

A Note From Your Atelieristas

This week is a perfect time to take advantage of the stunning natural phenomena of rain and the amazing properties of water. We invite you to bundle up, go outside, and explore the world adorned in water.

Use your cameras, whether digital, analogue, or polaroid, to capture the droplets dancing on both human-made and organic materials and life forms.

Take time to identify patterns. Facilitate your children as they take photographs, and live action or slow motion video. Revisit and explore the images captured as you make prints and/or screen the footage inside your home.

“Only those who look with the eyes of children can lose themselves in the object of their wonder.”

-Eberhard Arnold

Photography and the Photographer's Lens

Each child has a unique lens through which they experience the world. Photography is a creative outlet to express the unique perspective of a child as they chose to focus on objects that inspire learning. The result is a photographic documentation of moments which provoke joy and wonder.

What may be explored:

Formation of droplets

Rippling in puddles

Floating objects

Dry vs. wet material

Water responding to your presence

The sound, smell and feel of rain
