### EXPECTATIONS

#### MATH TOOLS

To support curriculum implementation, the Common Core recommends the use of certain math tools at each grade level. CAISL implements these recommendations, with the exception of a graphing calculator, which CAISL chooses to introduce in High School. Students are also expected to use a basic calculator for simple computations. See link below:

[https://www.caislisbon.org/uploaded/Curriculum\\_links/Math/Manipulatives\\_6-8.pdf](https://www.caislisbon.org/uploaded/Curriculum_links/Math/Manipulatives_6-8.pdf)

## **MENTAL MATH**

To reinforce computational fluency, students are expected to practice mental math calculations based on grade level content on a weekly basis.

## **INFORMATION TECHNOLOGY EXPECTATIONS**

Students will be expected to use a variety of digital tools according to grade level expectations stated in CAISL's Research and Information Technology Integration Scope and Sequence.

See link below:

[https://www.caislisbon.org/uploaded/Curriculum\\_links/2019-2020/IT\\_Skills\\_Scope\\_and\\_Sequence\\_by\\_Grade.pdf](https://www.caislisbon.org/uploaded/Curriculum_links/2019-2020/IT_Skills_Scope_and_Sequence_by_Grade.pdf)

## **PERFORMANCE INDICATORS**

### **MATH PRACTICES**

**Explanations of Math Practices:** By the end of the year students will be expected to problem solve, reason mathematically, and communicate efficiently according to grade level expectations. See link below:

[https://www.caislisbon.org/uploaded/Curriculum\\_links/Math/Math\\_Practice\\_Progressions\\_5-12.pdf](https://www.caislisbon.org/uploaded/Curriculum_links/Math/Math_Practice_Progressions_5-12.pdf)

### **PROBLEM SOLVING**

Make sense of problems and persevere in solving them

Look for and make use of structure (Deductive Reasoning)

Look for and express regularity in repeated reasoning (Inductive Reasoning)

### **MATHEMATICAL REASONING, COMMUNICATION AND MODELING**

Reason abstractly and quantitatively

Construct viable arguments and critique the reasoning of others

Model with mathematics

Use appropriate tools strategically

Attend to precision

### **MATH CONCEPTS**

#### **RATIOS AND PROPORTIONAL RELATIONSHIPS**

Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. DOK 1, 2

Understand the concept of a unit rate  $a/b$  associated with a ratio  $a:b$  with  $b \neq 0$  and use rate language in the context of a ratio relationship. DOK 1, 2

Use ratio and rate reasoning to solve real-world and mathematical problems. DOK 1, 2 E

## **THE NUMBER SYSTEM**

Interpret and compute quotients of fractions and solve word problems involving division of fractions by fractions. DOK 1, 2 E

Fluently divide multi-digit numbers using the standard algorithm. DOK 1

Fluently add, subtract, multiply, and divide multi-digit decimals using the standard algorithm for each operation. DOK 1

Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1-100 with a common factor as a multiple of a sum of two whole numbers with no common factor. DOK 1

Understand that positive and negative numbers are used together to describe quantities having opposite directions or values; use positive and negative numbers to represent quantities in real world contexts, explaining the meaning of zero in each situation. DOK 1, 2 E

Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates. DOK 1 E

Understand ordering and absolute value of rational numbers. DOK 1, 2

Solve real-world and mathematical problems by graphing points in all four quadrants of the coordinate plane. Include use of coordinates and absolute value to find distances between points with the same first coordinate or the same second coordinate. DOK 1, 2

## **EXPRESSIONS AND EQUATIONS**

Write and evaluate numerical expressions involving whole-number exponents. DOK 1

Write, read, and evaluate expressions in which letters stand for numbers. DOK 1, 2

Apply the properties of operations to generate equivalent expressions. DOK 1, 2 E

Identify when two expressions are equivalent. DOK 1

Understand solving an equation or inequality as a process of answering a question: which values from a specified set, if any, make the equation or inequality true? Use substitution to determine whether a given number in a specified set makes an equation or inequality true. DOK 1

Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set. DOK 1, 2 E

Solve real-world and mathematical problems by writing and solving equations of the form  $x + p = q$  and  $px = q$  for cases in which  $p$ ,  $q$  and  $x$  are all nonnegative rational numbers. DOK 1, 2 E

Write an inequality of the form  $x > c$  or  $x < c$  to represent a constraint or condition in a real-world or mathematical problem. Recognize that inequalities of the form  $x > c$  or  $x < c$  have infinitely many solutions; represent solutions of such inequalities on number line diagrams. DOK 1, 2

Use variables to represent two quantities in a real-world problem that change in relationship to one another; write an equation to express one quantity, thought of as the dependent variable, in terms of the other quantity, known as the independent variable. Analyze the relationship between the dependent and independent variables using graphs and tables and relate these to the equation.

DOK 1, 2, 3

## GEOMETRY

Find the area of right triangles, other triangles, special quadrilaterals, and polygons by composing into rectangles or decomposing into triangles and other shapes; apply these techniques in the context of solving real-world and mathematical problems. DOK 1, 2

Find the volume of a right rectangular prism with fractional edge lengths by packing it with unit cubes of the appropriate unit fraction edge lengths and show that the volume is the same as would be found by multiplying the edge lengths of the prism. Apply the formulas  $V = lwh$  and  $V = bh$  to find volumes of right rectangular prisms with fractional edge lengths in the context of solving real-world and mathematical problems. DOK 1, 2

Draw polygons in the coordinate plane given coordinates for the vertices; use coordinates to find the length of a side joining points with the same first coordinate or the same second coordinate. Apply these techniques in the context of solving real-world and mathematical problems. DOK 1, 2

Represent three-dimensional figures using nets made up of rectangles and triangles and use the nets to find the surface area of these figures. Apply these techniques in the context of solving real-world and mathematical problems. DOK 1, 2

## STATISTICS & PROBABILITY

Recognize a statistical question as one that anticipates variability in the data related to the question and accounts for it in the answers. DOK 1

Understand that a set of data collected to answer a statistical question has a distribution which can be described by its center, spread, and overall shape. DOK 1, 2 E

Recognize that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation describes how its values vary with a single number. DOK 1

Display numerical data in plots on a number line, including dot plots, histograms, and box plots. DOK 1, 2  
Summarize numerical data sets in relation to their context. DOK 1, 2, 3

## FURTHER CURRICULAR EXPECTATIONS

### **For the Performance Indicator (Ratios and Proportional Relationships):**

Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.

- Make tables of equivalent ratios relating quantities with whole-number measurements, find missing values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios.
- Solve unit rate problems including those involving unit pricing and constant speed. *For example, if it took 7 hours to mow 4 lawns, then at that rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?*
- Find a percent of a quantity as a rate per 100 (e.g., 30% of a quantity means 30/100 times the quantity); solve problems involving finding the whole, given a part and the percent.
- Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities.

**For the Performance Indicator (The Number System):**

Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates.

- Recognize opposite signs of numbers as indicating locations on opposite sides of 0 on the number line; recognize that the opposite of the opposite of a number is the number itself, e.g.,  $-(-3) = 3$ , and that 0 is its own opposite.
- Understand signs of numbers in ordered pairs as indicating locations in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections across one or both axes.
- Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers and other rational numbers on a coordinate plane.

Understand ordering and absolute value of rational numbers.

- Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram. *For example, interpret  $-3 > -7$  as a statement that  $-3$  is located to the right of  $-7$  on a number line oriented from left to right.*
- Write, interpret, and explain statements of order for rational numbers in real-world contexts. *For example, write  $-3^{\circ}\text{C} > -7^{\circ}\text{C}$  to express the fact that  $-3^{\circ}\text{C}$  is warmer than  $-7^{\circ}\text{C}$ .*
- Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a positive or negative quantity in a real-world situation. *For example, for an account balance of  $-30$  dollars, write  $|-30| = 30$  to describe the size of the debt in dollars.*
- Distinguish comparisons of absolute value from statements about order. *For example, recognize that an account balance less than  $-30$  dollars represents a debt greater than 30 dollars.*

**For the Performance Indicator (Expressions and Equations):**

Write, read, and evaluate expressions in which letters stand for numbers.

- Write expressions that record operations with numbers and with letters standing for numbers. *For example, express the calculation "Subtract  $y$  from 5" as  $5 - y$ .*
- Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity. *For example, describe the expression  $2(8 + 7)$  as a product of two factors; view  $(8 + 7)$  as both a single entity and a sum of two terms.*
- Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole-number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations). *For example, use the formulas  $V = s^3$  and  $A = 6s^2$  to find the volume and surface area of a cube with sides of length  $s = \frac{1}{2}$ .*

**For the Performance Indicator (Statistics and Probability):**

Summarize numerical data sets in relation to their context, such as by.

- Reporting the number of observations.
- Describing the nature of the attribute under investigation, including how it was measured and its units of measurement.
- Giving quantitative measures of center (median and/or mean) and variability (interquartile range and/or mean absolute deviation), as well as describing any overall pattern and any striking deviations from the overall pattern with reference to the context in which the data were gathered.
- Relating the choice of measures of center and variability to the shape of the data distribution and the context in which the data were gathered.
