

Password Management Set-Up Instructions – For iPads and Mobile Devices

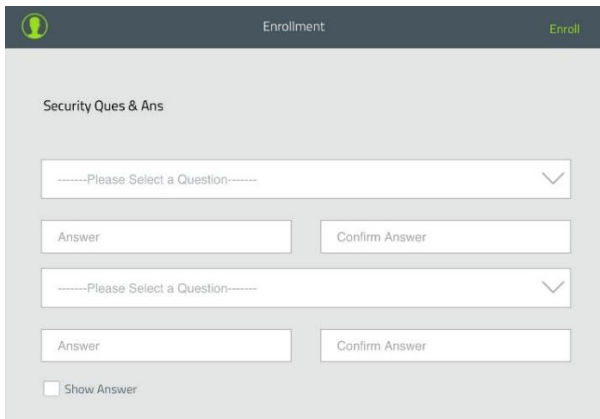

In order to use the Troy School District password management software, you need to set up your account and rescue questions. To set up your account, go to: <https://password.troy.k12.mi.us>

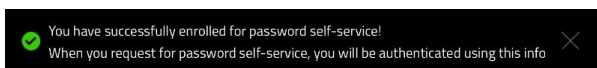

To set up your account, click the green “Login” button on the right.

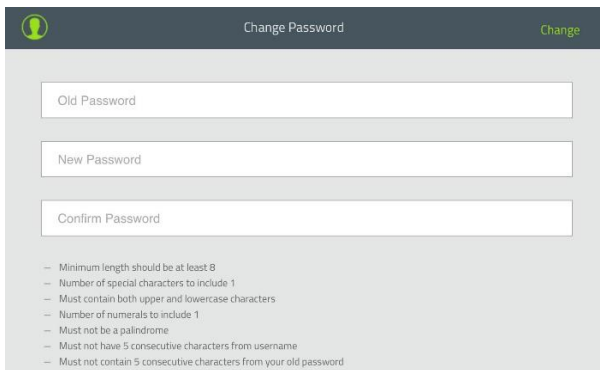

Enter your username and current password, then click “Login” in the top right.

After you successfully log in, you need to set up security questions in order to complete your registration. Use the drop down menus to choose your questions, and provide answers in the space below the question. Once you have provided answers to the questions, click the “Enroll” button. Note: the length of your answer must be at least 3 characters.

You will see a success message when set up is complete. You can now change your password or exit the site.

To change your password, enter your old password in the first box and enter a new password in the other two boxes. Click the change button in the top right to finalize the change.

To exit, click the green portrait in the top left, and then click “Sign Out.” You can now safely close the browser window to exit.
