

Career exploration is an important component of a student's experience at Spring Lake Park Schools. Beginning in high school, students can select courses within three Career & College Pathways that each align with areas of job growth. Courses provide students an opportunity to gain real-world experience, determine if a career path aligns with their interests and even earn college-level credit.

Students can sample courses in many Pathways and/or take all the courses within a single Pathway. Pathways courses help students prepare for additional post-secondary education, training or work opportunities after high school.
