Medications for Disaster/Emergencies

Dear Parents,

In order to care for students that will need medication during an emergency/disaster, we're requesting that parents/guardians provide all the medication and supplies that would be needed by their student for a 72 hour (3 day) period. This 3-day supply of emergency medication should be sent to school in separate, labeled containers. Routine medication that is administered during school hours will be kept separate from the emergency medication. If your student requires medical procedures, we will need authorizations and instructions as well as the necessary supplies.

If your student routinely takes his/her medication at home (not at school), you will need to send the medication in the original, labeled container with both a physician authorization and parent permission for administration.
