Hello second graders!

We continue to think about you often and wish you good health. We hope you enjoyed last week's activities featured on In-Home Learning, and learned about other ways cultures celebrate around the world.

This week, you will practice keeping track of your reading in chapter books. You will focus on what's important, like the problem and how it's solved, or a character's traits. This skill is especially important as you start reading longer books with many details. In writing, you will jot down your story ideas along with the type of story, like a teaching story about riding a bike. You will also practice setting goals for writing long and strong.

In social studies, you will learn about agriculture - what it means, agriculture in Washington state, and how the food we eat goes from farm to store to your table. There are also two science activities on plants and pollination.

Math activities will be a mix of problem solving, including figuring out how old a fallen tree was using measurement skills. There is a book link to review the many ways we measure, too.

Feel free to contact us if you have any questions, or if you just want to share an activity you've worked on. We miss you!

~ Ms. Lambert, Ms. Vance, Ms. Taylor, Ms. Pang-Ching
