

WORKSITE LEARNING and Science Research Internships

WHAT: Worksite Learning is a CTE (Career and Technical Education) program designed to place students in a working environment that matches their career path. WSL is a partnership between the school, employer, and student. WSL provides exposure, experience and paid training – a capstone experience to the student's program of study. The experiences are monitored and supervised by both representatives of an educational institution and a community partner. Students must provide their own transportation.

Students receive a semester credit (.5 credit) while working part-time in a local business (180 hours per semester work experience for a maximum of 1 credit per year) and meeting program requirements. Students in the program are released 1-2 periods from the school day to go to work. Attendance at WSL Seminars is required.

WHO: Any current sophomore/junior who has identified their career path, has a minimum 2.5 GPA, and has completed or enrolled in a class that is related to their career path and job placement (connecting class).

(Student worksite placements are not limited to the businesses identified in this flyer.)
