Middle School Fitness Assessments

Each student’s fitness level is assessed at the beginning, middle and end of semester. These assessments measure levels of fitness in four health-related fitness components.

<table>
<thead>
<tr>
<th>Fitness Component</th>
<th>Cardio-Respiratory Endurance</th>
<th>Muscular Endurance</th>
<th>Muscular Strength</th>
<th>Flexibility</th>

60 Minutes of Play, Every Day

To feel great and maintain a healthy weight, children need at least 60 minutes of physical activity every day. Physical activity is anything that gets your heart pumping or makes you stronger. This recommendation comes from health leaders at the U.S. Department of Health and Human Services. For more information about these recommendations, visit the Physical Activity Guidelines Toolkit website or learn how families can play a role in youth physical activity.

Why Physical Activity is Important?
Physically active children tend to be physically active adults. You can help your child be more physically active by making physical activity an important part of family life. Make it a priority to spend time with your child by playing at the park, going on walks or even doing chores together. Children learn from their parents the joy and fun of physical activity by doing it together. Everyone reaps the rewards and benefits of a healthier, happier family.

Schools Need Your Help!

Getting 60 minutes of physical activity at school each day can be challenging. Your child receives 30-45 minutes of physical education two days a week and between 15-45 minutes of recess each day. Highline needs your help to make sure each child gets 60 minutes of physical activity each day.

Get Involved

To help your child hit the 60-minute mark, come up with fun ways to add a little bit more activity for the whole family. It doesn’t matter what it looks like—an organized basketball game or bike riding with mom or dad around the neighborhood. Finding ways to add a little more activity to every day can mean big health benefits for your children.

Resources

Learn more about what you can do to improve your child’s health and fitness by accessing the following websites:

1. Let your child explore all the fun and creative ways to be physically active here
2. What types of physical activity are appropriate for your child? Learn that and more here
3. Can’t get outside? Find indoor activities you can do with your child here
4. www.cdc.gov/physicalactivity/basics/children

Regular Physical Activity and the Life Changing Results

⇒ Reduce the risk of developing obesity
⇒ Reduce the risk of developing diabetes, cardio vascular disease, and certain cancers.
⇒ Help build and maintain healthy bones and muscles
⇒ Promotes psychological well-being
⇒ Reduces feelings of depression and anxiety
⇒ May improve students’ academic performance, including academic achievement and factors that influence academic achievement, such as concentration and attentiveness in the classroom.
