

SHAWNEE MISSION

SCHOOL DISTRICT

District Technology Plan Overview

The Shawnee Mission School District is committed to safety and security for all students and staff. In compliance with the Children’s Internet Protection Act (CIPA) requirements, the district maintains an internet filter to safeguard against inappropriate content. As technologies change, the district Information and Communication Technologies team continues to evaluate security resources in an ongoing manner, maintaining the safest environment possible for teaching and learning.

While internet filtering is maintained by the District, it is not the sole means for maintaining safe teaching and learning experiences for children. The District Responsible Use Policy (RUP) is shared and signed annually by every student and parent. This guiding document is a foundation for educational practice in teaching students about Digital Citizenship, including responsible, respectful, and safe learning practices while utilizing technology linked to school related assignments as well as in life.
