## SOY WAX CANDLES

Soy wax candles are made from soy wax. Soy wax is a vegetable wax derived from soybean oil. After soybeans are harvested they are cleaned, dehulled, cracked, and rolled into flecks. Oil is then extracted from these flecks and hydrogenated. In the process, unsaturated fatty acids present in the oil are saturated, thereby dramatically altering the oil's melting point. It then solidifies at room temperature.

### *Benefits of soy wax*

- Soy wax is derived from a vegetables, (soy beans), while it's counter partner, paraffin wax is derived from petroleum (a refined a gasoline product).
- Soy wax is a natural, renewable resource.
- Soy wax is biodegradable and cleans up with plain old soap and water.
- Soy wax has a lower melting point than paraffin wax and because of this, soy candles will burn slower or longer than paraffin candles.
- Soy wax burns with zero petro soot, creating petro [soot free candles](#). Paraffin candles burn with petro-soot.

## GOAT MILK SOAP

Naturally high in vitamins (including nourishing vitamin E), minerals, and healthy fats, goat's milk is the preferred beverage of many around the world. But this substance also has numerous skin benefits, including exceptional moisturizing properties, absorption capacity, and exfoliating power through alpha-hydroxy acids. We're confident you'll love it!

**Ingredients:** Aqua, Glycerin, Sodium Stearate, Sorbitol, Sodium Laurate, Goats Milk, Propylene Glycol, Sodium Laureth Sulfate, Sodium Chloride, Sodium Lauryl Sulfate, Titanium Dioxide, Stearic Acid, Lauric Acid, Pentasodium Pentetate, Tetrasodium Etidronate.
