

Hello Tigers!

We hope you are all doing well and are finding ways to stay engaged in learning during this challenging time. We were terribly sad to hear that we won't be back in school for the rest of this 2019/2020 year.

However, we know we will find creative ways to keep in touch with each other. Second graders and families will be hearing from us this week either through phone calls, video conferences, and/or email. We hope to answer any questions you have or to give further support with at-home learning.

This week all reading and writing activities will focus on the importance of Earth Day, which is April 22. Much of the reading will be done using online stories or articles. Do look around these websites, as there are many interesting and related articles and links. For the writing activities, print and write your responses. Feel free to email them back to your teacher, too! You can also write a response using 'goos' paper, write in your writing journal, or simply respond by discussing with a parent.

For math, you will be reviewing addition and subtraction by solving problems related to Earth Day. Remember to try to use efficient strategies we practiced in class, as well as challenge yourself to find new strategies that work.

Because it is Earth Day/Week, we have provided some great activities around conservation in the home. Not only is protecting and conserving resources in our planet very important, these activities can spark some excellent conversations in your family. We are curious to hear how these activities went, so be sure to save some of your work to share with us next week during our weekly check-ins.

We miss you!

Mrs. Lambert, Mrs. Vance, Mrs. Taylor, and Mrs. Pang-Ching
