

# This is a commitment to Play & Outdoor Space

*This is the perfect time for this campaign. I am super excited about the potential to have more green spaces, where we can grow vegetables and teach outdoors.*

- ELEANOR COFFELT, SCIENCE TEACHER

## This is our day!

### The Campaign for San Francisco Day School

#### An Expansion of Green Space

As a school in and of this dynamic city, we understand the importance of green space for our students. Right now much of that experience happens away from school, whether in Pt. Reyes or in the church garden across the street. We have the opportunity now to improve and dramatically expand our outdoor spaces on campus.

Our new 3,000 square foot rooftop garden will explore the intersection of science and horticulture, ecology and engineering, sustainability and sunshine for students at every grade level. We will also renovate the lower school playground for our youngest learners at SF Day.

*"I'm most excited about providing spaces that support a range of student needs, such as access to quiet spaces with natural light."*

- ASHLEY GOLDSMITH, LOWER SCHOOL COUNSELOR

#### Play & Outdoor Learning: At a Glance

- Our rooftop garden will include space for planting beds to allow students to experiment with growing vegetables and fruit, flowers and plants, testing soil and experimenting with breed types, and exploring water sources that support sustainability.
- Access to an outdoor classroom will broaden the possibilities for our teachers as they design curriculum and plan study units for our students.
- Our new outdoor space will also serve as a quiet gathering and study space for our older students.
- Play is a vital part of learning for our students - it offers them the time and space to create relationships with peers, develop and test their skills, and explore the world around them.
