diverse project portfolio, spanning police and fire facilities, industrial manufacturing and laboratories, corporate workplace, healthcare and community destinations -- encompassing the many and varied purposes that K-12 facilities so often serve.
