Asbestos Analysis of Bulk Materials by Polarized Light Microscopy

TRC Solutions
 Project: Highland Park Middle School- Dust Project,
 Beaverton, OR, Proj #362317

JSE Project: 13087
Analysis Date: 11/22/2019
Report Date: 11/22/2019

Sample	Layer	Description	Binder/Matrix	Other Non-Asbestos	Asbestos (% Type)
Wipe/HPMS- BRR1-W1	LAYER 1	White woven sheet w/ dust residue	dirt		See Comments
AB-1927869			filler		

Only presence or absence of asbestos fibers could be determined due to the nature of the sample. Asbestos was not detected in the sample.

Wipe/HPMS-GRR1-W1	LAYER 1	White woven sheet w/ dust residue	dirt		See Comments
AB-1927870			filler		

Only presence or absence of asbestos fibers could be determined due to the nature of the sample. Asbestos was not detected in the sample.

Wipe/HPMS-BRR2-W1	LAYER 1	White woven sheet w/ dust residue	dirt		See Comments
AB-1927871			filler		

Only presence or absence of asbestos fibers could be determined due to the nature of the sample. Asbestos was not detected in the sample.

Analysis Date: 11/22/2019
Report Date: 11/22/2019

Sample	Layer	Description	Binder/Matrix	Other Non-Asbestos	Asbestos (% Type)
Wipe/HPMS-BLR-W1	LAYER 1	White woven sheet w/ dust residue	dirt		See Comments
AB-1927878			filler		

Only presence or absence of asbestos fibers could be determined due to the nature of the sample. Asbestos was not detected in the sample.

Analyst: Brianna Young

Approved Signatory

Date 11/22/2019

JSE is accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) for bulk asbestos analysis by EPA-600/M4-82-020 and EPA/600/R-93/116 methods for polarized light microscopy (PLM).

These analysis results apply to the sample(s) as received. Asbestos content for an inhomogeneous sample is reported by layer when it is possible to subsample the discrete strata for individual analysis. Small diameter fibers may not be detected by this method.

Quantification is performed using visual area estimation unless otherwise stated in the report. Qualitative and quantitative transmission electron microscopy (TEM) analysis may be recommended for difficult samples. Quantitative analysis by PLM point count or TEM is recommended for sample(s) testing at < or = to 10% asbestos.

Asbestos includes the following minerals: chrysotile, amosite, crocidolite, tremolite, actinolite, anthophyllite. "Matrix" is defined as non-asbestos, non-binder fibrous and non-fibrous components. "Binder" is defined as a component added for cohesiveness. Non-asbestos sample constituents may not be definite.

This report may not be used to claim product certification, approval or endorsement by NVLAP, NIST or any agency of the Federal Government. If the NVLAP logo does not appear beneath the JSE logo of this report then "This report contains data not covered by the NVLAP accreditation." (NIST Handbook 150, 2006.) Amended reports supercede all previous reports.
