

Bottle Feeding and Weaning Policy

September 2018

This policy has been written to assist Academy staff in the nursery provision for offering bottle feeds and supporting families with weaning children. Please see below guidance which should be followed in these circumstances. The Nursery has a separate protocol to support the safe procedures for the making up and storage of formula milk.

We recognise the important role feeding a young child plays in both nutrition and the development of relationships. The following points detail our philosophy and approaches

- Parents and carers are supported in their choice to provide formula or expressed breast milk or cow's milk over the age of one.
- Parents and carers are fully involved in sharing feeding routines through "Settling In" sessions and daily contact, all information is added to the child's care plan. This includes preferred temperatures such as warm, room temperature or cooled.
- Parents and carers provide all milk and bottles. Milk should come in an original container so that practitioners ensure they are making bottles correctly. Parents may provide sterilised bottles that have a secure lid or staff can sterilise them as needed.
- Only practitioners that are based in the Hedgehog Team (Baby Room) should make up bottle feeds. They should ensure they follow the agreed protocol displayed in the kitchen. Feeds are only warmed with water and not in a microwave.
- Babies under the age of 1 will be offered cooled boiled water between feeds if required.
- Bottle feeding should be carried out in a quiet, comfortable space, where practitioners can engage with the child through eye contact and communication as appropriate.
- The amount of milk a child drinks should be recorded in the Daily Diary to be shared with parents.
- After the age of 6 months and when parents and practitioners agree that it is appropriate to wean a child, parents are usually asked to provide "first food" such as puree or soft finger food. However, the nursery staff are able to puree food provided from home. We suggest that school dinners provided for older children in the setting would not be suitable for children under a year old.
- In the same way cow's milk can be introduced over the age of one. Practitioners will continue to discuss and share progress through the transition period of offering coarser textured food with lumps.
