

March 27th, 2020

Hello Second Grade Families!

We hope you all are well and making the most of this time together. Your teachers miss you all terribly and think about you all the time.

We teachers met this week to put together some activities for you for the upcoming week. These

activities are meant not to teach new lessons, but to keep practicing concepts we've already learned together. The activities we've put together should be able to be done independently, but also know that if there are any questions, each of your teachers is available to answer questions and/or help via email.

The following activities have been created for you this week:

MATH:

Two pages that focus on working with money, and solving problems using money. (Remember to practice showing how you solved the problems--show your work!)

Online "Math-A-Day" activities provided by Bridges. A new one is offered each day. (click on 2nd grade, or if your child wants a challenge, let them try 3rd grade!)

READING/WRITING

A ReadWorks reading passage about the Grand Canyon, which was formed by erosion (we've been learning about erosion in science). After reading the passage, answer the questions. Score yourself using the answer key provided.

SCIENCE

"Erosion in our Neighborhood" home activity. Teach your family about what you've learned in class about erosion. Take pictures to share with your teacher if you wish.

Stay healthy and safe,

Mrs. Lambert, Mrs. Pang-Ching, Mrs. Taylor, Mrs. Vance
