

## Health and Safety FAQs

### **What precautions should Delbarton students follow in the 14 days prior to their arrival on campus?**

To help us ensure students are healthy when they arrive on campus, we encourage them to take reasonable precautions prior to their arrival. This includes avoiding travel to areas designated as virus hotspots ([link to NJ State Covid site re travel](#)) as well as practicing regular hand hygiene, adhering to social distancing measures, limiting social contacts outside of their immediate household, wearing face coverings in public settings where social distancing is difficult to maintain, avoiding large group assemblies of 10 or more people, and limiting their use of air, bus, train, and public transportation.

### **How will Delbarton protect students' private health information?**

All medical test results are subject to the same privacy and confidentiality protections mandated by HIPAA regulations and Delbarton's existing health records policies.

### **When will quarantined students be allowed to return to campus?**

Delbarton's quarantine procedures are outlined in our Delbarton Illness Policy posted here and on our Reopen Roadmap hub. Briefly, if a student exhibits symptoms of, and tests positive for, COVID-19, he is expected to remain off campus until the following criteria are met:

- Symptoms are significantly improved
- No presence of a fever for at least 72 hours without fever-reducing medications
- Two negative COVID-19 PCR tests to detect viral presence at least 24 hours apart

If a student exhibits no symptoms and tests positive for COVID-19, he is expected to remain off campus until all three of the following criteria are met:

- At least ten days have passed since the positive test result
- Continue to experience no symptoms
- Two negative COVID-19 PCR tests to detect viral presence at least 24 hours apart

### **How and where will students, faculty, and staff undergo routine/daily temperature screening?**

All students, faculty and staff are required to complete daily online symptoms and temperature screens via the MagnusHealth app ([link to the app](#)). Consistent with current CDC recommendations, Delbarton will not conduct daily, in-person temperature screens of its campus population.

### **Will Delbarton use any form of antibody testing?**

Not at this time. A positive COVID-19 antibody test indicates someone was previously infected with COVID-19. Beyond this, the clinical utility of COVID-19 antibody testing is unclear, especially in regards to whether it implies some degree of immunity. The CDC is not currently recommending antibody testing.
