# COVID-19 SCREENING APP

To better protect our community from COVID-19, we have established the following daily symptom-screening procedures:
• All faculty and staff will self-screen before arriving on campus.
• All students will be screened daily by a parent or other adult at home using the MyMedBot App.

The student screening procedure requires parents/guardians to answer a series of prompts using the MyMedBot app before campus arrival. If the app determines that your child is COVID-19 symptom-free, a green box will be displayed on the screen and you may proceed to school. If the app determines that your child has COVID-19 symptoms, a red box will be displayed and your child should not come to school.

The app will automatically notify the school that you have completed the COVID-19 screening. Please have the app pulled up on your phone in the carpool line to show the green check to a staff member prior to your child exiting the car.

The MyMedBot app is straightforward to use and works on both Androids and iPhones. Additional information and FAQs regarding the app are available at https://www.mymedbot.lu/app-user-guide.

Please be aware that this app is not available for use at this time. The school will provide you with instructions when the app becomes available.
