

## Community Outreach

---

Education at SIS is more than what our students learn in the classroom. As we prepare our students to become active global citizens, principled leaders, creative thinkers, team members and problem solvers, we acknowledge that learning needs to go beyond the traditional sense as we know it. By providing authentic, real-world opportunities to enrich our student learning programs, we are actively seeking opportunities to connect with the Shenzhen community.

How we might collaborate

Are you willing?

- To share your career as a Guest Speaker?
- To provide insights/expertise into your industry?
- To host a factory/plant site visit?
- To allow a peek "behind the scenes" of your organization?
- To act as a mentor for high school students?
- To accept high school students for assigned periods of work experience?
- To fulfill your CSR goals through the support of service learning opportunities?

Opportunities such as these are just part of a larger continuum of experiences that SIS is looking to deepen as we develop today's emerging generation of leaders. We want to inspire our students to identify and deepen their passions, while building unique connections between academic studies and real-world endeavors. We believe that the key to meaningful learning lies in the collaboration amongst our learners, educators, parents and members of our greater community.

We hope you will join us!

It has been suggested that 85 per cent of the jobs that will exist in 2030 haven't even been invented yet. The pace of change in future workplaces is increasing, allowing for new opportunities for a pool of truly global talent. As emerging technologies rapidly and thoroughly transform the workplace, the ability to adapt and quickly acquire new skills will become a necessity for survival. At SIS, we believe the purpose of education today is to prepare our students for such a future, by developing individuals who are creative thinkers and problem solvers.

If you are interested to learn more about how you or your organization can support our community outreach programs, please contact [Paul Ducharme](#).
