Valuation Results and Highlights

Purpose of the Valuation

The purpose of the valuation is to develop the Actuarially Determined Employer Contribution (ADEC).

The ultimate cost of a pension plan is based primarily on the level of benefits promised by the plan. The pension fund's investment earnings serve to reduce the cost of plan benefits and expenses. Thus,

$$\text{Ultimate cost} = \text{Benefits Paid} + \text{Expenses Incurred} - \text{Investment Return} - \text{Employee Contributions}$$

The actuarial cost method distributes this ultimate cost over the working lifetime of current plan participants. By means of this budgeting process, costs are allocated to both past and future years, and a cost is assigned to the current year. The current year's allocated cost, or normal cost, is the building block upon which the actuarially determined employer contribution is developed. The July 1, 2016 valuation produces the contributions for the fiscal year ending 2018.

Full actuarial valuations are performed every other year. This valuation report is for the interim year.

Information Available in the Valuation Report

The Executive Summary is intended to emphasize the notable results of the valuation from the perspective of the Plan Sponsor. Supporting technical detail is documented in Results of the Valuation, Supporting Exhibits and Description of Actuarial Methods and Assumptions. A concise summary of the principal provisions of the Plan is outlined in Summary of Plan Provisions.

Changes Reflected in the Valuation

The amortization increase rate was changed from 2.50% to 2.25%. The Asset Valuation Method was also changed. See the Description of Actuarial Methods Section for a full description.

Cash Contribution for Fiscal Year Ending 2018

The Town cost is:	2018 Fiscal Year
Part A	\$67,205
Part B	10,315,044
Part B1	110,189
Part C	4,769,070
Part D	6,300,618
Part E	53,267
Total	<u>\$21,615,393</u>

Asset Experience During Period Under Review

The plan's assets provided the following rates of return during the past year:

	2016 Fiscal Year
Market Value Basis	-0.5%
Actuarial Value Basis	6.9%

The Actuarial Value of assets, rather than the Market Value, is used to determine plan contributions. The Actuarial Value spreads the asset volatility by recognizing 20% of the difference between the Market Value and expected Actuarial Value each year, thereby smoothing out fluctuations that are inherent in the Market Value. The asset loss during 2015-2016 increased the ADEC by about \$500,000.

Changes to Consider for the Next Valuation

For the July 1, 2017 valuation, we plan to review both the mortality and interest rate assumptions.

Overriding Minimum Contribution (OMC)

In 2010, the Society of Actuaries published a paper that discusses public plan funding policy and defines an "Overriding Minimum Contribution (OMC)". For a plan that is less than 50% funded, the OMC equals Normal Cost plus Benefit Payments. Using this formula, the OMC for the Town of West Hartford Pension Plan for FYE 2016 is \$33,968,352. Actual contributions (employee and employer) for FYE 2016 were \$20,963,554. Based upon this analysis, the Town's 10-year plan of increasing the contribution each year is prudent.

Certification

This report presents the results of the July 1, 2016 Actuarial Valuation for Town of West Hartford Pension Plan (the Plan) for the purpose of estimating the funded status of the Plan and determining the Actuarially Determined Employer Contribution (ADEC) for the fiscal year ending June 30, 2018. This report is intended to satisfy the requirements of Connecticut General Statute 7-450a. This report may not be appropriate for any other purpose.

The valuation has been performed in accordance with generally accepted actuarial principles and practices. It is intended to comply with all applicable Actuarial Standards of Practice.

I certify that the actuarial assumptions and methods that were selected by me and represent my best estimate of anticipated actuarial experience under the Plan.

In preparing this valuation, I have relied on employee data provided by the Plan Sponsor, and on asset and contribution information provided by the Trustee. I have audited neither the employee data nor the financial information, although I have reviewed them for reasonableness.

The results in this valuation report are based on the Plan as summarized in the *Summary of Plan Provisions* section of this report and the actuarial assumptions and methods detailed in the *Description of Actuarial Methods and Assumptions* section of this report.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to factors such as, but not limited to, the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of this report, an analysis of the potential range of such future measurements has not been performed.

The signing actuary is independent of the Plan Sponsor. I am not aware of any relationship that would impact the objectivity of my work.

I am a member of the American Academy of Actuaries and meet its Qualification Standards to render the actuarial opinion contained herein.

The long-term expected rate of return on pension plan investments was determined using a building block method in which best-estimate ranges of expected future real rates of return are developed. Best estimates of the real rates of return for each major asset class are included in the pension plan's target asset allocation.

The information above is based on geometric means and does not reflect additional returns through investment selection, asset allocation and rebalancing.

Description of Actuarial Methods

Asset Valuation Method

Actuarial Value - Expected Return

Effective with the July 1, 2016 valuation, the Actuarial Value of assets used in the development of plan contributions phases in differences between the Market Value and Expected Actuarial Value by recognizing 20% of the difference each year.

Prior Method: The Actuarial Value of assets used in the development of plan contributions phases in recognition of the difference between the actual return on Market Value and the expected return on Market Value over a five-year period at 20% per year.

Actuarial Cost Method

- A. Changes in Actuarial Cost Method: None.
- B. Description of Current Actuarial Cost Method:

Basic cost method: Entry Age Normal (level percentage of salary)

Normal Cost: Under this method, the total normal cost is the sum of amounts necessary to fund each active member's normal retirement benefit if paid annually from entry age to assumed retirement age. Entry age is the age at which the employee would have been first eligible for the plan, if it had always been in effect. The normal cost for each participant is expected to remain a level percentage of the employee's salary. The normal cost for the plan is the difference between the total normal cost for the year and the anticipated member contributions for that year.

Past Service Liability: The present value of future benefits that relates to service before the valuation date is the total past service liability. The unfunded past service liability is the difference between the total past service liability and any assets (including accumulated member contributions). This amount is amortized over 30 years on a closed basis starting on July 1, 2015.

Experience Gains and Losses: All experience gains and losses (the financial effect of the difference between the actual experience during the prior period and the result expected by the actuarial assumptions for that prior period) appear directly in the past service liability and are amortized at the same rate the plan is amortizing the remaining unfunded past service liability.

In addition, an annual 2.25% amortization increase rate was assumed. (Prior valuation: 2.50%). For future valuations, the amortization increase rate is planned to decrease by 0.25% each year.

Full actuarial valuations are performed every other year. For interim year valuations, the actuarial accrued liability and the normal cost are estimated based on the results of the prior full valuation.

Description of Actuarial Assumptions

Changes in Actuarial Assumptions as of July 1, 2016

None.

Investment rate of return (net of investment-related and administrative expenses)

7.50%.

Rate of compensation increase (including inflation)

Based on age per the table below.

Age	Rate
<25	6.00%
25-29	5.85%
30-34	4.65%
35-39	4.35%
40-49	3.65%
50-59	3.50%
60+	2.80%

An additional increase is assumed in year 1 only as follows:

Part B – 1.35%

Part B1 – 2.00%

Part E – 1.66%

The assumption is based on input from the plan sponsor regarding future expectations, as well as knowledge that younger employees generally earn higher annual percentage increases than older employees.

Inflation

2.75%.

This assumption is based on long term historical inflation numbers. While near term averages have been lower, we do not believe this trend will continue indefinitely and expect that there will be a reversion to the long term average.

Mortality

Non-Disabled Mortality: RP-2000 Annuitant and Non-Annuitant Mortality Tables for Males and Females projected to valuation date by Scale AA. A Blue Collar adjustment is applied pre- and post-retirement for members of the Custodial (05), Maintenance (06), Grounds (70), Building Maintenance (71), Streets (62), Fire (61) and Police (60) groups.

Disabled Mortality: RP-2000 Disabled Mortality Table.

Mortality Improvement

Non-Disabled Mortality Improvement: Projected from valuation date to 2020 using Scale AA.

Disabled Mortality Improvement: None.

We have selected a mortality table commonly used by public pension systems (such as the State of Connecticut). It is a recently published pension mortality study released by the Society of Actuaries. The plan does not have sufficiently credible data on which to perform a mortality experience study.

We are using Scale AA because it is consistent with recent industry analysis of future mortality improvement.

Survivor Benefit

Parts C & D

The survivorship benefit was valued at 39.4% of final pay while the normal form of the retirement benefit was set as a 10% Joint & Survivor in order to account for the additional death benefit for these groups.
