

# Toaster

Jonah Marciano

I innovated a toaster.

My idea is a toaster that can know when toast you ready so it will not get burned. The toast will have a thermometer in it that will know when it is ready.

This product get you toast to be perfect and the problem is you do not know when your toast is ready.

ok.

This item helps people who use there toasters alot.

This product is better because you can get the perfect toast.

I think you should vote for me because I know you have burned food on a toast and this will not happen again if they vote for my product.

Thank you all for listening!
