Holmdel Prepares for Reopening

RE: Playground Cleaning and Disinfection

We will be using a professional service to ensure our playgrounds are thoroughly cleaned and sanitized to properly address community concerns regarding healthy access to our Holmdel playground facilities.

They will complete a 3-stage system of cleaning, sanitizing and protecting play surfaces:

Stage 1 – High pressure, hot water cleaning to remove dirt and contaminants utilizing environmentally-friendly cleaning agents.

Stage 2 – Pump misting system distributes a Sanitizer called Kilzone, EPA registration Number 10324-117-85841-Sanitizer, on EPA's list of approved Sars-CoV-2 disinfectant to all playground equipment.

Stage 3 – BioShield/ProShield 5000 (Surface Pro) is applied. This is a biostatic antimicrobial coating. The coating bonds with hard surfaces to create a durable and lasting coverage. It inhibits virus, bacteria, fungus and algae growth by deploying a long chain positively charged ions on the surface that act as micro spears that kill off germs when in contact. The product is lab tested, invisible, non-toxic, food safe and hospitable grade (EPA Registration Number 53053-28 Antimicrobial Coating).
