

Internet Tips

District-wide we are hearing of so many internet issues. We try to troubleshoot as best as we can, but we have also compiled a list of some other things that you can try too. Check to see if any of these will help!

- If possible, turn your camera off in Google Meet. This lowers the bandwidth that is getting used.
- Disconnect all devices that are using the WiFi network (cell phones, tablets, etc) that aren't a school device during work time. Multiple devices connecting will slow everything down.
- Close tabs that you do not need for what you're working on. The more tabs that are open and running, the slower it will be for you.
- Music/video streaming can bog down the wifi, be aware if you are working and having music playing from your device at the same time.
- Avoid Streaming Media on another device on the same network.
- [Clear browsing history, cache, and cookies.](#)
- Your wireless router sitting in the dark corner of the basement is not the best place to have it. Preferably on the same level that you're working and not having to go through many walls or even worse, walls with pipes in them.
- If you are having troubles with your device connecting to the internet try testing it out at the Public Library or McDonalds/Starbucks. If it is not having problems at either of those locations it might be your Router or an issue with your connection to your ISP.
- [Reboot your modem or router](#)
- Upgrade your modem or router - recommended every two years as equipment becomes obsolete with new technology. Check with your internet service provider if there is an upgrade or a newer modem that you need.

Make your teacher aware if your internet connection is preventing you from accessing an assignment or materials needed for an assignment.
