You will need:

22 index cards
pen

0.13

0.07

Set

Make 2 sets of index cards numbered 0–9. You will have 2 cards of each digit. Draw a decimal point on each of the remaining two cards. Give each player a card with a decimal point. Shuffle the other cards, and place them facedown on the table.

Go!

- 1 Have each player draw two cards. Use the two numbers and the decimal point to make the least possible decimal to the hundredths place.
- 2 Compare the decimals. The player with the lesser decimal collects all the number cards from that round.
- 3 Repeat the steps until the stack of numbers is gone. The player with the most cards wins.
- 4 For a more challenging game, have each player draw three cards to make each decimal to the thousandths place.
