

How to Access the Internet from Home on a District-Issued Device

1. Connect to your home Wi-Fi

Remember you must do these steps before using any apps or using Safari.

2. Navigate to a website you have not visited (or you can go to Settings, Safari, Clear History and Website Data to refresh browsing history and then navigate to a website). You will get a screen that says Captive Portal. Enter your network username and password. Use the same password you use for a computer or Wi-Fi at school.

3. After you successfully authenticate you will be redirected to the website.

Google Classroom: If you get errors when using the Google Classroom app after you have successfully authenticated to the Internet....Open the Safari web browser and navigate to classroom.google.com and login with your student email account.
