

HEALTH SCIENCE

Licensed Practical Nurses are some of the most sought after members of the medical community. Their gifts for patient interaction and quick action make them the eyes and the ears of hospitals and clinics all across the nation. While doctors and registered nurses are often considered to be the foot soldiers in the campaign against illness, it is the licensed practical nurse (LPN) who truly serve in the front lines.

At the end of the day, LPN's have more regular contact with patients than almost anyone else. LPNs perform all sorts of necessary duties, from the taking of vital statistics to the preparation of injections and other medications.

TCAT - Knoxville

WHY?

Apprenticeships are a win-win for workers and employers alike. Individuals get access to training in critical and relevant skills without the challenges of time and money that often accompany the pursuit of a degree – and employers benefit from higher productivity, increased retention rates, and a substantial return on investment. It's a “grow-your-own” strategy that better aligns the needs of employers with the interests of the workforce. Apprenticeships may have been around for centuries, but employers, training providers, and policymakers alike are rediscovering their value in advancing the future of work.

EXPECTED OUTCOMES

- Earn your high school diploma
- Earn professional certifications
- Earn nationally recognized credentials
- Earn up to two years paid employment

HOW?

- Partnership
 - TVYA connects qualified students with participating employers
 - Employers interview and hire students
 - Students begin employment (with pay) while taking high school and college courses
- Application
 - See your guidance department
 - You must be a rising junior or senior
 - You must be at least 16 years old
