## Strand 6.1: STRUCTURE AND MOTION WITHIN THE SOLAR SYSTEM

The solar system consists of the Sun, planets, and other objects within Sun’s gravitational influence. Gravity is the force of attraction between masses. The Sun-Earth-Moon system provides an opportunity to study interactions between objects in the solar system that influence phenomena observed from Earth. Scientists use data from many sources to determine the scale and properties of objects in our solar system.

SEEd Standard	DESK Standard	EbD Activities
6.1.1 Develop and use a model of the Sun-Earth-Moon system to describe the cyclic patterns of lunar phases, eclipses of the Sun and Moon, and seasons. Examples of models could be physical, graphical, or conceptual.	6 a. Explore the attributes of the solar system and universe. 6 d. Demonstrate the process of scientific inquiry.	<a href="#">I &amp; I, Unit 6 Lesson 1 Establishing a Lunar Outpost (Resources)</a> <a href="#">ET, Unit 4 Human Exploration (Resources)</a>
6.1.2 Develop and use a model to describe the role of gravity and inertia in orbital motions of objects in our solar system.	6 a. Explore the attributes of the solar system and universe. 6 d. Demonstrate the process of scientific inquiry.	<a href="#">I &amp; I, Unit 6 Lesson 1 Establishing a Lunar Outpost (Resources)</a> <a href="#">ET, Unit 4 Human Exploration (Resources)</a>
6.1.3 Use computational thinking to analyze data and determine the scale and properties of objects in the solar system. Examples of scale could include size and distance. Examples of properties could include layers, temperature, surface features, and orbital radius. Data sources could include Earth and space-based instruments such as telescopes and satellites. Types of data could include graphs, data tables, drawings, photographs, and models.	6 a. Explore the attributes of the solar system and universe. 6 d. Demonstrate the process of scientific inquiry.	<a href="#">I &amp; I, Unit 6 Lesson 1 Establishing a Lunar Outpost (Resources)</a> <a href="#">ET, Unit 4 Human Exploration (Resources)</a>

**Strand 6.2: ENERGY AFFECTS MATTER**

Matter and energy are fundamental components of the universe. Matter is anything that has mass and takes up space. Transfer of energy creates change in matter. Changes between general states of matter can occur through the transfer of energy. Density describes how closely matter is packed together. Substances with a higher density have more matter in a given space than substances with a lower density. Changes in heat energy can alter the density of a material. Insulators resist the transfer of heat energy, while conductors easily transfer heat energy. These differences in energy flow can be used to design products to meet the needs of society.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
6.2.1 Develop models to show that molecules are made of different kinds, proportions and quantities of atoms. Emphasize understanding that there are differences between atoms and molecules, and that certain combinations of atoms form specific molecules. Examples of simple molecules could include water (H <sub>2</sub> O), atmospheric oxygen (O <sub>2</sub> ), and carbon dioxide (CO <sub>2</sub> ).	6 d. Demonstrate the process of scientific inquiry. 7-1 Students will understand the structure of matter. 7-1.a Describe the structure of matter in terms of atoms and molecules	
6.2.2 Develop a model to predict the effect of heat energy on states of matter and density. Emphasize the arrangement of particles in states of matter (solid, liquid, or gas) and during phase changes (melting, freezing, condensing, and evaporating).	6 c. Understand the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 7-1 b. Accurately measure the characteristics of matter in different states. 7-1 c. Investigate the motion of particles.	<a href="#">04 EbD TEEMS Lesson 17 Keep Your Cool Challenge</a> <a href="#">04 EbD TEEMS Lesson 7 The Steam Turbine</a>
6.2.3 Plan and carry out an investigation to determine the relationship between temperature, the amount of heat transferred, and the change of average particle motion in various types or amounts of matter. Emphasize recording and evaluating data, and communicating the results of the investigation.	6 c. Understand the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 7-1 b. Accurately measure the characteristics of matter in different states. 7-1 c. Investigate the motion of particles.	<a href="#">04 EbD TEEMS Lesson 17 Keep Your Cool Challenge</a> <a href="#">04 EbD TEEMS Lesson 8 Properties</a>
6.2.4 Design an object, tool, or process that minimizes or maximizes heat energy transfer. Identify criteria and constraints, develop a prototype for iterative testing, analyze data from testing, and propose modifications for optimizing the design solution. Emphasize demonstrating how the structure of differing materials allows them to function as either conductors or insulators.	6 c. Understand the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 7-1 b. Accurately measure the characteristics of matter in different states. 7-1 c. Investigate the motion of particles.	<a href="#">04 EbD TEEMS Lesson 17 Keep Your Cool Challenge</a> <a href="#">04 EbD TEEMS Lesson 8 Properties</a>

**Strand 6.3: EARTH'S WEATHER PATTERNS AND CLIMATE**

All Earth processes are the result of energy flowing and matter cycling within and among the planet's systems. Heat energy from the Sun, transmitted by radiation, is the primary source of energy that affects Earth's weather and drives the water cycle. Uneven heating across Earth's surface causes changes in density, which result in convection currents in water and air, creating patterns of atmospheric and oceanic circulation that determine regional and global climates.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
6.3.1 Develop a model to describe how the cycling of water through Earth's systems is driven by energy from the Sun, gravitational forces, and density.	6 c. Understand the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 7-2 a. Examine the effects of density and particle size on the behavior of materials in mixtures. 8-4 b. Examine the force exerted on objects by gravity. 9-4 Students ill understand the dynamics of the hydrosphere.	<a href="#">03 EbD TEEMS Lesson 1 We All Live Downstream</a> <a href="#">03 EbD TEEMS Lesson 6 Every Drop Matters Vocabulary</a> <a href="#">03 EbD TEEMS Lesson 7 Water Cycle</a> <a href="#">03 EbD TEEMS Lesson 12 Every Drop Matters Bingo</a> <a href="#">03 EbD TEEMS Lesson 14 A Drop in the Bucket</a> <a href="#">04 EbD TEEMS Lesson 7 The Steam Turbine</a>
5 6.3.2 Investigate the interactions between air masses that cause changes in weather conditions. Collect and analyze weather data to provide evidence for how air masses flow from regions of high pressure to low pressure causing a change in weather. Examples of data collection could include field observations, laboratory experiments, weather maps, or diagrams.	6 c. Understand the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 8-4 a. Investigate the transfer of energy through various materials. 9-3 a. Relate how energy from the Sun drives atmospheric processes and how atmospheric currents transport matter and transfer energy.	
6.3.3 Develop and use a model to show how unequal heating of the Earth's systems causes patterns of atmospheric and oceanic circulation that determine regional climates. Emphasize how warm water and air move from the equator toward the poles. Examples of models could include Utah regional weather patterns such as lake-effect snow and wintertime temperature inversions.	6 c. Understand the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 8-4 a. Investigate the transfer of energy through various materials. 9-3 a. Relate how energy from the Sun drives atmospheric processes and how atmospheric currents transport matter and transfer energy. 9-3 b. Describe elements of weather and the factors that cause them to vary from day to day.	<a href="#">04 EbD TEEMS Lesson 7 The Steam Turbine</a>

<p>6.3.4 Construct an explanation supported by evidence for the role of the natural greenhouse effect in Earth’s energy balance, and how it enables life to exist on Earth. Examples could include comparisons between Earth and other planets such as Venus and Mars.</p>	<p>6 c. Understand the properties and behavior of heat, light and sound.          6 d. Demonstrate the process of scientific inquiry.          8-4 a. Investigate the transfer of energy through various materials.          9-3 a. Relate how energy from the Sun drives atmospheric processes and how atmospheric currents transport matter and transfer energy.          9-3 c. Examine the natural and human-caused processes that cause Earth’s climate to change over intervals of time ranging from decades to millennia.</p>	<p><a href="#"><u>04 EbD TEEMS Lesson 6 Building Vocabulary</u></a>  <a href="#"><u>04 EbD TEEMS Lesson 9 The Greenhouse Effect TD, Unit 5 Lesson 2 Technological Design in Energy and Transportation</u></a></p>
--	--	---

**Strand 6.4: STABILITY AND CHANGE IN ECOSYSTEMS**

The study of ecosystems includes the interaction of organisms with each other and with the physical environment. Consistent interactions occur within and between species in various ecosystems as organisms obtain resources, change the environment, and are affected by the environment. This influences the flow of energy through an ecosystem, resulting in system variations. Additionally, ecosystems benefit humans through processes and resources, such as the production of food, water and air purification, and recreation opportunities. Scientists and engineers investigate interactions among organisms and evaluate design solutions to preserve biodiversity and ecosystem resources.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
6.4.1 Analyze data to provide evidence for the effects of resource availability on organisms and populations in an ecosystem. Ask questions to predict how changes in resource availability affects organisms in those ecosystems. Examples could include water, food, and living space in Utah environments.	6 d. Demonstrate the process of scientific inquiry. 8-2 b. Generalize the dependent relationships between organisms. 8-2 c. Analyze human influence on the capacity of an environment to sustain living things. 9-4 b. Analyze the characteristics and importance of freshwater found on Earth’s surface and its effect on living systems. 9-5 b. Describe how humans depend on Earth’s resources.	<a href="#">00 EbD TEEMS Lesson 5 Home Sweet Home</a> <a href="#">00 EbD TEEMS Lesson 6 Spiders</a> <a href="#">00 EbD TEEMS Lesson 7 A Wasp Nest</a> <a href="#">00 EbD TEEMS Lesson 8 Caves</a> <a href="#">00 EbD TEEMS Lesson 9 Underground Homes</a> <a href="#">00 EbD TEEMS Lesson 10 Underwater Homes</a> <a href="#">00 EbD TEEMS Lesson 15 Dr. Murawski</a>
6.4.2 Construct an explanation that predicts patterns of interactions among organisms across multiple ecosystems. Emphasize consistent interactions in different environments, such as competition, predation, and mutualism.	6 d. Demonstrate the process of scientific inquiry. 8-2 b. Generalize the dependent relationships between organisms.	
6.4.3 Develop a model to describe the cycling of matter and flow of energy among living and nonliving parts of an ecosystem. Emphasize food webs and the role of producers, consumers, and decomposers in various ecosystems. Examples could include Utah ecosystems such as mountains, Great Salt Lake, wetlands, and deserts.	6 d. Demonstrate the process of scientific inquiry. 8-2 a. Compare ways that plants and animals obtain and use energy. 8-2 b. Generalize the dependent relationships between organisms. 8-4 a. Investigate the transfer of energy through various materials. 8-4 d. Analyze various forms of energy and how living organisms sense and respond to energy.	<a href="#">01 EbD TEEMS Lesson 8 Plant and Animal Sources</a>

<p>6.4.4 Construct an argument supported by evidence that the stability of populations is affected by changes to an ecosystem. Emphasize how changes to living and nonliving components in an ecosystem affect populations in that ecosystem. Examples could include Utah ecosystems such as mountains, Great Salt Lake, wetlands, and deserts.</p>	<p>6 d. Demonstrate the process of scientific inquiry.        8-2 b. Generalize the dependent relationships between organisms.        8-4 a. Investigate the transfer of energy through various materials.        8-4 d. Analyze various forms of energy and how living organisms sense and respond to energy.</p>	<p><a href="#">03 EbD TEEMS Lesson 4 A River Ran Wild</a>  <a href="#">03 EbD TEEMS Lesson 5 Discover a Water Source</a>  <a href="#">03 EbD TEEMS Lesson 9 Point and Non-Point Pollution</a>  <a href="#">03 EbD TEEMS Lesson 10 Water Treatment Systems</a></p>
<p>6.4.5 Evaluate competing design solutions for preserving ecosystem services that protect resources and biodiversity based on how well the solutions maintain stability within the ecosystem. Emphasize obtaining, evaluating, and communicating information of differing design solutions. Examples could include policies affecting ecosystems, responding to invasive species or solutions for the preservation of ecosystem resources specific to Utah, such as air and water quality and prevention of soil erosion.</p>	<p>6 d. Demonstrate the process of scientific inquiry.        8-2 b. Generalize the dependent relationships between organisms.        8-2 c. Analyze human influence on the capacity of an environment to sustain living things.        8-4 a. Investigate the transfer of energy through various materials.        8-4 d. Analyze various forms of energy and how living organisms sense and respond to energy.</p>	<p><a href="#">03 EbD TEEMS Lesson 9 Point and Non-Point Pollution</a>  <a href="#">03 EbD TEEMS Lesson 10 Water Treatment Systems</a>  <a href="#">05 EbD TEEMS Lesson 15 Majora Carter</a></p>

# 7<sup>th</sup> Grade Crosswalk

## Strand 7.1: FORCES ARE INTERACTIONS BETWEEN MATTER

Forces are push or pull interactions between two objects. Changes in motion, balance and stability, and transfers of energy are all facilitated by forces on matter. Forces, including electric, magnetic, and gravitational forces, can act on objects that are not in contact with each other. Scientists use data from many sources to examine the cause and effect relationships determined by different forces.

SEEd Standard	DESK Standard	EbD Activities
<p>7.1.1 Carry out an investigation which provides evidence that a change in an object's motion is dependent on the mass of the object and the sum of the forces acting on it. Various experimental designs should be evaluated to determine how well the investigation measures an object's motion. Emphasize conceptual understanding of Newton's First and Second Laws. Calculations will only focus on one-dimensional movement; the use of vectors will be introduced in high school.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion.</p>	<p><a href="#">The Colossal Cookie-Tin Race</a><sup>1</sup> <a href="#">05 EbD TEEMS Lesson 7 Balloon Vehicle</a> <a href="#">05 EbD TEEMS Lesson 8 Balloon Vehicle Testing</a></p>
<p>7.1.2 Apply Newton's Third Law to design a solution to a problem involving the motion of two colliding objects in a system. Examples could include collisions between two moving objects or between a moving object and a stationary object.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion.</p>	<p><a href="#">Bouncing Balls</a><sup>2</sup> (Resources)</p>

<sup>1</sup> © 2017 SCIENTIFIC AMERICAN, A DIVISION OF NATURE AMERICA, INC.

<sup>2</sup> © 2004 by Regents of the University of Colorado

<p>7.1.3 Construct a model using observational evidence to describe the nature of fields existing between objects that exert forces on each other even though the objects are not in contact. Emphasize the cause and effect relationship between properties of objects (such as magnets or electrically charged objects) and the forces they exert.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 5 c. Explore the features and behavior of magnets and electricity. 8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion.</p>	<p><a href="#">Whose Field Line is it, Anyway?<sup>3</sup> (Resources)</a> <a href="#">The Good, the Bad and the Electromagnet<sup>4</sup> (Resources)</a></p>
<p>7.1.4 Collect and analyze data to determine the factors that affect the strength of electric and magnetic forces. Examples could include electromagnets, electric motors, or generators. Examples of data could include the effect of the number of turns of wire on the strength of an electromagnet, or of increasing the number or strength of magnets on the speed of an electric motor.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 5 c. Explore the features and behavior of magnets and electricity.</p>	<p><a href="#">Whose Field Line is it, Anyway?<sup>3</sup> (Resources)</a> <a href="#">The Good, the Bad and the Electromagnet<sup>4</sup> (Resources)</a></p>
<p>7.1.5 Engage in argument from evidence to support the claim that gravitational interactions within a system are attractive and dependent upon the masses of interacting objects. Examples of evidence for arguments could include mathematical data generated from various simulations.</p>	<p>8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion.</p>	<p><a href="#">I &amp; I, Unit 6 Lesson 1 <i>Establishing a Lunar Outpost</i></a></p>

**Strand 7.2: CHANGES TO EARTH OVER TIME**

Earth's processes are dynamic and interactive, and are the result of energy flowing and matter cycling within and among Earth's systems. Energy from the sun and Earth's internal heat are the main sources driving these processes. Plate tectonics is a unifying theory that explains crustal movements of Earth's surface, how and where different rocks form, the occurrence of earthquakes and volcanoes, and the distribution of fossil plants and animals.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
7.2.1 Develop a model of the rock cycle to describe the relationship between energy flow and matter cycling that create igneous, sedimentary, and metamorphic rocks. Emphasize the processes of melting, crystallization, weathering, deposition, sedimentation, and deformation, which act together to form minerals and rocks.	6 d. Demonstrate the process of scientific inquiry. 7-2 b. Analyze how density affects Earth's structure. 8-3 b. Describe the nature of the changes that rocks undergo over long periods of time. 8-3 d. Compare rapid and gradual changes to Earth's surface.	<a href="#">Earthquake Formation<sup>5</sup> (Resources)</a>
7.2.2 Construct an explanation based on evidence for how processes have changed Earth's surface at varying time and spatial scales. Examples of processes that occur at varying time scales could include slow plate motions or rapid landslides. Examples of processes that occur at varying spatial scales could include uplift of a mountain range or deposition of fine sediments.	6 d. Demonstrate the process of scientific inquiry. 8-3 d. Compare rapid and gradual changes to Earth's surface. 8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion. 9-2 c. Demonstrate how the motion of tectonic plates affects Earth and living things.	<a href="#">Earthquake Formation<sup>5</sup> (Resources)</a>
7.2.3 Ask questions to identify constraints of specific geologic hazards and evaluate competing design solutions for maintaining the stability of human-engineered structures, such as homes, roads, and bridges. Examples of geologic hazards could include earthquakes, landslides, or floods.	6 d. Demonstrate the process of scientific inquiry. 8-4 a. Investigate the transfer of energy through various materials. 9-2 c. Demonstrate how the motion of tectonic plates affects Earth and living things. 9-5 c. Indicate how natural hazards pose risks to humans.	<a href="#">T &amp; S, Unit 1 Lesson 2 Ethics in Engineering</a> <a href="#">TS, Unit 4 Lesson 3 System Testing and Evaluation</a>

<p>7.2.4 Develop and use a scale model of the matter in the Earth’s interior to demonstrate how differences in density and chemical composition (silicon, oxygen, iron, and magnesium) cause the formation of the crust, mantle, and core.</p>	<p>6 d. Demonstrate the process of scientific inquiry.          7-2 a. Examine the effects of density and particle size on the behavior of materials in mixtures.          7-2 b. Analyze how density affects Earth’s structure.          9-2 a. Evaluate the source of Earth’s internal heat and the evidence of Earth’s internal structure.          9-2 b. Describe the development of the current theory of plate tectonics and the evidence that supports this theory.</p>	<p><a href="#">Earthquake Formation</a><sup>5</sup> <a href="#">(Resources)</a></p>
<p>7.2.5 Ask questions and analyze and interpret data about the patterns between plate tectonics and:          (1) The occurrence of earthquakes and volcanoes.          (2) Continental and ocean floor features.          (3) The distribution of rocks and fossils.          Examples could include identifying patterns on maps of earthquakes and volcanoes relative to plate boundaries, the shapes of the continents, the locations of ocean structures (including mountains, volcanoes, faults, and trenches), and similarities of rock and fossil types on different continents.</p>	<p>6 d. Demonstrate the process of scientific inquiry.          8-3 c. Describe how rock and fossil evidence is used to infer Earth’s history.          9-2 a. Evaluate the source of Earth’s internal heat and the evidence of Earth’s internal structure.          9-2 b. Describe the development of the current theory of plate tectonics and the evidence that supports this theory.          9-2 c. Demonstrate how the motion of tectonic plates affects Earth and living things.</p>	<p><a href="#">Earthquakes Living Lab</a><sup>6</sup> <a href="#">(Resources)</a></p>
<p>7.2.6 Make an argument from evidence for how the geologic time scale shows the age and history of Earth. Emphasize scientific evidence from rock strata, the fossil record, and the principles of relative dating, such as superposition, uniformitarianism and recognizing unconformities.</p>	<p>6 d. Demonstrate the process of scientific inquiry.          8-3 b. Describe the nature of the changes that rocks undergo over long periods of time.          8-3 c. Describe how rock and fossil evidence is used to infer Earth’s history.          8-3 d. Compare rapid and gradual changes to Earth’s surface.</p>	

<sup>6</sup> © 2013 by Regents of the University of Colorado; original 2013 Colorado School of Mines

**Strand 7.3: STRUCTURE AND FUNCTION OF LIFE**

Living things are made of smaller structures, which function to meet the needs of survival. The basic structural unit of all living things is the cell. Parts of a cell work together to function as a system. Cells work together and form tissues, organs, and organ systems. Organ systems interact to meet the needs of the organism.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
7.3.1 Plan and carry out an investigation that provides evidence that the basic structures of living things are cells. Emphasize that cells can form single-celled or multicellular organisms, and that multicellular organisms are made of different types of cells.	6 b. Understand the characteristics and significance of microorganisms. 6 d. Demonstrate the process of scientific inquiry. 7-3 a. Observe and describe cellular structures and functions. 7-3 b. Identify and describe the function and interdependence of various organs and tissues. 7-5 c. Classify organisms using an orderly pattern based upon structure.	
7.3.2 Develop and use a model to describe the function of a cell in living systems and the way parts of cells contribute to cell function. Emphasize the cell as a system, including the interrelating roles of the nucleus, chloroplasts, mitochondria, cell membrane, and cell wall.	6 b. Understand the characteristics and significance of microorganisms. 6 d. Demonstrate the process of scientific inquiry. 7-3 a. Observe and describe cellular structures and functions.	<a href="#">Cell Membrane Structure and Function<sup>7</sup> (Resources)</a>
7.3.3 Construct an explanation using evidence to explain how body systems have various levels of organization. Emphasize understanding that cells form tissues, tissues form organs, and organs form systems specialized for particular body functions. Examples could include relationships between the circulatory, excretory, digestive, respiratory, muscular, skeletal, and nervous systems. Specific organ functions will be taught at the high school level.	6 d. Demonstrate the process of scientific inquiry. 7-3 a. Observe and describe cellular structures and functions. 7-3 b. Identify and describe the function and interdependence of various organs and tissues.	

<sup>7</sup> © 2013 by Regents of the University of Colorado; original © 2010 Vanderbilt University

**Strand 7.4: REPRODUCTION AND INHERITANCE**

The great diversity of species on Earth is a result of genetic variation. Genetic traits are passed from parent to offspring. These traits affect the structure and behavior of organisms, which affect the organism's ability to survive and reproduce. Mutations can cause changes in traits that may affect an organism. As technology has developed, humans have been able to change the inherited traits in organisms, which may have an impact on society.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
7.4.1 Develop and use a model to explain the effects that different types of reproduction have on genetic variation, including asexual and sexual reproduction.	5 d. Examine the significance of inherited traits. 6 d. Demonstrate the process of scientific inquiry. 7-4 a. Compare how sexual and asexual reproduction passes genetic information from parent to offspring.	<a href="#">Heredity Mix 'n Match</a> <sup>8</sup> ( <a href="#">Resources</a> )
7.4.2 Obtain, evaluate, and communicate information about specific animal and plant adaptations and structures that affect the probability of successful reproduction. Examples of adaptations could include nest building to protect young from the cold, herding of animals to protect young from predators, vocalization of animals and colorful plumage to attract mates for breeding, bright flowers attracting butterflies that transfer pollen, flower nectar and odors that attract insects that transfer pollen, and hard shells on nuts that squirrels bury.	6 d. Demonstrate the process of scientific inquiry. 7-4 b. Relate the adaptability of organisms in an environment to their inherited traits and structures.	<a href="#">Bees: The Invaluable Master Pollinator</a> <sup>9</sup> ( <a href="#">Resources</a> )
7.4.3 Develop and use a model to describe why genetic mutations may result in harmful, beneficial, or neutral effects to the structure and function of the organism. Emphasize the conceptual idea that changes to traits can happen because of genetic mutations. Specific changes of genes at the molecular level, mechanisms for protein synthesis, and specific types of mutations will be introduced at the high school level.	6 d. Demonstrate the process of scientific inquiry. 7-4 a. Compare how sexual and asexual reproduction passes genetic information from parent to offspring. 7-4 b. Relate the adaptability of organisms in an environment to their inherited traits and structures.	<a href="#">Mutation Telephone</a> <sup>10</sup> ( <a href="#">Resources</a> )

<sup>8</sup> © 2013 by Regents of the University of Colorado; original © 2004 Duke University

<sup>9</sup> © 2013 by Regents of the University of Colorado; original © 2006 Vanderbilt University

<sup>10</sup> © 2016 by Regents of the University of Colorado; original © 2015 University of Houston

<p>7.4.4 Obtain, evaluate, and communicate information about the technologies that have changed the way humans affect the inheritance of desired traits in organisms. Analyze data from tests or simulations to determine the best solution to achieve success in cultivating selected desired traits in organisms. Examples could include artificial selection, genetic modification, animal husbandry, and gene therapy.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 7-4 b. Relate the adaptability of organisms in an environment to their inherited traits and structures. 8-2 c. Analyze human influence on the capacity of an environment to sustain living things.</p>	<p><a href="#">T &amp; S, Unit 4 Lesson 3 <i>Gene Theft</i></a></p>
--	---	---

**Strand 7.5: CHANGES IN SPECIES OVER TIME**

Genetic variation and the proportion of traits within a population can change over time. These changes can result in evolution through natural selection. Additional evidence of change over time can be found in the fossil record, anatomical similarities and differences between modern and ancient organisms, and embryological development.

SEEd Standard	DESK Standard	EbD Activities
<p>7.5.1 Construct an explanation that describes how the genetic variation of traits in a population can affect some individuals' probability of surviving and reproducing in a specific environment. Over time, specific traits may increase or decrease in populations. Emphasize the use of proportional reasoning to support explanations of trends in changes to populations over time. Examples could include camouflage, variation of body shape, speed and agility, or drought tolerance.</p>	<p>6 d. Demonstrate the process of scientific inquiry.            7-4 a. Compare how sexual and asexual reproduction passes genetic information from parent to offspring.            7-4 b. Relate the adaptability of organisms in an environment to their inherited traits and structures.</p>	<p><a href="#">T &amp; S, Unit 4 Lesson 3 Gene Theft Mice Rule! (Or Not)<sup>11</sup> (Resources)</a></p>
<p>7.5.2 Analyze and interpret data for patterns in the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth, under the assumption that natural laws operate today as in the past.</p>	<p>6 d. Demonstrate the process of scientific inquiry.            7-4 a. Compare how sexual and asexual reproduction passes genetic information from parent to offspring.            7-4 b. Relate the adaptability of organisms in an environment to their inherited traits and structures.            8-3 c. Describe how rock and fossil evidence is used to infer Earth's history.</p>	
<p>7.5.3 Construct explanations that describe the patterns of body structure similarities and differences between modern organisms, and between ancient and modern organisms, to infer possible evolutionary relationships.</p>	<p>6 d. Demonstrate the process of scientific inquiry.            7-3 b. Identify and describe the function and interdependence of various organs and tissues.            7-5 a. Classify based on observable properties.            7-5 b. Use and develop a simple classification system.            7-5 c. Classify organisms using an orderly pattern based upon structure.            8-3 c. Describe how rock and fossil evidence is used to infer Earth's history.</p>	

<p>7.5.4 Analyze data to compare patterns in the embryological development across multiple species to identify similarities and differences not evident in the fully formed anatomy.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 7-3 b. Identify and describe the function and interdependence of various organs and tissues. 7-5 a. Classify based on observable properties. 7-5 b. Use and develop a simple classification system. 7-5 c. Classify organisms using an orderly pattern based upon structure.</p>

# 8<sup>th</sup> Grade Crosswalk

## Strand 8.1: MATTER AND ENERGY INTERACT IN THE PHYSICAL WORLD

The physical world is made of atoms and molecules. Even large objects can be viewed as a combination of small particles. Energy causes particles to move and interact physically or chemically. Those interactions create a variety of substances. As molecules undergo a chemical or physical change, the number of atoms in that system remains constant. Humans use energy to refine natural resources into synthetic materials.

SEEd Standard	DESK Standard	EbD Activities
8.1.1 Develop a model to describe the scale and proportion of atoms and molecules. Emphasize developing atomic models of elements and their numbers of protons, neutrons, and electrons, as well as models of simple molecules. Topics like valence electrons, bond energy, ionic complexes, ions, and isotopes will be introduced at the high school level.	6 d. Demonstrate the process of scientific inquiry. 7-1 a. Describe the structure of matter in terms of atoms and molecules.	
8.1.2 Obtain information about various properties of matter, evaluate how different materials' properties allow them to be used for particular functions in society, and communicate your findings. Emphasize general properties of matter. Examples could include color, density, flammability, hardness, malleability, odor, ability to rust, solubility, state, or the ability to react with water.	6 d. Demonstrate the process of scientific inquiry. 7-1 b. Accurately measure the characteristics of matter in different states. 8-1 a. Describe the chemical and physical properties of various substances. 8-1 b. Observe and evaluate evidence of chemical and physical change. 8-1 d. Identify the observable features of chemical reactions.	<a href="#">04 EbD TEEMS Lesson 8 Properties</a>

<p>8.1.3 Plan and conduct an investigation and then analyze and interpret the data to identify patterns in changes in a substance's properties to determine whether a chemical reaction has occurred. Examples could include changes in properties such as color, density, flammability, odor, solubility, or state.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 7-1 b. Accurately measure the characteristics of matter in different states. 8-1 a. Describe the chemical and physical properties of various substances. 8-1 b. Observe and evaluate evidence of chemical and physical change. 8-1 d. Identify the observable features of chemical reactions.</p>	<p><a href="#">Let's Make Silly Putty<sup>12</sup> (Resources)</a></p>
<p>8.1.4 Obtain and evaluate information to describe how synthetic materials come from natural resources, what their functions are, and how society uses these new materials. Examples of synthetic materials could include medicine, foods, building materials, plastics, and alternative fuels.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 8-1 a. Describe the chemical and physical properties of various substances. 9-5 b. Describe how humans depend on Earth's resources.</p>	<p><a href="#">01 EbD TEEMS Lesson 10 Natural and Human-Made Fibers</a> <a href="#">02 EbD TEEMS Lesson 10 Plastic Codes</a> <a href="#">02 EbD TEEMS Lesson 15 Nathaniel Wyeth</a> <a href="#">04 EbD TEEMS Lesson 8 Properties ET, Unit 1 Lesson 3 Transforming Resources into Technology: From Production to You (Resources)</a> <a href="#">FOT, Unit 3 Lesson 2 Manufacturing (Resources)</a> <a href="#">T &amp; S, Unit 3 Lesson 1 Paper or Plastic</a></p>
<p>8.1.5 Develop a model that uses computational thinking to illustrate cause and effect relationships in particle motion, temperature, density, and state of a pure substance when heat energy is added or removed. Emphasize molecular-level models of solids, liquids, and gases to show how adding or removing heat energy can result in phase changes, and focus on calculating the density of a substance's state.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 7-1 b. Accurately measure the characteristics of matter in different states. 7-1 c. Investigate the motion of particles. 8-1 a. Describe the chemical and physical properties of various substances. 8-1 b. Observe and evaluate evidence of chemical and physical change. 8-1 c. Investigate and measure the effects of increasing or decreasing the amount of energy in a physical or chemical change, and relate the kind of energy added to the motion of the particles. 8-1 d. Identify the observable features of chemical reactions.</p>	<p><a href="#">04 EbD TEEMS Lesson 17 Keep Your Cool Challenge</a> <a href="#">04 EbD TEEMS Lesson 7 The Steam Turbine</a></p>

<p>8.1.6 Develop a model to describe how the total number of atoms does not change in a chemical reaction, indicating that matter is conserved. Emphasize demonstrations of an understanding of the law of conservation of matter. Balancing equations and stoichiometry will be learned at the high school level.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 7-1 a. Describe the structure of matter in terms of atoms and molecules. 7-1 b. Accurately measure the characteristics of matter in different states. 8-1 b. Observe and evaluate evidence of chemical and physical change. 8-1 c. Investigate and measure the effects of increasing or decreasing the amount of energy in a physical or chemical change, and relate the kind of energy added to the motion of the particles. 8-1 d. Identify the observable features of chemical reactions.</p>	<p><a href="#">04 Ebd TEEMS Lesson 17 Keep Your Cool Challenge</a></p>
<p>8.1.7 Design, construct, and test a device that can affect the rate of a phase change. Compare and identify the best characteristics of competing devices and modify them based on data analysis to improve the device to better meet the criteria for success.</p>	<p>6 d. Demonstrate the process of scientific inquiry. 7-1 b. Accurately measure the characteristics of matter in different states. 7-1 c. Investigate the motion of particles. 8-1 c. Investigate and measure the effects of increasing or decreasing the amount of energy in a physical or chemical change, and relate the kind of energy added to the motion of the particles. 8-1 d. Identify the observable features of chemical reactions.</p>	<p><a href="#">04 Ebd TEEMS Lesson 17 Keep Your Cool Challenge</a></p>

**Strand 8.2: ENERGY IS STORED AND TRANSFERRED IN PHYSICAL SYSTEMS**

Objects can store and transfer energy within systems. Energy can be transferred between objects, which involves changes in the object's energy. There is a direct relationship between an object's energy, mass, and velocity. Energy can travel in waves and may be harnessed to transmit information.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
8.2.1 Use computational thinking to analyze data about the relationship between the mass and speed of objects and the relative amount of kinetic energy of the objects. Emphasis should be on the quantity of mass and relative speed to the observable effects of the kinetic energy. Examples could include a full cart vs. an empty cart or rolling spheres with different masses down a ramp to measure the effects on stationary masses. Calculations of kinetic and potential energy will be learned at the high school level.	6 d. Demonstrate the process of scientific inquiry. 8-4 a. Investigate the transfer of energy through various materials. 8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion.	<a href="#">04 EbD TEEMS Lesson 7 The Steam Turbine</a> <a href="#">05 EbD TEEMS Lesson 7 Balloon Vehicle</a> <a href="#">05 EbD TEEMS Lesson 8 Balloon Vehicle Testing I &amp; I, Unit 2 Lesson 1 Rubber Band Racers</a> <a href="#">FOT, Unit 3 Lesson 1 Energy and Power (Resources)</a> <a href="#">The Colossal Cookie-Tin Race<sup>1</sup></a>
8.2.2 Ask questions about how the amount of potential energy varies as distance within the system changes. Plan and conduct an investigation to answer a question about potential energy. Emphasize comparing relative amounts of energy. Examples could include a full cart vs. an empty cart or rolling spheres with different masses down a ramp to measure the effects on stationary masses. Calculations of kinetic and potential energy will be learned at the high school level.	6 d. Demonstrate the process of scientific inquiry. 8-4 a. Investigate the transfer of energy through various materials. 8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion.	<a href="#">04 EbD TEEMS Lesson 7 The Steam Turbine</a> <a href="#">05 EbD TEEMS Lesson 7 Balloon Vehicle</a> <a href="#">05 EbD TEEMS Lesson 8 Balloon Vehicle Testing I &amp; I, Unit 2 Lesson 1 Rubber Band Racers</a> <a href="#">FOT, Unit 3 Lesson 1 Energy and Power (Resources)</a> <a href="#">The Colossal Cookie-Tin Race<sup>1</sup></a>
8.2.3 Engage in argument to identify the strongest evidence that supports the claim that the kinetic energy of an object changes as energy is transferred to or from the object. Examples could include observing temperature changes as a result of friction, applying force to an object, or releasing potential energy from an object.	6 d. Demonstrate the process of scientific inquiry. 7-1 c. Investigate the motion of particles. 8-1 c. Investigate and measure the effects of increasing or decreasing the amount of energy in a physical or chemical change, and relate the kind of energy added to the motion of the particles. 8-4 a. Investigate the transfer of energy through various materials. 8-4 b. Examine the force exerted on objects by gravity. 8-4 c. Investigate the application of forces that act on objects, and the resulting motion.	<a href="#">04 EbD TEEMS Lesson 7 The Steam Turbine</a> <a href="#">05 EbD TEEMS Lesson 7 Balloon Vehicle</a> <a href="#">05 EbD TEEMS Lesson 8 Balloon Vehicle Testing I &amp; I, Unit 2 Lesson 1 Rubber Band Racers</a> <a href="#">FOT, Unit 3 Lesson 1 Energy and Power (Resources)</a> <a href="#">The Colossal Cookie-Tin Race<sup>1</sup></a>

<p>8.2.4 Use computational thinking to describe a simple model for waves that shows the pattern of wave amplitude being related to wave energy. Emphasize describing waves with both quantitative and qualitative thinking. Examples could include using graphs, charts, computer simulations, or physical models to demonstrate amplitude and energy correlation.</p>	<p>6 c. Investigate the properties and behavior of heat, light and sound.          6 d. Demonstrate the process of scientific inquiry.          7-1 c. Investigate the motion of particles.          8-4 a. Investigate the transfer of energy through various materials.</p>	
<p>8.2.5 Develop and use a model to describe the structure of waves and how they are reflected, absorbed, or transmitted through various materials. Emphasize both light and mechanical waves. Examples could include drawings, simulations, and written descriptions of light waves through a prism; mechanical waves through gas vs. liquids vs. solids; or sound waves through different mediums.</p>	<p>6 c. Investigate the properties and behavior of heat, light and sound.          6 d. Demonstrate the process of scientific inquiry.          7-1 c. Investigate the motion of particles.          8-4 a. Investigate the transfer of energy through various materials.</p>	
<p>8.2.6 Obtain and evaluate information to communicate the claim that the structure of digital signals are a more reliable way to store or transmit information than analog signals. Emphasize the basic understanding that waves can be used for communication purposes. Examples could include using vinyl record vs. digital song files, film cameras vs. digital cameras, or alcohol thermometers vs. digital thermometers.</p>	<p>6 c. Investigate the properties and behavior of heat, light and sound.          6 d. Demonstrate the process of scientific inquiry.          7-1 c. Investigate the motion of particles.          8-4 a. Investigate the transfer of energy through various materials.</p>	<p><a href="#">05 Ebd TEEMS Lesson 9 History of Communication</a></p>

**Strand 8.3: LIFE SYSTEMS STORE AND TRANSFER MATTER AND ENERGY**

Living things use energy from their environment to rearrange matter to sustain life. Photosynthetic organisms are able to transfer light energy to chemical energy. Consumers can break down complex food molecules to utilize the stored energy and use the particles to form new, life-sustaining molecules. Ecosystems are examples of how energy can flow while matter cycles through the living and nonliving components of systems.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
8.3.1 Plan and conduct an investigation and use the evidence to construct an explanation of how photosynthetic organisms use energy to transform matter. Emphasize molecular and energy transformations during photosynthesis.	6 c. Investigate the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 7-1 c. Investigate the motion of particles. 8-2 a. Compare ways that plants and animals obtain and use energy. 8-4 a. Investigate the transfer of energy through various materials. 8-4 d. Analyze various forms of energy and how living organisms sense and respond to energy.	<a href="#">04 EbD TEEMS Lesson 4 The Solar Power Story TD, Unit 6 Lesson 2 Choosing Plant Species (Resources)</a>
8.3.2 Develop a model to describe how food is changed through chemical reactions to form new molecules that support growth and/or release energy as matter cycles through an organism. Emphasis is on describing that during cellular respiration molecules are broken apart and rearranged into new molecules, and that this process releases energy.	6 c. Investigate the properties and behavior of heat, light and sound. 6 d. Demonstrate the process of scientific inquiry. 7-1 c. Investigate the motion of particles. 8-2 a. Compare ways that plants and animals obtain and use energy. 8-4 a. Investigate the transfer of energy through various materials. 8-4 d. Analyze various forms of energy and how living organisms sense and respond to energy.	
8.3.3 Ask questions to obtain, evaluate, and communicate information about how changes to an ecosystem affect the stability of cycling matter and the flow of energy among living and nonliving parts of an ecosystem. Emphasize describing the cycling of matter and flow of energy through the carbon cycle.	6 d. Demonstrate the process of scientific inquiry. 7-1 c. Investigate the motion of particles. 8-2 a. Compare ways that plants and animals obtain and use energy. 8-2 b. Generalize the dependent relationships between organisms. 8-2 c. Analyze human influence on the capacity of an environment to sustain living things. 8-4 a. Investigate the transfer of energy through various materials. 8-4 d. Analyze various forms of energy and how living organisms sense and respond to energy.	

**Strand 8.4: INTERACTIONS WITH NATURAL SYSTEMS AND RESOURCES**

Interactions of matter and energy through geologic processes have led to the uneven distribution of natural resources. Many of these resources are nonrenewable, and per-capita use can cause positive or negative consequences. Global temperatures change due to various factors, and can cause a change in regional climates. As energy flows through the physical world, natural disasters can occur that affect human life. Humans can study patterns in natural systems to anticipate and forecast some future disasters and work to mitigate the outcomes.

<b>SEEd Standard</b>	<b>DESK Standard</b>	<b>EbD Activities</b>
<p>8.4.1 Construct a scientific explanation based on evidence that shows that the uneven distribution of Earth’s mineral, energy, and groundwater resources is caused by geological processes. Examples of uneven distribution of resources could include Utah’s unique geologic history that led to the formation and irregular distribution of natural resources like copper, gold, natural gas, oil shale, silver, and uranium.</p>	<p>6 d. Demonstrate the process of scientific inquiry.            8-3 c. Describe how rock and fossil evidence is used to infer Earth’s history.            8-3 d. Compare rapid and gradual changes to Earth’s surface.            9-2 c. Demonstrate how the motion of tectonic plates affects Earth and living things.            9-3 a. Relate how energy from the Sun drives atmospheric processes and how atmospheric currents transport matter and transfer energy.            9-4 a. Characterize the water cycle in terms of its reservoirs, water movement among reservoirs and how water has been recycled throughout time.            9-5 b. Describe how humans depend on Earth’s resources.</p>	
<p>8.4.2 Engage in argument supported by evidence about the effect of per-capita consumption of natural resources on Earth’s systems. Emphasize that these resources are limited and may be non-renewable. Examples of evidence include rates of consumption of food and natural resources such as freshwater, minerals, and energy sources.</p>	<p>6 d. Demonstrate the process of scientific inquiry.            8-2 c. Analyze human influence on the capacity of an environment to sustain living things.            8-3 c. Describe how rock and fossil evidence is used to infer Earth’s history.            8-3 d. Compare rapid and gradual changes to Earth’s surface.            9-5 b. Describe how humans depend on Earth’s resources.</p>	<p><a href="#">02 EbD TEEMS Lesson 2 Trash</a>  <a href="#">ET, Unit 3 Lesson 1 Community Related Environmental Problems and Technology (Resources)</a>  <a href="#">ET, Unit 3 Lesson 2 What is next? Investigating Alternatives/Solutions</a>  <a href="#">T &amp; S, Unit 3 Lesson 2 Sustainability by Design</a>  <a href="#">T &amp; S, Unit 3 Lesson 5 Justice by Design</a>  <a href="#">T &amp; S, Unit 4 Lesson 5 Sugar: Good as Gold</a></p>

<p>8.4.3 Design a solution to monitor or mitigate the potential effects of the use of natural resources. Evaluate competing design solutions using a systematic process to determine how well each solution meets the criteria and constraints of the problem. Examples of uses of the natural environment could include agriculture, conservation efforts, recreation, solar energy, and water management.</p>	<p>6 d. Demonstrate the process of scientific inquiry.        8-2 c. Analyze human influence on the capacity of an environment to sustain living things.        8-3 d. Compare rapid and gradual changes to Earth’s surface.        9-5 b. Describe how humans depend on Earth’s resources.</p>	<p><a href="#">ET, Unit 3 Lesson 2 <i>What is next? Investigating Alternatives/Solutions</i></a>  <a href="#">I &amp; I, Unit 5 Lesson 2 <i>A Clean Solution to a Messy Problem</i></a>  <a href="#">T &amp; S, Unit 3 Lesson 3 <i>Disposal by Design</i></a>  <a href="#">T &amp; S, Unit 3 Lesson 5 <i>Justice by Design</i></a>  <a href="#">T &amp; S, Unit 4 Lesson 1 <i>Engineering Disaster: Santa Susana</i></a>  <a href="#">T &amp; S, Unit 4 Lesson 2 <i>Going Nuclear</i></a>  <a href="#">T &amp; S, Unit 5 Lesson 3 <i>Reuse and Recycle Man-Made Resources</i></a>  <a href="#">TD, Unit 4 Lesson 3 <i>Technology Impacting the Environment</i></a>  <a href="#">TD, Unit 5 Lesson 2 <i>Technological Design in Energy and Transportation</i></a> (Resources)</p>
<p>8.4.4 Analyze and interpret data on the factors that change global temperatures and their effects on regional climates. Examples of factors could include agricultural activity, changes in solar radiation, fossil fuel use, and volcanic activity. Examples of data could include graphs of the atmospheric levels of gases, seawater levels, ice cap coverage, human activities, and maps of global and regional temperatures.</p>	<p>6 d. Demonstrate the process of scientific inquiry.        8-2 c. Analyze human influence on the capacity of an environment to sustain living things.        8-3 d. Compare rapid and gradual changes to Earth’s surface.        9-3 c. Examine the natural and human-caused processes that cause Earth’s climate to change over intervals of time ranging from decades to millennia.        9-5 b. Describe how humans depend on Earth’s resources.</p>	<p><a href="#">ET, Unit 3 Lesson 4 <i>Producing Engineering Design Technology: Building “Green”</i></a>  <a href="#">T &amp; S, Unit 3 Lesson 4 <i>My Global Footprint</i></a> (Resources)  <a href="#">T &amp; S, Unit 4 Lesson 4 <i>Climate Change</i></a></p>
<p>8.4.5 Analyze and interpret patterns of the occurrence of natural hazards to forecast future catastrophic events, and investigate how data are used to develop technologies to mitigate their effects. Emphasize how some natural hazards, such as volcanic eruptions and severe weather, are preceded by phenomena that allow prediction, but others, such as earthquakes, may occur without warning.</p>	<p>8-3 d. Compare rapid and gradual changes to Earth’s surface.        9-2 c. Demonstrate how the motion of tectonic plates affects Earth and living things.        9-3 a. Relate how energy from the Sun drives atmospheric processes and how atmospheric currents transport matter and transfer energy.        9-5 b. Describe how humans depend on Earth’s resources.        9-5 c. Indicate how natural hazards pose risks to humans.</p>
