The **Talkinator**

Mason Bouissey

Imagine ...

You just downloaded a new **video game**. It looks **super FUN**!

In this new video game, **The Wizard** tells you every step of your **exciting quest** … **in TEXT**...

But you are **dyslexic** and you **can't read** what to do next in your quest.

SO you are **frustrated** and **can't play** the game without help.

WHAT DO YOU DO?   :(

Introducing **The Talkinator**...

The Talkinator is a **laser** that you can point at text and it **reads** (or **translates**) the **words out loud** to you

Simply point The Talkinator at your video game screen. The Talkinator shoots four lasers in the **shape of a box.** The word in that box is the word you want to read.

You can even adjust the size of the box if it's a long word or a paragraph.

Who does The Talkinator help?

The Talkinator helps people who have **trouble reading**, like people who have dyslexia.

How does it work?

The Talkinator fits in **your pocket**. Take it out when you need it.

Point to the words you need read to you. The Talkinator reads the words to you.

Charge the battery overnight. It take **four hours** to charge and then the battery lasts for **three days**.

Why is The Talkinator better?

The Talkinator is **more reliable and easier to use** than Google Talk or other audio programs.

No need to download an application.

You can point The Talkinator at a **book, a video game or movie theater screen** when you need it.

And you can plug in headphones.

The Talkinator is **easy to use** and **helps people** who cannot read become more **independent** and **confident**.
