**RE: W.O. 9813.01
PROPERTY ACCESS REQUEST NOTICE**

Tectonic Engineering and Surveying Consultants P.C. (Tectonic), has been retained by the Pelham Union Free School District to provide construction phase monitoring services during the site work for the New Hutchinson School. The site work will consist of rock removal along the northern and western portions of the site to achieve final grading elevations for the New School and associated site improvements.

The project specifications require that all structures within a 150-foot radius of the project site undergo a pre-construction condition survey prior to the commencement of rock removal. With your permission, a pre-construction condition survey of your property will be conducted free of charge. The intent of this survey is to document the existing conditions of your property for future reference in the unlikely event that any damage is caused as a result of the construction activities. Two engineers representing Tectonic will take photos and video of all readily accessible areas of your property. Upon completion of the survey, a report will be generated and sent to you and the School District, which will describe the observed building conditions, including representative photos and video of documented distress, if encountered. If structural distress is documented, with your permission, we will install and monitor 1"x 6" acrylic crack gauges at select locations, which will be used to monitor propagation of existing cracks.

Additionally, Tectonic will be performing onsite remote vibration monitoring during the rock removal to ensure that all vibration levels associated with the rock removal are within the allowable vibration limits set forth in the project specifications.

If you wish to have a pre-construction survey performed at your property, please complete, sign and return the attached authorization form within 15 business days of the date of the notice, to the attention of the undersigned by mail or email (bfigurski@tectonicengineering.com). Thereafter, you will be contacted by a representative of Tectonic to schedule a date for the performance of a pre-construction condition survey of your property.
