ARTICLE INFORMATION

- Title: *Japanese Fisherman Reels In Monster Wolffish*
- Author: Meera Dolasia
- Date of Article: September 18, 2015
- Publisher: DOGO News
- Link: <http://www.dogonews.com/2015/9/18/japanese-fisherman-reels-in-monster-wolffish>

MAIN IDEA OF THE ARTICLE

The main idea of article is that a Japanese fisherman caught a massive Wolffish off the coast of Japan. The fish could have possibly been mutated due to the Fukushima nuclear power plant spill that released mass amounts of radiation into the waters.

THREE THINGS I LEARNED

1. The fish has a huge mouth that is almost half of its body.
2. The Wolffish lives on the floors of the Pacific and Atlantic Oceans.
3. Wolffish typically are about 1.2-meters long, but this Wolffish is 2-meters long, which is almost twice the size!

MOST INTERESTING THING!

That this fish could be so big due to the mass amounts of radiation in the ocean!

QUESTIONS?

Is the fish really mutated from the radiation from the Fukushima power plant accident or is the fish just a big eater?
