

MARINE SCIENCE - 2002500

Grade 10-12, Credit 1.0

Prerequisite: Biology

This course provides a student with a survey of marine ecosystems. Major topics will include, but will not be limited to physical and chemical oceanography, marine geology, the diversity of the marine organisms, marine plant and animal life, marine ecology, and human interaction with the World's Ocean. Laboratory and fieldwork activities are an integral part of the course, attendance/participation is required for successful completion of this course.
