Related Activities to Try at Home

Dear Family,

The activities suggested below are related to the mathematics we are currently studying in school. Doing them together can enrich your child's mathematical learning.

Counting A major focus of this unit is counting. You can help your child learn to count fluently by finding many opportunities to ask your child to count in different ways. For example, sometimes count aloud together and see how high you can count. At other times, ask your child to count a small set of objects ("How many books are on the table?") or the number of pictures on a page. A slightly different kind of question is "Can you make a group of 6 blocks?" or "Can you count out 7 pennies?" You can also ask your child to count to solve a problem; for example, "If everyone needs a fork, how many forks do we need to set the table?"

Grab and Count Gather a set of objects, such as toy cars, blocks, or foam peanuts. Ask your child to grab a handful and count how many he or she grabbed. Then, ask your child to predict whether you will be able to grab more or less. Try it and find out. Your child can also grab two handfuls and see which holds more, the left hand or the right.

Related Activities

Which Is Longer? Another major focus of this unit is comparing objects to see which is longer. Find opportunities to ask your child about the length of different objects; for example, “What do you think the longest part of this cereal box is? Do you think the cereal box is longer than the milk carton? How could we find out?”

Playing Compare We have been playing a card game called *Compare* that is similar to the familiar card game, *War*. You could play at home with a deck of playing cards. Each player gets half of a deck of cards and puts them in a pile facedown. Both players turn over their top card, and the person with the greater number says, “Me.” Ask your child to explain how he or she knows which number is greater. The game is over when all of the cards have been turned over.

Math and Literature You can find the following counting books in your local library and read them together. Ask your child to count the objects on each page, and see what mathematical concepts your child discovers.

- Bowman, Anne. *Count Them While You Can...: A Book of Endangered Animals*.
- Gayzagian, Doris. *One White Wishing Stone: A Beach Day Counting Book*.
- Krebs, Laurie. *We All Went on Safari: A Counting Journey Through Tanzania*.
- Mora, Pat. *Uno, Dos, Tres: One, Two, Three*.
- Martin, Bill. *Chicka Chicka 1, 2, 3*.
- Wormell, Christopher. *Teeth, Tails, and Tentacles*.
