

## Coding at the Middle School

The middle school Computer Science curriculum revolves around project-based learning in a highly creative fashion using Code.org's Computer Science Discoveries Course. Programming concepts learned in lower school are applied towards an open-ended capstone project in 6th grade. While continuing with Blockly and pseudo code, students work on challenge units, which serves as a foundation. In 7th grade, students learn the basics of web design using HTML and CSS and apply that towards creating websites on a topic of their choice. Programming concepts learned in lower school and grades 6 and 7 are put to the test in 8th grade as students create animations and program games in Javascript.

## *Educating students who flourish intellectually, emotionally, and ethically*

FASNY focuses on learning and the well-being of our students in an academically rigorous, international, bilingual setting. We develop creative, open-minded, critical thinkers to become lifelong learners who are motivated to thrive, lead and give in an ever-changing world.

## The International Program at FASNY

### Grades 6, 7 & 8

### Live Locally, Learn Globally

French-American School of New York  
Mamaroneck, NY
