## Fraction Pairs

### Ready

**You will need:**

40 index cards  
pen or pencil

3	6
4	8

### Set

Separate the index cards into 4 sets of 10. Number each set from 1–10, with one number on each card.

### Go!

- 1 Shuffle the cards. Give 6 cards to each player.
- 2 Set the rest of the cards facedown.
- 3 Form a pair of equivalent fractions from the cards in your hand. The first player to form an equivalent fraction earns 2 points. If a player has a pair of equivalent fractions, the round ends. If no player has equivalent fractions, Player 1 picks a card from the top of the stack and places it into her or his hand of cards. If he or she can form 2 equivalent fractions using 4 of the cards, the round ends.
- 4 If the player cannot form 2 equivalent fractions, he or she discards a card faceup into a discard pile. Player 2 then chooses a card either from the discard pile or the facedown stack.
- 5 Continue until one player can form a pair of equivalent fractions from the cards in his or her hand.
- 6 Reshuffle the cards and give out again to start Round 2. The first player to earn 10 points wins.
