

CONFIRMED POSITIVE COVID-19 CONTACT TRACING

Person A is diagnosed with laboratory-confirmed COVID-19. If **Person B** had close contact with **Person A**, **Person B** would be subject to mandatory quarantine (if close contact).

Any individual (**Person C**) who is a contact of **Person B** (i.e., spouse, children, co-workers, etc.) is considered a “contact of a contact”. **Person C** is not at risk for infection and would not be subject to quarantine unless **Person B** had or developed symptoms, or tested positive for the virus causing COVID-19.

Close contact is defined as any individual who was within 6 feet of an infected person for at least 15 minutes starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to positive specimen collection) until the time the patient is isolated

Mandatory quarantine is required for a person who “has been in close contact (6-feet) with someone who is positive, but is not displaying symptoms for COVID-19; or person has traveled to China, Iran, Japan, South Korea or Italy and is displaying symptoms of COVID-19”

Precautionary quarantine is required for a person who “meets one or more of the following criteria: (i) has traveled to China, Iran, Japan, South Korea or Italy while COVID-19 was prevalent, but is not displaying symptoms; or (ii) is known to have had a proximate exposure to a positive person but has not had direct contact with a positive person and is not displaying symptoms”
