

HEALTH OFFICE

MEDICATION GUIDELINES

If any student requires **regularly scheduled medications** (prescription or OTC) to be administered while at school, the family is required to submit a signed physician's authorization form and to register with Keystone Pharmacy which packages and dispenses the medication to the school nurse.

Short-term medication such as antibiotics will require the signed physician's authorization form, and the medication delivered to the nurse's office by an **adult**. The medication must be in its labeled container from the pharmacy. We are not allowed to accept any medications without physician authorization *and* in a pharmacy-labeled container. Please do not send any medication to school with your child. It is against DCF regulations and school policy.

If a student requires **emergency medication** to be stored and on hand at school, such as an EpiPen, AviQ, inhaler, seizure or any other medication, please provide a signed Action Plan from your physician and uploaded to your Magnus Health Account where indicated. The medication must be delivered to the Health Office in a gallon-sized clear plastic bag (ZipLoc type) with a recent headshot photo of your child. These medications are stored on a pegboard for easy access and recognition of the student if needed.

The Physician Authorization Form is attached for your convenience and is also available under 'essential information' on the EHS home page under quick links at www.eaglehillsschool.org.
