

# General Floor Plan

## ClearCom Stations and Stage Audio Monitoring

While wireless ClearCom is available, these locations offer a wired connection throughout the theater. Also included in this drawing are the rooms that have stage audio monitoring and the location of their volume control knobs. The audio that is sent to this system is fed through an over-stage microphone.

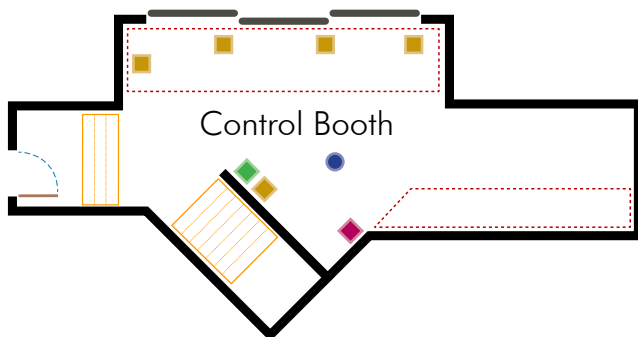

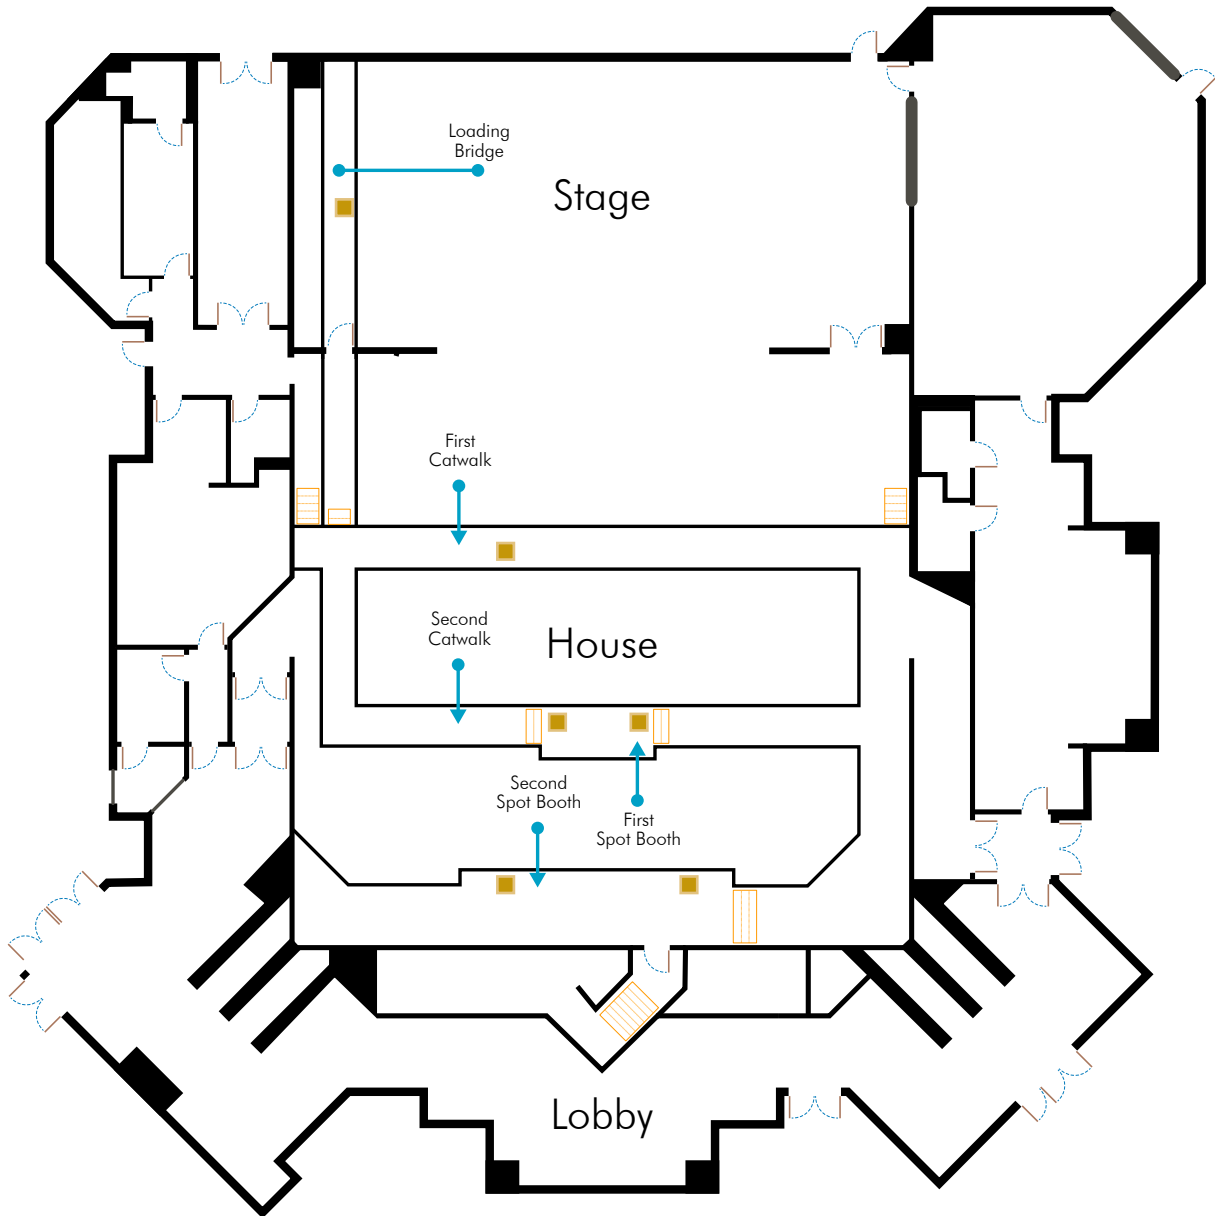

The lobby and restroom volume is controlled by the sound technician in the booth and can be fed both the over-stage microphone and direct signal from the mixing console.
