The attached PDF files are different activities that can be used in a primary classroom and a separate activity for intermediate.

Primary Worksheet- Students are talking/filling out a worksheet that has a gauge on it going from green to red. Each gauge has a scenario attached to it. Parents read the scenario to the students. Students identify the emotion they would feel and gauge (from green to red) how intense that emotion would be felt.

Intermediate- Different faces convey different emotions. Students write down the things that happen to their body when they feel the emotion.
