

## **Honors Physics - Unit 1 - Kinematics**

## **Unit Focus**

Throughout this unit, students will explore one dimensional and two dimensional, projectile, motion. Beginning with evaluating the nuances of distance vs displacement and velocity vs speed, students will learn about scalars versus vectors and how they affect signs and acceleration. Students will discover the various graphical representation of motion and will apply this knowledge to critically analyze motion graphs. Students will expand upon this prior knowledge in linear motion, to begin evaluating two-dimensional motion. Beginning with demonstrations that pose questions about two-dimensional motion, students will explore the relationship between horizontal and vertical motion of objects. Ultimately, students will be evaluating motion to determine the range (landing position), maximum height and time in the air for a given projectile. Students will be able to solve numerical word problems and extend these skills to solve for multiple physical variables.

Stage 1: Desired Results - Key Understandings			
Standard(s)	Transfer		
<b>Next Generation Science Standards (DCI)</b> <i>Science: 10</i>	T1 Make observations and ask questions to define a problem based on prior knowledge and curiosity that stimulates further exploration, analysis, and discovery. T2 Analyze qualitative and quantitative data to interpret patterns, draw conclusions, and/or make predictions. Meaning		
• Newton's second law accurately predicts changes in the motion of macroscopic objects. <i>PS2.9.A1</i>			
	Understanding(s)	Essential Question(s)	
<ul> <li>NGSS/NSTA Science &amp; Engineering Practices NGSS Science &amp; Engineering Practices: 9-12</li> <li>Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations. SE.9-12.5.3</li> <li>Apply techniques of algebra and functions to represent and solve scientific and engineering problems. SE.9-12.5.4</li> </ul>	<ul> <li>U1 The pattern of an object's motion in various situations can be observed and measured from which predictions can be made.</li> <li>U2 The motion of objects must be defined by using a frame of reference.</li> <li>U3 The motion of an object can be determined and/or predicted by using its position, velocity, and acceleration.</li> <li>U4 Objects in motion remain in straight-line motion at constant speed, and objects at rest remain at rest unless acted upon by unbalanced forces. (Newton's 1st law).</li> </ul>	Q1 What makes an object move the way it does? Q2 How can I describe and predict patterns of motion? Q3 How does the launch angle of a projectile impact its range?	
<ul> <li>Madison Public Schools Profile of a Graduate Critical Thinking         <ul> <li>Analyzing: Examining information/data/evidence from multiple sources to identify possible underlying assumptions, patterns, and relationships in order to make inferences. (POG.1.2)</li> </ul> </li> </ul>	Acquisition of Knowledge and Skill		
	Knowledge	Skill(s)	
	<b>K1</b> An object in linear motion may travel with a constant velocity or with acceleration.	<b>S1</b> Be able to use the definition of a vector to distinguish between speed and velocity, displacement and distance	

Stage 1: Desired Results - Key Understandings		
<ul> <li>K2 An object in free fall accelerates due to the force of gravity. Friction and other forces cause the actual motion of a falling object to deviate from its theoretical motion.</li> <li>K3 The slope of a position - time graph is the velocity of an object</li> <li>K4 The slope of a velocity - time graph is the acceleration of an object</li> <li>K5 Displacement, Velocity and acceleration are vectors</li> <li>K6 Objects near the earth fall at an acceleration rate of 9.1 m/s/s</li> </ul>	• Be able to look at a Velocity vs. Time graph and explain in words the motion of the object that is
