

The Whirler

Phoebe Jean Crowe

Hello my name is Phoebe and my product is The Whirler. A New Frontier in rodent exercise. My mom and I both say that our Mouse Oliver needs to lose weight, but he hates going on his wheel. What would you say if you could do something about it, well then try the Whirler, a whole new take on the traditional hamster wheel.

The Whirler is a type of hamster wheel, but is enclosed, with an attachable door that folds down in the middle and has vents, so the animals can breathe. The pet can't get out unless you open the door. Do not leave it unattended for long periods of time. It has a stand you can use on your desk or a table, near you.

Animals can become overweight if they don't exercise often enough .

A person's rodent who doesn't like to exercise and could potentially get health problems from it.

It's just a hamster wheel with a fold-down door and vents. Perfect in its simplicity. It provides better health for the rodent, plus peace of mind and entertainment for the human .

The Whirler is my idea. I came up with it last year on a ride home from PetSmart. I thought how my mouse doesn't really like to go on his wheel, and how I could make him have to go on his wheel so that he can lose some weight, thus the whirler.

The prototype in action:
