

Internet Safety

[Information on internet safety and cyber-bullying](#)

There are many ways you can help keep your child safe when using the internet, including:

- Discuss internet safety with your child
- Monitor your child's internet activity by making sure they use a computer that is in a common area such as a family room rather than a child's bedroom
- Remind your child to never share personal information (name, address, phone number, school, etc.) with anyone on the internet and never to agree to meet anyone on the internet
- Do not allow your child to enter private chat rooms
