Asbestos and Environmental Analysis

Job Number: 196400

PDX

Report Number: 196400R01

Client: TRC Environmental Corp.

Report Date: 11/22/2019

Project Name: Highland Park M.S. -Dust Project

NIOSH 7400 - Preparation and analysis of the above samples was conducted in accordance with the NIOSH 7400 method dated August 15th, 1994. Phase contrast microscopy (PCM) analysis was conducted on air samples collected on mixed cellulose ester (MCE) filters. Samples are placed on a glass slide and exposed to hot acetone vapor until the filter material is completely collapsed. Approximately 0.02ml of Triacetin is placed on the collapsed filter and sealed with a #1.5 thickness cover slip. PCM analysis is then performed using a calibrated Olympus BHTU BH-2 phase contrast microscope with a Walton Beckett Graticule.

Disclaimer The results reported relate only to the samples tested or analyzed; the laboratory is not responsible for data collected by personnel who are not affiliated with the laboratory. Results reported in both structures/cm3 and structures/mm2 are dependent on the sample volume and area. These parameters are measured and recorded by non-laboratory personnel and are not covered by the laboratory's accreditation. Interpretation of these results is the sole responsibility of the client.

If further clarification of these results is needed, please call us. Thank you for allowing the staff at Lab/Cor Portland, Inc. the opportunity to provide you with the analytical services.

Sincerely,

Isabel Burgos

Analyst

Concentration = (((Total Adj Fibers) * (Filter Area)) / (Number of Fields * Field Area * Volume * 1000))

¹ Net fiber counts after average blank count reduction.

² LOD is calculated based on 5.5 fib/ 100 fields as referenced in NIOSH 7402 Method.

³ Density is reported as <7.0 fib/mm2 when the Total Fiber Cnt. - Avg. Blank Fiber Cnt. is <5.5 fibers
