

Teaching Mastery in Primary Maths JAWS 23rd & 24th November 2018

Topics could include:

- An inclusive approach to support all children achieving
- Ways to stretch your more able students laterally and get them to think 'deeply'
- Ways to develop a long term and adaptable understanding of maths concepts
- What does supporting learning challenges while teaching for mastery look like?

We would like to invite you to share your experiences in these or other related areas and further your own understanding, learning and knowledge of the Primary Maths Curriculum.

Day 1 will offer the opportunity to see Maths take place at SCIPS before a number of small group discussions and workshops led by delegates.

Day 2 will include a variety of workshops facilitated and led by delegates. There will also be an opportunity to prepare a presentation for your own school as well as extended discussion and networking.

Please be aware that there is an expectation for all delegates to be involved in the presentation of a workshop at some point over the two days of the JAWS.
