SUMMER

Math Packet
ANSWER KEY

For

Students Entering Fifth Grade
Math Academy
Use after Unit One, Session 10

Page 1, Multiplication & Division Facts
1  0, 28, 48, 12, 36, 18, 56,
    16, 48, 49, 32, 9, 21, 30,
    40, 25, 64, 27, 36, 35, 42
2  7, 9, 8
    7, 7, 7
3  a  2 x 24 > 2 x 16
    7, 7, 7
  b  400 ÷ 80 < 400 ÷ 10
  c  77 - 20 > 67 - 20
  d  36 + 23 < 48 + 16
  e  458 - 129 = 358 - 29
  f  (challenge) 3 x 360 < 40 x 30
  g  (challenge) 50 x 400 = 400 x 50
  h  (challenge) 2,500 ÷ 10 > 1,000 ÷ 5
  i  (challenge) 24,000 ÷ 6 = 48,000 ÷ 12

Page 2, Finding Factor Pairs
1

2 (challenge) 1, 2, 4, 5, 10, 20, 25, 50, 100

Page 3, Prime & Composite Numbers
1

2  No. Students’ explanations will vary. Example:

Prime numbers aren’t always odd because 2 is an
even number and it only has 2 factors: 1 and 2. Com-
posite numbers aren’t always even because 27 is a
composite number with 4 factors: 1, 3, 9, and 27.

Page 4, Multiplication Practice
1  60, 80, 180, 240, 270, 200, 280,
    150, 200, 400, 480, 300, 360, 490,
    210, 630, 560, 480, 720, 720, 320
2  162, 145, 342
    424, 648, 868, 2598

Page 5, Multiplication, Division & Secret Path
Problems
1  32, 63, 0, 25, 18, 42, 8,
    27, 18, 70, 35, 64, 27, 40,
    81, 28, 54, 49, 56, 72, 96
2  6, 6, 5
    4, 6, 3
3  a  54 ÷ 6 = 9, 9 x 3 = 27

b  42 ÷ 6 = 7, 7 x 4 = 28

b Students' responses will vary. Example: The multiples of 3 go in pattern of odd, even, odd, even. There are 3 in the first row, 3 in the second row, and 4 in the third row. That pattern repeats in the fourth, fifth, and sixth row, and again in the seventh, eighth, and ninth row. The numbers form diagonals on the grid.

</tr>
</tbody>
</table>

b Students' responses will vary. Example: The multiples of 7 go in a pattern of odd, even, odd, even. Every other multiple of 7 is also a multiple of 14. The numbers form straight lines on the grid.

3 Students' responses will vary. Example: Numbers that are multiples of both 6 and 7 are also multiples of 42. There are only two of them on the grid, 42 and 84.

4 126, Students' explanations will vary. Example: Since numbers that are multiples of both 6 and 7 have to be multiples of 42, the next one after 84 must be 126 because $84 + 42 = 126$. 

xii Bridges in Mathematics © The Math Learning Center
Use after Unit One, Session 10 (cont.)

Page 8, Multiplication & Multiples
1 30, 28, 36, 14, 63, 42, 48, 49, 28, 56, 48, 120, 84, 108
2 (challenge) Students' explanations will vary.
   Example: 6 is an even number. An even number plus an even number is always even. Any time you add 6 to a multiple of 6, you will always get an even number. 7 is an odd number. An odd plus an odd is even, so 7 + 7 = 14. Then 14 + 7 is an odd number, 21, because you've added an even and an odd number. When you add 7 to 21, you're adding two odds again, so you get an even number, 28. That is why multiples of 7 can have any digit in the ones place.
3 (challenge) Students' explanations will vary.
   Example: Any number that is a multiple of both 6 and 7 has to be a multiple of 42. 42 is even, so every multiple of 42 will also be even because even plus even is always even.

Page 10, Run for the Arts
1 a Students' responses will vary. Example: How many miles does Stephanie have to run to get more money than Emma?
b & c Stephanie is 11 years old. Her sister Emma is 9 years old. They are doing Run for the Arts at their school. Stephanie wants people to make pledges based on the number of miles she runs. Emma just wants people to pledge a certain amount of money. Their grandma pledged $36 for Emma and $8 per mile for Stephanie. Their uncle pledged $18 for Emma and $7 per mile for Stephanie. How many miles will Stephanie need to run to earn more money than Emma?
d 4 miles. Students' work will vary.
e Students' explanations will vary.

Use after Unit One, Session 21

Page 11, Order of Operations
1 a (9 + 3) × (16 ÷ 8) ÷ 4
   = 12 × 2 ÷ 4
   = 6
   b (365 + 35) ÷ 5 + 3
   = 400 ÷ 5 + 3
   = 80 + 3
   = 83
   c 36 ÷ 6 + 4 × (27 ÷ 9)
   = 36 ÷ 6 + 4 × 3
   = 6 + 12
   = 18
   d (26 − 18) × 5 ÷ 10 + 10
   = 0 × 5 ÷ 10 + 10
   = 40 ÷ 10 + 10
   = 4 + 10
   = 14
2 Note: Students only need to insert parentheses. Solutions are shown for your benefit.
a 2 × 18 − (5 + .5) ÷ 5 = 32
   36 − 20 ÷ 5 = 32
   36 − 4 = 32
   32 = 32
Use after Unit One, Session 21 (cont.)

Page 17, Time Calculations (cont.)

3 1 hour, 45 minutes. Students’ work will vary.

4 Miguel gets more sleep each night. Students’ explanations will vary. Miguel gets 10 hrs. Carlos gets 9 hrs. 45 min.

Page 18, Roberta’s Time & Money Problem

1 a Student responses will vary. Example: What time does Roberta have to leave in the morning to make at least $50 working for her grandma?

b & c Roberta’s grandma asked her to help clean up her yard and garden on Saturday. She said she will pay Roberta $8 per hour. Roberta’s mom says she can go, but that she needs to be home by 4:30 pm. It takes Roberta 30 minutes to ride her bike the 5 miles to her grandma’s house and 30 minutes to ride home. If she takes an hour break to eat lunch with her grandma, what time should she leave her home in the morning so that she can make at least $50 and get home at 4:30?

d Roberta needs to leave her home in the morning at 8:15 to make exactly $50. If she leaves earlier, she can make more than $50. Student work will vary.

e Student explanations will vary.

Page 19, Division, Multiplication & Prime Factorization

1 9, 6, 5, 8, 7, 4, 3

2 a 972

b 1628

c 3,776

3 (challenge) The greatest factor of 96 (other than 96) is 48.

Page 20, Chin’s Vegetable Patch

1 a Student responses will vary. Example: How wide and how long should Chin make his vegetable patch to have the largest area?

b 9 feet long and 9 feet wide.

2 (challenge) Student responses will vary. Example: Here is a list of all the rectangles you can make that have a perimeter of 36 feet. The area of each one is different, and they increase as the two dimensions get closer.

\[
\begin{array}{c}
1 \times 17 = 17 \text{ sq. ft}.
2 \times 16 = 32 \text{ sq. ft.}
3 \times 15 = 45 \text{ sq. ft.}
4 \times 14 = 56 \text{ sq. ft.}
5 \times 13 = 65 \text{ sq. ft.}
6 \times 12 = 72 \text{ sq. ft.}
7 \times 11 = 77 \text{ sq. ft.}
8 \times 10 = 80 \text{ sq. ft.}
9 \times 9 = 81 \text{ sq. ft.}
\end{array}
\]

The area of each rectangle differs from the one below it by an odd number, starting with 15, then 13, 11, 9, 7, 5, 3, and finally 1 square foot. There isn’t much difference between the area of an 8 x 10 rectangle and a 9 x 9 rectangle, but the 9 x 9 is still a little bigger.

Use after Unit Two, Session 10

   \]
   c 24, 38, 72, and 96
   d (challenge) 10 numbers. Students' explanations will vary. Example: 24 is the least common multiple of 6 and 8. So all the numbers that are multiples of 6 and 8 are multiples of 24. There are 10 multiples of 24 that are less than 250.

Page 34, Snacks for the Field Trip
1 a Students' responses will vary. Example: Which snack costs the least per item?
   b Mrs. Ramos is taking 32 students on a field trip. She wants to provide snacks for the students to eat. Granola bars come in boxes of 8 and cost $2.50 per box. Apples come in bags of 4 and cost $1.50 per bag. Packages of peanut butter crackers come in boxes of 16 for $4.69. At these prices, which of the snacks has the cheapest price per item: granola bars, apples, or peanut butter crackers?
   c 8 apples for $3.00; 8 granola bars for $2.50; 8 packs of peanut butter crackers for $2.30 - something; Peanut butter crackers are least expensive. Students' work will vary.
   d Students' responses will vary.

Page 35, Division on a Base-Ten Grid
1 28, 42, 140, 70, 280, 420
2 Sketches may vary. Examples:
   a \[
   \begin{array}{cccccccccccc}
   32 & - & 14 = & 23 \\
   322 & - & 280 = & 42 \\
   \end{array}
   \]
   b \[
   \begin{array}{cccccccccccc}
   236 & - & 14 = & 222 \\
   \end{array}
   \]

Page 36, Carla's Market & The Animal Shelter
1 Carla should put her apples into bags of 4. (139 \div 4 = 34 R 3; 139 \div 5 = 27 R 4) Students' work will vary.
2 Jorge and Mrs. Johnson will be at the animal shelter twice on the very same day. Students' work will vary.
Use after Unit Two, Session 20 (cont.)

   c $7 \times 40 = 280$, $280 \div 40 = 7$, $280 \div 7 = 40$
2 a Yes
   b No
   c No
   d Yes
3 (challenge) Bakery A offers the better deal on muffins. Students' explanations will vary. Example: Bakery A sells 6 muffins for $5.85, which means they each cost less than a dollar because $6 \times$ $1.00$ would be $6.00. Bakery B sells 8 muffins for $8.25, which means they each cost a little more than a dollar because $8 \times$ $1.00$ is $8.00.$

Page 39, Estimating Money Amounts
1 Choice 3, about $7 in his pocket
2 Choice 1, She is right. She cannot afford to buy two more milkshakes.
3 Choice 2, Chris is wrong. The bike is more expensive than 5 months of bus passes.
4 Choice 2, a bag of cherries for $2.00
Page 40, Kasey's Blueberry Bushes
1 a (challenge) Students' responses will vary.
   Example: How many rows of plants should Kasey make, and how many plants should be in each row?
   b (challenge) Kasey should plant 3 rows of bushes with 4 in each row. (4 rows of bushes with 3 in each row is also acceptable.) Students' work will vary. Example: Each plant needs a square of land that is 4' on each side. If you arrange 12 squares like that into a $3 \times 4$ rectangle, the rectangle is $12' \times 16'$. The perimeter of the rectangle is $(12 \times 2) + (16 \times 2)$. That's $24 + 32$, which is 56'.

1  
   a Surface Area = 52 square cm,
   Volume = 24 cubic cm
   b Surface Area = 48 square cm,
   Volume = 20 cubic cm
   c Surface Area = 64 square cm,
   Volume = 32 cubic cm
2 (challenge) 45 cubic cm

Page 58, Measuring to Find the Area
1  
   a Area = 4 cm x 7 cm; Area = 28 sq cm
   b Area = (5 cm x 8 cm) ÷ 2; Area = 20 sq cm
   c Area = 6 cm x 3 cm; Area = 18 sq cm

Page 59, Volume & Surface Area of Rectangular & Triangular Prisms
1 Volume = 32,000 cubic cm;
   Surface Area = 7,200 sq cm
2 Volume = 12,000 cubic cm;
   Surface Area = 3,800 sq cm
3 Volume = 18,000 cubic cm;
   Surface Area = 4,800 sq cm
4 (challenge) Volume = 22,500 cubic cm;
   Surface Area = 5,700 sq cm

Page 60, Surface Area & Volume Story Problems
1 Present A takes more wrapping paper to cover.
   Students’ work will vary. (The surface area of
   Present A is 2(8 x 8) + 4(8 x 10) = 448 sq in; the
   surface area of Present B is (9 x 9) + (15 x 9) +
   (9 x 12) + 2 (9 x 12÷2) = 432 sq in.)
2 Tank A holds more water. Students’ work will vary.
   (The volume of Tank A is 24 x 12 x 18 = 5,184
   cubic inches; the volume of Tank B is (36 x 24 x
   10) ÷ 2 = 4,320 cubic inches.)

Use after Unit Four, Session 10

Page 63, Multiplication Problems & Mazes
1 a 36, 54, 180, 90
   b 46, 69, 230, 115
   c 68, 102, 340, 170
2 a Students' responses will vary.
   b Students' responses will vary.
   c Students' responses will vary.
3 a 240 ÷ 60 = 4; 4 × 30 = 120;
   end start
   120 ÷ 6 = 20; 20 ÷ 4 = 5
   4 60 240
   5 30 120
   4 20 6
   b 420 ÷ 70 = 6; 6 × 40 = 240;
   end start
   240 ÷ 8 = 30; 30 ÷ 6 = 5
   5 420 6
   6 70 40
   30 ÷ 8 = 240

Page 64, More Division Story Problems
1 8 hours; Students' work will vary.
2 9 days, although she'll only have to read 17 pages
   the last day. Students' work will vary.
3 9 bags, with 7 candies left over. Students' work will vary.
4 (challenge) Students' responses will vary. Example: The robins flew about 40 miles a day. This is a
   reasonable estimate because 80 × 40 is 3,200. The
   number of days they actually flew was 78, so 78 × 40
   should be close to 3,000.

Page 65, Which Box Holds the Most?
1 a You need to know the volume of each box.
   b Ebony should use Box B if she wants to send
      the most candy.
      (Box A Volume: 52 × 22 × 8 = 9,152 cubic cm;
       Box B Volume: 22 × 22 × 22 = 10,648 cubic cm;
       Box C Volume: 22 × 17 × 15 = 5,610 cubic cm.)
       Students' work will vary.
2 2,904 square cm; Students' work will vary.

2  a  24 square meters
   b  15 square inches
   c  52 square centimeters
3  520 square yards; Students' work will vary.

Page 86, Time Problems
1  5 days (4 days and 30 more minutes on the fifth day is also acceptable.) Students' work will vary.
2  6\frac{1}{2} hours each week; Students' work will vary.
3  2 hours and 45 minutes; Students' work will vary.

Page 87, Amanda's Height Graph
1  Amanda has been getting taller. Students' explanations will vary. Example: *The line on the graph keeps going up; it never goes down.*
2  Between 8 and 9 years old.
3  No, Amanda grew different amounts some years. Students' explanations will vary. Example: *The number of inches changes from one year to the next. Amanda grew 4 inches the first year on the graph. She grew 3 inches the next year and 2 inches the year after that.*
4  Students' responses will vary. Example: *I think Amanda will be about 5 feet tall by the time she is 13. When she was 10, she was 54 inches tall. When she was 11, she was 56 inches, so she grew 2 inches that year. Even if she only grows 2 inches a year for the next 2 years, that will be 60 inches, which is 5 feet.*
5  Students' responses will vary. Example: *I think the growth line would keep going up at least 2 inches a year until she was 15 or 16. After that, it would go up very slowly or maybe not at all, so you'd see a steep line between ages 5 and 15 or 16, and then it would get almost flat because people don't grow any taller after they get to be about 16.*
Use after Unit Five, Session 11 (cont.)

Page 88, Kurt’s Height Graph

1 Student responses may vary. Example:

Kurt’s Height

2 Students’ responses will vary. Example: Kurt grew faster in his first year than in the next two years. He grew 5 inches every 6 months for the first year. Then he grew 2 inches every 6 months until he turned 21/4. Between 21/4 and 3, he only grew 1 inch, so it seems like he’s slowing down.

3 Students’ responses will vary. Example: Kurt grew really fast in the first year, and then he slowed down in the next two years.

Page 90, Which Bag of Candy?

1 Lemon Sours; students’ work will vary.

2 16 candies

Use after Unit Five, Session 19

Page 91, Square Inches, Square Feet & Square Yards

1 a 29 square yards; students’ work will vary.

   b (challenge) 261 square feet; students’ work will vary.

2 a 900 square inches; students’ work will vary.

   b (challenge) 69/square feet; students’ work will vary.

Page 92, The Frozen Yogurt Problem

1 a Students’ responses will vary. Example: How many tubs of frozen yogurt do the kids need for parents’ night at their school?

   b & c The fourth and fifth graders are hosting a special night for their parents at school, and they want to serve frozen yogurt. Altogether there will be 95 students, 5 teachers, and 1 principal. Six students are not coming. Fifty-two students will bring 2 parents, and 43 students will bring 1 parent with them. Each tub of frozen yogurt serves 14 people. How many tubs of frozen yogurt will they need to have enough for everyone?

   d 18 tubs of frozen yogurt; students’ work will vary.

   e Students’ answers will vary.

Page 93, The Homework Survey

1 14 middle-school students

2 3 high-school students

3 12 high-school students

4 Overall, high-school students spend more time on homework each night. Students’ explanations will vary. Example: The mode and the median for the middle-school students is 1 hour a night. The mode and the median for the high-school students is 1 1/2 hours a night. If you count up all the hours, the whole group of middle-school students spends 26.5 hours each night on homework, and the high-school students spend 46 hours each night. The average amount of time is a little less than 1 hour for the middle-school students and about 1 1/2 hours a night for high-school students.
Use after Unit Five, Session 19 (cont.)

Page 93, The Homework Survey (cont.)

5 (challenge) Students' responses will vary. The middle-school data is clustered tightly around half an hour and 1 hour, while there is more variation in the high-school data. It would be reasonable to say that it's easier to use the data to make estimates about any middle-school student than it is to make estimates about any high-school student.

Page 94, The Fifth-Grade Reading Survey

1 Students' responses will vary. Example: Most parents read 1 hour or less each week. Most students read 1½ hours or more each week.

2 Students' graphs may vary somewhat. Example:

![Graph of Time Spent Reading Each Week]

3 Students' responses will vary. Example: You can see that students read way more than parents each week.

Page 95, Reading & Interpreting a Circle Graph

1 Soda

2 Milk

3 Less than half of the students prefer soda. Students' explanations will vary. Example: One way to tell that less than half of the students prefer soda is because the soda section takes up less than half the circle. Another way to tell is because the soda section says 22, and 22 is less than half of 48.

4 Students' responses will vary. Example: They should serve 24 bottles of water, 20 bottles of juice, and 8 bottles of milk. That adds up to 52 bottles, but leaves a few extra in case someone changes their mind. Some kids will probably pick juice because it's sweet, but some of them might pick water. Maybe a couple of them will switch to milk, but probably not very many.

Page 96, Constructing & Interpreting a Circle Graph

1 Students' responses will vary. Example: The most popular choice is board games.

2 Students' work will vary. Example:

![Circle Graph of Fifth Graders' Favorite Party Activities]

3 Students' responses will vary. Example: Half the kids voted for board games. A third of them voted for a movie, and only a sixth voted for crafts.

Page 97, Classifying Triangles & Quadrilaterals

1 a

b Students' responses will vary. Example: Because every triangle in the group has 3 sides that are different lengths.

c Scalene triangle

2 a

b Students' responses will vary. Example: Because every quadrilateral in the group has 4 congruent sides.

c Rhombus
Use after Unit Five, Session 19 (cont.)

Page 98, The Robot's Path
1 A quadrilateral or rectangle
2 The dimensions of the rectangle could be 1 and 6, 2 and 5, or 3 and 4. (The rectangle with dimensions 3 and 4 is the only one that allows the robot to collect 170 gold pieces.)
3 A5, D5, and D1

Page 99, Division Estimate & Check

<table>

c \(1\frac{13}{4}\)
d \(1\frac{14}{3}\)
3 Solutions may vary.
a \(\frac{7}{4} - \frac{1}{4} = \frac{3}{4}(1\frac{1}{4} \text{ is also acceptable})\)
b \(\frac{39}{34} - \frac{9}{24} = \frac{11}{34}; \frac{21}{24} = \frac{7}{8}\)
c \(2\frac{3}{24} - \frac{10}{24} = \frac{11}{24}\)
d \(3\frac{19}{16} - 1\frac{3}{16} = \frac{30}{16}; \frac{39}{16} = 1\frac{14}{16} \text{ or } 1\frac{7}{8}\)

Use after Unit Six, Session 19

Page 111, Modeling Decimals
1 a 1.004
b 2.316
c 1.07

Page 112, Decimal Sums & Differences
1 1.236 + 1.07 = 2.306
2 1.236 + 1.7 = 2.936
3 1.236 + 1.007 = 2.243
4 2.131 - 1.004 = 1.127
5 2.131 – 1.04 = 1.091
6 2.131 – 1.4 = 0.731

Page 113, Using Models to Add & Subtract Decimals
1 Less than 3. Students’ explanations will vary. Example: Because \(1 + 1 = 2\), and \(0.009 + 0.762\) is less than 1 more.
2 Greater than 3. Students’ explanations will vary. Example: Because \(1 + 1 = 2\), and \(0.5 + 0.5\) is already 1 more, but there are also some extra hundredths and thousandths.
3 Less than 1. Students’ explanations will vary. Example: Because you have to subtract 2 tenths, and you have less than 1 tenth. You’ll have to split the unit mat into tenths, and when you take 2 tenths away, it will leave less than 1.

</tbody>
</table>

7  CHALLENGE  Randall has $5.00 to spend on snacks at the movies. Use the table to figure out three snacks Randall can buy for $5.00. Show your thinking. Is that the only combination of three snacks Randall can buy? How do you know?

<table>
<thead>
<tr>
<th>Snack</th>
<th>Price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Popcorn - small</td>
<td>$2.75</td>
</tr>
<tr>
<td>Popcorn - medium</td>
<td>$2.99</td>
</tr>
<tr>
<td>Popcorn - large</td>
<td>$3.49</td>
</tr>
<tr>
<td>Cookie</td>
<td>$2.25</td>
</tr>
<tr>
<td>Lemonade</td>
<td>$1.19</td>
</tr>
<tr>
<td>Candy Bar</td>
<td>$1.29</td>
</tr>
<tr>
<td>Granola Bar</td>
<td>$0.89</td>
</tr>
</tbody>
</table>

There are several combinations Randall can buy. A few examples:
- Cookie + lemonade + candy bar: $4.73
- Cookie + lemonade + granola bar: $4.33
- Sm. popcorn + lemonade + granola bar: $4.83
- Sm. popcorn + candy bar + granola bar: $4.93
Dante's Decision  page 1 of 2

Dante wants to spend some of his allowance money, but he is having a hard time deciding what to buy. He loves baseball cards, packs of gum, and bouncy balls. Fill in the ratio tables and answer the questions to help Dante keep track of what he can buy.

1 Dante’s favorite packs of baseball cards cost $1.70 each. Fill in the table below to show the cost of different numbers of packs of baseball cards.

<table>
<thead>
<tr>
<th>Packs of Baseball Cards</th>
<th>1</th>
<th>2</th>
<th>4</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>15</th>
<th>25</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost</td>
<td>$1.70</td>
<td>$3.40</td>
<td>$6.80</td>
<td>$13.60</td>
<td>$15.30</td>
<td>$17.00</td>
<td>$25.50</td>
<td>$42.50</td>
</tr>
</tbody>
</table>

2 Dante’s favorite gum costs $0.60 a pack. Fill in the table below to show the cost of different numbers of packs of gum.

<table>
<thead>
<tr>
<th>Packs of Gum</th>
<th>1</th>
<th>2</th>
<th>5</th>
<th>9</th>
<th>10</th>
<th>19</th>
<th>20</th>
<th>25</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost</td>
<td>$0.60</td>
<td>$1.20</td>
<td>$3.00</td>
<td>$5.40</td>
<td>$6.00</td>
<td>$11.40</td>
<td>$12.00</td>
<td>$15.00</td>
</tr>
</tbody>
</table>

3 Bouncy balls come in packages that cost $3.15 each. Fill in the table below to show the cost of different numbers of packs of bouncy balls.

<table>
<thead>
<tr>
<th>Packs of Bouncy Balls</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>6</th>
<th>9</th>
<th>10</th>
<th>12</th>
<th>20</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost</td>
<td>$3.15</td>
<td>$6.30</td>
<td>$9.45</td>
<td>$18.90</td>
<td>$28.35</td>
<td>$31.50</td>
<td>$37.80</td>
<td>$63.00</td>
</tr>
</tbody>
</table>

4 Dante decided to spend only $20.00 of his allowance and save the rest for later.

a Can he buy 12 packs of baseball cards? Why or why not?
No. 12 packs costs $20.40.

b Can he buy 30 packs of gum? Why or why not?
Yes. 30 packs of gum costs $18.

c How much of the $20.00 will he still have after he buys 5 packs of bouncy balls?
$4.25 ($20 – $15.75)

(continued on next page)
Review

5 Finish the number pattern for the rule: $2n + 1$

3, 5, 7, 9, 11, 13, 15, 17, 19, 21

6 Finish the number pattern for the rule: $4n + 1$

5, 9, 13, 17, 21, 25, 29, 33, 37, 41

7 What do you notice about the two number patterns you just completed? How are they similar? How are they different?

Observations will vary. Some possibilities:

- They both have only odd numbers.
- All of the numbers in the second pattern appear in the first pattern.
- Every other number in the first pattern is a number from the second pattern.

In the first pattern you add 2 to get the next number; in the second pattern you add 4.

8 Multiply:

a $8.7 \times 10 = 87$

b $8.7 \times 100 = 870$

c $8.7 \times 1,000 = 8,700$

d $8.7 \times 0.1 = 0.87$

e $8.7 \times 0.01 = 0.087$

f Look at the zeroes and the decimal points in your answers. What do you notice?

Observations will vary. Example:

When you multiply by a whole number power of 10 (like 10 or 100) you move the decimal to the right by the number of zeroes in the power of 10. When you multiply by a power of 10 less than 1 (like 0.1 or 0.01) you move the decimal point to the left by the number of digits to the right of the decimal point.
Fraction Times Fraction Checkpoint  page 1 of 2

1  Henry's little sister spilled ketchup on one of his homework problems.

\[ \frac{3}{5} \times \_ = \_ \]

a  Fill in the bubble to show what Henry should be able to tell for sure about the answer, even though he can't see the other number.
○ The answer will be less than \( \frac{3}{5} \).
○ The answer will be greater than the ketchup-covered number.
○ The answer will be less than the ketchup-covered number.

b  Explain your answer. How do you know the statement you chose is true?
Explanations will vary. Example: When you multiply a number by \( \frac{3}{5} \), it's like finding only \( \frac{3}{5} \) of the number, so the answer has to be less than the starting number.

2  Use the rectangular arrays to model and solve each problem. Show all your work.

a  \[ \frac{4}{6} \times \frac{2}{5} = \frac{8}{30} \text{ or } \frac{4}{15} \]

b  \[ \frac{3}{7} \times \frac{2}{3} = \frac{6}{21} \text{ or } \frac{2}{7} \]

Work will vary.

(continued on next page)
Use after Unit One, Session 10 (cont.)

Page 10, Centimeters, Decimeters & Meters (cont.)
3 a (challenge) Sherman crawled 237 cm farther than Sidney.
   b (challenge) Explanations will vary.
      Example: Sidney was faster because he would have gone 5 meters or 500 cm in an hour.

Use after Unit One, Session 21

Page 11, Multiplication & Division Facts
1 24, 16, 42, 30, 24, 18, 0
   8, 36, 36, 40, 15, 63, 48
   9, 6, 9, 4
   2, 6, 2, 7
2 18, 20, 35, 32, 64
   2, 5, 3, 5, 8
3 (challenge) Responses will vary. Example: Since 16 is 2 \times 8, you can multiply the answer to \(4 \times 8\) by 2 to get \(4 \times 16 = 32\) and \(32 \times 2 = 64\), so
   \(4 \times 16 = 32\).

Page 40, The Information You Need

1 Emilio has $125. He wants to buy a new video game system that usually costs $312 but is on sale for $289. He wants to borrow money from his brother so that he can buy it while it is on sale. How much money will Emilio need to borrow to buy the game system while it is on sale?

a Responses will vary. Example: How much money does Emilio need to borrow?

b & c See above.

d $164.00

2 Marie had a $5 bill, three $1 bills, 2 quarters, and 3 pennies in her pocket. She bought a bottle of juice for 88¢ and an apple for 55¢. If she paid with two $1 bills, how much change did she get back?

a Responses will vary. Example: How much change did Marie get?

b & c See above.

d 46¢

Use after Unit Three, Session 10

Page 41, Fractions of a Foot

1 a \( \frac{1}{8}, \frac{2}{8}, \frac{3}{8} \)

b \( \frac{1}{6}, \frac{2}{6}, \frac{3}{6} \)

c \( \frac{1}{6}, \frac{2}{12} \)

2 a \( \frac{1}{6}, \frac{3}{6} \)

b \( \frac{5}{6} \)
Use after Unit Three, Session 10 (cont.)

Page 41, Fractions of a Foot (cont.)
2  c $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{6}$, $\frac{1}{12}$
   d $\frac{1}{12}$, $\frac{1}{3}$
   e $\frac{1}{12}$, $\frac{1}{6}$

Page 42, More Fractions of a Foot
1  a 6
   b 3
   c 2
   d 4
2  a $\frac{1}{4}$ should be circled (4 inches, 3 inches)
   b $\frac{1}{6}$ should be circled (8 inches, 6 inches)
   c $\frac{1}{2}$ and $\frac{1}{4}$ should be circled (both are 6 inches)
   d $\frac{3}{4}$ should be circled (8 inches, 9 inches)
   e $\frac{1}{6}$ should be circled (3 inches, 8 inches)
3  a 1, 2, 3, 4, 6, 12
   b 1, 3, 5, 15
   c 1, 2, 3, 4, 6, 9, 12, 18, 36
   d 1, 2, 3, 4, 5, 6, 10, 12, 15, 20, 30, 60
   e (challenge) 1, 2, 3, 4, 5, 6, 8, 10, 12, 15, 20, 24, 30, 40, 60, 120

Page 43, Comparing Fractions on a Number Line
1  a $\frac{3}{4}$ should be circled; $\frac{3}{4}$ > $\frac{1}{3}$
   b $\frac{5}{6}$ should be circled; $\frac{5}{6}$ > $\frac{1}{3}$
2  a $\frac{3}{4}$ should be circled; $\frac{3}{4}$ > $\frac{2}{3}$
   b $\frac{5}{6}$ should be circled; $\frac{5}{6}$ > $\frac{2}{3}$
   c $\frac{5}{6}$ should be circled; $\frac{5}{6}$ > $\frac{2}{3}$

Page 44, Egg Carton Fractions
1  6, 4, 3, 2
   18, 8, 9, 10
2  a $\frac{2}{6}$
   b $\frac{1}{4}$
   c $\frac{1}{2}$
   d $\frac{3}{6}$
   e $\frac{3}{4}$
   f $\frac{4}{6}$
3  a $\frac{4}{6}$ = $\frac{2}{3}$
   b $\frac{1}{4}$ > $\frac{3}{6}$
   c $\frac{3}{4}$ > $\frac{5}{6}$

Page 45, More Egg Carton Fractions
1

Page 46, Comparing & Ordering Fractions
1  $\frac{1}{4}$, $\frac{1}{6}$, $\frac{1}{2}$, $\frac{3}{4}$, $\frac{5}{6}$, $\frac{7}{6}$
2  $\frac{1}{6}$, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{2}{4}$, $\frac{3}{4}$, 3
3  $\frac{3}{4}$, 2, $\frac{2}{6}$
4  (challenge) $\frac{5}{6}$; explanations will vary. Example: $\frac{5}{6}$ is less than 1. $\frac{5}{6}$ is less than 1. $\frac{1}{4}$ is more than $\frac{1}{6}, \frac{1}{4}$ must be less than $\frac{5}{6}$.
5  (challenge) $\frac{5}{6}$; explanations will vary. Example: $\frac{5}{6}$ is the same as $\frac{1}{4}$. $\frac{5}{6}$ is the same as $\frac{1}{6}$. $\frac{1}{4}$ > $\frac{1}{6}$, so $\frac{5}{6}$ > $\frac{1}{6}$.

Page 47, Fractions & Mixed Numbers on a Number Line
1  a $\frac{1}{2}$
   b $1\frac{1}{2}$ (1$\frac{1}{2}$ is also acceptable)
   c 1$\frac{1}{2}$
   d 3$\frac{1}{2}$
   e $\frac{3}{4}$
   f $\frac{3}{4}$
2  (challenge) $\frac{1}{2}$
3  (challenge) 1$\frac{1}{2}$
4  (challenge) 8$\frac{1}{2}$
Use after Unit Three, Session 10 (cont.)

Page 48, Fraction Story Problems
1. Jim's string is 1/4 of a foot longer than Damien's. Student work will vary. Example:

<table>
<thead>
<tr>
<th>Jim</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1/4</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Damien</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1/4</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Jim's string = 1/4 of a foot
Damien's string = 1/4 of a foot
Jim's string is 1/4 of a foot longer than Damien's.

2. Rosa ran further than Jasmine. Student work will vary. Example:

<table>
<thead>
<tr>
<th>Rosa ran 1/4 K</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
</tr>
<tr>
<td>1/4</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Jasmine ran 1/4 K</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
</tr>
<tr>
<td>1/4</td>
</tr>
</tbody>
</table>

3. (challenge) Darius ate 1/4 more of a pizza than Lisa did. Student work will vary. Example:

<table>
<thead>
<tr>
<th>Lisa ate 1/4 pizzas</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Darius ate 3/4 pizza</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Page 49, Clock Fractions
1. a) 30
   b) 20
   c) 15

<tr>
<td>a) 3/4</td>
<td></td>
<td>45 minutes</td>
</tr>
<tr>
<td>b) 2/3</td>
<td></td>
<td>40 minutes</td>
</tr>
<tr>
<td>c) 1/8</td>
<td></td>
<td>10 minutes</td>
</tr>
</tbody>
</table>

Page 50, Time & Fractions
1. a) Mai spent more time doing homework.
   (10 more minutes) Students' work will vary.
   b) 5:15; students' work will vary.
   c) 5:25; students' work will vary.
2. (challenge) It takes 10 more minutes to get to Ashley's aunt's house.

Use after Unit Three, Session 20

Page 51, Multiplication Tables
1. a) 15, 6, 27, 9, 24, 18, 21, 12
   b) 20, 8, 36, 12, 32, 24, 26, 16
   c) 40, 16, 72, 24, 64, 48, 56, 32
2. 8, 9, 4, 4
   8, 8, 3, 3
3. (challenge) Answers will vary. Example: 376
4. (challenge) Answers will vary. Example: 2 x 376 = 752

Page 52, Fractions & Division
1. a) 1/2
   b) 1/4
   c) 1/6
2. Each friend got 1/3 of the cookie.
3. Each friend got 1/5 or 1 1/5 cookies.

Page 53, More Multiplication Tables
1. 32, 30, 49, 48, 36
   7, 7, 5, 7, 9
2. a) 50, 20, 90, 30, 80, 60, 70, 40
   b) 25, 10, 45, 15, 40, 30, 35, 20
   c) 45, 18, 81, 27, 72, 54, 63, 36
3. (challenge) 120, 60, 108, 80, 90, 162

Page 54, Classroom Groups
1. Each student got 3 erasers, and there were 2 erasers left over.
2. a) 27 students
   b) (challenge) 9 groups of 3
Use after Unit Three, Session 20 (cont.)

Page 55, Fractions of an Hour

1  e  2,892  
f  777

2 Ramon bought 8 big cases of breakfast cereal. Each case held 12 boxes of cereal. Each box of cereal held 10 oz. of cereal. How many boxes of breakfast cereal did Ramon buy?
   a Responses will vary. Example: How many boxes of cereal did Ramon get?
   b & c See above.
   d 96 boxes of cereal

Page 70, Kylie's Babysitting Money

1 Kylie earns $8 an hour babysitting. She babysat 24 hours last month. This month, she babysat 17 hours more than last month. How much more money did she earn this month?
   a Responses will vary. Example: How much more money did Kylie earn this month than she did last month?
   b & c See above.
   d $136

2 (challenge) 32 hours; student work will vary.

Use after Unit Four, Session 21

Page 72, Toothpicks & Leaves

1 Last year, there were 26 students in Mrs. Coleman's class. This year, there are 28 students in her class. They are doing an art project, and every student needs 17 toothpicks. How many toothpicks will they need altogether?
   a Responses will vary. Example: How many toothpicks do the kids need for the project?
   b & c See above.
   d 476 toothpicks

2 Leo is 11 years old. His neighbors pay him $12 to rake the leaves in their yards. He raked 23 yards in October and 15 yards in November. How much money did he earn in those two months?
   a Responses will vary. Example: How much money did Leo earn in 2 months?
   b & c See above.
   d $456

Page 73, Reasonable Estimates & Partial Products

1 a 400 (first bubble)

   e Estimate: 600; Solution: 726
   f Estimate: 2,000; Solution: 1,854
   g (challenge) Estimate: 3,600; Solution: 3,936
Use after Unit Four, Session 21 (cont.)

Page 76, Cherry Tomatoes & Cafeteria Tables
1 Farmer Sara drives 32 miles each week to take baskets of vegetables to her customers. She put 16 cherry tomatoes into each basket. She filled 23 baskets. How many cherry tomatoes did she use altogether?
   a Responses will vary. Example: How many cherry tomatoes did it take to fill all the baskets?
   b & c See above.
   d 368 cherry tomatoes

2 There are 24 tables in the cafeteria, and each table seats 17 students. The cafeteria serves lunch from 11:15 am until 12:25 pm. How many students can sit in the cafeteria at a time?
   a Responses will vary. Example: How many kids can sit in the cafeteria at the same time?
   b & c See above.
   d 408 students

Page 77, Using the Standard Algorithm & Partial Products to Multiply

   c 4,092
   d 7,245

Page 78, Raffle Tickets & Exercise Minutes
1 The middle school was giving away raffle tickets at Back to School Night. There were 48 classrooms altogether and 896 students at the school. Each classroom got a bundle of 108 tickets to give away. How many tickets did the classrooms get altogether?
   a Responses will vary. Example: How many tickets were there to give away in all?
   b & c See above.
   d 5,184 tickets

2 Deja exercises four days a week at the gym. The gym is 7 blocks away from her house. Each time she spends 45 minutes exercising. If she does this for 13 weeks, how much time will she spend exercising altogether?
   a Responses will vary. Example: How many minutes will Deja spend exercising in 13 weeks?
   b & c See above.
   d 2,340 minutes
   e (challenge) 39 hours and 0 minutes

Page 79, Using the Standard Algorithm to Multiply Large Numbers

Page 82, Favorite Fruit Graph
1 Watermelon
2 Peaches
3 Apples and strawberries
4 120 students
5 60 students
6 30 students
Use after Unit Five, Session 10 (cont.)

Page 83, Spinner, Tile & Marble Fractions
1  a $\frac{1}{2}$
   b $\frac{1}{4}$
   c $\frac{1}{3}$
   d $\frac{1}{6}$
2  a $\frac{2}{6}$ (Both acceptable also)
   b $\frac{1}{3}$ (Both acceptable also)
   c $\frac{1}{6}$ (Both acceptable also)
   d $\frac{1}{6}$ (Both acceptable also)

Page 84, Probability Experiments
1  $\frac{1}{6}$ or $\frac{1}{4}$ (Other acceptable answers include: 2 out of 8 chances, 1 out of 4 chances.)
2  Chris has a better chance of getting a gray tile from the large bowl than the small bowl. Explanations will vary. Example: Half the tiles in the large bowl of 240 are gray because 120 is half of 240. Only $\frac{1}{6}$ or $\frac{1}{4}$ of the tiles in the small bowl are gray. So his chances are only 2 out of 8, which is less than 1 out of 2.
3  $\frac{3}{10}$ or $\frac{1}{5}$ (Other acceptable answers include: 2 out of 10 chances, 1 out of 5 chances.)
4  a (Challenge) 4 would need to be black. Explanations will vary. Example: 20 is twice as much as 10. If you want the chances to stay the same, you have to double the number of black marbles.
   b (Challenge) 20 would need to be black. Explanations will vary. Example: 2 is $\frac{1}{3}$ of 10. 20 is $\frac{1}{3}$ of 100. The chances have to be 2 out of 10, or $\frac{1}{5}$.

Page 85, Eating Our Vegetables
1  a 2 students
   b 16 students
   c 13 students
   d Tuesday, Wednesday, and Friday
   e (Challenge) Friday; explanations will vary.
      Example: $\frac{1}{6}$ of 24 is 8, so $\frac{3}{6}$ of 24 would be 16. Sixteen kids are vegetables on Friday.

Page 86, Fair Spinners
1  a Choice 3, the half and half spinner
   b Yes; explanations will vary. Example: 4 parts of the spinner are labeled A and 4 parts are labeled B. The parts are the same size, so it's fair.
2  a Responses will vary. Example: If you split the spinner into 3 equal parts, each boy has an equal chance.

Page 87, Multiplication & Division Practice

Use after Unit Six, Session 22 (cont.)

Page 118, Decimal & Fraction Story Problems

1 Yes; explanations will vary. Example: \( 2.4 = 2\frac{2}{10} \).
\( \frac{4}{10} > \frac{1}{4} \), so 2.4 pounds will be more than enough.

2 No; explanations will vary. Example: \( 3\frac{1}{4} = 3.75 \)
and \( .75 < .6 \), so 3.6 pounds is not enough.

3 Yes; explanations will vary. Example: \( 13\frac{1}{6} = 13.5 \).
\( 13.8 > 13.5 \), so they can stop now.

Page 119, Comparing Decimals & Fractions

<table>
<thead>
<tr>
<th>( a )</th>
<th>( b )</th>
<th>( c )</th>
<th>( d )</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \frac{0.12}{5} )</td>
<td>( \frac{0.5}{3} ) and ( \frac{0.20}{5} )</td>
<td>( \frac{0.12}{5} ) and ( \frac{0.00}{0.5} )</td>
<td>( \frac{0.12}{5} &lt; \frac{0.00}{0.5} )</td>
</tr>
</tbody>
</table>

2

\( a \frac{3}{4} < 0.75 \)
\( \frac{b}{0.5} = \frac{0.25}{0.50} \)
\( c \frac{0.7}{1} \)
\( d \frac{0.8}{2} \)

3 (challenge)

\( a \frac{3}{5} > \frac{0.5}{2} \)
\( b \frac{0.5}{3} > \frac{0.3}{3} \)
\( c \frac{0.29}{8} < \frac{0.3}{8} \)
\( d \frac{0.3}{3} > \frac{0.3}{3} \)

Page 120, More Decimal & Fraction Story Problems

1 Yes; explanations will vary.
Example: \( 1.15 + 1.56 = 2.71 \). 2.71 is more than \( 2\frac{1}{2} \)
pounds, so Elisa will have enough.

2 Ming; explanations will vary.
Example: Ming ran 8.6 miles. Enrico ran 8\( \frac{1}{10} \) miles.
\( 8.6 > 8\frac{1}{10} \) so Ming ran farther.

Use after Unit Seven, Session 10

Page 121, Area Problems

1 105 square inches, students' work will vary.

2 210 square inches, students' work will vary.

3 700 square inches, students' work will vary.

4 (challenge) 294 square inches, students' work will vary.

Page 122, Thinking about Area

1 a 9
b 18
c 36
d 72
e Responses will vary. Example: The area is twice as big.

2 a 128
b 64
c 32
d 16
e Responses will vary. Example: The area is cut in half each time.

3 (challenge) Responses will vary. Example: When you double the length of both dimensions, the area is 4
times as big from one to the next.

Page 123, Solving Equations

1 a 12
b 11
c 8
d 42
e 48
f 66

2 a 8
b 20
c 7
d 100
e 5
f 14
g 7
h 7

3 (challenge) Responses will vary. Examples:
a a + 10 = 15
b \( 100 = 20 \times a \)
c \( 50 \div a = 10 \)
d \( 3 = a - 2 \)
Use after Unit Seven, Session 10 (cont.)

Page 124, Writing & Solving Equations

1. Ali has 25 seashells. She gave some to her sister. Now she has 12 seashells. How many seashells did she give her sister? 
   \[ 25 - \square = 12 \]
   \[ 25 - 12 = 13 \]
   She gave her sister 13 seashells. 
   \[ \square = 13 \]

2. George put apples into bags to sell at the farmers market. He put 5 apples into each bag. He had 45 apples altogether. How many bags did he fill? 
   \[ 45 \div \square = 9 \]
   \[ 45 \div 9 = 5 \]
   He put 9 apples in each bag. 
   \[ \square = 9 \]

3. Mr. Jones had 16 book marks to give to his reading group. How many bookmarks did each student get if they all get the same number of book marks? 
   \[ 16 \div \square = 4 \]
   \[ 16 \div 4 = 4 \]
   Each kid got 4 bookmarks. 
   \[ \square = 4 \]

4. Seraphina had 30 stickers. She gave the same number of stickers to each of her 3 friends. How many stickers did she give to each friend? 
   \[ 30 - (3 \times \square) = 18 \]
   \[ 30 - (3 \times 10) = 18 \]
   She gave 10 stickers to each friend. 
   \[ \square = 10 \]

Page 125, What's the Rule

1. Pattern 3, 6, 12, 24, 48, 96
   a. Pattern 3, 6, 12, 24, 48, 96
   b. Rule Double the number.

2. Pattern 16, 8, 4
   a. Pattern 16, 8, 4
   b. Rule Divide the number in half.

3. Pattern 6, 12, 18, 24, 30, 36
   a. Pattern 6, 12, 18, 24, 30, 36
   b. Rule Add 6 each time.

4. Pattern 2, 3, 4, 5, 6, 7, 8
   a. Pattern 2, 3, 4, 5, 6, 7, 8
   b. Rule Add 1 each time.

5. Pattern 3, 6, 9, 12, 15, 18
   a. Pattern 3, 6, 9, 12, 15, 18
   b. Rule Add 3 each time.

Page 126, Number Patterns & Divisibility

1. a. 14, 16, 18, 20, 22, 24
   b. 30, 35, 40, 45, 50, 55
   c. 50, 60, 70, 80, 90, 100

2. Responses will vary. Examples: 
   a. All the count-by-2 numbers are even. They all end in multiples of 2.
   b. All the count-by-5 numbers end in 0 or 5.
   c. All the count-by-10 numbers end in 0. They are also all even.

3. a. 40: yes, yes, yes
   b. 75: no, yes, no
   c. 37: no, no, no
   d. 110: yes, yes, yes
   e. 364: yes, no, no
   f. 930: yes, yes, yes

Page 127, Ounces, Cups, Pints, Quarts & Gallons

1. a. 8
   b. 2
   c. 2
   d. 4
   e. 4
   f. 8
   2. 640 ounces
   3. (challenge) 7 pints (112 ounces, 14 cups, or 3 1/2 quarts are also acceptable responses.)

Page 128, Find or Write the Matching Equations

1. a. Nina had 2 cats. They had kittens and now Nina has 8 cats. How many kittens did they have? 
   b. Tim had 8 keys. He gave some to his friends. Each friend got 2 keys. How many friends did Tim give them to? 
   c. Kaylee has 8 keys on her keychain. She gave all but 3 of them to her friends. How many keys did she give to her friends? 
   d. Takumi was tying knots. He tied the same number of knots on 2 different pieces of string. When he was done, he had tied 8 knots. How many knots did he tie on each piece of string? 

2. The letter students use to represent the unknown amount may vary. Examples: 
   a. 30 ÷ \( \triangle \) = r 
   b. 9 ÷ \( \triangle \) = b 
   c. $45 - \( \triangle \) > $30

Page 129, Thinking about Number Patterns

1. a. 42, 44, 46, 48, 50, 52
   b. 60, 65, 70, 75, 80, 85
   c. 90, 100, 110, 120, 130, 140

2. Responses will vary. Examples: 
   - It must be even. 
   - It must be a multiple of 10. 
   - It must be divisible by 2.

3. (challenge) Responses and explanations will vary. Example: I agree with Mia because 2 x 3 = 6, so any multiple of 6 must also be a multiple of both 2 and 3. If you look at the first few multiples of 6, for example (6, 12, 18, 24, 30, 36, and 42), they're all even, so they have to be multiples of 2. You can divide them all by 3, so they're all multiples of 3 as well.
Use after Unit Seven, Session 10 (cont.)

Page 130, The Paper Problem
1. Drawings will vary. Examples:
   a.
   b.

2. (challenge) Responses will vary. Example: The first way shown above wastes a 2' x 11' piece of paper or 22 square feet. The second way shown above wastes a 2' x 7' piece of paper, or 14 square feet. The second way wastes less paper.

Use after Unit Eight, Session 10

Page 131, The Vegetable Eating Contest
1. 2 students
2. 15 students
3. Friday
4. Tuesday, Wednesday, Thursday
5. Responses will vary. Example: Room 108 did a better job because there was only 1 day more kids from that class ate less vegetables. On all the other days, they ate more or the same amount. For the whole week, the kids from 106 only ate vegetables 61 times, and the kids from 108 ate vegetables 71 times.

Page 132, Room 108's Fruit Graph
1. a–c

2. a. 11, 12, 13, 14, 15, 16, 17
   b. 17 – 11 = 6
   c. There are 2 modes: 15 and 16
   d. 15

Page 133, Two Different Kinds of Data
1. Numerical; A
2. Categorical; D
3. Categorical; B
4. Numerical; C

Page 134, How Tall Are We?
1. 50, 51, 52, 53, 54, 55, 56, 57, 60
2. a. 60 – 50 = 10 inches
   b. Responses will vary. Example: The tallest friend was 10" taller than the shortest friend.
3. a. 52 inches
   b. Responses will vary. Example: The height that was most common is the group was 52".
4. a. 53 inches
   b. Responses will vary. Example: Half of the friends were 53" or taller, and half were 53" or shorter.

Page 135, Estimate or Exact Measurement?
1. a. E
   b. M
   c. E
   d. M
   e. M
2. Responses will vary.
3. Responses will vary.

Page 136, Multiplication Review
1. a. 15, 6, 27, 9, 24, 18, 21, 12
   b. 35, 14, 63, 21, 56, 42, 49, 28
   c. 45, 18, 81, 27, 72, 54, 63, 36
2. 8, 7, 5, 8, 6
3. 9, 3, 7, 6
4. 282; 2,002; 1,417; 40,932

Page 137, Decimal & Fraction Riddles
1. a. 0.25
   b. 0.75
   c. 0.7
   d. 0.02
   e. 0.30
   f. 0.53
   g. 2.06
   h. 3.25
Use after Unit Eight, Session 10 (cont.)

Page 137, Decimal & Fraction Riddles (cont.)

2  
2. a $\frac{3}{2} = 1.5$
   b $0.6 > \frac{6}{100}$
   c $\frac{36}{100} > 0.25$
   d $0.75 = \frac{9}{12}$
   e $83\frac{1}{2} > 83.48$
   f $12\frac{3}{100} > 1.07$
   g $\frac{83}{100} < 0.9$
   h $74\frac{3}{4} < 74.8$
3 Responses will vary. Examples:
   a $0.90$

Page 138, Jeff's Wallpaper Problem

1 328 square feet
2 90 square feet
3 (challenge) The area stays the same.

Page 139, Multiplication, Area & Perimeter Review

1 a
   56
   1 6 7
   4 2 4
   4 1 9
   18

1 b
   0
   7 3 0
   4 2 9
   5 3 3
   42

2 a Area = 1,862 square units
      Perimeter = 174 units
   b Area = 15,038 square units
      Perimeter = 558 units
   c Area = 11,164 square units
      Perimeter = 474 units
3 (challenge)
   Perimeter: $(2 \times 2) + (2 \times 10) = 36$ units
   Area: $2 \times 16 = 32$ square units

Page 140, Tiling the Kitchen Floor

1 Jean and Mike are covering their kitchen floor with big tiles. The floor is 21 feet long and 17 feet wide. The tiles they are using are each 1 foot wide and 3 feet long. Each tile weighs 5 pounds. The tiles come in packages of 10 that each cost $120. How much will it cost them to cover their floor with these tiles?
   a Responses will vary. Example: How much will Jean and Mike have to pay for the tiles they need?
   b & c See above.
   d $1,440.00
Use after Unit Eight, Session 10 (cont.)

Page 140, Tiling the Kitchen Floor (cont.)

2  Responses will vary. Example: The floor is 357 square feet. The tiles are 3 square feet. If you divide 360 by 3, you get 120. That’s 12 packages of 10 tiles. $12 \times 120 = $1,440.00 so I know I’m right, even though they’ll have one tile left over.
